THE

UNIVERSAL DICTIONARY

OF

TRADE and COMMERCE:

WITH LARGE

ADDITIONS and IMPROVEMENTS,

Adapting the ſame to the

PRESENT STATE of BRITISH AFFAIRS in AMERICA,
ſince the laſt TREATY of PEACE made in the Year 1763.

With GREAT VARIETY of

NEW REMARKS and ILLUSTRATIONS

Incorporated throughout the Whole:

TOGETHER WITH

Every Thing eſſential that is contained in SAVARY's DICTIONARY:

ALSO,

All the Material LAWS of TRADE and NAVIGATION
relating to theſe KINGDOMS,

AND THE

CUSTOMS and USAGES to which all TRADERS are ſubject.

By MALACHY POSTLETHWAYT, Eſq;

THE FOURTH EDITION.

VOL. II.

LONDON:

Printed for W. STRAHAN, J. and F. RIVINGTON, J. HINTON, L. HAWES and W. CLARKE and R. COLLINS,

MDCCLXXIV.

ADAMS III,3

TO

SIR STEPHEN THEODORE JANSSEN, BARONET,

CHAMBERLAIN OF THE CITY OF LONDON.

SIR,

THE Performance before you being planned upon Principles no Way incompatible with thoſe you have always eſpouſed, I am willing to hope that addreſſing this Volume to a Gentleman of your diſtinguiſhed Character will not be unacceptable.

There being contained in this new Edition, and particularly in this Volume, ſeveral valuable Commercial Memoirs, with which you have been ſo kind as to favour me, calls for a grateful public Acknowledgment of the Obligation.

Though this was not the Caſe; and though I had not many Years had the Honour of your Friendſhip and Confidence, on whom could I pitch upon with more Propriety to inſcribe this commercial Work, than to ſo zealous and conſpicuous a Friend to Trade, and ſo cloſely connected with a Corporation the Author ſo highly venerates?

Had not the worthy Citizens of London lately given you diſtinguiſhed Marks of their great Regard, and which has obtained the Sanction of public Approbation, your laudable Conduct, as a City Magiſtrate, or a commercial Patriot, would have been only known to a few, who conſidered its uncommon Merits.

When you became the happy Inſtrument of putting a Stop to the general Wear of French Cambrics, and inſtead of this Nation giving Employment to French Manufacturers, you promoted that of our Engliſh Weavers; the Kingdom has ever ſince been benefited no leſs than HALF A MILLION PER ANNUM: For before the Year 1744-5, when you procured an Act to prohibit the Wear of French Cambrics, which was inforced afterwards by ſeveral others, we paid at leaſt 250,000 *l.* a Year to France for that Commodity: and having ſaved that Sum, and given Employment to our own Manufacturers of Gauzes and Blonds, and numerous other home-made Wares in their Stead, makes a Difference to the Nation between ſaving and ſpending of double the Sum: and the national Gain of half a Million yearly from 1745 to 1765, amounts to TEN MILLIONS OF PRINCIPAL MONEY. Was not this an Object worthy the Patronage of a Britiſh Legiſlature? And is not this Advantage, under a wiſe Adminiſtration, as likely to continue at leaſt as many Years as it has done?

The Conſideration of the Difficulties you had to encounter by this Step of public Virtue adds to its Luſtre. There was a Duty of Import on French Cambrics, and that was appropriated; and the Annihilation of any Part of the Revenue, generally meets with miniſterial Oppoſition, notwithſtanding the national Emolument is demonſtrable. This was your Caſe, Sir; yet your Reaſons were urged with ſuch irreſiſtible Weight, that miniſterial Authority concurred with your patriotic Deſign. And had we another JANSSEN to ariſe, who would obtain the PROHIBITION OF ALL FOREIGN WROUGHT SILKS, though he ſhould meet with the like Obſtacles; would not the Nation in the like Number of Years be Gainers thereby many more Millions than it has already been by that of Cambrics? We do not pay for foreign wrought Silks ſo little as a MILLION a Year, including all ſmuggled into Great Britain and her Plantations.

Was this ſaved to the Nation, inſtead of ſpent out of it, would it not make a Difference of TWO MILLIONS a Year? Is this Benefit to the Kingdom to be loſt, for the Sake of a mortgaged Revenue? Is it not more politic to ſupply the Revenue Deficiency by all other Ways poſſible, than to ſuffer the Nation longer to be deprived of ſo intereſting an Advantage it at preſent ſtands in Need of? Can it be proved, that an equivalent Benefit would accrue to the Kingdom, by permitting the Importation of foreign wrought Silk at all? I am perſuaded it cannot. For in ten Years might not the Nation ſave TWENTY MILLIONS by their abſolute Prohibition? I could wiſh this Point was duly conſidered by the preſent Patriotic Adminiſtration, and that you, Sir, would turn your Thoughts upon ſupplying any Deficiency in the Revenue, ſuch a wiſe Meaſure might occaſion. For as the Revenue is already highly indebted to you as a Financier; ſo it may be in future.

You

You have been happily ſucceſsful in the eſſential Article of greatly improving the Revenue on Tea: and yet by Means that were judged to have the contrary Effect, when you firſt ſtarted them. Few Miniſters are inclined to liſten to the lowering of Duties; yet upon this ſingular Maxim, you propoſed to augment the Revenue. Herein you met with no leſs Diſcouragement than in the Cambric Affair. Yet you perſevered in maintaining that lowering the EXCISE DUTY ON TEA, would increaſe the Revenue. So it has to a very conſiderable Degree, notwithſtanding the Oppoſition your Sentiments met with at firſt.

Before your Intentions, with regard to Tea, were carried into an Act of Parliament, both the Duties of Exciſe and Cuſtoms thereon, had not for ſeveral Years exceeded, *Communibus Annis*, 170,000 *l.* and the Eaſt India Company had not imported above 1,200,000 Pounds Weight of Tea, *Communibus Annis:* But ſince paſſing the Law, which you were inſtrumental to procure, the Exchequer has received yearly from 4 to 500,000 *l.* and for ſome Years paſt above 600,000 *l.* and even above 700,000 *l.* and the Eaſt India Company has ſold from THREE to FOUR MILLIONS of Pounds Weight annually; whence it is that the Eaſt India Company have imported and ſold not leſs than SIXTY MILLIONS OF POUNDS WEIGHT OF TEA MORE THAN THEY WOULD HAVE DONE, had it not been for the paſſing the ſaid Act. By which it appears, that if the Company have gained no more than ONE SHILLING *per* Pound Weight, it amounts to THREE MILLIONS STERLING EXTRORDINARY CLEAR PROFIT TO THAT COMPANY; of which the Preprietors and the Public Credit have reaped the Benefit: and the Public Revenue has been advantaged by You above SEVEN MILLIONS OF MONEY: and, perhaps, if your Principles of lowering the Duties upon other Articles of general Conſumption, were adopted, the Revenue might be ſo advantaged, as to enable the preſent Adminiſtration likewiſe to promote the Prohibition of foreign wrought Silks; thereby ſave Millions upon Millions of Treaſure to the Kingdom, and give full Employ to our induſtrious Spitalfields Manufacturers. I could wiſh, I could rejoice, as well for the Honour of the preſent wiſe and upright Britiſh Miniſtry, as the Intereſt of the Kingdom in general, that this national Point could be happily accompliſhed, in a Manner perfectly conſiſtent with the general Proſperity. If thus reminding you, Sir, of the more extenſive Application of your own Principles to advance the Revenue ſhould have ſo good an Effect, I am perſuaded, that any Thing of the kind will be well received by the Miniſtry, and if practicable, carried into Execution.

There is another Inſtance of your public Conduct, that has not been leſs admired than other Parts of it: That I mean is, when you had the Honour to be Lord Mayor of this City in the Year 1755. At which Time, Hoſtilities being expected to begin againſt France at the Commencement of the late War, you wrote a Letter to his Grace the Duke of Newcaſtle and Lord Anſon, the former then one of his Majeſty's principal Secretaries of State, and the other Firſt Lord Commiſſioner of the Admiralty, ſignifying the then State of the French Trade to their Sugar Colonies; and informing them, from certain Intelligence you had received, "that the French Ships bound to America, "were doubly manned; which to you appeared an indubitable Proof, that France intended to be at "War with us before the Return of thoſe Ships to Old France: wherefore you ſubmitted to the Ad-"miniſtration this Propoſition: Whether it might not be an eligible Meaſure, by Way of Repa-"ration for the many Murders and Incroachments made by the French upon his Majeſty's Subjects "in North America, ſince the Peace of Aix la Chapelle, to make Prizes of their homeward-bound "Weſt India Ships, without a FORMAL DECLARATION of WAR; whereby You judged, that we "could not have at once leſs than EIGHT THOUSAND FRENCH SAILORS PRISONERS IN ENG-"LAND; which would be crippling the French Navy during that whole War.—This was the "Propoſition you had the Honour to ſuggeſt to his Grace the Duke of Newcaſtle; and this very "Meaſure was ſoon after adopted by the Court of London; and we actually had, as you pro-"phetically declared before the Cloſe of the Year 1755, eight Thouſand French Sailors Priſoners "in this Nation."——And certain it is, that his Grace of Newcaſtle did you the Juſtice and Honour to ſignify in Council, his Acknowledgment that he received the Information and Suggeſtion from the Lord Mayor of London: nor is it leſs certain, that no Step of this Kind was taken, or even thought of by the Adminiſtration, till this Intimation was given by You.

What Effect this Meaſure had to render the laſt War at Sea ſo ſucceſsful as it happily proved, is too well known to need expatiating on: and in what Light this Maſter-ſtroke of Engliſh Policy was then looked on in France by the wiſeſt Men in that Kingdom, is alſo notorious, and the Event ſufficiently indicates their Diſcernment.

The numerous other public Services You did, during the two laſt Wars, by a Series of judicious Intelligence you communicated to the Adminiſtration during their whole Courſe, I am not unapprized of; and was the whole laid before the Public, it would make an acceptable Volume not leſs to your Honour than what I have already taken the Liberty to notice: which I have done to animate others to imitate your glorious Example for the public Emolument. And did your public Spirit more abound, Miniſters would often be better informed than they are, and the Nation rendered more proſperous; it being impoſſible for the ableſt and beſt intentioned Adminiſtration at all Times to have all Requiſites before them for the Guidance of their Judgment occaſionally. In your Intelligence of that Kind,

Kind, and in your ſeveral public Plans, you appear to have been very happy and fortunate: and although you have not been ſo in your private Affairs, and ſome have unknowingly and uncandidly attributed it to your attention to thoſe of the Public; yet I can take upon me to declare the contrary, having had the Examination of them, and am at preſent in Poſſeſſion of authentic Vouchers to teſtify the Reverſe. However, your late exemplary Conduct, as a Merchant, is at preſent deſervedly in the higheſt Eſteem, by all wiſe and good Men, as tending to render COMMERCIAL CREDIT SACRED AMONG THE TRADING WORLD; and as ſuch your Example is worthy of conſtant Imitation, and therefore cannot be too much revered.

I am,

With great Friendſhip and Regard,

SIR,

Your moſt Humble

And moſt Obedient Servant,

Feb. 10, 1766.
Broad Street, London.

MALACHY POSTLETHWAYT.

THE

UNIVERSAL DICTIONARY

OF

TRADE and COMMERCE, &c.

VOL. II.

L.

LABOUR. The price of the produce of land, and all the commodities which depend upon the mechanical and manufactural arts affecting trade in general, it becomes needful to make ſome

REMARKS on LABOUR in general, in relation to the natural price thereof.

A labourer's ſon, from 7 and 12 years of age, becomes an aſſiſtant to his father, either in keeping the flocks, or manuring the ground, or in other ſorts of country labour, which require no art or ſkill.

But, if his father puts him to a trade, he is at ſome expence for it, and loſes his aſſiſtance beſides, during the time of his apprenticeſhip: and, as the life of a man is commonly calculated but at 10 or 12 years, his wages, as a ſervant, mechanic, or manufacturer, muſt exceed his wages as a labourer, in proportion to the expence he is at, and the riſque he may run in ſuch ſervitude. This ſhews why ſuch ſervant ought to earn more than a common labourer.

Let it be ſuppoſed that two taylors make the cloaths of a village, and that, the one dying, the ſurvivor has more work than uſual: this may enhance his price, by giving ſome preference in point of expedition to others, he may thus continue raiſing his price, 'till the countryman ſhall find it more advantageous to go to ſome taylor of another village, or market-town, or city, to have cloaths made, or 'till ſome other taylor comes into his own village, to ſhare the buſineſs of making cloaths.

If, of two taylors in a village, the one works better than the other, he may have a better price for his work; or, if he cuts his cloaths more faſhionably (that is to ſay, if he pleaſes better) he ſhall have a better price.

The ſame reaſon will hold good in market-towns and cities; thoſe trades which require more art and capacity to learn, and more time to arrive at perfection in, earn, cæteris paribus, a better price.

The arts and employments attended with danger, as ſailors, bell-founders, ſilver-mines, &c. earn more in proportion; and, where there muſt be capacity, danger, and confidence, they earn ſtill more, as pilots, ſkippers, &c.

If every labourer in a village breeds up ſeveral children, there will be too many hands for the cultivation of the land belonging to the village; and ſo ſeveral adult ſons and daughters muſt go to ſeek a livelihood elſewhere: and it will probably happen that the inhabitants of this village ſhall not be more numerous in 500 years than they were at firſt.

The ſame may be ſaid of the tradeſmen of the village. If a taylor, who makes the cloaths of the whole village, breeds up three ſons to the ſame trade, as there is but work enough for one, he will bring up one of his ſons to ſucceed him, and the other two muſt ſeek their livelihood elſewhere.

If they cannot find employment any where in their trade, they will go to ſea, or into the army, or into foreign countries, or turn highwaymen and be hanged. But the number of tradeſmen in the village in queſtion will always proportion itſelf to the demand, or the work there is for them.

It is eaſy to conceive, in like manner, that the number of labourers and tradeſmen proportions itſelf to the demand for them in market-towns and cities: but this further explication may be added: that, if four taylors in a market-town be able to make all the cloaths of the inhabitants, a fifth taylor may nevertheleſs find employment there, by the diminution of the work of the other four; and thus it happens that tradeſmen often gain a livelihood, though they may not have full occupation.

One acre of land produces more wheat, or feeds more ſheep than another acre, and the work of one man is dearer than that of another, according to the occurrences, as we have explained.

If two acres of land are of equal goodneſs, the wheat or wooll of one is of equal value to that of the other, provided the work be equal that is employed about them.

Let us ſuppoſe the wooll produced by one acre to be made into a coarſe ſuit of cloaths, and the wooll of the other to be made into a ſuit of fine cloth, containing the ſame quantity of wooll with the coarſe cloth: as the fine ſuit of cloth requires more, and dearer workmanſhip, it will coſt more in making than the courſe ſuit, and, proportionably to the difference of the work, one ſuit of fine cloth ſhall ſell for ten times the price of a coarſe ſuit, containing an equal quantity of wooll.

Wherefore the price of any thing, intrinſically, ſeems to take in the quantity of land with regard to the goodneſs of the land, and the quantity of the labour, with regard to the dearneſs of the labour.

A pound of flax wrought into Bruſſels lace, according to the computation of the different parts of labour it may require, will employ the labour of one perſon for near 14 years; and thus the quantity of lace, manufactured out of a pound of flax, ſells at a price which not only pays the maintenance of a woman for 14 years, or of 14 for one year, but alſo to yield a profit to the merchant, or principal undertaker of the lace-manufacture.

The ſteel ſpring which regulates a good watch, may ſell at a price which makes the proportion of the value of the ſteel to the workmanſhip as 1 to 1,000,000.

On the other hand, the apples of a tree require ſo little labour, that their price ſeems to be proportioned almoſt to the land only that enters into their production.

The price of a bucket of water at the river is nothing; but, carried at ſome diſtance into the ſtreet, ſhall ſell for one penny, which ſeems to be the meaſure of the labour of the water-carrier.

From theſe examples and explanations it ſeems to appear, that the price of any thing intrinſically is the meaſure of the land, and the labour that enters into it's production: but it may happen that things which have ſuch an intrinſic value, may not ſell accordingly, with regard to the faſhions and humours of men. For example: if a gentleman cuts canals, and erects terraſſes in his garden, the price of them will be intrinſically proportionable to the land and labour thereon employed, becauſe they really coſt the gentleman in that proportion; nevertheleſs it may happen that nobody elſe will give him one quarter part of that value for them.

Land, which produces all commodities and goods, muſt neceſſarily maintain thoſe who give thoſe goods and commodities their form by labour; and the labour itſelf may be eſtimated by the quantity of land required to maintain thoſe who labour, as may be further elucidated from what follows:

It does not appear that providence has given the right of the poſſeſſion of land to one man preferably to another; ſome of the moſt ancient titles that we have any knowledge of, came by violence and conqueſt, and by laws eſtabliſhed in conſequence of ſuch conqueſts. The property of the lands in Mexico is veſted in Spaniards, and of thoſe at Jeruſalem in Turks; but, however people come by the property of land in a ſtate, it naturally falls into the hands of a few *.

* Which way ſoever a ſociety of men is formed, the property of the lands muſt be in the hands of few men. If a prince at the head of an army conquered France, and diſtributed the lands among his officers, or favourites, according to his pleaſure, or their merit, he would then eſtabliſh laws for veſting the ſaid property in them, and their deſcendants. Each proprietor manages his own eſtate, or lets it to one or more farmers, as he thinks fit; and the farmer and his aſſiſtants muſt be maintained out of it, and he pays the proprietor the overplus of the produce of the eſtate; the proprietor pays the prince what he requires, according to the laws of ſociety enacted or agreed upon, for the maintenance of his ſoldiers, courtiers, armies, &c. The uſe the land is put to depends upon the humour and faſhion of living which the prince and the proprietors follow: if they delight in horſes, a proportionable quantity of the land muſt be turned to paſture and meadow; if they are fond of a great number of ſervants and dependants, a proportionable quantity of the land muſt be applied to produce wherewithal to maintain them, &c.
If, upon the firſt conqueſt, the lands are divided among all the inhabitants by equal portions, yet they will gradually fall into the hands of a few; one man ſhall die without iſſue, and leave his portion to whom he pleaſes; another ſhall have ſeveral children, and not wherewithal to maintain them, and ſo they muſt become dependants on ſuch as have too much land. One man ſhall be ſickly, lazy, or extravagant, and be obliged to ſell his portion of land to another, who is frugal and induſtrious, and this latter ſhall every year add to his eſtate.
Of this we have an inſtance in the firſt ſettlement of the Roman ſtate: each citizen had two acres of land, and yet, ſoon after, the property of the land fell into few hands.
The moſt ancient accounts we have of the forming ſocieties and ſtates, tell us, that they have been formed by conqueſt; how they ſtood in the day of the patriarchs is not very clear.

Let us ſuppoſe the proprietor of an eſtate in land keeps it in his own hands, he will employ ſlaves, vaſſals, or ſervants, to work for him. If he employs ſlaves in great numbers, he muſt have overſeers to keep them at work; he muſt have as many labourers and tradeſmen, and mechanics, as are neceſſary to procure him all the conveniencies his fancy and inclination lead him to.

In this œconomy, he muſt allow theſe ſlaves not only what will maintain them, but alſo their children; he muſt likewiſe allow the overſeers of the ſlaves ſuch advantages and rewards as are proportionable to the authority which he gives them. Wherefore the labour of a ſlave is worth, at leaſt, the quantity of land that ſerves to maintain him, and about double the quantity of land which ſerves to breed up a child 'till he is of age fit for labour; for half the children that are born die before 17; ſo that two children muſt be reared up, on an average, in order to have one fit for labour, and even then their lives can be calculated but at 10 to 12 years.

It is true, that the one half of the children who die before 17, die faſter in the firſt years than in the following; but, as the time the mother loſes in producing and tending them, ſeems to make up for this computation, and the females are more chargeable, and leſs profitable when they grow up, than the males; it appears reaſonable to think, that the labour of the meaneſt ſlave is equal to double the produce of the land that is required to maintain him.

When the proprietor maintains ſlaves on his land, if he has more of them than his labour requires, he ſells the ſuperfluous hands, as he does his cattle; in which caſe their value or price ought to anſwer (cæteris paribus) to the quantity of land employed to breed up two ſlaves to maturity.

But, if the proprietor employs in his ſervice free ſervants, or vaſſals, inſtead of ſlaves, he may probably maintain them upon a better foot than ſlaves, according to the uſage and cuſtom of the place he lives in: yet, in this caſe alſo, the labour of a day-labourer ought to correſpond to about double the quantity of land that is employed to maintain him. If he be married, the ſurplus goes to the breeding up of his children, his wife being ſuppoſed juſt able to maintain herſelf by her labour: but, if he be a bachelor, he will probably employ his ſurplus to live more at his eaſe: for example, the married labourer will live upon bread and cheeſe, roots, &c. eat meat, drink ſtrong beer or wine ſeldom, change cloaths and linen ſeldom; whereas the unmarried labourer will eat and drink better, and wear better apparel, and conſequently (if we ſuppoſe their wages equal) he will conſume the produce of more land for the maintenance of his own perſon, than the married man, if he ſaves nothing.

For the better underſtanding of this, it is to be obſerved, that a poor labourer may maintain himſelf at the loweſt computation, upon the produce of an acre and an half of land; whereas, if he allows himſelf ſtrong beer, meat, and all other conveniencies, he may, without gluttony or exceſs, conſume the produce of four to 10 acres of land, of ordinary goodneſs.

From this may be inferred, that the labour of a working man correſponds to more or leſs land in different countries, according to the different cuſtoms of living uſed in the ſaid countries; and that, if the labour of a peaſant in France be worth the produce of three acres, that of an Engliſh countryman, who drinks beer, wears woollen cloth, eats meat pretty often, and conſequently conſumes the produce of more land, is worth in England from ſix to eight acres.

It has been already obſerved, that a mechanic tradeſman earns more than a day-labourer, and, conſequently, he is able to conſume, in the maintenance of his perſon, the produce of more land, or he may ſpare his overplus, if he pleaſes.

The maſter-tradeſmen, and ſuperior undertakers of buſineſs, upon the footing that things are managed in Europe, correſpond ſomething to the overſeers of ſlaves in other parts, and gain more than the journeymen-tradeſmen; and theſe maſter-tradeſmen know how much work a journeyman can do in a day, and often pay them by the work and piece: this makes them work, for their own intereſt, as hard as they can, without further inſpection.

From what has been ſaid, it ſeems to be pretty clear, that the par and equation of land and labour are known by the quantity of land, the produce whereof is given for wages to the man who labours. That the labour of a man, who earns the produce of three acres, is equal to three acres; of a man who earns the produce of ſix acres, to ſix acres, &c. And it ſeems that the ſame proportion allotted for labour differs in ſeveral parts of the world, according to the different ways of living.—That, in China, the labour of a peaſant may be equal to half an acre of land, ſince a quarter of an acre may probably maintain him after the Chineſe manner.—That, among the Iroquois Indians in America, the labour of a vaſſal, or ſlave, may be equal to 20 or 100 acres, ſince the maintenance of a man may require half that quantity, in regard that they live moſtly on wild beaſts, which they hunt, and that the beaſts one man conſumes in a year muſt have many acres of paſture to feed them; eſpecially ſince people there have not the knowledge to cut down the woods, and make the land produce as much graſs for them as it might; and it ſeems in this as if nature had no regard to the multiplication of men in particular, but is indifferent whether the land produces graſs, corn, or trees, or whether it maintains a great or ſmall number of birds, beaſts, or men.

The females commonly conſume the produce of leſs land than the males, or, in other words, ſpend leſs; their infancy is not only indeed expence, but, even when they are grown up, they ſeldom earn more than what barely maintains them. Therefore it ſhould ſeem that the labour of a peaſant ought to exceed twice the quantity of land neceſſary to maintain him, with regard to the female children that are bred up in a ſtate; but, as moſt of the day-labourers do not marry till they have ſaved ſomething, ſuch who are frugal are, by that means, enabled to breed up ſeveral children.

So that, if it be allowed reaſonable that the labour of a peaſant is equal to twice the product of the land that ſerves to maintain him, the mechanic and tradeſman, who earn more, may be ſaid to follow the ſame proportion.

If we conſider to what quantity of land an hundred buſhels of wheat correſpond in value, we muſt not only take into conſideration the number of acres which produced it, but alſo the double of the number of acres neceſſary to maintain the men whoſe work and labour produced it in that form, during the time they were at work thereupon: and, if the ſaid wheat has been brought from afar, we muſt alſo take into conſideration the land neceſſary to maintain the men and beaſts employed in the carriage.

Thus, to judge of the intrinſic value of any thing, we muſt conſider the land, and the labour that enters into it's productions; and, ſince we may pretty nearly determine the par of land and labour, we may look upon land alone, perhaps, to be the principal meaſure of all values.

But as money is the medium, which finds out the proportion of all values, it is alſo the beſt medium to fix the proportion of

of land and labour, in relation to all goods and commodities. If a workman earns half an ounce of ſilver per diem, and another earns an ounce, it may be judged that the latter has twice the quantity of land to ſpend, ſince he earns twice the quantity of money.

This notion of the par of land and labour Sir William Petty looked upon to be one of the moſt important conſiderations in political œconomics, as appears by a MS. of his, written in the year 1685; but the method he has taken to enquire into it, ſeems to be but very indifferently grounded. But the principles which we have laid down ſeem to be very plain and natural, and may be applied to the eclairciſſement of many political altercations.

Money, for the facility and convenience of commerce, being the medium of all values, the more hard money there is in circulation, the dearer the price of labour, and conſequently all commodities in general, will be in a ſtate. See the articles BARTER, CASH, CIRCULATION, MONEY.

That the quantity of the hard circulating money of this kingdom has increaſed in the like proportion as the price of labour and commodities, no one, we preſume, will undertake to prove. In proportion to the increaſe of our ſpecie, the price of labour may have increaſed; but, as there are other obvious and apparent cauſes which have contributed to the increaſe in the price of labour within this century, it may be neceſſary to point out the ſource of thoſe cauſes, that we may not aſcribe certain effects to uncertain and inadequate cauſes.

This we have done under our article DUTIES, to ſhew how thoſe DUTIES and TAXES, laid upon commodities in this nation, operated before the laſt war, when our PUBLIC DEBTS and TAXES were not greatly above one-half of what they are at preſent; and conſequently, what is repreſented under the article DUTIES, muſt have much greater weight now, than it had in our former edition of this work, and may be found to deſerve, one day, due public attention.

But nothing can be more indubitably apparent, than that the high price of labour, and of all the produce and manufactures of this kingdom, is owing to the immenſe WEIGHT OF OUR TAXES: and are not theſe ſolely owing to the WEIGHT AND INCUMBRANCE OF OUR NATIONAL DEBTS? And, if thoſe taxes were taken off, in conſequence of the redemption of the principal national debts, would not the price of labour, and of all our commodities, fall in proportion BY SUCH ANNIHILATION OF OUR TAXES? I believe that no one would be hardy enough to attempt to prove, that, if our taxes were taken off, the price of labour and commodities would not be leſſened in the like proportion, as it has been thereby augmented, making allowances for the different values of money now, and before they were impoſed.

If this be the true ſtate of the caſe, nothing can more demonſtrably prove the neceſſity of paying off the debts of the nation, by meaſures every way adequate thereunto. How that may be effectuated, ſee the article DEBTS [PUBLIC DEBTS] and ſuch other heads to which from thence we refer.

There are other cauſes likewiſe, which will contribute to the keeping of the price of labour low, and in proportion to that of other neighbouring commercial ſtates, by improvements in the mechanic arts and inventions, as well as in agriculture. See AGRICULTURE, FARMING, HUSBANDRY, MANURE.

In Ruſſia, we are told, they had no other way of making planks, 'till near the end of the laſt century, but by hewing or chipping away a whole tree to the neceſſary thickneſs; notwithſtanding which, they could afford to ſell them cheaper than their neighbours. Two Ruſſians might poſſibly, with hard labour, finiſh a plank in a day in this inartificial way, in the ſame time two carpenters could with eaſe ſaw out 20 good boards. Without troubling ourſelves with the loſs of timber, if both are ſold at a neighbouring port for the ſame money, 'tis plain, the Ruſſian muſt work for a twentieth part of the carpenter's wages: if a ſawyer in Sweden can get ten pence a day, the Ruſſian muſt be paid with an halfpenny. This inſtance may bear a further application; the carpenter, by the contrivance of the long ſaw, performs as much in a day, as twenty Ruſſians with the axe; but, beyond this, there are in Sweden a kind of mills turned by water, and ſo contrived, as to take in large trees at the upper ſide the ſtream, and deliver them out on the lower, ſawed into planks, in a very few minutes. One of theſe mills will at leaſt make 500 planks, whilſt the poor Ruſſians could hew out a ſingle one; ſo that it performs the buſineſs of a thouſand Ruſſians, or 50 common ſawyers, in a day, with the attendance of a ſingle perſon *.

* Reflections on various ſubjects, relating to arts and commerce.

That nation which invents ſuch-like compendious arts of workmanſhip, will certainly ſtand the beſt chance to gain the trade of foreign markets; for, beſides that machines generally do the work truer and better than the hand, the labour ſaved by them is ſo very great, that, if the materials are equally plentiful, they who uſe the machine, muſt underſel the others in a vaſt diſproportion. For, as in this inſtance, both are ſuppoſed to work only to live, proviſions can be in no part of the world dearer than another, in the proportion of 500 to one. A larger quantity wrought in a more compendious manner may call for as many hands, as a leſs quantity in a way more laborious. Theſe conſiderations tend to make up their numbers, which will be richer, more improved, and more ingenious, either to defend or acquire; for ingenuity is generally an over-match for ſtrength.

States without commerce regard chiefly the increaſe of numbers of inhabitants, and their home markets; and commercial ſtates conſider wealth alone, and foreign markets. Without prejudice to either, engines may be allowed in the following caſes. (1.) When they do ſuch buſineſs as cannot be performed by hand at all. Of this kind are pumps, fire-engines, water-engines, looms, wine and oil-preſſes, hand-mills for grain, and perhaps horſe-mills. (2.) Where the commodities wrought by them are ſuch as would not have been uſed at all, except they were done by the machine, either being not cheap enough, or not good enough for conſumption, when prepared by hand. Under this head are the mills for paper, thoſe for forging, drawing, ſlitting of iron, copper, or lead, fulling of cloths and leather, and making gunpowder.

A people without commerce may ſafely refuſe to admit ſtocking-looms, ſawing-mills, throwing-engines, weaving or ſpinning-engines, mills for ſtriking files, cutting watch-wheels, making nails, and all the variety of inventions produced by a rivalſhip amongſt nations contending for commerce, and private men for orders.

Commercial ſtates muſt have their eyes on their neighbours, and, if they deſign to engroſs foreign markets, muſt provide for the cheapneſs of labour at home. Goods muſt be made cheap, to render them of general uſe abroad and at home. Engines for ſhortening buſineſs ought to be rejected, or not admitted in commercial ſtates; when the commodity is not at all ſold abroad, when it affects not the price of labour, when the machines would leſſen our home markets, more than increaſe our foreign ones; which is, perhaps, the caſe with moſt of the laſt mentioned ones, many of which tend only to take the bread out of the hands of thouſands, and, by a ſhameful monopoly, to enrich one or two. And, if they were not moſt of them already admitted, one would not wiſh to ſee them in uſe here.

Of the natural cauſes of the riſe and decay of nations in wealth and power, with regard to the price of labour.

Let us ſuppoſe France in a middling ſtate, the land pretty well cultivated, and the proprietors rents pretty well paid; if in theſe circumſtances there happens a civil war, the proprietors will take party, ſome on one ſide and ſome on the other; they will engage and mortgage their eſtates, to lend money to the chief of their faction to ſupport his quarrel, ſince, if the oppoſite chief prevails, their lands and eſtates will be confiſcated, the undertakers will be diſheartened, the country rifled, the magazines and warehouſes plundered, and labour will be diſcouraged; ſo the land will not produce wherewithal to maintain the inhabitants, and to ſupply neceſſaries for the armies. The chiefs of the parties will be obliged to get ſtores and other neceſſaries from the neighbouring ſtates which are in peace, and conſequently they will ſend money out of France to pay for them.

This will gradually create a ſcarcity of money in France; beſides that great ſums will be buried, and that all barters in evaluation and credit will be diminiſhed, the uncertainty of the event of war will hinder marriages and multiplication, and the mortality in the war will diminiſh the inhabitants.

In this ſituation France will be in a deplorable condition, and in danger of being oppreſſed by a foreign power. A general plague in France will occaſion much the ſame miſchiefs.

Now let us ſuppoſe the civil war ended, the proprietors who received little or no rent during the troubles, and whoſe lands lay waſte and uncultivated, will now farm them out at a ſmall rent, as well becauſe the ſcarcity of money, which makes all commodities cheap, as becauſe they muſt encourage the farmers, in regard to the decreaſe of the inhabitants. As the rents are ſmall, they will live without luxury, and conſume little or no foreign commodities, which will be dear, ſince more money circulates on this hypotheſis in the neighbouring ſtates, than in France. The labourers and peaſants, by reaſon of the thinneſs of the inhabitants, will be encouraged, and, as they will conſequently find it eaſy to ſubſiſt, they will breed up a great number of children, and ſo France will become again very populous. The ſcarcity of money in France will make their commodities ſo cheap, that they will export great quantities of them, particularly if valuable manufactures are ſet up in France. So that France will in this caſe get a yearly balance, and fall naturally into the channels of trade. This will gradually bring great ſums of money into France, where it's plenty will begin to raiſe the price of all things, and where ſeveral undertakers will have amaſſed good ſums of money.

Now, ſince the prices of all things are riſen inſenſibly, the proprietors will raiſe the price of their eſtates, the increaſe of the inhabitants will make them offer to work for leſs ſuſtenance than at firſt; and, as there is plenty of money in circulation,

circulation, foreign commodities will come at a cheap price, the exportation of commodities will ſlacken becauſe of their dearneſs, and the neighbouring nations will be able to ſet up cheaper manufactures; and, as the buſineſs decreaſes in France, ſeveral French tradeſmen will go into foreign parts, where there is work for them, and improve the manufactures there. The quantities of money amaſſed by the French undertakers in the courſe of their buſineſs, while France gained the balance of trade, will encourage to ſpend more money, and conſume more foreign commodities, than uſual, as they are now cheaper; and the proprietors, with their additional rent, will do the ſame, and ſo luxury will come into faſhion. In the beginning of this turn of affairs, the balance of trade will be pretty equal, France being not yet quite beaten out of the channels of trade, but only beginning to loſe ſome branches of it. In this ſituation France is in it's acmé, or higheſt ſtate of power, having more ready money than the neighbouring ſtates, and conſequently the king can raiſe greater ſums from his ſubjects than at any time. But, as the increaſe of expence and luxury has taken root, 'tis remarkable thoſe who begin it ſeldom lay it aſide 'till they are undone; this will cauſe a continuance of the expence of foreign commodities, and, the exportation ſlackening and decreaſing in proportion, the balance of trade will turn againſt France, and their money will be ſent out annually in payment of the ſurplus of thoſe foreign commodities they conſume: and thus France will decline in it's wealth and power, by the decreaſe of the quantity of actual money, and the thinning of it's inhabitants, which it's luxury and decay of trade and manufactures will neceſſarily occaſion.

This example of France is hiſtorical. After the compoſing of the civil war there about 1652, the prime miniſter of the finances, Mr. Colbert, ſet up and encouraged fine manufactures there, and France lived ſeveral years without luxury, and few coaches were ſeen at Paris.

They gained greatly in the balance of trade, and Lewis the XIVth grew very powerful: money grew very plenty, and, about 1680, the balance of trade grew pretty equal, and luxury began; and then it would have naturally turned againſt France, which muſt have neceſſarily declined in proceſs of time, if that operation had not been haſtened by the expulſion of the Hugonots, which, by the money and inhabitants ſent out of the kingdom, haſtened the decline of France; which nevertheleſs did not happen viſibly, 'till about the year 1715, when ſhe was in peace.

The riſe and decline of all other kingdoms, naturally and abſtractedly from wars and conqueſts, are owing to cauſes of the like nature; and, when a nation gets a great plenty of money, and increaſes exorbitantly in it's paper circulation, it naturally tends to decline, by the dearneſs that happens of land, labour, and commodities; and the greateſt prudence of a legiſlator ſeems to be, when money and paper circulation are riſing to that plenty, to take methods to clog their circulation, and, if poſſible, to lock great ſums of money gradually and inſenſibly, to encourage the uſe of plate, and take any other methods than thoſe that naturally and commonly happen, which is to ſend it again to foreign parts, in payment of jewels, pictures, and other ornaments of luxury. The next eſſential thing to be done, alſo, is the gradual annihilation of their paper debts, and the taxes thereby occaſioned. If this could be effected, a ſtate would continue, by a reaſonable price of it's commodities, to keep up the channels of trade and exportation; but, where things go on in their natural courſe, the too great plenty of money, or paper credit, by enhancing the price of things, gives other rival nations an opportunity to take the trade into their hands, and to get the money along with it.

There ſeems to be but a limited quantity of trade in Europe: ſuppoſe that in the trade of the woollen manufacture, the quantity of foreign cloth conſumed in Italy, Spain, Portugal, Germany, Turkey, and the North, may amount to 30,000,000 ounces of ſilver, and that the cloth is chiefly ſupplied by England, France, Flanders, Holland, &c. That England is in the channel of exporting and ſupplying to the value of 15 millions; if it ſhould in any year ſupply 20 millions, it muſt be at the expence and diminution of the ſales of the others: and, if France ſhould get into the channel of ſupplying large quantities of woollen manufactures more than uſual, it would be probably ſo much taken away from the Engliſh trade.

Sir William Petty ſeems not to have had any thought of this limitation of conſumption, when he inſinuated, that it would be beſt for England to abandon the manure of the land, and make all the inhabitants turn tradeſmen, weavers, &c.

If we ſuppoſe there are 90 millions of inhabitants in Europe, it will not, perhaps, be found that one in 50 of the whole number conſumes yearly foreign manufactures: France and England principally conſume their own; and even the greateſt number of the inhabitants of all other countries are cloathed at home.

Let us ſuppoſe the circulating money of England to have been four millions ſterling, and the lands to be farmed out at 12 millions, the yearly produce of the land, according to the method of calculation we have followed, will be 36 millions; if, in proceſs of time, the circulating money of England comes to ſeven or eight millions, the rents of the land will naturally come to exceed 20 millions, without any other alteration than the increaſe of the quantity of circulating money; and whereas the lands of England might have been worth, at 20 years purchaſe, 240 millions, in the firſt ſuppoſition, they will, in the ſecond, be computed at 400 millions, for no other reaſon than becauſe from three to four millions additional money was introduced into barter, though the ſaid ſum ſhould be due to foreigners, and pays them a yearly intereſt, to the great diſadvantage of the Engliſh balance of trade.

Now if the ſaid ſum, from three to four millions, ſhould be ſent back to the foreigners, the rents of the lands would fall to 12 millions, as before; and here would appear, on computation, a vaſt decreaſe of the wealth of England, without any real decreaſe in the intrinſic value of the land and labour, and the annual produce of the land.

The more commercial labour there is in a ſtate, the richer the ſtate is eſteemed.

It has been judged, by experience, that the labour of 25 perſons is nearly ſufficient to provide meat, drink, apparel, houſing, and, generally, all the neceſſaries of life for 100 perſons: upon this ſuppoſition, the fare and cloathing are coarſe, but eaſy and plentiful: yet, as above one third of the inhabitants are either too old or too young to work, or ſick, or infirm, and that full one half are neceſſarily idle, or free from common labour: there would be ſtill, on this ſuppoſition, 25 adult working perſons, or thoſe capable of working, who would have nothing to do.

If the moſt part of theſe 25 perſons in 100 are employed to draw metals out of the earth, or to work fine cloth and fine linen, and to refine, by greater labour, the houſes, the utenſils, and other conveniencies of life, though they add nothing to the quantity of food of themſelves, nor to the quantity and neceſſary uſes of the cloathing; yet the ſtate will be eſteemed the richer for their labour: labour adds to the reliſh of food and drink, and to the ornament and conveniency of cloathing.

The more labour is employed in a ſuit of cloaths, the dearer it ſells, and the richer it is eſteemed. A knife and fork that are nicely wrought, taking up more labour, are dearer, and eſteemed richer, cæteris paribus.

It is true, that, whether the inhabitants wear fine or coarſe cloath, if equally laſting, and eat or drink, and are lodged nicely or coarſely, it is, in one reſpect, much the ſame thing, ſince coarſe and fine food and cloathing are equally conſumed; but, in the general notion, the ſtate that conſumes fine cloathing is eſteemed richer than that which conſumes coarſe, &c.

But when the additional labour of the 25 perſons, we mentioned, produces permanent wealth, as gold, ſilver, copper, &c. to ſerve for a corps of reſerve, whether by exchanging their labours with foreigners for thoſe metals, or digging them out of the ground, the ſtate is not only eſteemed richer, but is in every reſpect ſo; and more particularly if ſuch labour brings in gold or ſilver, for which, on any emergency, the ſtate may have, even from it's enemies, any thing it may ſtand in need of.

Wherefore the more labour there is in a ſtate, the richer it is eſteemed; and, if that labour be well applied, the richer in reality, and the more powerful, a ſtate is. For,

The point, which ſeems to determine the comparative ſtrength and riches of nations, is the corps de reſerve which they have; magazines of all things neceſſary for the uſe of man, exceeding the yearly conſumption, to anſwer in bad years and wars; or, foraſmuch as gold and ſilver anſwer all theſe things, the quantity of gold and ſilver ſeems to determine the comparative wealth and power of ſtates; for thoſe are permanent and laſting riches.

It is very adviſeable to encourage all ſorts of work and labour in a ſtate, ſince a ſtate is eſteemed the richer for it; but the labour which anſwers beſt, in caſe of war and difficulty, is the moſt to be encouraged. Diogenes, at the ſiege of Corinth, is ſaid to have fell a rolling his tub, that he might not be idle, when all others were at work. We would not recommend that ſort of labour; but, rather than have a perſon idle in the ſtate, we would recommend the working of toys and trinkets, that have a ſhew of ornament, though little of real uſe.

If all the proprietors of land had but juſt as much of it as they could overſee, and manage by themſelves, or as much as farmers commonly rent and overſee, without under officers to aſſiſt them; if the ſaid proprietors became the undertakers of ſuch their ſmall eſtates, they would keep few or no idle ſervants, few pleaſure-horſes; they would live without luxury, and, conſequently, the inhabitants of the ſtate would be more numerous, and more laborious, cæteris paribus. This makes it ſenſible, that a great inequality in eſtates is prejudicial to a ſtate, becauſe of the luxury and idleneſs which great eſtates commonly introduce. And whether a convent of 50 monks live on a large eſtate, or a lord with 50 ſervants and horſes, who do nothing but attend him, it ſeems pretty much the ſame thing in time of peace; but, in caſe of war, the lord, indeed, and his ſervants and horſes, may be uſeful, and is always an ornament; whereas the monks ſeem to be of no real uſe in peace or war, on this ſide heaven.

But

But the convents of all Mendicants are baneful in a ſtate; they are not only idle themſelves, and live upon the induſtry of others, but are an hindrance to labour in many reſpects, by their holy devices: the number of holydays in Roman Catholic countries, and other inſtitutions of devotion, ſeem to take off nearly one tenth part of the yearly labour of the ſtate.

Before we diſmiſs this head, it may not be improper to obſerve, that the French always outdo us in the price of labour: their common people ſubſiſt upon roots, cabbage, and other herbage; four of their large provinces live, as it were, intirely upon cheſnuts; and the beſt of them eat bread made of barley, millet, Turkey and black corn: ſo that their wages uſed to be ſmall in compariſon with ours.

The price of meat and wheat doth little concern the poor manufacturers, as they generally drink nothing but water, and, at beſt, a ſort of liquor which they call beuvcrage (which is water paſſed through the huſks of grapes, after the wine is drawn off) they ſave a great deal upon that account, for it is well known that our people ſpend half of their money in drink.

At Lyons, which next to Paris is the beſt city in France, they do not pay much above five-pence Engliſh money an ell for making luſtrings; and the price paid here for making luſtrings is above twelve-pence per ell.

In the paper-manufacture abundance of people are employed for ſorting rags in the mills, who can earn in France not two-pence a day; and the price paid here for ſuch work is from four-pence to ſix-pence a day.

The French working thus cheap, it is no wonder if they afford their manufactures at lower rates than their neighbours.

As this nation is our great rival in foreign commerce, it therefore becomes the wiſdom of the nation to meditate all reaſonable and practicable meaſures to remove every cauſe that tends to increaſe the artificial price of labour, and keeps us upon an inequality in trade with our competitors.

The LAWS of ENGLAND in regard to LABOURERS.

Who may be compelled to work, and how puniſhed on refuſal.

He who hath no lands of his own, or is not of ſome trade or myſtery to get a livelihood. Fitz. N. B. 168. b.

The churchwardens and overſeers, &c. may ſet ſuch perſons to work; and, if they refuſe, one juſtice may ſend them to the houſe of correction: ſo he may thoſe that refuſe to work for reaſonable wages.

Perſons brought up in huſbandry, or in any of the arts of trades, and not able to get a livelihood, if under thirty years of age, and having no viſible means to maintain themſelves but by labour, may be warned by two juſtices to get a ſervice by a certain day; and, if they neglect or refuſe to be hired for a year, they may be ſent to the houſe of correction, or bound over to the next aſſizes or ſeſſions, and to be of good behaviour in the mean time. Dalt. 116. 6 Eliz. c. 4.

One juſtice may put in the ſtocks, for two days and one night, ſuch as he in his diſcretion ſhall think fit to work, and command ſo to do, if they refuſe in the time of harveſt. 3 Eliz. c. 4.

Artificers muſt likewiſe work in hay-time and harveſt, and, if they refuſe, the conſtable ſhall put them in the ſtocks for the like time; and the conſtable therein neglecting forfeits 40s.

In hay-time and harveſt, labourers may go into other counties to work, but then they muſt have a teſtimonial, under the hand and ſeal of one juſtice, to ſignify that they had not work where they lived the winter before.

2. How long they muſt continue at work.

If they work by the day, or by the week, they muſt continue working from five in the morning 'till after ſeven at night, from the middle of March to the middle of September, and all the reſt of the year from twilight to twilight; only from March to September as aforeſaid, they are to be allowed two hours for breakfaſt, dinner, and drinking; and, from the middle of May to the middle of Auguſt, half an hour more for ſleeping; and all the reſt of the year an hour and a half for breakfaſt and dinner; and, for the abſence of every hour, the maſter may ſtop one penny out of the wages. 4 Eliz. c. 4.

3. Puniſhment for departing when they do work by the great.

If they depart before it is finiſhed (except for non-payment of wages agreed on, or with leave of the maſter, or being taken into the king's ſervice, or for other lawful cauſe) they are to be committed for a month, without bail, and to forfeit 5 l. to the party grieved, to be recovered by action of debt, &c. over and above the coſts and damages as by law may be recovered for ſuch offences.

4. For what wages they ſhall work.

The wages of artificers, labourers, and others, ſhall yearly be aſſeſſed by the ſheriff of the county; this by 5 Eliz. c. 4. But the juſtices of the peace, or the greateſt part of them reſident in the county, have the like power by ſtat. Jac. I. cap. 6. in their ſeſſions every Eaſter, or within ſix weeks after. This aſſeſſment, by ſtat. Eliz. muſt be certified under their hands and ſeals to the chancellor, &c. who thereupon ſends a proclamation into every county and corporation, before the 1ſt of September following, which the ſheriff, or chief officer, muſt cauſe to be proclaimed and inrolled by the clerk of the peace, before Michaelmas enſuing; but, if no alteration is made in the old rates, then there is no need of ſuch proclamation.

Every juſtice, &c. who ſhall be abſent at the taxing the wages, not being ſick, or not having ſome reaſonable excuſe, to be proved upon oath, and allowed by the reſt of the juſtices, ſhall forfeit 10 l. one moiety to the king, the other to the informer, to be recovered by action of debt, information, or otherwiſe.

5. The puniſhment for giving greater wages than what is allowed.

He who gives more wages, forfeits 5 l. and may be committed for 10 days without bail. He who takes more wages, and is convicted before two juſtices, or a head officer, ſhall be committed for 20 days; but a maſter may reward a ſervant as he pleaſeth, ſo as it be not by way of contract on the retainer.

6. The wages of labourers in the woollen trade.

By the ſtat. 1 Ann. all payments for work done in the woollen, linen, fuſtian, cotton, and iron manufactures, muſt be in current money, and not in cloth, victuals, or other commodities; and all the wooll, delivered to them to be wrought, ſhall be firſt weighed, and the true weight thereof declared. The offender, in either of thoſe caſes, forfeits to the labourer double the value of what ſhall be due for his work.

But, if the labourer ſhall be guilty of any fraud or fault in his work, then he muſt anſwer to the owner double the damages by him ſuſtained. Then as to determining the wages, demands, frauds, and deceits of labourers in woollen, &c. it muſt be by any two juſtices of the peace where the controverſy doth ariſe, who may examine witneſſes upon oath; but there lies an appeal from the order of the two juſtices to the next ſeſſions, after notice of the ſaid order, whoſe judgment ſhall be final; and, if for the appellee, then they may give coſts and charges.

REMARKS.

In a dictionary of trade, we have judged it neceſſary to introduce the article of LABOUR; in order to obſerve how, and in what manner, our taxes, as they are at preſent laid, enhance its price, and thereby augment that of our product and manufactures in general. This was moſt apparently the caſe, before the laſt war; and ſince we have accumulated, by that war, an additional debt, near equal to that we did, by the THREE PRECEEDING GREAT WARS, our GENERAL TAXES have multiplied, in proportion as our PUBLIC DEBTS have. To what degree this our additional weight of TAXES affects the price of labour throughout the kingdom in general, and in conſequence raiſes the prices of all our produce and manufacture, as well for foreign as home conſumption, is too ſenſibly felt and experienced to need further proof, or whole commerce and navigation labouring under the oppreſſion. See DUTIES.

LACE-MANUFACTURE, is a work compoſed of many threads of gold or ſilver, fine or otherwiſe, or of ſilk or linen, interwoven the one with the other, which is worked upon a pillow with ſpindles, or bones for bone-lace, according to the pattern deſigned. This is performed by the means of ſeveral pins, which are placed and diſplaced as the ſpindle is moved, upon which the threads are divided.

The fabric of lace has divers varieties and qualities, as that of net-work-lace, or bone-lace; alſo ſome with large, others with ſmall flowers, ſome in a looſe, others in a compact manner; ſome high-raiſed, others lower, and ſome very low-raiſed; one kind all of gold or ſilver-thread, or part of gold and part of ſilver; others of ſilk of divers colours, and others of linen-thread, extremely white.

The common uſe thereof is for the embelliſhment of dreſs, in regard to linens, ladies head-dreſſes, the altar ornament of churches.

In France, the ſale of lace makes a part of the mercery buſineſs.—The milliners deal only in that of white linen.

The manufacture of gold and ſilver-lace in France is carried on moſtly at Paris, Lyons, and the adjacent villages belonging thereunto.

The fineſt ſilk lace is made at Fontenay, Puiſſieux, Morgas, and the Louvre; the ordinary ſort is manufactured chiefly in France, at St Denis, Montmorency, Villiers le Bel, Carcelle, Ecouan, St Brice, Groſlat, Giſors, St Pierre des Champs, Eſtrepagny, Doumeſnil, and in ſome other places in the neighbourhood of theſe cities, bourgs, and villages.

At the Louvre they manufacture particularly the greateſt part of the raiſed black ſilk-lace for womens ſcarves.

The principal places from whence the fine white lace comes, are Antwerp, Bruſſels, Malines, Louvain, and Gand, all cities of Spaniſh Flanders; alſo Valenciennes, Liſle, and ſome other places of French Flanders; Charleville, Sedan, Le

Comté de Bourgogne, Loraine, Liege, Dieppe, Havre de Grace, Honfleur, Harfleur, Pont L'Eveſque, Giſors, Feſcamp, Caën, and other cities of the province of Normandy; Arras, Bapaume, and other places of the county of Artois; Le Puy in Velay, ſome places of Auvergne and Picardy, the Louvre in Paris, St Denis in France, Montmorency, Villiers le Bel, &c.

The fineſt and moſt beautiful thread-laces are thoſe of the Spaniſh Flanders, next to which are thoſe of French Flanders; among which are diſtinguiſhed the true Valenciennes, then thoſe of Dieppe, and next thoſe of Havre and Honfleur: for, with regard to thoſe of other places, they are but ordinary, and of a middling price, although there is no inconſiderable vent for them.

The greateſt part of the laces, as well of gold and ſilver as of ſilk and thread, which are made in France, are conſumed in the kingdom. There is but little except thoſe of ſilk, and particularly thoſe of the black ſpecies abovementioned, whereof they make any conſiderable export into Spain and Portugal, and into the Spaniſh Indies, Germany, and Holland.

The French fabricate particularly a ſort of white thread-lace, for the commerce of the Spaniſh Weſt-Indies. It is compoſed only of large flowers, without net-work, or bars. This kind was formerly greatly in faſhion; but, at preſent, they wear none of it; in Flanders they manufacture the moſt of this kind.

Of the principal LAWS of France in regard to LACE.

The mark upon thread-laces which come from Flanders, the Low Countries, and England, as likewiſe that of point from Genoa and Venice, and other foreign countries, was eſtabliſhed in France in the year 1660, by royal ordonnance.

In 1664, it was united to the leaſe of the five groſs farms.—In 1667, by a declaration of the king, a tariff took effect, conformably to which the duties of this mark ſhould be paid; which tariff was afterwards confirmed, and it's execution ordered by the arret of the council of ſtate of 1681, of which we ſhall ſpeak preſently.

To this year the mark upon lace had not been eſtabliſhed and practiſed, except in the juriſdictions of the cuſtom-houſe of Lyons, for the point, which was imported from divers parts of Italy, particularly from Venice and Genoa.

In 1680, the king's farmer of the revenues, Monſ. Boutet, having paſſed a leaſe to the Sieurs Joly and Fariole, of the under-farm of the impoſt-duties upon thread-laces of Flanders and the Low Countries, was obliged, in order to enable the leſſees duly to enjoy it, to preſent a petition to the royal council, that the declarations, ordonnances, arrets of council, leaſes of the farms, and tariffs of the king, ſhould be executed according to the form and tenor thereof; to which the king having regard, his majeſty ordered, by an arret of the 8th of April, 1681, that all merchants, carriers, and others who brought Flanders lace into the kingdom, ſhould be obliged to paſs through the juriſdiction of Peronne, and repreſent the ſame to the ſaid juriſdiction, in order to have ſuch lace duly marked, with the farmer of that revenue's mark, at both ends of each piece of the ſaid lace, and to pay the cuſtoms due, according to the declaration of his majeſty, and the tariff made by the council the 18th of April, 1667; which laces, and the acquittals of the payment of ſuch duties, merchants and others were obliged to lay before the juriſdiction of the ſaid farms eſtabliſhed in the city of Paris, to be there viewed and examined, upon pain of confiſcation, and a fine of 3000 livres, &c. which was executed as well in the juriſdiction of Peronne, for the laces which paſſed through there from the time of the ſaid arret, as in * the ſhops and merchants warehouſes for laces, which were before entered into the kingdom.

* This policy, in collecting the duties on foreign impoſts, may deſerve attention in other nations.

In 1682, the merchants complaining that their merchandize was opened and handled, in the ſaid juriſdiction of Peronne, they having no correſpondence there to take the care of them, the merchants and farmers of the revenue unanimouſly agreed, that the laces ſhould paſs only by Peronne, where ſhould be taken ſecurity for their paſſage to Paris, where they ſhall be marked, and the duties paid, which has been practiſed ever ſince.

The duties on importation and exportation out of the kingdom, and the provinces reputed foreign, for all ſorts of lace, are paid by weight; and the duties are more or leſs, according to the different ſpecies and qualities, and the places of their fabrication.

Of the principal LAWS of England with regard to LACE.

Gold or ſilver thread, lace, fringe, or other work made thereof, or any thread, lace, fringe, or other work made of copper, braſs, or any other inferior metal, or gold or ſilver wire or plate, imported, to be forfeited and burnt, and 100l. paid by the importer, for every pareel ſo imported. 10 Ann. cap. 26. ſect. 65. and 15 Geo. II. 20. 7.

The allowance on gold and ſilver lace, thread, and fringe, exported.

By 10 Ann. cap. 26. §. 62. from 1 July 1712, for 32 years. By 3 Geo. I. cap. 7. §. 1. thence continued for ever.

Upon ſufficient ſecurity before ſhipping, that the goods ſhall not be relanded in Great-Britain, and oath before the cuſtomer or collector of the port, that they were actually made after the firſt of July 1712, of the plate-wire ſpun upon ſilk, the exporter thereof to foreign parts is to have the following allowances, viz.

Gold lace, thread, or fringe, the pound avoirdupoiſe weight, 6s. 8d.

Silver lace, thread, or fringe, the pound avoirdupoiſe weight, 5s.

To be paid out of the duties on gilt and ſilver wire, by the collector, or the commiſſioners, by a debenture from the collector of the cuſtoms, expreſſing the kinds and quantities, and the ſhipping teſtified by the ſearcher. 10 Ann. cap. 26. §. 62.

Foreign bone-lace, band-ſtrings, cut work, embroidery, fringe needlework, made of thread or ſilk, and buttons of all ſorts imported, forfeited; the importer liable to 100l. and the ſeller to 50l. 3 Ed. IV. cap. 3. §. 1.—1 Rich. III. cap. 10. §. 1.—19 Hen. VII. cap. 21. §. 1.—5 Eliz. cap. 7. §. 1.—13 and 14 Car. II. cap. 13. §. 2.—4 and 5 W. and M. cap. 10. §. 2.—9 and 10 Will. III. cap. 9. §. 1.—11 and 12 Will. III. cap. 11. §. 1.

Except thread bone-lace not made in the dominions of the French king, or the duke of Anjou. 5 Ann. cap. 17.

Of the form of the cuſtom-houſe buſineſs relating hereunto.

3d of March 1730.—No. 35.

In the Taviſtock of London, Daniel Bright maſter, for Jamaica.

Roger Granger.

Twenty-four pounds one ounce of ſilver lace,
Twenty-eight pounds ten ounces of gold thread,
Ten pounds five ounces of gold fringe,
} value at 200l. in all.

William Brooks [the maker] maketh oath, That the twenty-eight pounds ten ounces of gold thread, twenty-four pounds one ounce of ſilver lace, and ten pounds five ounces of gold fringe, avoirdupoiſe weight, above-mentioned, were all made ſince the firſt day of July 1712, and were all made of plate-wire ſpun upon ſilk.

William Brooks.

Jurat 3 die Martii 1730, coram me
A. B. Collector of the cuſtoms.

And, before the ſaid goods are ſhipped off, ſufficient ſecurity muſt be given to the collector of the cuſtoms, for the due exportation, in the following manner:

A bond for the exportation of gold and ſilver lace, thread, or fringe.

Noverint univerſi, &c.

Whereas the above-bounden Roger Granger hath this day entered outwards in the port of Southampton, on board the Taviſtock of London, Daniel Bright maſter, for Jamaica, twenty-eight pounds ten ounces of gold thread, twenty-four pounds one ounce of ſilver lace, ten pounds five ounces of gold fringe, avoirdupoiſe weight, all made ſince the firſt day of July 1712, and made of plate-wire ſpun upon ſilk: and, whereas the ſaid Roger Granger, upon the exportation of the ſaid gold thread, ſilver lace, and gold fringe, for foreign parts, is to have an allowance or drawback, according to an act of parliament of the tenth year of the reign of her late majeſty queen Anne, on that behalf made:

Now the condition of this obligation is ſuch, That if the ſaid gold thread, ſilver lace, and gold fringe, and every part thereof, ſhall be ſhipped, and really and truly exported into parts beyond the ſeas, and that the ſame, or any part thereof, ſhall not be relanded, or unſhipped with intent to be relanded, or brought on ſhore again in any port or ports of Great-Britain: then this obligation to be void, or elſe to remain and be in full force, effect, and virtue.

Sealed and delivered in the preſence of

A. B. Collector. Roger Granger.
B. C. Comptroller. Daniel Bright.

A debenture for gold and ſilver lace, thread, and fringe.

* Roger Granger did enter with us the 3d day of March 1730, in the Taviſtock of London, Daniel Bright maſter, for Jamaica, twenty-eight pounds ten ounces of gold thread, twenty-four pounds once ounce of ſilver lace, ten pounds five ounces of gold fringe, all made ſince the firſt of July 1712, and of plate-wire ſpun upon ſilk, as appears by the oath of William Brooks.

A. B. Collector.
B. C. Cuſtomer.
C. D. Comptroller.

* 10 Ann. cap. 26. §. 62.

Bond

Bond is taken in the penalty of 38 l. that the above-mentioned gold thread, ſilver-lace, and gold fringe, ſhall be ſhipped and exported, and that the ſame, or any part thereof, ſhall not be relanded, or brought again into any part or parts of Great-Britain.

A. B. Collector.
C. D. Comptroller.

The twenty-eight pounds ten ounces of gold thread, twenty-four pounds one ounce of ſilver lace, ten pounds five ounces of gold fringe above-mentioned, were ſhipped the 6th of March preſent. Certified the 19th of March.

D. E. Searcher.
E. F. Surveyor.
F. G. Land-waiter.

REMARKS.

'Tis but few years ſince England expended, upon foreign lace and linen, not leſs than two millions yearly. As lace in particular is the manufacture of nuns, our Britiſh ladies may as well endow monaſteries as wear Flanders lace, for thus Popiſh nuns are maintained by Proteſtant contributions. This manufacture, in Flanders, not only employs the hands of nuns and other women, but of great numbers of the country peaſantry, who alſo work at it. The number of people employed all over Flanders in making lace is almoſt incredible, nor can the value be eaſily eſtimated *. This is a branch of trade that we may either do without, or elſe bring to perfection in time among ourſelves, ſo as, perhaps, to be able to export quantities of it †.

* The moſt celebrated places for this manufacture, are Anvers, Bruſſels, Malines, Louvain, and Ghent; in French Flanders, they make the beſt at Valenciennes and Liſle, and in ſeveral places in the province of Normandy. Great quantities of black lace made of ſilk, are alſo wrought at thoſe places, and vended in Germany, Spain, the Indies, &c. by the induſtrious inhabitants.
The manufacture of thread, in Flanders, has been alſo brought to a moſt ſurprizing degree of perfection: M. Savary informs us, that they have ſpun thread, at Malines, ſo fine as almoſt to eſcape the ſight, and the action of the very air eaſily breaks it. Thus, in order to ſpin it, the greateſt precaution is neceſſary. It was in this town that fine threads were firſt manufactured for making of lace; but they have, at Liſle and other places, come up to thoſe ſpun at Malines. Thread has been manufactured in theſe places, from 7 or 8 livres the pound weight, to above 400 livres; ſo that nothing can well ſhew the value of induſtry to a greater degree.

† At Bland, a town on the Stour, between Saliſbury and Dorcheſter, they make the fineſt lace in England. The author of the Tour through Great-Britain ſays, they ſhewed him ſome ſo exquiſitely fine, that he never ſaw better in Flanders, and which, they ſaid, was rated at above 30 l. ſterling per yard.

In Ireland, the Dublin ſociety in particular, have already, by premiums and other attempts, done great ſervice towards exciting a ſpirit of improvement and induſtry throughout that kingdom, and, from the encouragement lately given by his moſt ſacred majeſty for the ſame ends, it is to be hoped, that, in a little time, this kingdom may be made happily inſtrumental to Great-Britain, in vyeing with her rivals in trade, in many important branches, and, in conjunction with England, in this of lace among the reſt. The Cork ſociety alſo, to their great honour, follow the ſame ſteps, and have diſtinguiſhed themſelves of late by the ſame kind of proceeding: what may we not hope from ſuch a ſpirit? Several times and places have been famous for the advancement of the ſciences, ſuch as that of Philip and Alexander in Greece, the firſt Cæſars in Rome, the houſe of Medicis in Florence, and Lewis the XIVth in France. What theſe perſons and ages were to their reſpective countries, it is to be hoped, the laudable endeavours of the above-mentioned ſocieties, added to the royal bounty, will be to this kingdom.
As all the improvements in the lace manufacture, as well as in the linen in general, depend upon flax, too much care cannot be taken of the cultivation of this article to the laſt perfection in Great-Britain. See FLAX.
The lace manufacture in England has greatly improved within theſe few years, and is likely to arrive at as high perfection in this kingdom, as it is in any part of Europe, by the means of the honourable and laudable ſociety of Antigallicans, who have followed the example of the Dublin and Cork ſocieties, in reſpect to lace; and, by their well-judged premiums, have been lately inſtrumental to produce lace manufactured in England, to an extraordinary pitch of delicacy *.

* Auguſt 7, 1752, ſix pieces of bone-lace for mens ruffles were produced, the premium of 10 l. 10 s. adjudged to Mr. William Marriott of Newport-Pagnel, Bucks, for the beſt piece.—For the ſecond beſt 5 l. 5 s. to Mrs Elizabeth Waterman of Saliſbury.
May 8, 1753, 14 pair of needle work ruffles, the premium 5 l. 5 s. adjudged to Mrs Maria Maule of Stonecutter-ſtreet, London.—May 8, 1753, the ſecond beſt to Miſs Wiſſendall from Saxony.—The third beſt 2 l. 2 s. to Miſs Anne Clarke of Leominſter in Herefordſhire, 14 years of age.—6 Pair of lady's lappets, the premium 15 l. 15 s. adjudged to Mrs Lydia Maynard of Honiton.—The ſecond beſt to Mrs Mary Channon of Lynn Regis Dorſetſhire.—The third of 5 l. 5 s. to Mrs Mary Bere of Lynn Regis Dorſetſhire.

GOLD and SILVER LACE. This manufacture depends on the art of GILDING and WIRE-DRAWING. And thoſe arts depend on the ductility of gold and ſilver.
To give ſome idea of this extraordinary property, to which we have occaſion to refer.
Our gold-beaters and wire-drawers furniſh us with abundant proof of this property: they every day reduce gold into lamellæ, or leaves inconceivably thin; yet without the leaſt aperture diſcoverable, even by the microſcope: a ſingle grain of gold may be ſtretched under the hammer into a leaf that will cover a pretty large houſe, and yet the leaf remain ſo compact, as not to tranſmit the rays of light, nor even to admit of the tranſudation of the ſpirit of wine.
Dr Halley took the following method to compute the ductility of gold: he learnt from the wire-drawers, that an ounce of gold is ſufficient to gild a ſilver cylinder of 48 ounces weight; which cylinder may be drawn out into a wire ſo very fine, that two yards thereof ſhall only weigh one grain, and conſequently 98 yards of the ſame wire only 49 grains. So that a ſingle grain of gold here gilds 98 yards, and of courſe the $\frac{1}{100000}$ part of a grain is here above $\frac{1}{3}$ of an inch long. And, ſince the $\frac{1}{3}$ of an inch is yet capable of being divided into 10 leſſer parts, viſible to the naked eye, it is evident, that the $\frac{1}{1000000}$ part of a grain of gold may be ſeen without the aid of a microſcope. Proceeding in his calculus, he found, that a cube of gold, whoſe ſide is the $\frac{1}{100}$ part of an inch, contains 2,433,000,000 viſible parts: yet, though the gold wherewith ſuch wire is coated, be ſtretched to ſuch a degree, that there is not any appearance of the colour of the ſilver underneath.
Mr Boyle, examining ſome leaf-gold, found that a grain and a quarter's weight took up an area of 50 ſquare inches: ſuppoſing, therefore, the leaf divided by parallel lines $\frac{1}{100}$ of an inch apart, a grain of gold will be divided into 500,000 minute ſquares, all diſcernible by a good eye. For the ſame author ſhews, that an ounce of gold, drawn out into wire, would reach 155 miles and a half *.

* See Boyle's Abr. Vol. 1. p. 405.

Monſ. Reaumur has carried the ductility of gold a greater length: a gold wire, every body knows, is only a ſilver one gilt. This cylinder of ſilver, covered with leaf-gold, they draw through the hole of an iron: and the gilding ſtill keeps pace with the wire, ſtretch it to what length they can. Now M. Reaumur ſhews, that, in the common way of drawing gold-wire, a cylinder of ſilver, 22 inches long and 15 lines diameter, is ſtretched to 1,163,520 feet; or is 634,692 times longer than before, which amounts to above 97 leagues. To wind this thread on ſilk for uſe, they firſt flatten it; in doing which it ſtretches at leaſt $\frac{1}{7}$ further, ſo that the 22 inches are now 111 leagues: but, in the flattening, inſtead of $\frac{1}{7}$ thy could ſtretch it $\frac{1}{4}$, which would bring it to 120 leagues. This appears a prodigious extenſion, and yet it is little.
The cylinder of ſilver might have been covered with one ounce of gold only, inſtead of ſix, as ſuppoſed: the gilding, indeed, in this latter caſe, will be but thin; ſtill it will be gilding, and no point but will have it's coat of gold. On this foundation Reaumur computes, that the thickneſs of the gold-leaf on the wire is $\frac{1}{240000}$ of a line. He adds, that, as the leaf gold is not every-where the ſame thickneſs, but at leaſt twice as thick in ſome parts as other, in the thinneſt parts it will not be above $\frac{1}{525000}$ part of a line, or the 6,300,000th part of an inch.
Yet this is not the furtheſt the artiſt can go: in flatting the wire gently between two wheels, it may be extended to double the breadth hitherto ſuppoſed; in which caſe the thickneſs of the leaf will be reduced to leſs than a millionth part of a line, or a twelve millionth of an inch.
Yet after all, putting a piece of this gilt wire in aqua fortis [ſee AQUA FORTIS] the ſilver will be diſſolved, and the gold left a perfect continuous tube *.

* Mem. de l'Acad. An. 1713.

This force of coheſion in the parts of gold, which appear ſcarce leſs than infinite, depends on it's being freed from common ſulphur: for mix but one ſingle grain of ſulphur with 1000 grains of gold, the maſs ceaſes to be malleable, 'till the ſulpher be evaporated. Hence we have a ſtrong preſumption, that the leſs coheſive metals, tin, copper, and iron, contain a large quantity of ſulphur.
The immenſe diviſibility of gold is learnt from another experiment.—Take a pound of ſilver, and fuſe it with a ſingle grain of gold; the gold will diffuſe itſelf equally through every minute particle of the ſilver; ſo that taking a grain of the maſs, and diſſolving it in aqua fortis, you will find a quantity of gold fall to the bottom, which bears preciſely the ſame proportion to the grain of gold, as the gold in the maſs had in the whole maſs.

The wire and thread we commonly call gold-thread, &c. which is only ſilver wire gilt, as before obſerved, is drawn from a large ingot of ſilver, uſually about 30 pound weight. This they round into a cylinder, or roll about an inch and a half in diameter, and 22 inches long; and cover it over with the leaves prepared by the gold-beaters, laying one over another, 'till the cover is a good deal thicker than that in our ordinary gilding: and yet even then it is very thin, as will be eaſily conceived from the quantity of gold that goes to gild the 30 pound weight. Two ounces ordinarily do the buſineſs, and frequently little more than one. In effect, the full thickneſs of the gold on the ingot rarely exceeds $\frac{1}{400}$, or $\frac{1}{500}$ part, and ſometimes not $\frac{1}{1000}$ part of an inch.

But this thin coat of gold muſt be yet much thinner: the ingot is ſucceſſively drawn through the holes of ſeveral irons, each ſmaller than other, 'till it be as fine, or finer than a hair. Every new hole leſſens it's diameter, but it gains in length what it loſes in thickneſs, and conſequently increaſes in ſurface. Yet the gold ſtill covers it, that following the ſilver in all it's extention, and never leaving the minuteſt part bare, not even to the microſcope. Yet, how inconceivably muſt it be attenuated, while the ingot is drawn into a thread, whoſe diameter is 9000 times leſs than that of the ingot.

M. Reaumur, by exactitude of weight and computation, found, that one ounce of the thread was 3232 feet long, and the whole ingot 1,163,520 feet, Paris meaſure, or 96 French leagues, equal to 1,264,400 Engliſh feet, or 240 miles Engliſh: an extent, which far ſurpaſſes what Father Merſenne, Furetier, Dr Halley, &c. ever dreamt of.

Merſenne ſays, that half an ounce of the thread is 100 toiſes, or fathoms long; on which footing, an ounce would only be 1200 feet; whereas M. Reaumur finds it 3232, &c. according to what has been already obſerved.

The method of drawing ſilver is the ſame with that of gold, except that the latter is gilt or covered with gold, and the other is not.

There are alſo counterfeit gold or ſilver wires: the firſt made of a cylinder of copper ſilvered over, then covered with gold; and the ſecond of a like cylinder of copper ſilvered over, and drawn through the iron, after the manner of gold and ſilver wire, and this again is gilt.

And a great quantity of the French gold and ſilver lace is certainly made of this ſort, which is too often paſſed upon the world for other. This may deſerve the regard of thoſe, who are ſo mighty fond of French lace, to the detriment of the Britiſh gold and ſilver lace manufacture, which is in general of a far ſuperior quality, wears far preferably, and will fetch more after it is worn out, from the intrinſic value of the gold and ſilver.

The LAWS of England with regard to gold and ſilver LACE.

No metal inferior to ſilver ſhall be ſpun on ſilk, under penalty of 5 l. an ounce. Silver wire for making ſilver thread ſhall hold at leaſt 11 ounces 15 pennyweights of fine ſilver upon the pound Troy weight; and all ſilver gilt, and uſed in the wire-drawers trade, ſhall hold at leaſt 11 ounces 8 pennyweights of fine ſilver, for every pound Troy weight; and ſhall not have leſs than four pennyweights four grains of fine gold, without allay, laid on each pound of ſilver, on penalty of five ponnds per ounce. For gold and ſilver prepared as beforeſaid, and reduced into plate, there ſhall be allowed ſix ounces of plate to five ounces of ſilk. A penalty of 2s. 6d. per ounce for ſelling gold and ſilver lace mixed with any other metal, and 5 s. per ounce for ſelling by any other than Troy weight: no gold or ſilver thread, &c. made of copper or other inferior metal, or gold or ſilver wire or plate, ſhall be imported, on pain of being forfeited and burnt, and 100l. on the importer for each parcel.

LADING. See BILLS of LADING, CHARTER-PARTIES, FREIGHT.

LAGAN, or LAGON, in our ancient marine laws, ſignifies goods ſhipwrecked, left by the ſea, lying on the ſand, either aſhore, or out at ſea. See FLOTSAM, JETSAM, and WRECK.

LANCASHIRE in England. This county has Yorkſhire on the eaſt, and the Iriſh Sea on the weſt, Weſtmoreland on the north, and Cheſhire on the ſouth, and is about 170 miles in circuit.

The air is ſerene and healthy, and the ſoil for the moſt part fruitful, yielding ſtore of wheat, barley, and oats; and the paſture ſo nouriſhing, that their cattle are uſually of a larger ſize than in other counties. Here is plenty of timber, coal and cannel coal-pits, with mines of lead, iron, and copper, antimony, black-lead, lapis calaminaris, beſides allum, brimſtone, and green vitriol, found in ſome of the coal-pits.

It's chief rivers are the Merſey, Ribble, Wire, Lon, and Ken; all which abound with fiſh. Another river, called the Irke, is noted for eels, reckoned the fatteſt in England, and too luſcious for common digeſtion; which is aſcribed to the greaſe and oils from the woollen cloths milled in it.

LANCASTER, the ſhire town, ſtands near the mouth of the river Lon. It is a populous thriving corporation, with a tolerable harbour and a cuſtom-houſe. Veſſels of 70 tons go from hence to America, with hard-ware and woollen manufactures; but the country hereabouts is ſo thinly peopled, by reaſon of it's barrenneſs, that it cannot take off the ſugars imported.

PRESTON on the Ribble, may, for it's beauty and bigneſs, compare with ſome cities. It is plentifully ſupplied with fiſh, coal, and other commodities.

LIVERPOOL is a large and populous town, and the moſt flouriſhing ſea-port in theſe parts, pretending to rival, if not to excel Briſtol, it's cuſtoms being increaſed eight or ten fold within theſe forty years paſt. The inhabitants are univerſally merchants; and, notwithſtanding their out-of-the-way ſituation, drive an incredible trade, with great ſucceſs, and very large ſtocks, to all the northern parts of the world, as to Hamburg, Norway, and the Baltic, to the Britiſh colonies in America, to Guinea and Ireland, and alſo to France, Spain, Portugal, and Italy; ſo that there is no trade but that of Turkey, Greenland, and the Eaſt-Indies, in which they are not concerned. As it imports almoſt all kind of foreign goods, it has conſequently a large inland trade, and ſhares that to Ireland and Wales with Briſtol, as follows: as Briſtol trades chiefly to the ſouth and weſt parts of Ireland, from Dublin in the eaſt to Gallway weſt; this town has all the trade of the eaſt and north ſhores, from Dublin to Londonderry: as Briſtol has the trade of South Wales, this has great parts of that of North Wales: as Briſtol has the ſouth weſt counties of England, and ſome north of it, as high as Bridgenorth, if not to Shrewſbury, Liverpool has all the north counties, beſides what goods it ſends to Cheſhire and Staffordſhire, by the new navigation of the rivers Merſey, Weaver, and Dane, even ſo near to the Trent, that it's goods are carried by land to Burton. The merchants of Liverpool are alſo concerned with thoſe of Londonderry, in the fiſhery on the north coaſt of Ireland. There is a navigation from hence farther up the Merſey, even for ſhips of burden, as high almoſt as Warrington; and alſo up the ſouth channel, called the river Weaver; but it is chiefly for two things, 1. For rock-ſalt, which is dug out of the earth, both in this county and Cheſhire, and ſhipped off here in great quantities, not only to neighbouring parts, but to London, Colcheſter, and ſeveral other places in the ſouth of England, where it is diſſolved in ſea-water, and boiled again into a ſtronger and finer, as good as that ſort called ſalt upon ſalt, made by the Dutch of the St Ube's ſalt, and with which they cure their herrings. 2. For great quantities of Cheſhire cheeſe ſhipped here.

REMARKS in 1764.

By an authentic account we have from Liverpool this year 1764, there were lying in that port the following veſſels; viz. 81 ſhips, 27 ſnows, 67 brigs, 6 ſchooners, 3 doggers or ketches, 141 ſloops; and only one ſhip and four brigs ſailed; which reduced the number to 351 veſſels lying in this harbour at the ſame time: an inſtance not to be equalled by any port belonging to Great-Britain, except the mother-port of London; eſpecially when we conſider that none of the merchants ſhips were accidently forced into this harbour by contrary winds.

WARRINGTON ſtands on the Merſey, and is a populous and rich town, full of good country tradeſmen, and has a particular market every week for linen, which is generally that called huckaback, the manufacture of it's neighbourhood; and it is ſaid that at leaſt 500l. worth, and ſometimes much more, is ſold every market-day.

MANCHESTER, as an inland town, has perhaps the beſt trade of any in theſe north parts. The fuſtian manufactures, called Mancheſter cottons, for which it hath been famous for almoſt 150 years, have been very much improved of late, by ſome inventions of dyeing and printing; which, with the great variety of other manufactures known by the name of Mancheſter goods, as ticking, tapes, filletting, and linen cloth, inrich not only the town, but the whole pariſh, and render the people induſtrious. The weavers have looms here that work 24 laces at a time, an invention for which they are obliged to the Dutch *.

* How far it may be good policy for a commercial ſtate to make uſe of machines to leſſen the price of labour, ſee the article LABOUR, towards the concluſion, alſo the article MACHINE.

ROCHDALE is another town of good trade, being of late years much improved in the woollen manufacture.

BURY is a town alſo of good trade. It is the utmoſt bound of the fuſtian-manufacture, and drives a conſiderable trade in coarſe goods, called halfthicks and kerſeys, for which here is a very great market, though the town lies ſo much out of the way, and at the foot of the mountains, that otherwiſe it would not be much frequented.

BOLTON is a ſtaple for fuſtians of divers ſorts, eſpecially thoſe called Augſburg and Milan fuſtians, which are brought to it's fairs and markets from all parts of the county.

ORMSKIRK is a handſome town, with a good inland trade.

HAWKSTEAD has a good trade in cloth, in that part of the county called Fowrneſs, towards Cumberland and Weſtmoreland.

LANDED INTEREST.

The reaſon why the decline of foreign trade ſinks the value of LAND.

Firſt, By ſinking the markets at home.

For, the produce of land being rendered exceſſively dear, from the cauſes below enumerated *, foreigners will not take it's ſuperfluities; and labour being by the ſame cauſes rendered exceſſively dear too [ſee the article LABOUR] we cannot manufacture or improve that produce, nations that can afford cheaper ſupplying the markets abroad; ſo that the produce of the lands, not being carried off as uſual, muſt become a dead ſtock on the farmers hands, and cauſe great quantities to be crowded into the markets, where being encouragement but for few buyers, the price naturally falls: as, for inſtance, the declining demand for our woollen goods abroad falls the price of wool at home.

* The foreign trade of every country muſt decline, that
1. Lays unequal taxes in general on it's people. See the articles LABOUR and TAXES.
2. That cramps it's commerce, the fountain of riches, by high duties, and impolitic prohibitions. See the articles DUTIES and BONDING of duties at the cuſtom-houſe, and the article CUSTOMS.
3. That ſuffers many monopolies. See the articles COMPANIES and MONOPOLIES.
4. That oppreſſes it's people by prohibiting the importation of victuals, under the pretence of raiſing the value of it's lands. See IRELAND, remarks thereon.
5. That encourages idleneſs by bad laws relating to it's poor. See the article POOR.
6. That tempts foreigners to carry away it's coin for leſs than it's intrinſic value. See the articles COIN and MONEY.
7. That makes the obtaining juſtice chargeable. See the articles CONSULS and MERCHANT [COURT MERCHANT.]
8. That ſuffers a heavy national debt, contracted in time of war, to continue unpaid in time of peace. See DEBTS [NATIONAL DEBTS], CREDIT [PUBLIC CREDIT], FUNDS.

Suppoſe that, in 1669, we exported to Turkey 40,000 cloths, the value of raw wool in each being 2l amounts to — — —	l. 80,000
Suppoſe that, in 1738, we exported to Turkey 8000 cloths, the value of raw wool in each being 1l. 10s. amounts to — —	12,000
The difference of the value of wool exported in thoſe two years — — — —	l. 68,000

Wools of this value, lying yearly on hand, muſt make a glut; the farmers puſh to ſell at market, but in vain, unleſs at under prices; for the wool-ſtaplers, finding the demand decreaſes, decreaſe in number themſelves; ſome break, ſome leave off trade, ſome take to other trades; for many ſellers, with great ſtocks on hand, and few buyers, naturally fall the markets; and the landlords preſſing the tenants for rent, and threatening to ſeize if payments are not made, the wool muſt be ſold at any rate to raiſe money; and there being yearly 68,000 l. leſs money brought into the nation, to be laid out in wool, than in former times, the price muſt be ſtill lower on that account; the lower the produce ſells, the leſs rent the farmer can give for the land; the worſe the markets, the greater arrears of rent the farmer runs into; and taxes, monopolies, &c. making neceſſaries grow dearer, and the decay of foreign trade making the wool ſell cheaper, muſt break him in the end, and then the farm is thrown on the landlord's hands, who, unwilling to fall the rent, keeps it in the management of ſtewards or bailiffs, whoſe profits and charges ſeldom make it pay the old rent, but generally ends in mortgaging the land, or ſelling it; and, as theſe caſes grow more frequent, more eſtates will be at market, and, conſequently, the leſs prices they will fetch.

Secondly, By increaſing the number of poor, to burden the land.

The poor, wanting employment, muſt be ſupported by the land; if foreigners give them work, they give them bread; but, when trade cannot maintain them, land muſt. When the poor's rates are heavier than the tenant can bear, the landlord muſt pay them, either by allowance in the rent, or by taking the farm into his own hands; or elſe by breaking of his tenant, who has paid that money to the poor's rates his landlord ſhould have received.

Suppoſe, in 1669, the labour of the above 40,000 cloths to have given employment to — — — — —	40,000 People
Suppoſe, in 1738, the labour of the above 8000 cloths to have given employment to	8,000 People
The difference is — — — —	32,000 People
Suppoſe theſe 32,000 people to have earned by their labour formerly, from foreigners, 6l. per annum each, it amounts to — — —	l. 192,000
But, wanting employment, they come on the pariſh, at 1s. 6d. per week each, which, for one year, amounts to — — —	124,800
The difference to the landholder, in one year is	l. 316,800

For as the land, by the decay of foreign trade, receives not the firſt ſum, and is, by the ſame cauſe, ſaddled with the latter, it makes an annual difference of the above ſums to the landholders in this ſingle branch of labour, and is the ſame in proportion for all other decayed branches of trade.

Thirdly, By decreaſing the ſtock of people.

For, as employment leſſens, the moſt induſtrious, rather than ſtarve here, will fly to other countries, where trade can maintain them; ſo, the conſumption of theſe being taken away, the demand at market muſt grow leſs; and, of courſe, rents muſt fall, yet the farmers charges muſt grow greater; for, the fewer hands, the higher wages are; this muſt break him in the end, and produce all the conſequences following that misfortune, mentioned in the firſt remark: beſides, it is men that trade, and bring in money, therefore, the fewer they are, the leſs money will be brought; and, the leſs money, the leſs rent can be given for land.

Fourthly, By decreaſing our riches.

This is a conſequence of the above three remarks; for having fewer goods capable of being exported, by reaſon of their dear price, and our manufactures declining, muſt in time be loſt: therefore the importation of foreign goods muſt naturally increaſe, and more money go out to pay for them.

Nations that have no mines of gold and ſilver, have no means to get them but by foreign trade, and, according to the degree of theſe metals they poſſeſs, the prices of their commodities, and therewith the value of their lands, riſe and fall in proportion; which I ſhall now prove.

The Britannia Languens, page 12, ſays, If there were but 500 l. in England, an ox could hardly be worth a penny; therefore the rent muſt bear it's proportion to the riches. This appears by Maitland's Hiſtory of London; for he ſays, that, in the year 961, land ſold at 1s. per acre. The reaſon the land then bore ſo low a price, was, the low price the produce ſold at; for he ſays, that, in the year 1000, an ox ſold for 2s. 6d. a cow for 2s. a ſheep for 1s. and a ſwine for 8d. This could be only owing to the little foreign trade the nation then had, and, conſequently, to the little quantity of gold and ſilver, trade had then brought in.

But if it ſhould be aſked, What is the reaſon that, at preſent, all things are naturally ſo much advanced in price, to what they were in thoſe days? The anſwer is, That the quantities of gold and ſilver brought to Europe ſince the progreſs made by the Spaniards and Portugueze in America, have made thoſe metals more common, and of leſs value than formerly, ſo that 20s. will hardly purchaſe what 1s. would before the diſcovery of the Weſt Indies *.

* Let there be added to this conſideration, that alſo the great increaſe of our national debts and taxes, in conſequence thereof, together with the circulation of the intereſt of the principal money of the public funds, and likewiſe that great circulation of paper credit in trade, occaſioned by notes and bills, in the way of private credit, which is deſtructive of our trade. See CREDIT [PRIVATE CREDIT.] Alſo the circulation of property by mortgages, and by means of the public ſecurities in general; for, although one is obliged to take annuities in payment, yet who would refuſe them on peculiar occaſions? Theſe things all conſpire to promote an artificial circulation of property, which raiſes the price of commodities, and has the appearance, with too many, of the riches of the nation; whereas theſe things are the characteriſtics of a declining condition, and that we ſtand in need of a quantity of real hard money to circulate what trade we have, and are therefore obliged to make uſe of paper credit, which is only it's repreſentative, and proceeds from our apparent neceſſities, not from our increaſe of ſolid treaſure. This is certainly the caſe, unleſs it can be proved, that our national debts, and the taxes on labour and commodities occaſioned thereby, are bleſſings, and that, the more we increaſe our debts, the richer the nation will be. Perhaps too ſome will attempt to perſuade us, that the more mortgages of land there are in the kingdom, and the oftener they are transferred, and the more private paper credit paſſes in trade, inſtead of ready caſh, the richer the nation is; but theſe are egregious miſtakes, and ought to be vigilantly guarded againſt; for, upon the annihilation of this ſhew of artificial wealth, the price of labour and commodities will fall to their natural value; which will be the means of ſo increaſing our trade, that our paper circulation will become realized by ſolid gold and ſilver; and then the price of labour and commodities will be reduced to a natural ſtate, according to the real, and not the imaginary riches of the nation. For further confirmation of theſe principles, ſee the articles DEBTS [NATIONAL DEBTS], CREDIT [PUBLIC CREDIT], DUTIES, FUNDS, LABOUR, MONEY.

The Spaniards and Portugueze do not throw away their gold and ſilver for us to pick up; we have no mines of theſe metals, therefore could not get ſuch quantities as we have, but by our trade to Spain and Portugal, or to thoſe countries that had an overbalance upon them, and were overbalanced by us.

So that the preſent natural price of land, and it's produce, is the proportion of gold and ſilver that foreign trade hath brought into, and left in the nation. If the preſent quantity was to be doubled by foreign trade, the natural price of land, and it's produce, muſt be ſo too; for, according to the price the farmer

farmer can ſell his commodity at market, he can pay for the rent of land, and no otherwiſe. If our foreign trade decays until the preſent money in the nation be half ſwept away, the produce of land muſt ſell for half the natural price it does now, and land muſt let at half the rent it naturally bears now: but if we ſhould go on declining, until we have no more money left in the nation than there was in 961 or 1000, the prices of land, and its produce, can be no more than they bore in thoſe days, taxes, &c. deducted.

Therefore, if the landed gentlemen have a mind to raiſe or ſink the value of their lands, the encouraging or diſcouraging our foreign trade is the only means to do either, ſo cloſely united are land and trade; their true intereſts are the ſame; they muſt ſtand or fall together.

The ſum of all is this: that

What foreigners take from others, inſtead of us,
What the poor have given them inſtead of buying — — — — — —
The ſcarcity of people — — — —
The ſcarcity of money — — — —
} Sinks the value of lands.

Taxes, monopolies, ill-judged laws, and national debts, are the cauſes of the decline of our foreign trade; the decline of foreign trade cauſes the above calamities, and they ſink the value of lands.

Before we conclude this point, we ſhall obſerve, that our chief intent, from what has been urged, is to remove that deſtructive prejudice ariſing from the falſe diſtinction of landing and trading intereſts, by ſhewing that there neither is, or can be any difference of intereſt between them; for whatever clogs trade, muſt ſink the value of lands, and that any benefit to trade, how remote ſoever it may ſeem from land, will at laſt terminate in the increaſe of it's value; therefore we may dare to affirm, that the giving trade the utmoſt encouragement is the greateſt and moſt ſolid improvement of the value of lands.

'It muſt be evident, ſays the author of Britannia Languens, 'page 290, that, were our trade eaſed as our neighbour nations, England would have the ſuperiority, ſince the ſame cauſes muſt produce greater effects in England, being invigorated with thoſe national advantages which no other nation doth or can enjoy.' See BRITAIN [GREAT-BRITAIN.]

REMARKS.

Of the effects of LAND-TAXES, compared with thoſe upon COMMODITIES.

As the benefit of taxes to the public reſults only from the nett income, and the evil to individuals extends not only to the groſs produce, but to every other expence and loſs incident and conſequential, that tax is moſt beneficial to the public, and leaſt injurious to the ſubject, which produces a large ſum through a cheap collection, and which is exempt from every other eventual charge.

To uſe a familiar inſtance: he who attends to his own affairs, lives upon his own land, employs but one ſteward, at a ſmall ſalary, to receive his rents, and buys at the firſt hand, may, from a ſmall and compact eſtate, thus conducted, ſpend and ſave more than the lord of an immenſe rental, widely diſperſed, gathered by many hands profuſely paid; he living at a diſtance, and purchaſing what he conſumes from the fourth or fifth retailer. That a land-tax is attended with the leaſt expence of any other whatſoever, that does produce not any thing near the nett ſum annually, is matter of fact.—Quære, therefore, whether LAND-TAXES are not far more beneficial to the public than TAXES ON COMMODITIES? How taxes upon commodities really affect the commerce of the nation, ſee the article LABOUR. It becomes neceſſary, however, to expatiate upon this important ſubject in other lights. As the good of our country ſhould be the only object of ſuch diſquiſitions, and truth the only medium through which it ought to be attained, advantage ſhall not be taken of a maxim favourable to the opinion here profeſſed, although it hath been long received, and is ſupported by the greateſt authorities.

The maxim in view is, That taxes, wherever laid, fall ultimately upon land; which with all due deference to thoſe who firſt eſtabliſhed it, and to thoſe who have ſince adopted, and argued from it, ſeems to go farther than reaſon and experience will warrant.

The arguments, by which it has been maintained, ſeem rather calculated to puzzle than convince; for, although every man cannot anſwer the premiſſes, yet ſcarce any will aſſent to the concluſion, 'That in fact, and in reality, all the taxes in 'this nation are paid out of it's lands.' And ſtrange it were if many agreed in the propoſition, for it is certainly falſe.

When a tax is laid upon any commodity, it becomes a circumſtance of expence, of the ſame nature with any other attending upon it. Therefore no reaſon ſeems aſſignable, why the tax ſhould neceſſarily fall upon land, that will not equally conclude for every other circumſtance, and for ſettling the whole charge of national expence and conſumption upon the ſame bottom.

But this is impoſſible: for it is agreed by the beſt authors of political arithmetic, that the rents of lands, houſes, and mines, are not more than $\frac{1}{4}$ part, and half of the annual expences of the nation.

In Sir William Petty's computation of 7 millions of people in England, who, one with another, expended, for their lodging, feeding, and cloathing, 7l. a head, the annual expence and conſumption of the whole people amounted to 49 millions: and Dr. Davenant's calculation of rents does not exceed fourteen.

The quantities are ſince, no doubt, conſiderably increaſed; but, as, moſt probably, the proportions remain very little unaltered, it is fair to argue upon them, as has been done by the beſt writers upon theſe ſubjects. But, Mr. Locke having treated of a tax upon land, a few extracts may not be improper from that incomparable author, which, with ſome reſtrictions, ſhall be applied to the preſent purpoſe.

'A tax laid upon land, ſays that great man, ſeems hard to 'the landholder, becauſe it is ſo much money going viſibly 'out of his pocket: and, therefore, as an eaſe to himſelf, 'the landholder is always forward to lay it upon commodities. 'But, if he will thoroughly conſider it, and examine the 'effects, he will find, he buys this ſeeming eaſe at a very 'dear rate; and, though he pays not this tax immediately 'out of his own purſe, yet his purſe will find it, by a greater 'want of money there at the end of the year than that comes 'to, with the leſſening of his rents to boot; which is a 'ſettled and a laſting evil, that will ſtick upon him beyond 'the preſent payment.

'To make this clear, let us ſuppoſe in the preſent ſtate of 'affairs in England, that the rents of England are 12 millions, and that the charge and neceſſities of the government require a ſupply of 3 millions from the parliament, 'which is laid on land.

'Here is $\frac{1}{4}$ part of his yearly income goes immediately out of 'the landlord and landholder's pocket. This is a burden very 'apt to be felt. The country gentleman, who actually pays 'the money out of his pocket, or finds it deducted out of his 'rent at quarter-day for taxes, ſees and very ſenſibly obſerves, 'what goes thus out of his eſtate: but, though this be a 'quarter of his yearly income, and, out of an eſtate of 400l. 'a year, the public tax now openly takes away one hundred; yet this influences not at all the yearly rent of the 'land, which the rack-renter, or under-tenant, pays; it 'being the ſame thing to him, whether he pays all his rent 'to the king or his landlord; or half, or a quarter, or none 'at all, to the king: the caſe is all one to him, what hand 'receives his rent when due: ſo trade flouriſhes, and his 'commodities go off well, he will be able to pay his rent 'on. This leſſens not any more the value of his farm, than 'an high or low chief rent does, paid out of it to the lord of 'the fee: the tenant's bargain and profit is the ſame, whether the land be charged or not charged, with an annuity 'payable to another man.

'But ſuppoſe, to ſhift off the burden from the land, ſome 'country gentlemen ſhould think fit to raiſe theſe 3 millions 'upon commodities, to let the land go free. Firſt, it is to be 'conſidered, that ſince the public wants require 3 millions '(for that we ſuppoſe for argument ſake, let it be 3 millions, 'or 1 million, that's all one) and ſo much muſt go into the 'king's coffers, or elſe the neceſſities of the goverment will 'not be ſupplied; that for raiſing theſe 3 millions on commodities, and bringing ſo much into the Exchequer, there 'muſt go a great deal more than 3 millions out of the ſubjects pockets. For a tax of that nature cannot be levied by 'officers, to watch every little rivulet of trade, without a 'great charge, eſpecially at firſt trial. But, ſuppoſing no 'more charge in raiſing it than of a land-tax, and that there 'are only 3 millions to be paid, 'tis evident, that, to do this 'out of commodities, they muſt to the conſumer be raiſed a 'quarter in their price; ſo that every thing, to him that uſes 'it, muſt be a quarter dearer.

'Let us ſee now, who at long-run muſt pay this quarter, 'and where it will light. 'Tis plain, the merchant and broker neither will nor can; for, if he pays a quarter more 'for commodities than he did, he will ſell them at a price 'proportionably raiſed *. The poor labourer and handicraftſman cannot, for he juſt lives from hand to mouth already; and, all his food, cloathing, and utenſils, coſting a 'quarter more than they did before, either his wages muſt 'riſe with the price of things to make him live, or elſe, not 'being able to maintain himſelf and family by his labour, 'he comes to the pariſh, and then the land bears the burden 'a heavier way. If the labourer's wages be raiſed in proportion to the increaſed rates of things, the farmer, who 'pays a quarter more for wages, as well as all other things, 'whilſt he ſells his corn and wool, either at the ſame rate, 'or lower, at the market (ſince the tax laid upon it makes 'people leſs forward to buy) muſt either have his rent abated, 'or elſe break and run away in his landlord's debt, and ſo 'the yearly value of the land is brought down. And who 'then pays the tax at the year's end, but the landlord; when 'the tenant, not able to raiſe his rent by his commodities,

* See that charge, and the conſequence of duties on commodities, proved under the articles LABOUR and TAXES.

'either runs away in his landlord's debt, or cannot be continued in the farm without abatement of rent? For, when 'the yearly charge in his farm is greater by the increaſe of 'the labourer's wages, and yet his produce ſells cheaper, by 'reaſon of the tax laid on his commodities, how will the 'farmer be able to make up his rent at quarter-day? For this 'may be worth our notice, that any tax, laid on foreign 'commodities in England, raiſes their price, and makes the 'importer get more for his commodities; but, on the contrary, a tax, laid on your native products and home-made 'commodities, leſſens their price, and makes them yield leſs 'to the firſt ſeller.

'If, therefore, the laying of taxes upon commodities does, 'as it is evident, affect the land that is out at rack-rent, it 'is plain it does equally affect all the other land in England 'too; and the gentlemen will, but the worſt way, increaſe 'their own charges; that is, by leſſening the yearly value of 'their eſtates, if they hope to eaſe their land by charging 'commodities. It is in vain, in a country whoſe fund is 'land, to hope to lay the public charge of the government 'on any thing elſe: there at laſt it will terminate. The 'merchant (do what you can) will not bear it, the labourer 'cannot, and therefore the landholder muſt: and whether he 'were beſt to do it, by laying it directly where it will at laſt 'ſettle, or by letting it come to him by the ſinking of his 'rents, which, when they are once fallen, every one knows, 'are not eaſily raiſed again, let him conſider.'

Some paſſages in the foregoing abſtracts ſeem to be too general, and, poſſibly, not quite conſiſtent with one another.

For it is not eaſy to conceive, if 'taxes laid upon commodi-'ties raiſe the price proportionably to the conſumer, why the 'farmer muſt ſell his corn and wool either at the ſame rate, 'or lower at the market;' or, if the reaſon aſſigned be a good one, that 'the tax, laid upon it, makes people leſs forward 'to buy,' why that reaſon ſhould not have the ſame operation upon other commodities, not ſo indiſpenſably neceſſary for the uſe of men; and, why 'a tax, laid upon our native product 'and home manufacture, may not make them yield leſs to 'others beſides the firſt ſeller.'

And it certainly often hath this effect. For, as the demand for commodities is proportioned to the quantity of money ſubſiſting in the market, traders muſt adapt their prices to that quantity; and, if additional taxes be laid, while the money, with which commodities are to be purchaſed, remains unincreaſed, they muſt be contented with ſmaller gains, or not trade at all. And the firſt part of the alternative will always be the caſe, where the profits of a flouriſhing trade may well ſupport ſome diminution.

When Mr. Locke ſays, 'that the merchant and broker nei-'ther will nor can bear a tax; that, if he pays a quarter 'more for commodities than he did, he will ſell them at a 'price proportionably raiſed,' theſe are propoſitions which ſeem too general: and that great maſter of reaſoning, in a ſubſequent paſſage, appears ſenſible, that they required ſome qualification; where, after an aſſertion, that, 'lay your tax 'as you pleaſe, the traders will ſhift it off from their own 'gain,' he ſubjoins theſe words, 'the merchants will bear 'the leaſt part of it, and grow poor the laſt.' And a little farther he ſays, 'a country may thrive, the country gentle-'man grow rich, and his rents increaſe (for ſo it has been 'here) whilſt the land is taxed: but I challenge any one to 'ſhew me a country, wherein there is any conſiderable pub-'lic charge raiſed, where the land does not moſt ſenſibly 'feel it, and, in proportion, bear much the greater part of 'it.'

Wherefore, although it be admitted, that Mr Locke's firſt poſition, taken in it's full extent, and without any limitation, is generally controvertible, yet it is concluſive as to our preſent ſituation; if it be confeſſed, that the lands of England are, in general, lett at too high a rent, and that our trade is injured by the taxes already laid upon it. For then the inference will be plain, what the farmer and trader cannot pay out of their gains, the land-owner muſt pay out of his lands, or the farmer will fail, and the trader become bankrupt. Whether, therefore, it is better to lay the taxes immediately on land, as Mr. Locke inſinuates, ſince the greateſt part of them terminate there, may deſerve conſideration; becauſe the expence, in collecting of ſuch taxes, bears no compariſon to thoſe that are laid upon commodities. For, how greatly the expence of theſe is enhanced, is proved under the article LABOUR.

Certain it is, that no good to the nation can be produced by taxes upon commodities. They may ſtarve the induſtrious, but they never will induce the idle and extravagant to labour, and to ſave for the benefit of his landlord; and the wiſdom of ſuch landlords, who, under ſuch pretences, would lighten their own burdens, by laying inſupportable weights on their tenants, is of a piece with that œconomy, which, to ſwell a large rental, beyond it's natural ſize, loſes, by a riſe of rents, much more in money than it gained upon paper. And it does not require much logic to demonſtrate, that, where the tenant is undone, the land muſt proportionably ſuffer.

In order to prove the evils ariſing to our trade from the heavy taxes with which it is incumbered, it were, perhaps, not juſt to conſult the opinion of actual merchants, who, upon this ſubject, are prejudiced judges. But,

The teſtimony of thoſe who have long withdrawn themſelves out of trade, hath ever been deemed the beſt authority; and, as ſuch, the late Sir Matthew Decker cannot be refuſed.

He tells us in favour of his ſcheme, that 'it would ſet the 'merchant and ſhopkeeper free from a multitude of falſe and 'vexatious, or frivolous informations, which may now be 'lodged againſt them: that the charge upon the revenue 'is now computed at above one million: that, as the duty 'upon merchandize imported from abroad, as well as upon 'our own exciſeable goods, amounts, on an average, to 'about 50 per cent.' (and, ſince Sir Matthew wrote, it hath been greatly increaſed, by a very great additional duty on imports) 'it would, continues he, enable the merchant, as 'well as the ſhop and warehouſe-keeper, to trade with half 'the ſtock, and make his profit the ſame, or rather increaſe 'it, in proportion to the leſſer ſum for which he can purchaſe 'the ſame commodity.

'It would alſo encourage the great merchants, when they 'buy any goods upon ſpeculation, as they call it, to keep 'the ſaid goods at home, and employ their own warehouſes; 'whereas, as the caſe now ſtands, they are, in prudence, 'obliged to ſhip off ſuch goods, as are intitled to a draw-'back of 30, 40, and even more per cent. for Holland, or 'other places; whereby Dutch ſhips are not only benefited, 'but we pay commiſſion, warehouſe room, and other inci-'dental charges, which our own people might put in their 'own pockets, and have the goods in their own poſſeſſion.'

The ingenious Mr. Wood, beſide much excellent reaſoning upon the ſame principle, refers us, for farther proof, to the cuſtoms, which, ſays he, 'ſince the additional duties and 'impoſitions on ſome ſpecies of goods, have not actually 'produced ſo much as before.'

It is computed by the Britiſh Merchant, that, out of 49,000,000l. expended and conſumed by our people at home, not more than 4,000,000l. are of foreign commodities.

There remains, therefore, 45,000,000l. for an annual expence and conſumption in home products and manufactures. Of theſe the land-owner can expend and conſume no more than his rents, and they are computed at no more than 14,000,000l. therefore, above two parts in three of home products and manufactures are expended and conſumed by all other denominations of our people.

Whatever is expended and conſumed at home, or exported into other countries, whether of home or foreign commodities, is the fruit of our lands, of the labourer and artificer, or is purchaſed by theſe fruits.

In 1713, the Britiſh Merchant computed our imports at 5,000,000l. and our exports at 7,000,000l. Of theſe one million he ſuppoſes to be of foreign commodities. Therefore, even at that time, our own conſumption and foreign exportation amounted to 56,000,000l.

But, whatever is produced by land, by the labourer and artificer, is paid for by thoſe, who rent lands, and employ labourers and artificers. Therefore, the farmer and trader contribute three parts in four, more than the land-owner can, to the employment of our people, and to the wealth and expences of the nation.

Landed men are, quatenus ſuch, of advantage to the public, only in what they ſpend: traders are of advantage, by what they ſpend and by what they gain; and the gains of traders exceed their expences. A riſe of rents can only be through an increaſe of employment, ſince lands can only riſe by an increaſe of products and manufacture, and theſe are the fruits of labour and art. But land-owners, as ſuch, can give no increaſe to employment, without a previous increaſe of rents.

Therefore they muſt be indebted for all ſuch augmentations to trade, and to an increaſe of trade. If Dr. Davenant ſpeaks truth, the whole rental of England, in 1600, did not exceed ſix millions, and the price of lands was 12 years purchaſe. In 1688, the rental was 14 millions, and the price of land was 18 years purchaſe: ſo that, within this period, the landed intereſt roſe from 72 to 252 millions. And, in ſo much at that time, it ſtood indebted to an increaſe of trade. From the ſame cauſe, circulating by induſtry through innumerable different channels, life, and ſtrength, and ſpirit, were proportionably derived to the whole: neceſſaries to the poor, eaſe and comforts to the middle rank, affluence and magnificence to the wealthy and the great.

They who pay for the employment, expence, and conſumption of others, pay, in like degree, all taxes laid upon theſe articles. Therefore, the farmer and trader pay three parts in four more than the land-owner, to the ſupport of government; and mankind is indebted to them, in the ſame proportion, for all natural and civil enjoyments.

To them, and to their proſperity it is owing, that, ſince the Revolution, this nation hath been enabled to bear thoſe drains of treaſure, which muſt long ſince have exhauſted her vitals, had ſhe no ſupply to truſt to, but the landlord's waſting rents, and the tenant's diminiſhed gains, with ſome ſmall rivulets of foreign trade ſtealing in upon her.

Since

Since that happy deliverance, commerce hath produced ſums ſufficient to maintain armies and fleets, in defence of our liberties, and of that eſtabliſhment on which they are founded; while the tenant hath been enabled, under an increaſing load of taxes, and of rents raiſed on him, to cultivate and improve the lands of this nation.

But a continuation of public expences in peace, which ought, in a great meaſure, to have ceaſed with war, ſquandered the proviſion which ſhould have been laid up for the day of danger and trial. That day came, and found the nation incumbered, after above 20 years of peace, with near the ſame load, that was heaped upon her by two ſucceſſive wars. And the ſame bad policy, which lengthened out the expence beyond the occaſion, rendered the burden more heavy, by the manner of collecting it. No wonder, if, in theſe circumſtances, trade bleeding at every vein, had not ſtrength, although her growth was miraculous, to ſupport heavier loads, than ever were before laid upon the ſhoulders of this nation; and that ſome branches of commerce ſhould droop and decay under the baleful influence of ſuch weighty taxes, while our commercial competitors planted their intereſts where ours once flouriſhed, and gathered the fruits of wiſer management. From the ſame cauſe, the tenant can no longer ſupply an advance of taxes out of his declining ſtock; and, inſtead of that good claſs of men, the ancient ſtrength and glory of this country, the wealthy, induſtrious, and ſturdy yeomen, a race ſucceeds, of puny, abject wretches, tamed by want and ſervitude.

With the yeomen, the middling gentry of ſmall eſtates, ſeem haſtening to annihilation. The few remaining (for they every day decreaſe) are poſſibly the moſt miſerable beings amongſt us; with nothing left undiminiſhed that belongs to their fathers, but pride and appetites beyond their fortunes. And theſe taxes, which have near devoured their little ſubſtance, have in no inconſiderable degree impaired the poſſeſſions of the greateſt.

Theſe are the effects of taxes upon commodities; which had they, according to Mr Locke's intimation, been rather raiſed wholly upon land, how many millions would have been ſaved to the nation, by the different manner of collection, and how would the landed intereſt have proſpered?

Miſtake us not, we are not pleading for land-taxes, but ſhewing the comparative difference only between them and taxes upon commodities, which muſt prove deſtructive of the national trade. See the articles DUTIES, LABOUR, and TAXES.

The inequality in laying the land-tax, a circumſtance much complained of by ſome, and juſtified by others, does not regard the preſent ſubject. It may be a proper matter of conteſt between the owners of lands; and, if it be a grievance upon ſome of them, ſufficient to deſerve the redreſs, the parliament ought to grant that redreſs, and alter the particular meaſures by which they are rated.

But, however that matter may ſtand between the individuals of the landed intereſt, the propoſition remains in full force, 'that a tax upon land is more advantageous to the commu-'nity in general, and the landed intereſt in particular, than 'that upon commodities, and more effectual for thoſe pur-'poſes, which render taxes neceſſary.'

Nor is the inequality, in laying this particular tax, attended with any of thoſe diſadvantages to the public, which would ariſe from the ſame cauſe in taxes laid upon commodities; ſince, in this inſtance, they who pay more than their ſhare to the land tax, are the only ſufferers; whereas other inequalities fall more diffuſively, and may finally center upon the whole landed intereſt.

It has been objected to this, that through a land tax the monied men eſcape, but this is totally devoid of foundation. For, Not to inſiſt upon that ſhare, which ſome of them really pay in the form of a land-tax, in every tax that affects conſumption, they are taxed like other men, in proportion to what they conſume. And, on the ſuppoſition, that commodities are already taxed as high as they can bear, theſe men cannot be taxed at more, through this medium.

Were mortgages or the funds to be taxed, matters would not be mended. For, as taxes, wherever placed, can have no tendency to lower the intereſt of money, they who buy into the funds, would buy ſo much cheaper as the tax would amount to, and the lender upon mortgages inſiſt upon a higher rate of intereſt.

Beſides, they, who by lending their money upon lower terms, than would be done if the lender were taxed, or by giving a higher price for ſtocks, enable others the better to pay taxes, contribute, in reality and effect, their ſhare, as much as thoſe who pay them. And, in this ſenſe alſo, the mortgagee and ſtockholder are equally taxed with the owners of land.

But, if it be ſtill inſiſted on, that the actual poſſeſſors of the ſoil are the only payers to the land-tax; this diſtinction will greatly reduce the importance of thoſe, who are the ſubject of our preſent conſideration; ſince a deduction muſt be made from that landed intereſt of their intereſt in land, who, by mortgages, are the legal and abſolute proprietors; and alſo of that ſhare abſorbed out of land by every tax, which mediately or immediately affects it.

Laſtly, It hath been ſaid, that in diſtant counties the quantity of circulating money is not ſufficient to ſupply the tax. As in theſe diſtant counties, for much the greater part, the land-tax is lower rated than in a nearer neighbourhood to the metropolis; this objection contradicts that which hath been mentioned, and ſeems, if any thing will, to juſtify the inequality of the meaſure, by which the tax is raiſed.

Yet no argument ſeems capable of juſtifying ſo extraordinary an inequality, in any kind of tax whatever; more eſpecially of a land-tax, that being raiſed at the leaſt expence of any whatever; and, if that tax is, more or leſs, to be continued to perpetuity, it ought to be equally raiſed, ſince, in that caſe, it would produce double what it ever has done: and, if the ſurpluſage, from one ſhilling in the pound to four, ſhould, as ſhall be required, be applied to the ſinking fund, it would put the national debts once more into the parliamentary way of redemption, and thereby pave the way to the annihilation of taxes, upon our native produce and manufacture.

But taxes of all kinds cannot be too equally laid, nor too unexpenſively raiſed. And therefore, that the land, as well as commodities, might be effectually eaſed of their weighty incumbrances, it becomes the wiſdom of the legiſlature to think ſeriouſly of ſome UNINHANCEABLE TAXES, that will effectually anſwer that great end; either that propoſed by the late Sir Matthew Decker, Bart. or one or more ſomething ſimilar thereunto; for taxes of that nature, collected at a ſmall expence, ſeem to be the grand ſpecific to give ſuccour to our land and our trade, by freeing them from thoſe burthens, which, if multiplied, muſt prove the inevitable ruin of both. See the articles CREDIT [PUBLIC CREDIT], DEBTS [NATIONAL DEBTS], FUNDS, TAXES.

The landed gentleman being convinced that his intereſt muſt riſe or fall with trade, and that taxes on native commodities muſt, at length, prove the ruin thereof, it becomes his intereſt to ſtudy the national benefits of commerce. How this can be done to the purpoſe, is the next conſideration. To which end we ſubmit the following queries.

1. Whether the country gentleman, unacquainted with practical trade, can be preſumed capable of making ſo good a judgment of what may tend to it's national proſperity, as one acquainted therewith?

2. Whether the country gentleman, being equally knowing with the ſkilful merchant in the ways of conducting trade, and the eſſential uſages among traders, and laws of nations relating thereto, may not be eſteemed better qualified to promote the public intereſt of trade, though not practically engaged therein, than the merchant, who, being intereſted in any peculiar branch, may be ſomehow biaſſed in his judgment, in regard to his own peculiar trade?

3. Whether this Dictionary of Commerce may not be inſtrumental ſo to inform the country gentleman in the nature of trade, as to enable him to judge properly thereof, in any public capacity, for the benefit of the nation in general?

4. Whether the country gentleman, in any public capacity, from the conſul to the ambaſſador, may not, by means hereof become ſerviceable to the commercial intereſts of his country abroad, as well as in any poſt of honour at home, from the clerk in a public office to the ſenator?

5. Whether a well grounded knowledge in the practical and political nature of commerce, and the money affairs of the kingdom, may not prove more generally inſtrumental to the riſe and proſperity of country gentlemen, and the male branches of their families, than any other kind of knowledge whatever?

6. Are not the capital debates in parliament moſtly upon matters that have relation to commerce, and the money-affairs and public credit of the nation? And are not likewiſe our concerns and negociations with foreign courts principally with regard to affairs of trade and navigation?

7. Whether thoſe ſtudies do not require as regular a courſe of erudition as any other whatever, to arrive at any diſtinguiſhed degree of diſcernment therein?

8. Whether the proper eſtabliſhment of one or more colleges, for purpoſes ſo highly beneficial and honourable, would not as well become the wiſdom of this nation as any other kind of literary inſtitution whatever?

REMARKS.

The late ingenious Mr. Carey of Briſtol, in his Diſcourſe on Trade, where he recommends to the parliament a ſtanding committee of trade, conſtituted of men well verſed therein, to ſcrutinize into whatever comes before that moſt honourable aſſembly, ſays, 'That, in the management of things of much 'leſs moment, we employ ſuch who are ſuppoſed to under-'ſtand what they undertake, and believe they cannot be carried 'on without them; whilſt the general trade of the nation '(which is the ſupport of all) lies neglected, as if the coggs that 'direct it's wheels did not need ſkill to keep them true: trade 'requires as much policy as matters of ſtate, and can never 'be kept in a regular motion by accident; when the frame of

'our

'our trade is out of order, we know not where to begin to 'mend it, for want of a ſet of experienced builders, ready 'to receive applications, and able to judge where the defect 'lies.

'Such a committee as this will ſoon appear to be of great uſe 'and ſervice, both to the parliament in framing laws relating 'to trade, and alſo to the government, in the treaties which 'they make with foreign nations.

'As to the firſt, it hath ſometimes been thought, that, when 'that great and glorious aſſembly [the parliament] hath med-'dled with trade, they have left it worſe than they found it; 'and the reaſon is, becauſe the laws relating to trade require 'more time to look into their diſtant conſequences than a 'ſeſſion will admit; whereof we have had many inſtances.'—He proceeds to give a few inſtances in his time.

'To begin with the French trade, ſays he; in the 22d of 'Car. II. a new impoſt was laid on wines, viz. 8 l. per tun 'on the French, and 12 l. per tun on Spaniſh and Portu-'gueze. This difference, with the low ſubſidies put on their 'linens by former acts, in reſpect to thoſe of other places, 'was a great means of bringing the balance of that trade ſo 'much againſt us, that the parliament, in the 7th and 8th 'of Will. III. thought fit to make an act, which, in effect, 'prohibited all trade with that nation for 21 years, by lay-'ing a great duty on the importation thence, in order to pre-'vent a correſpondence, 'till the trade ſhould be better re-'gulated.

'In the 14th of Car. II. logwood was permitted, by act of 'parliament, to be imported, paying 5 l. per ton duty; the 'ſame act repeals two ſtatutes of queen Elizabeth, againſt 'importing and uſing it in dyeing here, and ſets forth the 'ingenüity of our dyers in finding out ways to fix the colours 'made with it; and yet, at the ſame time, gave a drawback 'of 3 l. 15 s. per ton on all that ſhould be exported; where-'by foreigners uſe it ſo much cheaper in their manufactures 'than ours here; which proceeded from a too haſty making 'that law, and being adviſed, or rather abuſed, by thoſe 'who regarded more their own intereſt than that of the 'nation.

'By an act made 1 Jac. II. an impoſt of 2 s. 4 d. per cent. 'was laid on muſcovado ſugars imported from the planta-'tions, to be drawn back at exportation: the traders to the 'plantations ſtirred in this matter, and ſet forth, that ſuch 'a duty would diſcourage the refining them here, by hin-'dering the exportation of refined ſugars, which was then 'conſiderable, and carry that manufacture to Holland and 'Flanders; but the commiſſioners of the cuſtoms prevailed 'againſt them, and the bill paſſed; the fatal conſequences 'whereof ſoon appeared; for, the exporters of muſcovado 'ſugars drawing back 2 s. 4 d. per cent. by that act, and '9 d. per cent. by the act of tonnage and poundage, foreign 'markets were ſupplied with refined ſugars from other places 'cheaper by about 12 per cent. than we could furniſh them 'hence; by which means we were beat out of that trade: and 'tho' the duty of 2 s. 4 d. per cent, was not continued on the 'expiration of that act, by the parliament 2 Will. and Mar. '(as they did the 3 d. per pound on tobacco) the bad effects 'thereof being then apparent, yet it is difficult to retrieve a 'loſt trade, commercial nations being like expert generals, 'who make advantage of the miſtakes of each other, and 'take care to hold what they get.

'By a ſtatute of the 4th and 5th W. and M. 20 s. per ton was 'laid on lapis calaminaris dug here and exported, on an in-'formation given to the houſe of commons, thatit was not 'to be had any where elſe *; the merchants concerned in 'exporting that commodity made application, and ſet forth, 'that ſuch a duty would bring in nothing to the crown, but 'be a total bar to it's exportation; yet the act paſſed, and we 'were like to have made a fatal experiment; for, 'till the ſtatute 'of the 7th and 8th of the ſame king, which reduced the duty 'to 2 s. per ton, the exportation ceaſed; and, in the mean 'time, thoſe places which had been diſcouraged from digging 'and calcining it, becauſe we underſold them, ſet again to 'work, and ſupplied the markets where we vended ours.

* Does not this ſhew the neceſſity of the legiſlature, as well as private traders, being well acquainted with trading commodities, and the places of their production or manufacture? This is the great reaſon for our being ſo particular in this work in the deſcription of the chief commodities throughout the world.

'What injury was done by the act made in the 9th and 10th 'Will. III. for the more effectual preventing the importation 'of foreign bone-lace, &c. doth ſufficiently appear by the 'preamble of that made in the 11th and 12th of the ſame 'reign, for repealing it, three months after the prohibition 'of our woollen manufactures in Flanders (which was occa-'ſioned by it) ſhould be there taken off.

'I mention theſe things with great ſubmiſſion to the judge-'ment of that glorious aſſembly, the wiſdom and ſtrength of 'the nation; to whom I only preſume, with all humility, 'to offer my thoughts, that it would very much tend to the 'putting matters of trade into a true light before them, if 'they were firſt referred to a body of men, well verſed in the 'true principles thereof, and able to ſee through the ſophiſti-'cal arguments of contending parties, to be by them con-'ſidered, and well digeſted, before they received the ſanction 'of a law.

'And, as to foreign treaties, I do not think our trade hath 'been ſo much bettered by them as it might have been, for 'want of ſuch a committee; the repreſentations made by 'private merchants (who generally differ, according as their 'intereſts claſh with each other) tending rather to diſtract, 'than to inform the government; which would not be, if 'their firſt applications were made to an experienced com-'mittee, who had judgment enough to ſubtract out of them 'what was proper to be offered; by which means, our de-'mands might be rendered ſhort and comprehenſive.'—So far Mr. Carey.

It was ſaid, ſome time ago, by an honourable perſon in the Houſe of Commons [Sir J—— B——d] eſteemed to be very well acquainted both with the practical and political knowledge of commerce, that 'There cannot be brought before 'that Houſe any queſtions more difficult in themſelves, more 'entangled with a multiplicity of relations, or more perplex-'ed with an endleſs diverſity of circumſtances, than thoſe 'which relate to commercial affairs; affairs on which the 'moſt experienced often diſagree, and on which the moſt ſa-'gacious may deceive themſelves with erroneous conjectures. 'There are no queſtions which require ſo much perſonal 'knowledge of the ſubject to which they relate, nor is there 'any ſubject with which ſo few gentlemen in that Houſe have 'had opportunities of being acquainted: there are no que-'ſtions, which their variety of relations to different perſons 'expoſes to be ſo eaſily miſrepreſented, without detection; 'nor any in which the oppoſition of particular intereſts ſo 'much incites a falſe repreſentation. In all theſe caſes, de-'ceit is eaſy; and there is a ſtrong temptation to deceive.' With more to the like effect.

It is certain that the chief knowledge which the gentry obtain of trade, is derived from the information they receive from traders themſelves; and that is not always to be depended upon, eſpecially at thoſe conjunctures when the legiſlature may ſcrutinize thoroughly into the nature of any particular branch. But, although traders themſelves may be extremely well acquainted with their own peculiar trades, ſo far as it relates to their private intereſt, yet they may not always have ſuch a comprehenſive view thereof as to diſcern how the nation is, in all relations, a gainer or loſer thereby. It is rare, therefore, that the country gentleman can obtain a ſatisfactory knowledge from traders.

In order to make a right judgment of any branch of trade, when conſidered in a national light, it is frequently neceſſary to ſurvey it's connection with various others; and, if the landed gentleman is not duly informed of theſe connections, how ſhould he be capable of making ſuitable enquiries?

Beſides, nothing is more common than for traders to differ widely among themſelves, in regard to meaſures proper to be taken by the legiſlature for the due encouragement or re-gulation of peculiar branches. Whence ariſe thoſe oppoſite and contradictory petitions to parliament from traders, which often tend to miſlead, and even confound, the legiſlature it-ſelf.

Theſe conſiderations, without urging more, manifeſt the ne-ceſſity of landed gentlemens being well informed in the na-ture of every branch of the national trade and commerce, if poſſible, in order to render them capable of judging of the beſt public meaſures requiſite to be occaſionally taken for the benefit of the whole, without regard to the private intereſt of particulars.

Of the country gentleman's advancement of his LANDED ESTATE.

We will ſuppoſe, from what has been here ſaid, and alſo in divers other parts of this work, that the Britiſh landed gen-tleman cannot avoid diſcerning that his own private intereſt is intimately connected with that of the national commerce: and, if ſo, he is nearly concerned to promote it's benefit and advantage, in every ſhape poſſible; and can any thing be more conducive to this great end, beſides what has been humbly ſuggeſted, than the due improvement of every inch of his land? For, as the proſperity of land depends upon that of trade, ſo that of trade equally depends upon the culture, and other beneficial management of the land. The more uſe-ful and eſtimable productions the land affords, as articles of merchandizing, the more treaſure will the trader be capable of bringing into the kingdom, by vending them in foreign markets.

It is not the cultivating of lands at random, that will beſt promote the intereſt of commerce, and of the landholder. Theſe intereſts are beſt promoted by cultivating ſuch things as commerce points out to be the moſt beneficial to both. And how are theſe ſpecific particulars to be known, but from the knowledge of trade?

The increaſe of new productions for commerce depends on the farther tranſplanting and communicating of the ſeveral natural commodities of all nations, to other airs and other

L A N

ſoils, and other ways of cultivation. That this is not yet brought to the ultimate perfection is evident, in that there is no land ſo well furniſhed as to produce all the various ſorts of things which it's ground and temperature is capable to receive; and alſo becauſe many of the moſt fertile countries contain large ſpaces that are utterly barren.

Theſe improvements depend chiefly upon three kinds of endeavours.

The firſt, by tranſplanting out of one land into another, of the ſame ſituation in reſpect of the heavens. This may be tried by conveying the eaſtern ſpices, and other uſeful vegetables, into our weſtern plantations. Nor can it be imagined, why they ſhould thrive in one Indies, and not in the other; why the ſoil ſhould not be as good where the ſun ſets, as where it riſes: ſeeing there are parts of both, which lie under the ſame influence of that, and the other celeſtial bodies, to whoſe kindly heat and neighbourhood the oriental nations are ſuppoſed to owe their advantages.

This alſo may be attempted in our northern climates. For inſtance: the flax and hemp which we ſtand ſo much in need of, may proſper far more than it does in England, Ireland, and Scotland, in many vaſt tracts of ground, which lie barren and uncultivated.

Other improvements of this nature are accompliſhed by carrying and tranſplanting living creatures, as well as vegetables, from one climate to another. Sometimes the ſoil and the air, being changed, will give a new force to the new gueſts; as the Arabian horſe, by mingling with our breed, produces a more ſerviceable race than either of them ſingle. And ſometimes the alteration will be for the worſe, which muſt be guarded againſt; as the vine of France brought into England, and the horſes and dogs of England into France, both which are found to degenerate exceedingly: their ſoil and their ſun, it ſeems, being fitted to produce things of pleaſure and delight, and our air and our earth being more proper to beget valour and ſtrength.

The third way of this kind of improvements to be tried, is by removing the plants and the productions of the ſame country from one part of it into another, and by practiſing every where all the ſorts of huſbandry, which are uſed in ſome places with ſucceſs. That this is not enough perfected in England, is manifeſt to every one that beholds the Kentiſh orchards, and the Herefordſhire hedges, which ſeem to upbraid the lazineſs of other counties, whoſe highways are only fenced with thorns and briars, or, at the beſt, with hazel; while theirs are beautified with apples, pears, and cherries.

In every one of theſe tranſplantations, the chief progreſs that has hitherto been made has been rather for the collection of curioſities, to adorn cabinets and gardens, than for the ſolidity of philoſophical diſcoveries: yet there may be a prodigious advantage made in them all, both for the one end and the other. And in this it will be found, as in many other things, that, if men only intend a little curioſity and delight, they will reap not much more by their pains: but, if they regard real uſe, not only the profit, but a greater delight will alſo follow thereon.

And, for our encouragement, whatever attempts of this nature have ſucceeded, they have redounded to the great advantage of the undertakers. The orange of China, being brought into Portugal, has drawn a great revenue every year from London alone. The vine of the Rhine, taking root in the Canaries, has produced a far more delicious juice, and has made the rocks, and the ſun-burnt aſhes of thoſe iſlands, one of the richeſt ſpots of ground in the world. And, if we can produce ſilk, hemp, flax, pitch and tar, timber and naval ſtores of every ſort, cocheneal, pot-aſh and ſpices, in the Britiſh American colonies, as may now be done ſince our new acquiſitions by the peace of 1763, this kingdom might reap unſpeakable benefits thereby. If the ſilk-worm ſhould at length be brought to thrive there (of which there ſeems to be no doubt, if the affair was wiſely, vigorouſly, and honeſtly conducted) the profit on that article alone would be inexpreſſible: we may happen, if that proves the caſe, to give hereafter cloaths to a great part of Europe: we may, in ſome meaſure, gueſs at the extraordinary advantages, by conſidering what number of caravans [ſee CARAVANS] and how many great cities in Perſia are maintained by that manufacture alone, and what mighty income it yearly brings into the ſophi's revenue.

To which end, it will be requiſite to conſult ſuch other diſtinct articles of merchandizes in our Dictionary, as every climate will admit of under the Britiſh dominion.

This being done, the next ſtep is, to conſult every art of cultivating thoſe exotics to the beſt advantage within our own dominions: for which ſee the articles MANURE, FARMING, HUSBANDRY, HOPS, SOIL; ſee alſo CACAO, COCHENEAL, INDICO, HEMP, FLAX, NAVAL STORES, SILK.

Beſide, there is ſcarce any land but what affords ſomething within it's bowels, of a greater or leſs depth, beneficial to the proprietor if he can make a juſt judgment of the nature of EARTHS, BOLES, CLAYS, FOSSILS of all kinds, LOAMS, SANDS: ſee thoſe diſtinct articles, and ſuch others to which from them we refer.

Theſe points being duly conſidered, it then becomes neceſſary for the country gentlemen to be ſo far ſkilled in philoſophical chemiſtry, as to be able to make ſuch experiments upon bodies of all kinds, as may enable him to judge of their worth; otherwiſe, a gentleman may have more treaſure upon his land within the compaſs of a few acres, than others may have in ſome thouſands. See the articles CHEMISTRY, EARTH, PHILOSOPHY EXPERIMENTAL, and ROYAL SOCIETY.

Were the particulars here intimated made an eſſential part of the education of the gentry of theſe kingdoms, they would be as capable of advancing the trade of their country, in theſe reſpects, as practical traders do in others; they would be inſtrumental to ſupply traders with more valuable commodities, the produce of their lands, to diſpoſe of in foreign countries, than we have at preſent: and 'to this purpoſe I will venture 'to propoſe, ſays the learned biſhop Spratt, to the conſideration 'of wiſe men, whether this way of TEACHING, by 'PRACTICE and experiments, would not at leaſt be as 'beneficial as the other, by UNIVERSAL RULES; whether 'it were not as profitable to apply the eyes and the hands of 'children, to ſee and to touch all the ſeveral kinds of ſenſible things, as to oblige them to learn, and remember the 'difficult doctrines of general arts? In a word, whether a 'mechanical education would not excel the methodical?

'This certainly is no new device: for it was that which 'Plato intended, when he injoined his ſcholars to begin with 'geometry; whereby, without queſtion, he deſigned that 'his diſciples ſhould firſt handle MATERIAL THINGS, and 'grow familiar to viſible objects, before they entered on the 'retired ſpeculations of other more abſtracted ſciences.

'According to this counſel of the father of philoſophers, it 'would not be amiſs, if, before young ſcholars be far engaged in the beaten tracks of the ſchools, the myſtries of 'manual arts, the names of their inſtruments, the ſecrets of 'their operations, the effects of natural cauſes, the ſeveral 'kinds of beaſts, of birds, of fiſhes, of plants, of ſtones, of 'minerals, of earths, of waters, and all their common virtues and qualities, were propoſed to be the ſubjects of their 'firſt thoughts and obſervations.

'It may be here ſuggeſted, that the vaſt number of ſuch particulars will ſoon overwhelm their tender minds, before 'they are well eſtabliſhed by time and uſe. But, on the contrary, it is evident that the memories of youth are fitter to 'retain ſuch ſenſible images, than thoſe of a fuller age. It 'is memory that has moſt vigour in children, and judgment 'in men: which, if rightly conſidered, will confirm what 'I ſaid, that, perhaps, we take a prepoſterous courſe in education, by teaching GENERAL RULES before PARTICULAR THINGS; and that therein we have not a ſufficient 'regard to the different advantages of youth and manhood. 'We load the minds of children with doctrines and precepts, 'to apprehend which they are moſt unfit, by reaſon of the 'weakneſs of their underſtandings: whereas they might, 'with more profit, be exerciſed in the conſideration of viſible 'and ſenſible things, of whoſe impreſſion they are moſt capable, becauſe of the ſtrength of their memories, and the 'perfection of their ſenſes.'

The country gentleman, thus trained up to know and purſue his own intereſt, from experiments in regard to his lands, and every production thereof, both above ground and below, will be far more capable of promoting the commercial intereſts of his country.

And, if ever the Engliſh will attain to the maſtery of commerce, not only in diſcourſe, but reality, they muſt begin it by their labours, as well as by their ſwords; they muſt do it by awaking their minds, by rouzing themſelves from this lethargy by action, by trials, by working: unleſs this be done, they will in vain be victorious; at the end of their wars they will cool again, and loſe all the fruits of their valour. The arts of peace, and their improvements, muſt proceed in equal ſteps with the ſucceſs of their arms: the works of our citizens, our ploughmen, our gardeners, our wood-men, our fiſhers, our diggers in mines, muſt be equally advanced with the triumphs of our fleets, or elſe their blood will be ſhed in vain: they will ſoon return to the ſame poverty, and want of trade, which they ſtrove to avoid.—And who are ſo capable to inſpire a national induſtry like the country gentlemen of this kingdom?

LAND-CARRIAGE OUTWARDS. All foreign goods, ſent by land carriage from one part of this kingdom to another, as the law at preſent ſtands, muſt be accompanied with certificates under the hands of the collector, cuſtomer, and comptroller of the port from whence they are ſent *; otherwiſe any officer of the cuſtoms may ſtop them, 'till due proof be made that the duties have been paid, &c.

* 6 Geo. I. cap. 21. §. 39, 42.

And all brandy, arac, rum, ſpirits, or ſtrong waters, exceeding the quantity of one gallon, ſo ſent, muſt be likewiſe accompanied with a permit, or certificate from an officer of the exciſe, or cuſtoms, expreſſing the quantity and quality, and

and ſignifying that the duties have been paid, or that the ſame has been condemned. 6 Geo. I. cap. 21. §. 18.
And, with reſpect to wool, wool-fells, mortlings, ſhortlings, yarn made of wooll, wooll-flocks, fuller's-earth, fulling-clay, or tobacco-pipe clay, it muſt be obſerved, that no packs, ſacks, bags, or caſks thereof, may be loaden on any horſe, cart, or other carriage, or be conveyed by land, to or from any place in Great-Britain, within five miles of the ſea-coaſt, but in the day-time, and at ſeaſonable hours, that is, between ſun-riſing and ſun-ſetting, upon forfeiture thereof, or the value, with the horſes, carriages, &c. 14 Car. II. cap. 18. §. 9. and 7 and 8 Will. III. cap. 28. §. 8.
For all other regulations relating to wooll, and for the form of a certificate, or let-paſs, ſee the directions hereafter given; but, for all other goods, it muſt be as follows, viz.

A land-carriage certificate, or let-paſs, for any other goods than wooll.

Port of Southampton.

Know ye, that Benjamin Shaw is permitted to paſs three caſks, containing four hundred weight and eighteen pounds
* L. S. Cuſtomer. of raiſins ſolis, in the waggon [coach,
* L. S. Comptroller. cart, &c.] of Benjamin Daws, for Briſtol. To be in force ſix days from the date hereof, and no longer.
Dated the 12th of January, 1730.

A. B. Collector, B. C. Cuſtomer, C. D. Comptroller.

Note, The time theſe certificates are to be in force, muſt be limited, in proportion to the diſtances of the places where the goods are to be ſent.
Before a land carriage certificate is granted for foreign goods, oath muſt be made on the back, that the duties of the goods therein mentioned have been paid, or that they were bought in a fair and lawful way of trade, &c. or if the goods are to be exported from the port to which they are deſigned to be ſent, and receive the drawback, a particular certificate of the collector, &c. muſt be granted, as directed at the granting of ſufferances for the ſhipping of foreign goods, to be ſent coaſtways by water.
And, before the certificate be delivered to the merchant, it muſt be entered in a book to be kept for that purpoſe, thus:

Land-carriage certificate outwards.

To what place.		Time to be in force.
Briſtol	12th of January, 1730. In the waggon, &c. of Benj. Daws. Benjamin Shaw. 3 caſks, containing 4 C. 18 lb. raiſins ſolis. A. B. Collector, B. C. Cuſtomer, C. D. Comptroller.	6 Days

For all goods (but eſpecially wines) in order to ſecure the London-duty, ſent by land-carriage to London, a duplicate of the certificate muſt be tranſmitted to the commiſſioners, the firſt poſt after granted, thus:

Port of Southampton.

An account of wines, &c. ſent by land carriage to London, 13th of January, 1730. George White, 3 baſkets, containing 18 gallons of French wine, paid duty by E. H. the 18th of November laſt.

A. B. Collector, B. C. Comptroller.

The foregoing are inſtructions for, and general rules to be obſerved, by the officers of the cuſtoms, in relation to goods ſent from one port or part of Great-Britain to another, either by water or land: but, Britiſh wooll being (to prevent exportation) under very particular regulations, it may be proper here to ſhew the ſeveral requiſites to be performed, from the time of ſheering to the removal to the laſt place where it is to be conſumed or manufactured.

Regulations relating to Britiſh wooll.

* Britiſh wooll, ſhorn or houſed, laid up or lodged within ten miles of the ſea-ſide, within the counties of Kent and Suſſex, muſt be entered with the officers of the cuſtoms, at the next adjoining port, within three days after the ſheering, by a certificate under the hand of the proprietor, or owner. † And, in all other counties, Britiſh wooll having been carried from the place of ſheering to the proprietor's own houſe, within five miles, or leſs, of the ſea, muſt, within ten days after ſheering, be entered with the officer of the cuſtoms at the next port, by a certificate under the proprietor's hand.
Which enteries, certificates, or notices, muſt be in form following:
This is to certify, That I A. B. of C. have ſhorn two hundred fleeces of ſheeps-wooll, and the wooll of one hundred lambs, and have lodged the ſame at my dwelling-houſe at C.
Witneſs my hand this 14th of July, 1730.

A. B.

Note, if through ignorance the wooll be not entered in time, and the proprietors will come and voluntarily enter the ſame, making oath of their ignorance of the laws, and that the wooll in queſtion is numerically the ſame, both for quantity and quality, that the owners ſheered the laſt ſummer, and no part has been ſince removed, or exported, it may then be regiſtered, &c.
The proprietors having thus entered their wooll, it muſt be regiſtered in a book for that purpoſe, by way of charge on ſuch proprietors, and a certificate of the entry granted them in form following, viz.

Port of Southampton.

A. B. of C. hath entered two hundred fleeces of ſheeps-wooll, and the wooll of one hundred lambs. Certified the 14th day of July, 1730.

B. C. Collector, C. D. Comptroller.

* And, with reſpect to the buyers of wooll, it muſt be obſerved, that every perſon reſiding within 15 miles of the ſea in the counties of Kent and Suſſex, who intends to become a buyer or dealer in wooll, before he preſumes ſo to do, muſt, with ſufficient ſureties, become bound to his majeſty in the following manner, viz.
The condition of this obligation is ſuch, That the above-bound B. C. who is a dealer in wooll, ſhall not again ſell any part of the wooll which he ſhall at any time hereafter buy, to any perſon or perſons reſiding within 15 miles of the ſea in the counties of Kent or Suſſex, and ſhall not tranſport nor ſell the ſame to any other perſon, or perſons, to be tranſported, but ſhall well and truly obſerve all the acts of parliament made againſt the tranſportation of wooll: then this obligation ſhall be void, or elſe to remain in full force and virtue.

A. B. *
B. C. *
C. D. *

Sealed and delivered in the preſence of
D. E. Collector,
E. F. Comptroller.

* And, when the proprietor has ſold the wooll, at leaſt three days before the removal he muſt certify it to the officers of the cuſtoms, upon the back of the aforementioned certificate of entry, mentioning the time when it is to be delivered, thus:

* 1 Will. and Mar. cap. 32. §. 3. 9 and 10 Will. III. cap. 40. §. 3.

This is to certify, that I have ſold the wooll within-mentioned, weighing fifty tods eighteen pounds, to B. C. of E. to be delivered him there the fifteenth day of September, 1730.
Witneſs my hand this ſeventh of September, 1730.

A. B.

Then, if the intention of removal is regularly certified, a let-paſs (to be in force no longer than the time appointed for the delivery) may be granted for the removal, thus:

Port of Southampton.

Know ye, that B. C. is permitted to paſs by land-carriage *, in the day-time, as the law directs, from the houſe of A. B. of C, to his own houſe in E, with two hundred fleeces of ſheeps-wooll, and the wooll of one hundred lambs, weighing fifty tods and eighteen pounds; it being the wooll of the ſaid A. B. entered here the 14th day of July laſt, and now certified to be ſold to B. C. aforeſaid. To be in force four days, from the 7th day of this preſent September, and no longer.
Dated at the Cuſtom-Houſe, the 8th day of September, 1730.

C. D. Collector, D. E. Cuſtomer, E. F. Comptroller.

* 14 Car. II. cap. 18. §. 9. 7 and 8 Will. III. cap. 28. §. 8.

Land-Carriage Inwards. Though foreign goods, carried by land from one port of this kingdom to another, ſhould be accompanied with a certificate, yet, that being only an authority for any officer of the cuſtoms * not to ſtop them, there is no occaſion to deliver in ſuch certificate at the cuſtom-houſe when the goods arrive at the intended port, unleſs they are intended to be exported from thence, and the duties intended to be drawn-back; or they are prohibited Eaſt-India goods, coffee, tea, cocoa-nuts, or pepper ſent from London in order to be exported.

* 6 Geo. I. cap. 21. §. 39, 42.

As to the form and general direction of theſe certificates inwards, and of the payment of duties for goods to be exported, they are the ſame as for the diſpatches outwards, but, with reſpect to the following goods, they are under theſe additional regulations, viz.

I. * Prohibited Eaſt-India goods.—When intended to be ſent by land-carriage to any out-port, to be thence exported to foreign parts, ſecurity for the due exportation is taken at London, before they may be delivered out of the warehouſes in which they were firſt lodged: and, on ſuch ſecurity, a cocket is granted for the delivery of the goods, and their conveyance to the intended port, in form following, viz.

* 11 and 12 Will. III. cap. 10. §. 2.

A cocket for prohibited Eaſt-India goods ſent by land-carriage from London.

London.

Know ye that Andrew Bell ind' hath entered twenty taffaties, forty cuſhtaes, ten photaes, fifteen damaſks, twelve pelongs, which paid duty out of time: late unladen, and now by land-carriage to Southampton, and ſo for exportation.

Dated the 3d of March, 1730, anno quarto Georgii Secundi, &c.

C. D. Collector Outwards,
D. E. Comptroller (Surveyor, or Surveyor-General).

* Loc. Sig.

On the back are to be ſpecified the ſeveral packages, with the particular contents of each.

The ſearcher in London having executed this cocket, it is to be returned to the commiſſioners, who ſend it by the poſt to the collector of the port; and, the goods being likewiſe directed to him, he is, by virtue of the cocket, to demand them of the carrier, &c. in order to have them lodged in the cuſtom-houſe warehouſe 'till exportation; obſerving whether the package be agreeable to the indorſement on the cocket, and under the ſeal of the officers of London: and, if the goods do not arrive within 20 days of the date of the commiſſioners letter, they are to be acquainted thereof.

And, when the merchant declares his intention of exporting ſuch goods, and has paſſed an entry at the port, the London cocket is to be delivered to the proper officer, who, before ſhipping for exportation, is to open and examine the goods, to ſee if they agree in quantity and quality; and, the next poſt after the goods are ſhipped off, the commiſſioners muſt be acquainted with the proceedings.

II. * Coffee, tea, cocoa nuts, and pepper.—When deſigned to be ſent by land-carriage to any out-port, after proper ſecurity has been given for the due exportation, a cocket is granted for the delivery out of the warehouſe, and conveyance to the intended port, in form following, viz.

* 8 Ann. cap. 7. §. 20. 10 Geo. I. cap. 10. §. 26.

A cocket for coffee, tea, or cocoa-nuts, ſent by land-carriage from London.

London.

Know ye, that Andrew Bell ind' hath entered five hundred forty-four pounds weight of tea, by the united Eaſt-India company, the 18th of Auguſt laſt: late unladen, and now by land-carriage to Southampton, and ſo for exportation.

Dated the 3d of March, 1730, anno quarto Georgii Secundi, &c.

C. D. Collector Outwards.
D. E. Comptroller (Surveyor, or Surveyor-General.)

* Loc. Sig.

For the form of a cocket for pepper, ſee that for prohibited Eaſt-India goods. And as to the whole proceedings of ſending the coffee, tea, cocoa-nuts, and pepper, with the cockets, to the collector, and the method of ſhipping them off at the port, they are the ſame as directed for prohibited Eaſt-India goods, remembering, that, at the examination, they muſt be carefully weighed.

And when any foreign goods intitled to a drawback, which came by land carriage from any other port, have been exported to foreign parts, a debenture muſt be made out, to be ſent to the * port where the duties of ſuch goods had been before paid, at the time of their importation, to intitle the exporter, or his agent to demand the drawback of the collector of ſuch port. See the article CARRIAGE.

* 2d rule of the Book of Rates, p. 177, 178.

LAND-WAITER, an officer of the Cuſtom-Houſe, whoſe duty is, upon landing any merchandize, to examine, taſte, weigh, meaſure them, &c. and to take an account thereof.—In ſome ports they alſo execute the office of a coaſt waiter.—They are likewiſe occaſionally ſtiled ſearchers, and are to attend and join with the patent ſearchers, in the execution of all cockets for the ſhipping of goods to be exported to foreign parts: and, in caſes where drawbacks or bounties are to be paid to the merchant on the exportation of any goods, they, as well as the patent-ſearchers, are to certify the ſhipping thereof on the debentures.

In caſe of SUFFERANCES granted for landing goods at an unlawful key, they are ſigned by the land waiters and ſurveyor, collector, cuſtomer, and comptroller; alſo for SUFFERANCES granted for the landing and examining of paſſengers baggage and wearing apparel.

When the goods are entered, and the warrants, ſufferances, &c. granted for the landing and delivering of the ſame, are produced to the land-waiters to whom they are directed (who are to be appointed by the collector, either by noting their names in the margin of the report-book, or in a particular book to be kept for that purpoſe) they are to accept of the ſame (provided the contents of the goods are found to be juſtly repreſented, and the other requiſites duly performed) as an authority for them to permit the landing and delivering; but they may not preſume to examine the goods on board, but muſt order them to be brought on ſhore at the merchants charge: and, in order thereunto, upon receipt of the warrants, &c. they are to certify the entry to the tideſmen on board the ſhip, before the ſaid tideſmen may preſume to permit any goods to be unladen. The form of which certificate muſt be as follows:

In the Providence of London, James Bell maſter, from Rotterdam.

Oliver Rook.

46. One caſe
47. One bale

21ſt of January, 1730. A. B. } Land-waiters.
B. C. }

To the officers on board the aforeſaid ſhip.

And, if the SUFFERANCE permits the landing of the goods at any other place than the lawful keys, the ſame muſt be mentioned on the aforeſaid order, thus:

SUFFERANCE for———

By virtue of the aforeſaid order, the tideſmen on board are to ſuffer the goods to be unladen, and brought on ſhore, and are to deliver them into the charge of the proper land-waiters, who are to attend at the landing of the goods, to examine, taſte, weigh, meaſure, gauge, number, &c. the ſame, according to the nature thereof, and to take an account of the quantities and qualities, in order to adjuſt the duties which are to be paid for the ſame.

That the land-waiter may be duly prepared to take an account of the examination and delivery of the goods, as ſoon as every ſhip is reported, a blank book is to be directed and delivered to each of the land-waiters, whom the collector ſhall think fit to appoint, or direct to ſee ſuch ſhip diſcharged. The title of which book muſt be as follows:

Cuſtom-Houſe, Southampton, 8th day of January, 1730.

This book contains 12 leaves, delivered to Mr. A. B. land-waiter, to take an account of the delivery of the lading of the Providence of London, James Bell maſter, from Holland, reported the 8th day of January, 1730.

B. C. Collector.

And as to ſuch ſhips which do not report, &c. every land-waiter muſt have a general pocket-book delivered to him, wherein he is to enter all warrants directed to him for the delivery of any goods out of ſuch ſhips, with the particular execution thereof. The title of which book muſt be as follows:

This book, containing one hundred leaves, delivered to Mr. A. B. land-waiter, to take an account of the delivery of all goods landed out of ſuch ſhips as do not report.

B. C. Collector.

In the landing, examining, and delivering all goods, and merchandizes, it muſt be carefully obſerved,

1. That no goods may be landed or delivered without a proper warrant, and, if any goods are ſo landed, they are liable to ſeizure.

2. That no more goods may be delivered than what the land-waiters have perfect warrants for; and if, upon examination of ſuch dry goods as pay duty by tale or meaſure, the importer appears to have entered ſhort, the ſaid goods muſt be ſeized, and ſent immediately to his majeſty's warehouſe, in order to be proſecuted: but, in caſe of ſhort entries upon goods paying duties by weight or gauge, the land-waiters muſt give the merchant an account thereof in writing, that he may make a poſt-entry for the ſame, before ſuch goods

may

may be permitted to be taken off the keys, unleſs the quantity ſhort-entered be very ſmall; and then if the ſurveyor thinks fit to permit the goods to be carried away before ſuch poſt-entry be made, one of the land-waiters is to go immediately and enter the ſame in a book to be kept for that purpoſe, above-ſtairs in the Cuſtom-Houſe, that the collector may know the quantity and quality of the goods, in order to demand the duties of the merchant, which the land-waiters are to ſee poſted the next day at the furtheſt; though, in ſtrictneſs, the land-waiters ſhould not give any credit, of which they are to be frequently admoniſhed: and, in order to prevent their giving credit, the ſurveyor muſt, within 14 days after the expiration of every month, deliver to the collector and comptroller a liſt of all ſhips cleared in the preceding month, with an account of the poſt-entries that were ſtanding out ſix days after the ſhips were cleared; who are to enquire into the reaſons thereof, and charge the officers concerned in giving ſuch credit to tranſmit their anſwers to the commiſſioners, with their obſervations thereon.

The form of the aforeſaid poſt-entry book may be as follows:

When poſted.

C. D. Land-waiter.

3. That the account of all goods muſt be taken in the proper books, at the time of examination, &c. and not in any other books or looſe papers.

4. That the marks and numbers of all caſks, &c. muſt be carefully obſerved, and placed to the proper merchant's account; and that each day's work muſt be compared with the account taken by the merchant, his ſervant, cooper, &c.

5. That goods are not to be brought to the warehouſe without a bill of ſight, or other warrant, or the conſent of the ſurveyor, under his hand, in the land-waiter's book.

6. That, upon any miſtake in taking the account of any goods, the land-waiters are not to eraſe their books, but, having ſtruck the pen through the error, are to inſert the true figures, &c. and to write the reaſon thereof in their books.

7. That the land-ſurveyor muſt duly attend at the water-ſide, and frequently every day inſpect the land-waiters in the diſcharge of goods.

8. That after payment of the new duties, and before the delivery of any hides and ſkins liable to thoſe duties, the ſame are to be ſtamped with a proper mark (being an hammer) which, with ſome printer's ink, and a little box, have been ſent for that purpoſe; and, when the ſaid hammer or ſtamp is not in uſe, it is to be ſecured under the ſeparate locks of the collector and comptroller; but, for uſing the ſaid ſtamp, a block is to be prepared, which may be of elm, two feet and one half high, about 10 inches diameter at the top, and hollowed one inch and a half, which is to be filled up with lead, about five inches ſquare, in order to make it ſolid, and prevent the hammer's rebounding, and to keep the lead from ſpreading and cracking.

9. That after the payment of new duties, and before the delivery of linens chequered, ſtriped, printed, painted, ſtained, or dyed, the ſame are to be ſtamped with the proper ſeal and ſtamp, with printer's ink; which ſtamp is to be lodged in the (joint) cuſtody of the collector and comptroller, and not to be delivered thence but to the land-ſurveyor, and land-waiter appointed to the ſhip, wherein there are any ſuch linens imported, as are liable to be ſtamped; and, after entry and landing, ſuch linens are to be ſtamped in their preſence by a weigher or porter, who is under oath and ſecurity; and the land-waiter is to keep an account thereof in his book, which is to be marked by the land-ſurveyor: and, when they leave off ſtamping, the ſaid ſtamp or ſeal is to be returned by the ſurveyor and land-waiter, into the joint cuſtody of the collector and comptroller, to be locked up under two different locks 'till wanted again.

10. That if, upon examination of any goods at the delivery, the merchant appears to have over-entered, either in any particular goods, or upon the whole entry, the following regulations muſt be obſerved, in order to procure the repayment of the duties for the goods ſo over-entered: and though he ſhould be over-entered on ſome goods, and ſhort-entered on others, yet ſuch ſhort-entry muſt not be deducted from the over-entry, but a poſt-entry muſt be made for what is ſhort, and the over-entry muſt be obtained by the regulations before-mentioned, being as follows:

1. On the face of the warrant, at the bottom, muſt be certified the quantity of goods over-entered, thus:

The merchant is over-entered thirty-three pounds of thrown ſilk.

B. C. } Land-waiters.
C. D. }

2. On the back of the warrant, the merchant, his ſervant, or agent, muſt make oath to the quantity of goods received, and the occaſion of the over-entry, thus:

James Croſs maketh oath, That neither himſelf [and, if the goods were taken up by a ſervant or agent, there muſt be likewiſe added, nor A. B. the proprietor] nor any other perſon for him, or to his uſe, did to his knowledge or belief, receive any more than three hundred pounds of the ſilk within mentioned, nor had any more landed out of the within mentioned ſhip, and that this over-entry was occaſioned by a miſtake * in caſting up the invoice.

Jurat' 16 die Martii, coram me
D. E. Collector. Signed James Croſs.

* Or any other occaſion, as may be the caſe.

Underneath which oath muſt be certified as follows:

Upon examination, as alſo per affidavit above, we find the merchant is over-entered thirty-three pounds of thrown ſilk.

Certified the 16th of March 1730. B. C. } Land-waiters.
A. B. Surveyor. C. D. }

Whereupon a certificate muſt be made out, in order to repay the duties for the goods ſo over-entered, ſigned by the land-waiters. On the back whereof muſt be inſerted the particular duties to be repaid, with the merchant's receipt for the ſame.

But, before the duties are repaid, the entry inwards, referred to in the ſecond certificate, muſt be diſcharged for ſo much goods as were over-entered, by writing off the ſame in the margin of the book: and the whole muſt be entered in particular books, to be kept by the collector and comptroller for that purpoſe.

11. That as all goods are to be entered as found, with regard to damage, &c. therefore, if on examination of poundage goods *, except tobacco, they appear to have received damage by ſalt-water, &c. whereby the merchant will be prejudiced; the collector, ſurveyor, and land-waiters, may make ſuch allowance as they think proper, though no allowance muſt be made in conſideration of the meanneſs of any goods: but, if the merchant is not ſatisfied with the allowance made, then the collector, and any other principal officer, may appoint two indifferent merchants, experienced in ſuch goods, on their oath, to adjuſt the allowance.

* 11th Rule of the book of rates, at the end of letter A.

Whereupon the officers or other perſons who have adjuſted the damages, are to certify the ſame on the back of the warrant. —Which allowance for damage, &c. muſt be made upon the keys, or in the king's warehouſe, immediately after landing the goods, and before taken into the merchant's poſſeſſion: and, in making theſe allowances, the quantity allow-

ed for damage muſt not be deducted from the quantity ſhort-entered (if any); but a poſt-entry muſt be made for ſuch ſhort-entry, and a certificate for the repayment of the duties of the goods allowed for damage, ſigned by the land waiters. But, before the duties are repaid, the entry inwards, referred to in the ſaid certificate, muſt be diſcharged for ſo much goods as were allowed for damage, by writing off the ſame in the margin or the book: and the whole certificate muſt be entered in particular books to be kept for that purpoſe, by the collector and comptroller.

12. That although no allowance is made to the importers of tobacco, in conſideration of any that is damaged or mean, yet, if on delivery, any part appears damaged, and the merchant is not willing to enter and pay, or ſecure the duties, he may either refuſe the whole, or ſeparate the damaged tobacco (but not the ſtalk from the leaf) by cutting off from the hogſheads, &c. ſo much as he ſhall refuſe to enter, &c. and any three or more of the principal officers may cauſe ſuch tobacco to be burnt: whereupon a certificate for an allowance, in conſideration of the tobacco ſo deſtroyed, muſt be made out, ſigned by the ſurveyor and land-waiters.

On the back whereof, the merchant muſt give a receipt for the payment of the aforeſaid allowance. See WOOLL.

But, before this allowance is paid, the ſame muſt be entered, in particular books to be kept for that purpoſe, by the collector and comptroller.

Land waiters are not to be paid their ſalaries, 'till a certificate be produced from the ſurveyor, that they have not any poſt-entries ſtanding out.—They are to aſſiſt at the ſhipping of corn and other goods, and to certify on debentures—To examine the ſhip's contents, and compare them with the merchant's endorſements on the cocket—To examine the ſhips, and diſcharge the tideſmen—To preſerve and enter the warrants outwards—A book to be kept by them for the outward buſineſs—To aſſiſt the coaſt-waiters in examining foreign goods.

LANERKSHIRE, in Scotland, is bounded on the ſouth with Dumfrieſſhire; on the ſouth-weſt with that of Aire; on the north-weſt with that of Renfrew; on the north with that of Dumbarton; on the north-eaſt with Sterlingſhire; and on the eaſt with that of Linlithgow and Mid-Lothian.

It is a pleaſant fruitful country, and, though mountainous in ſome places, and woody in others, is very well inhabited, eſpecially near the Clyde. It abounds with coal-pits and lime-ſtone, and has ſome profitable lead-mines.

GLASCOW, in this ſhire, for extent, buildings, trade, and riches, is the chief city of the kingdom, next to Edinburgh. Though the river Clyde, on whoſe banks it ſtands, is navigable up to the town for ſmall veſſels, yet New Glaſcow, at the mouth of the Clyde, is the harbour for thoſe of great burden, where the city obliges the merchants to load and unload, there being a good wharf, and a cuſtom-houſe for all the coaſt; and ſhips are alſo repaired, laid up, and fitted out here, or at Greenock. There is not only an appearance, but a reality of trade at this city, both as to foreign commerce and domeſtic manufacture; which, though great before, is very much improved ſince the union, which more fully anſwered it's end to this city, than to any other part of Scotland, ſo that they now ſend above 80 ſail of ſhips every year to Virginia, and other Engliſh colonies in America. They have a very conſiderable trade in the herring-fiſhery, which they catch ſooner, and cure ſo much better than the Engliſh, that they are reckoned equal to the Dutch. They have alſo the advantage of ſituation, lying ſo convenient for the coaſts of Spain and Portugal, that they are often at Cadiz, the Streights mouth, and even at the Canaries, in eight or nine days. Their ſituation for the American trade is no leſs advantageous, eſpecially in time of war. They lately purchaſed a harbour on the Frith, near Alloway, to enable them to reſhip their ſugars and tobacco for Holland, Germany, and the Baltic, without ſailing round England or Scotland.

They have a manufacture of plaids and muſlins, which laſt are ſo good and fine, that great quantities are ſent to England, and the Britiſh plantations, where they fetch a good price, being generally ſtriped, and much uſed for aprons by the ladies, and ſometimes in head-cloths by the meaner ſort.

LANGUEDOC in France. This province is bounded on the north by Quercy and Rovergne, on the eaſt by Auvergne and Lyonnois, on the ſouth it borders on the Mediterranean Sea, and on the weſt the Garonne ſeparates it from Gaſcony.

It is eſteemed one of the moſt pleaſant and fruitful provinces in France: it's chief commodities are wine, oil, honey, wax, ſaffron, ſilk, and ſalt.

In this province is the famous canal, cut at an immenſe expence, to make a communication between the ocean and the Mediterranean. 'Twas begun in 1666, and completed in 1680. It coſt above thirteen millions of livres, and takes an immenſe ſum yearly to keep it in repair; and yet does not anſwer the deſign for which it was chiefly made, namely, to carry the French fleets, which are ſtill obliged to paſs through the ſtreights of Gibraltar. Nor does it ſeem to be of great uſe for the inland trade.

'Tis divided into the following diſtricts or diviſions, viz.

I. TOULOUSAIN, lying between Gaſcony on the weſt, Albigeois on the eaſt, and the county of Foix on the ſouth. In it is

TOULOUSE, the capital of the whole province, ſeated on the river Garonne.

Though this city is very advantageouſly ſituated for trade, it has hardly any, the genius of it's inhabitants not being turned that way; ſo that, though this be one of the greateſt cities in France, it is neither rich nor populous.

II. ALBIGEOIS is bounded by Rovergne on the north and weſt, by Toulouſain on the ſouth, and by Quercy on the eaſt.

The ſoil about GAILLAC is the only part of Albigeois, that produces wine proper to be exported beyond ſea. They ſend it by the river Tarn, which begins here to be navigable to Bourdeaux, where the merchants ſell it to the Engliſh, this wine being better after it has been tranſported by ſea.

RABASTENS on the Tarn alſo, is an ancient city, but gone to decay; there is, however, ſome trade here, particularly of wine, which is very good.

III. LAURAGAIS lies on the eaſt of Toulouſain, between the rivers Ariege and Agout.

CASTLENANDARI has a pretty good trade, the plains that ſurround it producing abundance of corn. It ſtands on a hill, at the foot of which is a baſon of the royal canal of Languedoc.

IV. The diſtrict of NARBONNE lies between Lauragais and the county of Foix on the weſt, Rouſillon on the ſouth, the ſea and the diſtrict of Beſiers on the eaſt, and Toulouſain on the north.

Narbonne is commodiouſly ſeated in a low country, on a canal cut from the river Aude. It formerly had a good harbour, and drove a vaſt trade in the Mediterranean, but it has been long ſince ſtopt up, the ſea having left the coaſt.

CARCASSONNE is ſeated on the river Aude. The country round it is much enriched by the manufacture of all ſorts of cloth eſtabliſhed here, and which afford a conſtant employment for all the inhabitants.

LIMOUX, a ſmall city on the ſame river, has likewiſe a manufacture of cloths and other woollen ſtuffs. 'Tis alſo the ſtaple for all the iron that is worked in the neighbouring forges.

V. The diſtrict of BESIERS is extended between that of Narbonne on the weſt, Rouvergne on the north, the diſtrict of Niſmes on the eaſt, and the ſea on the ſouth.

The ſoil of this dioceſe is one of the moſt fruitful of the whole province; it produces excellent wines, and much more corn than the inhabitants can conſume, and a great quantity of oil.

VI. The diſtrict of NISMES lies between that of Beſiers on the weſt, the Mediterranean Sea on the ſouth, Provence on the eaſt, and Sevennes on the north.

Niſmes is a large town, well peopled, and has a very good trade, which conſiſts chiefly in woollen ſtuffs made here.

MONTPELLIER is the capital city of what is termed Lower Languedoc, and the largeſt and moſt conſiderable of the whole province, except Toulouſe.

The inhabitants are employed in making treacle, verdegreaſe, white wax, dimities, ſilks, and woollen ſtuffs, and other ſorts of manufactures.

BEAUCAIRE, ſituated on the Rhône, is famous chiefly for the fair kept yearly about the time of St. Magdalen's feſtival. It had formerly great privileges granted, but, in 1632, they laid a duty on all merchandizes, which amounts yearly to about 25,000 livres; beſides another of twenty-pence on every bale that has not been opened, which brings in about 5000 livres more. They carry on in this fair a trade for above ſix millions of livres. Merchants reſort hither from Italy, Germany, Spain, Turkey, Armenia, Smyrna, &c.

SOMMIERES is conſiderable for it's manufactures of ſerges, which are ſold in this and the adjacent provinces.

VII. GEVAUDAN is for the moſt part a mountainous and barren country; but moſt of the people follow ſome trade at home, making ſerges and other ſtuffs, which they ſell very cheap; and yet thoſe little manufactures bring in above two millions of livres yearly, being exported into Switzerland, Germany, Italy, and even into the Levant.

MARVEJOLS is a pretty populous city, and drives a good trade.

VIII. VIVARAIS lies between Languedoc, properly ſo called, on the ſouth, Gevaudan on the weſt, Forez and Velay on the north, and the river Rhône on the eaſt.

VIVIERS is it's capital, but is not a place of any trade.

IX. VELAY is a ſmall county or diſtrict, and has Vivarais on the eaſt, Forez on the north, Auvergne on the weſt, and Gevaudan on the ſouth.

The moſt conſiderable place in it is PUY, where they make a vaſt quantity of laces, by which they are much enriched.

LAPIDARY, an artificer who cuts preciou ſtones. The ſame is ſaid of thoſe who deal therein, and have a perfect knowledge of gems in general, and of thoſe alſo who have wrote thereon in French, as Boot, Berguen, Ruæus, Geſner, Durondel, &c.

This art is of great antiquity. The French fell into it late, yet have carried this art to a very great perfection, but not ſuperior to that of the Engliſh.

Divers machines are employed in the cutting of precious ſtones, according to their quality. The diamond which is extremely hard, is cut on a wheel of ſoft ſteel, turned by a mill, with diamond-duſt, tempered and poliſhed with olive oil.

The oriental ruby, ſapphire, and topaz, are cut on a copper-wheel with diamond-duſt, tempered with olive oil, and are poliſhed on another copper-wheel with tripoli and water.

The hyacinth, emerald, amethyſt, garnets, agates, and other ſtones not of an equal degree of hardneſs with the other, are cut on a leaden-wheel with ſmalt and water, and poliſhed on a tin-wheel with tripoli.

The turquois, of the old and new rock, giraſol, and opal, are cut and poliſhed on a wooden-wheel with tripoli alſo.

The lapidaries of Paris have been a corporation ſince the year 1290. It is governed by four jurats, who ſuperintend their rights and privileges, viſit the maſter-workmen, take care of the maſter-piece of workmanſhip, bind apprentices, and adminiſter the freedom. There are two jurats choſen, every year, by a plurality of voices.

The apprenticeſhip is for ſeven years; a maſter can have but one apprentice at a time; he is permited, however, to take a ſecond toward the end of the laſt year of the time of the others.

Apprentices, after the expiration of their ſervitude, muſt ſerve two years as journeymen with maſters, in order to perfect them in the art.

Every candidate for the freedom of the corporation, even by the royal recommendation, is obliged to perform a maſter-piece of workmanſhip before admiſſion.

Maſters may have no more than two wheels, nor more than three mills going.

Foreigners, or aliens, are not allowed to expoſe to ſale either rough or cut precious ſtones, or even pearls; nor are the maſters to purchaſe any of them, that have not been viſited by the jurats.

Theſe merchandizes can only be ſold by the maſter-lapidaries, and the goldſmith-jewellers; all others are forbid to mend or repair them.

Some of theſe articles have been ſince new modified and changed.

1. By an arret of the council of May 1613, regiſtered the June following, all merchants, foreigners, ſtrangers, and others, are forbid to carry and ſell, in the kingdom, any precious ſtones and diamonds, cut and faſhioned, unleſs in the fair time, who are then ſubject to viſitation by the jurat-lapidaries.

2. By another arrêt of the council of December 1614, the preceding is ratified; and yet it is ordered, that the dealing in diamonds, and other rough and cut precious ſtones, carried by merchant ſtrangers, ſhall remain free, as well to the goldſmith as the lapidaries, without the latter viſiting or dividing the ſtones by lots among themſelves; being alſo forbid, both the one and the other, to be factors or agents to merchants foreigners.

The parliament of Paris made a decree in February 1740, with regard to a law-ſuit between the body of trading goldſmith-jewellers, that of the mercers, and that of the other four corporations of merchants of the city of Paris of the one part, and the company of lapidaries on the other: the latter and the goldſmith-jewellers were at law for above 100 years; and this decree of the parliament terminated their differences, and definitively regulated the ſtate of theſe corporations among themſelves; by which decree, the lapidaries are forbidden to vend any ſort of precious ſtones ſet and adorned by art, under the penalty of a fine and confiſcation of the ſame, and they are reſtrained to the ſale of rough ſtones, and theſe cut and poliſhed, but not ſet and adorned. By an arrêt of the council of ſtate of January 1673, lapidaries were prohibited, and all others except goldſmiths, ſelling all precious ſtones, on pain of 3000 livres penalty, and of all expence, damage, and intereſt. The foregoing arret of parliament, in conſequence thereof, forbids lapidaries from aſſuming the quality of merchant jewellers, and to give to their jurats the name of wardens, nor permits them to be called only maſter lapidaries, gravers, and artificers, in all ſort of precious ſtones, fine and natural.

LAPLAND. This country is divided into Daniſh, Swediſh, and Muſcovian Lapland. See the articles NORWAY, SWEDEN, and RUSSIA.

LAQUE, or artificial LACCA, a name given to a coloured ſubſtance, drawn from ſeveral flowers; as the yellow from the flower of the juniper, the red from the poppy, and the blue from the iris or violet.

The method of preparing the vegetable colours called laques.

Take a pound of turmeric root, reduced to fine powder, three pints of fair water, and an ounce of ſalt of tartar; put them into a glazed earthen veſſel, and let them boil together gently, over a clear fire, 'till the water appears richly impregnated with the turmeric, or will ſtain a piece of white paper beautifully yellow; then filtre the liquor, and gradually add to it a ſtrong aqueous ſolution of roch-allum, 'till the yellow matter is all curdled together, or precipitated: after this, pour the whole into a filtre of paper, where the aqueous part will run off, and leave a yellow matter behind; which being edulcorated, or waſhed in the filtre, by the repeated affuſion of freſh water, 'till the water comes away inſipid, and afterwards dried, it becomes the laque of turmeric, or a beautiful yellow colour for painting.

This experiment ſhews a general method of obtaining a laque from all the vegetable ſubjects fitted to afford it: for in the ſame manner may a red laque be made from madder, brazil, nicaragua, and many other dyeing woods, or tinging vegetables. But, where the colour of the ſubject depends upon a very ſubtle texture, mixture, or arrangement of the parts, this method deſtroys, or at leaſt impairs the colour; as particularly in violets, red roſes, carnations, &c. So that it ſeems applicable only to the tinging vegetables of a ſomewhat ſtrong and firm texture.

In ſome caſes alſo, a ſimple proceſs is ſufficient to obtain rich laques; particularly that beautiful red one, emphatically called laque, and from which the name ſeems to be derived to the reſt. This red laque is obtained, barely by boiling ſtick-lac in water, then filtring the decoction, and evaporating the ſuperfluous humidity: for the beautiful red colour adheres to the outſides of the ſticks broke of the trees, along with the gum-lac, and readily communicates itſelf to boiling water*. Some of this tinging matter likewiſe ſticking to the gum itſelf, it is proper to boil them both together: for the gum does not prejudice the colour, nor diſſolve in boiling water: ſo that, after the operation, the gum is as fit for the making of ſealing wax, or other uſes that do not require the colour, as it was before.

* The tinging matter adhering to the ſticks and gums is, perhaps, not a vegetable, but animal ſubſtance; ſomewhat of the nature of cocheneal, and depoſited in form of an excrement, by a certain kind of bees in the Indies. See a paper upon this ſubject in the French Memoirs; ſee alſo Mr. Boyle upon human blood, Abridgment, Vol. II. p. 481.

And, much after the ſame manner, is that extremely rich and beautiful red colour called carmine, prepared from cocheneal, and a ſolution of tin; for carmine may be conceived as no more than the ſcarlet, or Bow-dye liquor, concentrated, or reduced to what the painters call a body.

How far the preſent experiment may be applicable to other parts of the materia tinctoria, ſeems not hitherto well conſidered. Doubtleſs, it might afford a great variety of new colours, by a proper extenſion and diverſification in the menſtruum and method. For example: if red ſaunders be digeſted warm in ſpirit of wine, the menſtruum acquires a deep red colour; and, if drawn off by diſtillation, leaves behind it a red, taſteleſs, and inodorous roſin, that affords no ſmell even upon burning, nor diſſolves in any expreſſed or eſſential oil; yet, even in a ſmall proportion, tinges ſpirit of wine of a full red colour, ſo as to render it uſeful for anatomical injections, &c.

In like manner, may a particular gummy red ſubſtance, or pigment, be obtained by ſpirit of wine, from dried red wine lees; and, whether the tinging parts of the more cumberſome dyeing woods and ſtuffs could not be advantageouſly extracted at the places of their growth, ſo as to leave their ponderous bulk behind, and bring away only their concentrated eſſential colours, might deſerve the conſideration of the merchant, the dry-ſalter, the dyer, the callico-printer, &c. It might be tried on logwood, brazil; on madder, ſafflore, and many other dyeing woods and ſtuffs*, whoſe names we ſeldom meet with but in the bills of entry.

* This is well deſerving the conſideration of thoſe traders, who are any way concerned in theſe things.

LAQUERED WARES are peculiar ſorts of cabinet-work, varniſhed, in the nature of japan-work, over with laquer. See LAQUE.

A white laquer, or varniſh.

Take ten ounces of rectified ſpirits of wine, and fine pulverized gum-ſandarac two ounces, clear Venice turpentine two ounces; put them together into a glaſs, and cover it cloſe with waxed paper and a bladder; then take a pot with water, put it on a coal fire, and, when it begins to be warm, put ſome hay under the bottom of the pot, whereon ſet your glaſs; let it boil for two or three hours, and the ſandarac and turpentine will diſſolve and unite with the ſpirits: then pour your laquer boiling hot through a clean hair-cloth, and put it in a clean phial for uſe. This is an excellent laquer, fit to be uſed for light colours.

Another laquer to mix with red or dark colours, and to japan the work over with.

Take rectificd ſpirits, that is, ſuch as, when poured on gunpowder, will fire it; or when a linen rag being dipped into it and lighted, it will conſume it one pound; of clean gum lacca a quarter of a pound; grind them fine, and put them into a phial, then pour the ſpirits over it; let it ſtand for two days,

days, ſhaking it once every hour: the third day, hang it over a gentle cool fire 'till it is well diſſolved, then ſtrain it through a hair-bag, and put it up for uſe.

Another laquer varniſh.

Take of the beſt and ſtrongeſt brandy one quart, calcined tartar one pound; let the brandy ſtand upon the tartar covered, for one day, in a gentle warmth; pour off the brandy, and filtrate it through paper; of this take one pound, white amber ſix ounces, ſandarac ſix ounces, gum-lac two ounces, (the amber muſt be picked out of clear pieces) grind all fine together, put them into a phial or matraſs, then pour on it three pounds of the filtrated brandy: your phial muſt be but about half filled; then ſhake it for about an hour together, keep it in a matraſs for two days, ſhaking it once every hour; when ſettled, pour it through a hair-cloth, and it will be fit for uſe.

What ſediment remains in the phial, may be uſed in making another ſuch quantity, adding to it but one half the quantity of freſh ingredients.

A fine laquer or varniſh, for blue, and other colours, which will make them bright like looking-glaſſes.

If your table is to be of a blue colour, paint it firſt with indico and white, ground with oil, with a little turpentine; when dry, you may give it another layer, and heighten it to your liking; and, when this is thoroughly dry, laquer it with the following matter.

Take clear Cyprian turpentine half an ounce, ſandarac one ounce, maſtic two ounces; grind the ſandarac and maſtic very fine; then take oil of ſpike two ounces, oil of turpentine one ounce, put them into a glaſs cucurbit, to diſſolve over a gentle heat: add thereto the pulverized gum, ſet the glaſs or matraſs in a pan with water; let it boil over a ſlow fire for an hour, and all will be diſſolved and incorporated: let it cool, preſerve it in a phial well ſtopped for uſe.

When uſed, firſt wipe your painted table, and clean it from duſt; then take ſome fine and light ſmalt in a cup, or upon a plate, according to what quantity your piece requires; temper it with the above laque, and, with a large hair-bruſh pencil, glaze it as quick as you can all over; let it dry in a clean place that is free from duſt, which will be in about three hours time, then glaze it over again: the oftener you repeat it, the brighter your table will be: if you chuſe to have it of an exceeding fine luſtre, glaze it over 12 or 15 times.

A Chineſe laquer for all ſorts of colours.

Put into a matraſs a pint of ſpirits of wine, one ounce of gum-animæ, two ounces of maſtic, two ounces of ſandarac or juniper gum, powdered finely together in a mortar: put them together into a matraſs, cloſe it up, and hang it in hot weather in the ſun for 24 hours, or ſo long over a fire, 'till the gum is diſſolved, and the ſpirits are tinctured therewith: then filtre it through a clean cloth, and keep it in a phial cloſed up: you may mix therewith what colour you pleaſe: for red, uſe vermillion; for black, uſe lamp-black, or ivory-black; for blue, uſe indico and white, Pruſſian blue or ſmalt, and white lead, &c.

LATITUDE, in geography, the diſtance of any place from the equator, meaſured in degrees, minutes, and ſeconds, upon the meridian of that place; and is either north or ſouth, according as the place is ſituated, either on the north or ſouth ſide of the equator. It is found at ſea, by having the ſun's or any ſtar's declination (by a proper table, and his meridian altitude) and that is found by a quadrant or aſtrolabe. From the horizon to the zenith being 90°, if from 90° you take the ſun's meridian altitude, the remainder will be the ſun's diſtance from the zenith. When, therefore, by obſervation, the ſun's meridian altitude is found, you are to conſider, whether the ſun hath any declination or not: if he hath none, but moves in the equinoctial that day, then the elevation of the equator will be equal to his meridian altitude; and, conſequently, his meridian altitude is the co-latitude: ſubduct, therefore, that from 90, the remainder is the latitude of the place, which will be north, if the ſun be on the ſouth part of the meridian; and ſouth, when the ſun comes to the north of the meridian.

'Tis the ſame thing with any ſtar in the equator. When the ſun or ſtar hath any declination, the zenith diſtance with that will give the latitude; for, if the meridian altitude and declination be both the ſame way, i. e. both north, or both ſouth, the difference between them will be the latitude of the place, or the pole's height: only obſerve, that, if the zenith diſtance exceeds the declination, the contrary pole will be elevated. If the declination be 23° 30′ N. and the zenith diſtance 8° 30′ N. the latitude will be 15° N. But, if the zenith diſtance be 71° 30′ S. and the declination 20° S. the difference will be 51° 30′ = to the latitude, as before; only it will be north, becauſe the zenith diſtance exceeds the declination.

If the declination be north, and the meridian altitude ſouth, or vice verſa, i. e. one contrary to the other, then the ſum of the declination and the zenith is the latitude of the place. Indeed, ſometimes the ſun or ſtar may have two meridian altitudes, as when the altitude and declination being the ſame way, the latter exceeds the former, and then the ſum of the co-declination and the meridian altitude is the height of the pole, towards which the declination is. And you muſt obſerve, that, whether the meridian altitude be north or ſouth, if that and the co-declination together be leſs than 180°, the ſun or ſtar will have two meridian altitudes in 24 hours. See the article LONGITUDE, with regard to navigation, and alſo the article COMMANDERS of SHIPS.

LAW. Traders in general are the principal perſons who ought to keep out of litigious broils, yet they are the moſt liable to be plunged into them, by reaſon of their conſtant dealings with great variety of people. We have, therefore, endeavoured, throughout this work, not only to give the ſtatute law in miniature which has relation to the chief ſpecies of merchandizes, but alſo the determination, in our courts of common law and equity, of the moſt curious mercantile caſes which have come before them, in order to guard traders againſt thoſe evils to which they are too frequently liable.

Beſides the common and ſtatute laws of England, as alſo the lex non ſcripta, there are in ſeveral parts of England certain cuſtoms and uſages, which have the force of common law among thoſe people to whoſe property they belong; as borough Engliſh, a cuſtom ſo called, not being in uſe out of England, where the youngeſt ſon, or, for want of ſons, the youngeſt brother, is to inherit, the eldeſt being ſuppoſed to have learned the father's trade, and the youngeſt the leaſt able to ſhift for himſelf.

Beſides theſe, we make uſe of the civil and maritime law, in regard to divers commercial and naval occurrences; which law is exerciſed in the high court of admiralty, as correſponding and agreeing with the laws of foreign nations, being ſuitable to the nature and negociations of the people that are ſubject to them. By this law, and the ancient cuſtoms thereof, a mutual intercourſe of commerce is maintained between nations, and ſhould, in trading ſtates, be preciſely and ſtrictly upheld and preſerved; yet the rights of the municipal laws of the kingdom ſhould, by no means, be infringed, but each juriſdiction reſtrained within it's proper limits; which will be more advantageous to the trading interſts of this nation, than the ſuffering either of them to incroach upon, and ſwallow up and devour the other: and that law which is univerſally regarded in all trading nations, ſhould ſeem the beſt calculated to determine all miſunderſtandings between the trading ſubjects of thoſe ſeveral nations which have relation to traffic, or maritime concerns. Yet, in the leagues that are eſtabliſhed between nation and nation, the laws of either kingdom are excepted; and as the Engliſh merchants in France, or in any other nation in amity, are ſubject to the laws of that country where they reſide, ſo muſt the people of France, or any other country, be ſubject to the laws of England, when reſident here. 19 Hen. VII.

By the common law, merchants were always particularly regarded in this kingdom; but the municipal laws of England, or, indeed, of any realm, are not ſufficient for the ordering and determining the affairs of traffic, and matters relating to commerce, merchandizing being ſo univerſally extenſive, that it is impoſſible: therefore there is another law, called the law-merchant, which is a kind of ſpecial law, differing from the common law of England, proper to merchants, and is become a part of the law of the realm; and all nations take ſpecial knowledge of this law; and the common and ſtatute laws of this kingdom leave the cauſes of merchants, in many caſes, to their own peculiar law, which is founded on cuſtoms and uſages immemorial. On this law, alſo, we have been pretty copious throughout our whole work.

REMARKS.

There can be nothing more perplexing and vexatious to traders than the being unhappily involved in law-ſuits. To avoid which, or to prove ſucceſsful therein, nothing can be more conducive than method and regularity, which is the life of a trader's affairs in general. Thus the due arrangement and methodizing of the original vouchers which relate to a trader's tranſaction, for immediate reference, ſhould, by no means, be neglected: for, the grand books being of no authority in courts of judicature, without the original vouchers, theſe ought to be as regularly diſpoſed as the other, in the way they will admit of; neglects of this kind, either by miſplacing, or loſing thoſe teſtimonials of a trader's tranſactions, being productive of great confuſion in public buſineſs: order and regularity in all things cannot be too early made habitual to the young trader.

And, indeed, if a trader has any miſunderſtanding or law-ſuit with others, and has the beſt cauſe to defend, and employs the moſt ſkilful, as well as moſt upright council, ſollicitor or attorney, yet, if he cannot produce authentic vouchers in his vindication, he will loſe his cauſe.

With

With relation particularly to the laws, which concern the various branches of the PUBLIC REVENUE, traders in general ſhould not be remiſs in making themſelves acquainted with thoſe that may concern themſelves, leſt they ſhould incur the penalties thereby inflicted, or injured by the officers who may exceed their authority. Thus the merchant ſhould be well informed in the laws, relative to the buſineſs of the CUSTOMS; variety of the eſſential whereof is given in this work, either under the reſpective articles which they immediately concern, or at the end of every letter, wherein the general BUSINESS OF THE CUSTOMS is concerned. But they are ſo numerous, that it cannot be expected we ſhould give the whole, and at large, which would be no more than to tranſcribe the Statutes at large: we have judged it ſufficient to give the practical trader ſuch an idea thereof, as may tend to induce him to look into thoſe, wherein his own private intereſt is concerned.

Thoſe traders, who are liable to the exciſe laws in any peculiar branch, ſhould not be neglectful to become familiar with thoſe which concern their reſpective branches of buſineſs: as the ſalt or ſtamp duties, &c.

The neceſſity of merchant importers and exporters informing themſelves well in the laws relative to the CUSTOMS in particular, will appear under the BUSINESS OF THE CUSTOM-HOUSE, at the concluſion of our letter A, and the end of the ſubſequent letters of the alphabet.

LEAD, is the heavieſt of all metals, next to gold, quickſilver not being ranked in the claſs of metals. It is the ſofteſt of all, and very ductile, though much leſs ſo than gold; is very little ſubject to ruſt, and the leaſt ſonorous, except gold; the moſt readily fuſible of all except tin, and acquires this fluidity long before it changes colour; when melted, it readily calcines into a grey powder, which, if the fire be increaſed, becomes of a fine florid red, which is the minium of the ſhops. If the fire be made yet more vehement, it runs into an oleaginous matter, which, as it cools, turns reddiſh, which is litharge. Theſe ſeveral ſubſtances, by addition of iron-filings over the fire, or only ſome pieces of charcoal, or any oily matter, become lead again.

The ſcoriæ of lead in a ſtrong fire vitrify, and in that form eſcape through all ſorts of veſſels.

Lead readily amalgamates with mercury, and as readily fuſes with all other metals, except iron. It's ſpecific gravity is to that of water as 11,322 to 1000. Expoſed to a burning-glaſs, it in a few moments goes through all the changes already mentioned.

When kept in fuſion over a common fire, it throws up all other bodies, except gold; it afterwards vitrifies with the baſer metals, carrying them off as ſcoriæ.

The weakeſt acids are it's beſt ſolvents; it diſſolves readily in aqua fortis, mixed with water, as alſo in vinegar, and is corroded with the fumes of the weakeſt acids, becoming what is called ceruſſe. It gives a ſweetiſh taſte to liquors wherein it is diſſolved. If heated 'till it ſmoaks, and copper in thin plates be put in, it boils up vehemently, and the copper breaks and blends with it. The mixed maſs, when cool, is very brittle, reſembling caſt iron where broken.

Lead is met with in the mines in various forms. The ore is uſually of colour eaſily diſtinguiſhable to the eye, being a little darker than lead, bright and gloſſy where freſh broken, and compoſed either of cubic pieces, or of ſmall granules, or of long ſtriæ. The firſt is called potters lead ore, the ſecond ſteel-grained ore, and the third antimoniated lead ore. Theſe, though apparently different, are in reality very like, when compared with the help of glaſſes.

There is, beſides theſe ores, a very curious kind, which is green, and of cryſtalline ſubſtance, uſually mixed with a kind of calamine: this has not the leaſt appearance of lead, though it contains very much, and ſome zink.

Lead is more eaſily ſeparated from it's common ores than any other metal, requiring only a common wood-fire and bellows. Such ores as contain earth and ſtones are firſt to be powdered and waſhed, and thoſe which have pyrites, or marcaſites, muſt be roaſted two or three times, to burn away the ſulphur; then powdered and waſhed, and finally mixed with the common black flux, if very refractory. If there be occaſion to ſeparate lead from copper in the regulus, it is readily done, as the lead will run off in a heat not ſtrong enough to fuſe the copper.

As to it's medicinal virtues, it ſeems to be a metal very cautiouſly to be given, and rather calculated for outward application. It's ore is poiſonous: the ſteam of the furnaces where it is worked infects the graſs around about, and kills the animals that feed on it; and it's beſt preparation, the ſaccharum ſaturni, is apt to bring on violent cholics, and ſo many other diſorders, that the remedy is often worſe than the diſeaſe.

The preparations moſt in uſe are the following, viz.

MINIUM.

Melt lead in a broad, earthen, unglazed veſſel, ſtirring continually 'till calcined to a grey powder; continue ſtirring, and it will become yellow, and is the maſticot uſed in painting. Then calcine further in a reverberatory furnace, and it will be of a fine red, which is the common minium.

LITHARGE.

This is of two kinds, but differing only in colour, called litharge of gold, and of ſilver. It is not prepared on purpoſe, but got from the ſilver ſmelting furnaces, or from thoſe where gold and ſilver are purified with lead; but it is generally run into lead again, to ſerve for the ſame uſes. The litharge of the ſhops is from the copper-works. The greateſt quantities are brought from Sweden, Germany, and Denmark; Poland furniſhes ſome, as alſo our own country, but the Dantzic kind is moſt eſteemed. The beſt is the moſt calcined, and of the livelieſt colour. It is ſoluble in oil and unctuous ſubſtances, making the baſis of moſt of the ointments and plaiſters of the ſhops. The beſt way of preparing it, is to grind it in a mortar with water, which pour off thick, adding freſh to the remainder, 'till all the litharge is waſhed off, and the fæces only remain. The litharge ſubſiding from theſe liquors is to be kept for uſe, after carefully drying it.

BURNT LEAD.

Cut a quantity of the thinneſt milled lead that can be got, into ſmall plates, with which fill an earthen veſſel that will bear the fire, and, with powder of brimſtone, laid layer upon layer; when the ſulphur is burnt away, the lead will be in a blackiſh powder: five ounces of brimſtone ſuffice for half a pound of lead. Stir the matter while on the fire, and, when cold, waſh the powder in three or four waters. It is uſed externally as the litharge: mixed with lard alone, it makes a good unguent for the piles.

WHITE LEAD, or CERUSSE,

Is a calx of lead, made by the vapour of vinegar. The uſual way of making it is by covering an earthen veſſel, in which is ſome ſharp vinegar, with a plate of lead, and ſetting it in a place gently warm; in 10 or 14 days it converts it moſtly into this white matter, which ſeparate for uſe.

But a much better way is recommended by Boerhaave. Cut a glaſs cucurbit in ſuch a manner as to leave a very large mouth, to which fit a glaſs helm; put ſome vinegar in the body, and a number of thin plates of lead in the head, ſo as they may ſtand ſomewhat erect. Set in a gentle ſand-heat for 12 hours, and, after letting cool 12 hours more, unlute the veſſel; the receiver will contain a ſweet and ſtyptic liquor, nauſeous and turbid, and the lead will be covered with ceruſſe.

The ſame proceſs, uſed with iron or copper, converts them alſo into a calx, that of iron being red, and the copper green.

Ceruſſe is of great uſe externally, either in unguents, or uſed dry, ſprinkling it on old ulcers, running ſores, and many cutaneous diſeaſes.

The finer part of this calx cauſes, in thoſe who grind and prepare it, violent and incurable aſthmas, palſies, and other nervous complaints.

Painters uſe it in great quantities; and, to afford it them cheap, it is generally adulterated with common whiting. The Engliſh and Dutch ceruſſe are very bad in this reſpect; the Venetian ought always to be uſed by the apothecaries.

SACCHARUM SATURNI.

Put into a large glaſs cucurbit any quantity of true Venetian ceruſſe, on which pour twenty times it's weight of diſtilled vinegar; boil three or four hours in a ſand-heat; when ſettled, pour off the clear liquor, and add more vinegar to the remainder: repeat the operation with freſh vinegar, 'till the ceruſſe is nearly all diſſolved. Mix the liquors, and evaporate part, if to be kept under this form. If the ſalt of lead is to be prepared, inſpiſſate in a ſand-heat, to the thickneſs of oil, and ſet it in a cool place for the ſalts to ſhoot. Pour off the liquor, and dry the cake of ſalt in a gentle heat.

The vinegar of lead is uſed by ſome for pimples: an ointment may alſo be prepared from it, by mixing with oil of roſes, and working together ſome hours in a leaden mortar. This is called butter of lead, and is an excellent medicine, by way of liniment, for almoſt all kinds of eruptions.

The ſugar of lead is greatly recommended by ſome internally, in dyſenteries and hæmorrhages; but the generality condemn it, as containing all the poiſonous qualities of lead in their higheſt degree.

Externally it has been long famous for many virtues. It is good againſt inflammations of all kinds, and in collyria for the eyes, and in the eriſypelas: it deterges, dries, and cicatriſes ulcers, and in gonorrhœas is mixed in injections with great ſucceſs.

If one ounce of it, and two of oil of turpentine, be ſet in a ſand-heat, 'till the ſalt is diſſolved, the oil turns red, and is called balſam of lead. This is alſo an external medicine, of great note for it's effects in old and ſharp ulcers.

Remarks.

There are lead-mines in divers parts of England, Wales, Scotland, and Ireland, and the Britiſh plantations, and in various other parts of Europe; but Great-Britain has larger plenty than moſt countries, and exports great quantities. Flintſhire and Derbyſhire are the two counties in England, which have been long famed for their lead-works; and that of the latter is generally eſteemed the beſt, as being the ſofteſt: the reaſon of which we aſcribe to it's being ſmelted in North Wales with pit coal fuel, and in Derbyſhire with wood fuel. For the method of aſſaying lead ores, ſee the article Assay.

The method of ſmelting lead ore at the great works, with pit-coal.

The ſmelting-houſes have large air-furnaces, in the form of ovens, with a kind of hopper in the center at top, wherein to put the ore. At one end is an open fire place, the breadth of the furnace, with large iron bars, wherein is put the pit coal; and at the other end is a large chimney flue, which draws the flame of the pit coal over the inward part of the furnace, and melts the ore.

To prepare the ore more eaſily for fuſion, they pound it, either with iron ſtampers, or by hand, and put it into the hopper before-mentioned: and, in order to ſeparate the ſparry, or ſtony and ſulphureous matter from the lead, they, for cheapneſs ſake, uſe burnt lime, in proportion to the quantity of ore to be ſmelted at a time; for the ſulphur of the lead has a natural tendency to vitrify the lime, and the ſtony or ſparry part of the ore, and to precipitate the lead: ſo that quick lime is eſteemed a proper flux [ſee Flux] for the generality of lead ores; but, as lead itſelf hath a tendency to vitrification, there is commonly a quantity of the lead turned into glaſs, as well as of the lime and ſpar, &c.—To prevent which, nothing has a better effect than to throw in, after the ore is melted, a ſmall quantity of billet-wood, or charcoal, the ſalts of whoſe aſhes the vitrified matter will inſtantly lay hold of, and thereby the greater quantity of lead will be precipitated, than with the mere pit-coal alone; and the lead will alſo become the purer and the ſofter, for the addition of a ſmall quantity of wood at the end of the ſmelting.

When all is thoroughly fuſed, and the lead as neatly precipitated as it can be in the great work, with theſe unexpenſive fluxes, there is a tap-hole, which is opened; out of which the lead runs, into the form of pigs, or bars, of fixed ſizes. And if the lead, by the aſſay, will yield ſilver ſufficient to pay the expences of refining, and to leave any reaſonable profit, the lead is then refined for it's ſilver, which is performed after the following manner.—A large teſt is made with bone or fern-aſhes, and fixed in an iron ring; which teſt will contain ſeveral tons of lead in fuſion: the lead is melted upon this teſt, with a reverberatory fire, and, when melted, is blown off with a large pair of bellows, that go either by hand or water, into litharge, and, at the ſame time, the ſilver is left or precipitated at the bottom of the teſt; and, if the refinement is carried on to the full extent, the ſilver will be as fine as ſilver can poſſibly be. After the ſilver is thus extracted from the litharge, that is reduced again into a body of lead, by being put into another furnace for that purpoſe, and melted down with pit-coal, and a ſmall quantity of wood fuel put into the furnace per contactum with the fuſed matter; for, the litharge being a kind of half-vitrified lead, the aſhes of the fuel hath, as before obſerved, a natural tendency to unvitrification.

And here the reader will pleaſe to obſerve, that, after the lead is thus refined in the great works for it's ſilver, yet every particle of the litharge lead, when again reduced into a body of lead, contains ſilver, in an equal proportion; and, indeed, there is ſcarce any lead but what holds ſome ſmall proportion of ſilver, though the produce will not pay the expence of the extracting operation. But if, by any art, the whole quantity of ſilver, if ſuch a thing is poſſible, could be extracted in one ſingle, eaſy, and unexpenſive operation, as has been attempted by ſome, it might probably be of ſome additional advantage.

The method of ſmelting lead ore with wood fuel

Is much the ſame, in point of operation, as the preceding, with this difference, that the furnaces are open, and worked by bellows, inſtead of mere air, which go by water or by hand, and the fuel is conjoined with, or laid ſtratum ſuper ſtratum with the ore. After fuſion, it is tapped in the like manner as before deſcribed, and the lead is refined alſo, as before repreſented, with wood alone inſtead of pit-coal.

Lead ores, as well as all other kinds of ores, being of different qualities in point of their value, and more or leſs difficult of fuſibility, and in the ſeparation of their reſpective metals; they require as different methods of treatment in a large way of working, as they do in the aſſay.

There are very few inſtances of native lead exiſting naturally pure and malleable among other metals *.

* Some pure native malleable lead hath been found in New-England. What is commonly taken for native lead, is really a very rich, ſomewhat malleable, ſilver ore, of a lead colour. The vitrean ſilver ore is of an irregular, and altogether unſettled figure: it is very ponderous, eaſy to be flatted with the hammer, and to be cleft, not much harder than lead, and much of the ſame colour; it melts preſently, and ſoon grows red-hot. This is what is often taken for native lead. It conſiſts of ſulphur and of pure ſilver, which the regeneration of it, and the chemical analyſis ſhew: it contains above three quarter parts of ſilver. See the article Silver.

Gallena teſſulata, or the cubic dice-lead ore, is an ore very rich of lead, conſiſting of a quantity of ſmall equilateral cubes, or of oblong parallelopipeds. But theſe cubes are, as it were, compoſed of very thin, well poliſhed lamina's, that ſhine very bright, and are of a blackiſh blue colour. However, this ore is very ponderous, ſoft, and brittle; it is more fuſible than a great many other ores, though it requires a much greater fire to be melted than lead itſelf: the cauſe of which is, the abundance of ſulphur that lies hidden in the lead ore, and conſtitutes almoſt one quarter part of it. In a fuſion well managed, one hundred pounds weight of pure and ſolid lead ore, will yield from 65 to 70 pounds weight of lead.

If the foregoing ſort of lead ore conſiſts of ſmall, thin, oblong cubes *, when broken, it appears finely ſtriated.

* You will always ſee this cubical figure in this lead ore; nor was ever any other figure obſerved in it, except ſuch as had been given it by ſome external power or reſiſtance; for, even in this caſe, it has always the ſame form within. But lead ores are called by different names, according to the various either regular or irregular application of the cubes to each other, agreeably to their magnitude, and their brightneſs thereon depending, and to their ſurfaces, whether ſmooth or rough, and granulated. There is alſo a difference obſerved in them as to their colour, ſome being of a lighter and more bright colour, and others of a dark or blackiſh dye.

Lazarus Erker, page 161, mentions a red kind of lead ore, which he ſays is ponderous, and like red clay. But it has been found that this red mineral, which has been miſtaken for cinnabar, was nothing more than the lead ore, having here and there larger cubes, eaſy to be diſtinguiſhed by the eye, without any help; and an infinite number of very minute ones, not to be ſeen without a microſcope, and lying hidden in a red kind of marly earth: ſo that it does not conſtitute a particular ſpecies.

The ſame author mentions another lead ore, reſembling a white ſandy ſtone. There are alſo ſandy rocks now and then rich of lead, but, well examined, contain an ore not in the leaſt different from that laſt deſcribed. The rock which is commonly ſoft, and therefore does not deſerve to be called a rock, bears a true lead ore, which is irregular on the outſide, looks globular, and is filled, throughout the ſubſtance of the rock, with ſmall maſſes, of various ſizes, and not very bright; ſo that, when the rock is broken, there appears the perfect ſpecies of lead ore, the laſt but one deſcribed. Abundance of theſe are digged out of the mines at Braybach.

The ſtones that are of a lighter colour, eſpecially the flints, and their like *, when they are mixed with aſh or black colour, or only marked here and there with veins and ſpots of the like dye, thereby ſhew, that they contain either iron or lead in them.

* Some of them will melt in the greateſt heat of a wind-furnace, and are ſaid to be of the vitrifying kind, to which claſs they are referred.—All minerals hitherto known may be referred to ſix claſſes, viz. metals, ſemi-metals, ſalts, ſulphurs, ſtones, and earths. See Minerals.

The green lead ore is very rare, of a yellowiſh green colour, much varied, and half tranſparent. It varies it's figures, though it moſt commonly has that of ſpaad, ſhooting in form of nitre, but leſs regular. It is likewiſe ponderous, not hard, and, at the ſame time, very rapacious; nevertheleſs, 100 pounds weight of it yields from 70 to 80 pounds weight of lead. The white and aſh-coloured lead ores are looked upon as being like this, and are as rare.

The lead ores, hitherto mentioned, are never rendered refractory by a mixture of iron ore, or of the ſulphureous iron pyrites [ſee Pyrites], as are the other ores [ſee Ores]: for, unleſs the ore then contains iron, be naturally aſſociated to the lead ores, the major part of aſſayers, in order to roaſt them with greater care and benefit, commonly uſe an addition of iron, or of it's fuſible ſcoria's, that are ſtill reducible. However, the white arſenical pyrites, if worthy to be claſſed among ores,

ores, ought, in this caſe, to be excepted, on account of it's rapaciouſneſs, and it's refractory quality of the abundant caput mortuum that remains of it, after the arſenic has been blown away.

BLACK LEAD, is found in ſeveral parts of Europe and America; the wad-mines of Cumberland in England have it in heavy lumps, ſome of which are hard, ſtony, and of ſmall worth; others very ſoft, and of a fine grain and texture.

This mineral hath none of the properties of metal; it will not fuſe, but calcine in an intenſe fire; though there are ſome fluxes, perhaps, that would melt it. The mechanics, who work in iron, ſteel, and braſs, frequently uſe it, as well by way of poliſh as to eaſe the motion of the finer wheel-work; and quantities of it are wrought into pencils; though the conſumption is not very great.

LEAKAGE. There is an allowance of 12 per cent. in the cuſtoms, allowed to importers of wine, for the waſte and damage it is ſuppoſed to have received in the paſſage: an allowance of two barrels in twenty-two is alſo made to the brewers of ale and beer, by the exciſe officers. See the articles BREWERS and WINE, and the BUSINESS OF THE CUSTOMS, at the end of each letter.

LEASE, in law, a demiſe, or letting of lands, tenements, or hereditaments, unto another for life, term of years, or at will, for a rent reſerved.

The party who letts a leaſe is called the leſſor, the party to whom it is lett, the leſſee.

The buſineſs of leaſes taking into conſideration the calculation of annuities upon lives, and the uſe of tables of intereſt computed to anſwer the variety of caſes which may be required upon theſe occaſions; we have been pretty full upon the articles of ANNUITIES and INTEREST. With regard to the former of theſe heads, we have built on the foundation laid by the great Dr. Halley in the Philoſophical Tranſactions, No. 196. and the calculus made by the method laid down by the ingenious Mr. Abr. De Moivre, in his Annuities on Lives. In relation alſo to the latter, we have given accurate tables of intereſt, both ſimple and compound, to ſeven decimal places, for 3, $3\frac{1}{2}$, 4, $4\frac{1}{2}$, and 5 per cent. with examples of the divers caſes, to which they are generally applied: theſe are neceſſary introductions to what we have to ſay under this head.

The former of theſe being algebraically inveſtigated, and therefore not intelligible by thoſe who are unacquainted with that admirable analytic art of reaſoning; we ſhall, on this article, endeavour to accommodate ourſelves to the ſkill of the arithmetician only; though what we have to ſay is founded on the very ſame principles, and will be more generally underſtood.

About 20 years ago, the doctrine of leaſes was warmly controverted by ſeveral ingenious gentlemen. The occaſion was ſome Tables calculated for renewing and purchaſing of the leaſes of cathedral churches and colleges, &c.—With the value of church and college leaſes conſidered, &c. ſaid to be wrote by Sir Iſaac Newton; but this, by ſome writers at that time, was denied: how juſtly I ſhall not enter into.

From the beſt judgment that I have been able to form of this delicate ſubject, I ſhall give the following ſtate of it for general uſe, according to the principles whereon they have been calculated, ſince the time of the learned Dr. Halley.

Our deſign being to reduce eſtates of all kinds, as near as may be, to their true value in caſh, by comparing them with annuities to continue a certain number of years, it will be neceſſary to explain what an annuity is: by which we mean a ſum of money to be paid yearly; and, if the ſame is to be continued a determined number of years, then 'tis an annuity for years certain; if it is to be continued as long as one, two, or three perſons, or either of them, ſhall continue in being, then it is an annuity for life, or lives.

As theſe yearly payments are frequently charged on eſtates as a ſecurity, ſo they may be incumbered with a part of the aſſeſſments on ſuch eſtates: an eſtate of 100l. per ann. may be bound for payment of 50 or 60l. a year: with the proviſo, that the annuitant allows out of the ſaid annuity, a proportionable part of the taxes, tythes, &c.—In ſuch caſe, we would reduce theſe outgoings to a certainty, as near as may be, and deduct the ſame out of the ſaid groſs annuity, calling the remainder only the nett annuity.

The next point to enquire is, whether, by rules certain, we can know how much ready money, at a given rate of intereſt, will, in the time of the annuity's continuance, amount to an equivalent for the ſaid annuity?

'Tis obvious, that, if a perſon advances a ſum of money, to receive an equivalent for it at one year's end, he muſt then receive, over and above the ſum laid out, one year's intereſt for the ſame: now the ſum to be received, and the intereſt expected, being ſettled, the money to be laid out will eaſily be found. Again: for the next year, the purchaſer muſt lay out no more for this, than a ſum which continued two years at compound intereſt would amount to the ſame annuity; and ſo on for the 3d, 4th, 5th, &c. years, as long as the annuity is to continue. Hence it is plain, that, where the yearly income, the rate of intereſt, and the number of years are fixed, the value of the annuity in ready money may be eaſily found; the method of doing which we ſhall ſhew hereafter.

Though the method of computing the value of an annuity, when the terms are thus fixed, is eaſy; yet frequently the fixing of the term is difficult, and not always poſſible; for in ſome caſes, the yearly income of an eſtate is hard to be found; in others, the rate of intereſt that the purchaſer ought to be allowed for the money he lays out, is ſomewhat uncertain: and the term that the purchaſer ſhall enjoy the income, is in ſome kind of tenures unknown: one or more of theſe perplexities happen in almoſt every query of this kind, according to the nature of the tenure by which the purchaſer is to hold the eſtate.

It is ſcarce poſſible to give an account of all the tenures that are amongſt us; ſecundum conſuetudinem manerii, inſerted in the copies of court rolls, refer to cuſtoms different in almoſt every manor: we, therefore, ſhall only remark thoſe which are general. As 1. Eſtates in fee. Under this head we may range thoſe held by leaſe for a long term, under ſmall rents; for, though the nature of the tenure be different, yet is the real value of them near the ſame, as appears by comparing the preſent value of an annuity to continue 200 years, with the value of the ſame in fee, at 4, 5, 6, &c. per cent. intereſt.

The difficulty in valuing theſe eſtates lies, firſt, in aſcertaining the yearly income likely to be produced by them, and the yearly outgoings in rates, taxes, repairs, &c. (aſſeſſment on land only excepted, for that is alſo chargeable on money at intereſt). And, ſecondly, the rate of intereſt that the purchaſer may expect for the money he lays out, as the ſecurity for the eſtate and income are better or worſe than the common ſecurity for money at intereſt.

2. Another kind are ſuch eſtates as are held for terms abſolute, under divers conditions and reſervations of rents, &c.—Theſe are alſo reduced to annuities as the former, only the reſerved rent muſt be valued as an annuity to be deducted, and at a lower rate of intereſt than that of the rack-rent, in regard of the ſecurity for payment being better than that of the other.

3. Another ſort are copyhold lands; under which are included all church, college, dean, and chapter lands; ſome held for term of years, renewable at certain periods, for ſtated ſums of money; others for life or lives abſolute, renewable in like, or different manner with the former.

It is the cuſtom of ſome manors, that the widow of him that was tenant for life, hath a right of dower during widowhood; ſometimes of the whole, ſometimes of a moiety, the other moiety of the eſtate to the ſon. Theſe and divers other cuſtoms there are, which muſt be well conſidered, to find the real value of theſe tenures; and the income, rate of intereſt, and, in ſome caſes, time of continuance being dubious, muſt be fixed with judgment, if we would, with any degree of certainty, arrive at the juſt value.

4. Another kind of tenure is for a term of years, determinable on the death of one, two, or three perſons, with reſervation of rents, &c. Under this head may be included thoſe that hold by life, or lives abſolute; for, though this laſt be in the nature of a freehold, yet, as to the real value of ſuch eſtates, there is little difference betwixt that which is held for 99 years, if 1, 2, or 3 lives, or either of them live ſo long, and that which is held for the ſame lives abſolute: and the cautions, mentioned in copyhold eſtates for fixing the term, are alſo to be obſerved in theſe.

Under theſe general heads may be comprized all, or the moſt part of holdings, in uſe at preſent among us; all of which may, with due caution, be reduced to annuities of a known equal value; ſo may the reverſion of a term of years, or a life or lives, after an eſtate in eſſe, be computed by the ſame method.

Mr. De Moivre juſtly obſerves, 'that the method of calcu-
'lating the value of annuities upon lives, was never per-
'fectly underſtood before Dr. Halley's rules were made
'public.'

As to eſtates in fee ſimple, the vulgar method uſed, before Dr. Halley's time, for finding their value, is thus: divide 100l. by the rate of intereſt per annum, and take the quotient for the number of years value of the purchaſe in ready money: hence, after the yearly income is known (which with them is the rack-rent, excluſive of tythes, without any allowance for outgoings) there is no more to be done, but to multiply this yearly income by the ſaid quotient, and the product is eſteemed to be the value in caſh.

The fallacy of this way of computation will be obvious, if we conſider the conſequence: for inſtance, admit I were to purchaſe an eſtate of 100l. per ann. intereſt of money being at 5 per cent. Both parties can expect no other terms than theſe, by this method of reckoning: 100 divided by 5, the quotient is 20 years value the fee, which in caſh is 2000l. Now, admit that, out of this eſtate, I muſt pay 12l. per ann. parochial aſſeſſments (excluſive of the king's tax) and 3l. per ann. more for repairs; then it is plain, that I ſhall receive no more clear than 85l. for the income of my 2000l. To find what rate of intereſt I have for my money, let the rate be $= r$; then $\frac{100}{r} \times 85 = 2000$; conſequently $r = \frac{8500}{2000} = \frac{8,5}{2} = 4,25$; that is, 4 and $\frac{1}{4}$ per cent.

The

The common argument for this is, that a man would rather take 4½ per cent. on landed ſecurity, than 5 on the common ſecurity for money; this is plauſible, but it is a wrong way of compu.ing: let us ſuppoſe again, that the eſtate I would purchaſe were of the ſame yearly value (100 l.) as before, and that the price at which I muſt purchaſe be likewiſe 2000 l. admit alſo, that, in this latter, the outgoings be no more than 4 l. a year (as the caſe may be in different pariſhes and circumſtances): upon this ſuppoſition I have 96 l. per ann. income for my 2000 l. which is above 4 l. ¾ per cent. that is, 11 s. per cent. more than in the former caſe. So that upon the whole, by this way of computation, a man may purchaſe an annuity, in one place, of ⅛ yearly value more than he can in another, for the ſame ſum of money. And although the difference of theſe outgoings be ſometimes made a ground for cavil in the treaty, yet all that is ſaid about it, amounts to nothing concluſive on either ſide. But,

2. With reſpect to ſuch as hold for a certain number of years, the common method, if it be deficient in nothing elſe, is ſo in this reſpect, that no difference is made in the ſecurity for the rack-rent, and of that for the reſerved rent, rates, taxes, &c. The beſt of the uſual methods, for eſtimating the value, being to deduct the outgoings, and value the remainder as an annuity, for the number of years that the eſtate is to continue at legal intereſt: whereas a man may reaſonably expect more intereſt for laying out his money on ſuch a tenure, becauſe he binds and incumbers the whole eſtate for the payment of an annuity (for ſuch are the outgoings) thereby taking all caſualties upon himſelf. Thus if a man, for want of opportunity, keeps his money by him, he pays nothing out of what it would bring in, if it were at intereſt; it is different in this purchaſe; here the outgoings muſt be paid, whether the eſtate brings in any thing or no.

3. The ordinary valuation of copyhold eſtates was ſtill more fallacious than either of the former; thoſe who held for lives, no regard was had to the probabilities of life (a matter very conſiderable) neither was there any allowance made for the money paid out in a regular way: to inſtance ſome particulars: and, firſt, in valuing three lives abſolute (or 99 years determinable on 3 lives, which is the ſame to all intents, as to the value) the general rule was formerly, to reckon it as a leaſe of 21 years certain; which, by the tables for that purpoſe at 5 per cent. is worth, in ready money, 12,82 years value, and no more, for 3 lives; the firſt of which they eſteemed worth 6 years, the ſecond 4, and the third 2,82; ſo that to renew 2 lives, in reverſion of one, would coſt 7 years, or one in reverſion of 2, three years value: and this was the conſtant expectation, what age ſoever the life or lives in eſſe were of, at the time of renewing.

This way of computing was corrected by another, which is likewiſe, in ſeveral reſpects erroneous. For,

By this other method (which is ſtill in practice) a leaſe for one life may be reckoned equivalent to one of 9, 10, 11, or 12 years, &c.

That for two lives, at 17, 19, 21, or 23 years, &c.

That for three lives, as a leaſe of 24, 27, 30, or 33 years, &c.

Though this latter method is a little more plauſible than the former, by reaſon of the ſteward's liberty of chuſing which of theſe proportions he pleaſes, yet what analogy does this bear to the reaſon of the thing? For, if the different numbers are to be choſen according to the age or goodneſs of the lives, or the different value of the outgoings, or both, how do they bear any proportion to each other? At beſt, it is but groping in the dark; no one can give ſuch a reaſon for his choice as will weigh with an unprejudiced perſon, that the value thereby attained is juſt and reaſonable. By this method, at 6 per cent.

One life is worth 6,8, or 7,4, or 7,9, 8,4 years value.

Two lives are worth 10,5—11,2—11,8—12,3 years value.

Three lives are worth 12,5 — 13,2 — 13,8 — 14,3 years value.

This was always the rule, without any regard to the different ages of the lives, or the greater or leſs burden of the poor, &c. Whence it appears, that, when three lives are valued at 14 years, they value one in reverſion of two, at two years, two in reverſion of one, at ſix years, and the one life in poſſeſſion, at eight years purchaſe: if ever theſe numbers agree with the real value, it is by chance; as will more evidently appear, when we conſider the probabilities of life, and the value of the chances relating thereto.

Another particular under this head, is that of renewing leaſes for years, of church or college lands; wherein the advantage of the leſſees is very evidently made appear, by an anonymous author, who wrote in the year 1731 *, in a letter publiſhed to that purpoſe; at the end of which letter is a table †, for renewing any number of years lapſed in a leaſe for 21 years.

* This tract is intitled, The Value of Church and College Leaſes conſidered: And the advantage of the Leſſees made very apparent, dated July the 1ſt, 1718.

† A TABLE for the renewing of any number of years lapſed in a leaſe for 21 years.

The cuſtomary method of doing this, is, to deduct the rent reſerved out of the rack-rent, and then one year's value is the fine for renewing ſeven years, now this method, compared with that uſed by the laity in ſuch caſes, will ſtand thus:

A leaſe for 7 years, in reverſion of another leaſe of 14 years in church or college lands, is ſold for - - - - - - - } 1 year's value.

A leaſe for the ſame term, of other lands, at 6 per cent. is ſold for, and is really worth - } 2½ years value.

Thus it appears, that the former leſſors have not above ⅔ of the value of what they ſell. The before-mentioned author hath made it plainly appear, that the tenants in church lands have (when they renew their leaſes) after the rate of 11 l. 11 s. 8 d. ¼ per cent. intereſt for the money they lay out; which is ſuch a rate, as will fix on them the guilt of extortion in a high degree.

At the firſt view of this prepoſterous way of dealing, the public were much at a loſs to find what ſhould induce clergymen, fellows of colleges, &c. to give away, what they had ſo juſt a title to, from themſelves and families. But it ſeems to be cleared up by what was then urged by Mr. Richards.

'The reading the aforementioned letter, ſays he, confirmed 'the truth of the matter of fact, but then it gives no light 'into the reaſons of it's being ſo. The author ingeniouſly 'aggravates the guilt and ſhame of the oppreſſion, but how 'the landlords ſhould be induced to grant ſuch terms (if it 'be in their power to advance the fine) he is ſilent. It is 'certain, that the keeping the eſtates in hand would be more 'advantageous than to leaſe them out for leſs than half 'the value; and as it is as certain, that the tenants would 'advance at leaſt a part of what is under value, rather than 'refuſe a bargain that would ſtill be better than any the laity 'would grant them.

'To ſay, that, by following the rules fixed by their prede-'ceſſors of 180 years ago, they think they do themſelves and 'ſucceſſors juſtice, is to brand them with a degree of igno-'rance they cannot be poſſeſſed with. For the ſtatute of '37 Hen. VIII. was made to reduce intereſt of money to '10 per cent. which ſhews, that it was higher before that 'time; and hence, if this was the cuſtom of renewing theſe 'leaſes at this time, it carried reaſon with it: but why the 'cuſtom ſhould continue after the reaſon of it ceaſed, is ſtill 'to be accounted for.

'In order to explain this ſeeming paradox, the deans and 'chapters, fellows of colleges, &c. muſt be conſidered in a 'double capacity: firſt, as they are a ſociety, and, as ſuch, 'have a right to divers lands, with power to make and re-'new leaſes of theſe lands for a term of years: but then, ſe-'condly, in their private capacity, they have a right to the 'money brought in by theſe leaſes, to be diſpoſed of at their 'own will and pleaſure.

'And

'And now, if it can be made appear, that it is for the 'worldly advantage of the members of theſe ſocieties, in re-'gard to their private capacity, to keep the leaſes filled at 'this low rate, rather than let them run out, and thereby 'hazard their never having an opportunity to make any ad-'vantage to themſelves; I ſay, if this can be ſhewn, then 'I doubt not but every one will ſuſpect, that it is this god 'of the world, that tempts them to do a thing ſo prejudicial 'to themſelves as a ſociety.'

That the value of renewing or filling up theſe leaſes is different with reſpect to theſe different circumſtances, will appear by the ſolution of theſe following queries, viz.

Quere 1. What is the value of renewing 7 years lapſed in a leaſe of 21 years, at 5 per cent.?

The anſwer will be about three years value.

Quere 2. What is the value of renewing 7 years lapſed in a leaſe of 21, to continue, if one life ſhould ſo long happen to live, at 6 per cent.?

This to a man of about 50 years of age, by a rational computation deduced from the probabilities of life, is worth no more than one year's value.

Wherefore the man that receives one year's value for renewing ſuch a lapſe, receives as much as it is worth on the chance of his own life; (and he can enjoy it no longer, if it falls into his hands): but, as the leaſe is good for the term abſolute, the leſſor grants away the right of his ſucceſſors; theſe ſucceſſors do the like by the next, and ſo on, and have nothing for it. And this they chuſe to do only, or chiefly, it ſeems, becauſe the tenants are obſtinate, and will not break through a cuſtom that is ſo profitable to them, altho' the reaſon for eſtabliſhing the cuſtom is ceaſed long ago.

We ſhall now proceed to give ſome farther account of the abſurdities in the common method of valuing copyholds; but the cuſtoms of manors being ſo various, it would be endleſs to run through them all; we ſhall therefore proceed to the fourth ſort of tenures before-mentioned.

4. In theſe, eſtates for 99 years, determinable on the death of 1, 2, or 3 lives, the method of valuing is generally the ſame with thoſe on lives before-mentioned, and is conſequently liable to the ſame miſtakes. As this kind of tenure is very common, at leaſt in the weſtern counties, ſo the moſt care ought to be taken in adjuſting the value, and, if poſſible, ſuch rules laid down, as may include all the circumſtances, viz. all the incumbrances of rates, taxes, repairs, high rents, &c. and all the caſualties; which are different, according to the quality and ſituation of the eſtate. All theſe ſhould be duly conſidered, and a proper allowance made, before the value of the leaſe can be determined.

That the common way of eſtimation doth not provide for theſe differences in any regular manner is evident, and therefore muſt of neceſſity be deficient on that account.

Previous to the aſcertaining the value of leaſes, it will be neceſſary to have a right underſtanding of the following particulars:

1. The nature of the tenure, and term of continuance (as near as may be) of the eſtate to be purchaſed; and whether the lord hath a full, or only a conditional power of granting it for ſuch a term.

2. The caſualties, incumbrances, and impoſitions that go along with the eſtate, and how far the poſſeſſor of the eſtate is liable to them.

3. The quality of the eſtate, as to the preſent condition of repair; what it will coſt to put the ſame in good repair, and how much per ann. afterwards to keep it in that condition, during the term to be purchaſed.

4. This rate of intereſt for money, together with the analogy that the common ſecurity for money lent bears to the ſecurity for the income of the eſtate to be purchaſed.

5. The yearly value. Here great care muſt be taken, that it be not fixed too high nor too low; for it is not always the rent that an eſtate is lett for, that is the value of it. A landlord may lett out an eſtate for more or leſs than it is really worth, according to the neceſſities or convenience of himſelf or tenant.

Beſides theſe, there may be other accidental circumſtances that attend particular tenures; but theſe being the principal, we ſhall take notice of them, and leave the leſs material to be conſidered by the parties concerned.

1. As to the nature of the tenure, enough hath been already ſaid: but the continuance of the term, which is often during 1, 2, or 3 lives, is a matter very precarious, becauſe nobody can tell how long theſe lives will continue in being: wherefore, ſince the certain knowledge of this is out of our reach, the beſt we can do is to inform ourſelves of the moſt probable conſequences in thoſe reſpects: and, though, in regard to theſe uncertainties, the buyer muſt be ſaid to purchaſe a chance, yet the real value of chances, as ſuch, may be found to a tolerable degree of certainty: to do which, let the following hypotheſis be aſſumed, viz.

'The probability that a life of any given age will con-'tinue in being, 1, 2, 3, 4, &c. years, is exhibited by 'Dr. Halley's tables, publiſhed in the Philoſ. Tranſ. 'No. 196, or may be deduced therefrom.' See the article ANNUITIES.

Nobody will undertake to prove, that this is mathematically certain: for it is evident, that the nature of the thing will not admit of that degree of certainty. The deficiency that the learned doctor ſeemed to apprehend in it, was the want of a great number of years experience; but it will, we apprehend, cauſe but a ſmall error in the reſult, if the numbers in the doctor's table ſhould, on future experience, be a little varied. To proceed:

If the lord, from whom you purchaſe, has no more, or will grant no more than a conditional right, then the value of the hazard of ſuch conditions muſt be computed, whether it depend on a chance, or otherwiſe, and that ſum muſt be deducted as prudence ſhall direct.

2. By caſualties we underſtand ſuch unforeſeen accidents which an eſtate is expoſed to; as fire and inundation, whereby houſes are liable to be conſumed, wears, banks, &c. demoliſhed, and cattle deſtroyed, to which ſome eſtates are more liable than others. Beſide, is the eſtate likely to be always tenanted? Will it not be often changing tenants, which always brings a charge? If, on a ſcrutiny, the hazards that a perſon runs by the purchaſe be greater or leſs than the common hazard in lending money, a purchaſer muſt be allowed a proportionably greater or leſs intereſt for the money he thus lays out.

By the incumbrances and impoſitions that are inſeparably annexed to an eſtate, muſt be underſtood all tythes, rents, rates, taxes, harriots, ſuits, ſervices, &c. for the payment of which the eſtate is generally bound; conſequently, theſe muſt be valued as a rent charge, or clear annuity to be paid out, when, ſometimes at leaſt, the income of the eſtate, as being attended with ſome uncertainties, &c. muſt be reckoned at 1 or 2 per cent. more than theſe outgoings.

3. As to the quality of the eſtate, in regard to repair: herein the greateſt difficulty ſeems to lie; for the beſt that can be done is but gueſs-work, with reſpect to theſe diſburſements. If it be out of repair at the time you purchaſe, the beſt way will be, whether it be fields or houſes, or both, to procure men, well ſkilled in theſe matters, to compute the charge of putting it into tenantable condition: which charge ought to be deducted out of the value, and reckoned as ſo much money paid; ſo far the difficulty is ſurmounted.

But, as all eſtates will coſt money yearly to keep them in repair, theſe diſburſements alſo muſt be computed. Here again the judgment and experience of honeſt men muſt be your guide: for repairs of houſes, &c. are dearer in one place than another, ſo are they more expoſed to ſtorm, &c. in one place than another. Moreover, old houſes, though at firſt put into repair by the former ſuppoſition, are more chargeable in future repairs than thoſe of later building; and houſes, at firſt ſlightly built, are more chargeable than others of a more ſubſtantial ſtructure. Thus ſometimes it may be neceſſary, in eſtates which conſiſt chiefly of houſes, to allow $\frac{1}{3}$, at other times not above $\frac{1}{10}$ part of the annual income towards the repairs of theſe houſes.

If the right to timber-trees, coppice-woods, corn, &c. or the profits of mines, &c. are to be alſo transferred to the purchaſer, then, as to the former of theſe, they muſt be eſtimated at their preſent worth, and ſo much money added to the fine. In regard to mines, the clear yearly profit like to ariſe thereby, and the probable time of their continuance muſt be conſidered; and, the chances herein being more hazardous than others, perhaps the perſon that purchaſes may reaſonably expect a greater rate of intereſt for the money he lays out in theſe; therefore they muſt be ſeparately valued, and this value added to that of the eſtate before found.

4. We ſhall now conſider the rate of intereſt and ſecurity for money lent, and compare it with money laid out in lands, &c. The legal intereſt is 5 per cent. per annum. Though a perſon can lawfully take no more, yet he may lay out his money for leſs advantage: many who lend money by way of mortgage, or purchaſe land ſecurity, accept of 4 and under.

But, if a man lays out his money on an eſtate for life only, there is no reaſon why he ſhould not expect the legal intereſt, in regard of the uncertainty of the tenure, &c. And, indeed, he may a great deal more, if the eſtate purchaſed be houſes, or the like, where the calamities are many and great; ſuch as fire, damage by ſtorm, bad tenants, or perhaps none at all: in theſe caſes 6, 7, or even 8 per cent. may be little enough.—Of this more hereafter.

5. Becauſe the value of eſtates is to be computed from their yearly income, due care muſt be taken to aſcertain that. If the eſtate has not been lett at a yearly rent, the judgment of ſkilful honeſt men in the neighbourhood will be a good guide, as well in that as in regard to the value of all advantages and deficiencies; if it has been lett at a yearly rent, thoſe perſons can inform whether that was too much or too little, and why. By theſe means the value may be aſcertained, by which the worth of the fee, or leaſe for years or lives, may be computed. It is beſide neceſſary to be conſidered, whether the leſſee is bound to pay a harriot or farley, either abſolutely of each life, or conditionally, if the liver dies in courſe. In the firſt caſe, the probability of life being known, i. e. how long it is likely each life may continue in being, the value of the money, or

harriot, then to be paid, may, by the following tables, be found in ready money: and ſo of each life. In the ſecond caſe, the probability of the lives dying in courſe, together with the probability as to the number of years, as before, being found, by the rules and tables hereafter laid down, the value in ready money may thence be found; which ſums, ſo found, muſt be deducted out of the purchaſe-money.

Sometimes there is a condition in a leaſe for a certain ſum to be paid for renewing a life, in caſe one ſhould die within a time prefixed. Here the probability of all the lives living for that time being found, the value of ſuch a privilege to the leſſor, or leſſee, may be found. If there be any other conditions of this kind, we preſume, they may be reduced to ſome or other of theſe and the following caſes.—Before we proceed to the tables, it may be requiſite to ſay ſomething in general of REVERSION.

By which is meant that right to an eſtate which is to take place after the determination of a term of years, or lives, during which it is held by ſome former grant.—The queſtions that ariſe, in relation to theſe eſtates in poſſe, are ſuch as theſe:

1. What is the value of the fee, in reverſion of a certain number of years, or of a life or lives in being?

2. What is the value of a term of years, to commence after the expiration of another term of years certain?

3. What is the value of a term of years, or of one, two, or three lives, in reverſion for a life or lives in being, to be nominated either now, or at the end of the term in being?

4. Three perſons being to enjoy an eſtate by equal portions, during their joint lives, the remainder to the ſurvivor and ſurvivors, and what is the value of each man's right?

Theſe, and the like, are the queries that will ariſe about reverſions; and the ſolution of them will appear eaſy enough, if we conſider,

1. That the value of the eſtate in eſſe, added to the reverſion, is equal to the value of the fee in poſſeſſion: whence it is plain, that, ſubtracting the value of the preſent poſſeſſor's right out of the value of the fee ſimple, the remainder is the value of the reverſion in the firſt query.

2. Find the value of the term of years in eſſe, and then add the two terms together, and find the value of that whole term; the exceſs in value of that whole term, above the value of the eſtate in eſſe, is the value ſought in the ſecond query.

If in the third query, the life, or lives, in reverſion, be to be nominated at the time of taking, firſt find the value of a leaſe to continue during the term of all the lives, and from that value ſubtract that of the lives in eſſe; the remainder is the anſwer to the firſt part of the queſtion: but, if the lives are to be nominated at the expiration of the right in eſſe, find the probable duration of the preſent eſtate in years, and alſo the value of one, two, or three lives, in ready money; then (from the tables for that purpoſe) find how much this laſt ſum, payable at the end of the years before found, is worth in ready money alſo, rebate at 5 per cent. for this is the value required.

4. For a ſolution to the fourth queſtion, note, that each perſon has a right to one third of the value of their joint lives, and to half the value of the expectation, after the death of either of the other two, and alſo to the whole value of the expectation, after the death of both the others; which three ſums, added together, give the value for each. The value of two or three joint lives is found by the tables for that purpoſe, which follow.

Theſe tables, for the more eaſy computing the value of annuities upon lives, are, as before obſerved, the reſult of thoſe obſervations publiſhed by Dr. Halley, and are calculated according to the method laid down by Mr. Abraham De Moivre, in his treatiſe intitled Annuities upon Lives, &c.

But, before we proceed to theſe, it may be proper to give the reader here a table for finding the value of an annuity for years certain, at 4, 5, 6, 7, and 8 per cent.

LEA

Though the following tables are calculated ſome for every 5th, and ſome but for every 10th year of age; yet, it is preſumed, that the common known method of equating will accommodate them, as well to any other year of age, as to any intermediate rate of intereſt.

TABLE I.

Shewing the value of an annuity, in years and decimal parts, for any number of years not exceeding 100, at the rate of 4, 5, 6, 7, or 8 per cent.

Years of continuance.	4 per cent. Value in years.	5 per cent. Value in years.	6 per cent. Value in years.	7 per cent. Value in years.	8 per cent. Value in years.
1	0.98	0.95	0.94	0.93	0.92
2	1.88	1.86	1.83	1.81	1.78
3	2.79	2.72	2.67	2.62	2.58
4	3.61	3.55	3.46	3.39	3.31
5	4.44	4.33	4.21	4.10	3.99
6	5.23	5.07	4.92	4.77	4.62
7	5.99	5.79	5.58	5.39	5.21
8	6.57	6.46	6.21	5.97	5.75
9	7.42	7.11	6.80	6.51	6.25
10	8.09	7.72	7.36	7.02	6.71
11	8.75	8.31	7.89	7.50	7.14
12	9.37	8.86	8.38	7.94	7.54
13	9.97	9.39	8.85	8.36	7.90
14	10.55	9.90	9.29	8.74	8.24
15	11.10	10.38	9.71	9.11	8.56
16	11.60	10.84	10.15	9.45	8.85
17	12.15	11.27	10.47	9.76	9.12
18	12.64	11.69	10.83	10.06	9.37
19	13.12	12.08	11.16	10.33	9.60
20	13.57	12.46	11.47	10.59	9.82
21	14.01	12.82	11.76	10.83	10.02
22	14.43	13.16	12.04	11.06	10.20
23	14.84	13.49	12.30	11.27	10.37
24	15.25	13.80	12.55	11.47	10.53
25	15.60	14.09	12.78	11.65	10.67
26	15.96	14.37	13.00	11.83	10.81
27	16.31	14.64	13.21	11.99	10.93
28	16.64	14.90	13.40	12.14	11.05
29	16.97	15.14	13.59	12.28	11.16
30	17.27	15.37	13.76	12.41	11.26
31	17.57	15.59	13 93	12.55	11.35
40	19.78	17.08	15.03	13.39	11.91
50	21.47	18.25	15.67	13.83	12.17
60	22.61	18.93	16.17	14.00	12.34
70	23.39	19.34	16.34	14.11	12.42
80	23.90	19.58	16.50	14.15	12.46
90	24.26	19.75	16.59	14.18	12.47
100	24.50	19.85	16.64	14.20	12.48
The fee ſim.	25	20	16.66	14.29	12.50

In this, and the following tables, the numbers at the left-hand of the points are years, and the remaining figures are decimals of a year. I ſuppoſe there will be no difficulty to underſtand the value of theſe decimal parts; but, if there ſhould, it may be very uſeful, to ſuch as are wholly unacquainted with decimals, only to take the half of the decimal, and reckon it for ſo many weeks: thus, againſt 40 years of continuance, you will find, under 4 per cent. 19.78; the 19 ſhews ſo many years, and the half of 78, being 39, ſhews ſo many weeks: therefore an annuity for 40 years is worth 19 years 39 weeks, or, rather, 19 years 10 months purchaſe nearly. See the articles ARITHMETIC and INTEREST.

TABLE II.

Shewing the preſent value of 1 l. payable at any number of years hence under 100, at 5, 6, 7, or 8 per cent. viz.

Years.	Value at 5 per cent. in parts.	Value at 6 per cent. in parts.	Value at 7 per cent. in parts.	Value at 8 per cent. in parts.
1	·95	·94	·93	·92
2	·91	·89	·87	·86
3	·86	·84	·82	·79
4	·82	·79	·76	·74
5	·78	·75	·71	·68
6	·75	·71	·67	·63
7	·71	·67	·62	·58
8	·68	·63	·58	·54
9	·64	·59	·54	·50
10	·61	·56	·51	·46
11	·58	·53	·47	·43
12	·56	·50	·44	·40
13	·53	·47	·41	·37
14	·51	·44	·39	·34
15	·48	·42	·36	·32
16	·46	·39	·34	·29
17	·44	·37	·32	·27
18	·42	·35	·30	·25
19	·40	·33	·28	·23
20	·38	·31	·26	·21
21	·36	·29	·24	·20
22	·34	·28	·22	·18
23	·32	·26	·21	·17
24	·31	·25	·20	·16
25	·29	·23	·18	·15
26	·28	·22	·17	·13
27	·27	·21	·16	·12
28	·25	·19	·15	·11
29	·24	·18	·14	·11
30	·23	·17	·13	·10
35	·18	·13	·09	·07
40	·14	·10	·07	·05
50	·09	·05	·03	·02
60	·05	·03	·02	·01
70	·03	·017	·008	·004
80	·02	·009	·004	·002
90	·012	·005	·002	·001
100	·008	·003	·001	·0004

I ſuppoſe that an example or two will render the finding the value of theſe parts in money very eaſy.

Thus: againſt 15 years, and under 5 per cent. is - .48
Multiply theſe parts by - - - 20

In the parts given are two figures at the right-hand of the point, therefore cut off two figures in the product, and the remaining figure to the left-hand is ſhillings - - - - - } 9.60

Again: multiply theſe parts by - - - - 12

And cut off, as before, then the figures at the left-hand are pence - - - - } 7.20

Hence the parts 48 is the ſame with 9 s. 7 d. $\frac{2}{10}$.

Again: oppoſite to 70 years, under 7 per cent. is - .008
20

00.160
12

1.920

Hence the value in money is 1 d. $\frac{9}{10}$, &c.

TABLE III.

Shewing the value (in years and decimal parts) of annuities to continue 7, 10, 14, or 21 years, if a perſon of a given age live ſo long, calculated to every 10th year of age, at 5, 6, 7, and 8 per cent.

Annuity for 7 years on a life.

Age.	5 per cent. Years.pts.	6 per cent. Years.pts.	7 per cent. Years.pts.	8 per cent. Years.pts.
2	5.11	4.94	4.77	4.62
7	5.43	5.24	5.06	4.88
12	5.59	5.40	5.21	5.04
22	5.55	5.36	5.18	5.00
32	5.42	5.24	5.06	4.88
42	5.27	5.10	4.92	4.74
52	5.07	4.91	4.76	4.59
62	4.80	4.64	4.38	4.13
72	3.92	3.80	3.69	3.58
79	2.64	2.58	2.52	2.46

Annuity for 10 years on a life.

Age.	5 per cent. Years.pts.	6 per cent. Years.pts.	7 per cent. Years.pts.	8 per cent. Years.pts.
2	6.75	6.45	6.18	5.91
7	7.15	6.83	6.53	6.24
12	7.36	7.02	6.70	6.40
22	7.24	6.91	6.50	6.31
32	7.05	6.73	6.43	6 15
42	6.77	6.47	6.19	5.92
52	6.48	6.20	5.93	5.68
62	5.91	5.66	5.42	5.20
72	4.70	4.55	4.36	4.21
82	1.38	1.36	1.34	1.32

Annuity for 14 years on a life.

2	8.58	8.12	7.72	7.21
7	9.21	8.68	8.23	7.69
12	9.27	8.73	8.28	7.75
22	9.04	8.51	8.10	7.50
32	8.70	8.21	7.81	7.30
42	8.24	7.80	7.43	6.94
52	7.76	7.36	7.02	6.56
62	6.78	6.28	6.17	5.76
72	5.08	4.94	4.74	4.56

Annuity for 21 years on a life.

2	11.00	10.16	9.41	8.75
7	11.63	10.70	9.90	9.18
12	11.60	10.67	9.87	9.16
22	11.18	10.30	9.55	8.86
32	10.60	9 80	9.10	8.46
42	9.98	9.24	8 61	8.03
52	8.99	8.42	7.88	7.39
62	7.77	7.26	6.86	6.47
65	7.18	6.77	6.40	6.06

TABLE IV.

Of the value of an annuity for one life, calculated to every fifth year of age, at 4, 5, 6, 7, and 8 per cent.

Age.	Value at 4 per cent. Years.pts.	Value at 5 per cent. Years.pts.	Value at 6 per cent. Years.pts.	Value at 7 per cent. Years.pts.	Value at 8 per cent. Years.pts.
2	15.28	13.56	11.92	10.59	9.64
7	17.32	15.30	13.42	11.79	10.69
12	17.20	15.23	13.36	11.72	10.67
17	16.68	14.73	12.99	11.47	10.46
22	16.05	14.14	12.54	11.14	10.17
27	15.18	13.46	11.97	10.73	9.78
32	14.30	12.79	11.47	10.38	9.46
37	13.40	12.10	10.90	9.90	9.07
42	12.50	11.27	10.24	9.37	8 62
47	11.58	10.49	9.58	8.82	8.16
52	10.50	9.65	8.91	8.25	7.68
57	9.31	8.70	8.11	7.58	7.10
62	8.04	7.53	7.08	6.66	6.29
67	6.53	6.21	5.90	5.60	5.32
72	5.21	4.98	4.78	4 56	4.38
77	3.52	3.40	3.29	3.19	3.09
82	1.41	1.38	1.36	1.34	1.32

TABLE V.

Of the value of an annuity for two joint lives (to continue 'till one of them dies) of equal ages, calculated to every fifth year of age, at 4, 5, 6, 7, and 8 per cent.

Age.	Value at 4 per cent. Years.pts.	Value at 5 per cent. Years.pts.	Value at 6 per cent. Years.pts.	Value at 7 per cent. Years.pts.	Value at 8 per cent. Years.pts.
2	10.89	10.04	9.24	8.50	7.84
7	13.04	12.08	11.16	10.26	9.37

TABLE VI.

Shewing the value of annuities for two joint lives of any ages (that is to continue 'till one of them dies) calculated to every 10th year of either of their ages, at 4, 5, 6, 7, and 8 per cent.

One life 2 years old.

Age.	4 per cent.	5 per cent.	6 per cent.	7 per cent.	8 per cent.
2	10.89	10.04	9.24	8.50	7.84
12	11.88	10.99	10.11	9.28	8.48
22	11.28	10.40	9.60	8.87	8.21
32	10.37	9.68	9.01	8.35	7.67
42	9.36	8.77	8.19	7.62	7.07
52	8.17	7.74	7.31	6.88	6 45
62	6.59	6.29	5.99	5.70	5.41
72	4.52	4.37	4.22	4.07	3.93
82	1.33	1.31	1.29	1.27	1.25

One life 12 years old.

12	13.01	12.05	11.13	10 22	9.32
22	12.37	11.41	10.50	9.67	8.88
32	11.27	10.96	9.84	9.11	8.39
42	10.52	9.47	8 84	8.22	7.64
52	8.73	8.39	7.84	7.38	6.91
62	6.94	6.68	6.39	6.08	5.75
72	4.71	4.57	4.42	4.26	4.10
82	1.35	1.34	1.32	1.30	1.28

One life 22 years old.

22	11.64	10.80	10.00	9.24	8.53
32	10.82	10.09	9.11	8.73	8.05
42	9.65	9.22	8.45	7.92	7.45
52	8.42	8.00	7.55	7.12	6.67

72	3.46	3.38	3.30	3.21	3.13
82	1.18	1.17	1.16	1.14	1.12

One life 72 years old.

72	2.73	2.68	2.63	2.58	2.52
82	1.04	1.03	1.03	1.01	1.00

One life 82 years old.

82	0.55	0.54	0.54	0.53	0.53

The uſe of the foregoing table is very eaſy: for, the age of one of the lives being found at the top, and that of the other in the left-hand column (as is uſual in ſuch-like tables) right againſt it, under the proper rate of intereſt, you will find the value of the annuity, in years and decimal parts; which decimal parts may be reduced to months or weeks, by the foregoing rules laid down under Tab. I.

TABLE VII.

Wherein is ſhewn the value of an annuity for three joint lives, in years and decimal parts, calculated to every tenth year of either of the ages, at 4, 5, 6, 7, and 8 per cent.

2d life. Two years old. | 3d life.

One life 2 years old.

3d life.	4 per cent.	5 per cent.	6 per cent.	7 per cent.	8 per cent.
2	8.44	7.97	7.49	7.01	6.53

The way of finding the value of lives of any ages, howſoever combined in the foregoing tables, cannot be difficult; for, if the age of any one of the lives be found at the top, then may the age of the other two be met with in the two left-hand columns; and the value of thoſe three joint lives is given in years and decimal parts, in the column under the given rate of intereſt. How to reduce thoſe decimal parts to weeks or months, hath been already ſhewn: we ſhall therefore proceed to the conſideration

Of annuities for years abſolute, &c.

We ſhall apply the preceding tables to this purpoſe, by giving examples in the peculiar caſes before-mentioned: in which we ſhall be particular in regard to the nature of the diſburſements, and to ſtart all objections that may ariſe on account of the precarioufnefs of the tenure.

Example I. There is an annuity of 40 l. payable to A clear of all outgoings, to continue for 30 years abſolute; for the payment of which he has ſecurity on lands of a much greater value, what is this worth in ready money, legal intereſt being 5 per cent.?

For ſolution to this it muſt be conſidered, that in regard the ſecurity for payment is better than the common ſecurity on money lent, and alſo that the aſſeſſment of 2, 3, or 4 s. in the pound on intereſt money is hereby ſaved (the 40 l. per ann. being, by ſuppoſition, to be paid clear of all outgoings) the purchaſer ought to be contented with leſs than legal intereſt, and, perhaps, all things duly weighed, 4. per cent. may be ſufficient intereſt, and agreed on.

This premiſed, in order to ſolve the queſtion, look into Table I. for the number of years in the firſt column, and right againſt it, under the rate of intereſt, viz. 4 per cent. you will find 17,27 decimals, which ſhews, that the annuity is worth ſo many years value: wherefore, 17,27 being multiplied by 40, the product is l. 690,8 = 16 s. the value ſought in ready money.

Suppoſe the annuitant be to allow his proportion towards the rates and aſſeſſments, and that theſe deductions, excluſive of the land-tax, amount to 2 l. 10 s. a year: in this caſe, if the annuitant be to pay his ſhare of the land-tax, it is reaſonable that he ſhould be allowed 4 l. 10 s. per cent. and the reſt of the outgoings being deducted out of the annuity 40 l. the remainder, viz. 37 l. 10 s. muſt be called the annuity.

Againſt 30 years in Tab. I. and under 4 per cent. is 17,27 decimals; and in the ſame table againſt 30, and under 5 per cent. is 15,37. The mean between theſe two numbers, viz. 16,32, is the number of years anſwering to $4\frac{1}{2}$ per cent.; and this number multiplied by 37,5, or 37 l. 10 s. the product 612 is the value of the annuity required in the queſtion.

Example II. Admit the farm of —— were to be leaſed out for a term of 21 years, at the end of which, the tenant to yield it up in as good condition as he finds it.

Suppoſe the yearly value thereof, at a rack-rent, to be (the landlord paying tythes, and all outgoings, except the king's tax) 76 l. that can be made thereof: ſuppoſe alſo that thoſe tythes, chief rents, rates, and repairs, amount to 11 l. yearly; and ſuppoſe further, that the leſſor will reſerve 10 l. a year rent: now, granting that the caſualties, &c. to which it is expoſed, make it reaſonable that the purchaſer ſhould be allowed 6 per cent. for the money he lays out, what fine ought he to pay for the 21 years?

In this caſe it ſhould be conſidered, that, though the purchaſer may expect 6 per cent. for his money laid out on an eſtate thus encumbered, and ſubject to ſuch caſualties, yet as to the rates, tythes, chief rent and repairs, it being a tenure of the beſt kind, and liable to no deductions at all, it may be reaſonably reckoned at 4 per cent. and then the reſerved rent, being liable to the king's tax only, may be conſidered as an annuity at $4\frac{1}{2}$ per cent. Theſe things premiſed, the matter will ſtand thus:

The rack-rent is an annuity of 76 l. per ann. ſubject to divers incumbrances, caſualties, &c. and therefore, 6 per cent. intereſt, being allowed 21 years continuance, is worth per Tab. I. 11,76 years value, which amounts to 894 l.

Out of this, the parſon, the pariſh, the chief lord, &c. have an annuity paid clear, which (on the beſt computation that can be made of it) amounts to 11 l. yearly: this at 4 per cent. is worth per Tab. I. 14,01 years value, which in caſh amounts to 154 l.

The reſerved rent is an annuity of 10 l. yearly, ſubject to the king's tax only, and therefore to be valued at $4\frac{1}{2}$ per cent. which, per Tab. I. (due equation being made) is worth 13,41 years value, which in caſh amounts to 134 l.

Laſtly, If theſe two mentioned ſums of 154 l. and 134 l. be deducted out of the whole value, the remainder, or 506 l. is the ſum that ought to be paid by the purchaſer, for the grant of 21 years in the farm. Our being ſo very particular in this example will excuſe expatiating ſo largely again.

Example III. An eſtate in houſes containing divers tenements, to be lett for a term of 21 years; the whole yearly rent amounts to 50 l. the charge of putting the houſes in repairs is about 40 l. and of keeping them ſo during the term 7 l. per ann. the outgoings in rates, &c. 4 l. a year, rent reſerved 3 l. a year. In regard of the ſituation, caſualties, hazard of bad tenants, or of none at all, &c. the purchaſer ought to be allowed 7 l. per cent. Quere, What fine ought he to pay?

	l.	s.	d.
An annuity of 50 l. for 21 years at 7 per cent.	541	10	0
Out of which deduct			
An annuity of 11 l. for the ſame time, at 4 per cent. - - - - -	154	0	0
An annuity of 3 l. for 21 years, at $4\frac{1}{2}$ per cent.	40	0	0
The charges of putting the ſame into repair -	40	0	0
The remainder, after theſe deductions, is the anſwer to the query - - - - -	307	10	0

Note, If it be conſidered that houſes are liable to accidents by fire, and that, where the eſtate (as in this inſtance) conſiſts of divers tenements, the charge of tenants always brings a charge of repairs with it, and very often loſs of rent: theſe things conſidered, 7 l. per cent. we apprehend, will be judged little enough to be allowed the purchaſer.

Example IV. Out of a leaſe for 30 years in an eſtate which is 6 per cent. coſts 700l. there is lapſed 17 years: what muſt be given at the ſame rate of intereſt, to renew the ſaid 17 years?

In Tab. I. againſt 30, and under 6 per cent. you find 13,76, by which dividing 700, the quotient is 50,85: this is the annuity, which was at firſt purchaſed for 700l.

The value of an annuity of 50l. 17 s. to continue 30 years at 6 per. cent. is - - - -	l. 700
The value for 13 years at the ſame rate, by the ſame table, is - - - - -	450
The remainder, after ſubtraction, is the ſum to be paid for renewing the 17 years lapſed - -	250

Example V. An eſtate in fields, only worth 70l. per ann. out of which is iſſued a chief rent of 11. per ann. and the rates and tythes thereof amount (excluſive of the king's tax) to 12 l. a year: what is the fee in reverſion of a leaſe of 40 years worth in ready money, the accidents and caſualties very few, or none at all?

Here the nett produce of the eſtate is 57 l. a year:

And 57 l. per ann. to continue for ever, is equal to a fee ſimple, if it were in poſſeſſion; which at $4\frac{1}{2}$ per cent. is - - - - -	l. 1267
The value of the leaſe for 40 years, by the tables and multiplication, is at $4\frac{1}{2}$ per cent.	1050
This laſt value, ſubtracted from the former, leaves the value of the reverſion - - -	217

In this laſt example, the ſecurity that the purchaſer has for the rack-rent, is near as good as that for the payment of the outgoings; on which account, the outgoings are firſt deducted from the yearly value, and the remainder is reckoned as an annuity: but, generally ſpeaking, it ought to be done otherwiſe, viz. by reckoning the whole rent as an annuity, to be received at a proper rate of intereſt, and then to compute the outgoings as near as poſſible, and to value that ſum as an annuity to be paid out; for which, generally, the rate of intereſt ought to be 10 s. and ſometimes 1 l. per cent. leſs than the legal intereſt on money.

Having given theſe cautions, we ſhall, in all that follows, call this laſt mentioned annuity, the ſum paid out: which ſhall include all rates, tythes, repairs, or the like diſburſements, which go along with the tenure; and which muſt be judiciouſly computed, before the juſt value of the purchaſe can be obtained.

In the preceding examples, a difference is made in the reſerved rent, and other outgoings; for this reaſon, that, when the reſerved rent amounts to 20 s. or upwards, the landlord is to allow the tenant a proportion towards the king's tax, and therefore $\frac{1}{2}$ per cent. more ſhould be reckoned for it, than for clear annuities, ſuch as rates, tythes, repairs, &c.

Of Copyholds.

Method leads us next to ſhew, how, by the foregoing tables, the value of eſtates held from deans and chapters, colleges, &c. for terms of years, or for life or lives, renewable at certain periods on fixed conditions, or otherwiſe, may be found; and, to this purpoſe, the following examples may be acceptable.

Example I. A tenement of church lands of 30l. per. ann. rent, to be leaſed on the condition that the tenant pay at the end of every ſeven years 30 l. or one year's value for ever; what ought to be paid for the firſt purchaſe, the ſum paid out yearly 4 l. and the rate of intereſt to the purchaſer 6 per cent.?

Note, Though, perhaps, no biſhops, deans, or fellows of colleges, do or can grant their leaſes on ſuch abſolute conditions of renewing; yet, in effect, it is all one to the tenant; for they always think themſelves ſure of theſe terms, and the common practice has confirmed it: by this example, therefore, ſhall be ſhewn, how much they ought to pay for the firſt purchaſe.

The value of the fee at 6 per cent. is, by the foregoing tables, $16\frac{2}{3}$ years purchaſe - -	l. 500
Deduct the value of the ſum paid out at 4 per cent. 25 years - - - - - -	100
Remainder is the value of the eſtate in fee - -	400

For the value of the ſeptennial payment of 30l. per. Tab. I. an annuity of 1 l. to continue 7 years at 4 per cent. is worth 5,99, and per Tab. II. the preſent value of 1 l. to be paid at the end of 7 years, is (at 4 per cent.) .760. Wherefore, dividing .760 by 5,99, the quotient .1269, being multiplied by 30, produces 3,84 = 3 l. 16 s. 1 d. $\frac{1}{2}$. This is the ſum that may be paid yearly as an equivalent for the 30 l. that is to be paid at the end of every 7 years: conſequently, an annuity of that value to continue for ever, muſt be deducted out of the value of the fee before found.

Thus the value of that annuity at 4 per cent. is worth 25 years value, or - - - - - -	l. 95
Hence the remainder, after ſubtraction, is the ſum that ſhould be paid for the firſt purchaſe, viz.	305

Example II. What is the ſum to be paid for renewing of 7 or 14 years lapſed in a leaſe of 21, in an eſtate of 40 l. per ann. at 6 per cent. the ſum paid out being 6 l. per ann.?

The value of the yearly rent for 21 years, at 6 per cent. is - - - - - - - - -	l. 470 00
Deduct the value of the ſum paid out, at 4 per cent. - - - - - - - - - -	84 00
Remainder is the value of the 21 years - -	386 00
The value of 14 years at 6 per cent. - -	371 12
The value of the ſum paid out for that time -	63 6
Remains the value of the eſtate of 14 years in eſſe - - -	308 6
Hence the ſum to be paid for the renewing of the 7 years ſhould be - -	77 14

Again:

The value of the 21 years, as above, is -	386 00
The value of 7 years, the time in eſſe, at 6 per cent. - - -	223 00
The value of the ſum to be paid out for that time	36 00
Remains the value of the 7 years in eſſe -	187 00
Hence the ſum to be paid for the renewing of 14 years lapſed ſhould be - -	199 00

And by the like proceſs, may the value of renewing any number of years be found, without any difficulty, by the tables before-mentioned.

Example III. to find the value of a leaſe of 7, 10, 14, or 21 years, if a perſon of a given age ſhould ſo long happen to live.

Let the yearly rent be 50 l. the rate of intereſt 6 per cent. the ſum to be paid out 7 l. per ann. and the perſon's age 42 years, what is the value?

By Tab. III. the value of the annuity for 7 years on the given age, at 6 per cent. is 5,10 years, or	l. 255
Deduct the value of the outgoings taken from the ſame table, at 4 per cent. 5,6 years value	39
Remainder is the ſum to be paid for 7 years, on a life of 42 years old - -	216
By the like method of proceeding, the value of 10 years on the ſame life is - -	274
That for 34 years is worth - -	329
That for 21 years is worth - -	286

Example IV. Admit there be 7 years lapſed in the former leaſe of 21 years, what is the value of renewing the ſaid lapſe?

Firſt, The value of a leaſe of 21 years to a perſon of 49 (for that will be now the age) is -	l. 364
Secondly, the value of the leaſe for 14 years on the ſame life of 49 to be deducted - -	316
Remainder is the value for renewing 7 years - -	48
Let there be 10 years lapſed in the ſame leaſe, then by the like proceſs the value of a leaſe of 21 years to a life of 52, at 6 per cent. is - -	353
The leaſe of 11 years in eſſe is worth - -	282
The remainder, after ſubtraction, is the ſum to be paid for renewing - - -	71

By theſe examples it is apparent, that the value of renewing 7 years lapſed in the leaſe of 21, is, to the perſon that purchaſes it, abſolutely worth almoſt twice as much, as it is to him that can enjoy it only conditionally, viz. if a perſon of 42 years of age live ſo long.

Example V. What is a leaſe for 7 years abſolute, in reverſion of a life of 52 years old, worth in ready money, on an eſtate worth 60 l. per ann. at 5 per cent. intereſt, the ſum paid out being 9 l. per ann. and to be valued at 4 per cent.?

The value of a life of that age, and at that rate of intereſt, as may be found by Tab. IV. is 9,65 years purchaſe, or - - -	l. 579
This number 9,65 being found in Tab. I. under 5 per cent. againſt it in the firſt column (by making due equation) is 13,51, which ſhews that the life is reckoned to continue in being ſo many years; to this add 7, the term of the reverſion, the ſum is 20,51; againſt which in Tab. I. under 5 per cent. is 12,62, for the year's value of the rent during both terms, which in money is - - -	757
The remainder, after ſubtraction, is the value of the rent in reverſion, if it were to be paid clear of outgoings, that is - - -	178
The value of the ſum paid out at 4 per cent. during the life in eſſe, is 10,50 years value - -	94

The

LEA

The number 10,50 found in Tab. I. under 4 per cent. anfwers to 13,96 years; this added to 7, the years of the reverſion, makes 20,96; to which number of years in the ſame table, anſwers under 4 per cent. 13.96: that is in money — l. 128

The difference of theſe two ſums is the value of the ſum paid out — 34

This laſt ſum ſubtracted from the ſum before found, viz. the value of the rent, leaves the value of the reverſionary leaſe required — 144

Of leaſes for one, two, or three lives.

It has been obſerved before, that the value of a leaſe for 99 years, determinable on the death of one, two, or three lives, is the ſame with that of a leaſe on thoſe lives abſolute: ſo that we ſhall make no difference, but call them all leaſes on life, or lives.

Example I. A man of 37 years of age is poſſeſſed of an eſtate for his life of 65l. per ann. the yearly outgoings of which are as follow, viz.

	l. s.
To the lord's rent	3 00
To the church and poor's rates	3 00
To tythes	5 10
To repairs (one year with another)	2 10

How much is the leſſee's right worth in ready money at 5 per cent.?

In Tab. IV. the value of a life of 37 years, at 5 per cent. is 12,10 years in caſh — 786 10

The value of the ſame life at 4 per cent. by the ſame table, is 13,40 years value, which, for the rates, tythes, and repairs, amounts to — 147 00

The value of the ſame life, at $4\frac{1}{2}$ per cent. is 12,70 years, which for the high rent is — 38 00

The whole ſum to be deducted is — 185 00

And hence the value required is — 601 10

Example II. What is the value, in the ſame eſtate, of two joint lives, one of which is 12, the other 32 years old, and the eſtate to be extinct, when one of them dies?

	l. s.
Out of Tab. VI. take the value of the two joint lives at 5 per cent. for the rent which is 10,56 years, this, multiplied by 65, produces	686 00
From the ſame table, the value of the joint lives at 4 per cent. is 11,27 years; which multiplied into 11 l. the yearly out goings in rates, tythes, and repairs, produces	124 00
By the ſame table, the value at $4\frac{1}{2}$ per cent. is 10,92 years value, which multiplied by 3l. the yearly rent to the lord, produces	33 00
Hence the value of the eſtate for two joint lives, that is, to continue 'till one of them dies, is	529 00

Example III. To find the value of three joint lives, on the ſame eſtate, one of which is 12, another 22, and the third 42 years old.

	l. s.
From Tab. VII. finding the age of the youngeſt at the top, the next at the left-hand column, and the other in the ſecond column to the left-hand, under 5 per cent. take out the value of the three joint lives, which is 7,83 years; this drawn into 65, the yearly rent produces	509 00
At the ſame place (under 4 per cent.) you find 8,15, which multiplied by 11 l. the product is	90 00
Again: In the ſame table, the number anſwering to $4\frac{1}{2}$ per cent. is 8,00; this, for the high rent, 3l. per ann. is worth	24 00
Theſe two laſt ſums being ſubtracted out of the former, the remainder is the value of a leaſe to continue as long as all three of the lives remain in being	395 00

Example IV. An Eſtate of bad houſes meanly ſituated, containing divers ſmall tenements, in all (when full of tenants) of the yearly value of 50l. to be leaſed for the term of one, two, or three lives, and the longeſt liver of them, the purchaſer to have 6 per cent. for his money: the ſum to be paid out in rates, repairs, and high rents (which laſt is under 20s. per ann. and therefore to be reckoned as a clear annuity, as well as the other diſburſements) amounts to 6l. a year: what muſt be paid for the purchaſe?

Firſt, for one life aged 67 years.

	l. s.
This, for the whole rent, by Tab. IV. is worth, at 6 per cent. 5,90 years purchaſe; which, in caſh, at 50l. a year, amounts to	295 00
The value of the ſum to be paid out at 4 per cent. is 6,53 years, or	39 00
The value of a leaſe for one life	256 00

Secondly, For the value of two lives, one 67, the other 52, Mr. Abraham De Moivre has demonſtrated, [ſee the article ANNUITIES] that the value of an annuity upon the longeſt of two lives is the remainder, after ſubtraction of the value of thoſe lives jointly taken, from the ſum of their values ſingly taken.

The yearly rent on the life of 67 years was found before to be worth	295 00
That for the life of 52 is worth	445 00
The ſum is	740 00
The value of the ſame for the joint lives is 4,39 years, or	220 00
Remainder after ſubtraction is the value on the longeſt liver of the two	520 00
The value of the ſum paid out on the firſt life, at 4 per cent. is 6,53 years, or	39 00
The value of the ſecond life is 10,50 years, or	63 00
The ſum	102 00
On the two joint lives 4,67	28 00
The remainder after ſubtraction is the value of the outgoings on the longeſt	74 00
The ſum being ſubtracted from the 520l. leaves the value required	446 00

Thirdly, Let a third life, aged 22 years, be joined with the two before mentioned, and let the value of the eſtate on the longeſt liver of theſe three be required.

For the whole rent,	The life 67 years old	5,90	Years value.
	The life 52 years old	8,91	
	The life 22 years old	12,54	
	Their ſum is	27,35	
The value for the three joint lives, at the ſame rate (viz. 6 per cent.) is		3,99	
	The whole ſum	31,34	

The before-mentioned ingenious author ſhews, that the values of the joint lives combined, two and two added together, and the ſum ſubtracted from the foregoing ſum, leaves the value of the annuity upon the longeſt liver of them.

Thus for the purpoſe:	Years.
The value of the firſt and ſecond jointly	4,39
The value of the firſt and third jointly	5,26
The value of the ſecond and third jointly	7,56
The ſum is	17,21

This laſt ſum being ſubtracted from the former ſum, the remainder is 14,13 years for the value of the longeſt liver, which in caſh is — 707 l.

We are next to find the value of the ſum to be paid out at 4 per cent. in the ſame manner as the former was found.

The life of 67 years old value in years	6,53
That of 52	10,50
That of 22	16,05
The three joint lives	4,15
The ſum of which is	37,23
The firſt and ſecond jointly	4,66
The firſt and third jointly	5,67
The ſecond and third jointly	8,42
The ſum of theſe three	18,75
Remainder after ſubtraction	18,48

This drawn into 6, the yearly outgoings, produces in money — 111 l.

This ſum being ſubtracted from the value before found (viz. 707) leaves the value of the leaſe on the longeſt of the three lives, and at the rate of intereſt propoſed — 596

The reſult of the whole operation will appear to be as follows, viz.

One life of 67 years old is worth	l. 256
Two lives, one 67, the other 52, worth	446
Three lives, aged 67, 52, and 22, worth	596

An objection, it may be preſumed, will be made to what has been ſaid, by reaſon of the difference that there is, or ſeems to be, betwixt this reſult, and the common way of eſtimation: for, ſays the gentleman's ſteward, it is always reckoned, that one life in poſſeſſion is as good as two in reverſion; and a third life, in reverſion of two, is generally reckoned but in two years value: whereas, by this way of computing, the firſt life amounts but to $5\frac{1}{4}$ years value; and the other two are here worth above 7. And again: the third life in reverſion of 2, in the above example, amounts to almoſt 3 years and an half's value: and how can this be?

In anſwer to which objection, it has been obſerved, that, though this be true in the example alledged, yet it is no deviation from reaſon, notwithſtanding it be from the ordinary practice: and that it rather eſtabliſhes the truth and neceſſity of this method, than is of real weight againſt it, will appear by another example, wherein the value of the

reverſions,

reverſions, on account of different ages of the life or lives in poſſeſſion, will, when found by this method, be thought as much too little, as thoſe are too great.

Example V. Admit the eſtate to be purchaſed on lives be worth 40 l. per ann. and of ſuch quality, that 6 per cent. is a proper intereſt for the purchaſer: ſuppoſe that the rates, tythes, and repairs, be 5 l. per ann. and the reſerved rent 2 l. per ann. let 5 per cent. be allowed for the money to be paid out, and let the ages of the lives to be purchaſed be,

The firſt 32
The ſecond 22 } Years old.
The third 12

What will be the value of one, two, or three of thoſe lives, in the order that they are here placed?

Lives.	Number of years value for 40 l. per ann. rent.	No. of years value for the 7 l. per ann. paid out.	Value in caſhafter ſubtraction.
	At 6 l. per cent.	At 5 l. per cent.	
1ſt	11,47 years	12,79 years - - -	l. 370
2d	12,54 years	14,14 years - - -	402
3d	13,37 years	15,23 years - - -	428
Lives.	The value of the longeſt liver for the rent	The value of the longeſt liver for the money paid out.	Value of the rem. money.
1ſt and 2d	14,60 } Years.	16,84 } Years.	l. 466
1ſt and 3d	14,99	17,46	477
2d and 3d	15,40 }	17,96 }	490
The value of the longeſt liver of the three lives for the 40 l. per ann.		The value of the longeſt liver for the 7 l per ann.	Value of the remain n money.
15,83 years.		18,71 years.	l. 502

By the above eſtimation it appears, that two lives of 22 and 12 years old, in reverſion of one of 32, is worth but 132 l. which is little more than ¼ of the value of the life in poſſeſſion; and that two of 32 and 22, in reverſion of one of 12, is of much leſs value, viz. no more than 74 l.

Again: One of 12 in reverſion of two of 32, and 22 years of age, is worth but 36 l. that is leſs than one year's value; and, for one life of 32 in reverſion of two of 12 and 22 years old, muſt be given no more than 12 l.

Hence the great difference that ariſes on account of the age of the lives appears (if this method holds good) to call for a particular regard, and that even when the difference of the age of the lives is not very great, as in this example; how much more then, if the tenant ſhould defer the renewing of his leaſe, 'till the life or lives in eſſe arrive to a declining age?

Thus we have endeavoured to clear up the affair, as to eſtates in eſſe, and given ſome light in regard to the valuation of reverſions; of which we ſhall now ſpeak more particularly, and ſhew how to find the value of ſuch in expectancy: to do which, we ſhall lay down the following general rule.

From the value of the ſum of the terms in poſſeſſion and reverſion, ſubtract the value of that in poſſeſſion, the remainder is the ſum to be paid for the reverſion.

We have before ſhewn, how to find the value of the fee in reverſion of a term of years abſolute; and, from what we have laſt ſaid, may be eaſily deduced the value of the fee in reverſion of lives, or of one life in reverſion of two; of two in reverſion of one, by a due application of the above general rule. Something, however, may be requiſite to be ſaid of the value of a life in reverſion of a term of years, to be nominated at the expiration of the ſaid term; and of a term of years in reverſion of another term of a life or lives, or of 2 or 3 joint lives; as alſo of the right of ſuch two or more, as hold by joint-tenancy and ſurvivorſhip.

Example I. Let it be required to find how much an eſtate of 30 l. per ann. is worth, during the continuance of a life of 22 years of age; the right to commence, and the life to be nominated, at the expiration of a term of 14 years, allowing the purchaſer 6 per cent, and deducting the value of the ſum paid out, viz. 4 l. a year at 5 per cent.

The value of ſuch a life in poſſeſſion, for the whole rent, is by Tab. IV. - - } l. 376
The ſum paid out is worth - - - 56

Remains the value of the life, if it were to be entered upon immediately - - } 320

The queſtion then will be, What 320 l. payable at the end of 14 years, is worth in ready money at the rate of legal intereſt, viz. 5 per cent.?

By Tab. II. we find the value of 1 l. payable at the end of 14 years, is .505 decimal parts of a pound; which, being multiplied by 320, gives the value of the reverſion, viz. 162 l.

By this example may be ſeen, the method to find the worth of 2 or 3 lives in reverſion for a term of years, and alſo of a term of years in reverſion of a term in eſſe.

If it be required to ſhew the value of a term of years in reverſion of a life or lives; firſt find the number of years value of the eſtate in eſſe, and then, by Tab. I. ſee how many years it muſt continue to produce that value; and the value of the eſtate in poſſe, payable after the expiration of this number of years, is the ſum to be paid in hand for the expectancy.

If a life is to be nominated at the death of another, the ſum to be paid for it may be found, by ſeeking, in the tables, the number of years of an annuity that is of equal value with each of the lives; and then find, in the table for that purpoſe, the value of the money that the life in poſſe will be worth at the death of the other, and the preſent value of ſuch a ſum is the ſum required.

Example II. There is, at preſent, on an eſtate of 50 l. per ann. one life, aged 52; the tenant would purchaſe another life, to be nominated at the death of the former, viz. one that ſhall be then 22 years old, allowing the purchaſer 6 per cent.; and for the ſum paid out, which is 9 l. per ann. 5 per cent. what is the value of the life to be purchaſed?

The life in poſſeſſion is worth, at 6 per cent. (for any rate may be taken for this purpoſe) by Tab. IV. - - - - - - - - - } 8,91 years.
This number found under the ſame rate of intereſt, in Tab. I. ſhews in the firſt column, that the life is as valuable as an annuity certain for the term of - - - - - } 13,14 years.

Hence the life that is to ſucceed, is to be named at the end of 13,14 years.

A life of 22 is worth, by Tab. IV. at 6 per cent. 12,54 years.
And the ſame at 5 per cent. - - 14,14

Which being the number of years value that the rent and outgoings will be worth for the ſecond life at the end of 13,14 years, the value of each, in ready money, may be found, by taking out the numbers in Tab. II. anſwering to the times at 5 per cent. and multiplying that by theſe numbers of years reſpectively, the two products will ſhew the number of years value for the rent, and for the ſum paid out, Thus:

The number in Tab. II. under 5 per cent. and againſt 13,14, by duly equating, is ,527. This, multiplied by 12,54, produces 6,61 years; and, multiplied by 14,14, produces 7,45 years.

Hence the value of the rent in money is - - l. 330
And that of the ſum paid out - - 67

Conſequently the ſum to be paid is - - 263

By the like proceſs may be found, the value of a third life in ſucceſſion of two to be named at the death of one or both of theſe; as of two lives to be named, one at the death of the firſt, another at the death of the ſecond, or in any other manner: this, doubtleſs, will be eaſy enough to the perſons concerned, without adding more examples to that purpoſe.

Example III. A man dying leaves to his three daughters an annuity of 20 l. per ann. each, during their lives, payable out of lands of a much greater value; and he ſo ordered it, that, when either of them ſhould die, her annuity ſhould fall to the other two in equal ſhares; and, at the death of another of them, the whole is to come to the ſurvivor for life: their ages at the father's death are 32, 22, and 12, what is the right of each worth in ready money at 5 per cent.?

	Years.	
The value of the eldeſt life is - -	12,79, or	256 l.
That of the next is - - - - - -	14,14, or	283
The youngeſt worth - - -	15,25, or	305
The joint lives of the firſt and ſecond is	10,21 } Years.	
of the firſt and third is	10,56	
of the ſecond and third is	11,41	
The three joint lives are worth - -	8,59 }	

For the right of the eldeſt daughter.

Firſt, 20 l. per ann. during her life is worth -	l. 256
Secondly, 10 l. per ann. in reverſion of the youngeſt, to continue from thence during the joint lives of the other two; found by ſubtracting the value of the three joint lives from the value of the firſt and ſecond jointly - - -	16
Thirdly, 10 l. per ann, in reverſion of the ſecond, to continue during the joint lives of the firſt and third, found by ſubtracting the value of the three joint lives, from that of the firſt and third jointly - - - - - - -	20
Fourthly, 40 l. per ann. in reverſion of the two youngeſt lives during her own life, found by ſubtracting the value of the longeſt of the ſecond and third, from that of the longeſt of the three lives, is - - - -	30
The whole ſum of theſe four values is the eldeſt daughter's portion, viz. - -	321
By the like proceſs, the ſecond daughter's right in the eſtate will appear - -	376
And that of the third, or youngeſt - - -	426
The whole value is - -	1123

And the truth of the work will appear, by finding, according to the method laid down, the value of the whole eſtate on the ſurvivor of the three lives; which, by the tables, will be found 18,71 years purchaſe; and this multiplied by 60, the whole yearly value of the three annuities, the product is 1123 l. as before.

Thus

Thus have we given examples in moſt of the uſeful caſes of this ſubject; by the help whereof, any of the queries that ariſe about the value of leaſes in poſſeſſion or reverſion, may be ſolved.

Remarks.

We might very well have concluded this article here, but, conſidering that this work might fall into hands, to whom what we have ſaid on this topic might be uſeleſs, on account of the operations for finding the value of the ſurvivorſhip; to do which, the numbers are required to be taken out of the ſeveral tables, and to be added, ſubtracted, &c. which to ſome perſons may ſeem ſuch an intricacy, as probably to diſcourage them from endeavouring to become maſters of the ſubject: for the eaſe and convenience of ſuch, therefore, we ſhall add tables of the value on the longeſt liver of 2 or 3 lives; where the ſame may be taken out at once for theſe purpoſes, and for any ages, howſoever combined, to every tenth year.

We have likewiſe added two other ſhort tables, the one for finding the value of the decimal parts of a year in months; the other, ſhewing the value of the decimal parts of a pound in money; ſo that it is but to find the numbers to the right-hand of the point in the firſt column of the tables, and, oppoſite to it in another column, is the value thereof in months in one table, and in money in the other.

Table VIII.

Shewing the value of an annuity for two lives, that is to continue 'till both are dead, at 4, 5, 6, 7, and 8 per cent: and to every tenth year of age.

Age.	4 per cent.	5 per cent.	6 per cent.	7 per cent	8 per cent.

Further REMARKS on this article.

The reader will please to observe, that the foundation of these tables are the principles of the learned Dr. Halley and Mr. Abraham De Moivre; whose reputations for this kind of studies have been esteemed superior to all others: and Mr. Richards, in the preceding calculations, has applied their principles to the several uses before represented: but, notwithstanding the authority of great names, the principles, rules, and computations, laid down by these learned gentlemen, have been objected to; and, indeed, with no little colour of reason and plausibility; as appears from the objections made thereto, by that judicious gentleman Weyman Lee, Esq; in his Essay to ascertain the Value of Leases and Annuities for Years and Lives, &c. and also by that ingenious gentleman Mr. Thomas Simpson, in his Tract entitled, The Doctrine of Annuities and Reversions, deduced from general and evident Principles, &c. The latest author, who has obliged the public with something new upon this subject, is Mr. James Hardy, in his book printed in 1753, entitled, A Complete System of Interest and Annuities; founded upon new, easy, and rational principles, &c. which seems to be a work of no less merit than either of them. Upon the whole, however, this subject does not appear to be yet settled upon such a basis, as to obtain in universal practice, according to the sentiments of either of these learned and judicious gentlemen, who have so laudably distinguished themselves therein. See the articles ANNUITIES, LIFE, or LIVES, LOTTERIES, MONEY, MORTALITY [BILLS of MORTALITY]; under which several heads, we shall endeavour to give the substance of what has been said most pertinently upon this subject.

LEATHER, is the ſkin of ſeveral ſorts of beaſts, dreſſed and prepared for the uſe of the various manufacturers, whoſe buſineſs it is to make them up, according to their different employments. The butcher, and others who flay them off the carcaſes, diſpoſe of them raw or ſalted to the tanner and tawyer, they to the ſhamoy, morocco, and other kind of leather-dreſſers, who prepare them according to their reſpective arts, in order to vend them among the curriers, glovers, harneſs-makers, coach makers, ſaddlers, breeches-makers, gilt leather-makers, chair-makers, ſhoe-makers, book-binders, and all in any way concerned in the article of leather.

Leather has divers names, according to the ſtate wherein it is, and according to the different kinds of ſkins whereof it is prepared, and it's peculiar qualities when ſo prepared.

(1.) The ſkin is raw as it comes off of the animal. (2.) Some are ſalted with ſea-ſalt and allum, or with natron, which is a ſpecies of ſalt-petre, or white ſalt-wort, to prevent corruption in keeping, or ſending to diſtant tanneries during hot ſeaſons.

Skins dried with the hair on, are commonly thoſe of oxen and cows, or buffaloes, either tame or wild.—Moſt of thoſe in France come from foreign countries. The places which furniſh them with the largeſt quantity, are Peru, the iſle of St. Domingo, Barbary, Cape Verd iſles, the river Senegal in Africa, Muſcovy, Ireland, the iſland of Cuba. Thoſe of this latter place are the moſt eſteemed; they are called Havannah ſkins, from the name of the capital city of that iſland, whither they are carried, in order to be ſent to Spain, and from thence into other parts of Europe.—After theſe ſkins are ſtript of their hair, they are ſold to the tanner. See TANNER, and SKINS.

The three principal aſſortments of leather are tanned or tawed, and oil and allum leather, all which are dreſſed in ſome yards, as they are by Shipton and ſons of Watford.

If we reflect on the number of ſkins of all ſorts which this kingdom produces, the prodigious quantity of many kinds that are imported from Spain, Portugal, Ireland, and from our own colonies * in general, under the various denominations of hides, deer-ſkins, deer-pelts, half-dreſſed ditto, &c. if this be conſidered, and alſo that moſt, if not all of theſe are dreſſed here, many manufactured into a variety of things for our own conſumption, and very large quantities of the ſeveral ſorts of leather wrought and unwrought (tanned in particular) exported; it will be readily granted, that leather is a ſtaple commodity, that may very juſtly be ranked in the firſt claſs of thoſe belonging to this kingdom.

* Our late accounts from South Carolina inform us, that they exported from thence, in about 12 months, no leſs than 303 hogſheads of deer-ſkins, which, upon a modeſt computation, is 10,000 ſkins.

REMARKS.

It may be affirmed, with great truth, that the ſkins of our own production, and thoſe imported from our NORTH AMERICAN COLONIES, when dreſſed in this kingdom, make the beſt leather in the world, and therefore is an article of very great importance to the trade of the nation; but, unleſs ſome proper regulations are made in relation to this branch of trade, we are in a fair way ſoon to loſe no inconſiderable part of it, as will appear hereafter. For the king of Pruſſia hath lately eſtabliſhed this manufacture in ſeveral parts of his dominions, which, with the conduct of France in regard to the ſame, is likely to do this kingdom no ſmall detriment in this particular.

REMARKS ſince the laſt war, and DEFINITIVE TREATY of 1763.

By the large territories ceded to the crown of Great-Britain in NORTH AMERICA, by the DEFINITIVE TREATY, 'tis to be hoped we ſhall uſe every meaſure to obtain the ſtrict friendſhip and alliance of the INDIAN NATIONS inhabiting there; in which caſe, we ſhall not want great plenty of ſkins to carry on this branch of traffic at the CHEAPEST RATES, and thereby to improve in every part relative to the manufacture thereof, in the moſt extenſive manner.

The various trades to which the epithet leather is annexed, are as follow, viz. leather breeches-maker, leather-cutter, leather-dreſſer, leather-dyer, leather-parer and grounder, leather-ſeller. We ſhall ſpeak of theſe in the order wherein they are mentioned.

LEATHER BREECHES MAKER, is a buſineſs ſprung from the glover, and is a trade, whoſe number of artizans has greatly increaſed within theſe few years, and employs a great many hands in all parts of the kingdom, there being ſcarce a market-town or village of any note, but ſome of this trade may be found therein: and it may be truly obſerved, that ſome of the preſent maſters of this buſineſs, in the cities of London and Weſtminſter, have brought it to ſo great perfection, that what was thought to be a garment fit to be worn only by the laborious, is become faſhionable, and univerſally worn, from the tradeſmen to thoſe of the firſt rank in the kingdom; and may, with ſuitable encouragement, become a very profitable mercantile commodity, when exported to proper markets, the beſt London made leather breeches beginning to be eſteemed, and to be worn in many parts abroad; not excepting even ſome very hot countries.

The ſorts of leather breeches are various; ſome being made of deer, ſheep, and goat-ſkins; others of calf, lamb, and beaver-ſkins. The two firſt ſorts are the principal, the conſumption whereof is of more conſequence than may at firſt view appear. The deer-ſkins being chiefly imported from our colonies, and the only commodities (the half dreſſed ones in particular) the Indians have to exchange with our Indian traders in North America, for what they want of them: and as this commerce with the Indians may increaſe, the import of deer-ſkins will do ſo in the like proportion; conſequently the price muſt fall, if a proper vent be not found; and, in that caſe, a ſtop may, in ſome meaſure, be put to that branch of our trade.

The conſumption of the ſecond ſort, i. e. the ſheep-ſkin kind, is, in ſome degree, an help to the woollen trade; for, if the fell-monger cannot find a market for the pelt, it's value will, of courſe, enhance the price of wooll.

This being the caſe, may it not be worth conſideration to enquire how the conſumption may be effectually ſupported? In anſwer to which it may be ſaid, (1.) By the makers taking due care to manufacture them in the beſt manner, and ſelling them as low as poſſible. (2.) By the merchants making trial of a ſmall quantity of thoſe ſorts, which are not periſhable, nor too low priced; which has been done, and good returns made for them. And, in order to encourage the maker, the exporter, and the foreign markets, (3.) by the parliament's taking off the drawback on undreſſed deer-ſkins, and giving ſuch a bounty, or allowing ſuch a drawback on the exportation of buck, doe, and ſheep-ſkin breeches, as may appear nearly adequate to the duties, and the exciſe which the ſkins and leather have paid.

As the duties and exciſe are the great obſtruction to the exportation of leather breeches, it may be conducive to the general good, if our ſuperiors would pleaſe to conſider, that, as this article now ſtands, our politic rivals, the French, have, and do actually buy our deer-ſkins undreſſed, taking the drawback on exportation, and dreſs and manufacture them at home, and ſend them in breeches to a foreign market, where they have ſold very well (though inferior in many reſpects to thoſe that are made in London) which ſeems to be owing to our ill-judged impoſts, duties, and exciſes on leather. See the article LABOUR.

LEATHER-CUTTER and CURRIER, is a buſineſs in London of large extent, and is generally carried on by thoſe who were originally curriers; between whom and the worſhipful company of cordwainers in London, there was ſome few years ſince a diſpute at law, concerning the right of cutting leather; which, after expending ſome thouſands of pounds, ended with each party's ſitting down with their own coſts. To curry a ſkin, is to finiſh it after it comes from the tanner; the art conſiſteth in cutting them to a proper ground, waxing, colouring, and making them fit for the uſe of ſeveral manufactures. It is deemed a good employment for maſter and journeyman, eſpecially as they now cut large quantities of bucks and buffs into ſoals for ſhoes and boots, and of calves leather for upper-leathers for ſhoes and legs for boots; which they ſell to many ſhoemakers in town and country, wholeſale and retail, and deal largely in all the ſorts of uncut, tanned, and other leather. It is a buſineſs, that, in it's preſent ſituation, requires a good capital; the tanner ſelling chiefly for ready money, and the returns generally conſiderable, with ſome * very large.

* There is one on Snow-Hill, London, ſaid to return near 40,000l. per ann.

LEATHER-DRESSER. We have before obſerved, that leather might be divided into three aſſortments, i. e. tanned or tawed, oil and allum leather; and the dreſſers into the like number. For the tanned or tawed leather, ſee TANNER. Thoſe who dreſs in oil and allum come under this article, and are called leather-dreſſers. The art of dreſſing ſkins in oil is a buſineſs of large extent, and very beneficial to this kingdom. To deſcribe every proceſs in this art is needleſs; it may be ſufficient to ſay, that when the ſkins are put into work, they are firſt ſoaked, then thrown into the lime-pit, when taken thence are pulled and delivered to the ſtriezer, then ſtruck with the oil and ſent to the mill; when they are milled ſufficiently, they are thrown into the drench to be ſcoured, (then by ſome ſcudded) which done, they are hung upon the hooks to dry; after which they are deemed leather, and when the proper officers have weighed and marked them, in order to eſtimate the exciſe duty thereon, they are fit for the market, or to be ſent to the reſpective proprietors. The ſorts of ſkins dreſſed in oil, are deer, ſheep, and lamb (ſome few goat, and others not worth mentioning) of which prodigious quantities are conſumed, when wrought into the different manufactures made thereof. It is a flouriſhing buſineſs in moſt parts of the kingdom; it's profeſſors (thoſe eſpecially who dreſs their own ſkins) being men of large fortunes, and dealing for very conſiderable ſums: London, Briſtol, and Exeter, are the principal markets for oil-leather *, although there are others, and oil mills ſet up within theſe few years, in ſeveral part of the kingdom.

* The oil they uſe is Newfoundland, i. e. cod's liver oil, of which they conſume a great quantity.

Some of this buſineſs make from their pieces a large quantity of glue, which is judged to be the beſt that is; that made by Shipton and ſons of Watford in particular.—It may, perhaps, be of ſervice for the farmer to know, that the fleſhings and ſhavings, made by friezing the ſkins, is a very rich manure.

The allum leather-dreſſer is one, that underſtandeth the manner of dreſſing ſkins in allum, of which there is a conſiderable conſumption; the art conſiſteth in properly ſoaking, limeing, wringing*, and ſtriking them in a liquor compoſed of water, ſalt, and allum, then drying them properly; which done, and the exciſe account taken, they are fit for the market.—The ſorts of ſkins dreſſed in allum are ſheep and lambs and a large quantity of kid.

* Some ſorts are not wrung, nor any by ſome dreſſers.

LEATHER-DYER. This is an art of which there are but few in the trade; their buſineſs is to dye, colour, oil, and allum leather, for the manufacturers; which they do of all colours, ſome of them to a very great nicety. This profeſſion hath ſuffered by black ram-ſkin breeches not being ſo generally worn now, as they were before the death of her late majeſty. The mourning for her occaſioning a large demand for black ram lamb-ſkins, obliged the manufacturers to dye ſome ſkins that were not quite proper; and the dyer being preſſed to expedite them too faſt, were the true cauſes that many of them did not come up to the character they bore before that time: the conſequence of this was (and ever will be in ſuch caſes) a decline in their conſumption; notwithſtanding which, there is not ſo good or ſerviceable a commodity of the colour as black ram-ſkin breeches are, when made as they ought to be. We take notice of this as a caution to all manufacturers, to be careful how they vend an indifferent commodity, for the ſake of a preſent profit; for it will prove in the run of trade to be a future loſs, to all concerned in that manufacture; therefore this ſhould never be done, on any conſideration whatſoever.

LEATHER-PARER and GROUNDER is an art, by which it's profeſſors give the finiſhing ſtroke to all ſorts of oil, allum, and ſome tanned leathers. It conſiſteth in bringing the oil leather to it's proper face, by pareing off the ſurface left on it by the dreſſer, and grounding it with a ſtone, compoſed or made of pieces of the pumice-ſtone; and in waſhing and grounding the allum and tanned leather, and making all fit for the uſe of the ſeveral manufacturers. It is a laborious art, that affordeth a good maintenance to the maſter, and good wages to the journeyman.

LEATHER-SELLER is a buſineſs that is followed by many in this city, and ſeveral other parts of the kingdom. They buy large quantities of undreſſed deer-ſkins of the importers: oil, allum, and ſome ſorts of tanned leather of the dreſſers; all which they ſell to the manufacturers.—It is a very genteel buſineſs, but their returns being large and ſlow, (they buying all their undreſſed deer-ſkins with ready money, and giving large credit) it requires a very large capital to carry it on. In the city of London they are an incorporated company, &c. and generally have with an apprentice 100 l. frequently more.

The chief laws of England relating to leather.

There ſhall be paid for all ſkins and hides, and pieces of ſkins and hides imported, the duties following, over and above all other cuſtoms.

For all deer-ſkins dreſſed in oil or allum, or otherwiſe perfectly dreſſed and imported, 6 d. per pound.

For all loſhee, buffalo, elke, or any other hides dreſſed in oil, 4 d. per pound.

For Ruſſia hides imported, 2 d. per pound.

For tanned hides and calf-ſkins imported, 1 d. ½ per pound.

For horſe, mare, or gelding's hides, imported and dreſſed in allum and ſalt, or meal, or otherwiſe tawed, 1 s. per hide.

For hides of ſteers, cows, or any other hides imported, and dreſſed in allum and ſalt, or meal, or otherwiſe tawed, 2 s. for every hide.

For calf-ſkins and kipps imported, dreſſed in allum, ſalt, or meal, or otherwiſe tawed, 1 d. ½ per pound.

For all ſlink calf's-ſkins imported and dreſſed in allum and ſalt, or otherwiſe, with the hair on, 1 d. per pound; if without the hair, ½ d. per pound, and the like ½ d. for dog's ſkins.

For cordivants, 4 s. per dozen imported.

For goat-ſkins not uſually called cordivants, imported and dreſſed in oil or allum, ſalt, meal, or otherwiſe, 6 d. per lb.

For all kid-ſkins imported, dreſſed or undreſſed, 1 s. per dozen; and, if any of the kid-ſkins ſhall be dreſſed after imported, no farther duty ſhall be paid.

For all ſheep-ſkins imported and dreſſed in oil, 1 s. per dozen; and upon all imported ſheep-ſkins and lamb ſkins dreſſed in allum, ſalt, or meal, or tawed, 6 d. per dozen.

For all hides and ſkins, and pieces imported, tanned, tawed, or dreſſed, and not before charged; and for all wares made into manufacture of leather, or whereof the greateſt part is leather, a duty after the rate of 15 l. for every 100 l. of the real value, to be paid by the importer.

For hides tanned in England, 1 s. per pound.

For calf's-ſkins, kipps, hog-ſkins, and dog-ſkins, tanned in England, 1 d. per pound.

For goat-ſkins tanned with ſumac, or otherwiſe in reſembling Spaniſh leather, 2 d. per pound.

For all ſheep-ſkins, which ſhall be tanned for roanes in England, 1 d per pound.

For all ſheep-ſkins and lamb-ſkins tanned in England for gloves and bazils, a half penny per pound.

For all other ſkins and pieces of ſkins (not before charged) and tanned in England, a duty after the rate of 15 l. for every 100 l. of the true value, to be paid by the tanners.

For hides of horſes, mares, and geldings, dreſſed in allum, ſalt, meal, or tawed, in England, 1 s. per hide.

For hides of ſteers, cows, or any other hides dreſſed in allum, ſalt, or meal, 2 s. per hide.

For calf-ſkins and kipps dreſſed in allum, ſalt, or meal in England, 1 d. per pound.

For all ſlink calf ſkins dreſſed with the hair on, 1 s. 6 d. per dozen.

For all buck and doe-ſkins dreſſed in allum, ſalt, or meal in England, or tawed, 3 d. per pound.

For all kid-ſkins, 6 d. per dozen.

For goat-ſkins, 1 s. 6 d. per dozen.

For ſheep-ſkins and lamb ſkins, a halfpenny per pound.

And for all other ſkins and parts of ſkins, tawed in England, fifteen pounds in the hundred of the true value, and proportionably for greater or leſſer quantities; all the duties to be paid by the tawers or makers thereof into leather.

For all hides and ſkins dreſſed in oil in England, 4 d. per pound.

For deer-ſkins, beaver-ſkins, goat-ſkins, and calf's-ſkins, dreſſed in oil in England, 4 d. per pound.

For ſheep-ſkins dreſſed in oil, and for lamb-ſkins, 1 d. per pound.

For all other ſkins and parts of ſkins dreſſed in oil, fifteen pounds for every hundred pounds of the true value, and ſo proportionably.

Tanned hides are ſuch as are tanned in ooze, made of the bark of trees, or ſumac. Hides dreſſed in oil, are ſuch as are made into leather, in oil or any liquor, of which the chief ingredient is oil; tawed hides are ſuch as are dreſſed in allum, ſalt, or meal.

For all vellum and parchment made in England, or imported, after the rate of 1 s. per dozen; for vellum imported, and for parchment imported, 6 d. per dozen; and the ſame, if made in England, to be paid by the maker.

When the duty is paid on ſkins imported, the officer of the cuſtoms ſhall mark them, to ſhew that the duty is paid.

If the raw hide of any ox, bull, ſteer, or cow, or the ſkin of a calf, ſhall wilfully or negligently be gaſhed or cut in the flaying, or, being gaſhed, ſhall be offered to ſale by any other butcher, then he who gaſheth it, or who offered it to ſale, ſhall forfeit 2 s. 6 d. for every hide, and 1 s. for every calf's-ſkin, one moiety to the poor where the ſame ſhall be offered to ſale or found, the other moiety to the informer.

A tanner ſhaving a hide or calf's-ſkin before it it thoroughly tanned, ſo that it is impaired and the duty diminiſhed, the ſame ſhall be forfeited, or the value thereof, one moiety to the crown, and the other to the informer.

Tanners, &c. ſhall not uſe any place for drying hides or ſkins, &c. without giving notice to the proper officer of the places for drying and keeping their hides.

Collar-makers, glovers, bridle-cutters, and others who dreſs ſkins in allum, &c. and who cut the ſame into wares, ſhall be accounted tawers, and ſubject to the penalties and forfeitures aforeſaid, and ſhall be charged with the duties before the ſkins be cut and converted into wares.

Where hides or leather manufactures are exported, in ſuch a caſe, upon ſhipping them, and upon ſufficient ſecurity given to the cuſtomer, that ſuch hides or ware ſhall not be relanded in England, the cuſtomer ſhall give the exporter a certificate in writing of the kinds, qualities, and weight of the hides, calf-ſkins, and wares exported; and, upon producing that certificate to the collector of the duties at the port where they ſhall be exported, then he, or in his default the commiſſioners of the duties, ſhall repay two-thirds of the duties which were before charged for the ſaid hides, &c. and wares ſo ſhipped to be exported.

Wares made of hides or ſkins, ſhall have now drawback, as made wares, in reſpect of being dreſſed, or curried by a currier.

All ſheep-ſkins and lamb-ſkins, tanned, tawed, or dreſſed, which are chargeable with any duties by the act 9 Ann. ſhall, upon exportation thereof, have a drawback or allowance of two thirds of the duties uſual, as upon exportion of hides and calf-ſkins.

Some other of the laws and regulations in England in regard to leather tanned.

* As manufactures of tanned leather, ſuch as boots, ſhoes, gloves, or other goods and wares, are, upon exportation,

entitled to a drawback or repayment of the exciſe duties; therefore, beſides making an entry as for other goods, the exporter muſt, on the bill of entry, give a certificate of the kinds and weights, as a foundation for making out a debenture to obtain the drawback, the form of which certificate muſt be as in the following example:

* 9 Ann. cap. 11. §. 39. 10 Ann. cap. 26. §. 4.

16th of February 1730.—No. 26.

In the Taviſtock of London, Daniel Bright, maſter, for Jamaica.

William Turner.

Four dozen and an half of mens leather-heel ſhoes — — —
Three dozen of womens ſhoes —
Fifteen dozen of boys and girls ſhoes
} Containing two hundred forty-nine pounds.

Theſe are to certify, That the ſhoes above-mentioned, weighing two hundred forty-nine pounds weight, were made of tanned hides and calf-ſkins, chargeable with a duty of one penny per pound weight, by an act of parliament of the ninth year of her late majeſty queen Anne; and an additional duty of one halfpenny per pound weight, by an act of the tenth year of her ſaid late majeſty's reign.

William Turner.

And, before the ſaid manufactures of tanned leather are ſhipped off, ſufficient ſecurity muſt be given for the due exportation, in the following manner:

A bond for the exportation of manufactures of tanned leather.

KNOW ALL MEN by theſe preſents,

Whereas the above-bounden William Turner hath this day entered outwards in the port of Southampton, on board the Taviſtock of London, Daniel Bright, maſter, for Jamaica, four dozen and a half of mens leather-heel ſhoes, three dozen of womens ſhoes, and fifteen dozen of boys and girls ſhoes, made of tanned hides and calf ſkins, weighing two hundred and forty-nine pounds weight, chargeable with a duty of one penny per pound weight, by an act of parliament of the ninth year of the reign of her late majeſty queen Anne; and an additional duty of one halfpenny per pound weight, by an act of the tenth year of her ſaid late majeſty queen Anne: And whereas the ſaid William Turner, upon the exportation of the ſaid ſhoes, is to have an allowance or drawback, according to the ſaid acts of parliament on that behalf made:

Now the condition of this obligation is ſuch, That if the ſaid ſhoes and every part thereof, ſhall be really and truly exported into parts beyond the ſeas, and no part thereof be relanded, or unſhipped with intent to be relanded, or brought on ſhore again in any part or parts of Great-Britain; then this obligation to be void, or elſe to remain and be in full force and virtue.

Sealed and delivered in the preſence of
A. B. Collector.
B. C. Comptroller.

William Turner *.
Daniel Bright *.

A debenture for hides and calves-ſkin leather, tanned, tawed, or dreſſed, exported.

Port of Southampton,

* Theſe are to certify, That Bartholomew Richardſon did enter with us the 16th day of February 1730, in the Diligence of Briſtol, Henry Hopkins maſter, for the Streights, twelve bales of tanned hides and calf-ſkin leather, containing one hundred and ſix hundred weight, one quarter, and nine pounds avoirdupoiſe weight; and hath made oath, that all the tanned hides and calf-ſkins contained in the ſaid twelve bales reſpectively (weighed as above-mentioned) were marked with the marks and ſtamps denoting the charging of the duties of one penny and one half-penny per pound, payable for the ſame by the ſeveral acts of parliament made in that behalf, and not with the marks or ſtamps denoting the charging the duty of one half-penny per pound, as being ſtock in hand, the 24th day of June 1711. Certified this 19th day of March 1730.

A. B. Collector, B. C. Cuſtomer, C. D. Comptroller.

* 9 Ann. cap. 11. §. 39. 10 Ann. cap. 26. §. 4, 5.

Bond is taken in the penalty of one hundred pounds, that all the ſaid tanned hides and calf-ſkin leather ſhall be exported into foreign parts, and ſhall not be relanded or brought on ſhore again in any port or ports of Great-Britain.

A B. Collector.
C. D. Comptroller.

The one hundred and ſix hundred weight, one quarter, and nine pounds of tanned hides and calf-ſkins above-mentioned, were ſhipped the 18th of February laſt. Certified the 22d of March 1730.

E. F. Searcher.
F. G. Surveyor.
G. H. Land-waiter.

On the back of the aforeſaid debenture muſt be endorſed the duties to be repaid, as follows:

	l.	s.	d.
The two-third parts of the old duty payable by the 9th of queen Anne, to be repaid for the tanned hides and calf-ſkins within mentioned, amount to thirty-three pounds one ſhilling and ſeven pence half-penny — — —	33	1	7½
The two-third parts of the additional duty payable by 10 Ann. to be repaid for the ſaid hides and ſkins, amount to ſixteen pounds ten ſhillings and nine pence half-penny — —	16	10	9½
The total —	49	12	5

A. B. Collector
C. D. Comptroller
} of the cuſtoms.

Note. Hides and calf-ſkins dreſſed, or curried, are to be allowed one penny per pound weight. 10 Ann. cap. 26. §. 26. Sheep and lamb-ſkins tanned, tawed, or dreſſed, are to be allowed two-third parts of the duties formerly paid. 12 Ann. cap. 9. §. 69.

* The debenture being thus executed by the officers of the cuſtoms, the ſame is to be delivered to the exporter, in order to be produced to the collector of the duties on hides and ſkins at the port of exportation; who is forthwith, out of the monies in his hands ariſing by the ſaid duties, to repay the two-thirds, (as above) of the duties which were before paid; or in default thereof, the commiſſioners of the ſaid duties are to repay the ſame.

* 9 Ann. cap. 11. §. 40. 10 Ann. cap. 26. §. 5.

A debenture for manufactures of tanned leather.

Port of Southampton,

* William Turner did enter with us the 16th of February 1730, in the Taviſtock of London, Daniel Bright maſter, for Jamaica, four dozen and an half of mens leather heel ſhoes, three dozen of womens ſhoes, fifteen dozen of boys and girls ſhoes, made of tanned hides and calf-ſkins, weighing two hundred forty-nine pounds weight, chargeable with a duty of one penny per pound weight, by an act of parliament of the ninth year of the reign of her late majeſty queen Anne, and an additional duty of one halfpenny per pound weight, by an act of parliament of the tenth year of her ſald late majeſty's reign.

A. B. Collector, B. C. Cuſtomer, C. D. Comptroller.

* 9 Ann. cap. 11. §. 39. 10 Ann. cap. 26. §. 4.

Bond is taken in the penalty of four pounds, that the ſhoes above-mentioned, and every part thereof, ſhall be exported for parts beyond the ſeas, and not relanded or brought on ſhore again in any part or parts of Great-Britain.

A. B. Collector.
C. D. Comptroller.

The ſhoes above-mentioned containing two hundred forty-nine pounds weight, were ſhipped the 16th of February laſt. Certified the 20th of March 1730.

D. E. Searcher.
E. F. Surveyor.
F. G. Land-waiter.

On the back of the aforeſaid debenture muſt be endorſed the duties to be repaid, as follow:

	l.	s.	d.
The old duty payable by the ninth of Anne, to be repaid for the ſhoes within mentioned, amounts to one pound and nine-pence —	1	0	9
The additional duty payable by the tenth of Anne, to be repaid for the ſaid ſhoes, amounts to ten ſhillings and four pence half-penny —	0	10	4½
The total -	1	11	1

A. B. Collector
C. D. Comptroller
} of the cuſtoms.

* The debenture being thus executed by the officers of the cuſtoms, the ſame is to be delivered to the exporter, in order to be produced to the collector of the duties on hides and ſkins at the port of exportation, or to the commiſſioners for managing the ſaid duties; who are forthwith, out of the monies ariſing for the ſame duties, to repay (as above) one penny half-penny for every pound thereof; although the marks and ſtamps to denote the payment of the duties do not appear on ſuch ſhoes [or other wares.]

Relanded, forfeited with treble the value.

* 9 Ann. cap. 11. §. 41. 10 Ann. cap. 26. §. 4. 12 Ann. cap. 9. §. 68.

REMARKS on LEATHER-DRESSING in general.

Although there is no little difference between the dreſſers of ſhamoy, allum leather, Hungary leather, Morocco leather, the tanner, and parchment-maker; yet the ſkins which paſs through the hands of ſeveral workmen, ought to have been, for the moſt part at leaſt, waſhed of the blood and impurities in a running water; ſet to drain; worked with hands, or pounded with wooden peſtles in a vat; put into the pit (made in the ground, and bordered with wood, or ſtone and mortar) filled with water in which quick lime is diſſolved, in or-

der to looſen the hair, that it may be eaſily rubbed off without injuring the ſkin; drawn out, and ſet to drain on the edge of the pit; ſtretched on the leg or horſe, in order to have the hair ſcraped off with a blunt iron knife, or a wooden cylinder; pared off the membranes on the fleſhy ſide, and of the ſcabs or roughneſs on the grain ſide with a ſharp knife, rubbed with a whetſtone on the ſame horſe, to take off any particles of the lime or other thing, which may occaſion hardneſſes; thickened by different ſorts of powder, whereby they become greater in bulk, and ſo much lighter, as gradually to riſe to the ſurface of the water; ſtretched out green or half dried, and piled one over another; or put up ſeparate after dried to a cruſt; hung out to air upon poles, lines, or any other way: which muſt be repeatedly done in the dreſſing of ſmall ſkins.

This alternate tranſition from the liquid of the air into that of water, and from water into the air, with the aſſiſtance of the lime, ſalts, and oils, opens the inmoſt fibres of the ſkin ſo effectually, as greatly to facilitate the introduction of ſubſtances proper for making them pliant without rendering them thinner.

Natural philoſophy would be embarraſſed to ſettle the order and number of theſe operations, by dint of reaſon à priori alone: but what the moſt penetrating genius has never been able to invent, frequent handling of the ſame thing brings a man to practiſe with eaſe and ſucceſs. Common workmen continue to do the ſame thing ſcrupulouſly by habit. One of them, more expert than the reſt, and whoſe experience makes up all his philoſophy, overſees the whole, judges of the degree of dryneſs and moiſture, hardneſs and ſoftneſs, determines juſtly; and either repeats, lengthens, or ſhortens the proceſſes.

Theſe proceſſes, though really the ſame in the four or five principal dreſſings of leather, are ſo different in regard to the manner of executing them, and the time required in them, that the knowledge of all the minute particulars is requiſite for him who would underſtand the trade to perfection.

The allum leather-dreſſer dreſſes all ſorts of white leather, from the ox-hide to the lamb-ſkin. He works chiefly for the ſaddler and glover. For dreſſing the ſaddler's leather, he uſes bran, ſea-ſalt and allum. For that which the glover uſes, after the common preparatives, he firſt employs bran, and then with ſalt, allum, fine flour, and yolks of eggs mixed in hot water, he makes a ſort of pap, with which the ſkins are ſmeared in a trough.

The ſhamoy dreſſer ſoaks in oil *, not only the ſkins of the true ſhamoy, which is a wild goat, but likewiſe thoſe of all other goats, though much inferior to the true, and even ſheep-ſkins, which he dreſſes like ſhamoy.

* The ſhamoy leather-dreſſer uſes fiſh-oil.

The tanner uſes the bark of young oaks, from eighteen to thirty years old, ground in a tanning-mill; in which he ſoaks ſkins more or leſs, according to the different ſervices expected from them, and their chief uſe is to remain firm and keep out water.

Whereas the tanner's way of dreſſing leather in lime and tan, takes up two or three years; the Hungary * leather-dreſſer allows but three or four weeks to that which paſſes through his hands. He ſupplies the harneſs-makers, ſaddlers, belt-makers, and all other trades that uſe not only white and allum leather, or oiled and tanned leather, but alſo ſkins coloured grey with ink, and dreſſed in tallow, which is the diſtinctive work of the Hungarian leather-dreſſer †.

* The Hungary leather-dreſſer employs ſuet or tallow.

† The leather-dreſſers in England dreſs this ſort of leather to great perfection.

His name (Hongreyeur in French) and method came from Hungary, whither a French workman went, by order of Henry IV. to learn the trade by ſtealth; and thereby to lower the price of harneſſes, and ſeveral other things wanting in his armies, made of leather.

The tanner, in certain caſes, inſtead of tan, uſes redon, which is a plant cultivated much in Gaſcony, and very common in Poliſh Ruſſia.—It ſerves chiefly for tanning ram and ſheep-ſkins, which the French call baſanes: but it is alſo uſed in dreſſing Ruſſia leather, which the Poliſh Ruſſians make a great myſtery of, though there is a very good manufacture of that ſort at St. Germain en Laye.

The conſit and ſumac are litttle in uſe but for Morocco leather. The conſit, into which goat-ſkins are put after the common preparations, is a large tub of warm water, wherein they are thrown, after having diſſolved therein a very cheap ſubſtance taken from the animal kingdom, viz. the ſweepings of dog-kennels; for there is nothing in nature, but what the philoſophic artiſt can uſefully apply.

The ſumac is taken from the vegetable kingdom. It is a duſt, which comes on the leaves and ſmall branches of the plant called rhus, or ſumac. It is ſumac, with galls and allum, that the Morocco leather dreſſers chiefly uſe; whoſe intention is to give a grain to goat-ſkins, and thereby to render them ſuſceptible of the moſt beautiful colours. They call grain thoſe little wrinkles or furrows, which run all over the ſurface of Morocco leather, as alſo that of calves and cows-leather, which they bring to a reſemblance of it, by dint of waſhing, pounding, wringing, and folding the ſkins different ways. They uſe alſo water tinged with ruſt of iron, which ſerves to give a black colour; and laque [ſee LAQUE] and other ſubſtances, which colour the ſkins red, yellow, &c.

The workmen, who give the grain and the moſt likely colours to ſkins of the ſhamoy, or other goats, and who dreſs calves and ſheeps ſkins in the ſame manner to imitate Morocco, make a great ſecret of certain parts of their art, which are the niceſt; but the experimental philoſopher is rarely at a loſs to diſcover any, which he in earneſt attempts.

As the grain and beautiful dyes of goat-ſkins are the work of the Morocco leather dreſſer, the laſt preparations and dyes, given to certain tanned leather, are the buſineſs of the currier. So likewiſe, when ſkins dreſſed white by the ſkinner, are deſtined for writing or drawing, the parchment-maker puts the finiſhing hand to them.

Of ſkins brought from the tan-yard, ſome are ſent in cruſt to the ſhoemakers and other tradeſmen who employ hard leather, the reſt are ſoftened, and ſometimes coloured by the currier.

His chief buſineſs is to ſoften and ſupple cows and calves-ſkins, which make the upper leathers and quarters of ſhoes, coverings of coaches, harneſs, and other things; which muſt keep out water, bear continual jolts, and yet be pliant, either for receiving a handſome ſhape, or to facilitate motion by their giving way.

Firſt, theſe ſkins, after coming from the tanner's yard, having ſtill many fleſhy fibres on them, the currier ſoaks them ſome time in common water.

Secondly, he takes them out and ſtretches them on a very even wooden horſe. Then with a paring-knife he ſcrapes off all the ſuperfluous fleſh, and puts them into ſoak again.

Thirdly, he puts them wet on a hurdle, and tramples them with his heels, 'till they begin to become ſoft and pliant.

Fourthly, he ſoaks them in train-oil, which, by it's unctuoſity, is the beſt liquor for this purpoſe.

Fifthly, he ſpreads them on large tables, and faſtens them at the ends. Theſe, with the help of an inſtrument called a pummel, which is a thick piece of wood, the underſide whereof is full of furrows croſſing each other, he folds, ſqueezes, and moves them forward and backward ſeveral times under the teeth of this inſtrument, which breaks their too great ſtiffneſs. This is what is properly called currying. The order and number of theſe operations vary in different places, but the material part is always the ſame.

Sixthly, after the ſkins are curried, there may be occaſion to make them white or black. In order to whiten them, they are rubbed with lumps of chalk or white lead, and afterwards with a pumice-ſtone. As calves-leather is generally required to be thin, inſtead of uſing the ſcraping-knife to take off the fleſh, the currrier makes uſe of the round paring-knife, which carries a good edge on it's whole circumference, and has a round opening in the center, big enough to let both hands through, in order to manage it with ſtrength. When a calf's-ſkin is hung on the paring-horſe or frame, which has a croſs-bar at top and is open at bottom, the workman faſtens it on tight, and pulls it down as he thinks fit, by means of a cord that ſecures both ends of it, and goes round his own body. He then rubs it with chalk, and with the knife he pares off the fleſh. He repeats this work as often as is neceſſary, 'till the ſkin is as thin and white as he deſires.

Seventhly, when a ſkin is to be made black, after having oiled and dried it, he dips a puff, which is a thick tuft of fringes or hair, in water impregnated with iron. The old iron, which he has let ſtand ſome time in this water, together with it's ruſt, depoſes a quantity of ſalts, and particles of iron, which are known to be the baſis of the blackneſs of ink. After this firſt wetting, he gives the ſkin another in a water prepared with ſoot, vinegar, and gum arabic. Theſe different dyes gradually turn the ſkin black, and the operations are repeated 'till it is of a ſhining black. The grain and wrinkles, which contribute to the ſuppleneſs of calves and cows-leather, are made by the reiterated folds given to the ſkin in every direction, and by the care taken to ſcrape off all hard parts on the coloured ſide.

The parchment-makers buſineſs is more ſimple. After the ſkinner has dreſſed the ſkins white which he wants, and put them on the paring horſe, pared, rubbed them with chalk ſeveral times, wetted, pumiced, wetted again, drained, rubbed them again with pumice ſtone, duſted them with a piece of lamb's-ſkin with the wool on; the parchment-maker takes thoſe ſame ſkins to ſcrape them dry, and rub them thinner on both ſides with an iron inſtrument.

After he has gathered up the ſcrapings, for making a thin glue or ſize, which ſerves particularly for ſizing the warp of ſeveral ſorts of woollen ſtuffs, and for making it move eaſier through the reed; he finiſhes his work by rubbing the ſkin with the pumice-ſtone, and carefully removing all roughneſs from the ſurface of it. If it be a ſheep-ſkin, it is called parchment, the principal uſe of which is to engroſs acts or deeds that are required to laſt long.

If it be a ſlink calf or lamb's-ſkin, it is named vellum; and is uſed by deſigners for whatever requires a very ſmooth ground and great propriety in the execution.

We ſee the advantage of differently imbibing ſkins with tallow, mutton-ſuet, or fiſh oil, and of feeding them with ſome vegetable powders.

Inſtead of thoſe ſubſtances, many of which are brought from very remote places, and are expenſive to be got; it is not impoſſible but we may have ſome as good, or better at home, which are not taken notice of. We have a number of large ſeeds and thick barks, which might yield powders or oils fit to ſupply the places above-mentioned. In coſtly undertakings, it is prudent to adhere to what has already ſucceeded: but a more noble concern ought to put our manufacturers upon making daily trials of improvement in little. The ſame experimental philoſophy, which has merited our acknowledgements by it's firſt diſcoveries, may ſtill gain more glory, by diminiſhing the tedioufneſs and expence of ſeveral works, and, perhaps, even by ſuppreſſing ſome unneceſſary rules or operations in the mechanic as well as manufactural arts.

LEDGER, in regard to accountantſhip [ſee ACCOUNTANTSHIP], is a large book, containing all the tranſactions of a trader's or gentleman's affairs, methodized in the form of debtor or creditor. The ledger, indeed, is only the waſte-book, or the journal ſo digeſted, as to exhibit, as it were, at one view, the ſtate of a merchant's, or any other trader's concerns, though they be ever ſo various and complicated.

To methodize every diſtinct account in a peculiar book, two pages are required, oppoſite to each other; that on the left hand ſerving for the debtor ſide, the other for that of the creditor: and each article conſiſts of five parts, viz. the date, the perſon whom we credit, or are credited by, the thing for which we are indebted or credited, the page where ſuch counterpart is found, and the ſum or amount of the article, ſo poſted into the ledger.

The peculiar nature and form of this grand livre, or moſt eſſential book, as the French call it, we have exemplified under the article of BANKING; where at the ſame time that we illuſtrate the art of accountantſhip by debtor and creditor, we likewiſe comprehend the principal buſineſs of domeſtic banking. See BANKING.

We ſhall here take occaſion alſo to illuſtrate the utility and importance of this book, by tranſactions drawn from ſome real foreign mercantile concerns, that happened ſome years ſince; which will give a lively idea, not only of foreign mercantile accounts, but of the nature of conducting the buſineſs of a trading voyage at the ſame time.

Thoſe mercantile tranſactions, as they fell out, are as follow; viz.

Thomas Dale of Leghorn, James Goodman of Barcelona, Peter Winberton of Smyrna, Peter Blaxland of New England, John King, John Kelly, Peter Bradbey of London, James Bradſon of Bilboa, James Dixon of Cadiz, and James Corman of Liſbon, correſpond and trade with each other: viz.

Thomas Dale of Leghorn buys the Anne galley, and fits her out to ſea, to proceed on a voyage from Leghorn to Barcelona, and thence to Smyrna and the Arches, for a lading of wheat for Liſbon, to be conſigned to the care and diſpoſal of James Corman, who is $\frac{1}{3}$ part concerned therein, and Thomas Dale $\frac{2}{3}$, and who paid for the hull, maſts, &c. according to inventory and contract 1600 dollars, and paid all charges of fitting out to ſea, as per accompt, dollars 1589 : 12 —Inſured dollars 3600 on the hull from Leghorn for Barcelona, at 9 per cent. with more, $\frac{1}{2}$ per mill. palace charges —Alſo inſured dollars 6000 on the hull and ſtock, from Barcelona to Smyrna, the Arches, and to Liſbon, at 28 per cent. with more $\frac{1}{2}$ per mill. palace charges, and reckons his proviſion on both inſurances $\frac{1}{2}$ per cent.—The galley arriving at Barcelona, James Goodman receives the freight of barley and wheat, made by ſaid galley, being dollars 1242 : 10— Buys 2000 pieces of eight Spaniſh money, amounting for coſt and charges to dollars 2068 : 12 : 6—Delivers them to Capt. Barnby commander of the galley, to diſpoſe of in Smyrna, in buying a cargo of wheat—Pays alſo to ſaid captain dollars 280—Reckons for his commiſſion on ſaid tranſactions dollars 30 : 2 : 6, and 15 ſols for poſtage of letters—Draws the ballance of accompt on Thomas Dale of Leghorn, at livres 18 $\frac{1}{4}$ per piſtole—The galley arriving at Smyrna, Peter Winberton ſells the 2000 pieces of eight, weighing 1951 (moſt pillar) one with the other, at 35 per cent.—Paid conſulage 2 per cent. ſhroffage, or loſs on money, 4 per mill.—Reckons his proviſion and brokerage at 2 per cent.—Buys a cargo of wheat at ſundry prices, viz. 622 kellows at $\frac{22}{40}$, and at $\frac{1}{120}$ per kellow—659 ditto at $\frac{22}{40}$— 505 kellows at $\frac{21}{40}$, and at $\frac{1}{120}$—1800 ditto at $\frac{23}{40}$—1194 ditto at $\frac{21}{40}$, and at $\frac{1}{120}$—Pays petty expences, and for boats, &c. dollars 20 : 2—For conſulage 4 per cent.—Brokerage $\frac{1}{80}$ of a dollar per kellow—Reckons his proviſion at 3 per cent.—Pays to Capt. Barnby dollars 235, and draws the ballance on Thomas Dale at 13 per cent.—Thomas Dale draws on James Corman dollars 1506 : 18 : 7, at 930— Dollars 400, at 925—Dollars 300, at 930, and the ballance of Corman's accompt current at 930—Having reckoned him $\frac{1}{2}$ per cent. brokerage, and expences of poſtage of letters at Leghorn, Amſterdam, and London, amounting to dollars 24 : 5 : 1—The galley arriving at Liſbon, Corman ſells the lading of wheat (that was purchaſed by Winberton) as follows—360 Alquiers at 480 rees per alquier—60 Ditto at 460—358 Ditto at 450—10,494 Ditto at 440—488 Ditto at 430—And, by ſelling the corn to ſeveral perſons, it fell ſhort 3 moys of what it firſt meaſured aboard—Corman paid meaſuring aboard of 204 moys, 80 rees per moy—Boat-hire to Bellem on ditto 100 rees per moy—Porterage into the warehouſe on ditto, 90 rees per moy—Boat-hire from Bellem to the market on 190 moys, at 120 rees per moy—Porters, landing, cartage, &c. on 190 moys, 210 rees per moy —Meaſuring into the market on 204 moys, 100 rees per moy—Porterage, cartage, &c. to a private warehouſe for ſale, on 38 moys, at 380 rees per moy—Hire of empty ſacks, 10,300 rees—Gave the health office at Liſbon 48 milrees—Ditto at Bellem, for aſſiſting in unloading 10,300 rees —Guards to watch the boats, with ſundry expences, 8500 rees—Warehouſe room, and turning, 22,700 rees—Selling in the markets 201 moys, at 600 rees per moy—Brokerage on 201 moys, at 100 rees per moy—His commiſſion 2 $\frac{1}{2}$ per cent. on ſales.

Corman buys the ſhip Jenny for his own accompt, for 960 milrees—Lades on board her 155 moys of ſalt, at 3500 rees per moy, and charges, amounting to 576,770 rees—Pays ſundry diſburſements in fitting her out to ſea for New England, Capt. John Walker, amounting to 581,572 rees—He alſo pays fundries on the Anne galley for her voyage to Algier, to lade corn on freight; viz. To the captain, as per his accompt of diſburſements (allowed) 910,819 rees—To guards and pilot 15,840 rees—For 5 boats of ballaſt 17,500 —For 7 barrels of beef, and 2 frails of fruit, 34 milrees— For 3 caſks of butter, containing nett 249lb. at 35 rees per pound—For port charges, as per Tho. Harwood's accompt, 16 milrees—For a pilot going out 7200 rees—For 25 alquiers of peaſe, &c. as per bill, 76 milrees—To William Pratt, the ſhip-chandler, as per his accompt, 328 milrees— To John Stamp, the ſail-maker, as per his accompt, 93 milrees—For wine and fruit 9600 rees—For 3 cannons 48 milrees—For ſundry petty expences 3600 rees—For caſh paid Capt. Barnby 14,400 rees, and ſaid Corman reckons 2 $\frac{1}{2}$ per cent. commiſſion—Ship Jenny arriving at Boſton in New England, Peter Blaxland ſells to James Dudley 210 hogſheads of Liſbon ſalt, at 33 s. per hogſhead—To John Prieſtly 30 hogſheads of French ſalt, at 28 s. per hogſhead —To ditto 121 hogſheads ditto, at 25 s. per hogſhead—To John Pieterſon 78 hogſheads ditto, and 20 s. per hogſhead— Pays lighterage, and porterage of the ſalt landing and meaſuring, l. 10 : 1 : 10—Pays ſtorage for the ſalt that was landed, 5 l.—Reckons his commiſſion at 5 per cent.—The Anne galley returns from Algier to Liſbon, and Corman receives of Samuel Bolt for freight (as per charter-party) of 155 tons of corn, and other goods brought from Algier, at 14,500 rees per ton—For 9 boats of ballaſt (ſold at Gibraltar) 18 pieces of eight—For $\frac{2}{3}$ port-charges at Liſbon 25,733 rees— Peter Blaxland, of Boſton in New England, buys 200 quintals of dry cod-fiſh at 21 s. per quintal—More 1000 quintals ditto at 22 s —More 294 $\frac{1}{2}$ quintals of dry hack and haddock, at 16 s. 6 d. per quintal—More, 377 quintals of dry pollock, at 14 s. per quintal—Pays boat-hire, cullage, primage, and ſeveral extraordinary charges, amounting to l. 29 : 7 : 10—Reckons his commiſſion on coſt and charges at 5 per cent. and lades ſaid fiſh on board the Jenny for Bilboa, conſigned to James Bradſon for accompt of Corman, 1391 quintals, and for his own accompt 480 $\frac{1}{2}$ quintals— Corman of Liſbon diſburſed and allowed ſundry ſums on the Anne galley for her voyage to Genoa and Leghorn on freight, viz. Pays to Capt. Barnby, as per his accompt, for mens wages, &c. 637,670 rees—Pays for damage, with porterage and waterage aboard, 2780 rees—For labourers, 10 men for one day and half, at 200 rees—For cooperage and for nails 8400—For ſundry proviſions, as beef, pork, butter, bread, peaſe, &c. as per bill, 204,851 rees—For port charges, as per Thomas Harwood's accompt, 23,900 rees—To the caulker, as per bill, 45,600—To James Leven the mate, 10 pieces of eight due to him, and diſcharged him—For 10 bolts of canvas at 10,300 rees—For a cable weighing 19 quintals one aroba, and a piece of hawſer, 176,175 rees— To William Pratt the ſhip-chandler, as per bill, 73,794 rees —To John Stamp the ſail-maker 31,355 rees—For pilotage out 10,080 rees, and ſundry petty expences 9500 rees—For conſulage at Liſbon, and vice-conſulage, and charges at Bellem for two voyages, 33 milrees—To Capt. Barnby (as per his accompt) for expences during the Algier voyage 181 pieces of eight at 800 rees, out of which he deducts 18 pieces of eight, which was charged in a former accompt of diſburſements—Reckons his commiſſion at 2 $\frac{1}{2}$ per cent.— Blaxland of New England pays the ſhip Jenny's diſburſements, and to the captain, as per accompt and receipt, amounting to l. 437 : 8 : 4, and to reimburſe himſelf for the affairs done by him (as aforeſaid) draws by order of Corman

on

on John King of London, payable to Samuel Prag at 40 days ſight, l. 225 ſterl. at 55 per cent.—More on John Kelly of London, payable to Daniel Hooper at 40 days ſight, l. 100 ſterl. at 50 per cent. and the balance of account, he draws on Peter Bradby of London, payable to John Henchman at 40 days ſight, at 50 per cent.

The Anne galley arriving at Leghorn, Thomas Dale accompts for freight made from Liſbon to Genoa and Leghorn, viz. for freight (as per manifeſto) made good by Alberti Geminiani of Genoa, in l. 5825, at 51. per dollar, leſs 1 ½ per cent. on 1000 dollars drawn in—For freight received at Leghorn (according to manifeſto) 1104 dollars—For freight received for other merchandize, dollars 52 : 15—For average of 5 per cent. received for the owners on dollars 1104—And the ſaid Dale pays ſundry charges on ſaid galley, viz. for charges at Pratick, dollars 2 : 5—To the ſhip-chandler per accompt, dollars 42 : 4 : 1—To the butcher per accompt, dollars 17 : 7—For port-charges per accompt, dollars 22 : 11—To the ſhipwright per his accompt, dollars 8 : 10—To the baker for proviſions, &c. per his accompt, dollars 200—For ſalt proviſions, beef, &c. dollars 205—For ballaſt, dollars 25—For tranſlating the charter-party, dollar 1—To Capt. Barnby for his expences at this port, as per accompt, dollars 92 : 3 : 4—For charges, entering his conſulato, and procure, to recover in the freight, dollars 4 : 10—To Capt. Barnby for his expences at Genoa, l. 529 : 4, at 51. per dollar—For a barrel of tar at Genoa, paid for by Geminiani, 40l.—For expences incurred by Geminiani in going to Genoa, as per accompt, l. 168 : 9 : 4—For expences made by ditto at going from Genoa for Liſbon, l. 326 : 13 : 4—For boat-hire ſeveral times for aſſiſting the galley's diſpatch, dollars 1 : 10—Reckons his proviſion 2 per cent. recovering in the freight, and correſpondency for her diſpatch hence, and at Genoa, dollars 47 : 4 : 9—For poſtage of letters on this affair, dollars 4 : 11 : 6—The ſhip Jenny arrives at Bilboa, and there Bradſon ſells 1640 ½ quintals of fiſh to ſundry perſons, as per accompt, for rials plate 103,811—And delivers for provoſtage 2 ½ per cent. in ſpecie of fiſh, and one quintal to the weighers, as uſual—Pays for an expreſs to and from Portugal, when the ſhip arrived with orders to go to Liſbon, rials 13 : 26—To the inquiſition-veſſel 22 rials, and for refreſhment 45 rials—For freight of 12 gabars with fiſh, up to the keys, at 16 rials vellon per gabar—Unlading at the keys 9 gabars, at 93 rials vellon each—To the oxen, mews, and ſledges, carrying the lading of 12 gabars, at 20 rials vellon—Guards to watch the fiſh at landing, 10 rials plate—To ſeamen for their due, as cuſtomary, on 12 gabars, at 5 rials plate—For removing and piling 9 gabars in ſmall piles, at ſeparating the ſorts, at rials 22 ½ plate per gabar—Weighing out 9 gabars, at 20 rials plate—Town duties on weights, and new impoſt, rials 891 plate—Lodge-hire half a rial plate, per quintal on 1122 quintals—Contribution duties one per cent. on ſales—National duties ½ per cent.—Primage on 90 tons paid the captain at 2 ½ rials plate—Reckons commiſſion 5 per cent. on ſales and returns—Said Bradſon buys 300 bundles of cheſtnut-hoops, at 33 ½ quarts vellon per bundle—200 Bundles ditto at 4 rials vellon per bundle, which he ſhipped on board the Jenny for Cadiz, conſigned to James Dixon of ſaid place, for accompt of Corman, and pays ſhipping them on board two lighters, 2 marvedees vellon per bundle, and boat-hire aboard, rials 21 : 10 plate—The Anne galley arrives at Liſbon, and Corman accounts for freight made by her from Leghorn and Genoa to Liſbon, viz. J. Baptiſta Thialini, 30 parcels of ſewing ſilk, at 8 dollars per parcel—Lorenzo Geminiani 100 bales of paper, at dollars 2 ½ per bale—Nicolo Lazerogo 1100 bags of rice, containing 3710 quintals, at 700 rees per quintal—Nunez Alvarez 6 bundles of coral, 12 milrees—J. Rodrigus Autunez, 6 parcels of ribbon, 60 milrees—For primage 5 per cent. to the captain on 200 tons, at dollars 15 per ton, which was received of the above people, and paſſed to the captain's credit. Ship Jenny arrives at Cadiz, and James Dixon ſells, for accompt of Corman aforeſaid, 378 bundles of cheſtnut-hoops to Don Pedro de Tranquello, at 10 rials plate per flere of 2 bundles—More, 120 bundles ditto to ditto (being damaged) at 4 rials plate per flere of 2 bundles, and Capt. Walker had the remaining 2 bundles, which he applied to the ſhip's uſe—Dixon reckons brokerage one per cent.—For extraordinary charges on ſales aboard ½ per cent.—For commiſſion on ſales, and returns 5 per cent. of which 1 per cent. is to be charged on remiſſion, remains 4 per cent.—Dixon receives the freight made by the Jenny, Capt. Walker, from Bilboa, viz. for 2194 bars of iron weighing 577 quintals, conſigned to Don Juan de Matta Gonſalvez, at 6 ½ rials plate new money per quintal—For 1540 bars ditto, weighing 500 quintals, conſigned ditto at 6 ½ rials ditto—For 476 bars ditto, weighing 200 quintals ditto, and 8 bundles chapa de fierro, weighing 1369 pounds, together is 208 ⅝ quintals, at 6 ½ rials ditto, conſigned to Don Sebaſtian dos Lopez—For 250 bars ditto, weighing 100 quintals, conſigned to ditto, at 6 ½ rials ditto—For 774 rexas de fierro de arar, weighing 61 ½ quintals, conſigned to ditto, at 6 ½ rials ditto—For 72 carones de herrage clanos, weighing 140 quintals, conſigned to Don Juan Gonſalvez Lopez dos Santos, at 6 ½ rials plate—For 500 ſingle bundles of cheſtnut-hoops, conſigned to ſaid Dixon, being for accompt of the owner of the Jenny, nothing—For the groſs average on ſaid freight, occaſioned by the ſhip's loſing her bowſprit, deducting the ⅓ part of the charge to be borne by ſhip Jenny, and a proportion by the hoops: the remainder was adjuſted at ½ a rial plate per ducat, on 750 ducats; what received thereon, was 375 rials plate—Dixon reckons his commiſſion on ſaid freight, and groſs average, at 2 ½ per cent.—And by order of Corman, and for his accompt, ſells the ſhip Jenny, with all her maſts, yards, &c. to David Burrows, for 1300 pieces of eight, to pay in 30 days—Charges for boat-hire aboard ſeveral times, and other petty charges, 40 rials plate—For the duties of alcala y cientos on the ſale, which he has hopes to avoid paying; but, if he ſhould be obliged to it afterwards, he will then charge it to accompt; in the interim charges nothing—Reckons brokerage 1 per cent.—For commiſſion on ſale and returns 5 per cent. of which 1 per cent. is to be charged on remiſſion; remains 4 per cent. which he now charges.

Theſe tranſactions are ſtated as follow in the ledger only, according to the method of accountantſhip by double entry, whereby it will appear, what is due to or from the reſpective merchants herein concerned; what profit or loſs ariſes to each of them on this trade, and by the exchange or difference in the valuation of monies.

REMARKS.

From the face of the ledger-account of theſe mercantile negociations, there ariſes a double advantage: (1.) The nature of carrying on foreign trade from one country to another, is intelligibly illuſtrated from facts and realities. (2.) The method of accountantſhip, as practiſed by the ſeveral merchants therein concerned, is, at the ſame time, familiarly exemplified; alſo the nature of foreign accounts, as kept in the monies of different countries, is repreſented; and thoſe of MY ACCOUNT, HIS ACCOUNT, and COMPANY ACCOUNTS, or thoſe of FACTOR and MERCHANT, as kept in their proper columns, are alſo ſet in a clear light: from whence is ſeen, likewiſe, in what manner the profit or loſs is ſtated, that may happen by the riſe or fall of the prices current of exchange.

The conformity, alſo, amongſt theſe ſeveral accounts is manifeſt; and nothing can give a better idea of mercantile accountantſhip, than the ſtating of all the accounts reſpectively of the ſeveral parties who may be concerned in foreign adventures.

By accounts of this kind, the nature of anonymous partnerſhips in foreign traffic may be judged of, and the reaſonableneſs of what we have ſaid under the article anonymous, which is not incurious. See ANONYMOUS.

Theſe accounts very plainly ſhow the juſtneſs and elegancy of the art of accountantſhip by debtor and creditor, according to the true merchant-like method, by double entry; for, if one merchant has dealings with ever ſo many others in foreign countries, if they are all thoroughly ſkilled in this admirable art, they can have no miſunderſtanding in the ſtating of their accounts, as to the part of charge and diſcharge; their ballances will be all in conformity to their vouchers; and, if there happen to be any miſtakes in relation to the arithmetical part, theſe are eaſily rectified: whence the reaſon of the ſignature of the ordinary phraſe of ERRORS EXCEPTED, in the mutual tranſmiſſion of accounts from trader to trader, is apparent.

And when any errors happen to be committed in the ſtating of the accounts, as well with reſpect to their debts and credits in the ledger, as in the journal, or any miſtakes of a different kind occur, it is as inconſiſtent with the character of the fair and honourable trader, as with that of an accountant, to ſuffer any craſements or obliterations in his books: his buſineſs is to acknowledge ſuch miſtakes by plain words, and rectify them by writing them off in the ledger, or properly explaining them, if they are of the arithmetical kind, &c.—It is, therefore, we have left here and there an error, as happened in ſtating the accounts, with deſign to ſhow how they are wrote off, without razure or obliteration. For more matter in relation to this excellent method of account-keeping, ſee the articles BANKING, DEBTOR and CREDITOR, and MERCANTILE ACCOUNTANTSHIP.

LEEWARD-ISLANDS in AMERICA; chiefly thoſe iſlands that were called the NEUTRAL-ISLANDS before the laſt peace.

The French, after they firſt became maſters of GUADALOUPE and MARTINICO, as they made no ſcruple of deſtroying and expelling the inhabitants, ſo when that was once done, they under colour of a treaty pretended themſelves to be defenders of them in DOMINICA and ST. VINCENT, that they might hinder England from extending her territories, 'till they ſhould grow ſtrong enough to occupy theſe as they had done the reſt.

The negociation laſt mentioned, was actually depending when the revolution happened. But notwithſtanding this, the French thinking the opportunity favourable, broke without ceremony the treaty of NEUTRALITY, made November 5, 1686, at Whitehall, by attacking the Engliſh quarters in the iſland of St. Chriſtopher's, which was inſiſted upon by king William and queen Mary, as the grounds of declaring war againſt the French king in America. From this period, down to the treaty of AIX LA-CHAPELLE in 1748, both nations have kept up their claims; and by the laſt mentioned treaty, things were again reduced to their old ſituation, by a poſitive declaration that ST. LUCIA, ST. VINCENT, and DOMINICA, ſhould be eſteemed NEUTRAL; and conſidered in that light, not to be ſettled by other nations.

By that treaty likewiſe, a fourth iſland was added, to which the French had never laid any expreſs or direct claim before, and this was TOBAGO. Such were the regulations this treaty made, and ſuch the ſtate of things, or at leaſt ſuch the ſtate of things ought to have been, at the opening of the late war. By the 9th article of the peace ſigned at Paris, February 10, 1763, all the three iſlands of DOMINICA, ST. VINCENT, and TOBAGO, were yielded in full and perpetual ſovereignty to GREAT-BRITAIN, the iſland of St. Lucia being ceded by the king of Great-Britain to France, in exchange for the ISLAND of GRANADA, which by the before mentioned 9th article, with the GRANADINES or GRENADILLAS, and all their DEPENDENCIES, are abſolutely and for ever yielded to Great-Britain. We ſhall deſcribe the three formerly NEUTRAL, which are now become BRITISH ISLANDS, and theſe TWO ISLANDS that were thus exchanged.

DOMINICA lies, as it were, in the boſom of all the FRENCH ISLES, 8 leagues north-weſt from MARTINICO; about the ſame diſtance, ſouth-eaſt from GUADALOUPE; having the three ſmall iſlands called the Saints, between them, and at the diſtance of five leagues ſouth weſt from Marigalante. Dominica lies ſtretched out from ſouth to north-weſt. It is a large iſland, at leaſt twenty eight Engliſh miles in length, and about thirteen in breadth, in circumference about 30 leagues. It is not interſected by large inlets of the ſeas, as many others, both of the larger and leſſer of our own, and the French Weſt Indian iſlands are, and of courſe contains the more land. Some have judged it near twice as large as Barbadoes, and the French eſteem it near half the ſize of Martinico. The climate in general is reputed wholſome. After this iſle becomes thoroughly cleared, it will be more healthy and agreeable to European conſtitutions. The face of the country is rough and mountainous towards the ſea ſide eſpecially, and within land, there are many rich and fine vallies, and ſome ſpacious and fair plains. The declivities of the hills are commonly gentle, ſo as to facilitate their cultivation, and the ſoil in general a deep black mould, and commended for it's fertility, by the Spaniſh and French, as well as the Engliſh. It is well watered, by at leaſt 30 rivers, ſome of which are ſpacious and navigable for ſeveral miles, the reſt commodious for planting, and variety of fiſh. It abounds in all kinds of timber, that are cuſtomary in the Weſt-India iſles. Their fruits are ſuperior to thoſe in Martinico and Guadaloupe. Hogs both wild and tame are in plenty, as well as moſt ſorts of fowl. Ground proviſions in general are here as good as in any of the other iſles; ſuch as bananas, potatoes, maniac, from which the caſſada is made, the common bread of the Indians, Negroes, and even Europeans: their pine apples are reputed large and fine flavoured. The ſettlements made by the French upon the coaſt, were eſteemed equal, if not ſuperior in produce, to thoſe in their own iſles. The Spaniſh writers, particularly Oviedo, ſay, there are ſeveral ſafe ports and convenient creeks. On the north-weſt end of the iſland, there is a deep, ſandy, large bay, well defended by the adjacent mountains from moſt winds, which from prince Rupert's anchoring in it, when in thoſe parts, has received his name, where our armament under the late lord Cathcart, lay very commodiouſly, and which was of great ſervice to our ſquadron in the courſe of the late war. There is a good anchoring ground along all the LEEWARD COAST.—The French have acknowledged, that ſugar, cotton coffee, cocoa, and indeed every thing, that either they or we have been able to raiſe, in any of the other iſlands, may be produced in large quantities as well as in great perfection here.

The Indians may, without prejudice to our people, have convenient diſtricts of land allotted them; in which by good management and mild treatment, they may be rendered very uſeful to our new colony, in raiſing ſtock, and other things, as they have been for a century, to the French in Martinico. It may be proper on our firſt eſtabliſhment to allot ſmall plantations to ſuch ſoldiers, and larger to ſuch officers as have families, and are inclined to ſettle upon the iſland, and to offer them every kind of encouragement that may increaſe their number, as thoſe people would then be able to defend their property. Numbers of our countrymen ſettled in St. Euſtatia, St. Croix, and Cape Iſaquepe, might be invited to return upon advantageous terms into the territories of their natural ſovereign. A form of government upon thoſe of our other iſlands, guarded againſt the acquiſition by all graſping individuals, of large quantities of unſettled and uncultivated land, with the ſame reſtrictions, that take place in Barbadoes, for the conſtant maintenance of a numerous and well diſciplined militia, &c. cannot fail of drawing thither a ſufficient number of inhabitants, and with the help of regular fortifications, would render the iſland ſecure, and they would make it flouriſhing. This would induce to the diſcovery of that mine, for which this iſland has been always famous, which the Engliſh believe from tradition to be ſilver, but what the French well know to be gold; and though it ſhould not be judged expedient to open it, yet the certain knowledge of it could do us no injury, and the very fame of it might invite numbers there, and prove of great benefit.

Nor need apprehenſion of inſecurity intimidate the reſort of people thither. Beſides the immediate aſſiſtance this iſle might receive from Barbadoes, while we retain our maritime ſuperiority, a reſpectable ſquadron on the firſt appearance of a rupture might be ſent to Prince Rupert's bay, with a force ſufficient to quiet the fear of the inhabitants. But if ſuch an event be at any diſtance, the iſland in that time may be fully ſettled, and from it's extent and fortifications, exempt from the danger of any ſudden invaſion; and in that ſtate would ſerve as a place of arms, and the rendezvous of our forces, from all parts of the WEST INDIES; when from the nature of it's ſituation the whole of the French commerce in theſe parts muſt inſtantly become precarious, and all their ſettlements be at our mercy.

The iſland of ST. VINCENT lies between five and ſix leagues ſouth-weſt from ST. LUCIA, 23 ſouth-weſt from Martinico, 36 ſouth from DOMINICA, 30 weſt by ſouth from Barbadoes, and 17 north-eaſt from GRANADA. Being thus ſituated directly

rectly to the leeward of Barbadoes, it may in a few hours be reached from thence, and is at the ſame time ſo ſeated, as to cover and connect the ſmall iſlands that lie between it and GRANADA. It is from ſouth to north, about 24 of our miles in length, and about half as many in breadth, ſixty, or thereabouts in circumference.—It is rather bigger than Antigua, and if not larger, at leaſt as large as Barbadoes, ſomewhat ſmaller than ST. LUCIA, and much about 2 thirds of the bigneſs of DOMINICA. The warmth of the climate is ſo tempered with ſea breezes, that it is looked upon as very healthful and agreeable, and on the eminencies that are numerous, the air is rather cool.

The ſoil in general is extraordinary fertile, tho' the country is hilly, and in ſome places mountainous. Amongſt the former, there are pleaſant vallies; at the bottom of the latter, ſome large and luxuriant plains. No iſland of the like extent is better watered; from the mountains there deſcend rivers, and leſſer ſtreams run on both ſides from almoſt every hill. There are ſeveral fine ſprings at a ſmall diſtance from the ſea, and the ſlopes ſo eaſy and regular, that there are hardly any marſhes, and no ſtanding waters on the iſle. There are here large quantities of valuable timber, as well as good fruit-trees, ſome peculiar to this iſle. It abounds with wild ſugar-canes, from which the natives make a very pleaſant liquor; corn, rice, and all ſorts of ground proviſions, are raiſed in plenty, and without great trouble. In the ſouth part of the iſland, where the French have raiſed ſome large and flouriſhing ſettlements, they have coffee, indigo, cocoa, anatto, and very fine tobacco.—They have plenty of cattle and poultry, and ſend ſome lignum vitæ, and ſome timber to Martinico, where the latter is employed in building houſes, and in their fortifications. The rivers are ſtored with divers ſorts of freſh fiſh, and the ſea contiguous to it's coaſts abounds with thoſe properto it's element, and the general nature of the climate. Both land and water fowl are in plenty.

From the ſpecimens above given, we may collect, that when this country comes to be duly well cultivated, according to the invitation it gives, it would, in reſpect to it's produce, be little, if at all inferior, to any for extent, of the iſlands we have poſſeſſed; eſpecially if we conſider that it has many commodious bays, on the north-weſt and ſouth-weſt ſides, with abundance of convenient creeks, and good anchoring ground on every ſide. At the ſouthern extremity there is a deep, ſpacious, ſandy bay, called St. Antonio, where ſhips of large ſize may lie ſafely and commodiouſly; and when the whole comes to be further known, there is little doubt, but other advantages will be experienced, notwithſtanding the French have been ſolicitous to repreſent the iſland heretofore, as an inſignificant diſagreeable deſert, when they had a view of engroſſing it to themſelves.—The French have for ſeveral years gone on ſettling, planting, cutting timber, and raiſing every kind of Weſt India commodities, except ſugar, and carrying on a very lucrative trade to their other iſlands, in which a number of ſloops have been employed.

In relation to the ſecurity of this iſland, there is no doubt, that a competent military force muſt be ſent to protect our firſt eſtabliſhments; and as aſſiſtance may be derived from Barbadoes, at any time in the ſpace of a few hours, the French can take no advantage of this iſland, provided care is taken to pacify all miſunderſtandings between the native Indians and the Negroes, as they ſhall happen.

From the foregoing brief deſcription of this iſle, it appears to be a fine fruitful one; all the ancient, and of courſe unbiaſſed relations we have of it by authors of credit of every nation, Spaniſh, French, and Dutch, as well as our own, concur in this repreſentation. By depriving the French of all the ſettlements they had made at this iſland, of the produce thereof, and of the advantages ariſing from the trade, which was regularly ſettled between this and their other iſlands, and throwing them into the Britiſh ſcale of general commerce, may be conſidered as no deſpicable acquiſition to this nation. It ſhould not be forgot that all our former diſputes, too numerous to ſpecify relative hereunto, are by the peace of 1763, brought to a concluſion; this iſland is now become perpetually and inconteſtibly ours, we having given an equivalent for this and others, and the French have no colour or pretence for reviving any ſort of claim thereto.

By this acquiſition of ST. VINCENT, Great-Britain has likewiſe gained an additional check upon the French inland colonies in general, and particularly on that of ST. LUCIA, which is ceded to that nation. There can be no meaſure taken there, of which we may not have immediate notice; and if we conſider the ſituation of this iſland in reſpect to that and the reſt of the French iſlands, now that GRANADA and all its depencies are become Britiſh, it ſeems pretty apparent, we may from thence eſtabliſh a cruize, by which they may be effectually blocked up, or at leaſt deprived of all commerce, in caſe of a future war.

Should it be objected, that the bays in this iſland may not be convenient for a large ſquadron, ſince our ſquadrons avoid as much as poſſible coming into or continuing long in bays however commodious; nor does experience evince that our naval armament have hitherto ſuffered much from the want of ſuch conveniencies in the hurricane months, in which they are chiefly neceſſary; but from their dangerous ſtorms; they will have now a conſtant and ſafe retreat in the port of GRANADA. It may likewiſe ſerve us for a place of arms, by which forces may be tranſplanted from the other iſlands, and embarked very conveniently for our future expeditions in this part of the world. It alſo contributes to cover and connect all our other poſſeſſions, that together with it have been acquired by the peace; and from thence, reinforcements and ſupplies may be ſent with equal eaſe and expedition to DOMINICA.

TOBAGO, the moſt remote of all our new acquired iſlands in America, lies near 40 leagues ſouth by weſt from BARBADOES; about 35 leagues ſouth-eaſt from ST. VINCENT, 40 leagues eaſt from GRANADA, 12 leagues north-eaſt from TRINIDADA, and between 30 and 40 leagues north-eaſt from the Spaniſh main. It is 32 of our miles from ſouth-eaſt to north-weſt, which is the greateſt length; and where broadeſt, may be about nine miles, from eaſt to weſt, ſomewhat more than 70 miles in circumference. It differs not a great deal in bigneſs from the iſland of ST. VINCENT, is rather larger than Barbadoes, and of conſequence than any of our leeward iſlands. Near the north eaſt extremity, there lies a ſmall iſland called LITTLE TOBAGO, which is near two miles in length, and full half a mile broad. The rocks of St. Giles lie to the north, and there are many ſmall rocky iſlets on the north-weſt ſide of it, which though uſeleſs, are not however dangerous. The climate, though it lies only 11 degrees and ten minutes north from the equator, is not near ſo hot as might be expected, the force of the ſun's rays being happily tempered by the coolneſs of the ſea breezes. Another favourable circumſtance, which may ſerve to recommend this climate, is, that this iſland lies out of the track of the HURRICANES, to which our own iſlands as well as thoſe of the French are expoſed, and from which their plantations and ſhipping ſuffer frequently very ſeverely.

There are many riſing grounds over all the iſland, but it cannot be properly ſtiled mountainous, except, perhaps, in the north-weſt extremity; and even there, they are far from being rugged or impaſſable. The ſoil is well diverſified, being in ſome places light and ſandy, in others mixed with gravel and ſmall flints, but in general it is a deep, rich, black mould. From the extraordinary ſize of the ſame ſort of trees that grow in the other iſlands, and from the trials made by the Courlanders and the Dutch, this iſland is eſteemed to be luxuriantly fertile; well ſuited to the different productions that are raiſed in the WEST-INDIES, and from the concurrence of various favourable circumſtances, may be wrought with eaſe, and is not liable to the blaſt, and other accidents, which are ſo fatal to the moſt promiſing crops in ſome of our LEEWARD ISLANDS.

It is generally agreed, that hardly any country can be better watered than this is. Beſides ſprings that are found in plenty all over the iſland, there are not fewer than 18 rivulets, that run from the hills into the ſea, ſome on the eaſt, ſome on the weſt ſide. Some of thoſe take a ſerpentine courſe through the meadows; others pent up by rocky channels, roll with ſuch rapidity, as renders them very fit for driving mills; but there are very few or no moraſſes or marſhes, or lakes, pools, or collections of ſtanding waters, which of courſe muſt render it more healthy, and in all parts of it alike habitable; and from the happy diſpoſition of the running ſtreams and numerous ſprings, it is almoſt every where habitable, with the like convenience.

Yet this diſtribution of freſh water, is not more commodious, than the diſpoſition of the bays and creeks of the ſea upon it's coaſts. At the ſouth end lies the bay of La Guira, and at a ſmall diſtance, the leſſer and the great Rockley bays. The latter of theſe, may, with propriety, be ſtiled a harbour, for it is land-locked on every ſide, and is very ſecure. It was in this bay the Dutch and French fleets engaged in 1677, and in which engagement the count d'Eſtree's ſhip, called the Glorieux of 70 guns, was blown up; which ſhews that it is capable of receiving as conſiderable ſquadrons, and thoſe of as large ſhips, as are uſually ſent into thoſe ſeas. To the northward of theſe lies Cochon Gras, or Fat Hog bay, and beyond that Grand Rivier bay, Great Hog bay, little Hog bay, L'Ancre Batteau, covered by the iſland of Little Tobago; and therefore in the Dutch maps called Little Tobago bay. Oppoſite to this, on the other ſide of the iſland, is what the Dutch called John Moore's bay, now Man of War bay, very deep and ſpacious, with ten fathom water cloſe to the ſhore, with two fine rivulets running into the bay, where our ſhips may therefore careen, with the utmoſt conveniency, as well as with the greateſt ſafety; it being ſurrounded by high hills, that come down cloſe to the ſhore, by which the veſſels lying there, will be effectually ſheltered from both wind and weather. There are alſo ſeveral little commodious bays, between this and Great Courland bay, and Sandy Point bay, which brings us again to the ſouthern extremity of the iſland. Whence it appears, that it is in all reſpects moſt convenient for commerce; and though it be true, that having ſo many places that admit of eaſy landing, and lying in the neighbourhood of warlike Indians, it muſt of neceſſity require proper fortifications; and when this iſland ſhall be once well ſettled,

the many obvious and extraordinary advantages thereby afforded to trade, will amply compenſate the expence, that may be found neceſſary to provide for, and to preſerve it's ſecurity.

This iſland is covered with all that vaſt variety of valuable TIMBER, that is to be found in moſt countries in the WEST-INDIES, and many of theſe as extraordinary in their ſize, as excellent in their nature. The ſame may be ſaid, with reſpect to fruit trees, and amongſt theſe, there are ſome that are peculiar to Tobago. Such for inſtance as the true NUTMEG-TREE, which the Dutch, who of all nations could not in that reſpect be deceived, affirm to have found here. They indeed ſay, it is a wild nutmeg, that the mace is leſs florid, and the taſte of the nut it ſelf more pungent, though larger and fairer to the eye, than the ſpice of the ſame kind brought from the Eaſt-Indies by them. The CINNAMON-TREE grows likewiſe in this iſland, though the bark is ſaid to have a taſte of cloves as well as cinnamon. Here alſo grows that tree which produces the true GUM COPAL, reſembling that brought from the continent of America, and very different from what goes by the ſame name in the reſt of the Weſt-Indian iſlands.

All ground proviſions are produced here in great abundance, as well as perfection. Here likewiſe is plenty of wild hogs and other animals, together with great quantities of fowl, and an amazing variety both of ſea and river fiſh. In the time the Dutch were in poſſeſſion of this iſland, which was not many years, they exported large quantities of TOBACCO, SUGAR, CASSIA, GINGER, CINNAMON, SASSAFRAS, GUM COPAL, CACAO, ROCOU, INDICO, and COTTON; beſides rich WOODS, materials for DYEING, DRUGS of different kinds, and ſeveral ſorts of delicious ſweetmeats. Thus, we have not only the probability, ariſing from the climate, ſoil, and ſituation; but likewiſe the certainty, that all the valuable commodities which the WEST-INDIAN ISLANDS produce have been actually, and may conſequently be again unqueſtionably raiſed in TOBAGO.

We may add to what has been ſaid, that tho' the Dutch boaſted much of their ſettlements in, and the valuable cargoes they annually brought from them, yet Sir Joſiah Child, within that very period, mentions the defect in their improvement of Tobago, in ſupport of his doctrine, that the Dutch, as a nation, were leſs ſucceſsful in PLANTING than COMMERCE; which is enough to convince us, that in his time, this was conſidered as an iſland capable of being made at leaſt as valuable, as any of it's ſize in the poſſeſſion of Europeans.

As this iſland in the ſtate it now is, abounds, as before obſerved, with a vaſt variety of different ſorts of TIMBER, all of them allowed to be excellent in their reſpective kinds; it may deſerve conſideration in the firſt ſettling it, whether proper officers might not be appointed to ſecure to the public theſe advantages. It is by no means intended, that the firſt planters ſhould be deprived of the neceſſary uſe of all kinds of timber for buildings and utenſils, but that it ſhould be cut in a proper method, and with diſcretion; becauſe nothing has been more loudly exclaimed againſt by the ſenſible men in all our other iſlands, than the undiſtinguiſhing and deſtructive havock made amongſt the WOODS, without any regard to the general intereſt, or the leaſt reſpect paid to poſterity.

By ſuch a method, the country may be properly and regularly cleared and opened; and as from the nature of the ſoil and climate, vegetation is extremely quick, a ſucceſſion of uſeful trees may be conſtantly maintained. By this means valuable cargoes will be furniſhed of FINE WOODS for the uſe of JOINERS, CABINET-MAKERS, and TURNERS; the neceſſary materials for DYEING CLOTH, SILK, and LINEN, obtained in great perfection, and a prodigious variety of GUMS, BALSAMS, and other coſtly and efficacious medicinal DRUGS may be procured in their genuine ſtate. By this precaution, very large ſums which we now pay to foreigners, will be ſaved to the nation; the improvement of our manufactures facilitated, and the exportation of theſe bulky commodities prove a great benefit to our navigation. By putting the direction of theſe things into ſkilful hands, new lights will continually ariſe from experience; and new acquiſitions may be here made of valuable plants from the continent of South America, Africa, and even from the Eaſt-Indies. The ſubordinate care of theſe woods, might furniſh employment to the Indians; and the profits ariſing from the exportation to Europe, might conſtitute a public revenue for the ſupport of the fortifications and other expences of government; which would be a great eaſe to the induſtrious planters, and thereby procure a conſtant attention in their aſſemblies to promote a deſign equally ſerviceable to their mother-country and themſelves: and conſidered in this light, it might become a uſeful precedent in the eſtabliſhment of ſomething of the like kind in other colonies, and could be attended with no inconveniencies whatever.

Nor is there any ſort of improbability of our being able to produce a great part, if not all the variety of SPICES of the EAST-INDIES, in this very iſland. CINNAMON is ſaid to grow in ſome of the other WEST-INDIAN ISLANDS; and general Codrington had once an intention to try how much it might be improved, by a regular cultivation in the iſland of

Barbuda. It is univerſally allowed, that the bark of what is called the WILD CINNAMON-TREE in Tobago, is beyond compariſon the beſt in the WEST-INDIES, and even in its preſent ſtate may be made a commercial article of value. The bark, when cured with care, differs from that in the Eaſt-Indies, by being ſtronger and more acrid while it is freſh, and when kept for ſome time, it loſes that pungency, and acquires the flavour of CLOVES. This is preciſely the SPICE which the Portugueſe call CRAVA DE MARANAHON, the French CANELLE GEROFFLEE, and the Italians CANELLA GAROFONATA. There is a very conſiderable ſale of this at LISBON, PARIS, and over all ITALY. This kind of ſpice, at preſent, is drawn chiefly from Brazil; and the Portugueſe believe that their cinnamon-trees were originally brought from Ceylon, while it was in their poſſeſſion, but that through the alteration of ſoil and clime they are degenerated into this ſort of ſpice, and this may probably be true. However, from their ſize and number it ſeems to admit of no doubt, that the CINNAMON-TREES actually growing in TOBAGO, are the natural production of that iſland; and the point with us is, to know what improvements may be made with reſpect to theſe.

It may ſeem a little new, but we hope to render it highly probable, that the ſole difference in cinnamon ariſes from culture. In the firſt place it is allowed, both by the Dutch and Portugueſe, that there are no leſs than ten different kinds in the iſland of CEYLON; which is the cleareſt evidence, that this tree is every where ſubject to variation from the circumſtances of ſoil and expoſition. It is ſecondly allowed, that even the beſt, fineſt, and firſt ſort of cinnamon-tree, does not preſerve it's high qualities beyond 17, 18, or at moſt 20 years. The reaſon aſſigned for this by the Dutch, is that the CAMPHIRE, as the tree grows older, riſes in ſuch quantties as to penetrate the bark, and thereby alter its flavour; which accounts very well for the different trade of the Brazil and Tobago cinnamons, as the trees muſt be at leaſt five times more than the proper age. It is thirdly allowed, that the faireſt and fineſt cinnamon grows upon young trees, planted in vallies near the ſea ſide, naturally covered with white ſand, where they are perfectly unſhaded and expoſed to the hotteſt ſun; that at five years old they begin to bark the branches; and, that the tree continues to produce fine-flavoured cinnamon for the number of years already mentioned. —They then cut it down to the root, from whence in a year or two it ſpreads again, and in five or ſix they begin to bark the young plants. There is one circumſtance more neceſſary to be obſerved; the true cinnamon is in the inner bark of the branches grown to a proper ſize, and when taken off and expoſed to be dried is of a green colour and has no ſmell, but as the watery particles are exhaled, and the bark curls in the manner we receive it, the colour changes, and the odour of the cinnamon gradually increaſes. What then is there to hinder our attempting the cultivation of cinnamon, which nature ſeems to have produced in as much perfection in TOBAGO as in CEYLON?

We have mentioned, that the NUTMEG as well as the CINNAMON-TREE, is a native of TOBAGO; and as we have likewiſe obſerved, is reported to be defective and inferior in its kind, to the ſame ſort of ſpice in, or at leaſt as it is brought us from the Eaſt-Indies. That the NUTMEG naturally grows here, we cannot doubt of the fact; becauſe we find it aſſerted, in a book addreſſed to Mr. de Beveren, then governor of TOBAGO. The nutmeg tree that naturally grows in Tobago is wild, and may by due care and pains be rendered as valuable a nutmeg as thoſe that grow any where elſe; for the fact really is, that wherever there are nutmegs, they are wild nutmegs, or as ſome ſtile them mountain-nutmegs, which are longer and larger, but much inferior in flavour to the beſt nutmeg, and are liable to be worm-eaten: the point is, to know how theſe defects may be remedied, or in other words, wherein the difference conſiſts, between the wild taſteleſs nutmeg, and that which is the genuine aromatic, and of courſe a valuable ſpice.

The nutmegs which the Dutch bring into Europe, grow in the iſlands of Bande, which are ſix in number; but the Dutch long ago confined the nutmeg plantations to three of them only, and took all the precautions imaginable, to hinder their being cultivated any where elſe, that they might the better confine the profits ariſing from this fine ſpice to their own company. See our article DUTCH EAST-INDIA COMPANY.

The true nutmeg, is of the ſize and height of a pear-tree; the wild or mountain nutmeg is a large tree, not ſo well furniſhed with branches, but the leaves are broader and longer. The nutmegs are planted in CLOSES or PARKS, in a regular order, and with much labour and induſtry are carefully kept free from all weeds and plants that may exhauſt their nouriſhment, and are attended with the ſame diligence as a cacao walk. Beſides this, they are defended on the outſide, by one or two rows of trees, taller in ſize, which ſecure them from ſudden guſts of winds and from the ſea air, by both of which they would be otherwiſe prejudiced.

They afford three harveſts in the year, the firſt is towards the latter end of March and the beginning of April; the product then is but ſmall, conſiſting only of ſuch as are full ripe or

fallen;

fallen; but then theſe are the fineſt, both with reſpect to the true nut and to the mace. The ſecond is the great harveſt, in the latter end of July and the beginning of Auguſt, when all are gathered that are ripe. The third is in November, and is properly the gleaning, for then they take all that are left upon the tree. When they are thus gathered, they are ſtripped with a kniſe of their outer huſks, which reſemble thoſe of walnuts; the inner coat, which is the MACE, is next taken off, with great care and as whole as it is poſſible; it is then of a bright crimſon colour, but when cautiouſly dried, becomes of a yellow brown, thin, brittle, ſhining, oily, and of a pleaſing aromatic fragrance. The nut thus deſpoiled of both coats is expoſed to the ſun for a day to dry, and this operation is finiſhed in three or four days more, by expoſing them though at a convenient diſtance to the heat of fire. Then the ſhell, which is thin, and has a very ſlight pellicle adhering to it, is removed, and the kernel or nutmeg taken out. This is likewiſe very carefully dried, and when that is done, the nuts are put by ſmall parcels into wicker baſkets, in which they are dipped in a ſtrong ſolution of lime, made with calcined ſhells, mixed with ſea water. The great ſecret lies in thus curing of them, by which they are hindered from corrupting, from ſoftening by the warm, or loſing their virtue by the humidity of the ſea air when tranſported to Europe.

We may reaſonably conclude from this account, that the nutmeg-tree being a delicate plant, owes its high aromatic flavour, to its being induſtriouſly cultivated, with great caution, and all this in a proper ſoil. It muſt be alſo obſerved, that even amongſt the trees in the nutmeg parks, there are ſome that produce long and ill ſhaped nuts, with very little flavour, which are ſtiled male nutmegs; whereas the round aromatic fruit, which is brought to Europe, is called the female nutmeg. The ſmalleſt of the nutmeg parks or cloſes, does not contain above an Engliſh rood of land, but the largeſt contains three, four, or five times as much. The whole quantity collected in the three harveſts, and in a favourable ſeaſon, ſeldom amounts to more than three hundred tons of nutmegs, and from ſeventy to eighty tons of mace.

From this ſuccinct account of the nature and method of cultivating and curing this valuable ſpice, it will appear, that it may prove ſucceſsful to make the experiment in our new iſland of TOBAGO, that we may judge, whether by the ſame method, the wild nutmeg-tree, as it is called there, may not be reclaimed and improved as gradually to acquire all the virtue and odour of that true ſpice. There may no doubt many difficulties occur, both with the cultivation and in the curing; but the vigour, the ſagacity, the indefatigable diligence of Britiſh planters will very probably overcome all theſe.

We have no account of the tree that produces CLOVES, growing either in this, or in any other iſland in America. It is not, however, impoſſible, that when the productions of TOBAGO ſhall be more attentively examined, by capable perſons, we may poſſibly find, that nature has produced this ſpice here, as well as the reſt. No weight, indeed, at all ought this ſuppoſition to have, which is mentioned only, that an enquiry may be made. But if we take it for granted, that the clove does not grow here, we may nevertheleſs venture to aſſert, that the nature of the ſoil and climate conſidered, together with the ſize and ſituation of the iſle, the natural production of other ſpices, and the flavour of cloves, that is ſaid to predominate in theſe, make it not at all improbable, that if the clove was introduced, it would thrive here. That it may be introduced, and without much difficulty, will appear no unreaſonable aſſertion, when we conſider that this plant may be obtained from BORNEO, CERAM, and MINDANAO, without the leave of the Dutch.

The Dutch are at preſent in the ſole poſſeſſion of the SPICE-TRADE, and this they owe to a very commendable care, indefatigable induſtry, and conſtant circumſpection. For as on the one hand, they have taken inexpreſſible pains, in procuring and preſerving the perfection of theſe eſtimable commodities, by a ſkilful cultivation; ſo on the other hand, they have not been leſs careful to extirpate them, where nature had produced them, where they found it extremely difficult if not impoſſible to confine their production ſolely to their own profit. There ſeems to be no juſt cauſe therefore, why we ſhould not imitate them, as far as it is fit, if we are able to do it, for our own benefit.

Thoſe who would have an ample account of this ſpice, may have recourſe to botanical writers, particularly to a work lately publiſhed in Holland, where they may meet with every thing they can deſire, and be from thence more effectually convinced, that what has been aſſerted is ſtrictly agreeable to truth.

The clove like the nutmeg-trees, are planted in ſmall cloſes, and there cultivated with all poſſible care and attention. The ſoil and climate are choſen with great ſkill, and all the ground is kept continually clear of weeds, plants, and buſhes. There is no other vegetable ſuffered to grow in the cloſes deſtined for the cloves, becauſe this would deprive them of their due nutriment, and diminiſh the ſtrength and perfection of the ſpice, which tho' it derives its form and texture from nature, owes much of its delicate fragrance and flavour, as all other ſpices do, to cultivation and art; and to that aſſiduous attention that is employed in the planting, preſerving, gathering, and curing them, without which they would neither have gained or preſerved that degree of excellence which has now ſubſiſted for ages.

The harveſt of this fruit is annually, notwithſtanding what ſome have otherwiſe ſaid. They are ſometimes very plentiful, and at others not, according as the monſoons ſet in wet or dry. In the beſt years, they may produce about 2000 bahars, which is about 550 tons. In a very bad year, not half ſo much, but as the magazines are always kept well ſupplied, there comes uſually the ſame quantity to the Europe market, where the Dutch ſales, and indeed over all India, the price of ſpice very rarely alters. The clove retains its vigour, longer than either the cinnamon or the nutmeg, for it continues to bear plentifully, in a good ſeaſon, for 50 or 60 years, and in the Moluccas they did not reckon a tree old, in leſs than a 100. The number of bearing trees, in all cloſes, are computed at 250,000, excluſive of the young plants, that are intended to replace the old trees when they are become paſt bearing.

We have dwelt a little on this point, by reaſon of the probable importance that might attend it, though it is not entirely new, for the thought of raiſing the ſpices of the Eaſt in the Weſt-Indies occurred to us and the French long ago, though it was never attempted, or indeed could be attempted with ſo fair a proſpect of ſucceſs, as in this iſland.

In this, if in any of our iſland colonies, a free port may be opened, with as many apparant advantages, and perhaps fewer inconveniencies than any where elſe in America. Here is great choice of ports on both ſides the iſland, ſome that are by nature very ſecure, others that may be ſo at a ſmall expence. The fertility of the iſle is ſuch, as that with benefit inſtead of prejudice to its inhabitants, they will always have it in their power, to relieve the wants of thoſe on board ſhips, reſorting thither for a ſupply of freſh proviſions. In one or more ſettlements here might be erected ſpacious magazines for the reception of Eaſt-India, European, and North-American commodities; all of which would not fail of finding a vent, and thereby producing an advantageous circulation of commerce and money.

The ſituation of this iſland is an another advantage, whether we conſider its nearneſs to the Spaniſh main, or its convenient diſtance from ſome other iſlands, both of which ought to be regarded, in the choice of a FREE PORT. It may alſo be peculiarly advantageous upon the ſettling of the iſland, as by the hopes of immediate profit, it might attract people, create an inſtantaneous intercourſe, and thereby a lucrative commerce with different parts of the world, which muſt otherwiſe prove a work of time. It might alſo open to us a correſpondence with the free Indians, who live upon the continent, and who would be glad of having acceſs to a country ſo near them, to which they might go, and from which they might return at pleaſure, without danger to their liberty. On the other hand, our people would be attentive enough to their own intereſt; and tho' at firſt they might find it expedient to make them preſents of ſuch things as they ſaw moſt pleaſing to them, yet in a little time they would make them ſenſible, that in order to obtain a continuance of ſupplies they muſt be content to render them uſeful in return, either by finding goods to barter, or by undertaking themſelves ſome eaſy kind of labour; which propoſition, if made with addreſs, and proſecuted with humanity and juſtice, would hardly fail of making an impreſſion upon them; and thereby open the means of having at leaſt ſome kind of cultivation carried on there, by freemen, which would be an acquiſition of people, as well as of country. An acquiſition not at all the more impracticable, becauſe that hitherto it has never been made. Our planters when they firſt went to the WEST-INDIES, had as little idea of negroes ſlaves, as they now have of Indians. In time they may profit as much by the one as by the other. This point has been cautiouſly ſpoken to, becauſe ſome, not without reaſon, have doubted, whether it might be expedient for us to follow the example of our neighbours in the opening, as they have done, FREE PORTS in America. Certain it is, that the Dutch are very great gainers by thoſe of St. Euſtatia and Curaçoa. Should we ſucceed in the raiſing of ſpices, and making other improvements in this iſland, hitherto uninvoduced into any other; the trade of a FREE PORT therein may become very beneficial to its inhabitants, without detriment to the mother-country. On the contrary, great cargoes exported from hence, may be diſpoſed of there, and produce ſuitable returns. At all events, a free port in this iſland might be eaſily ſettled, and as eaſily kept, under proper regulations, by which the experiment, which is of no little importance, might be effectually made. If when it is made, the inconveniencies ſhould be found to out-weigh the advantages, or any unforeſeen miſchief ſhould from thence ariſe, either to the trade of the other colonies, or that of Great-Britain; ſuch a port might be with facility ſuppreſſed.

The definitive treaty of 1763 having alſo annexed the iſland of GRANADA to the crown of Great-Britain, we ſhall now briefly conſider what benefits may accrue to us from this poſſeſſion. It lies ſouth weſt from ST. VINCENT, 17 or 18 leagues;

leagues; ſouth-weſt from ST. LUCIA, about 35 leagues; weſt-ſouth-weſt from BARBADOES, 50 leagues; ſouth-ſouth-weſt from MARTINICO, 50 leagues; ſouth ſouth-weſt from DOMINICA, ſomewhat more than 60 leagues; weſt-north-weſt from TOBAGO, 35 leagues, or according to ſome charts, 40 leagues; ſouth from ST. CHRISTOPHERS, 100 leagues; and north from the SPANISH MAIN, about 30 leagues.

It lies in the latitude of 11 degrees, 30 minutes north, the fartheſt to the ſouth of any of the ANTILLES. We are not able to give it's dimenſions with any degree of exactneſs, as not only authors but maps differ very much in regard thereto. We may, however, without fear of erring much, aſſert that it is upwards of 30 Engliſh miles in length. De Liſle's map makes it near 40; and 15 or 16 in breadth, in ſome places, though in others much leſs, and about 25 leagues in circumference.

It appears from hence to be twice as big as BARBADOES, larger than ST. LUCIA, ST. VINCENT, or TOBAGO; and if we may take the words of ſome French memoir writers, contains of cultivatable land, near $\frac{1}{3}$ of what is to be found in MARTINICO. Theſe are circumſtances of ſome conſequence, though we cannot ſpeak of them as yet with preciſion.

The ſituation of this iſland leaves us no room to doubt, that the climate is very warm, which, however, the French writers aſſure us, is very much moderated by the regular returns of the ſea breeze, by which the air is rendered cool and pleaſant. We may from the ſame authority aſſert, that it is wholſome; for though ſtrangers eſpecially are ſtill liable to what is called the GRANADA fever, yet this is at preſent far from being ſo terrible, as it formerly was; proves very rarely mortal, and as it chiefly proceeds from the humidity of the air, occaſioned by the thickneſs of the woods, it will very probably be entirely removed, whenever the country is brought into a thorough ſtate of cultivation; and this we may predict, as the ſame thing has conſtantly happened, in our own and in the French iſlands.

Beſides, the climate has ſome, and thoſe too very peculiar advantages. The ſeaſons, as they are ſtiled in the Weſt-Indies, are remarkably regular, the blaſt is not hitherto known in this iſland; the inhabitants are not liable to many diſeaſes, that are epidemic in Martinico and Guadaloupe; and, which is the happieſt circumſtance of all, it lies out of the track of the hurricanes, which with reſpect to the ſafety of the ſettlements on ſhore, and the ſecurity of navigation is an ineſtimable benefit in this part of the world.

There are in GRANADA ſome very high mountains, but the number is ſmall, and the eminencies ſcattered through it are in general rather hills, or as the French writers ſtile them MORNES, gentle in their aſcent, of no great height, fertile, and very capable of cultivation. Excluſive of theſe, there are on both ſides the iſland, large tracts of level ground, very fit for improvement, the ſoil being almoſt every where deep, rich, mellow, and fertile in the higheſt degree, ſo as to be equal in all reſpects, if not ſuperior to that of any of the iſlands in the Weſt-Indies, if the concurrent teſtimony both of French and Britiſh planters may be relied on. The former, indeed, have conſtantly in their applications to the French miniſtry inſiſted, that this might be very eaſily made one of the moſt valuable colonies belonging to France. This we find aſſerted at the very opening of the current century, in the memorials addreſſed to the council of ſtate, confirmed ſome years afterwards by father Labat, and inſiſted upon with great zeal and vehemency, in repreſentations drawn up by very capable judges, the laſt year that it continued to be a French iſland.

It is perfectly well watered by divers ſtreams of different ſizes, and running in different directions, flowing from a large lake on the ſummit of a high mountain ſituated very near the center of the iſle. There are ſmaller brooks, running from moſt of the hills, and very fine ſprings almoſt every where, at a ſmall diſtance from the ſhore. All theſe rivers abound with variety of good fiſh, and are reſorted to by multitudes of water fowl. There are likewiſe in Granada ſeveral SALT-PONDS, which have their uſes and their value.

The great produce of this country, in its preſent condition, is a prodigious variety of moſt ſorts of TIMBER that are to be met with in any of the Weſt-India iſlands; ſo that whenever this iſland comes to be tolerably cleared, conſiderable profits will ariſe from the timber that may be cut down. There are likewiſe many rich fruits, valuable gums, dying woods, and ſeveral vegetable products, ſuch as oils, reſins, balſams, &c. which have always borne a high price here. All the different kinds of ground proviſions, which are ſo requiſite to the ſubſiſtence of Weſt-India plantations, are here in great quantities, and ſome kinds of grain ripen very kindly in this, which are not raiſed at all, or are raiſed with difficulty in other iſlands. River and ſea fiſh in great abundance, and in reſpect to the latter, turtle of the largeſt ſize and lamentins, which drew veſſels from the other French iſlands for the ſake of fiſhing. They have plenty of all ſorts of fowl, and prodigious quantities of game, ortolans, and a kind of red partridges eſpecially. Beſides theſe, the woods are well furniſhed with many wild animals, that afford excellent food, and are very rarely met with in the other iſlands. They have likewiſe much cattle, and as their hills yield excellent paſture, if the country was better peopled, might have many more.

But the diſtinguiſhing excellency of GRANADA, does not lie ſimply in its great fertility, or in its fitneſs for a vaſt variety of eſtimable commodities, but in the peculiar quality of its ſoil, which gives a ſurpriſing and inconteſtible perfection to all its productions. The SUGAR of Granada is of a fine grain, and of courſe more valuable, than that either of Martinico or Guadaloupe. The INDIGO is the fineſt in all the WEST-INDIES. While TOBACCO remained the STAPLE commodity, as once it was, of theſe iſlands, one pound of GRANADA tobacco was worth two or three that grew in any of the reſt. The CACAO and COTTON have an equal degree of pre-eminence; nor is this founded ſimply in the opinion of the French, but is equally known and allowed by the Engliſh and Dutch; and in regard to the laſt mentioned commodity, we may appeal to ſome of the merchants of this city, on whoſe authority we may more ſafely rely.

If credit be due to the memorials of the French officers, who have viſited Granada, true CINNAMON, and ſome NUTMEGS are found there; which, if future experience ſhould verify, all that has been ſaid in reſpect to TOBAGO, may be as juſtly applied to GRANADA; and the only reaſon for inſiſting on the ſubject there, was, becauſe we thought the fact better eſtabliſhed, from the authority of the Dutch, who, of all nations, are the beſt acquainted with ſpices. In reſpect to ſituation, and thoſe expoſitions that are eſſentially requiſite, to the proper culture of thoſe valuable productions, the iſlands are every way equal, or, if upon making the experiment, GRANADA ſhould be found preferable in TOBAGO, which may probably prove the caſe, it ought no doubt to be preferred accordingly.

All the writers of our own, as well as of the French nation, have agreed, that there is in general good anchoring ground on all the coaſts, and many commodious creeks and bays, both on the eaſt and weſt ſides, which would be infinitely advantageous to commerce, if this country was fully peopled and completely cultivated. But beſides theſe ſmall, there are alſo two large ports of great excellence, and which deſerve particular notice. The firſt of theſe is the harbour of CALIVENIE, at the ſouth-eaſt extremity of the iſland, and is ſingularly ſafe and ſpacious. It conſiſts of an outward and inward port. The former is three quarters of a mile broad at its entrance, but widens as you advance, and becomes above a mile in extent within. As to the entrance of the interior port, it is above a quarter of a mile broad, but preſently expands itſelf on both ſides, ſo as to be very capacious, and has about ſeven fathom of water, with a ſoft muddy bottom, from whence ſeamen will eaſily judge of its utility. Ships lying here in the utmoſt ſafety, may from warehouſes take in their lading very conveniently, and may then, with great eaſe be hauled into the outer port, which has this peculiar advantage, that ſhips may either come into, or go out of it with the ordinary trade wind. This port, ſuppoſing there was no other, is in an iſland thus ſituated, and ſo very capable of being improved, would, in a trading nation, like ours, render it a valuable acquiſition.

But the worth of GRANADA muſt be highly enhanced, when we conſider the other harbour, which lies at the north-weſt end of the iſland, and is called the CARENAGE, the harbour of PORT ROYAL, or the OLD PORT, which has been always eſteemed one of the beſt harbours in the WEST-INDIES, as poſſeſſing almoſt every advantage that can be deſired. It is a full quarter of a mile broad at its entrance, and, when once entered, it is ſo capacious, as to hold with eaſe a ſquadron of twenty-five ſhips of the line, where they may ride in perfect ſafety, in reſpect either to wind or weather. There lies alſo, at a ſmall diſtance from this port, a lake of a conſiderable ſize, very deep, the water brackiſh, and which, by cutting through a ſand-bank, might be eaſily joined to the port, and would then be one of the fineſt baſons in the world, and afford all the conveniencies that could well be wiſhed, for careening the largeſt ſquadron of the largeſt ſhips, that are ever employed in this part of the world. The mouth of this port is ſecurable by a tolerable fortreſs, called FORT ROYAL, where the governor reſides, but the ſituation of it has been cenſured; and indeed there is no doubt, that by the help of two good fortifications, erected on the promontories, which make the entrance of the harbour, it might be rendered inacceſſible, ſince in caſe of an attack, ſhips muſt warp in, under the fire of both fortreſſes. The benefits that may be juſtly expected from ſuch a port as this, in an iſland ſo well ſituated, and producing ſuch a diverſity of valuable commodities, are ſo obvious, that it is needleſs to enter into a detail of them. In time of war it would give us inexpreſſible advantages againſt the Spaniards as well as the French; and if it ſhould happen, that by a multiplicity of ſervices, our naval force ſhould be ſo divided, as to leave us only an inferior ſquadron in theſe ports, the CARENAGE would afford us a ſafe retreat, without obliging our ſhips to quit that ſtation. A circumſtance certainly worthy of being regarded; and of which, the French availed themſelves often, ſo long as this iſland remained in their poſſeſſion.

The ingenious father Labat was here in 1705, and made ſome curious and pertinent remarks. He ſpeaks of the planters as eaſy in their circumſtances, though not very poliſhed in their manners. He clearly diſcerned, that great improvements might be made in ſo pleaſant and fruitful a country, and regretted that the French refugees from their ruined colony of St. Chriſtophers were not ſent hither, where they would quickly have repaired their own loſſes, and have rendered this colony much more uſeful to France. He made other judicious reflections. 'If, ſays he, Barbadoes had a 'port, as ſafe, as capacious, as commodious, and as eaſy 'to be fortified, it would be indeed an incomparable iſland; 'the Engliſh know much better than we, how to turn every 'natural advantage in their iſlands to the utmoſt; and if 'GRANADA had belonged to them, it had before now chan-'ged it's appearance, it had been long ago a rich and pow-'erful colony; inſtead of which, we have hitherto reaped 'little, from thoſe beneficial circumſtances from which vaſt 'profits might have ariſen, ſince after ſo many years poſſeſ-'ſion, the country is yet in a manner defert, thinly peopled, 'without commodities, having little commerce, their ha-'bitations or rather cabins mean, ill built, worſe furniſhed; 'and to ſay all in a word, in a very little better ſtate, than 'when Mr. du Parquet bought it from the ſavages.'

We muſt admit, that within the half century that has ſince paſſed, ſomewhat more attention has been paid to this iſland, and it's productions have turned within this period much more to the account of France. They had ſent thither for ſome years before it came into our hands, 12,000 hogſheads of SUGAR annually, beſides COFFEE, CACAO, and a large quantity of excellent COTTON. Yet it is generally allowed, that never one half of the country was ſettled, nor half the profit drawn from what was ſettled, that might have been obtained, if the inhabitants had been better planters, and had been better ſupplied with ſlaves. The repreſentations made to the French court treat all the improvements made there as very imperfect, as demonſtrative rather of the fertility of the ſoil, and the excellence of the climate, than of the induſtry of the inhabitants. Theſe repreſentations likewiſe ſuggeſt, that many improvements might have been introduced, and that ſome lucrative branches of commerce might have been opened from thence. By the accounts of our own people, who have reſided there, and the captains of men of war who have viſited it; the French have not been extravagant in their accounts, or viſionary in their ſpeculations. An Engliſh gentleman who had great opportunities of knowing, thinks a much greater quantity of ſugar was raiſed there than found a regular paſſage to France.

Excluſive of theſe productions, this iſland was of great utility to the French, during the courſe of the laſt war, when the ſingle ſhips of force they ſent to the Weſt-Indies, with the tranſports under their care, came regularly hither, with little danger of falling into the hands of cruizers. Here they remained in ſafety, and from hence they ſent ſupplies of men, ammunition, and proviſions, in ſmall veſſels, which creeping along the Granadillos, St. Vincent, and St. Lucia, arrived generally ſpeaking ſafely in the harbour of St. Peter's in Martinico. In this reſpect, as well as many others, the French will very ſenſibly feel the loſs of this iſland, as we ſhall the advantage ariſing from the poſſeſſion of it. A Britiſh ſquadron ſtationed here will be, as before hinted, a ſevere check upon the Spaniards as well as the French.

There runs from the ſouthern extremity of the iſle of Granada, in the direction of north by eaſt, a long range of little ISLETS, extending about 20 leagues. Theſe are of different ſizes, but all of them, except the round iſland, very ſmall. The number of theſe iſles is very uncertain; according to our beſt information, there are about 23 of them, capable of cultivation. The ſoil being remarkably rich, the climate pleaſant, and all the neceſſaries of life, whenever they ſhall be ſettled, will be eaſily obtained. According to the ſentiments of the beſt judges, large quantities of INDIGO, COFFEE, and COTTON, may be raiſed upon them, nor are they at all unfit for ſugars. In their preſent ſituation, they abound with excellent TIMBER. In former times, they were very ſervicable to the planters of Barbadoes, who cut great quantities of MILL-TIMBER, which were a great conveniency. But for many years paſt, the French have not only prevented this, as injurious to their property, but by ſtationing guard-ſhips upon the coaſt, made prizes in time of full peace, of all Engliſh veſſels they found at anchor there, and even of ſuch as appeared in ſight of them, which was a great detriment to our navigation. For, if veſſels bound to Barbadoes, either through thick weather, or being diſabled, miſſed that iſland, and ran down the ſouth of it, which was the common rout, they come of courſe upon theſe iſlands, and fell into the hands of the guard-ſhips; the apprehenſion of which, made them ſo cautious, as to render their voyages to that Britiſh iſland longer and more tedious than in former times. But as all theſe difficulties will be removed for the future, and as the clearing of theſe iſles in order to their cultivation, will be an immediate and conſiderable advantage to the inhabitants of Barbadoes, theſe circumſtances enhance the value of this acquiſition.

There are beſides theſe 5 larger iſlands. The firſt of theſe neareſt the line of iſlets before-mentioned, retains the Indian name of Carrouacou, of a circular figure, about 6 or 7 leagues in compaſs, lies 5 leagues eaſt from Granada; 14 ſouth weſt from St. Vincent, and about 40 leagues weſt-ſouth-weſt from Barbadoes. This little iſle, is repreſented by the French, as one of the fineſt and moſt fruitful ſpots in America; and from being pervaded by the ſea breeze, the climate equally wholſome and pleaſant. It is covered with valuable timber, interſperſed with rich fruit-trees, and when ſettled and cultivated, is capable of more kinds of Weſt-Indian improvements.

But the circumſtance by which it is moſt diſtinguiſhed, is it's having as deep, capacious, and commodious an harbour, as any in theſe Indies, and on this account has often been recommended to the French government, as a place capable of being made of much ſuperior utility, to iſlands of far greater extent, and even allowing theſe to have equal merit, in regard to the value and the variety of their productions.

About a league north eaſt from Carrouacou, lies L'ISLE DE L'UNION, though in truth there are two, the larger three leagues, the leſſer two leagues in length. At the diſtance of two leagues from theſe, lies CANNOEN, ſo called from the great reſort thither of the kind of tortoiſes, or ſea-turtle, which bear that name. This iſle is 3 leagues in length, and 1 ½ broad, and has a ſmall iſlet at the weſt of it. At the diſtance of 2 leagues from this, lies the ISLE DE MOUSTIQUES, or MOSKITO ISLAND; 3 leagues in breadth, and 1 in length. All theſe iſlands, are allowed to be pleaſant, wholſome, and exceeding fruitful. They are, at preſent, overgrown with different kinds of TIMBER; ſome of which are become exceedingly ſcarce in the other iſles, and ſome alſo, which bear at preſent a very high price in Europe.

At the diſtance of a league from Moſkito iſland, lies Becovya, Bequia, or Bekia, which is but two leagues ſouth-weſt from ST. VINCENT. This is the largeſt of all the iſlands dependent upon GRANADA, being about 12 leagues in circumference, and conſequently ſomewhat larger than MONSERRAT. The ſoil is equal if not ſuperior to any of the reſt; it has likewiſe a very ſafe and convenient port, which is land-locked on every ſide, eaſy in its entrance, and very deep and capacious, and in which their ſmall armaments frequently took ſhelter, during the laſt war, in proceeding as before intimated, from Granada to port St. Peter's in the iſland of Martinico; and this circumſtance hereafter may poſſibly merit for it more attention.

The conſideration of theſe iſlands dependent upon that of GRANADA, led to the queſtion, whether they might not be, all circumſtances conſidered, more proper for the introduction of SPICES, than even that of TOBAGO? The 5 iſlands of the MOLUCCAS, which are TERNATE, TYDOR, MOTIER, MAQUIEN and BACHAM, were ſo many ſeparate kingdoms, rich and full of inhabitants, before they were known to the Europeans, lie all in a line like theſe, and are none of them larger than CARROUACOU. They have ſmall ſtraits of the ſea between them like the Granadines, bear the ſame TREES, HERBS, and ROOTS, are ſome of them, like theſe, deficient in freſh water, and produced originally, CINNAMON and NUTMEGS, as well as CLOVES, the uſes as well as the method of CULTIVATING and CURING of what were taught them by the CHINESE, as Dr. Angenſola, who wrote an excellent hiſtory of the MOLUCCA iſlands, informs us. BANDA, where the NUTMEGS originally grew, is not above half the ſize of BEQUIA; and AMBOYNA, to which the Dutch ſeem at preſent inclined to confine both NUTMEGS and CLOVES, is rather inferior in point of extent to the iſland of GRANADA.

It ſhould not be forgot that our iſland of GRANADA, and it's DEPENDENCIES the GRANADILLOS, are free from HURRICANES; to which alſo our iſland of ST. VINCENT is ſeldom expoſed. To judge of the true value, and to aſcertain the real importance of theſe iſlands, that are altogether now become ours, we muſt view and contemplate them in their different lights, from which they may every one of them become more or leſs, immediately or remotely, directly or indirectly, aſſiſting to the intereſts, increaſing the power and the commerce, extending the navigation, and thereby promoting the welfare of Great-Britain; or, in other words, conducing to the induſtry, the independency, and the happineſs, of their fellow citizens, and fellow ſubjects, who are the inhabitants of this their MOTHER-COUNTRY.

To judge to what degree our new acquiſitions in the WEST-INDIES may be likely to anſwer theſe deſirable purpoſes, it will be requiſite to obſerve that general arrangement of things, which has ſince the peace of 1763, taken place in this part of the world. There is not now an iſland ſmall or great in the Weſt-Indies, the right to as well as the poſſeſſion of which, is not, pretty clearly aſcertained, and this without introducing any new powers into America, which might have proved prejudicial to our intereſts. By thus adjuſting the ſettlements of different ſtates, an end is put, at leaſt as far as human foreſight reaches, to their ambitious views.

In virtue of this adjuſtment, many of our old plantations will avail themſelves of thoſe ſupplies of TIMBER, from which they

more viſible, in regard to the Spaniards, who poſſeſs at once iſlands the largeſt and the leaſt profitable in the Weſt-Indies. The Dutch on the other hand, have found means to render the ſmalleſt, and in point of ſoil and climate, the worſt iſland in the Weſt-Indies, by dint of ſkill and of induſtry, wonderful flouriſhing, exceeding populous, and of courſe highly beneficial.

Yet in this reſpect, the experience ariſing from the ſkill and ſucceſs of our own planters, goes beyond that of all other nations; and if we conſider their early improvements, and the vaſt extent to which they have been carried; and at the ſame time reflect, that theſe have been owing to no one circumſtance more than to the ſmallneſs of their iſlands, which for the reaſons already given, enabled them to get the ſtart and to keep it ſo long from the French, will abundantly ſatisfy every judicious and impartial enquirer, that what we have been laying down, is not more conſiſtent in ſpeculation, than evident from the light of facts.

The new iſlands taken all together, contain upon the moſt moderate computation, twice the quantity of ground capable of cultivation, or at leaſt very near it, that there is in Barbadoes, and the reſt are all conſiderably larger. In reſpect to their ſoil and climate, they are indiſputably to the full as capable of improvement, as any of thoſe that have been improved by our induſtrious countrymen in ſo high a degree. Why therefore in a reaſonable ſpace of time, may not we, or our poſterity at leaſt, expect to derive twice as much from them?

Theſe new colonies, like our old ones in that part of the world, muſt depend entirely upon us, and draw from hence every neceſſary, every conveniency that they want, either for their own ſubſiſtence, or for carrying on their plantations; and how extremely beneficial this is, and ſo conſiderable an increaſe will it be to the mother country, has been explained. It is requiſite only to mark, that we ſhall not be obliged to wait for all, or even the greater parts of the benefits of this commerce, till ſuch time as theſe iſlands are fully and compleatly ſettled, ſo as to vie in their productions with our old iſlands; but on the contrary, our exports to them, and of conſequence the profits upon thoſe exports, will very ſoon commence, and of courſe we ſhall immediately reap great advantages from them. The reaſon of this is obvious; for tho' our old colonies require annually many things, our new ones will require all; and 'tis eaſy to diſtinguiſh the difference that there muſt be, in ſupplying the vaſt variety of things requiſite for ſettling new colonies, and the furniſhing the annual ſubſiſtence, together with the wear and tear in the old ones.

Nor is there any room to fear, that theſe new ſettlers will not find wherewithal to make conſiderable returns; for though this cannot be at firſt done in SUGAR, yet in MAHOGANY, COTTON, and a great variety of other articles it may; and the very balance remaining a DEBT, will be a moſt effectual ſpur to induſtry, and compel the new planters to work hard and to live frugally, as the original ſettlers in our other iſlands did, in order to procure new ſupplies with that view, and to maintain and extend their credit.

The intercourſe between the new colonies and their mother country, as it muſt from the cauſes before-mentioned begin early, ſo the advantages ariſing from it will diffuſe themſelves generally over the whole iſland of Great-Britain; indeed thro' the whole ſphere of the Britiſh dominions in Europe, ſince very large quantities of linens and ſalt proviſions, will be exported for the uſe of the new ſettlers and their ſervants, from Ireland; and in proceſs of time, as they ſhall become more numerous, we may with great probability hope, their increaſed demands will, in a great meaſure, abſorb thoſe ſupplies with which the inhabitants of that iſland have hitherto furniſhed the French and Spaniſh ſhips, and contributed thereby to their navigation much cheaper than otherwiſe they could have done.

But it is requiſite farther to obſerve, that excluſive of the benefits flowing from their direct trade with us, they will bring us likewiſe conſiderable advantages, by the encouragement they will afford to other branches of our commerce. The African trade, more eſpecially at the beginning, will receive a new ſpring from their demands, ſince all that they can do either at preſent or in future, muſt ariſe from the labour of negroes. The ſupplying them with ſlaves, therefore, will be both an inſtantaneous and a continual ſource of wealth, to ſuch as are employed in that lucrative trade; more eſpecially to thoſe who have the largeſt ſhare therein, the merchants of London, Briſtol, and Liverpool.

We have before ſeen, how this trade comes to be of ſuch importance to Great-Britain, as it is carried on principally with our own manufactures, and more eſpecially with woollen goods of different kinds, to a large amount; and in all the incidental profits, excluſive of what is produced by ſlaves, which ariſe from our correſpondence with AFRICA, whether obtained by the purchaſe of elephants teeth and gold duſt, upon the coaſts of that country, or from the ſale of commodities to foreigners in the Weſt-Indies, finds its way hither. On the winding up of the account, therefore, as the ſale of the negroes centers in the Weſt-Indies, the profits ariſing from them, and every other acceſſion of gain, centers ultimately here, and becomes the property of the inhabitants of Britain.

This will appear with greater degree of evidence, when we reflect, that more than the moiety of that part of the cargo for the African trade, which is not made up of our own goods, conſiſts of the manufactures of the Eaſt-Indies. Beſides the quantity of India goods employed on the coaſt of Africa, there is likewiſe no ſmall demand for the ſame commodities in our old SUGAR COLONIES, and of courſe there will be the like demand in our NEW. We ſee from hence, how the comprehenſive chain of commerce is united, and how the different products of the moſt diſtant parts of the world, are carried to and brought from theſe diſtant countries in Britiſh ſhipping; and that all the emoluments ariſing from this extenſive navigation, is in the end the reward of the conſummate ſkill, the indefatigable induſtry, and the perpetual application, of the traders in this happy iſle, and how it is to be augmented and ſupported by our new acceſſion of territory.

The prodigious compaſs of this commercial circulation, would after all be defectively repreſented, if we ſhould omit mentioning the conſtant correſpondence that ſubſiſts between the SUGAR ISLANDS and the NORTHERN COLONIES. A correſpondence equally neceſſary, and reciprocally advantageous to thoſe of our countrymen who are ſettled in both; and a correſpondence, therefore, which will be always maintained, and by which the numerous ſubjects of Britain who are ſeated on the continent of America, and thoſe ſettled in the WEST-INDIAN ISLANDS, in purſuing their own immediate intereſts, contribute effectually to each of their ſupport.

This is a circumſtance, that muſt fill the breaſt of every well-meaning man with the higheſt and moſt rational pleaſure; and engage him to contemplate this ſubject, with a ſatisfaction which warms the heart of a parent, when he ſees his children aſſiduous in their application to thoſe methods of providing for their welfare, which have a tendency to promote their common intereſts, by which their commercial harmony doubles the effects of their mutual induſtry.

The northern colonies ſupply the SUGAR-ISLANDS chiefly with lumber and proviſions. Theſe are the fruits in a great meaſure of their indefatigable induſtry, to the rendering their labour ſubſervient to their proſperity. By this means, they diſpoſe of numerous bulky commodities, derive immenſe advantages from their fiſheries, ſupport an extenſive navigation; which is ſo much the more profitable to them, as it is entirely carried on in ſhips of their own building; circumſtances which, to the eye of a judicious reader, will place this trade, and all it's beneficial conſequences that attend it, in a very conſpicuous and intereſting point of view; and convince him, that nothing can be either more convenient for theſe people, or more to their profit.

On the other hand, the benefits that reſult to the inhabitants of the SUGAR COLONIES, are not leſs conſiderable. They draw all theſe neceſſary ſupplies from the neareſt, and conſequently from the cheapeſt markets; markets inexhauſtible, and upon which they can always depend. Theſe are brought them by their countrymen to their own doors; which is a circumſtance exceedingly ſuitable to their ſituation, as it ſpares them the pains and labour requiſite to provide them, which would otherwiſe be a great drawback on their induſtry in their own plantations. Theſe ſupplies they pay for in their own manufactures, which is another great advantage; from all which circumſtances taken together, it clearly appears, that the convenience of this correſpondence, and the benefits reſulting from it, are equally on both ſides, and exactly ſuited to the genius, temper, and ſituation of the people, by whom it is thus carried on.

By conſidering attentively this conjunction of intereſts, we cannot but plainly diſcern, that by theſe NEW ACQUISITIONS IN THE WEST-INDIES, new markets are opened, to which our NEW SUBJECTS on the continent may reſort. Theſe iſlands will certainly in time more than replace to the people of CANADA, the trade they formerly carried on to the FRENCH COLONIES; and will at the ſame time, enable our other ſettlements upon the CONTINENT, to find new cuſtomers for all their commodities, without leaving them that colour of neceſſity, which was the only excuſe they had to plead, for ſupplying our rivals with the materials eſſentially requiſite to their manufactures, and of courſe detrimental in the ſame degree, to thoſe of our fellow-ſubjects. Beſides, as the increaſe of our SUGAR ISLANDS affords them the increaſe of commerce, ſo from their ſituation they will be a great bar to that ILLICIT TRADE with the FRENCH, which cannot for the future be carried on with the ſame facility as before.

As the inhabitants of the SUGAR COLONIES are continual purchaſers from ſuch as are ſettled upon the continent of America, the amount of their purchaſes conſtitutes a ballance from them in the favour of all thoſe who diſpoſe of them. But on the other hand, the inhabitants of the NORTHERN COLONIES, drawing large and conſtant ſupplies of commodities and manufactures from hence, we for the ſame reaſon have a like BALLANCE in our favour againſt them. It is evident, therefore, from this deduction, that by their tranſferring the BALLANCE due to them, in ſatisfaction for that

which is due from them to us, the whole accumulated profits of these tranſactions ultimately centers with the inhabitants of Great-Britain. Such are the certain, the perpetual, the prodigious benefits that accrue to us from our PLANTATIONS.

There will be room in theſe new iſlands, for attempting many things, and improving more. The planting CACAO walks cannot be conſidered as impracticable, ſince we ſee the French have ſucceeded in it; and ſo no doubt might we, at leaſt in a degree ſufficient to furniſh our own conſumption. We have COFFEE already in our iſlands, but it would certainly turn to more account, if the culture of it was better underſtood; in order to which, pains ſhould be taken to be thoroughly informed of the manner in which it is managed in ARABIA; ſince it is not at all improbable, that the FLAVOUR, in which only our coffee is deficient, depends upon the culture, and the method of curing it. TEA, if we may believe the French, is a native of the Weſt as well as of the Eaſt-Indies; in reſpect to which it would be certainly right to make ſome enquiries, and in conſequence of them ſome experiments; and if from thence it ſhould, if it is not already there, it might eaſily be carried thither, and a trial made whether it might not be cultivated to advantage.

It has been no difficult matter to introduce black PEPPER. RHUBARB, SENNA, and ſeveral other valuable DRUGS, are ſaid to have been raiſed by curious people in great perfection. If the culture of theſe and other medicinal plants, were once underſtood, they might be rendered profitable articles in commerce. The laudable ſociety for promoting arts and manufactures, have given ſeveral premiums with reſpect to SARSAPARILLA, and other things; and it is to be wiſhed, that theſe endeavours, ſo well intended, may have good effects; for the increaſing the number of our commodities, appears to be a thing of conſequence.

The ſucceſs attending theſe, or any other experiments of the like kind, might become the means of improving many ſpots of ground, that would otherwiſe prove uſeleſs; as it is well known, that either lands worn out, or which are utterly unfit for either SUGAR or COTTON, might be employed for COCHINEAL. The raiſing a variety of commodities, would prevent the loſſes that enſue from ſhort crops; as ſeaſons unfavourable for ſome things, might be advantageous to others. Beſides, in reſpect to many things that have been mentioned, the cultivation of them might be carried on with fewer negroes, and yet afford a comfortable ſubſiſtence to white families, the increaſe of which in our colonies, is an object of great importance, and is a matter entirely and conſtantly attended to by the French. Add to this, that though TEA, COFFEE, and CHOCOLATE, are at preſent not improperly conſidered as articles of luxury, they would be much leſs ſo, if they only, or even if they principally, came from our own plantations; and the conſumption of them, ſhould it become greater than it now is, would likewiſe promote and increaſe the conſumption of our great ſtaple commodity, SUGAR. In theſe, and in various other lights, ſuch improvements would be found of great conſequence, and are, therefore, extremely well worthy of conſideration.

The ſettlement of theſe new iſlands, will be no detriment to our old colonies. It has been generally allowed, that there was a want of more ſugar land in the Weſt-Indies; and this being admitted, it is certain that Britain is a great gainer by thoſe acquiſitions, which put ſo large a quantity of land fit for the cultivation of SUGAR into our poſſeſſion. This was not only an opinion, in reſpect to the truth of which the beſt judges agreed, but it was a point alſo decided from matter of fact; becauſe it is known, that numbers of Britiſh ſubjects reſorted to countries in the poſſeſſion of other powers. No one will deny, that many Engliſh ſubjects are ſettled in the Daniſh ſettlement of ST. CRUZ; that there are many reſident in EUSTATIA, and that many more are intereſted in the Dutch ſettlements upon the continent of America. It became, therefore, highly neceſſary to remove this evil, by giving ſuch adventurers an opportunity of exerciſing their induſtry, in countries belonging to their mother country; and to theſe it is reaſonable to preſume, this opportunity being given them, they will return. Beſides, as from theſe facts it appears, that our old colonies began to be over-ſtocked, ſo as to afford little encouragement to new planters, it was incumbent on us to have an eye to this circumſtance, to prevent ſuch enterpriſing people, who were determined to ſeek their fortunes in thoſe parts, from being driven into foreign ſettlements; where their labour and induſtry, inſtead of benefitting us, would continue to turn to the advantage of our rivals; and foreign markets would have been ſupplied, for the profit of foreigners, by commodities raiſed by the ſkill and pains of Britiſh ſubjects.

We cannot but obſerve from what has already happened, that people who are indigent here, would go in ſearch of ſubſiſtence elſewhere; and we muſt alſo be ſenſible, that by providing countries for ſuch people to reſort to, their induſtry, though not their perſons, will ſtill be preſerved to Britain. By that increaſe of trade which their labours abroad will gradually produce at home, the number of our neceſſitous people here will be greatly leſſened. There will be larger quantities of our commodities and manufactures wanted, that are requiſite in our plantations; and to ſupply theſe, numbers muſt be ſet to work, who are either now idle for want of it, and are ſubſiſted by the poor's rate; or take methods of ſubſiſting them, more injurious to the public, and much leſs to their own advantage and comfort, than if they betook themſelves to honeſt labour here, or even went abroad to theſe new iſlands. See SUGAR COLONIES.

LEICESTERSHIRE, is an inland county in England, having Lincolnſhire and Rutlandſhire on the eaſt; Northamptonſhire on the ſouth; Warwickſhire on the weſt; and Derbyſhire and Nottinghamſhire on the north; and is in circumference about 100 miles.

The air is very ſweet and wholſome, but the ſoil is very different, according to the ſeveral parts, being in ſome places very rich and fruitful, producing wheat, barley, and oats; in others barren and rocky. It's moſt natural and plentiful crops are beans, which, in ſome places, are ſo luxuriant, that, towards harveſt-time, they look like a foreſt.

There are no manufactures in this county, except it be ſtockings, which has been of late greatly encouraged.

The great want of fuel, in the inland counties eſpecially, is ſupplied by a very rich coal-mine, at a place called Cole-Orton, from whence it is ſold at good rates to the neighbouring counties.

LEICESTER, the ſhire-town, is a large and populous place. The inhabitants have greatly improved the manufacture of ſtockings, vaſt quantities of which are wove by frames, in this and many other neighbouring towns and villages; and in ſome years it has returned 60,000 l.

ASHBY DE LA ZOUCH, a very pleaſant town, has a plentiful market; and it's fairs, which are held on Whit-Tueſday, the 24th of Auguſt, the 18th of October, and on St. Simon and Jude, are famous for being well ſtocked with young horſes of the large breed.

MELTON MOWBRAY, a large well-built town, has a market the moſt conſiderable for cattle of any in this part of England.

LEINSTER, a province in Ireland. This province is waſhed on the ſouth and eaſt by the ſea; has Munſter and Connaught on the weſt and ſouth-weſt; and Ulſter on the north; and is about 360 miles in circumference.

It has a temperate clear air, a ſoil fruitful in corn and paſture, and, though in ſome parts woody, abounds in general with cattle, fowls, milk, butter, cheeſe, fiſh, &c.

It's principal rivers are, the Barrow, Boyne, Liffy, Neur, Slane, and May.

It is divided into the twelve following counties, viz.

I. LOUTH COUNTY, which has St. George's Channel on the eaſt; Monaghan and Eaſt Meath on the weſt; Armagh and Carlingford Bay on the north; and Weſt Meath on the ſouth-eaſt. It is the leaſt county in the kingdom.

CARLINGFORD is one of the beſt harbours in Ireland, at the mouth of the Neur; but, the town being a little out of the way for buſineſs, the trade is not equal to the extent of the harbour. They uſe the coal trade to Whitehaven, as alſo the fiſhing in the ſeaſon, which is the life of trade on all this ſide of Ireland, eſpecially north.

DUNDALK is the ſhire-town, and has a good market, but little or no trade.

DROGHEDA, which ſtands on a bay of it's own name, has a good harbour, but of difficult entrance. The town is populous, and has ſome trade to the north parts of England, and is ſupplied with coals from Whitehaven, which they ſend to all the country round.

II. The county of EAST MEATH has thoſe of Cavan and Louth on the north and north-eaſt; Kildare on the ſouth-weſt; Weſt Meath on the weſt; with Dublin county and the ocean on the eaſt.

TRIM is it's chief, if not only town of note, but is not a place of any trade.

III. WEST MEATH, ſo called in reſpect of it's ſituation from the former, lies between King's county on the ſouth, and Longford on the north and runs weſt to the Shannon, which parts it from Roſcommon. It is well watered with rivers and lakes, but intermixed with bogs.

MOLINGAR, which lies in the center, is the head of the county by act of parliament, and a market-town of conſiderable note and ſtrength.

IV. The county of LONGFORD has Weſt Meath on the eaſt and ſouth; Cavan on the north; and Roſcommon on the weſt.

V. DUBLIN COUNTY is waſhed on the eaſt by the Iriſh Sea; has the county of Kildare on the weſt; Eaſt Meath on the north; and Wicklow on the ſouth.

DUBLIN, the metropolis of the whole kingdom, is pleaſantly ſeated on the Liffy, and is the grand mart, and the center of commerce for Ireland, eſpecially for the communication of trade with England; and though Cork is the chief port for trade to foreign parts, and for exportation of proviſion to the Weſt-Indies, a trade of great importance to Ireland; yet that of Dublin is greatly ſuperior in this particular, viz. that, by it's great import of all kinds of merchandize from all parts, either directly, or by way of England, it has the chief part of the inland trade. The only misfortune of this city is, the deficiency

deficiency of it's harbour, occaſioned by the bar, where ſuch heaps of ſand are brought in by the tides, that it is difficult of entrance for loaden ſhips, except at ſpring-tides, and even then ſhips of great burthen dare not venture in; nor, when they are in the haven, can any ſhip come to the kay that draws above ſeven or eight feet water.

The city is ſupplied with coals from Whitehaven in Cumberland, and Swanzey in Wales, in ſuch great fleets, that it is common to ſee 200 ſail of colliers in the road at a time.

VI. The county of KILDARE has thoſe of Dublin and Wicklow on the eaſt; King's and Queen's counties on the weſt; Catherlagh on the ſouth; and Eaſt Meath on the north.

NAAS is the ſhire-town, but KILDARE the capital of the county.

VII. KING'S COUNTY has a part of Tipperary on the weſt; by which, and Queen's county, it is bounded on the ſouth; by Kildare on the eaſt; and Weſt Meath on the north.

BALLY-BAY, in this county, is a well-ſituated thriving plantation, near the center of it.

VIII. QUEEN'S COUNTY has King's county on the north and weſt; part of Kildare and Catherlagh on the eaſt; and Kilkenny and Catherlagh on the ſouth.

PORT-ARLINGTON, a ſmall town in the north part of the county, on the river Barrow, is reckoned a thriving plantation. But

MOUNTMELLICK, a well-improved town, is ſaid to be the beſt market in the county.

IX. The county of WICKLOW has St. George's Channel on the eaſt; Kildare and Catherlagh counties on the weſt; that of Dublin, and part of Kildare, on the north; and Wexford county on the ſouth. A copper mine was diſcovered here not many years ago, at the expence of Mr. Wayne, and other gentlemen of Briſtol, which is like to bring them great profit for their undertaking.

The ſhire-town is WICKLOW, at the mouth of the river Letrim; but it has not any trade, except what is managed in ſmall veſſels, and chiefly to carry proviſions to Dublin, for the haven is good for nothing. It is famous for the beſt ale in Ireland.

DUNLAVIN is a fine Engliſh plantation, and a good market.

X. The county of CATHERLAGH has Wexford on the ſouth; part of Queen's county and Kilkenny on the weſt; part of Kildare and Wicklow on the north; and part of Wicklow and Wexford on the eaſt.

XI. The county of KILKENNY, is bounded on the weſt with Tipperary; on the eaſt with Wexford and Catherlagh; on the ſouth with Waterford; and, on the north, with Queen's county. This county is adorned with more towns and caſtles than any other in the kingdom.

KILKENNY is a large, ſtrong, populous, and wealthy city, with as good a trade as any inland town of that kingdom.

XII. The county of WEXFORD has St George's Channel on the ſouth and ſouth-weſt; part of Catherlagh and Kilkenny on the weſt; and Wicklow on the north.

Ross, on the borders of Kilkenny, is a town of good trade, by means of it's river, formed by the conjunction of the Neur and Barrow, which brings up ſhips of very conſiderable burthen to it's kay.

WEXFORD ſtands at the mouth of the river Slane: it is a large corporation, as well as the ſhire-town, and has a very good harbour.

LETTER of CREDIT, is where a merchant, or correſpondent, writes a letter to another, requeſting him to credit the bearer with a certain ſum of money.

Form of a LETTER of CREDIT.

Mr. E. F.

SIR, London, May 10, 1753.

My laſt to you was of the 15th of March, wherein I wrote what was needful, in anſwer to your's of the 10th of the ſame month; and this ſerves chiefly to deſire you to furniſh and pay unto Mr. C. D. Engliſh gentleman, to the value of two thouſand crowns, at one or more times, according as he ſhall have occaſion for it, and requeſt the ſame of you, taking his receipt, or bills of exchange, for the monies which you ſhall ſo furniſh him with, and put it to my account; and this my letter of credit ſhall be your ſufficient warrant for ſo doing.

To Mr. E. F. merchant at Madrid. Your's, &c. A. B.

LETTER-FOUNDER. He caſts types, or letters, for printers: there are but two in London; 'till very lately we had types from Holland; but that excellent artiſt Mr. Caſlon, having excelled all foreign founders, not only furniſhes us at home, but ſends great quantities abroad.

LETTER of LICENCE, is an inſtrument, or writing, made by creditors to a man that hath failed in his trade, allowing him longer time for the payment of his debts, and protecting him from arreſts in going about his affairs. Theſe letters of licence give leave to the party to whom granted, to reſort freely to his creditors, or any others, and to compound debts, &c. and the creditors covenant, that, if the debtor ſhall receive any moleſtation or hindrance from any of them, he ſhall be acquitted and diſcharged of his debt againſt ſuch creditor, &c.

The form of a LETTER of LICENCE.

To all people to whom this preſent writing ſhall come, we whoſe names are here underſcribed, and ſeals affixed, creditors of A. B. of London, merchant, ſend greeting: whereas the ſaid A. B. on the day of the date of theſe preſents, is indebted unto us, ſeverally, in divers conſiderable ſums of money, which at preſent he is not able to ſatisfy unto us, without reſpite and time to be given unto him for the payment thereof: know ye, therefore, that we the ſaid creditors, for divers good cauſes and conſiderations us thereunto moving, have given and granted, and by theſe preſents do give and grant, unto the ſaid A. B. our ſure and ſafe conduct, and free licence, that he the ſaid A. B. ſhall and may ſafely come and go, and reſort unto us, and every one of us, his ſaid creditors, to compound, and take order with us, and every one of us, for all and every of our ſaid debts, and to go about any other buſineſs to any other perſon or perſons whatſoever, without any trouble, ſuit, arreſt, attachment, or other moleſtation to be offered or done unto him the ſaid A. B. his wares, goods, monies, or other merchandizes whatſoever, by us, or any of us, or by the heirs, executors, adminiſtrators, partners, or aſſigns, or by our, or any of our means and procurement, to be ſought or procured to be done, from the day of the date hereof, unto the full end or term of one whole year next enſuing: and we the ſaid creditors, whoſe names are here underwritten, do hereby covenant and grant, and every one of us, for his own part, his executors and adminiſtrators, covenanteth and granteth to and with the ſaid A. B. that if any trouble, wrong, damage, or injury, ſhall be done unto him the ſaid A. B. either in his body, goods, or chattels, or any of them, within the ſaid term of one year, next coming after the date hereof, by us, or any of us, his ſaid creditors, or by any other perſon or perſons, by or through the procurement, conſent, or knowledge of us, or any of us, contrary to the true intent and meaning of this our preſent writing of ſafe conduct, that then the ſaid A. B. by virtue of theſe preſents, ſhall be diſcharged and acquitted for ever, towards and againſt him and them, of us, his, and their heirs, executors, adminiſtrators, partners, or aſſigns, and every one of them, by whom, and by whoſe means he ſhall be arreſted, troubled, and attached, or damnified of all manner of actions, ſuits, quarrels, debts and demands, either in law or equity, from the beginning of the world to the day of the date hereof. In witneſs whereof we have hereunto ſet our hands and ſeals, the, &c.

LETTERS of MARQUE, are extraordinary powers, or commiſſions for reparation to merchants taken and deſpoiled by ſtrangers at ſea, grantable by the ſecretaries of ſtate, with the approbation of the king and council, and uſually in time of war, &c. Lex Mercat. Malin. 173. If a letter of marque wilfully and knowingly take a ſhip and goods belonging to another nation, not of that ſtate againſt whom the commiſſion is awarded, but of ſome other in amity, this amounts to a downright piracy. Roll. Abr. 530.

The goods of others may be taken at ſea by letters of marque, but not by any private authority, nor to be granted but where the party damaged has juſtice denied him, or illegally delayed. This law, or cuſtom, was eſtabliſhed by conſent of nations; and, without it, licence would be given to commit depredations, eſpecially if only the goods of rulers were liable, who ſeldom poſſeſs any thing the injured can come at for ſatisfaction.

But princes, by the laws of nations, are anſwerable for injuries public, and ſhould, by the moſt prudent ways, prevent thoſe that are private, not ſuffering even foreigners to receive wrongs; nor ſhould the prince, or perſon injured, value his misfortune ſo low, as to deny him letters of requeſt; and, if juſtice be denied on ſuch requeſt, it is reaſonable to arm him with power, to take ſatisfaction by reprize. Uſually two or three letters of requeſt are ſent, before reprizal is awarded, and generally aſſign a time for reparation. King Charles I. after the maſſacre at Amboyna, granted letters of requeſt to the ſtates of Holland, for ſatisfaction within eight months, or letters of reprizal were to follow. King Charles II. on petition of Meſſ. Goulor and Canham, granted one Lee, letters to the great duke of Tuſcany, for redreſs againſt the government of Leghorn. In the year 1674, the ſame prince iſſued letters of requeſt to the king of Spain, for ſatisfaction for the depredation committed on the ſhip and goods of Mr. Stampe, who was robbed and murdered at the Havanna. He alſo publiſhed a proclamation, promiſing a reward for apprehending the offenders, dead or alive.

In the proſecution of letters of requeſt and reprizal, there muſt be,

1. The oath of the party injured, or other good proof of the injury, and of the loſs thereby ſuſtained. 2. A proof of due ſollicitation for redreſs, in a legal way. 3. The deferring or denial of juſtice. 4. A complaint to his own prince or ſtate. 5. Requiſition of juſtice by him or them, to the ſupreme ſtate, where juſtice in the ordinary courſe was denied. 6. Perſiſtance in denial of juſtice. And, after all, letters of re-

prizal, under legal reſtrictions, and as the ſpecial caſe requires, may iſſue, both by the civil and by the ancient municipal laws of this kingdom: and the prince of the country muſt repair the damage out of their effects who cauſed it, or, if that prove deficient, it ſhould fall as a common debt on his country.

Legal reprizals are of two ſorts, ordinary and extraordinary: the firſt are either within or without the realm, and granted to Engliſh merchants that have any wiſe ſuffered in their perſons or goods, and upon ſuit, or the king's demanding juſtice by his ambaſſadors, &c. cannot obtain redreſs: who in ſuch caſe ſhall have a writ out of chancery to arreſt the merchant ſtrangers of that nation, or their goods, here in England: and the lord chancellor has always approbation of the king and council, or both, for ſo doing.

Thoſe without the realm are always by patent, and not ordinarily revokable, as they immediately veſt a national debt in the grantee, to be ſatisfied as the patents direct, out of the effects of that prince's ſubjects who refuſed, or illegally delayed juſtice. But, if the peace of both ſtates ſeem to be endangered by attempting the execution of them, it may be refpited 'till a more convenient time; and princes, in granting ſuch letters, are careful to have them made ſo as they may not be reckoned a breach of the peace; but granting them for particular ſatisfaction does not, in the ordinary way, amount to a breach.

As to the extraordinary reprizals, they are by letters of marque, for reparation at ſea, or out of the kingdom, granted by the ſecretaries of ſtate, with like approbation of the king and council, but only during the king's pleaſure, and generally in war-time.

In king Henry the IVth's reign, on the grievous complaint of the commons for wrongs at ſea, contrary to leagues, &c. which were broken by the ſubjects of other nations, a law was made, that, upon application to the keeper of the privy-ſeal, he ſhall ſign letters of requeſt for reſtitution; which, if not made in due time, the lord chancellor ſhall grant letters of reprizal: and this confirmed by ſtat 4. Hen. V. cap. 7. and other ſtatutes.

But letters of reprizal were granted long before theſe ſtatutes, by the kings, nor was their prerogative diminiſhed by them, but remained at common law, to judge when expedient to grant them; nor does the beforementioned act reſtrain the king's prerogative therein.

The caſes where reprizals will or will not lie, are thus ſtated: on wrong judgment given in proſecution abroad, in matters not doubtful, that might have been redreſſed, and was perverted or denied, reprizal may be granted: if the matter be doubtful, it is otherwiſe; for, in ſuch, there is preſumption juſtice was duly adminiſtered. If an Engliſhman proſecutes a perſon in any legal court beyond ſea, and the military governor oppoſes the ſuit, and, by his means, the debtor and his goods are conveyed away, but a judgment is obtained, by this the execution is fruſtrated, and letters of reprizal ſhall be had.

And yet if a merchant of England commence a ſuit in the courts of law beyond ſea, and judgment paſs againſt him, and is confirmed by the ſupreme court to which he appeals, though the complainant hath received a judgment contrary to the right of the cauſe, here he ſhall not have letters of reprizal; but it may, according to the caſe, occaſion letters of requeſt, to have a rehearing.

If any perſon be killed, wounded, or any ways damaged in the territories of any potentate to whom letters of requeſt are ſent, and no redreſs be made, letters of reprizal may be iſſued; but are not to be granted for damages to the goods or perſons of thoſe reſiding in foreign countries in time of war: in this caſe they muſt ſit down with the loſs, for they may relinquiſh the place on the enemies approach.

It is not the place of any man's nativity, but of his habitation, that ſubjects him to reprize: if, therefore, letters of reprizal be awarded againſt the ſubjects of the duke of Tuſcany, and a native of Florence, but living in England, ſhould have a ſhip on a voyage to Leghorn, it cannot lawfully be made a prize: and certain perſons, as well as ſhips and goods, are exempted, as ambaſſadors, and their retinue, coming from him who awarded the prize, travellers, eccleſiaſtical perſons, &c. and a merchant of another place than againſt which reprizals are granted, though his factor be of that place, is not ſubject to reprizals. Molloy Jur. Mar. 21.

Ships forced into port by ſtreſs of weather, are exempted, by common right; but the laws of England ſay otherwiſe, unleſs expreſsly provided for in the writ: and ſuch ſhip flying his own country for ſome fault, and forced in by ſtorm, is lawful prize: but ſhips may not be ſeized in any ports but of the prince who awarded the reprizals, or againſt whom they are iſſued.

If a ſhip, having letters of marque or reprizal, carry thoſe ſhe hath legally taken into a neuter port, the owners may there claim and ſeize her, or the admiral may reſtore the ſhip and goods to the owners, and ſet the captives at liberty. Trin. 17 Car. I. in B. R. Marſh's Rep.

If any ſhip that hath letters of reprize attack a veſſel, and ſhe refuſe to yield, ſhe may be boarded; and, if any happen to be ſlain, the fault is their own, for hindering execution of a legal authority: but if it be thoſe of another nation, againſt whom commiſſion is not awarded, this is downright piracy, and puniſhable accordingly. Rol. Abr. 530.

Though, if ſuch letters of marque be aſſigned over to another perſon, who takes any ſuch ſhip or goods, on a violent preſumption that it belonged to the right of him againſt whom reprizals are granted, here, if the ſufferers recover ſhip and goods, yet the captors are not to be puniſhed criminally, nor the grantees of the patents civilly; the captors are anſwerable for damages, but the grantees are entirely excuſable, unleſs privy to the caption: it is like the caſe of an officer arreſting a wrong perſon; he is anſwerable to the perſon arreſted, but not the perſon that employed him. Stat. 4. Hen. V. cap. 14. Sea Laws, 470.

A perſon who had letters of marque in the Dutch war, took, by miſtake, an Oſtender, and brought her into harbour, and was proſecuted for damages, &c. Another, having taken a French ſhip, carried her into Africa, and the admiralty there condemned her as prize: having ſold her, and, coming into England, he was ſued in the admiralty, and ſentence given againſt him, though he appealed for a prohibition, but was denied. 1 Lev. 243. 1 Salk. 32.

A ſhip being lawfully taken, and brought into port, the captor muſt exhibit all his ſhip papers, and captive mariners, to be examined; and, 'till the goods are legally condemned, bulk ought not to be broken, nor may the captain permit embezzlement of the lading, or diſpoſe of any part, without commiſſion, for the king hath a ſhare in all prizes: and the common profits are to be equally divided among all the ſhips preſent; ſo that if letters are granted to two ſhips, and both of them meet a prize, which one of them takes, although the other did nothing, he hath right to an equal ſhare, for the preſence of that veſſel is a terror, and cauſes a ſhip to ſtrike ſooner. 3 Eliz. cap. 5. 2 Leon. Rep. 182.

If the caption of any ſhip be by men of war, the property will be in the captors, except it be loſt again, and recovered by the perſons from whom taken, or regained in battle. And, by the law of nations, the dominion of things taken with letters of marque becomes the captors, 'till the original damage, and ſubſequent charges, are ſatisfied; which done, the reſidue is to be reſtored: and ſo the Venetians uſed their equity, having taken the ſhips of Genoa, they carefully preſerved the lading, 'till the debt was paid, and then made intire reſtitution. Molloy, 20.

If, during a war between England and Holland, a Dutch man of war take an Engliſh merchant-man, which is afterwards retaken; in ſuch caſe, reſtitution is commonly made, the owners paying ſalvage; ſo where the prize is recovered by a friend, or comes into his ports: and the taking ſhips and goods by force is ſo odious, that reſtitution, where poſſible, is granted. Ibid. 6, 7.

Where for the fault, perhaps, of a few, a debt becomes national, the goods of the guiltleſs become liable, if taken, for ſatisfaction; but ſuch ſhould have contribution, by the law of England. Though, when depredations have happened here to foreign merchants, and complaint hath been made concerning them, our kings have often granted commiſſions to inquire and award ſatisfaction: and, on the petition of ſome merchants of Genoa, againſt the inhabitants of Guernſey, for detaining goods to a conſiderable value, out of a ſhip wrecked near the ſaid iſle, a commiſſion was granted to puniſh the offenders, and make reſtitution: for, as the Engliſh ſubjects may have their goods as reprize, for ſatisfaction of a debt from foreigners, ſo they may have benefit of theſe commiſſions, to make themſelves whole out of the eſtates of offenders. Pat. 26 Ed. III. See ſtat. 31 Hen. VI. cap. 4.

But he that will ſue to have reſtitution in England for goods taken at ſea, muſt prove that the ſovereign of the party was in amity with England, &c. and letters of reprizal make no war between nations. 22 Ed. III.

A copy of letters patent for eſpecial reprizals, from the king of Great-Britain (under the great ſeal of England) againſt the States of Holland, and their ſubjects. Inrolled in the high court of Chancery, 19 May, 15 Car. II.

CHARLES the Second, &c. Whereas our loving ſubjects Sir William Courteen, Knt. deceaſed, and his partners, anno 1643, by the depredation and hoſtile act of one Gailand, commander in chief of two ſhips belonging to the Eaſt-India company of the Netherlands, was, between Goa and Maccas, in the Streights of Malacca, deprived, and moſt injuriouſly ſpoiled, of a certain ſhip called the Bona Eſperanza, and of her tackle, apparel, and furniture, and all the goods and lading in her, upon a very hopeful trading voyage to China, which were carried to Batavia, and there, without any legal proceſs, confiſcated: and alſo, in the ſame year, another laden ſhip of our ſaid ſubject, called the Henry Bonadventure, being come on ground near the iſland of Mauritius, was there, both ſhip and goods, ſeized upon by ſome of the officers and miniſters, and others, under the command of the ſaid Eaſt India company, and utterly detained from the right owners: and whereas the ſaid Sir William Courteen,

teen, and his aſſigns, in his life-time, uſed all poſſible endeavours to recover the ſaid ſhips and goods, and to procure further juſtice againſt the malefactors, and yet could obtain no reſtitution or ſatisfaction, whereby they came to be much diſtreſſed, and utterly undone in their eſtate and credit: and thereupon, and upon the moſt humble ſupplication, and addreſſes of Francis earl of Shrewſbury, and William Courteen, Eſq; grandſon and heir of the ſaid Sir William deceaſed, Sir John Ayton and Sir William Turner, Knts. and George Carew and Charles Whitaker, Eſqrs. (on the behalf of themſelves, and divers others intereſted in the ſaid two ſhips, Bona Eſperanza and Henry Bonadventure, and in the eſtates of the ſaid Sir William Courteen deceaſed) Sir Edward Littleton, Bart. and Sir Paul Pindar, Knt. that we would take their caſe into princely conſideration: we, out of a juſt ſenſe we then had, and ſtill have of their unjuſt ſufferings in that buſineſs, both by our own letters, under our ſign manual, to the States-General of the United Provinces, and by Sir George Downing, Knt. and Bart. our envoy extraordinary, to whom we gave ſpecial command ſo to do, required ſatisfaction to be made, according to the rules of juſtice, and the amity and good correſpondence which we then deſired to conſerve with them firm and inviolable: and whereas, after ſeveral addreſſes made to the States-General by our ſaid envoy, and nothing granted effectual for relief of our ſaid ſubjects (whom we take ourſelves in honour and juſtice concerned to ſee ſatisfied and repaid) we lately commanded the ſaid Sir George Downing to intimate and ſignify to the ſaid ſtates, that we expected their final anſwer concerning ſatisfaction to be made for the ſaid ſhips and goods, by a time then prefixed, and ſince elapſed; that we might ſo govern ourſelves thereupon, that our aforeſaid ſubjects might be relieved according to right and juſtice, and yet no ſatisfactory anſwer hath been given; ſo that we cannot but apprehend it to be not only a fruitleſs endeavour, but a proſtituting our honour and dignity to make a farther application, after ſo many denials and ſlightings. And whereas John Exton, doctor of laws, judge of our high admiralty court of England, upon our command to certify to us the value of the loſſes and damages ſuſtained by the ſaid Sir William Courteen and partners, whoſe intereſt is now veſted in our loving ſubjects Sir Edmund Turner Knt. and George Carew, Eſq; and partners, hath, upon full examination and proof thereof, made by witneſſes in our high court of admiralty, reported and certified under his hand, that the ſame do amount to the ſum of one hundred fifty-one thouſand ſix hundred and twelve pounds.

Now know ye, that, for a full reſtitution to be made to them for their ſhips, goods, and merchandize, of which the ſaid Sir William Courteen, Knt. and partners, were ſo deſpoiled as aforeſaid, with all ſuch coſts and charges as they ſhall be at for the recovery of the ſame: we, by the advice of our privy-council, have thought fit, and by theſe preſents do grant licence and authority, under our great ſeal of England, unto our ſaid ſubjects, Sir Edmund Turner and George Carew, their executors, adminiſtrators, and aſſigns, for and on the behalf of themſelves, and other perſons intereſted as aforeſaid, to equip, victual, furniſh, and to ſet to ſea, from time to time, ſuch and ſo many ſhips and pinnaces as they ſhall think fit; provided always, that there be an entry made and recorded, in the admiralty courts, of the names of all ſhips and veſſels, and of their burden and ammunition, and for how long time they are victualled, and alſo the names of the commanders, before the ſame or any of them be ſet forth to ſea; and with the ſaid ſhips and pinnaces by force of arms to ſet upon, take, and apprehend any of the ſhips, goods, money, and merchandizes belonging to the ſtates-general, or any of the ſubjects inhabiting within any of their dominions or territories, wherefoever the ſame ſhall be found, and not in any port or harbour in England or Ireland, unleſs it be the ſhips and goods of the parties that did the wrong: and the ſaid ſhips, goods, money, and merchandizes being ſo taken, and brought into ſome port of our realms and dominions, an inventory thereof ſhall be taken, by authority of our court of admiralty, by the judge or judges thereof for the time being, upon proofs made before him or them that the ſaid ſhips, goods, wares, merchandizes, and money, did belong to the ſtates-general, or any of their ſubjects as aforeſaid, that they ſhall be lawful prize to the ſaid Sir Edmund Turner and George Carew, their executors, adminiſtrators, and aſſigns, as aforeſaid, to retain and keep in their, or any of their poſſeſſions, and to make ſale and diſpoſe thereof in open market, or howſoever elſe, to their and every of their beſt advantage and benefit, in as ample manner as any time heretofore hath been accuſtomed, by way of reprizal, and to have and enjoy the ſame as lawful prize, and as their own proper goods: ſo that neither any captain, maſter, nor any of their company, that ſhall ſerve in perſon, or ſhall promote and advance the ſaid enterprize, in manner and form aforeſaid, ſhall, in any manner of wiſe, be reputed or challenged as an offender againſt any of our laws: and that it ſhall be lawful for all manner of perſons, as well our ſubjects as any others, to buy the ſaid ſhips, goods, and merchandizes, ſo taken and apprehended by the ſaid captains, maſters, and others, and adjudged as aforeſaid, without any damage, loſs, hindrance, trouble, moleſtation, or incumbrance, to befal the ſaid buyer, or any of them, in as ample and lawful manner as if the ſhips, goods, wares, and merchandizes had been come and gotten by lawful traffic of merchants, or of juſt prizes in time of war: provided always, that all ſhips, goods, and merchandize, taken by virtue of this our commiſſion, ſhall be kept in ſafety, and no part of them waſted, ſpoiled, or diminiſhed, or the bulk thereof broken, until judgment hath firſt paſſed as aforeſaid, that they are the ſhips and merchandize of the ſtates-general, or ſome of their ſubjects as aforeſaid: and if, by colour of this our commiſſion, there ſhall be taken any ſhips, goods, or merchandizes, of any of our loving ſubjects, or the ſubjects of any prince or ſtate in good league or amity with us (except the ſtates-general, or their ſubjects, as aforeſaid) and the goods therein laden ſold and embezzled, or diminiſhed, or the bulk thereof broken in any place, before they ſhall be adjudged to belong to the ſtates-general, or ſome of their ſubjects, as aforeſaid: that then this commiſſion ſhall not be of ſufficient authority to take the ſaid ſhips, goods, and merchandizes, or to warrant or ſave harmleſs ſuch as ſhall receive, buy, or intermeddle therein, but that both the prizes ſo taken, and the ſaid ſhips of war, ſhall be confiſcated to our uſe.

And furrher we do hereby declare, that it is our will and pleaſure, that this our commiſſion ſhall remain in full force and power, to all intents and purpoſes, until the ſaid Sir Edmund Turner and George Carew, their executors, adminiſtrators, and aſſigns, as aforeſaid, ſhall, by virtue thereof, have by force of arms apprehended, taken, ſeized, recovered, and received, from the ſaid ſtates-general, or their ſubjects, one hundred and fifty-one thouſand ſix hundred twelve pounds, according to the appraiſement to be made by appraiſers upon oath, nominated and authorized in our ſaid court of admiralty, of ſuch ſhips, goods, wares, or merchandizes, as ſhall be taken from the ſaid ſtates-general, or any of their ſubjects, by virtue of this commiſſion, or ſhall otherwiſe receive ſatisfaction of the debt aforeſaid, by compoſition to be made between thoſe of the Eaſt-India company of the Netherlands and the ſaid Sir Edmund Turner and George Carew, their executors, adminiſtrators, and aſſigns, as aforeſaid: notwithſtanding the preſent difference between us and the ſaid ſtates-general, depending upon general reprizes, may be agreed and compoſed; and that, in the interim, a good correſpondence may be renewed between us and the ſaid ſtates-general, but only in caſe of reſiſtance; and that, after, in cold blood, the ſubjects of the ſtates-general, if hurt or wounded, ſhall be uſed with all convenient offices of humanity and kindneſs, &c.

A proclamation for revoking the foregoing letters of marque and reprizals, publiſhed Auguſt 3, 1680.

Whereas George Carew, Eſq; had formerly granted to him letters of marque againſt the States-General of the United Provinces, for ſatisfaction of a certain demand which Sir William Courteen and others had againſt the ſaid States, and to which the ſaid George Carew was intitled; which ſaid demand has ſince, by treaty of peace between his Majeſty and the ſaid States, been totally aboliſhed and extinguiſhed, and all letters of marque and reprizal by the ſame treaty diſcharged accordingly: and whereas his Majeſty has ſince recalled and ſuperſeded the ſaid letters of marque: to the end that no perſon may be miſled, under pretence of any letters of marque and reprizal heretofore granted to the ſaid George Carew, and thereby incur the danger of the law, as pirates: his Majeſty is pleaſed, by this, his proclamation, to declare, That the ſaid George Carew has now no authority and commiſſion, by virtue of any ſuch letters of marque, to equip or ſet out any veſſel whatſoever, and that all perſons that ſhall preſume to be aiding to him in ſetting forth any ſuch ſhip, or ſerve under him, by colour of any ſuch pretended authority, ſhall be proceeded againſt as pirates, according to the utmoſt ſeverity of the law.

LETTERS PATENT, LITERÆ PATENTES, ſometimes called LETTERS OVERT, are writings of the King, ſealed with the great ſeal of England, whereby a perſon is enabled to do or enjoy that which otherwiſe he could not, and ſo called, becauſe they are open, with the ſeal affixed, and ready to be ſhewn for the confirmation of the authority thereby given. 19 Hen. VII. cap. 7. And we read of letters patent to make denizens, &c. 32 Hen. VI. cap. 16. 9 Hen. III. cap. 18. Letters patent may be granted by common perſons; but, in ſuch caſe, they are properly patents; yet, for diſtinction, the king's letters patent have been called letters patent royal. Anno 2 Hen. VI. cap. 10. Letters patent conclude with Teſte me ipſo, &c. 2 Inſt. 78. See PATENTS.

LEVANT TRADE.

Of the firſt eſtabliſhment of the Chriſtian nations in the ports of the Levant *, and of their convention and treaties with the Ottoman Port.

* Levant ſignifies, in geography, any country ſituated to the eaſt of us, or on the eaſtern ſide of any continent or country, or that on which the ſun riſes.—In matters of commerce,

L E V

merce, it is generally reſtrained to the Mediterranean Sea, or, rather, to the country on the eaſtern part of it.—Hence our trade thither is called the Levant trade; and a wind that blows from thence out of the Streights mouth, is called a Levant wind.

France was the firſt nation that made treaties of commerce with the Port. The Sieur de la Foret ſigned them in 1535, in the name of Francis I. and thereby obtained many privileges in favour of that kingdom, which they alone enjoyed, 'till the Venetians, the Engliſh, the Hollanders, and at length the Genoeſe, likewiſe obtained particular privileges to themſelves.

The chief privileges granted the French, by the conventions made by the Sieur de la Foret, were:

I. The eſtabliſhment of a court of juſtice, under the appellation of the conſulſhip, in all the parts or places where the French merchants ſhould reſide, in order to do juſtice between the French merchants, among themſelves, and between them and the Turks, with regard both to civil and criminal matters; with prohibition to the officers of the Grand Seignior to take cognizance thereof, without conſent being firſt had and obtained from the French themſelves.

II. The privileges in reſpect to the conſul himſelf, and other officers of the conſulſhip, were, that they might not be judged in criminal matters by the officers of the places where they ſhall reſide, but be ſent to the Port, or to the neareſt lieutenant of the Grand Seignior.

III. That the liberty of their religion ſhall be granted to the French.

IV. That the permiſſion of trade in all the Grand Seignior's dominions be granted to the French alone, and that all other nations be prohibited coming thither to trade, but under the French banner.

The Venetians were the firſt in favour of whom the Port deviated from this laſt article, which was, ſays our author, as honourable as beneficial to the French; and when Henry III, in 1580, ſent James de Germigny, baron de Germelles, to renew the convention, the ſubjects of the republic of Venice were expreſly excepted from the liſt of thoſe nations who were obliged to navigate under French colours.

In the treaties of 1604, obtained from the ſultan Achmet by Monſ. Savary de Breves, ambaſſador from France to the Port, the Engliſh were alſo excepted from the ſaid liſt.

Theſe laſt conventions of the French not being renewed 'till 1673, by reaſon of the ſuccours which his moſt Chriſtian majeſty ſent into Hungary and Candia, the Hollanders, and afterwards the Genoeſe, availing themſelves by this miſunderſtanding between France and the Port, obtained more favourable treaties; which although, ſays our author, expreſſed in terms leſs honourable than thoſe were with regard to France; (wherein the king is always treated as an emperor, and as the moſt ancient ally of the Port) yet they contained the moſt eſſential article in relation to their commerce; which conſiſts in the liberty of having conſuls, and trading in all places of the Levant upon their own footing, independent of France.

It may alſo be ſaid, that, in a very material point, other nations were more favourably treated than the French, becauſe the duties on importation, and exportation of theſe other nations were reduced to 3 per cent. while thoſe, which regarded the commodities of the French merchants, continued to pay 5 per cent. as they had always done: but this difference was reduced by the capitulation of 1673.

Of the regulations and polity of France with reſpect to the trade of the Levant.

As long as the commerce of the Levant remained intirely in the hands of the French, it was ſo conſiderable, that the duties thereof, upon the importation and exportation of merchandizes, paid by the French at the cuſtom-houſe of the Grand Seignior, amounted to ſeveral millions of livres per annum.

The face of things is much changed ſince that time; the treaties of commerce made between the Port and ſeveral other nations, and the civil wars of France in the reigns of Henry II, and his ſucceſſors, which diverted the adminiſtration from purſuing the commercial intereſts of France, gave the Venetians, and afterwards the Engliſh, a favourable occaſion to ſecure to themſelves this navigation, upon their own bottom.

Certain it is, that the bad conduct of the nation in other reſpects alſo reduced it's trade to a deplorable ſtate, 'till the time of Lewis XIV, who reſolved, in 1665, to ſupport and encourage it, and recommended to Monſ. Colbert, his miniſter and ſecretary of ſtate, to reſtore the commerce of the Levant, in ſome meaſure, to it's former ſplendor, if it was not poſſible to oblige other nations to trade again under the French banner.

The firſt ſtep this patriot miniſter took to reſtore this branch of commerce, was to eſtabliſh a company, conſtituted of 20 of the moſt opulent merchants of Paris, Lyons, and Marſeilles.

Another point, which then appeared to be no leſs requiſite, was, to put an effectual ſtop to the complaints of the Turks, reſpecting the bad quality of the merchandizes which the Marſeillians imported there, and to provide againſt abuſes that had happened in the conſulſhip; and which had greatly diſcredited the French nation.

In relation to manufactures, that miniſter made various regulations concerning the fabric of woollen goods deſtined for the Levant trade, which we ſhall ſee under the articles FRANCE, and WOOLLEN MANUFACTURES of France.

The French pieces of money of five ſols * being introduced into the trade of the Levant, the Turks were ſo greatly taken with the beautiful appearance thereof, that they very earneſtly coveted them, and gave their merchandizes in exchange for half the price, on condition that they were paid for them in this French ſpecie; which, at length occaſioned the Genoeſe alſo to introduce them into the Levant trade: but, not ſatisfied even with the great profit which they thereby experienced, they diminiſhed the ſtandard, or intrinſic value of this coin more than one half, and carried ſo great a quantity of this counterfeit money to the Levant (and the French alſo imitating their example, by having the like fabricated at Morgues) that the eyes of the Turks became, at length, opened, and they accuſed the French of this roguery; againſt whom they made great complaints, and laid that nation deſervedly under great difficulties in it's traffic. To put an end to theſe complaints, the French ambaſſador had orders to ſtem the torrent of ſuch diſcredit at the Port, by endeavouring to throw a part of the loſs upon others, who alſo were the cauſe of the deceit.

* This ſmall ſilver money, whoſe commerce made ſo great noiſe in all parts of the Levant, towards the middle of the ſeventeenth century, was called by the Turks timmins, or temins.—The impreſſion was ſo beautiful and elegant, that the Turks would take no other money but this. From the merchants, the infatuation ſpread itſelf even among the ladies, whoſe head-dreſſes and habits were adorned with them. The French, taking advantage of this frenzy, paſſed theſe timmins at firſt, for 10 ſols, which was gaining cent. per cent.: afterwards they lowered them to 7 ſols 6 deniers; and at laſt, in 1670, they were abſolutely cried down.
The avarice of the European merchants (for the Hollanders, the Genoeſe, and ſome other Chriſtian nations, had a ſhare in this traffic as well as the French) was the cauſe of this diſgrace brought upon this ſpecies of the French money. Not contented with the immenſe gain made by paſſing of good coin, they reſolved to counterfeit the ſame, and carried Louis of 5 ſols to the Levant, that were only copper ſilvered over. Orange, Avignon, Monaco, Florence, and ſeveral caſtles in the ſtates of Genoa, were the places where this infamous merchandize was fabricated, for the laſt thirteen years that this unjuſt traffic continued.
To put a ſtop to this diſorder, at leaſt to prevent the French from taking further part therein, the parliament of Provence iſſued an arrêt, the 22d of December, 1667, forbidding the Levant trade to be carried on otherwiſe than with the money of France, Spain, Morgues, and Dombes; and under pain of death to tranſport any Louis of 5 ſols to Genoa or Leghorn, or any other places on that coaſt.—This arrêt put a ſtop to ſuch deteſtable traffic in Turkey, which had put the whole empire into great confuſion.

The proſperity of the French commerce depending, in a great meaſure, on the good conduct of the conſuls eſtabliſhed in the ports of the Levant, and his majeſty being informed that the greateſt part of thoſe who then filled theſe places, were either foreigners or obſcure perſons, in whom it was not ſafe for his ſubjects to confide; it was ordained, by an arrêt of council of the 29th of March, 1669, that all the French conſuls ſhould directly tranſmit to Monſ. Colbert their letters of authority whereby they held their conſulſhips.

In conſequence of this arrêt it was, that freſh inſtructions and powers were delivered in the two ſucceeding years to the ancient conſuls, and a number of new ones created in divers other ports of the Levant, where there had been none before.

By a declaration of the ſame year, regiſtered in the parliament of Provence, it was ordained, that all the oppreſſions which happened in the ports of the Levant, ſhould be diſcharged by the ſhips that ſhould be found in the ports and havens where ſuch oppreſſion had been made; for which purpoſe there ſhould be an aſſeſſment upon the ſhip's merchandizes.

The 12th of June, in the following year 1670, the execution of the declaration relative to the oppreſſions was appointed by a new ordonnance; in conſequence whereof, all conſuls eſtabliſhed in the Levant were expreſsly forbidden to convoke, for the future, any aſſembly of the body of the nation, under any pretext whatſoever, and this under the penalty of loſing their place, and to anſwer the ſame in their own perſons, the ſums that the ſaid aſſemblies ſhould have attempted to lay upon the whole nation; his majeſty injoining his ambaſſador at the Port to cauſe theſe ordonnances to be duly put in execution.

At the ſame time Monſ. Colbert wrote a circular letter to all the conſuls in the ports of the Levant, which conſiſted of four principal articles of polity.

By the firſt they were ordered to maintain a regular correſpondence with the Marquis of Nointel, the king's ambaſſador at the Port, in relation to what regarded the commerce of their various ports. The ſecond enjoined them to tranſmit to him conſtantly a memorial of whatever they ſhould judge

requiſite

requiſite to the advantage of commerce in their reſpective places of reſidence; as alſo another memorial, atteſted by the principal merchants of the ſaid ports, containing all the oppreſſions that the Turks made upon the French. The third article obliged them to ſend, every ſix months, to the court, as well as to the ambaſſador, a liſt of the French actually inhabiting their ſeveral ports; and likewiſe to give a faithful account of thoſe perſons of credit, probity, and good behaviour, as well as of thoſe whoſe conduct might give the Turks reaſons for any contempt towards their nation *.

* Was not this laying a good foundation for conſtant future eſteem towards the French ?

The inſtructions ſent to the marquis of Nointel contained alſo ſeveral articles of regulations.

I. The ſuppreſſion of all the impoſts of the conſulſhip, which had been made 'till then by his Catholic majeſty's miniſters at Conſtantinople, as well as all thoſe which were allotted to their ſecretaries and interpreters.

II. That, under any pretence of oppreſſion, no duties in future ſhould be raiſed, or any thing taken, by way of fee or bribe, upon the commerce of the nation in general.

III. To that end, every kind of aſſembly that uſed to be held on theſe occaſions was aboliſhed; and that every one ſhould avoid borrowing money of the Jews, and paying them monthly intereſt.

IV. That the debts, as well thoſe of the city of Marſeilles (for the payment whereof the duty of COTIMO* had been eſtabliſhed) as thoſe of the ports of the Levant, ſhould be examined and liquidated, in order to be diſcharged with the greater eaſe to trade.

* A term in marine commerce, uſed in the ports of the Levant.—It is an impoſition, or duty, which the conſuls lay, either by order of the court, or the conſent of the merchants, of ſo much per cent. upon ſhipping, either for the payment of ſome avanies (a), or for ſome other common affairs of the nation.

The arrêt of the council of 1684 ordains, that a cotimo ſhould be ſettled, at the rate of 2 per cent. upon the firſt ſhips that returned from the port of Alexandria, for an indemnification adjudged to the Levant company.

(a) Avanie ſignifies an inſult, affront, impoſition, a quarrel bred with deſign, and without cauſe. This is particularly uſed in the Levant, and in all the dominions of the Grand Seignior, to ſignify the preſents, or the fines, that the Turkiſh baſhaws, and the officers of the cuſtom-houſe, unjuſtly extort from the Chriſtian merchants under falſe pretences.—When theſe avanies relate to a particular nation, the ambaſſador and conſuls of the nation regulate them, and appoint the method of levying them among the merchants, and others of ſuch nation; which is commonly done with the advice of the chief perſons among them.

V. That no French ſhould inhabit in the ports of the Levant without expreſs permiſſion from the king's miniſter at the Port.

It was likewiſe ordained, by an arrêt of council of November 1669, that, in future, the interpreters in the ports of the Levant, reſiding at Conſtantinople, Smyrna, and other places, ſhould not act in that city, unleſs they were natives of France, and appointed by an aſſembly of the body of the nation in every port, and depoſited their oath with the conſuls.

In order to be ſecure of the fidelity of theſe interpreters, the ſame arrêt regulates, that there ſhould be ſent to the ports of Conſtantinople and Smyrna, every three years, ſix young men, to be there inſtructed in the languages, and to act afterwards in the capacity of interpreters.—To add to the advantage which the nation might derive from this eſtabliſhment, his majeſty ordained, by a ſecond arrêt of October 1670, that ſix young men ſhould be ſent for the three firſt years, for the purpoſe of becoming interpreters *.

* An interpreter, or druggerman, or drogman, as they are called in the Levant, is a perſon whom the ambaſſadors of the Chriſtian countries, reſiding at the Port, have near their perſons, to aſſiſt them in point of language in treating of public affairs. The conſuls likewiſe make uſe of theſe druggermen, as well for their private uſe, as for that of the merchants of their country who traffic in the ports of the Levant, or foreigners who come to trade under the banner of their princes. The aſſiſtance of theſe interpreters being abſolutely neceſſary in the commerce of the Levant, and the good ſucceſs therein partly depending on their fidelity and ingenuity, induced Lewis the XIVth of France to iſſue an arret of council to provide a number of the natives of France, who were well educated in the language, to officiate in that uſeful capacity, that the ambaſſadors and conſuls of France ſhould never be liable to impoſition by ſtrangers, who might have no attachment to their country.—A wiſe meaſure certainly !

The ambaſſador of France, predeceſſor to the marquis de Nointel, having greatly loaded commerce with unwarrantable impoſitions; his majeſty, in order to prevent theſe abuſes, ſtrictly forbid the marquis from following their example, under any pretext whatſoever; without firſt communicating the matter to the merchants and captains who ſhould be in the ſeveral ports, for their votes, with all imaginable freedom.

The convoys which the king granted for the ſafety of the commerce of his ſubjects, more particularly of thoſe who traded to the Levant, not having the ſucceſs expected, by the miſconduct of thoſe who commanded them, in not joining the merchants in due time, or leaving them before arrival in their intended ports: his majeſty iſſued an ordonnance in May 1671, whereby he commands all chiefs of the ſquadron, captains, and other officers of the marine, ordered to convoy merchants ſhips, either in meeting them on the high ſeas, or departing from the ports of the kingdom, to convoy them ſafe to the ports whither they were bound, and on their return into the ports of the kingdom; expreſsly forbidding them, at the peril of their lives, to abandon them, under any pretence whatever, if not prevented by the violence of the winds; upon condition, notwithſtanding, that the maſters of ſuch merchantmen ſhall be ready to ſail upon the day appointed by the captains, conſuls, and principal merchants intereſted in the trade.

Before the court had obliged the conſuls to lay before them the powers whereby they enjoyed their poſts, they were granted during life: ſome had even obtained the ſucceſſion for their children, or relations, and there were ſome made hereditary, and reckoned amongſt the patrimonial effects of families. In the new reform of conſuls, they were, for the moſt part, reduced to ſix years continuance, but they might be continued, and are ſo in effect.

The rights of conſulſhip are not equal in all the Levant ports, they being in ſome places 2 per cent. in others 3.

It was by theſe firſt regulations that Monſ. Colbert began to give another face to the French commerce in the Levant, by thus providing at once for the correction of the chief abuſes which were therein committed.

There was afterwards prepared a general regulation of the polity of the conſulſhip, in regard to whatever concerns the aſſemblies and the trade of the kingdom; to which, from time to time, and almoſt to the death of Lewis XIV, there were added new articles, as the circumſtances of things required. See the article CONSULS.

That the reader may make a right judgment of the polity of the French in regard to the regulation of this branch or trade, we ſhall give the ſubſtance of the principal royal ordonnances and arrêts relating thereunto: we ſhall begin with that of the 18th of March, 1693, which follows, viz.

'His majeſty judged it requiſite to ſuppreſs the duties of conſulſhip in the ports of the Levant, for the benefit of his ſubjects, and having excepted therefrom foreigners who trade under the banner of France, and ordained that thoſe duties in regard to their merchandizes ſhould continue in the accuſtomed manner, and be appropriated to the chamber of commerce at Marſeilles [ſee the article CHAMBER of COMMERCE] his majeſty being informed that the greateſt part of the foreigners, and particularly the Jews, daily make falſe declarations of the merchandizes which they embark in French bottoms, and oftentimes do not embark any at all, and that the captains and cap-merchants [ſee CAP-MERCHANTS] of ſhips, favour foreigners by night in ſhipping their merchandizes on Turkiſh bottoms, or even in French veſſels, to the prejudice of the French merchants, who lade goods in the ſame veſſels, and who are thereby obliged to bear a more conſiderable duty than they ought, if the merchandizes of foreigners were faithfully declared: againſt which grievance it being neceſſary to provide, his majeſty has ordained, that the merchandizes of foreigners, laden on French bottoms, which ſhall not be juſtly and truly reported in the Chancery of the ſaid ports of the Levant, with reſpect both to the quality and quantity thereof, ſhall be confiſcated: that is to ſay, one half ſhall go to the benefit of the informer, and the other to the chamber of commerce; which nevertheleſs ſhall be appropriated to the public ſervice, with the conſent of the intendant charged with the care of the trade. His majeſty expreſsly forbids all captains, maſters, and cap-merchants of French ſhips, to receive by night any merchandizes from any place from whence they may be tranſported on the penalty of 1500 livres fine, nor to receive any declarations, nor ſign any bills of lading of foreigners, which are not conformable to the reports made in the ſaid Chanceries, on pain of the like fine of 1500 livres. His majeſty further ordains, that all cap-merchants ſhall ſign a manifeſto, conformable to that depoſited in the Chancery, and to ſend a copy thereof to the conſuls of thoſe places whither the veſſel is bound, that they may teſtify to the unlading, whether all the merchandizes of foreigners have been faithfully declared. His majeſty injoins all conſuls and vice-conſuls of the French nation in the ports of the Levant, to ſee that the preſent ordonnance be duly executed, &c.

Signed LEWIS,
And underneath PHELYPEAUX.'

An arrêt of the king's council of ſtate, ordaining that the French ſhips trading to the ports of the Levant ſhall not be liable to thoſe averages [ſee AVERAGES] which may be neceſſary to be laid on for the payment of the debts and other charges of the nation, but in proportion to the value of the merchandizes wherewith they ſhall be loaded, and not according to the tonnage and ſtrength of the ſhipping. Extracted from the regiſters of the council of ſtate.

'According to what has been repreſented to the king in council, that the repartition of the averages laid upon the French

French ſhipping which navigate in the ports of the Levant, for the payment of the debts, and other charges of the nation, is made, at preſent, with relation to the ſtrength and kind of the ſhipping only; which has occaſioned a great prejudice to thoſe whoſe loadings are not judged of by the value of the merchandizes, whereby thoſe whoſe cargoes pay as much as others of ſmaller value, whoſe freight and profits are widely different: which inequality may, in it's conſequences, leſſen the navigation of ſhipping in the Levant commerce: his majeſty, deſirous to prevent theſe evils, and to procure every advantage to his ſubjects, by extending and rendering this traffic more conſiderable; and his majeſty, being now in council, hath ordained, and doth ordain, that, for the future, all French ſhips trading to the ports of the Levant, ſhall not be liable to any average that may be neceſſary to be impoſed for the payment of the debts, and other charges of the nation, but in proportion to the value of the cargoes therein contained, according to the bills of lading, and manifeſtoes of the loading; which ſhall be ſent to the conſuls and vice-conſuls of the kingdom in the ſaid ports, by the captains and cap merchants of the ſaid veſſels, &c.—Done at the royal council of ſtate, the 6th of October, 1698.

Signed PHELYPEAUX.'

Then follows a proclamation, of the ſame date, to inforce the ſaid arrêt,

Signed LEWIS.

The next arrêt of the royal council, of any conſequence, was of March 1705, in the time of the war, which ordains, That, upon the merchandizes of the Levant ariſing by the prizes made during the preſent war, and carried into the port of Toulon, there ſhall be levied 10 per cent. on the value of the ſaid merchandizes, over and above the ordinary duties paid on importation.—Extracted from the regiſters of the royal council.

'By reaſon of the repreſentations made by the mayor, ſheriffs, and deputies of the commerce of the city of Marſeilles, that the king's ſhips appointed to cruize from the port of Toulon, on the merchantmen belonging to the enemy, and alſo the privateers from the ſame port, frequently bring in prizes, whereby the magazines of the ſaid city are filled with the merchandizes of all ports of the Levant; which hinders the ſale of thoſe goods brought in by the trade of the merchants: in order to put all merchandizes of the ſame ſort upon an equality with each other, it would be neceſſary to impoſe a duty of 20 per cent. upon the merchandizes of the Levant taken as prize, as well as upon merchandizes which do not come into the kingdom by a direct commerce carried on in the Levant by his majeſty's ſubjects; or at leaſt a duty of 10 per cent. ad valorem of the ſaid merchandizes taken as prize, as was practiſed in the preceding war: to which his majeſty giving attention, and conſidering the report of the Sieur Chamillart, counſellor in ordinary to the royal council, and comptroller-general of the finances, and being preſent in council, hath ordained, and doth hereby ordain, that, upon the merchandizes of the Levant taken as prizes during the preſent war, and brought into the port of Toulon, there ſhall be raiſed 10 per cent. ad valorem thereupon, over and above the ordinary duties of importation.—Done at the royal council of ſtate, his majeſty being preſent, held at Verſailles the 10th day of March, 1705.

Signed PHELYPEAUX.'

'This arrêt was inforced by a declaration of the ſame day,

Signed LEWIS.

See the article PRIZES.

A royal ordonnance, permitting the ſheriffs and deputies of the chamber of commerce at Marſeilles, to deliver certificates of reſidence to the children and relations of the merchants of the province, who chuſe to ſettle in the Levant, provided they were 18 years of age; and alſo to ſuch women and girls whoſe huſbands or fathers are eſtabliſhed in the ſaid ports, to live there with them. Of March 1716. —By the king.

'Upon being repreſented to the king, that the families of merchants trading to the Levant are greatly prejudiced by the ordonnance of November 3, 1700, which forbids the ſheriffs and deputies of the chamber of commerce eſtabliſhed at Marſeilles, to deliver certificates of embarkation, or of reſidence, to the children or relations of the ſaid merchants, nor to others who would willingly ſettle themſelves in the Levant, before 25 years of age; that, on the contrary, it ſeemeth neceſſary that theſe young people go thither betimes in order to learn the language, cuſtoms, and uſages of the Turks, and to form themſelves to thoſe rules and maxims neceſſary to the benefit and advantage of commerce; otherwiſe, thoſe men from the age of 18 to 20 are compelled to apply themſelves to profeſſions other than thoſe to which they ſeem to be born, and bred up by their parents: his majeſty being informed, that as well the chamber of commerce at Marſeilles, as the French conſuls in the ports of the Levant and Barbary, make a difficulty in conſenting to the paſſage and reſidence in Turkey of the wives and daughters whoſe huſbands and fathers are eſtabliſhed there, no ordonnance or regulation being made for that purpoſe: his majeſty having conſidered the deliberations of the ſheriffs and deputies of commerce of Marſeilles, of the 5th of this month, held in the preſence of the Sieur Arnoul, inſpector of the ſaid commerce: his majeſty, with the advice of Monſ. the duke of Orleans, regent, hath ordained, and doth hereby ordain, that, from the day of the publication of the preſent ordonnance, it ſhall be permitted to the ſaid ſheriffs and deputies of the chamber of commerce at Marſeilles, to grant certificates of reſidence to the children or relations of ſuch merchants of the province, and others, who would ſettle in the ports of the Levant; it appearing, by a certificate of their baptiſm, that they are full 18 years of age; it being underſtood, nevertheleſs, that they ſhall not be admitted into the aſſembly of the French nation in Turkey, 'till they are 24 years old, nor to have a vote therein 'till 25 years of age: his majeſty deſiring, that, if any of theſe young people, ſo admitted to reſide in Turkey for the benefit of trade, ſhall commit any acts of libertiniſm, or acts of reproach and ſcandal, that may bring any diſhonour upon the French nation, or draw upon it's ſubjects any oppreſſion on the part of the Turks: if there are any ſuch, they are hereby ordered to be ſent back into France, by the firſt ſhipping that ſhall depart from the port, provided it ſhall be ſo reſolved by the deliberation of the body of merchants, which ſhall be aſſembled on theſe occaſions by the conſul; to whom his majeſty injoins the due execution of the reſolutions taken in theſe caſes. His majeſty permits the wives and daughters whoſe huſbands and fathers are eſtabliſhed in the ports of the Levant, to go thither and reſide in taking leave of the deputies of the chamber of commerce, &c. notwithſtanding the prohibitions heretofore iſſued to the contrary, &c.—Given at Paris the 17th of March, 1716.

Signed LEWIS,
And underneath PHELYPEAUX.'

The next royal ordonance that took place was that of Auguſt 1716, which excludes from all public truſt of adminiſtration, and from the aſſemblies of the body of the French nation in the ports of the Levant, ſuch French merchants who ſhall there marry maids or widows born in the dominions of the Grand Seignior; and excludes, likewiſe, all thoſe who are under 30 years of age, from all public truſts of adminiſtration, who ſhall marry, without the conſent of the parents, even any French young woman.

'His majeſty being informed that the children of merchants who are permitted to reſide in the Levant, in order to train them betimes to the arts of commerce, generally contract improper marriages, either with maids or widows born ſubjects of the Grand Seignior, or even with the French, the conſequence whereof commonly proves diſadvantageous to the families of theſe young people, as well as to the diſhonour of the French nation: which his majeſty being deſirous to prevent, and conſidering the deliberation of the ſheriffs and deputies of the chamber of commerce of Marſeilles, of July laſt, approved by the Sieur Arnoul, inſpector of the ſaid commerce: his majeſty, with the advice of Monſ. the duke of Orleans, regent, hath ordained, and doth hereby ordain, that, from the day of the publication of this preſent ordonnance, the French merchants eſtabliſhed in the ports of the Levant, who ſhall contract marriage with maidens or widows born in the dominions of the Grand Seignior, ſhall be rendered incapable of every public truſt and adminiſtration of the body of the French nation, even from the privilege of admiſſion into their aſſemblies. His majeſty ordains, alſo, that thoſe of the ſaid merchants who are not 30 years of age, and ſhall marry, without the conſent of their parents, even any French maiden, ſhall likewiſe be excluded from all public truſts. His majeſty commands the Sieur marquis de Bonnac, his ambaſſador extraordinary at the Ottoman Port, and the French conſuls and vice-conſuls in the port of the Levant, duly to obſerve the execution of the preſent ordonnance, and that it may be made public, and regiſtered among the archives of the chamber of commerce at Marſeilles, and in the Chancery of the ſeveral ports of the Levant and Barbary, that no one may be ignorant thereof. Given at Paris the 11th of Auguſt, 1716.

Signed LEWIS,
And underneath PHELYPEAUX.'

A royal ordonnance, forbidding all the ſubjects of France, and others, trading in Turkey under their protection, to purchaſe any thing taken from the Turks by the Malteſe corſairs, or by any other. March 1718.

'His majeſty being informed that the Malteſe corſairs, and others who are at war with the Grand Seignior, frequently ſell the prizes which they have taken from the Turks to French traders and navigators in the ports of the Levant, and to the end that this kind of traffic may not prove highly injurious in it's conſequences, by bringing oppreſſions upon the body of

merchants of the French nation ſettled in the Turkiſh ports: all which his majeſty being deſirous to prevent, doth thereby, with the advice of the duke of Orleans, his uncle regent, expreſsly forbid all his ſubjects, and all other merchants in Turkey under his protection, from buying of the ſaid corſairs, directly or indirectly, any of the effects taken by them from the Turks, on pain of confiſcation of the ſaid effects, and a fine of 3000 livres: his majeſty commands the Sieur marquis de Bonnac, his ambaſſador extraordinary at the Ottoman Port, and all conſuls of the French nation in the Levant, to make public the preſent ordonnance, that no one may be ignorant thereof, and to have all due regard to it's execution. Given at Paris the 22d of March, 1718.

Signed LEWIS,
And underneath PHELYPEAUX.'

A royal ordonnance, forbidding all captains of French ſhips and veſſels to embark in the Levant any Frenchman or foreigner, without permiſſion firſt had and obtained in writing, from the king's ambaſſador at Conſtantinople, or the conſuls of the ports.—October 24, 1719.

'His Majeſty being informed that the captains of French ſhips and veſſels which navigate in the ports of the Levant and Barbary, receive on board Frenchmen and foreigners, who ſometimes embark, to avoid the conſequences of bankruptcy, or other miſconduct of which they may have been guilty in the ſaid ports, which might draw grievances on the French nation, and moleſt it's commerce: his majeſty, judging proper to provide againſt ſuch-like inconveniencies, doth, by and with the advice of the duke of Orleans, regent, expreſsly forbid all captains, and maſters of French ſhips and veſſels, which navigate to the ports of the Levant and Barbary, to embark on board any perſons, under pretence of paſſage, be they either Frenchmen, or of any other nation, without the conſent firſt had and obtained in writing, from his ambaſſador at Conſtantinople, or the conſuls of the ports from whence they ſhall embark, on the penalty of a fine of 500 livres, and alſo to anſwer perſonally for the conſequences of ſuch embarkation; deſiring that, if any one unknown to them, and without their privity, ſhould get on board while they are under ſail, they ſhould be obliged, under the ſame penalties, to put ſuch perſon on ſhore, and ſend him to the conſul of the place where he might the ſooneſt land; and ſuch conſul ſhall be obliged to apprize him at the port where the eſcape ſhall have been made.—His majeſty orders his ſaid ambaſſador and conſuls not to grant thoſe permiſſions except to perſons not ſuſpected of the circumſtances beforementioned, but not to refuſe the ſame to the French, nor foreigners, without good reaſons, whereof they ſhall inform the council of the marine, and deliver diſpatches with charges.—His majeſty injoins and commands the Sieur Bonnac, his ambaſſador at the Ottoman Port, and the conſuls at the ports of the Levant and Barbary, to publiſh and regiſter the preſent ordonnance wherever needful, &c. Given at Paris the 24th of October, 1719.

Signed LEWIS,
And underneath FLEURIAU.'

An arrêt of the royal council of ſtate, in relation to the eſtabliſhment of a duty in favour of the chamber of commerce at Marſeilles, laid upon merchandizes coming from the Levant, charged with the payment of the appointments of the conſuls.—September 2, 1721.

'The king, being in council, ordains, that the conſuls of the ports of the Levant and of Barbary ſhould receive the duties granted to them by the arrets of the 10th of January, 1718, in the ſame manner, and as they had enjoyed them before the arrêts of the 21ſt and 24th of April, 1720; by means of which duties the conſuls ſhould be charged with the ſame expences wherewith they were charged before the ſaid arrêts: his majeſty having conſidered the deliberations of the ſheriffs and deputies of the chamber of commerce of Marſeilles, in their aſſembly of the 9th of April, 1721, by which they agreed to petition his majeſty to permit them to take upon themſelves the government of the conſulſhips, upon the following conditions: That the merchandizes which ſhall be laden in the ports of the Levant, Morea, and Barbary, for France, and which paid 3 per cent. in ſome ports, and 2 per cent. in others, ſhall pay no more after the 1ſt of May; viz. the firſt 2 per cent. and the others 1 ½ per cent. which duties of 2 per cent. and 1 ½ per cent. ſhall be paid in Marſeilles, at the chamber of commerce, by the ſhips and veſſels which ſhall arrive there, according to the value of the ſaid merchandizes, at the time of their arrival.—That the merchandizes for the account of foreigners deſigned for Italy, and other countries, ſhall pay the ancient duties of conſulage.—That the value ſhall be aſcertained of the merchandizes, by the deputies and French merchants, in preſence of the conſuls and vice-conſuls of every port in the Levant, which ſhall be loaded there for the account of foreigners deſigned for the ports of Italy, and other countries, in order to ſettle the ſaid duty of conſulage, paid in the port of departure, into the hands of the proper officers, according to the form preſcribed by the arrêts of the council of the 24th of November, 1691, the 27th of January, and 8th of September, 1694.—The chamber of commerce in every port of the Levant ſhall keep neceſſary funds, for the payment of the appointments of the conſuls, and other officers, from the 1ſt of May 1721, and alſo for the other expences of the conſulſhip; which funds ſhall be ſent to the deputies of each port, and by them converted into current money in the ſaid ports; in which money the appointments ſhall be paid to the ſaid conſuls, and other officers, upon the footing of 156,463 livres per annum.—And, in order to raiſe the funds requiſite for the current expences of the conſulſhips, his majeſty permits the chamber of commerce to borrow at Marſeilles to the amount of 100,000 livres, at the rate of 5 or 6 per cent. intereſt at moſt, with intent to avoid the engagements which might be made in the Levant at a higher rate, the leaſt of which are commonly at 1 per cent. per month: his majeſty, judging the ſaid demands and offers of the chamber of commerce of Marſeilles conſiſtent with the benefit and proſperity of commerce, and deſiring to procure whatever might contribute thereunto; and, being in council, hath ordained, and doth ordain, the following articles, with the advice of Monſ. the duke of Orleans, regent, without any regard to the arrêt of the 21ſt of January, 1721, or to the demands and offers of the chamber of commerce of Marſeilles, reſolved on in their deliberations of the 9th of April following:

ARTICLE I.

That the merchandizes which ſhall be laden for France in the ports of the Levant, Morea, and Barbary, and which paid 3 per cent. in ſome places, and 2 per cent. in others, ſhall pay no more for the time to come, after the 1ſt day of January, 1722, than the duties of 2 per cent. in the ports where they paid 3 per cent. and 1 ½ per cent. in thoſe where they paid 2 per cent. which duties ſhall be paid in Marſeilles, at the chamber of commerce, by the veſſels which ſhall arrive there, according to the value of the merchandizes at the time the veſſels arrive.

II.

That the ſame duties ſhall be paid upon all the merchandizes of the veſſels which ſhall finiſh their voyages in Italy, or elſewhere, into the hands of the deputies of the nation reſiding in the ports of the Levant, and according to the value of the merchandize, at the time of their departure.

III.

That the merchandize for the account of foreigners, deſigned for Italy and other countries, ſhall pay the ancient duty of conſulage.

IV.

That there ſhall be made, by the deputies and French merchants, in the preſence of the conſul or vice-conſul of each port, an eſtimation of the merchandizes which ſhall be laden for the account of foreigners, and deſigned for the ports of Italy, and other countries, in order to lay the duties of conſulage paid in the port at the departure of the veſſel, as preſcribed by the arrêts of council of the 24th of November, 1691, 27th of January, and 8th of September, 1694.

V.

That the chamber of commerce ſhall always have in each port competent funds, for the payment of the appointments of conſuls, and other officers, from the ſaid 1ſt of January, 1722, as well as for other expences of the conſulage; which funds ſhall be ſent to the deputies of each port, and by them converted into the current money of the ſaid port; in which money they ſhall pay the ſaid appointments to the conſuls, and other officers, by making the computation according to livres Tournois of France: ſo that, by reaſon of the equality of the monies, they may receive neither more or leſs than what is appropriated to them: to which end his majeſty revoketh the arrêt of his council, of the 21ſt of January laſt.

VI.

His majeſty ordains, that, on the ſaid firſt day of January, 1722, the conſuls of the Levant, Morea, and Barbary, ſhall ceaſe to receive the duties of conſulage, as they did from the 1ſt of May, 1721, and forbids them to demand any 'till after the ſaid day, on penalty of reſtoring the ſums ſo received, and of loſing their places.

VII.

And, to the end that the ſaid chamber of commerce at Marſeilles may be enabled to raiſe the funds neceſſary for the expences of the conſulſhip, his majeſty permits them to borrow, in the ſaid city of Marſeilles, to the amount of 100,000 livres, at the rate of 5 per cent. intereſt at moſt, deviating, in this reſpect, from the former regulation: and all bills neceſſary to this purpoſe ſhall be expedited, in order to avoid engagements in the Levant at a greater rate.—Given at the royal council, his majeſty being preſent, held at Paris the 2d of September, 1721.

Signed FLEURIAU.'

The due execution of this arrêt was inforced the ſame day, by a proclamation ſigned by the king.

L E V

An arrêt of the royal council of ſtate, of May 1722, laying a penalty upon the captains and owners of ſhips coming from the Levant to Marſeilles, who ſhould miſrepreſent the weight and quality of the merchandizes wherewith they are loaded, or ſhould not repreſent them at all.

'It being repreſented to the king, that the arrêts of council of the 2d of September, and the 28th of April, 1721, by the former of which, to commence the 1ſt of January laſt, it is ordained, that the merchandizes which ſhall be laden in the ports of the Levant, Morea, and Barbary, for France, on the veſſels that may arrive at Marſeilles, ſhould pay to the chamber of commerce 2 per cent. for thoſe coming from ſome of the ſaid ports of the Levant, and 1 ½ per cent for thoſe coming from others, &c.—And by the other arrêt, to commence the 1ſt of June next, his majeſty hath alſo ordained, that the ſaid merchandizes ſhould pay 3 per cent. for thoſe coming from the ſaid ports, which ought to pay 2 only, and 2 per cent. for thoſe coming from the other ports, that ought to pay but 1 ½; and his majeſty underſtanding that the receipt of the firſt duties were inſufficient to ſupport the expence of the commerce, that the chamber of Marſeilles had obliged themſelves to pay: his majeſty obſerving, alſo, that by the ſaid arrêts, there are no penalties inflicted againſt the captains and owners of the ſaid merchandizes, who ſhall conceal the quality or the weight, or who ſhould not report them, hath judged it neceſſary, to prevent the like abuſes, to ordain, and doth hereby ordain, that the captains and owners of the merchandize ſhipped in thoſe veſſels coming from the ports of the Levant to Marſeilles, who ſhall have diſguiſed the quality or quantity of their merchandizes, or not reported them, ſhall pay to the chamber of commerce at Marſeilles, inſtead of the duty of 3 per cent. or 2 per cent. as ſhall be due, 20 per cent. on the merchandize ſo miſrepreſented, and not reported, upon the foot of the valuation that the duty of 3 or 2 per cent. ſhould have been paid, &c.—Given in the council of ſtate, his majeſty being preſent, the 3d of May, 1722, and

Signed FLEURIAU.'

This arret was inforced by a royal declaration of the ſame date,

Signed LEWIS,
And underneath FLEURIAU.'

A royal ordonnance, regulating the appointments that the firſt deputies of the French nation are intitled to in the ports of the Levant and Barbary, if, in caſe of death or abſence of the conſuls, they perform the offices of the conſular power.—April 1723.

'His majeſty having regulated, by his ordonnance of 1681, concerning the marine, the conſuls of the French nation in foreign countries, that, the conſulſhip being vacant, the ſenior of the deputies of the nation who officiates, ſhall exerciſe the functions of the conſul, according to the proviſion made for that purpoſe; and intending to ſettle the ſalaries for the firſt deputy, while he exerciſes the ſaid office: his majeſty doth will and ordain, that the moſt ancient of the deputies of the nation in the ports of the Levant and Barbary, who executes the conſular office in caſe of the death or abſence of the conſul, ſhall enjoy, during that time, two-thirds of the appointments appropriated to the conſul of the ſaid port, being ſubject to the ſame expence as the conſul himſelf is; and that the other one-third of the appointments ſhall remain in caſh in the chamber of commerce at Marſeilles, in order to be employed in the ordinary expences of the ſaid chamber, &c. Given at Verſailles the 27th of April, 1723.

Signed LEWIS,
And underneath FLEURIAU.'

A royal ordonnance, revoking thoſe of the years 1789, 1613, and 1719, and the prohibitions therein contained; in conſequence whereof it permits all Frenchmen reſiding in the ports of the Levant, Barbary, and Italy, to load merchandizes for their account upon FOREIGN BOTTOMS.—January 1727.

'His majeſty cauſing to be laid before him the ordonnances made the 7th of January, 1689, the 5th of April, 1713, and the 10th of July, 1719, by which he forbids the French reſiding in the ports of the Levant, Barbary, and ports of Italy, to lade any merchandizes, either for their own account, or that of other nations, upon foreign ſhipping, which do not carry French colours, under the penalties therein mentioned: and being informed that the execution of the ſaid ordonnances has occaſioned many incidents injurious to the welfare of the commerce of his ſubjects in the ſaid ports of the Levant; againſt which judging it requiſite to provide, his majeſty hereby revoketh the ſaid ordonnances of the 7th of January, 1689, and of the 5th of April, 1713, and of the 10th of July, 1719, and the prohibitions contained therein: and, in conſequence thereof, hath permitted, and doth by theſe preſents permit all Frenchmen, his ſubjects, reſident in the ports of the Levant, Barbary, and ports of Italy, to lade merchandizes, either for their own account, or that of other nations, upon foreign bottoms, as they did, or might have done, before the ſaid ordonnances were enacted; which ordonnances ſhall remain void, and of no effect or authority, after the 1ſt day of March next enſuing. His majeſty injoins and commands the Sieur viſcount D'Andrezel, his ambaſſador at the Ottoman Port, and the ſeveral conſuls of the ſaid ports of the Levant, Barbary, and ports of Italy, to make public, and regiſter the preſent ordonnance, whereever it may be needful. He commands alſo the officers of the admiralty to make the ſame public, and regiſter it, and have due regard to it's execution.—Done at Marly the 7th of January, 1727.

Signed LEWIS,
And underneath PHELYPEAUX.'

A royal ordonnance, regulating what ſhould be regarded in the ports of the Levant and Barbary, on the part of the Jews, and other foreigners, who ſhall enjoy there the protection of France.—February 4, 1727.

'His majeſty being informed of the abuſes committed in the ports of the Levant and Barbary, to the prejudice of his ſubjects, by the different manner in which the conſuls grant the Jews, and other foreigners, his protection, judges it neceſſary to make certain and plain regulation for ſuch protection; and, to that end, ordaineth as follows:

ARTICLE I.

That no Jew, or other foreigner, a ſubject of the Grand Seignior, or reſident in his dominions, ſhall be received under the protection of France, until he hath requeſted and obtained the ſame from the conſul, and the body of the French nation aſſembled with him; which conſul ſhall not deliver his letter of protection to the petitioners, but in conſequence of the reſolutions taken for that intent.

II.

Thoſe who ſhall ſollicit ſuch protection, ſhall give reſponſible ſecurity to anſwer for their conduct; and the ſecurity received by the conſul of the nation ſhall be recorded in the Chancery of the conſulſhip.

III.

The Jews, and other foreigners, ſo protected, ſhall carry on no commerce whatſoever of the Levant into France, either directly or indirectly, on pain of confiſcation of their ſhips and merchandize, and a fine of 3000 livres againſt the captain.

IV.

His majeſty forbids all traders, paſſengers, captains, and maſters of French ſhips and veſſels, to lend their names to the protected and other foreigners, in order to carry on the commerce of the Levant and Barbary in France, under the like pains and penalties, and a fine of 3000 livres.

V.

His majeſty likewiſe forbids all Frenchmen and foreigners reſiding in the kingdom to receive any merchandize, proviſions, or other effects belonging to foreigners reſiding in the Levant and Barbary, and coming from the ſaid countries, under the penalties before inflicted.

VI.

His majeſty alſo forbids all perſons reſiding in France to ſend any effects or merchandize to foreigners protected, who reſide in the Levant and Barbary, either for their own account or for that of the protected, under the ſame penalties above inflicted.

VII.

No Jew, or other foreigner, reſident in the Levant and Barbary under the protection of France, ſhall receive the conſignments nor commiſſions of ſhips and merchandizes coming from France into the Levant, or into Barbary, on pain to ſuch who are not ſubjects of the Grand Seignior, but protected by France, of being ſent back into their own countries by the conſul of France, in virtue of the reſolutions of the nation aſſembled; and in relation to the rajas, or ſubjects of the Grand Seignior, of being for ever excluded protection; and, in both caſes, the penalty is confiſcation of the merchandizes that ſhall be proved to be ſo ſent and conſigned, as aforeſaid.

VIII.

The captains, maſters, officers, and paſſengers of marine ſhipping ſent from France to the Levant, or Barbary, ſhall not be addreſſed or conſigned to the perſon ſo protected as aforeſaid; reſident in the ſaid ports of the Levant, for the commiſſion, barter, or exchange of their merchandize and effects, under a fine of 1500 livres penalty for every ſuch-like contravention.

IX.

His majeſty, nevertheleſs, permits the captains, officers, and paſſengers of ſhipping ſent from France, to ſell to the ſaid protected perſons the merchandizes which they have carried for their account, and to purchaſe or take, in barter or exchange, ſuch other merchandizes as they ſhall judge proper; on condition, however, that for theſe ſales, barters, or purchaſes, the ſaid captains, officers, and paſſengers, ſhall be obliged to make uſe of, at their own option, the mediation of a

French

L E V

French merchant, as their factor, which factor cannot act for them before he has duly informed the conſul and the deputies of the nation, nor pretend but to one half of the ordinary commiſſion.

X.

All captains, and maſters of ſhips, who ſhall go to the Levant or Barbary, and ſhall not have the commiſſion of the cargo of imports or exports, nor any peculiar addreſs, ſhall be obliged to apply to a French merchant, who is of the body of the nation, and who ſhall regard what is preſcribed by the preceding article.

XI.

His majeſty wills and ordains, that all the confiſcations and fines which may happen ſhall be applied as follow, viz. thoſe incurred in the ports of the Levant and Barbary, one-third to the informer, another third to the redemption of French ſlaves, and the remaining third to the national expences of the Levant port; and, as to thoſe fines and confiſcations which happen in France, one-third ſhall go to the informer, one-third to the hoſpital of St. Eſprit of Marſeilles, and the other to the profit of the chamber of commerce of the ſaid city.

XII.

His majeſty permits Jews and foreigners in the Levant and Barbary to continue, as uſual, to ſend and conſign their merchandizes into Italy, and other foreign countries, either in their own name, for their own proper account, to their French or foreign friends reſiding in the ſaid countries, and to make uſe of the ſhips carrying his majeſty's colours; whereon the neutral ſtates of Italy, and other foreigners, may alſo load, in their reſpective countries, ſuch merchandizes as they think proper, and addreſs them to their correſpondents, be they either French, Jews, or other foreigners, eſtabliſhed in the Levant or Barbary, under the protection of France.

XIII.

His majeſty further wills and ordains, that there ſhall be no alteration in the peculiar cuſtoms and uſages which have been obſerved in certain ports, with reſpect to the ceremonial, the police, and method of paying the duties to the Grand Seignior, by the foreigners protected by France. His majeſty injoins and commands the Sieur le Bret, counſellor in his councils, firſt preſident and intendant of juſtice, police, and of the finances in Provence, and of the commerce of the Levant; and alſo the Sieur viſcount D'Andrezel, his ambaſſador at the Ottoman Port, and all the conſuls of the ports of the Levant and Barbary, to cauſe the preſent ordonnance to be publiſhed and regiſtered, wherever needful, and to have due regard to the due execution thereof.—Done at Marly the 4th of February, 1727.

Signed LEWIS,
And underneath PHELYPEAUX.'

A royal ordonnance, excluding from the liberty of trading in France, and from the privilege of the body of the nation, ſuch French who ſhall marry in the ports of the Levant, and the ſons of Frenchmen born in the ſaid ports, whoſe mothers are foreigners.—Auguſt 1728.

'His majeſty cauſing to be laid before him his ordonnances of the 11th of Auguſt, 1716, and the 20th of July, 1726, by the former of which it is ordained, that the French merchants eſtabliſhed in the ports of the Levant, who ſhould marry with the girls or widows born in the dominions of the Grand Seignior, ſhall be excluded from all public truſt and adminiſtration of the body of the nation; and, by the ſecond, they are prohibited from marrying, without his majeſty's permiſſion, with foreigners, ſubjects or not ſubjects of the Grand Seignior, or the ſtates of Barbary, not even with French by extraction, or thoſe born in the ſaid ports, on pain of being ſent back to France, with their ſaid wives: it having been found that the penalties inflicted by the ſaid ordonnances have not been ſufficient to prevent ſuch marriages of the French in the Levant, nor to remedy thoſe inconveniencies which ariſe therefrom, to the prejudice of the nation and it's commerce: his majeſty being informed that thoſe in particular who are born of Frenchmen and the women of the country, continue to marry, without ſubmitting to the regulations which forbid the ſame; that theſe ſame Frenchmen, knowing no other parents than thoſe which they have in that country, take their advice, aſſociate with the protected foreigners, and others, when their fathers are dead; lend their names frequently to the ſaid foreigners to trade in France, and thereby furniſh them with the means of evading the prohibitions made by divers regulations, and eſpecially by that of the 4th of February, 1727, of carrying on trade, either directly or indirectly, from the ports of the Levant, into the ports of the kingdom: againſt which his majeſty judging neceſſary to provide, after having ſeen the reſolution of the chamber of commerce of Marſeilles, and the ſentiments of the Sieur Le Bret, inſpector of the commerce of the Levant, his majeſty hath ordained, and doth will and ordain as follows:

ARTICLE I.

His majeſty expreſsly forbids all Frenchmen, of what quality or condition ſoever, who ſhall contract marriage for the future in the ports of the Levant and Barbary, in violation of his ordonnances, to carry on any commerce in France, either directly or indirectly, on pain of confiſcation of their merchandize, and a fine of 3000 livres for every ſuch violation, in caſe of repetition of the ſame.

II.

His majeſty injoins the ſame prohibitions and penalties on the ſons of Frenchmen born in the ſaid ports of the Levant or Barbary, whoſe fathers are deceaſed, and whoſe mothers are foreigners, not to trade, directly or indirectly, in France, unleſs they have reſided from thence ſix years; after which they may return to the ports of the Levant, and reſide there on the ſame conditions as the French born in the kingdom.

III.

His majeſty ordains that the ſaid French who ſhould marry in future in the ſaid ports of the Levant, in violation of the ſaid ordonnances, and the ſons of Frenchmen whoſe fathers are dead, and mothers are foreigners, and who ſhall not have reſided ſix years in the kingdom of France, ſhall be excluded the liberty of aſſiſting at the national aſſemblies, and ſhall not enjoy any privilege belonging to the body of the nation.—His majeſty injoins and commands that the Sieur marquis De Villeneufe, his ambaſſador extraordinary at the Ottoman Port, alſo the French conſuls, and vice-conſuls in the ſaid ports of the Levant and Barbary, and the ſheriffs and deputies of the commerce of Marſeilles, have due regard, every one in his peculiar province, to the execution of the preſent ordonnance: and that the ſame may be made public, and regiſtered in the Chanceries of the ſaid ports, and among the archives of the chamber of commerce at Marſeilles, that no one may be unacquainted therewith.—Done at Fointainbleau, the 25th of Auguſt, 1728.

Signed LEWIS,
And underneath PHELYPEAUX.'

A royal ordonnance, concerning the patent of health that the captains and maſters of ſhips ſhould take, who traffic in the ports of the Levant and Barbary.—September 1730.

'His majeſty being informed that the captains and owners of ſhips who traffic in the ports of the Levant and Barbary, inſtead of having duly inſpected, in every port where they arrive, the patent of health, which they ſhould take in the firſt of the ſaid ports where they began their loading, conformably to the ordonnance of the 26th of February, 1702, take ſeveral patents of health in the different ports into which they put, and do not preſent to the intendant of health at Marſeilles and Toulon, when they return, only thoſe patents which occaſion them to be treated more favourably with reſpect to their quarantine; which prevents the ſaid intendants from having knowledge of the true ſtate of health in the ports wherein the ſaid ſhips have had communication, and may thereby bring the plague into the kingdom: to prevent which calamity, his majeſty, judging it neceſſary to extend the regulations of the ordonnance of the 26th of February, 1702, hath ordained, and doth ordain as follows:

ARTICLE I.

All captains and maſters of ſhips, who ſhall depart from one port of the Levant and Barbary, wherein they have began to take in their loading of merchandize or proviſions, embark paſſengers, or receive their ballaſt, in order to load elſewhere, ſhall take their patent of health from the conſul or vice-conſul, who ſhall ſignify the true ſtate and condition of the ſaid port, with reſpect to it's healthfulneſs.

II.

The ſaid captains and maſters of ſhips ſhall not part with the firſt patent 'till their arrival in the ports of Marſeilles or Toulon, where they ſhall be obliged to repreſent the ſame to the intendants of health, on pain of ſix months impriſonment, and being deprived for ever of their freedom and privileges: to which end they ſhall be blotted out of the regiſters of captains and maſters, and ſhall not, for the future, ſerve again in the ſaid capacity, under any pretence whatever.

III.

If, in the courſe of their voyage, they touch at one or more ports in the Levant, or others of the Mediterranean, they ſhall return this firſt patent to the conſuls or vice-conſuls in the ſaid ports, to be examined, and afterwards given to the ſaid captains and maſters, without the ſaid conſuls and vice-conſuls retaining the ſame, and oblige them to take out a new one, under any pretence whatever, on pain of their being recalled.

IV.

The patents of health ſhall be examined by the ſaid conſuls and vice-conſuls, as ſoon as ever required by the captains and maſters of ſhips, that their voyage may not be retarded.

V.

The conſuls and vice-conſuls ſhall declare, in their viſa, the real ſtate and condition of health in the places of their reſidence, and ſhall inſert therein the intelligence which they have of the diſtempers that prevail in the other neighbouring places, on pain of being deprived of their poſt of truſt.

VI.

His majeſty forbids, under the ſame penalty, the ſaid conſuls and vice-conſuls, and their Chanceries, to demand any du-

ties,

ties, or fees, for the viſa of the patents of health of thoſe ſhips which ſhall be involuntarily obliged to touch at the ports of the Levant and Barbary, without loading there: and with reſpect to thoſe who, having made a part of their loading in one port, ſhall touch at other ports, to take in merchandize, proviſion, or paſſengers, the captains and maſters of ſhips ſhall be obliged, in that caſe only, to pay 30 ſols for the viſa of their patent of health.

VII.

If after a captain or maſter of ſhip, having his patent examined in one port, ſhall be neceſſited to ſtay there, either by being wind-bound, or from other unforeſeen cauſe, he ſhall be obliged before his departure, to preſent his patent of health again to the conſul or vice-conſul, of the ſaid port, to ſignify upon the ſpot, and without expence, the accidents which have happened in the interval with regard to health.

VIII.

His majeſty expreſsly forbids the ſaid captains and maſters of ſhips to preſent, on their arrival in the ports of Provence, any other patent than that which has been delivered to them at the place of their firſt departure; on the back of which ſhall be the viſa, which has been endorſed at the places where they have touched during their voyage, under the ſame penalty of degradation, and ſix months impriſonment beſide.

His majeſty enjoins and commands Monſ. the count of Toulouſe, admiral of France, to have a ſtrict regard to the execution of the preſent ordonnance, to cauſe it to be read, publiſhed, and regiſtered, wherever needful; and likewiſe the Sieur le Bret, counſellor of ſtate, intendants of juſtice, police, and of the finances, in Provence, and of the commerce of the Levant, and alſo the ſheriffs and deputies of the chamber of commerce at Marſeilles, and the intendant of health, to pay due regard hereunto.—The conſuls and vice-conſuls of the Levant and Barbary are alſo enjoined to conform to the ſame.—Done at Verſailles, the 6th of September, 1730.

Signed LEWIS,
And underneath PHELYPEAUX.'

' The count of Toulouſe, admiral of France, having duly attended to the king's ordonnance above addreſſed to us, with orders to ſee the ſame duly executed: we order and command all under our authority to conform thereunto, every one according to his ſtation; and alſo the officers of the admiralty of Provence to regiſter them among their records.—Done at Rambouillet, the 8th of September, 1730.

Signed L. A. DE BOURBON,
And underneath by his royal highneſs L'ENFANT.

The king's declaration, ſignifying that no cabbin-boy * ſhall be left in the ports of the Levant and Barbary.—October the 12th, 1730.

' LEWIS, by the grace of God, king of France, to all whom theſe preſents concern, &c. We having been informed that many cabbin-boys, employed in the commerce of the Mediterranean, remain in the Levant and Barbary, by reaſon of the bad treatment which they have received on board thoſe ſhips wherein they have been embarked, and that the Muſſelmen, having found it very eaſy to ſeduce them, by reaſon of their infancy, and to influence them to the religion of the country: his majeſty deſiring to remedy a grievance that our zeal for religion, and regard to our ſubjects, do not permit us to ſuffer: for theſe and other cauſes us hereunto moving, of our certain knowledge, full power, and royal authority, we have made, and do make by theſe preſents, ſigned by our hand, expreſs prohibition to all captains and maſters of ſhips, to maltreat, or ſuffer to be maltreated by the ſhip's crew, the cabbin-boys who ſhall have embarked on board the ſhips which they command, on pain of being puniſhed, according to the exigency of the caſe: we allow only that theſe cabbin-boys ſhall ſubmit to the ordinary and uſual puniſhment: we alſo forbid the ſaid captains and maſters to ſuffer any of the ſaid boys, when in the ports of the Levant, to go on ſhore, without the guard of an officer or ſailor, in whom confidence may be repoſed, on the penalty of 300 livres fine for every ſuch boy, who, for want of this precaution, ſhall be ſtopped in the ſaid ports. We enjoin and command the conſuls, vice-conſuls, and other perſons charged with our affairs in the ſaid ports of the Levant and Barbary, to ſignify, among the liſt of the ſhip's crew, the cabbin-boys who ſhall be there detained, and what occaſioned the ſame, and whether they have been demanded by the ſaid captains and maſters, and whether, by the neglect of the ſaid captains and maſters in reporting the ſame in the liſt of the ſhip's crew, any have been detained: we will and ordain, that ſuch ſhall be cenſured and reputed as having ſuffered the ſaid boys to go on ſhore without a perſon of truſt to attend them; and therefore they ſhall be liable to the ſaid fine of 300 livres penalty: we ordain, likewiſe, that violations againſt the preſent declaration ſhall be proſecuted at the requeſt of our ſollicitor of the admiralty, &c.'

* Our reaſon for taking notice of this declaration is, to give an idea how minutely this rival nation watches the meaneſt thing that tends to the ſecurity of their commerce, and the brood of their ſeamen.

A royal ordonnance, concerning the depoſits in the Chanceries of the conſulſhips of the Levant and Barbary.—September 11, 1731.

' His majeſty being informed that there are depoſits in truſt in the Chanceries of the conſulſhips of the Levant and Barbary, of different natures, which are not always reclaimed, either by thoſe who have made them, or by their creditors or their heirs; and that ſome conſuls have diſpoſed of their ſaid depoſits, inſtead of keeping them in the manner required by the ordonnance of the 4th of December, 1691.—His majeſty, reſolving to eſtabliſh a better order in regard hereunto, ordains as follows:

ARTICLE I.

All ſums of money, merchandize, or other effects, which ſhall be depoſited in the Chanceries of the conſulſhips of the Levant and Barbary, ſhall, conformably to their ordonnance of the 4th of December, 1691, be kept in a place of the conſular houſe, appointed for that purpoſe, locked up with three different keys, one of which ſhall remain in the hands of the chancellor, another with the conſul, and a third with the principal deputy of the nation, to the end that the ſaid effects ſhall not be drawn out from the place of depoſit, excepting in their preſence.

II.

The conſuls ſhall ſignify, at the end of every year, to the ſecretary of ſtate for the department of their marine, a ſtate of the depoſits which ſhall remain in their Chanceries, mentioning, in the ſaid ſtate, the day and year when they were ſo depoſited.

III.

His majeſty ordains, that all the depoſits that ſhall be found in the chanceries of the conſulſhips of the Levant and Barbary, and which have been there depoſited for 10 years, ſhall be drawn out in one year, reckoning from the day of the publication of the preſent ordonnance in the ſeveral ports of the Levant.

IV.

His majeſty alſo ordains, that thoſe of the ſaid depoſits made leſs than 10 years, and thoſe that ſhall be afterwards made, ſhall be alſo drawn out in 10 years, reckoning from the day that they were depoſited.

V.

His majeſty ordains that the depoſits which ſhall not have been reclaimed, according to the 3d and 4th articles of the preſent ordonnance, ſhall be ſent by the conſuls of the chamber of commerce at Marſeilles, in order to be remitted and divided by the ſaid chamber, one half to the hoſpitals of St. Eſprit and De La Charité, of the city, for the benefit of the poor, upon condition, nevertheleſs, to deliver up the value thereof to ſuch perſons who have a right to reclaim them.

His majeſty commands the Sieur Bret, counſellor of ſtate, firſt preſident of the parliament of Aix, intendant of juſtice, of the police, and the finances of Provence, and of the commerce of the Levant, to have ſtrict regard to the execution of the preſent ordonnance, which ſhall be read, publiſhed, and fixed up wherever needful, that no one may pretend ignorance thereof.—His majeſty alſo commands the Sieur marquis De Villeneufe, counſellor of ſtate, his ambaſſador at the Ottoman Port, to have ſtrict regard alſo to the execution of the ſame.—He enjoins the chamber of commerce at Marſeilles, and the conſuls of the ſeveral ports of the Levant, to conform hereunto.—Done at Marſeilles, the 11th of September, 1731.

Signed LEWIS,
And underneath PHELYPEAUX.'

Regulations for the impoſts of conſuls and vice-conſuls of the ports of Negropont, Cavalle, Rhodes, Meteline, Scio, Milo, Tine, and Micone.—Of February the 28th, 1732.

' His majeſty being informed of the different impoſts of the conſuls and vice-conſuls of the French nation, eſtabliſhed in the ports of Negropont, Cavallé, Rhodes, Meteline, Scio, Milo, Tine, and Micone, laid upon the ſhipping which traffic under his flag; and having been informed that this revenue has not only little proportion to the attendants and expences of the ſaid conſuls and vice conſuls (ſome having thereby too great an advantage, and others not ſufficiently indemniſied) but alſo that the power of the ſaid conſuls and vice conſuls to receive ſuch revenue is not ſufficient to authorize them, nor intelligible enough for their direction, whereby differences frequently ariſe from the conſuls and vice-conſuls, and the captains and merchants of ſhips liable to ſuch impoſts: his majeſty, judging neceſſary to provide againſt the ſame, ordains as follows:

NEGROPONT.

The conſuls of the French nation eſtabliſhed at Negropont ſhall be intitled to a duty of 2 per cent. con ſlage on all merchandizes

L E V

chandizes and proviſions of the growth of the ſaid country, which ſhall be laden for the account of Frenchmen, or for that of foreigners, upon all ſhips carrying French colours, let the ſaid merchandize and proviſions be deſtined either for France or any foreign country in Chriſtendom.

All French ſhips going on any expedition freighted by the ſubjects of the Grand Seignior, or other foreigners, if they be laden for the account of the captain or maſter, ſhall pay to the ſaid conſul a duty of two piaſtres for anchorage, when they embark or debark merchandizes, proviſions, or paſſengers in the ports depending on the ſaid conſulſhip; or when they bring proviſion of any kind whatſoever, his majeſty, forbidding the xaction of the ſaid duty in any other caſe whatſoever.

His majeſty intends that all the ports, roads, and coaſts ſituated within the extent of the government of the pacha of Negropont, ſhall be reckoned to belong to the department of the ſaid conſul, and that all French ſhips which ſhall traffic there ſhall pay the duties before mentioned.

CAVALLE.

The conſul of the French nation eſtabliſhed at Cavalle ſhall alſo be intitled to a conſulage duty of 2 per cent. upon all merchandizes and proviſions of the product of the country which ſhall be laden there for the French account, or for that of foreigners upon ſhips carrying his majeſty's colours, let the ſaid merchandizes and proviſions be intended for France, or any foreign country in Chriſtendom.

All ſhips going on an expedition, which ſhall embark or debark, in the ports dependent on the ſaid conſulſhip, merchandizes, proviſions, or paſſengers, ſhall pay alſo two piaſtres to the conſul as a duty for anchorage, whether they are freighted by the ſubjects of the Grand Seignior, or other foreigners, or laden for the account of captains or maſters.

RHODES.

Ships carrying French colours, which ſhall go directly from the ports of France to Rhodes, and which ſhall unlade their merchandizes, or proviſions, ro which ſhall embark to carry them to France, or any foreign country of Chriſtendom, ſhall pay to the conſul of the ſaid port a duty of anchorage only; which ſhall be of ſeven piaſtres and one half for the ſhips and veſſels with ſquare ſails and of five piaſtres for barks, and all other veſſels with ſmack or triangular ſails.

The cruizers which ſhall load or unload in the ports dependent on the ſaid conſulſhip, as before repreſented, and thoſe which ſhall carry proviſions thither, ſhall pay to the ſaid conſul five piaſtres, without diſtinction of veſſels.

His majeſty intends that the ſaid conſuls ſhall receive the ſame duties on all ſhips that ſhall traffic at Stanchio and other ports dependent on the conſulſhips.

METELINE.

French ſhips which ſhall load in the iſle of Meteline, and it's dependencies, merchandizes and proviſions, to carry either into France, or into the foreign countries of Chriſtendom, ſhall pay to the vice-conſul of the ſaid port, viz. for the veſſels 12 piaſtres, and barks 8 piaſtres.

Cruizers freighted by the ſubjects of the Grand Seignior, and other foreigners, or loaded for the account of the captain or maſter, ſhall pay to the ſaid vice-conſul four piaſtres, without diſtinction of veſſel, when they embark or debark merchandizes, proviſions, or paſſengers in the ports dependent on the ſaid vice-conſulſhip, and when they carry proviſions thither.

SCIO.

The duty of anchorage for the ſhips which, going from the ports of France to Scio, ſhall unlade there, and thoſe which ſhall load in their return to France, or the foreign countries of Chriſtendom, ſhall be paid to the vice-conſul of the ſaid port, at the rate of ſeven piaſtres and a half per veſſel, and five piaſtres per bark.

Cruizers freighted by foreigners, or laden at the riſque of the captains and maſters, as before ſhewn, ſhall pay to the ſaid vice-conſul five piaſtres, all without diſtinction of veſſel, when they load or unload merchandizes, paſſengers, or proviſions, and not otherwiſe.

The vice-conſul ſhall continue to have 400 piaſtres paid him annually, by the French nation at the port of Smyrna, to bear thoſe expences with which he is charged.

MILO.

Veſſels coming from France, which ſhall unlade in the ports dependent on the ſaid conſulſhip, and thoſe which ſhall load there for the ports of France, or others of Chriſtendom; and thoſe cruizers which ſhall load or unload merchandizes, paſſengers, or proviſions, ſhall pay to the conſul of the ſaid port three piaſtres for all duties, without diſtinction of veſſel.

TINE and MICONE.

The conſul of Tine and Micone ſhall receive alſo three piaſtres for the whole duty, as well of ſhips which, coming from France, ſhall unload in the ports of the department, and thoſe which ſhall load to return to France, or other countries of Chriſtendom, as of cruizers, which ſhall take in merchandizes, paſſengers, or proviſions.

GENERAL REGULATIONS for all the ſaid ports.

All the duties before regulated in favour of the conſuls and vice-conſuls, named in the preſent regulation, ſhall be paid once only in the ſame voyage, even when the veſſel ſhall load in ſeveral ports, in the department of the ſame conſul or vice-conſul.

The ſaid conſuls and vice-conſuls ſhall enjoy moreover the duties of Chancery, on the foot whereon they have been regulated in July 1692, on condition of providing thoſe with reaſonable ſalaries who ſhall devote themſelves to the buſineſs of the Chancery, &c.

In conſequence whereof, his majeſty forbids the ſaid conſuls and vice-conſuls, under pain of extortion, and of being deprived of their office, to demand any duty of anchorage, or other, of ſhips which do not arrive at the ports and roads of their department but by force, and only to touch there, and do not lade or unlade any merchandize or paſſengers, nor carry thither proviſions.

In like manner, and under the ſame penalties, he forbids the ſaid conſuls and vice-conſuls to demand any other duties whatever.

His majeſty alſo forbids all captains and maſters of French ſhips, their traders and freighters, to deprive the ſaid conſuls and vice-conſuls of the duties appropriated by the preſent regulation; enjoining them to bring with them their acquittal for the ſame, under pain of four times the ſum, and three months impriſonment.

The captains and maſters of ſhips ſhall continue to pay the Turks the duties eſtabliſhed by cuſtom in favour of the officers, and others of the country; of which duties the ſaid conſuls and vice-conſuls ſhall keep a table in the ſaid Chanceries.

His majeſty enjoins and commands Monſ. the count of Toulouſe, admiral of France, to have ſtrict regard to the execution of the preſent regulation, and cauſe the ſame to be read, publiſhed, and regiſtered, wherever needful, &c.—Done at Marly, the 28th of February, 1732.

Signed LEWIS,
And underneath PHELYPEAUX.'

The ordonnance of December, 1732, regulates the rank and place that the chancellors of the conſulſhip of the ports of the Levant ſhall have in the public ceremonies; which we ſhall paſs over.

An arrêt of the council of ſtate, relating to the merchandizes in pacotilles *, as the French term them, which the captains, ſupercargoes, and paſſengers carry into the Levant, as well for their own account as for that of the freighters, &c. March 1733.

'It having been repreſented to the king in council, that the French merchants eſtabliſhed in the ports of the Levant continue to complain of the infinite prejudice done to the trade of the nation in the ports of the Levant, for the cuſtom of the captains, ſupercargoes, and paſſengers carrying merchandizes in pacotilles, either for their account, or that of their freighters to their addreſs: his majeſty has judged neceſſary to cauſe thoſe memorials to be laid before him that have been ſent on this matter, as well by the Sieur marquis de Villeneufe, his ambaſſador at the Ottoman Port, as by the conſuls of the ſaid ports, and the chamber of commerce at Marſeilles: among the various methods that have been propoſed to his majeſty, nothing has appeared more reaſonable than to take for the future ſuch precautions, which, without depriving the ſaid captains, ſupercargoes, and paſſengers, of the liberty they have of carrying merchandizes in pacotilles into the Levant, may nevertheleſs prevent the abuſes ariſing therefrom, and put a ſtop to thoſe complaints that have been long made, and, being willing to explain his intentions upon this occaſion, the king being in council hath ordained as follows:

* This is a term in the French marine commerce, ſignifying a certain weight, or quantity of merchandizes, which the officers and ſailors are permitted to carry in their cheſts, to trade in for their own account.—It pays no freight, either in carrying out or in the returns made. It is rarely mentioned in the contract, it being a particular and verbal agreement, made between the ſailors and owners of merchantmen, particularly thoſe deſigned for foreign trade in long voyages.

ARTICLE I.

The captains, maſters, ſupercargoes, and paſſengers of French ſhips, carrying into the ports of the Levant merchandizes, either for their own account, or that of their freighters, ſhall be obliged for the future, from the day of the publication of the preſent arrêt, to ſell them to the French nation eſtabliſhed in the ſaid ports, and to purchaſe of them the merchandizes which they ſhall want in return; his majeſty expreſsly prohibits them from buying or ſelling any kind of merchandizes in the ſaid ports where there are French merchants eſtabliſhed, making a body of the nation, on pain of confiſcation of the ſaid merchandizes, and a fine of 500 livres, for every one who ſhall violate this arrêt: the ſaid captains and maſters ſhall alſo be diſqualified for ever acting in the ſaid capacity again.

II.

The French nation of the ſeveral ſaid ports ſhall be obliged to take for their account, at 10 per cent. under the current price, merchandizes of the ſaid captains and maſters, ſupercargoes, and paſſengers, and to ſupply them with the value thereof, either in money or ſuch merchandizes, as they ſhall require in return, at 4 per cent. above the current price in the ſaid port: his majeſty wills and ordains that the profit ariſing

as well from the diminution of the 10 per cent. on the price of goods imported, as on the augmentation of 4 per cent. upon thoſe merchandizes exported, ſhall be added to the national caſh, to diſcharge the expences of the port.

III.

Since the merchandizes carried by the ſaid captains, maſters, ſupercargoes, and paſſengers, ſhall be paid for by the nation charged therewith, either in money or merchandize, and that, among the ſaid imported merchandizes, there are ſome who ſell them at a diſtant time, a diſcount being allowed for prompt payment: his majeſty ordains, that, upon the merchandizes imported and ſo ſold, the nation ſhall retain the uſual diſcount, independent of the 10 per cent. mentioned in the preceding article.

IV.

His majeſty alſo wills and ordains, that, if any one of the ſaid captains, maſters, ſupercargoes, and paſſengers, buys or ſells merchandizes, in violating of the preſent regulation, the conſuls and vice-conſuls of the ſaid ports ſhall cauſe the ſaid merchandizes to be ſeized, and order the confiſcation thereof, together with the fines to be placed to the national caſh, for the uſe of the port.

V.

His majeſty nevertheleſs ordains, that the ſaid captains, maſters, ſupercargoes, and paſſengers, ſhall buy and ſell themſelves merchandizes, in thoſe ports where there are no French merchants eſtabliſhed, making a body of the nation.

VI.

His majeſty moreover wills that the chamber of commerce at Marſeilles doth continue to take cognizance of all the merchandizes which ſhall come from the Levant for the account of the captains, maſters, ſupercargoes, and paſſengers, alſo of the ordinary duties; even thoſe of the averages of the port, if they have not been diſcharged, as likewiſe in the caſe where the ſaid captains, maſters, ſupercargoes, and paſſengers, ſhall carry the merchandizes which they have brought in violation thereof, and unknown to the conſuls in the ſaid ports; and where there are French merchants eſtabliſhed as a body of the nation, the ſaid chamber of commerce ſhall have a ſtrict eye upon the violators, to cauſe them to be condemned in the pains and penalties hereby enacted.

His majeſty orders and commands that all officers any way concerned herein have due regard to the execution of this arrêt, &c.—Done at the king's council of ſtate, his majeſty being preſent, held at Verſailles the 17th of March, 1733.

Signed PHELYPEAUX.'

A royal ordonnance, concerning the duties of the conſuls and vice-conſuls of the ports of Negropont, Cavalle, Rhodes, Meteline, Scio, Milo, Tine, and Micone.—Of May 1733.

'The regulations of the 28th of February, 1732, being repreſented to his majeſty, whereby the duties of the conſuls and vice-conſuls are ſettled in the ports of Negropont, Cavalle, Rhodes, Meteline, Scio, Milo, Tine, and Micone, without mentioning that which the conſuls and vice-conſuls uſually require at the rate of 4 per cent. on the price of the freight which the captains and maſters of French ſhips make in their ports: and judging that the reduction of this duty, the foundation whereof is the care of the conſuls and vice-conſuls have with regard to the ſaid freights, and the advantage thereby reaped by the ſaid captains and maſters, the receipt thereof ſhall be made for the mutual advantage of the ſeveral parties: his majeſty ordains that the conſuls and vice-conſuls of the ſaid ports, who have not appointments paid them by the chamber of commerce at Marſeilles, ſhall receive for the future 2 per cent. only upon the price of the freights which the captains and maſters of the French ſhips ſhall make in their reſpective ports; forbidding the ſaid conſuls and vice-conſuls to exact the ſaid duty to a higher rate, and the ſaid captains and maſters not to defraud the ſaid conſuls and vice-conſuls thereof, under the pains and penalties enacted in the regulation of the 28th of February, 1732, which his majeſty requires ſhall be executed according to the form and tenor thereof.—His majeſty commands all officers concerned herein to ſee to the due execution hereof.—Done at Verſailles, the 27th of May 1733.

Signed LEWIS,
And underneath PHELYPEAUX.'

A royal ordonnance, forbidding the French merchants to conſign, directly or indirectly, merchandizes, fruits, or proviſions, to foreigners eſtabliſhed in the ports of the Levant.—Of February 1735.

'His majeſty being informed that the French merchants trading to the Levant make uſe of the names of ſtrangers eſtabliſhed at Marſeilles, or in other ports of the kingdom, to cauſe their merchandizes to be conſigned to other ſtrangers ſettled in the ports of the Levant, who ſhall be ordered to ſell them for the account of the ſaid French merchants, and make the returns to them: his majeſty, deſirous to prevent an abuſe equally prejudicial to the intereſts of his ſubjects and to the advantage of the commerce of the Levant, his majeſty expreſsly forbids all French merchants, and other his ſubjects trading there, to conſign, either directly or indirectly, either by themſelves or others, any ſort of merchandizes, fruits, or proviſions, even in pacotilles, to the commiſſioners, or foreign merchants, eſtabliſhed in the ſaid ports of the Levant, on pain of confiſcation of the ſame, and a fine of 10,000 livres, one half to go to the informer; and, even for the firſt default, the ſaid French merchants ſhall be for ever after rendered incapable of following the ſaid commerce of the Levant, and puniſhed alſo according to the exigencies of the caſe.

His majeſty commands all perſons in office to have due regard to the execution hereof.—Done at Verſailles, the 2d of February, 1735.

Signed LEWIS,
And underneath PHELYPEAUX.'

An arrêt of the council of ſtate, concerning the impoſition of a duty of average of 1 per cent. for three years, upon the merchandizes which ſhall be carried to the ports of the Levant.—Of February, 1736.

'The king having permitted the ſheriffs and deputies of the chamber of the commerce at Marſeilles to borrow, for the term of three years, the ſum of 180,000 livres, with ſtipulations of intereſt at 5 per cent. to diſcharge all the debts contracted by the nation at the ports of the Levant, for which the ſaid nation pays a conſiderable intereſt, which is a burthen upon commerce: and his majeſty deſiring to put the ſaid chamber in a condition to reimburſe the ſaid ſum of 180,000 livres, in the ſame term of three years, by means of a moderate average-duty on importation, which has been propoſed to be laid upon merchandizes which are carried into the ports of the Levant: his majeſty having ſeen the reſolution of the aſſembly held upon that ſubject by the ſaid chamber, the 23d of January laſt, and the ſentiments of the Sieur Icard, inſpector of that commerce; having heard the report, and conſidered the whole, his majeſty, being in council, has ordained as follows:

ARTICLE I.

There ſhall be raiſed in every port of the Levant, during the ſpace of three years, reckoning from the day of publication of the preſent arrêt, 1 per cent. average at importation upon all the merchandizes which ſhall be carried thither from France and foreign countries, by French ſhips, or others that carry on that trade under the protection of France.

II.

The ports of Morea and Barbary, and thoſe of the Archipelago.—[ſee ARCHIPELAGO] of Satalia, and others where there are no French merchants eſtabliſhed, making a body of the nation, ſhall be excepted from the ſaid impoſition.

III.

His majeſty wills and ordains, that the piaſtres, ſequins, and other foreign ſpecies, ſhall not be liable to the ſame duty of average at importation; which ſhall be received on our merchandizes, in conformity to the tariff of the ſettlement of the price thereof, which ſhall be raiſed by the chamber of commerce at Marſeilles, and ſent by the deputies of the nation for this purpoſe into the ſaid ports.

IV.

His majeſty ordains that the ſaid deputies ſhall receive the ſaid duty of average at importation, in the ſame manner as the duty of average is at exportation, and appropriated to the chamber of commerce; and they ſhall keep a ſeparate account of the product of the ſaid duty, which ſhall be balanced every ſix months, in the preſence of the conſul.

V.

His majeſty enjoins all captains and maſters of French ſhips, or foreigners which ſhall be under the protection of France in the ports of the Levant, to preſent, within 24 hours after arrival, the policies and manifeſtoes of their loading, to the conſuls and deputies of the nation; and juſtly and faithfully to declare the quantity of merchandizes with which their veſſels are laden, under pain of confiſcation of thoſe not ſo declared, and a fine of 1000 livres.

VI.

If any merchant is found to evade the ſaid duty, be it either in ſupplying counterfeit manifeſtoes, or otherwiſe, his majeſty wills and ordains, that, beſides the confiſcation of the merchandizes, he ſhall be compelled to pay a fine of 3000 livres; and, if he is a trader reſident in the Levant, he ſhall be ſent back into France: the whole to be applied, viz. one-third to the informer, one-third to the chamber of commerce at Marſeilles, and the remainder to the hoſpital of the ſaid city of Marſeilles.

VII.

His majeſty means and intends that the ſaid duty ſhall ceaſe before the expiration of the term of three years, for which it is eſtabliſhed, if it produce, before that time, wherewith to diſcharge the ſum of 180,000 livres, borrowed by the ſaid chamber of commerce, and the intereſt of the ſame, which likewiſe muſt be diſcharged out of the ſaid duty: for which purpoſe it is ordained, that the ſaid chamber and the conſuls

shall render an exact account of the receipt which shall be made in the ports of the Levant.

VIII.

His majesty wills and ordains, that the said chamber of commerce shall keep a separate account of the product and application of the said duty; which account shall be annually balanced by the Sieur Icard, inspector of this commerce, whom his majesty enjoins to have due regard to the execution of the present arrêt.—Done at the council of state, his majesty being present, held at Versailles the 25th of February, 1736.

Signed PHELYPEAUX.'

A royal ordonnance, permitting French ships to be consigned to merchant-strangers established in the ports of the Levant, in case they are entirely freighted by foreigners.—Of April 1737.

'His majesty being informed that the merchants of different nations who are settled in the ports of the Levant, would be more induced, than they really are, to freight French ships, by their correspondents in the ports of Italy and other foreign countries, where they find them, if the said ships might be directed and consigned to them: and his majesty's ambassador at Constantinople having also informed him, that such consignment made to foreign merchants, of French ships freighted by foreigners, would not be detrimental to the French merchants established in the said ports of the Levant: his majesty, considering the 31st article of the declaration of the 21st of October, 1727, hath permitted, and doth permit, that the ships of his subjects may be addressed and consigned to foreign merchants established in the ports of the Levant, in the case only when the said ships shall be wholly freighted by foreigners.—His majesty orders and commands Monsr. the count of Toulouse, admiral of France, and the Sieur marquis De Villeneufe, ambassador at Constantinople, to have due regard to the execution of the present ordonnance, which shall be registered in the rolls of the admiralty of Provence and Languedoc, and read, published, and fixed up wherever needful.—Done at Versailles, the 23d of April, 1737.

Signed LEWIS,
And underneath PHELYPEAUX.'

An arrêt of the council of state, establishing, to commence the 1st of April, 1739, that the duty of average at importation, the raising of which was ordained by the arrêt of the 25th of February, 1736, shall be suppressed in all the ports of the Levant.—Of December 1738.

'The arrêt of council of the 25th of February, 1736, being laid before the king in his council of state, by which his majesty ordained that there should be raised, in each of the ports of the Levant, during the term of three years, reckoning from the day that the said arrêt should be received and made public, a duty of 1 per cent. average of importation upon all merchandizes which shall be carried thither from France and foreign countries, by French ships, or others carrying on trade under the protection of France: and his majesty having caused the accounts to be examined, which, since the establishment of the said duty, have been given in by the deputies of the nation in the ports of the Levant, and by the chamber of commerce, and settled by the Sieur Icard, inspector of the commerce of the Levant, in conformity to the 7th and 8th articles of the said arrêt: and having found that, the said duty being received 'till the 31st of March, 1739, ensuing, the product thereof will be sufficient to reimburse the sum of 180,000 livres, which his majesty had permitted the sheriffs and deputies of the chamber of commerce at Marseilles to borrow, for the said term of three years, in order to discharge all the debts contracted by the nation in the ports of the Levant: his majesty, conformable to the 7th article of the said arrêt, ordaining that the said duty should cease, for the eafement of his subjects trading to the Levant, although the said three years, reckoning from the day such receipt of duty commenced, should not be absolutely expired:—Having seen the representation of the Sieur Icard, the king, being in council, hath ordained, and doth ordain, that, on the first day of April, in the year ensuing, 1739, the duty of average on importation shall be suppressed in all the ports of the Levant; that the merchandizes which shall be exported thither from France and foreign countries, shall be disencumbered from the payment of the said imposition: his majesty prohibits the consuls and deputies of the nation in the said ports, and all others, from demanding the said duty; and ordains, that the total of the amount of the receipt of the said duty, which shall be made during the six last months of the present year, and 'till the said 31st day of the month of March next, there shall be delivered, by the sheriffs and deputies of the chamber of commerce at Marseilles, a definitive account of the produce and appropriation of the said duty, which shall be balanced by the said Sieur Icard—His majesty commands the Sieur marquis de Villeneufe, counsellor of state, his ambassador at the Port, also the Sieur Icard, inspector of the commerce of the Levant, and the sheriffs and deputies of the chamber of commerce at Marseilles, to have a strict regard to the execution of the present arrêt: he also enjoins the consuls of the nation, in the ports of the

Levant, to cause the same to be made public, and registered in their Chanceries, and to see the same executed.—Done at the king's council of state, his majesty being present, held at Versailles the 12th of December, 1738.

Signed PHELYPEAUX.'

On the 18th of January, 1749, an arrêt was issued for the regulation of policies of assurance passed before the signing the preliminaries of peace, with regard to ships employed in the commerce of the ports of the Levant, and regulating the premiums to be allowed to the insurers, in those cases mentioned in the arrêt of the 12th of July, 1748.—But, this * being too long to insert here, we shall defer it to the article POLICY of ASSURANCE.

* This arrêt also shews what extraordinary care the French have taken of this branch of trade, in the most minute circumstance.

A royal ordonnance, forbidding all subjects who reside in the ports of the Levant and Barbary to possess themselves of any real estates.—July 1749.

'His majesty being informed that, notwithstanding the prohibitions made, none of his subjects resident in the ports of the Levant and Barbary should possess themselves of real estates, many of them are actually in possession of houses, lands, and gardens, which they pretend to have been obliged to accept in payment for debts due to them by the subjects of the Grand Seignior: and experience having manifested that this kind of property influences their residence in Turkey, prolongs their return into the kingdom at the term fixed for their residence, and gives room to litigations dangerous to the safety and tranquility of the nation: his majesty judges necessary to declare more precisely his intentions upon this subject, and, in consequence thereof, hath ordained, and doth ordain, as follows, viz.

ARTICLE I.

The consuls, chancellors, interpreters, merchants, artizans, and all other subjects of the king residing in Turkey and Barbary, shall be incapable, for the future, under any pretence whatsoever, to acquire real estate, by the way of purchase, cession, gift, or legacy, either lands, houses, gardens, rents, and other immoveables, under pain of being sent back without delay into France, and the loss of the said properties; which shall be appropriated to the body of the nation, in order to be sold, according to the laws of the country, and the amount to be remitted to the national cash of the port, to be applied to their expences ordinary and extraordinary.

II.

His majesty orders those of his subjects who possess real estates, to get rid of them as soon as possible; and, in order to prevent loss in the sale thereof, his majesty grants them 'till the 1st of January, 1751, after which term the said proprietors, or possessors, shall be liable to the penalties inflicted in the preceding article.

III.

His majesty declares that, in the present prohibition, the dwelling-house of his ambassador residing at Constantinople shall not be included, nor the dwelling-houses of the consuls, the chapels, church-yards, nor the hospital for missionaries; which the nation and the said missionaries shall continue to enjoy as heretofore, in conforming themselves, nevertheless, to what is prescribed, in respect hereunto, by the capitulations made with the Ottoman Port, and the particular orders of his majesty.

IV.

His majesty, notwithstanding, permits the French residing in Turkey and Barbary, in case of death, flight, bankruptcy of their debtors, and in default of payment, to enter their action against the immoveables, and to pursue the sale thereof 'till the absolute payment of their debts; expressly forbidding them to accept and keep such effects by way of mortgage, in order to enjoy their revenues.

V

His majesty, in like manner, forbids all his subjects from taking a farm, or the administration of lands, houses, or duties of custom belonging to the Grand Seignior, or his subjects, under any pretext whatsoever: ordaining that those who are encumbered therewith, may rather recede from their agreement, under pain of being sent back, and rigorously punished in France.

VI.

His majesty, however, permits his subjects, but only in case of absolute necessity, to take in payment the harvest, or the produce of one or several years, provided that they do not exceed the number of those fixed for the time of their residence in the Levant.

VII.

His majesty most expressly forbids all religious missionaries, French or foreigners, residing in Turkey under his protection, from making any acquisition or augmentation of house or chapel, without having first obtained the consent of his

majesty,

majeſty, and the approbation of the Ottoman Port, which ſhall not be ſollicited but through the interpoſition of his ambaſſador at Conſtantinople.

His majeſty enjoins the Sieur Deſalleurs, his ambaſſador at the Ottoman Port, the Sieur Pignon, inſpector of the commerce of the Levant, the ſheriffs and deputies of the chamber of commerce at Marſeilles, and all the conſuls of the French nation reſiding in Turkey and Barbary, to have all due regard to the execution of the preſent ordonnance, which ſhall be read, publiſhed, fixed up, and regiſtered wherever needful.

—Done at Compeigne, the 6th of July, 1749.

Signed LEWIS,
And underneath ROÜILLE.'

REMARKS.

Theſe are the principal royal arrêts, edicts, ordonnances, and declarations, iſſued from the year 1665, by authority, for the regulation of the Levant trade belonging to the kingdom of France: whence a good judgment may be made from FACTS, to what cauſes the preſent flouriſhing ſtate and condition of that trade may be juſtly attributed: and, without a diſtinct and minute knowledge of theſe meaſures, it is not poſſible for any one to have a true idea of the policy of that nation in this reſpect. A general ſuperficial knowledge that the French take this or that meaſure alone for the regulation of their Turkey trade, will give no ſatisfactory idea of that ſeries of policy which they have obſerved for near this century paſt; and, without that, we can, perhaps, make no right judgment of the regulations neceſſary for our own Turkey trade, for want of a true knowledge of the wiſdom of France and other nations in managing theirs.

From the tenor of theſe regulations, the judicious reader will eaſily diſcern the neceſſity of conſulting the articles CONSUL, CHAMBER of COMMERCE, and MARSEILLES; to which latter place we more particularly refer under the article PROVENCE in France, that being the capital city, where the French Levant trade is carried on, and where the regulations are made of the ſeveral ſpecies of merchandizes for that commerce.

Of the regulations of the Dutch, in regard to their commerce of the Levant.

Smyrna is the principal factory of the Hollanders in the dominions of the Grand Seignior.

The Hollanders have at Smyrna a conſul, a treaſurer, three aſſiſtant judges, and a chancellor. The conſul and treaſurer may not continue in place above three years; they are, nevertheleſs, very often continued, when their adminiſtration gives content; but they muſt obtain their confirmation by a new patent.

With reſpect to the aſſiſtant judges, their employ is annual; they are propoſed by the three aſſiſtants in office, the conſul and the treaſurer, to the directors of the commerce of the Levant eſtabliſhed at Amſterdam, which commonly approve of them, and make choice of one of the three ancients to continue for the following year: he is called the firſt aſſiſtant, and the other two the new aſſiſtants.

The ordonnances, regulations, and the inſtructions of the direction of Amſterdam, which are ſent to the Levant, as well as the diſpatches of the ambaſſador of the republic reſiding at the Port, are always directed to the conſul, treaſurer, and aſſiſtants, but cannot be opened but by the conſul in full aſſembly, and in preſence of the other officers, or at leaſt of two aſſiſtants, if the third and the treaſurer happen to be abſent: the ſame is obſerved alſo when any public expence becomes neceſſary for deliberation, or to ſubſcribe other reſolutions taken in relation to commerce, which are thereby authenticated and executed, when they are ſigned by the conſul and two of the ſaid five officers.

When it is requiſite to have an aſſembly of the body of the nation, the chancellor and a druggerman [ſee DRUGGERMAN] apprize the merchants of it: when aſſembled, the conſul communicates the occaſion of their meeting, and the chancellor reads, with a loud voice, the memorials concerning the ſame; after which, the matter is decided by the plurality of votes; but the execution is referred to the conſul and the aſſiſtants.

The treaſurer ſhould always be preſent at the aſſemblies when any diſburſements of money are required; and whatever is reſolved on this head without him, may not be executed, but is declared null and void.

The differences between merchants are laid before the conſul, and are judged of by the plurality of voices, as well by him as by his aſſiſtants. Appeals from their judgment are carried before the ambaſſador reſiding at Conſtantinople, from the ambaſſador to the directors of the commerce of the Levant eſtabliſhed at Amſterdam, and from the directors to the ſtates-general; ſo that there are four degrees of juriſdiction in regard to theſe commercial deciſions.

Ordonnances made by the conſul, without the interpoſition of the aſſiſtants, are invalid.

When the conſul is called before the cadi, the officers of the cuſtoms, the captain-pacha, or other Turkiſh miniſters, before they go, they muſt aſſemble the nation to deliberate upon the matter in agitation, and take ſuitable reſolutions: afterwards the conſul negociates the affair, 'till it's concluſion.

If the conſul is cited before the adjudicatory of the country, he goes accompanied with his whole nation, and requires a copy of the demands, in order previouſly to deliberate thereupon in their aſſembly.

In caſe of the conſul's death, the ambaſſador nominates one, but only proviſionally. With reſpect to the employs of the Treaſury and Chancery, it is left to the conſul and his aſſiſtants, to appoint others; but this is in like manner, according to the pleaſure of the directors at Amſterdam.

The duty of conſulage is due for whatever is laden or unladen, either in merchandizes or ready money; the latter at the rate of 1 per cent. at importation or exportation, the other upon the footing of 2 per cent.

When there is a great deal of money in caſh, the duty of conſulage is reduced to one half, that is to ſay, to $\frac{1}{2}$ per cent. for the money, and 1 per cent. for the merchandizes; but that can be done only with the permiſſion of the directors of Amſterdam, according to the repreſentation of the conſul, the Treaſury, and the aſſiſtants, in the name of the whole nation, certifying that the demand of the merchants, in ſuch caſe, is juſt.

If, on the contrary, the caſh is exhauſted by the avanies of the Turks [ſee the beginning of this article] or by extraordinary expences, which ſometimes happen, the duties of conſulage are doubled; whereby ready money pays 2 per cent. and the merchandizes 4 per cent.

Foreigners who trade under the banner of Holland, never pay more or leſs than 2 per cent.

The treaſurer, or his deputy, are charged with the recovery of the duty of conſulage, which is required in the following manner:

Foreigners pay in white money, viz. in lion-piaſtres, the duty on merchandizes imported: in relation to ready money, the duty is taken in the ſame ſpecie.

The quantity of ready money is verified on board the ſhips, before unladen. The conſul, treaſurer, and aſſiſtants examine the ſame, bag by bag, whence they take ſome of the ſpecie, which being found of good ſtandard, they are again put into the bags, that are ſealed with the ſeal of the chancery, and afterwards the debarkation is allowed, which for the money, muſt be done all at one time. If there is any counterfeit ſpecies, it is ſequeſtered in the chancery.

Foreigners, after the departure of convoy, pay the duty of conſulage according to the tariff and bills of lading; copies whereof, after being ſigned by the captain, muſt be carried to the Treaſury.

The Dutch merchants are obliged, eight days after the departure of the convoy, to give a declaration of the quantity and quality of the merchandizes which they have received and loaded, and pay the conſulage-duty thereof in white money. They are generally allowed a diſcount of 6 per cent. by which they pay 94 only for 100; but, if they do not pay at the time when it is due, that is, in the month, or later, there is added to the 94 one per cent. for as many months as they poſtpone the payment: they are, however, not permitted to defer payment longer than ſix months, after which the conſul may proſecute, and oblige them to pay, or impriſon their perſons.

When the duties of conſulage are paid at Conſtantinople, Smyrna, and Chio, there is liberty to ſend the merchandizes where you will; but, when they go to other places, or come from them, the conſulage is due.

The Hollanders, and thoſe under their protection muſt pay the conſulage according to the money there is in caſh, as before obſerved; but they do not pay double, either for exports or imports, on thoſe ſhips which trade under the protection of other countries, which is called the foreign conſulage: they are, nevertheleſs, obliged to pay, in the ſame manner, and under the ſame penalties, as for the merchandizes which are laden upon Dutch ſhips.

Once a year, the treaſurer, his deputy, and the whole nation, go in ceremony to church, where, after ſermon and pſalm-ſinging, they all take an oath, according to the formulary, read aloud in the congregation by the chancellor, which is, not to defraud the conſular power, either directly or indirectly, of any of the duties of conſulage, nor of any thing relating thereunto, on pain of a fine of 1000 crowns, and to be ſent away, if found perjured, and even to ſuffer other pains and penalties, if the ſtates judge proper.

Thoſe who reveal the ſecrets of the national aſſembly, are ſubject to a like chaſtiſement.

Captains, pilots, and cap-merchants, on their arrival at Smyrna, and before their departure, and before they have delivered their manifeſtoes and declarations to the conſul, are obliged to take the ſame oath, under the ſame penalties: and, moreover, the captains, found violating, are diſqualified for commanding any veſſel for ſix years.

The treaſurer keeps poſſeſſion, in the chancery, of all the money with which he is charged, reſerving ſome for common expences. The cheſt wherein the caſh is kept is of iron, with three keys, one of which is kept by the conſul, another by the aſſiſtants, and the third by the treaſurer.

No one but the treaſurer knows what money there is, for which he is not obliged to give account but to the directors of the Levant eſtabliſhed at Amſterdam. The aſſiſtants of Smyrna examine, nevertheleſs, all the receipts and expences made, and aſcertain the ſame according to the declarations of the merchants, the manifeſtoes of captains, and by what has been received or charged by foreigners by every convoy, or otherwiſe.

The treaſurer pays every three months, in money of due weight, with an agio of 10 per cent. viz.

	Piaſtres.
To the ambaſſador per annum, for his maintenance	10,000
To the conſul, ditto - - - - - - - - - -	4,000
To the treaſurer, retained in his hands - -	1,400
	15,400
Which ſum of 15,400 piaſtres, with an agio of 10 per cent. makes, in white money, that is to ſay, in lion or aſlani piaſtres [ſee ASLANI] which are of the current money of the country	16,940
More to the firſt druggerman [ſee DRUGGERMAN]	300
To the ſecond, ditto - - - - - -	300

To the ſame every new year's-day	36
To the druggermen alſo for new year's gifts	36
In the whole	18,202

The treaſurer pays all the expences made at the port and at Conſtantinople, as well for preſents as for the voyages of Adrianople and others, which he reimburſes to the ambaſſador, and at Smyrna to the conſul.

The vice-treaſurer, who reſides at Conſtantinople, ſends to the treaſurer at Smyrna an account of expences that he has made, which he reimburſes, after having the ſame examined and approved by the aſſiſtants and the nation aſſembled: this aſſembly is called the aſſembly of the aſſiſtants.

The ambaſſador is obliged to pay the rent of his houſe, where he gives a room to hold the national caſh. He is alſo obliged to pay the chancellor, the druggermen, and the janiſſaries of Conſtantinople, and all other expences that regard the maintenance of his houſe and domeſtics.

The conſul of Smyrna is obliged to the ſame things, with reſerve to the appointments of the chancellor, the miniſter, the druggermen, and janiſſaries, who are paid by the treaſurer, out of the money in caſh.

The directors of the Levant trade ariſing at Amſterdam are to the number of 17. According to their inſtitution, there ſhould be three from every province; but cuſtom has made it common for ſome to have only two, and others but one. They hold the quality of miniſters, or counſellors, to the States-General, in regard to the commercial affairs of the Levant; and their power is next of kin to ſovereign in that caſe, and yet under the authority of the States. It is a place of honour, but of no profit; and the States-General chuſe only the moſt ſkilful and honourable merchants into it.

The treaſurer of Smyrna ſends every year, to the directors, an account of all expences incurred, and another of the receipt of the duties of conſulage. with the balance of the caſh-account. The firſt account contains the appointments, the avanies, the preſents, the expence of meſſengers; in fine, generally ſpeaking, it contains whatever has been expended for the ſervice of the nation, and utility of it's commerce. They ſend alſo, to the directors, the copy of the manifeſtoes, or declarations of all the ſhips, and accounts in particular of the duties of conſulage, the whole being examined, and certified by the aſſiſtant; and, if they find any error to the diſadvantage of the caſh-account, the treaſurer is reſponſible for the ſame.

All the money in caſh, the expences firſt acquitted, remains in the hands of the treaſurer. The directors have ſometimes cauſed the money to be ſent to Amſterdam, and would have eſtabliſhed this cuſtom for a conſtancy; but the body of the merchants in the Levant complaining to the States-General, and remonſtrating that the ſurpluſage of the caſh ought to be appropriated to their advantage, in leſſening the duty of conſulage, ſince they were to make the augmentation, when it fell ſhort: the States ordered, that, for the future, the ſurpluſage of the funds ſhould remain in the Levant, to be applied to eaſe the national expence.

There are at Smyrna eight or ten conſiderable houſes of trade, of which the Dutch factory is conſtituted, and who uphold the whole traffic.

All the ſubjects of the United Provinces are permitted to export merchandizes for the Levant, whether the armateurs put themſelves under the protection of convoy, or chuſe to purſue the voyage alone. The chief thing which they are obliged to obſerve is, that the ſhips carry 28 pieces of cannon, and 50 men, as well in time of peace as war.

For the due execution of this regulation, there is a commiſſary eſtabliſhed in the Texel, to viſit all ſhips intended for the Levant trade; and, if their armament is not agreeable to the aboveſaid regulation, the captain, who commands the ſhip, is mulct in the penalty of 2000 crowns for the firſt time; and, in caſe of repetition of the like violation, beſides the ſaid fine, the captain is caſhiered, and the ſhip is ſequeſtered 'till a new captain is provided.

When a convoy departs, the directors of the Levant trade require of the commiſſioners of the admiralty the number of men of war neceſſary to convoy the merchantmen, which is always granted, the armament being at the expence of the admiralty, by reaſon of the duty of 1 per cent. on the value of the loading of the veſſels, that they receive from all thoſe who enter into the ports of the State, either under convoy or otherwiſe.

The convoys that go to the Levant, commonly touch in all the ports of Spain, Genoa, Leghorn, Naples, and Meſſina, and ſtay as many days as are neceſſary to load and unload, which is alſo regulated.

They follow the ſame orders when they are at Smyrna; but, if it happens that the merchantmen cannot be ready by the time appointed, which is generally of 90 days in time of peace, in this caſe the merchants of Smyrna, and the captains of their ſhips, preſent a petition to the conſul, the treaſurer, and the aſſiſtants, to prevail on the commandant of the convoy to ſtay till they are ready; to which he agrees if he thinks proper; though he is ſometimes permitted to ſail, if he has reaſons for ſo doing.

When the commanding officer of the convoy makes a difficulty of ſtaying for the merchantmen, by reaſon of the preciſe orders which he has received from the admiralty, all the nation oblige themſelves to indemnify the expence of his extraordinary ſtay; which otherwiſe may be thrown upon him, beſides the reproach that he may be liable to, on his return to Holland, for diſobeying his orders.

At the return of the convoys to Holland, the commandants give the journal of their voyage to the ſollicitor-general of the admiralty; who, diſapproving the days extraordinary of his ſtay, throws all the expence upon that officer, who is obliged to pay it, provided, as before hinted, he is not indemnified by the body of the nation in the Levant.

It is likewiſe the buſineſs of the ſollicitor-general of the admiralty to inform againſt the captains of men of war who have carried on contraband trade; and it is at his requiſition that they are condemned in a fine for the violation of the regulations in this reſpect, which ſtrictly forbid and puniſh a conduct of this kind. They are, indeed, allowed to lade money, either in ſpecie or bars, becauſe that does not encumber the ſhip in caſe of an engagement.

As it may happen that the men of war may be ſeparated from the merchantmen, the admiralty have a cuſtom of chuſing, among the captains who command the latter, firſt and ſecond commandants, whom the others are obliged to obey.

Ships of convoy, and generally all thoſe that come to Smyrna under the banner of Holland, pay 80 aſlani dollars anchorage, which are diſtributed partly to the cadi and governor of the caſtle, and partly among the druggermen and janiſſaries of the nation. There are alſo ſome reſerved for the ſlaves, and ſupport of a ſermon and church-yard. This diſtribution is made according to the pleaſure of the conſul.

The body of the nation forbid the lending of ſhips to the Turks; and, when they demand them, the captains excuſe themſelves under ſome pretext, which frequently diſguſts the Turks. It nevertheleſs ſometimes happens, that they take them by force; which muſt be ſubmitted to, leſt greater avanies ſhould follow.

Of the general nature of the Turkey trade in the Levant.

Though the Turks are no traders, but rather diſcouragers and deſtroyers of trade, yet, as they poſſeſs ſo great a part of the world, and ſome of the moſt fruitful, and productive of the beſt and choiceſt merchandizes, it will always induce the European parts of the world to ſend their merchants amongſt the Turks, to traffic with them.

The Turks themſelves, by their indolence and haughtineſs, deſpiſing manufacturing, and not improving the product which they enjoy, in many places, muſt neceſſarily be obliged to purchaſe of other nations the things that they ſtand in need of; which naturally encourages the merchants of other nations to come among them.

Thoſe that ſettle among them from the eaſtern part of the world, are generally Greeks, Jews, Armenians, and Georgians; thoſe from the weſtern parts are chiefly Venetians, Engliſh, French, and Dutch, with ſome Jews alſo, chiefly Italian.

The principal places of trade, on this ſide the Turkiſh dominions, reſpecting Europe, where the ſaid merchants reſide, are Conſtantinople, Smyrna, Aleppo, Alexandretta, or Scanderoon, Alexandra, Tripoli, Antioch, and the iſlands on the coaſt.

There are ſome Chriſtian merchants in moſt of the iſlands belonging to the Turks, viz. at Cyprus, Candia, Rhodes, Zant, Cephalonia, and in moſt of the inhabited iſlands of the Ægean Sea, or Archipelago. [See ARCHIPELAGO]—Theſe merchants are generally French, though there are ſome Jews.

This

This commercial eſtabliſhment, by the way of factories, among the Turks, take the ſame altogether, is, in one general acceptation, called with us the Turkey trade: the manner of which trade is this, viz.

The merchants of England, France, and Holland, chiefly furniſh the Turks with fine woollen cloths, dyed ſcarlet, crimſon, purple, blue, and green; the firſt three in grain, and as rich in colour as poſſible, which raiſes their value.

The Engliſh, beſides their cloth, ſend block-tin, lead, clock-work and watch-work, both in gold and ſilver; and, all put together, the value was formerly for upwards of 300,000 l. ſterling, one year with another.

The returns which the Franks (for ſo the European Chriſtian merchants are called in Turkey) make from the Turks, and which are the product of the Turkiſh and Perſian dominions, are as follow, viz.

Raw ſilk: this, though the chief return of the whole trade, is not all the immediate produce of the Grand Seignior's dominions, but of the Perſians alſo. [See PERSIA.] It is brought from the country where it is produced to Aleppo, and from thence to Scanderoon, where the merchants trade for it.

The ſilk, thus brought raw in bales from Perſia, is ſherbaff, the Perſian word for raw ſilk, or, perhaps, for ſilk in general. When this ſherbaff ſilk is landed here, and comes into the hands of our manufacturers, it is called by a name of their own, legee. Beſides this, the Levant or Turkey merchants import another ſort of raw ſilk, which they call white ſilk, and our workmen belladine. This is ſhipped either at Cyprus or Scanderoon, on board the ſame Turkey ſhips that bring the other ſort of ſilk, but is produced in ſeveral diſtant parts of the Turkiſh dominions, as at Cyprus, at Antioch, and at Tripoli; that is, in the country adjacent to the ancient Syria, and in ſeveral of the iſlands of the Arches. The ſame ſort of ſilk is alſo ſhipped off at Smyrna.

This iſland ſilk is generally the product of the iſlands of Andros, Naxos, Zea, Thermia, Syra, Santorini, &c.

The quantity of ſilk imported formerly from theſe places, and as comprehended under the denomination of the Turkey trade, has been calculated at between 3 and 400,000 lb. weight, one year with another. That we may not ſpeak without book, the reader may take the following account, drawn from our Cuſtom-Houſe books.

Turkey ſilk imported in the port of London, in the ſeveral years 1720, 1722, and 1723.

Anno 1720	- - - - -	399,688 lb.
Anno 1721	None imported, the plague being that year in Turkey and France.	lb.
1722	- - - - -	374,401
1723	- - - - -	329,983

Note. Every pound weight in this account contains 24 ounces.

The importations for ſome years after correſponded pretty much with this proportion, except that, upon ſome occaſion, the trade met with an interruption, as in the time of the plague, and on occaſion of war. What is the ſtate of the Turkey trade at preſent, compared with what it has been, we have not room to ſhew under this head; and, therefore, ſhall be obliged to refer to the articles ORIENTAL TRADE, and TURKEY TRADE; under which two heads, with what we have here ſaid, will be comprehended whatever is needful, in order to form a right judgment of this commerce, and of what may be further requiſite to render it more beneficial to this nation in particular. To proceed.

The other importations are,

2. Wool and yarn.
- Carmania wool, and wool of the iſlands,
- Grogram yarn, Mohair yarn, } that is, goat's hair, ſpun or twiſted,
- Cotton wool, Cotton yarn, } from almoſt all the iſlands of the Ægean Sea.

3. Gums, ſuch as gum
- Dragant,
- Sandrac,
- Seneca,
- Arabic,
- Sarcocolla.

4. Manufactures.
- Perſian ſilks,
- Carpets,
- Burdets,
- Callicoes, from the iſlands of Siphanto, Paros, &c.
- Cordevans,
- Shagreen-ſkins.

5. Drugs, dye-ſtuffs, earths, &c.
- Galls from Syria,
- Coffee from Mocha, by Alexandria,
- Balm,
- Natural balſam
- Rhubarb, from Perſia,
- Sal ammoniac,
- Turmeric from Perſia,
- Incenſe,
- Pumices from Santorini,
- Storax { Calamita, Liquida } from Samos,
- Scammony,
- Myrrh,
- Manna,
- Galbanum,
- Sena,
- Aloes hepatica,
- Olibanum,
- Zedoary,
- Eſquinethes,
- Hypoaſtri,
- Aceatrice,
- Oker, Emery-ſtone, Bolus, an earth, Adrachne, } all at Samos,
- Valonia, or velani, from the iſland of Zea,
- Coloquintida,
- Euphorbium,
- Mirabolans,
- Hypococuana, Frankincenſe, } from Perſia and Egypt,
- Maſtic, from Scio and Naxos,
- Opium, cum aliis.

6. Liquids.
- Viſney,
- Arac,
- Jallap,
- Orange flower-water,
- Vermecelli,
- Turpentine.

7. Seeds.
- Worm-ſeed,
- Clover-ſeed,
- Garden-ſeeds,
- Rice.

8. Fruits.
- Figs,
- Piſtachas,
- Raiſins of Smyrna,
- Pomegranates.

9. Woods.
- Box-wood,
- Cypreſs-wood,
- Fuſtic,
- Ebony,
- Walnut-tree.

Theſe are the principal productions with which the merchants of Europe trade among the Turks in this part of Aſia: the number of drugs may, perhaps, be greater than what are here mentioned, but theſe are the moſt conſiderable.

The chief articles are the ſilk, which comes from Georgia and Perſia, the wool, the hair, and the galls.

The cotton, as well in wool as in yarn, and alſo moſt of the goat's hair, is the product of the iſlands on the Aſian ſide of the Archipelago, and thoſe alſo of the European ſide. Some of the ſilk likewiſe comes that way to us, from Zea, Andros, Timor, Paros, Argenter, Naxos, Santorini, Syra, Thermia, and many others. Alſo from the iſland of Mycone come ſome goat's-hair and cordevans.

Theſe ſerve for the bulk of the trade; the others, perhaps, are equally uſeful in their kind, but not of equal value in general commerce.

As the Turks have little or no trade but what is, as it were, forced by the Europeans and others, ſo they have but few ſhips, compared to the extent of their naval dominions: the chiefeſt of their ſhipping is among the Grecian iſlands, and theſe are ſuch as belong to the Greeks of thoſe iſlands, not to the Turks. Alſo in the Morea and in the Black Sea they have ſome ſhipping: but, for the traffic between Egypt and the Port, they generally hire Engliſh, Dutch, or Venetian ſhips upon freight.

The Venetians, indeed, trade with the Turks in Morea, and in the gulph of Theſſalonica, and to ſome of the iſlands; and, as thoſe countries are full of Greeks, and other Chriſtian inhabitants, they carry them proper manufactures, ſuch as wrought ſilks, fine linen, bone lace, and all ſorts of haberdaſhery for the women, who delight to go gay, eſpecially in the iſles. They carry back in return according to the productions of the place, ſuch as currants, raiſins, figs, drugs, rice, corn, oil, wine, cotton, ſilk, &c.—This is the reaſon, perhaps, why Venice is the magazine for the ſcarlet drugs, from whence they are ſent over the whole Chriſtian world.

The produce of the iſlands is exceeding great, and aſſiſts the Turks in making returns for the goods they buy of the European merchants: for the Turks are either ſuch ſtrangers to correſpondence, or ſuch enemies to all the world but themſelves, that they have no ſuch things as exchange; ſo that, to balance their trade, they are frequently at a great loſs, if the balance runs againſt them. It is true, it may be in their favour in one place, and the contrary in another; whereby they may ſometimes bring one part to make good another; but they cultivate no epiſtolary correſpondence, no regular poſts going from one place to another, to adjuſt theſe things; ſo that moſt trade and buſineſs is executed by meſſages and expreſſes, ſuch as charoux for the government, or by ſhipping; and, as for money returned from place to place, it muſt be carried all in ſpecie.

Much leſs have they any aſſurances for the riſque of trade, or any of the uſual conveniencies of commerce that other nations have. But, as we ſhall have occaſion to ſpeak more largely to this hereafter, we are under the neceſſity of referring to the articles ORIENTAL TRADE, PROVENCE, for the trade of Marſeilles, and TURKEY TRADE, in order to conſider the ſtate of our own branch in particular. See alſo the article ARCHIPELAGO.

REMARKS.

From what we have here laid before the reader, in relation to this branch of trade, and what we ſhall further add, we ſhall be enabled to make a right judgment, whether our Turkey trade is at preſent put upon a right footing, and whatever elſe it may ſtand in need of further than the late act of parliament, in order to render it of greater emolument to the kingdom in general.

LIEGE, the principality and biſhopric thereof. This country is bounded on the weſt by Brabant; Namur, and part of Hainault on the ſouth; by the foreſt of Ardennes, and part of Luxemburg, on the eaſt; by Luxemburg alſo, by Limburg, part of the duchy of Juliers, and by Pruſſian Guelderland; and, on the north, by Dutch Brabant and part of Guelderland.

The air is very temperate, and the country fruitful; and it's mountains have quarries of marble, and mines of lead, iron, and brimſtone, beſides pit coal in abundance. It's chief rivers are the Maes, Demer, Jecker, and Weſier.

DINANT is ſeated between a ſteep rock and the Maes, which makes it enjoy a pretty good trade, particularly in manufactures of braſs and iron.

MALMEDI is a ſmall town, moſtly inhabited by leather-dreſſers or woollen-drapers.

STAVELO is another ſmall town, the inhabitants of which drive a pretty good trade in woollen cloth, and other ſtuffs, and chiefly in a great quantity of leather curried here.

SPAW, or SPA, is ſituated on the little river Weſe, ſo ſurrounded with mountains that you cannot ſee it 'till you are almoſt in it. It is from the Pouxhon, or Pohon ſpring, in the market-place here, that they draw that prodigious quantity of water that is tranſported into foreign countries, eſpecially into England and Holland, ſealed up in bottles with the town ſeal. The people of the town employ themſelves in making boxes for ladies toilets, ſnuff and other boxes, varniſhed after the manner of China wares, which they ſell to the company, as they go from the wells.

VERVIERS, on the ſame river, has a very flouriſhing manufactory of woollen cloths, ſaid to be nothing inferior to thoſe made in England or Holland; ſo that their trade extends all over Germany, and even into the north of Europe, Italy, and Turkey.

Near this town ſtands the borough of HODIMONT, where they alſo make a great quantity of woollen cloths.

LIGHT-HOUSES and SEA-MARKS. A light-houſe, or beacon by ſea, erected in any place where required, is of great uſe to direct and keep mariners in the right courſe they ought to take to avoid danger: and theſe are very neceſſary in thoſe parts where there are bars, or entrances into harbours, that there muſt be high tide to carry ſhips over them.

Light-houſes and ſea-marks of various kinds, as ſometimes large trees, or buoys, muſt be allowed to be proper cautions to ſtrangers and others, that they may not precipitately run on rocks or ſands, to their ruin and deſtruction: and, in the reign of king Charles II, care was taken for erecting light-houſes and lanthorns, and other ſpecial ſea-marks; but more eſpecially for the building that moſt excellent light-houſe near Goldſton by Yarmouth, which, for it's height, curioſity, and form, was then reckoned not inferior to any, but rather excelling all or moſt in any country whatſoever.

In the fourth and fifth years of queen Anne an act paſſed for the rebuilding of a light-houſe on the Ediſtone, by the maſter, wardens, and aſſiſtants of the Trinity-houſe of Deptford Strond; and, after the ſame is rebuilt, and a uſeful light put therein, there ſhall be paid to them, by the maſters and owners of Engliſh ſhips and barks paſſing by the ſaid light-houſe, except coaſting veſſels, one penny per ton inward, and one penny a ton if outward bound; of which the merchant is to pay a moiety, and the owner of any ſhip the other moiety: and, by ſtrangers, two-pence per ton of the burden of the ſhip or veſſel; and every coaſter two ſhillings only, for each time they paſs by the ſaid light-houſe.

The ſaid duties to be received by ſuch perſon or perſons as the ſaid maſter, wardens, and aſſiſtants of the Trinity-Houſe ſhall appoint, and where ſuch ſhips, barks, or other veſſels ſhall arrive, load, or unload; and on non-payment, to be recovered in any of the courts at Weſtminſter. Stat. 4 and 5 Ann. cap. 20.

By 3 Geo. II. cap. 36. all the powers, liberties, privileges, and authorities granted in letters patent of her majeſty queen Anne, bearing date the 13th day of July, in the 13th year of her reign, to William French, Eſq; for erecting a light-houſe on the iſland or rock called Skerries, lying in the ſea near Holyhead, in the county of Anglefea; and the ſaid light-houſe, with it's rights, members, and appurtenances, ſhall be valid and effectual, and continue for ever veſted in Sutton Morgan, his heirs and aſſigns: to the intent that he and they ſhall keep the light-houſe in good repair, and, in the night-ſeaſon, maintain a proper fire therein, ſo as the trade and navigation in the Channel may be effectually preſerved.

And the ſaid Sutton Morgan may demand and receive from the maſters and owners of every ſhip, hoy, bark, catch, veſſel, or bottom, paſſing, croſſing, or ſailing in or through St. George's Channel, by Holyhead or Wicklow, to or from any foreign port or place, or which ſhall paſs or croſs the ſaid Channel, to or from any port, creek, or place in Great-Britain ſouthward of Holyhead from or to Wicklow, or any ports or place northward thereof in the kingdom of Ireland, or that ſhall paſs, croſs, or ſail from any port, creek, or place northward of Holyhead, either from any foreign or other port, and ſail between Holyhead and the Calf of Man, or any way in St. George's Channel, to the ſouthward of Dublin; and likewiſe from all coaſters paſſing to and from any port, creek, or place in Great-Britain, north of Holyhead, from or to any port, &c. ſouth thereof; one penny per ton coming into, and the like ſum going out of the ſaid ports, places, creeks, or harbours, in Great-Britain or Ireland; and double ſuch duties for any foreign ſhip or veſſel, &c. paſſing, croſſing, or ſailing in like manner, according to their burthens. But ſhips loaded with coals, or the greateſt part of their loading being coals, paſſing from England to Ireland, ſhall only pay one voyage in every year.

And if any maſter, or other perſons, having the command of any ſhip, &c. ſhall refuſe to pay the duties, the ſaid Sutton Morgan, his heirs, &c. may ſeize any of the goods, guns, tackle, &c. of any ſuch ſhip or veſſel, and keep the ſame 'till the duties aforeſaid are paid; and, in caſe of any delay in payment, for the ſpace of three days after ſuch ſeizing, he may cauſe the ſame to be appraiſed by two ſworn appraiſers, and afterwards ſell the goods, and therewith ſatisfy himſelf for the duties, together with the charge of ſeizure, &c. rendering the overplus to the owner.

And, in conſideration of the frequent and conſtant benefit the packet-boats ſailing between Holyhead and Dublin receive by this light-houſe, the poſtmaſter-general, or the commiſſioners for executing that office, ſhall pay to the ſaid Sutton Morgan the annual ſum of 50l. by quarterly payment, without any office fees, or deductions. This ſtatute extendeth not to charge any ſhips of war with the duties beforementioned.

There are large lanthorns ordered by the ſtatute, with duties payable for maintaining them, to be erected at the head of ſome keys, ſuch as at the harbour of Minehead in Somerſetſhire, on the river Severn, &c. See 10 Ann. cap. 24.

LIMBURG, in the Auſtrian Netherlands. This province is bounded on the north and eaſt by the duchy of Juliers; on the ſouth by a ſmall part of the duchy of Luxemburg, and by the country aud biſhopric of Liege, which ſurrounds it alſo on the weſt.

It has excellent mines of iron, and one of copper; the ſoil is very fruitful in wheat, fruits and fuel.

The chief rivers are the Maes, Gueule, Weſe, and Bowine.

NEAU, called EUPIN by the inhabitants, though but a borough, is more conſiderable than many cities, both for the number of it's inhabitants, which amount to about 4000, and for it's trade. They make here woollen cloths, which are ſaid to be as good and fine as thoſe made in England, eſpecially the ſcarlet, blue, and black. They have a conſiderable trade of them throughout the country, and eſpecially in Germany.

LINCOLNSHIRE, is a maritime country, and one of the largeſt in England, and is bounded on the ſouth by Northamptonſhire; on the north by Yorkſhire; has the German Ocean on the eaſt; and is bounded on the weſt with ſome parts of Yorkſhire, Nottinghamſhire, Leiceſterſhire, and Rutlandſhire; and is computed to be about 180 miles in compaſs. It is uſually divided into three parts, viz. Holland, Keſteven, and Lindſey.

I. HOLLAND is bounded on the ſouth with part of Cambridgeſhire; and on the eaſt with the waſhes, which are paſſable at ebb, but overflowed by every tide. The ſoil of this diviſion produces much more graſs than corn.

BOSTON ſtands on the river Witham, which is navigable to Lincoln, and incloſed here with artificial banks. It is, and long has been, a famous and flouriſhing town: it is now in a thriving ſtate, with conſiderable merchants for foreign trade, beſides a good inland trade; and others of the inhabitants apply much to grazing.

DUNNINGTON has a port for barges, and is remarkable for large quantities of hemp and hemp-ſeed bought here, but for nothing elſe, though it is reckoned a good market-town.

CROWLAND is ſituated among fens. The people of this place, which is pretty well inhabited, ſubſiſt chiefly upon the profit of their fiſh and wild ducks, which in the month of Auguſt are ſo numerous, being brought hither by decoy-ducks, that they drive 3000 into a net at a time, by dogs trained up to the buſineſs.

SPALDING is a neater town, and more populous than would be expected in a place encompaſſed with lakes, canals, and rivers; for the drains of Boſton and Langtoft center, as it

were, upon it, and the Welland almoſt incloſes it. Veſſels of 50 or 60 tons may come up to it.

II. KESTEVEN is bounded on the ſouth-eaſt with Holland diviſion, and on the north with that of Lindſey.

STAMFORD ſtands upon the river Welland, which is navigable to it by barges: the chief trade of this town is in malt, ſea-coal, and free-ſtone.

SLEAFORD, in a pleaſant valley, near the head of a river of it's own name, has a conſiderable trade in corn and cattle, a large market-place, and the markets on the Monday after Epiphany, Eaſter, and Whitſuntide, are equal to great fairs.

III. LINDSEY. This, which is the third and largeſt diviſion of the county, runs out with a large front into the ſea, which waſhes it's ſhores on the eaſt and north; it is ſeparated from Yorkſhire and Nottinghamſhire, on the weſt, by the rivers Trent and Dun; and, on the ſouth, is bounded by Keſteven and the Foſſe-Dyke, cut between the Witham and Trent, for the conveniency of carriage to and from Lincoln; and is parted from the Holland diviſion by Horncaſtle wapentake.

LINCOLN CITY is in this diviſion; it is built on the ſide of a hill, at the bottom of which runs the river Witham. It was formerly a very large and flouriſhing place, and made a ſtaple or mart for wooll, leather, lead, &c. but it's trade is gone to decay.

GREAT GRIMBSY, half a mile from the Humber, was alſo a place of very great trade, before it's harbour was choaked up: it's chief trade now is in coals and ſalt, brought by the Humber.

GAINSBOROUGH is a well-built town, of good trade upon the Trent.

LINLITHGOWSHIRE, in Scotland, is bounded on the north with the Forth; with part of Clydeſdale on the weſt; and it is divided from Mid-Lothian on the ſouth and weſt; and by the waters of Almond and Brick-Water on the eaſt. It abounds with coal, lime-ſtone, and white ſalt, beſides corn and paſturage.

LINLITHGOW is the chief or ſhire-town, and is ſo named from it's ſituation on the ſide of a lake, which is a mile in length, and a quarter of a mile over, and abounds with perch, and other ſorts of fiſh.

This town has a face of great buſineſs, with a good harbour, where there is a large Cuſtom-Houſe built; with other houſes for the uſe of merchants.

Here is a great manufacture for linen, which the water of the lake is reckoned ſo extraordinary for bleaching, that great quantities are brought hither from other parts of the country for the purpoſe.

BURROWSTOWNESS, on the coaſt, had the greateſt trade with Holland of any in Scotland, before the Union, which is now much decayed, though it has ſtill a good export of coals and ſalt, and the greateſt traffic both to Holland and France, except Leith. It is ſaid they have the moſt ſhipping, and the beſt ſeamen in the Firth, who are very good pilots for the coaſts of Norway and the Baltic, as well as Holland.

QUEEN'S-FERRY, at the point of St. Margaret's Bay, is the common paſſage at all times of tide from Lothian to Fife, to which it is about two miles over, and it is the ſureſt way from all parts of the north to Edinburgh.

LINEN. What linen is needs no definition, it being ſo well known. There are variety of ſorts, the chief materials of which are cotton, flax, and hemp.

It is difficult to ſay with certainty to whom the invention of this manufacture is owing; perhaps the original idea proceeded from that admiral phænomenon of the ſpider's-web. To diſcribe the divers ſorts, would be as needleſs as tedious, and would oblige us to leave out matter, which, we apprehend, may be more uſeful and acceptable.

As introductory to what we would offer in regard to this article, we deſire the reader would conſult what is ſaid under the articles BLEACHING, CAMBRICS, COTTON-TREE, FLAX, HEMP, LINT, YARN, IRELAND, and SCOTLAND, all which heads contain ſomething tendering to the national advancement of this manufacture.

REMARKS.

We ſhall now conſider this matter in ſome other lights, not leſs intereſting to Great-Britain than what has been ſaid under thoſe heads beforementioned.

Linen is a commodity of univerſal uſe, from the prince to the meaneſt ſubject, and a commodity that cannot be ſupplanted by any thing elſe near ſo commodious and agreeable for thoſe uſes to which it is applied. The uſe of the Indian cotton-cloth has been often attempted for ſhirting, but to no purpoſe; and muſlins for women's head-cloths and ruffles, &c. in place of cambric, but without ſucceſs. Some aſcribe this to a fondneſs of the Engliſh nation for French faſhions; a conceit which, in too many inſtances, is moſt highly detrimental to the trading proſperity of this nation, and which ought, by all poſſible means, to be diſcouraged; but there is found, by long experience, to be a ſubſtance and firmneſs in cambric which gives it a preference to muſlins, for variety of uſes.

The linen trade of Europe is chiefly in the hands of the Ruſſians, Germans, Swiſs, Flemings, Hollanders, and French.

A nation may be drained of it's wealth, and undone by foreign trade, if it takes more goods from other nations for home conſumption than it ſends out, and pays balances in gold and ſilver [ſee BALANCE of TRADE;] and therefore every wiſe adminiſtration will watch carefully over thoſe branches of commerce where the balance is againſt them, and encourage thoſe where the balance is on their ſide.

The balance of trade and money tranſactions between England and thoſe foreign linen countries is againſt England; and, by reaſon of the high duties impoſed by them upon Engliſh woollen goods, and other incumbrances on the importation and ſale of them, the balance of trade is greatly in their favour, more eſpecially if the total balances of thoſe linen countries be conſidered in a conjunctive and aggregate light; becauſe we have not diminiſhed in our imports of foreign linens in the like proportion as thoſe nations have diminiſhed in their imports of our woollen and other merchandizes; and the attempts to eſtabliſh more and more new manufactures of their own, among the European powers, muſt inevitably increaſe the evil upon us, provided we do not take every meaſure to promote an adequate compenſation for the loſſes in trade with which we are daily threatened, by almoſt every power of Europe in their turn, as demonſtrably appears throughout this work.

It is high time to look into our ſtate of the trade to the North; for it is certain in our own power, by the effectual aſſiſtance of our fellow-ſubjects in our ſettlements in America, and by the induſtry of our own people at home (if both were properly employed) to bring the balance of trade with all thoſe countries on our ſide; not only thoſe linen countries, but alſo with thoſe which ſerve us with the bulky trade and naval ſtores.—See NAVAL STORES.

The ſoil of many parts of Virginia and Maryland is exceeding rich, and fit for raiſing of hemp and flax. The ſame hands which hough and dreſs their tobacco-grounds, and cut and cure their plants, may be employed all the winter in breaking and dreſſing hemp and flax. Theſe commodities, being imported rough, may be manufactured at home, into cordage, ſail-duck, and linen of ſeveral ſorts, and will ſerve ſo far to leſſen our demands from Ruſſia and Germany of theſe goods. Great quantities of hemp and flax, to ſupply what we cannot produce at home, may alſo be raiſed in Penſylvania, North Carolina, and in ſeveral other of our own plantations; and all ſo near navigable rivers, that, by ſaving the expence of a long carriage by land, to which thoſe commodities are liable in Muſcovy, they may be imported cheaper than they can be had from thence, and poſſibly too, of a better quality, if once a becoming emulation for that purpoſe is raiſed between ourſelves and them.

Several parts of theſe colonies lie in the latitude of Egypt; and as their ſoil, in ſome places, is equally fine and rich with the ſoil of Egypt, where the fineſt flax in the world is produced, what hinders but our Britiſh plantations may be brought to produce ſuch that is no way inferior in quality?

With regard to watering the flax, the dews in thoſe parts are exceedingly rich, and, when the flax is lying on the graſs, it is thereby brought to an excellent colour, without impairing it's ſtrength in the leaſt, wherein the great art of bleaching conſiſts. See BLEACHING.

Effectual meaſures of this kind would ſecure the dependence of our plantations upon their mother-country, when they ſhall be thus cloſely united to us, by the irrefragable tie of their own intereſt, and their friendſhip and affection for their mother-country, cheriſhed by this profitable intercourſe, when we thus work, as it were, to each other's hands, and mutually ſupport and inrich one another: for, wherever obligations are reciprocal, the conſequences will be ſo likewiſe.

We are at preſent enabled to ſerve our plantations with all the manufactured goods they uſe, except linen; and the preſent ſituation of our trade with the foreign linen countries calls loudly upon us to improve and extend the manufacture of home-made linen.

Every county, and almoſt every town in England, is ſupported, and their poor employed, by ſome one particular branch of trade. This greatly contributes to bring every article of manufacture to it's utmoſt perfection, to increaſe the inland commerce, and the dependency of one part of the country on another, and thereby to advance the common intereſt and wealth of the whole. The coal-trade is the chief buſineſs of Northumberland, Cumberland, and Weſtmorland; and, as this employs their men only, the linen-trade might alſo be ſet on foot in thoſe countries, to employ their women and children.

At Darlington ſome linen is made for inland ſale; but it lies too near Leeds, and the other cloth making towns of Yorkſhire. Many inconveniencies attend the interfering of manufactures: if the ſame hands come to be employed in linen and woollen, or in any part of both, both muſt inevitably ſuffer, by being in danger of falling into diſcredit, and becoming ruined thereby: wherefore all regard ſhould be had to prevent ſuch interfering.

In Lancaſhire the linen-trade may be ſafely carried on, becauſe it does not interfere with the cotton, and that the warp

of all their fuſtians, and ſeveral other cotton goods, is made of linen-yarn.

Linen is the ſtaple of Scotland; but it was long neglected. The Scots at preſent are not, however, in ſo bad a ſituation in reſpect to this trade, as the French were in the reign of king Henry IV, or the Iriſh at the Revolution, where, by the force of public encouragement, it has arrived to an extraordinary pitch, and, it is to be hoped, will daily advance; the Scots have it not to begin, they want only to improve and extend it to the height it will admit.

The linen manufacture may be brought to as great an extent in value as any other buſineſs now carried on in Britain, except the woollen; it may employ near as many hands as the woollen does; and the linen-trade of North Britain is of as great conſequence to the nation in general, as the woollen in the ſouth, and equally deſerves the ſame care, countenance, and encouragement from the public.

The parliament has, from time to time, upon proper application, paſſed acts, and given ſuitable encouragement for the advancing, and preventing the decay of the manufactures of wooll, ſilk, cotton, mohair, &c. all which have been attended with ſome good effects.

The act of parliament made in the year 1727, for regulating the linen manufacture of Scotland, and even the ſmall funds then appropriated by parliament for it's encouragement, did that nation very important ſervice in this reſpect: the linen-trade was, in ſome meaſure, thereby retrieved, and improved beyond expectation. This enabled the Scots to conquer one of their greateſt difficulties; and, when they came to underſtand the defects, faults, and imperfections under which this manufacture laboured, and the ways and means to cure, correct, and amend them, they have brought this manufacture to a very great excellency and perfection.

In a nation ſo populous and extenſive as this iſland of Britain is, branches of buſineſs might be carried on in different parts, which might lay a foundation for diviſion and ſtrife, through an interfering of different intereſts. But it is happily otherwiſe with us; it is no leſs the intereſt of England to promote and advance the linen manufacture of Scotland, than it is the intereſt of Scotland to encourage, by their conſumption, &c. the woollen manufacture of England.

England is ſerved with fine linen from Holland, and countries adjacent to it, and with cambrics, and other ſorts of linen from Holland and France; and the balance of trade and money tranſactions with both thoſe countries is againſt England. England and the Britiſh plantations, are ſerved with great quantities of middling and low-priced linens of divers ſorts, from Sileſia, and other parts in the upper and lower circle of Saxony. Formerly thoſe countries took large quantities of woollen goods from England, and then that trade was profitable to England; but now they have manufactures of woollen in ſeveral places of their own, as before intimated, which ſerves a great part of their conſumption of low-priced cloths, and leſſens their demands for woollen goods from England, whereby the balance of trade with them is now againſt us.

The balance of trade betwixt England and Scotland, and England and Ireland, is on the Engliſh ſide; and, ſo far as England and the plantations can be ſerved with linen from Scotland and Ireland, inſtead of Holland, France, Germany, and Ruſſia, ſo far will England be a gainer by this change in the courſe of trade. The more linen the Scots and Iriſh can ſell in England, the more of the Engliſh commodities will they be enabled to purchaſe; and it may be reaſonably ſuppoſed, that their demands from England will always increaſe in proportion to the increaſe of their people and linen manufactures. It is then evidently the intereſt of England to promote and advance the manufacture of linen in Scotland and Ireland, and to give them all reaſonable advantages in the trade, in preference to foreigners, where the balance of trade is againſt us; and this ſeems to be the ſenſe of the nation, ſince all foreign linen for home conſumption pays a duty.

Foreign linen, indeed, exported to the Britiſh plantations, draws back the whole duty to a trifle; and this was a neceſſary meaſure, when our linen trade was reduced to ſo low an ebb, and the Iriſh manufacture but in it's infancy; ſo that neither Scotch nor Iriſh were able to furniſh them with any large quantity: but now that thoſe countries have, in ſome meaſure, retrieved that branch, and that the Iriſh, as well as the Scotch, are daily increaſing our quantities of linen goods, they both ought to have all the advantages in the trade, that the intereſt of England, as well as the intereſt of Scotland and of Ireland, plainly requires. This may in a great meaſure be effected, if all foreign linen, when exported to the plantations, ſhould not be allowed to drawback the duty it pays on importation, or ſuch a proportion of it, as may be thought reaſonable, to give us a preference in the trade.

When the foreign linen countries took off our woollen and other manufactures, ſomething proportionate in value to the linens we had from them, it might not avail us to think of ſupplying our own plantations with Britiſh-made linen: good policy then dictated the advancing no further in this manufacture, than an endeavour to ſupply our own European domeſtic conſumption: but, as the ſcene is now changed, as thoſe linen countries have eſtabliſhed woollen, and other manufactures of their own, and are daily eſtabliſhing more, that will interfere with the manufactures of theſe kingdoms, is it not time to retaliate upon them by a ſimilar policy? Had we taken off the drawback on foreign linens upon their exportation to the Britiſh plantations, before we were capable, or even likely to ſupply ourſelves and plantations with our home-made linens, and before the foreign linen countries had ſent up woollen and other manufactures which interfere with ours, it might and would have been impolitic, and all theſe apprehenſions of the conſequences attending ſuch meaſure, that we had twenty years ago, might be juſtly grounded. Among other things, it was then urged, 'That, 'if we ſhould be capable of producing and manufacturing 'every thing, ſo that we had no occaſion to import any one 'thing, what ſhould we be gainers of? This would deſtroy 'the great band and ligament of all foreign commerce, and 'in the end the whole nation.'—But this is arguing upon the extreme, and I may as well aſk, if we took all our produce and manufactures from foreign nations, how long ſhould we be able to trade at all?

By the induſtry of England, Scotland, and Ireland, we are now in a condition to ſupply ourſelves and our plantations with linens of our own manufacture; and, if I am rightly informed, ſeveral ſpecies of them as cheap as we can have foreign linens.—But ſuppoſing, not granting, that, as yet, our linen manufacturers have not arrived at every art in making linens ſo cheap as foreigners, or ſo good in quality, what then? Are we to give them no encouragement, 'till they are capable of ſo doing? Is that the way to rouze and animate them to emulate the foreign linen countries? Is diſcouragement the beſt policy to enable them to vie with other nations in this univerſal manufacture? When Lewis the XIVth was informed by his great miniſter Colbert, that his ſubjects would eat herrings, and expended great ſums annually therein—Then anſwered that monarch, They ſhall catch them themſelves or go without; and they have ever ſince ſupplied themſelves.—So if Britons, either in Europe or America, will wear linens, or uſe them in any ſhape, let it be the voice of Great-Britain, that we may manufacture them ourſelves or go without.

But, ſay ſome, if the drawback is taken off on the exportation of foreign linens to our plantations, will not the foreign linen countries ſome how avail themſelves of ſuch a meaſure? They have already anticipated us in this reſpect, by ſettling woollen and other manufactures of their own, and conſequently taking leſs from us than heretofore; and is it not politic in our turn to retaliate upon them in manner ſomething ſimilar to their own policy? Let us then make our own linens, as the linen countries have began to make their own woollens, &c. and take off the drawback allowed on the exportation of foreign linens to the plantations, that our's may come as cheap to our own plantations as foreign linens there will. Ah? but, ſays ſomebody, that cannot reliſh this policy, Will not the Britiſh plantations, in ſuch caſe, make their own linens? What inducement can they have to do this, when the linens we ſhall ſell them, may be made of the very materials [HEMP and FLAX] that we ſhall purchaſe from theſe plantations? for that is the footing whereon I have put the matter, to which the reader will pleaſe to attend. That trifling attempts have been made in ſome of our northern colonies upon the linen manufacture, we are no ſtrangers to; but, if our plantations were effectually encouraged in the raiſing of all raw materials for this manufacture to be carried on in their mother-country, they would ceaſe to go greater lengths in a manufacture, which requires ſo long time to bring to tolerable perfection; nor would they then ſcruple to give the preference to Britiſh linens, though they came ſomething dearer at firſt than foreign linens, when they knew ſuch Britiſh linens were made of the produce of their own plantations.

Nothing is more common than for us to complain, that our northern colonies begin to interfere with us in our Britiſh manufactures, and may in time ſupply our ſugar iſlands therewith. If this ſhould ever come to paſs, may we not thank ourſelves? For, if we in time give them ſuch effectual encouragement in planting as we may, and as the ſtate of our commerce apparently requires, they will not eaſily turn from planting to manufacturing. Planting and agriculture are beſt underſtood there, and, if any thing ſtimulates our colonies to lay this aſide for what they do not yet underſtand to any degree of perfection, it will be the ſupineneſs and diſcouragement of the mother-country to rouze them to the former.

Is it more politic to encourage the importation of foreign linens into our plantations, than to encourage thoſe plantations in the production of ſuch materials, as will enable Great-Britain and Ireland to ſupply them with home-made linens, as cheap as they can have foreign now? And why ſhould not that be the caſe, when our plantations can ſupply us cheaply and plentifully with the materials for that purpoſe?

Would

Would not due encouragement given to our plantations, in this reſpect, take away the temptation from our colonies to ſupply themſelves by ſmuggling foreign linens *? When the mother-country took off immenſe quantities of their planting productions for the linen manufactures, would it not prove unſpeakably more for their intereſt to diſcourage all ſmuggling trade of this kind, than to ſacrifice their planting intereſt? in ſuch caſe, can we imagine them to be ſo little acquainted with their own happineſs and proſperity, as not to make laws every way adequate to the prevention of ſo deſtructive an evil, and alſo vigilantly ſee to their execution?

* It has been ſaid, in oppoſition to the taking off the bounty on foreign linen, on their being exported to our Britiſh plantations, 'That the harbour of Curaſoa, the iſland of St. Euſtatia, the ports of Surinam, and the Berbices, belonging to the Dutch, are always open and free for the Engliſh to trade to. The duties on what the Engliſh import and ſell there, ſeldom amount to above 5 per cent. I remember but one inſtance when they exceeded, and that was juſt upon the peace of Utrecht, when Monſ. Carſar, after having plundered Nevis and Montſerrat, made the garriſon of Curaſoa ranſom themſelves for 1,200,000 pieces of eight or Spaniſh dollars, as I have been informed the ſum was: and, indeed, for two or three years, they made all foreigners pay 10 per cent. on all the goods they imported and ſold there: but, during that time and occaſion, which might have, in ſome meaſure, excuſed a tax on their merchandize at exportation, they were not ſo weak as to do it, well knowing, that nobody would buy goods and merchandize of them that knew where to buy cheaper; nor did they ever, in any inſtance that I know of, demand any duties on any goods that any one purchaſed in their harbours, but let him carry them where he would or could, well knowing whatever draws ſhipping, draws trade, and that draws profit or money, which all trading people want. There is not a port in the world out of Europe, where all ſorts of European goods are to be ſeen in greater plenty than there, in Curaſoa; and, I believe, there has not been a day theſe twenty years, when there were no Engliſh ſhips to be ſeen in that harbour, but this is only one port: Surinam and the Berbices lie to windward of Barbadoes, and not above three days ſail from it; ſo that the people of Barbadoes might be ſupplied from thence very conveniently, and with ſmall riſque.'
St. Euſtatia lies in ſight of our Leeward iſlands; and, as I will not put all on my own ſingle authority on this occaſion, I will tranſcribe a paſſage out of a book publiſhed ſome years ago, intitled, The Importance of the Britiſh Plantations in America to this kingdom, printed for J. Peele, p. 32, 33. where the author ſays,
'I ſhall take leave, in this place, to mention an affair, 'for which, if a remedy could be found, it would be of 'ſome advantage to us. The iſland of St. Euſtace, which 'is inhabited by the Dutch, is not above three leagues 'diſtant from St. Chriſtopher's; and, with regard to it's 'extent and produce, very conſiderable: but its road is 'the place where Dutch interlopers from the coaſt of Af'rica ſeldom fail to call at. In a few days all our Lee'ward iſlands are informed of this. In places, ſuch as 'our iſlands are, it is not much to be wondered at, if 'there are perſons who run ſome hazard for the hope of 'a conſiderable gain; ſo that all the ready money which 'they can advance at any rate, is carried by them on 'board theſe ſhips, where negroes are ſold to them fre'quently 20 per cent. cheaper than our own ſhips do af'ford them. This ready money is a great temptation to 'ſome planters, who ſell their ſugars to them at leſs than 'the current price; and, under pretence of ſending it in 'ſloops to our own ſhipping, it is ſent on board theſe in'terlopers, who, by theſe means get loaden at leſs ex'pence than our own ſhips, and carry off more money 'than a great number of our own ſhips which trade for 'three times the value. By this it is evident, that we have 'really employed a Dutch ſhip, and have paid her whole 'freight, out and home, in money, which is juſt ſo much 'loſt to the nation: nor is that the only damage; for on 'board theſe ſhips are often great quantities of fine and 'coarſe LINENS, which are ſold for ready money only.'
See Reflections and Conſiderations, occaſioned by the petition preſented to the honourable Houſe of Commons, for taking off the drawback on foreign linens, printed for T. Cooper, 1738.

So far, then, it ſeems pretty clear, 'till I hear reaſons to change ſentiments, that it is for the mutual intereſt of Great-Britain and her plantations, to promote the manufacture of linens in general; the former in the making them, and the latter in producing the requiſites of nature for that purpoſe.
It has been ſuggeſted alſo, 'That, if we take the drawback off foreign linen, to make them dearer to our plantations, in order to introduce our own linens, we muſt be obliged to take off the ſame on the exportation of all foreign linens; which will bring them ſo dear to foreign markets, eſpecially to thoſe of the Spaniſh Weſt-Indies, that we ſhall thereby run the hazard of loſing that trade, becauſe that thoſe foreign linens make one of the eſſential aſſortments of a ſaleable cargo for Spaniſh America.—That the productions of many nations and countries are become abſolutely neceſſary to this end; and that often much more gain and advantage will accrue to the merchant, and conſequently to this kingdom, by trading in goods of foreign manufacture than in thoſe of our own.—That in ſuch caſe, if the Britiſh merchant is not at liberty to ſort his cargo with ſuch wares as the markets he ſends to require, and at as low a rate as others can, who trade to the ſame market, he muſt be beaten out by the others, and leave the trade wholly to them,' &c.
This argument, like all of the extreme and general kind, has the fate to prove too much; for, if this is allowed concluſive, it will follow, that we muſt never preſume to think of ſuch an advancement to our linen manufacture, as to come in for any ſhare whatever in the ſupply for foreign markets.—Had ſuch-like policy prevailed in France, would they ever have had reſolution to have attempted to ſupplant us in the woollen, or any other manufacture, wherein we had the ſtart of them, as they have done? But they would not be lulled to a lethargy by ſuch ſpecious reaſoning; that it is in vain for us to think of ſupplying the Spaniſh Weſt-Indies, or any other foreign country, with any of our home-made woollen, or linen manufactures; we cannot make up ſaleable aſſortments, without the woollen manufactures of England, and the linens of Germany; and therefore, if we preſumptuouſly attempt to make woollens or linens of our own to the taſte of the Spaniards, we ſhall, inſtead of increaſing, loſe that ſhare of the Spaniſh Weſt-India trade we have already obtained! With what contempt would a Colbert have treated ſuch argument? Had he been influenced by it, would it not have prevented every wiſe meaſure that he ſo ſucceſsfully took for the advancement of manufactures of every kind, in order to force a trade with foreign countries? Hath not the lucrative experience of France, to the unſpeakable detriment of England, proved ſuch reaſoning frivolous and deluſory? Yet this was the principal, if not the only colourable argument urged, ſome years ſince, againſt a petition prefented to the honourable Houſe of Commons, ſetting forth, 'That the manufactures of linen now labour 'under ſeveral diſcouragements, but more particularly on 'account of the drawbacks allowed on exportation of foreign 'linens, threads, and tapes; by means whereof, conſiderable 'quantities have been, and ſtill are ſent from hence to parts 'beyond the ſeas, to the GREAT HINDRANCE of the con'ſumption of our own produce and manufactures; and there'fore praying the Houſe to give ſuch relief, as to the Houſe 'ſhall ſeem meet.'
When France firſt attempted the eſtabliſhment of the woollen manufactures, they had every difficulty to ſtruggle with, having neither the material, nor the manufactures; yet a reſolute perſeverance and ſound policy diſſipated every difficulty and diſcouragement [ſee the article FRANCE]. The firſt ſtep they took was to ſupply themſelves with woollen goods of their own fabrication, and to ſtop the importation of the Engliſh woollen manufacture, in proportion as they advanced in their own: and although, at their firſt enterprize, their manufacture was but very indifferent, yet, as the king himſelf encouraged the wear, the whole nation followed the example. This laid the firſt foundation for their proſperity in this great manufacture. After which, they exerted every politic art, in the power of human nature to ſuggeſt, in order to imitate the Engliſh in that perfection to which they had long before arrived.—Thus the moſt ſkilful and experienced manufactures in England and Holland were allured by honours and rewards irreſiſtible; and thus the groundwork was laid to vie with the Engliſh at foreign markets, in the ſtaple manufacture of the kingdom. But, as the reputation of the Engliſh woollen goods was eſtabliſhed throughout the whole world, the difficulty lay in convincing foreigners, that they had arrived at as great a perfection in this art as the Engliſh; which they did, by propagating that they had the Engliſh and Iriſh wool to work with, and Engliſh manufacturers to fabricate it; and what hindered, ſaid the French, but we may make goods in France, equal in quality with thoſe made in England? Whether they have even yet arrived to the perfection of the Engliſh, is greatly to be doubted. However, they made their cloths façon d'Angleterre; they imitated their lengths, breadths, and thickneſs, and counterfeited the Engliſh ſeals affixed to the ſame, and thereby craftily inſinuated their woollen fabric among foreign nations; and, as they have been able to afford them cheaper, they have gradually made their way, and now ſhare the woollen trade with us in all parts of the world. And, while this was accompliſhing, they found ways and means to make up their ſaleable aſſortments for the Spaniſh Weſt-Indies, as well as other foreign markets; whereby the merchant and nation both gained, though not at firſt to the degree they have been able to do ſince they have arrived at a greater perfection in theſe fabrics.
And what hinders that Great-Britain and Ireland ſhould not be able to imitate the perfection of foreign linens, to as great a degree as the French have the Engliſh woollen goods? That our people want ingenuity to carry any manufactural art to the laſt perfection, will not be ſaid; that they wonderfully excel in the linen manufacture in particular, is indiſputably true; and that to ſuch a degree, it has been af-

firmed.

firmed, that foreign linen manufacturers have been themſelves deceived, by taking the Britiſh and Iriſh linens for ſome of their own. Certain it is, that a very extraordinary progreſs is now made in this univerſal manufacture; and, if we purſue the like meaſure that France has done, in relation to the eſtabliſhment of their woollen manufactories, why may we not firſt be able amply to ſupply ourſelves with home-made linen, and then attempt a competition therein with foreign nations? If we cannot raiſe hemp and flax ſufficient for our demands in Great-Britain and Ireland, will not our plantations moſt amply ſupply us, with effectual encouragement?

Neither the banks of the Nile, nor the moſt fruitful plains of Egypt, were ever more capable of producing fine flax (though formerly eſteemed the beſt in the world) than the banks of the Suſquehannah, Delawar, Hudſon's river, and the rich and fat vallies of the Engliſh North America are.—The climate of North America, with regard to the production of moſt vegetables, particularly as to HEMP and FLAX, is inferior to none in quality in the known world: they have ſo many ſorts of ſoil, that no place in any climate can ſhew more than may be ſeen there in one day's riding.

Notwithſtanding thoſe apparent advantages, which may accrue to the public weal from the advancement of this manufacture to it's laſt perfection; and notwithſtanding the reaſonableneſs of taking off the drawback upon foreign linen; yet we well know, that courts cannot at every point of time, at every criſis, do what is right and juſt for their own country, and what they would wiſh to do. The circumſtances of public affairs muſt be attended to; there is, in the concerns of ſtate, as well as in thoſe of private perſons, a ſeaſon for all things, as the wiſe man has long ſince reminded us of; and the wiſe and upright ſtatefman will watch thoſe ſeaſons, and take the advantage of favourable opportunities.

When we, therefore, occaſionally in this work, take the liberty humbly to ſuggeſt any meaſure, which we apprehend may turn to the commercial emolument of the ſtate, we would, by no means, preſume to dictate to our ſuperiors the PROPER TIME for the execution of any thing, becauſe that depends upon the real ſtate of public affairs both at home and abroad; and what may be wiſe and prudent to be done at one time, and may be attended with great national honour and advantage, may be the reverſe at other times.—Theſe reflections ſhould make the bulk of the people modeſt, and leſs cenſorious of the public meaſures in all nations, becauſe in moſt they cannot know the great wheels and ſprings of government.—In this happy land of liberty, indeed, we can as little bear with the myſteries of ſtate as of religion; and yet ſome politicians have told us, that there is a neceſſity for them in both.—But theſe things we leave to the divine and the ſtatefman; while we ſubmit to conſideration ſuch general principles only, as are deducible from facts, leaving their application to be made, as the exigencies of ſtate may occaſionally require.

That nothing may diſcourage and intimidate Great-Britain and Ireland from carrying the linen manufacture to the perfection that England has done the woollen *, it may be uſeful to give ſome calculations relating to the quantity of linen manufactured in Ireland, and of the proportion that the material of flax bears to the manufactured merchandize, by Thomas Prior, Eſq; of Dublin: which calculations may in ſome meaſure be applied to England and Scotland.

* The reader will pleaſe to obſerve, that, at the beginning of this article, the utmoſt national care is recommended to prevent any injurious interfering between thoſe ſtaple manufactures, the woollen and the linen; that is to ſay, our manufacturers engaged in the former muſt not be drawn off to the latter; nor ſhould the ſituation of the one be in places too near that of the other, leſt the workmen, engaged in the one, ſhould be diverted to the other, and grow leſs expert and ſkilful in both, to the detriment of our grand ſtaple the woollen branch, and to the obſtruction of the promotion of that of the linen. For, although we have powerful competitors in the woollen, yet we ſhould by no means abate that ardor and zeal, neceſſary to ſupport that ſhare of this ineſtimable branch which we ſtill preſerve. Times may change; Great-Britain ſtill maintains her weight and dignity at foreign courts; and if her manufactural artiſts maintain their ſpirit of induſtry and ingenuity, and if once the ſtudies of commerce and it's dependent arts, conſidered in all relations become as faſhionable as thoſe of the belles lettres and polemical and phyſiological ſtudies, we may have opportunities of making ſuch treaties of commerce with other nations, as may one day give us full employment in both theſe general manufactures: new channels of trade may likewiſe offer themſelves to us, which at preſent, perhaps, can be as little foreſeen, as the diſcovery of the new world was before it happened. See the articles ARTIFICERS, MANUFACTURERS, and MECHANICS.

* It is computed, ſays this judicious gentleman, that the value of linen, made in Ireland yearly, amounts to a million ſterling; and that half thereof is yearly exported, and that the remaining half is conſumed at home; reckoning five ſhillings a-head for two millions of people one with another, for all their conſumptions in linen.

It is alſo computed, that the following quantities of rough flax, ſuch as we have from Riga, worth forty ſhillings the hundred weight, will give employment for a whole year to the following number of perſons, one with another, including ſpinners, hecklers, weavers, bleachers, &c. viz. a hundred weight of flax will employ for a year two hands. A ton, or twenty hundred weight, will employ forty hands. A hundred tons will employ four thouſand hands. A thouſand tons will employ forty thouſand hands. And three thouſand one hundred and twenty-five tons will employ one hundred and twenty-five thouſand hands.

It is alſo computed that the following quantities of rough flax, worth forty ſhillings the hundred weight, when fully manufactured into linen, will, at a medium of coarſe and fine, be worth the following ſums annexed to them, viz. A hundred weight of flax, when manufactured into linen, will be worth ſixteen pounds. A ton, or twenty hundred weight, will be worth three hundred and twenty pounds. A hundred tons will yield thirty-two thouſand pounds. And three thouſand one hundred and twenty-five tons weight will yield a million ſterling.

It is alſo eſtimated, that a good acre of flax will produce three, four, five, or ſix hundred weight of flax; and if we allow four hundred weight, or thirty-two ſtone, to be raiſed from every acre one with another in a year, which is a reaſonable allowance; on that ſuppoſition, the aforeſaid three thouſand one hundred and twenty-five tons of flax, which are all that are at preſent ſuppoſed to be made uſe of in our linen manufacture, before eſtimated to be of the value of a million ſterling yearly, may be raiſed from fifteen thouſand ſix hundred and twenty-five acres only; and if we allow but three hundred weight or twenty-four ſtone to be raiſed from every acre one with another, which is a low computation, then it will require about twenty thouſand eight hundred and thirty-two acres, to raiſe the aforeſaid quantity of three thouſand one hundred and twenty-five tons of flax.

If theſe computations and eſtimates are true, or near the truth, as we may reaſonably ſuppoſe them to be, ſince they come from perſons well ſkilled in the linen manufacture, they will afford grounds for making the following obſervations.

It appears from theſe computations, that we have two millions of people in Ireland, yet no more than a ſixteenth part of them, viz. a hundred and twenty-five thouſand, are fully employed in the linen manufacture, our ſtaple commodity; that number being ſufficient, if employed the whole year round, to make linens to the value of a million ſterling, which is computed to be the value of all the linen yearly made at preſent, allowing eight pounds ſterling to each perſon one with another yearly for their work.

Though Ireland, which contains eleven millions of acres, hath ſeveral millions in it fit for the growth of flax, yet we ſee that there are not above thirteen thouſand acres in it employed that way: for, though ſixteen thouſand acres may be ſufficient to ſupply the three thouſand one hundred and twenty-five tons of flax employed in our manufactures, yet, as we import yearly from foreign countries five hundred tons of flax, a deduction ought to be made; and, as it will be found, that we do not raiſe above two thouſand ſix hundred tons of flax of our own growth yearly, the reſt being imported, therefore thirteen thouſand acres will be ſufficient to produce that quantity, allowing four hundred weight of flax to be raiſed from each acre.

From hence it evidently follows, that, as we neither want hands nor lands, and may command and employ what number and quantity we pleaſe, and yet have a great deal ſtill to ſpare, it is in our power to double the quantity and value of our linen manufactures, by employing double the quantity of land in raiſing flax, and double the number of hands in working it up into linen, which would yield a million ſterling yearly profit to the nation, more than we make at preſent; with a great proſpect of it's continuing ſtill to increaſe, ſince we have no reaſon to apprehend that we ſhall ever want a vent for all the linens we can make.

It appears from the foregoing calculations, that the nation would receive an additional profit of ſixty-four thouſand pounds yearly for every thouſand acres that ſhould be employed, more than are at preſent, in raiſing of flax and working up the ſame into linen, and thereby employ eight thouſand hands more.

This is a motive ſufficient to engage our attention, to puſh forward this improvement as far as it will go, and to loſe no time in accompliſhing it. And, though it may be practicable to enlarge our linen manufacture to the extent and value before-mentioned, yet will it take a conſiderable time before we can make any progreſs, unleſs we can, by proper encouragements and premiums, give a new and greater ſpirit to our induſtry and endeavours.'

OBSERVATIONS on the raiſing of flax, for the effectual eſtabliſhment of the linen manufacture in Great-Britain and Ireland.

We find, by experience, that all our flax, either of our own growth or imported from abroad, is ſpun into yarn; that all our yarn is either exported or worked up into cloth at home, and that all our cloth is either conſumed at home, or ſold at a good market abroad.

It is more advantage to the kingdom to raiſe the flax ourſelves * which we make uſe of, than to import it from abroad: for thereby we ſave the price of the material imported, and do not depend on other countries for the primum of our ſtaple commodity.

* Herein we include the Britiſh plantations as a part of ourſelves, and what is ſaid in relation to the raiſing of good flax may be applied to that of hemp; ſo that we may ſtand in need of importing no material from any foreign country, in order to carry this extenſive and important manufacture to the height it will admit of.

No manufacture can be increaſed, beyond what the material of which it is made will allow; but muſt increaſe or decreaſe, in proportion to the plenty or ſcarcity of the material.

There can be no increaſe of the linen manufacture without an increaſe of yarn, nor of yarn without an increaſe of ſpinners, nor of ſpinners without an increaſe of flax.

We import great quantities of flax yearly from foreign countries, which ſhews that we do not raiſe flax enough of our own growth to ſupply our manufactures. Our chief attention, therefore, ſhould be to increaſe the number of ſpinners, and the quantity of flax.

There are as many women and children in this kingdom that do not ſpin flax, as there are that do; and many of thoſe that are now unemployed, would work, if they could procure the materials.

If we ſhould double the number of our ſpinners, as it is certainly in our power, and ſupply them with flax and wheels, we might then make double the value in linen: it is, therefore, our intereſt to provide ſufficient ſtores of flax to keep our ſpinners at work.

We find, by experience, that in the beſt ſeaſons we never raiſe flax enough for our manufactures, and that, in bad ſeaſons, we greatly fall ſhort of the requiſite quantity; we ſhould, therefore, until we can raiſe flax enough ourſelves, import large quantities of foreign flax, that our ſpinners may be ſtill kept at work, who muſt otherwiſe be idle for want of the material.

Though by bad ſeaſons, or other accidents, we ſhould happen to raiſe but little flax of our own growth, yet in ſuch a caſe, if we take proper meaſures to import large quantities of flax from abroad, we ſhould ſtill be able to make great profit by our manufacture, by gaining ſeven parts in eight of the value of the linen, by the labour employed on the flax.

Good flax-ſeed ſowed on poor, ill-cultivated ground, and bad ſeed ſowed on good, well prepared ground, ſeldom yield good flax. A due cultivation of proper ſoil, and good ſeed, muſt concur to produce good flax.

One acre of rich, well cultivated, land, ſowed with good ſeed, will produce more and better flax, than two, three, or four acres of poor land, ill cultivated, ſowed with bad ſeed, though the expence by the acre, to the ſower, may be nearly equal to both.

Since flax-ſeed of our own growth ſometimes degenerates, by reaſon of bad ſeaſons and bad huſbandry, it would be highly proper, in order to be furniſhed with good ſeed, to give ſome premiums [ſee the articles MANUFACTURES and PREMIUMS] to merchants who ſhall, for one or two years to come, import large quantities of flax-ſeed from the Baltic, or North America.

By this expedient, every perſon who ſhould be willing to ſow good ſeed, in order to raiſe good flax and ſeed, may have it in his choice to make uſe of the beſt foreign or home ſeed he can meet with.

It is found, by experience, that, in all manufactures conſiſting of different parts, they ſucceed beſt, who have particular workmen for every part: each operator, being confined to his own branch, can afford his work cheaper and in greater perfection; by this method, watches and Birmingham ware are offered ſo cheap, every part being a ſeparate and diſtinct trade, and confined to a particular ſett of workmen; and the maſter who employs them, puts all their work together, and finiſhes the whole; whereas one who undertakes ſeveral diſtinct branches at once, will hardly ſucceed in any to perfection.

In like manner, to ſucceed in the linen manufacture, one ſett of people ſhould be employed, either at home or in our plantations, and confined to the plowing and preparing of the ſoil, ſowing and covering the ſeed, to the weeding, pulling, rippling, taking care of the new ſeed, and watering and graſſing the flax, until it is lodged at home; others ſhould be concerned in the drying, breaking, ſcutching, and heckling the flax, to fit it for the ſpinners; and others at home, in ſpinning and reeling the ſame to fit it for the weaver; others ſhould be concerned in taking due care of the weaving, bleaching, beetling, and finiſhing the cloth for the market. It is reaſonable to believe, that, if theſe ſeveral branches of the manufacture were carried on by diſtinct dealers, the ſeveral parts would be better executed, and the whole could be afforded cheaper and with greater profit.

Since we find, by experience, that all our flax, yarn, and linen, find a vent, it ſhould therefore be our chief endeavour to increaſe the quantity of our flax, not only as it is neceſſary to keep our preſent ſpinners fully employed, but as it will be a means of employing many hands, that are now uſeleſs for want of it.

We find a general diſpoſition and readineſs in all our poor women to get a livelihood by ſpinning, if they could get flax and wheels to work with.

It would be a great benefit to the whole kingdom, and to every gentleman poſſeſſed of lands in particular, if all the labouring women and children on his eſtate were furniſhed with flax and wheels; and, though this ſhould be attended with ſome ſmall expence at firſt, yet this would be ſoon made good, by the profit thoſe women and children would make by their yarn, which never fails of a market; and which would enable them to repay, with gratitude, the firſt expence their kind landlords were at, in putting them in a way of getting an honeſt livelihood.

Beſides the ſeveral other articles referred to at the beginning of this, we alſo refer to thoſe of SCOTLAND and IRELAND.

A SUMMARY of the chief LAWS of ENGLAND, relating to LINENS in general.

I. Stat. 28 Hen. VIII. cap. 4. §. 2. No perſon, Engliſh nor ſtranger, ſhall put to ſale any whole piece or half piece of dowlas and lockeram, unleſs there be expreſſed upon the piece the number of yards or ells contained in ſuch piece, upon pain of forfeiture of the ſame, not containing the number of yards or ells mentioned upon the piece; one half of ſuch forfeiture to be to the king, and the other half to him that ſhall ſeize and will ſue for the ſame by action of debt, &c.

II. Stat. 1 Eliz. cap. 12. §. 1. If any perſon ſhall willingly uſe any means with linen cloth, whereby the ſame ſhall be deceitful or worſe for uſe, the cloth ſhall be forfeited, and the offender puniſhed by one month's impriſonment, and ſhall pay ſuch fines as ſhall be aſſeſſed for his offence, by the juſtices before whom he ſhall be condemned.

III. §. 2. The juſtices of oyer and terminer, and juſtices of aſſizes, and juſtices of peace, or three of them, whereof one to be of the quorum, ſhall have power to enquire, hear, and determine, the offences aforeſaid in their ſeſſions, by information or indictment.

IV. §. 3. If any perſon ſhall ſeize any ſuch deceitful linen cloth, he ſhall at the next ſeſſions of the peace, or before two juſtices of the peace, whereof one to be of the quorum, make information of the offence, and of the ſeizure of the cloth, or procure the offenders to be indicted; and ſhall be bound before the juſtices, to the uſe of the queen, in ſuch form as the juſtices ſhall think meet, to purſue the ſame matter with effect, and to give evidence, and alſo to pay the moiety of all that he ſhall recover, to the ſheriff, or other accountant, to the uſe of the queen; the one half of all the forfeitures and fines to be to the queen, and the other moiety to him that ſhall make information, or procure indictments of the premiſes, and follow the ſame with effect.

V. §. 4. The juſtices before whom any ſuch offence ſhall be tried, ſhall certify the ſame by their eſtreat into the Exchequer, yearly, at Michaelmas, and the barons of the Exchequer ſhall have power to make proceſs for ſo much as ſhall appertain to the queen.

VI. Stat. 1 Ann. ſtat. 2. cap. 8. §. 2. All ſorts of hemp or flax, and the production thereof, as thread, yarn, and linen, imported into England directly from Ireland, by any natives of England or Ireland, being of the growth and manufacture of Ireland, upon producing ſuch certificates, and making ſuch oath, as in the act 7 Will. III. cap. 39. is required, ſhall be free from the additional ſubſidy of poundage, and all cuſtoms whatſoever.

VII. Stat. 3 Ann. cap. 8. §. 1. It ſhall be lawful for any natives of England or Ireland to ſhip in any port of Ireland in Engliſh built ſhipping, whereof the maſter and three fourths of the mariners to be Engliſh or Iriſh, any white or brown linen cloth of the manufacture of Ireland, and the ſame to tranſport into any of the plantations, the act 15 Car. II. cap. 7. notwithſtanding.

VIII. §. 2. Provided that no ſhip coming to the plantations from Ireland ſhall break bulk, until the maſter ſhall have made known to the governor, or to ſuch officer as ſhall be by him appointed, the arrival of the ſaid ſhip, with her name and the name of the maſter, and ſhall have delivered a true inventory or invoice of the lading, together with a certificate from the chief officer of the port in Ireland, where ſuch ſhip ſhall be laden, expreſſing the particulars of ſuch lading, with the names and abodes of the exporters, and of two perſons, who ſhall have made oath before ſuch chief officer, that the ſaid goods and linen are, bona fide, of the manufacture of Ireland; and, until the maſter ſhall have made oath before ſuch governor or officer, that the ſaid goods are the ſame that he took on board by virtue of ſuch certificate,

certificate, nor until such ship shall have been searched by an officer; and, in case the commander of such ship shall break bulk before such notice given and certificate produced, and such oath made, or before such search, or if any goods of woollen manufacture not laden in England (necessary apparel of the commander and mariners excepted) or any linen goods not laden in England, nor of the manufacture of Ireland, shall be found, such ship shall be forfeited, together with all goods imported or found in such ship; one third part to her majesty, one third part to the governor of such plantation, if the ship be there seized or sued for (or otherwise that third part also to her majesty) and the other third part to him who shall sue for the same in her majesty's court in the plantations where the offence shall be committed, or in any of her majesty's courts at Westminster.

IX. §. 3. All ships coming from Ireland to any such plantation, shall be subject to the same rules to which ships coming from England are subject.

X. §. 8. Any person for any seizure made in pursuance of this act may plead the general issue, and shall have double costs.

XI. §. 9. All informations and suits for any offence against this act shall be commenced within twelve months after the discovery of such offence.

XII. §. 10. If any ship laden with goods in England, Wales, or Berwick, for any of the plantations, shall put into any port in Ireland, and shall there take in any white or brown Irish linen, the like certificate and oaths shall be made, that the said linen is of the manufacture of Ireland, as is before directed; and if upon the arrival of such ship in the plantations such certificate be produced, and oaths made, such ship, &c. shall be subject to such rules as they were subject to before the passing of this act, and no other.

XIII. §. 11. This act shall continue eleven years.

Continued by 3 Geo. 1. cap. 21.

XIV. Stat. 7 Ann. cap. 7. §. 24. European linens, sisters threads, and tapes or incle, linseed and flax, shall be exempted from the duties called the two third subsidies.

XV. Stat. 10 Ann. cap. 19. §. 66. There shall be paid to her majesty upon all chequered and striped linens, and upon all linens printed, painted, stained, or dyed, after the manufacture, or in the thread or yarn before the manufacture, in foreign parts, which during 32 years shall be imported into Great-Britain, and may lawfully be used there (over and above all other customs) a duty of 15l. for every 100l. value.

XVI. §. 67. The said duty shall be managed and brought into the Exchequer, in the same manner as the duties upon paper.

XVII. §. 68. After the said duties upon chequered, &c. linens imported shall be paid, the commissioners and officers of the customs shall cause every piece to be stamped with a seal, to denote the payment of the duties.

XVIII. §. 69. There shall be paid to her majesty upon all silks, callicoes, linens, and stuffs, which during 32 years shall be printed, stained, painted, or dyed, in Great-Britain (such callicoes, linens, and fustians, as shall be dyed throughout of one colour only, and stuffs made of woollen, or whereof the greatest part in value shall be woollen, excepted) the duties herein after expressed (over and above the duties payable upon importation) viz. For all silks so printed, stained. or painted, in Great-Britain (silk handkerchiefs excepted) 6d. for every yard in length, reckoning half a yard for the breadth; and for all silk handkerchiefs so printed, &c. in Great-Britain, 3d. for every yard square; upon all callicoes so printed, stained, painted, or dyed, in Great-Britain, 3d. for every yard in length, one yard wide; and upon all linen and stuffs printed, &c. in Great-Britain, three halfpence for every yard in length yard wide.

XIX. §. 70. Such commissioners, as her majesty or the commissioners of the treasury appoint, shall be her majesty's commissioners for the receipt and management of the said duties, who shall have power to appoint receivers-general, collectors, comptrollers, surveyors, and other officers; and the commissioners shall cause all the monies to arise by the same duties to be paid into the receipt of Exchequer in England.

XX. §. 71. Every person who shall print, paint, stain, or dye, any such goods, shall give notice of their names and places of abode, and the rooms where they shall work or dry any such goods, upon pain to forfeit 30l.

XXI. §. 72. All persons who shall print, &c. any silks, &c. shall once in six weeks make entry at the next office of all such silks, &c. printed, &c. within such six weeks; and, if such printer, &c. be not the owner of such goods, he shall specify the names and places of abode of the owners, on pain to forfeit 50l. which entry shall be made upon the oath of the printer, &c. or of his chief workman, to the best of his knowledge or belief, unless a Quaker, and then on his solemn affirmation; and the said oaths and affirmations may be administered by the collector or supervisor, without fee.

XXII. §. 73. Provided that no person, for the making of such entries, be obliged to send further than the next market-town.

XXIII. §. 74. Every person who shall print, &c. any silks, &c. shall, within six weeks after he ought to have made such entry, clear off all the duties, upon pain of forfeiting double the duties; and no such person, after such default in payment, shall deliver or carry out any such printed, &c. goods, until he hath paid his duty, on pain to forfeit double the value of the goods.

XXIV. §. 75. The officers of the said duties shall at all times, by day or by night, and, if in the night, in presence of a constable or other officer of the peace, be permitted, upon request, to enter into the house, or other place belonging to, or used by, any person who shall print, &c. any silks, &c. and to take account thereof, and shall thereof make return in writing to the commissioners, leaving a copy (if demanded) with the printer, &c. and such return shall be a charge upon such printer, &c. and, if the officer neglect to leave a copy of his report, being demanded, he shall forfeit 40s. to such printer, &c.

XXV. §. 76. Every officer, impowered to make such charge, shall first be sworn for the due and faithful execution of his office; and the oath may be administered by the commissioners for the duties, or by any of her majesty's justices of the peace, who shall give such officer a certificate thereof.

XXVI. §. 77. The officers shall be permitted to take account of the quantities of silks, &c. in the custody of any printer, &c. to be printed, &c. and in case such officer shall miss any quantity of such silk, &c. and shall not upon demand receive satisfaction for what is become of the same, it shall be lawful for such officer to charge such printer, &c. with the duties of such silks, &c. as if the same were printed, &c.

XXVII. §. 78. If any person who shall print, &c. any the goods aforesaid, shall obstruct the officers, the offenders shall forfeit 20l.

XXVIII. §. 79. No person shall remove any the silks, &c. by him printed, &c. until the officer shall have taken account of every quantity of such goods, and until every piece be marked with a stamp, denoting the charging of the duty, upon pain of forfeiting 20l. and all the printed, &c. silks, &c. carried away without being marked, and found in the possession of any draper or other trader therein for sale, may be seized, or the value thereof recovered, one moiety for the use of her majesty, and the other moiety to the seizer or informer.

XXIX. §. 80. Upon payment of the duties for any quantity of the said goods, the collector shall give a receipt gratis.

XXX. §. 81. The said printers, &c. shall keep the goods not surveyed by the officers apart from all others of the same kinds, which shall have been surveyed, on pain to forfeit 5l.

XXXI. §. 82. If any of the said printers, &c. shall fraudulently conceal any silk, &c. with intent to deceive her majesty of her duties, the party offending shall forfeit 20l. and all the silks, &c. found in any private place, whereof no notice shall have been given, or the value thereof may be seized and recovered, one moiety to the use of her majesty, and the other moiety to the use of the seizer or informer.

XXXII. §. 83. All utensils and instruments for printing, &c. of such goods, in custody of any such printer, &c. shall be liable to the debts and duties, and also to all penalties incurred by such person, as if the debtor or offender were the true owner.

XXXIII. §. 90. No fee shall be taken by the officers from the said printers or others, for any entries, receipts, or marks, in this act mentioned, under the penalty of 5l. to the party grieved.

XXXIV. §. 91. The powers in 12 Car. II. cap. 24. or any other law of excise, shall be used in levying the duties hereby granted.

XXXV. §. 92. All penalties in relation to the said duties upon silks, &c. printed, &c. in Great-Britain, shall be levied or mitigated, as any penalty by any law of excise, or by action of debt, &c. in her majesty's courts at Westminster, or in the court of session, justiciary, or exchequer, in Scotland; and one moiety of every such penalty (not otherwise appointed by this act) shall be to her majesty, and the other moiety to him that shall sue for the same.

XXXVI. §. 93. The commissioners for the said duties on silks, &c. printed, &c. in England, Wales, and Berwick, shall have the same power as the commissioners of excise.

XXXVII. §. 94. It shall be lawful for any person who shall have paid her majesty's duties for any the said imported linens, or for any silks, &c. printed, &c. in Great-Britain, and any other person who shall be intitled to any such goods from the person who paid her majesty's duties, to export such goods for any foreign parts, giving security that the quantities to be exported shall not be relanded in Great-Britain; which security the customer or collector of the port of exportation shall take in her majesty's name.

XXXVIII. §. 95. If, after the shipping of any such goods and the giving such security, the same shall be relanded in Great-Britain, the said goods, or the value thereof, shall be forfeited.

XXXIX. §. 96. Any perſon who ſhall export ſuch chequered, ſtriped, printed, painted, ſtained, or dyed goods, may make proof upon oath, that the duties have been paid or ſecured (which oath the cuſtomer or collector is to adminiſter) and thereupon the cuſtomer or collector ſhall give to the exporter a debenture, expreſſing the kinds and quantities of the chequered and ſtriped linens, and of the printed, painted, ſtained, and dyed goods, ſo exported; and, the exportation thereof being certified by the ſearcher upon the debenture, the collector of the duties upon ſuch goods, in the place where ſuch exportation was, ſhall pay the duties received to the perſons or agents exporting the ſame; and, if ſuch collector ſhall not have money in his hands, the commiſſioners ſhall pay the ſaid debenture out of any duties upon chequered and ſtriped linens, printed, painted, ſtained, and dyed goods; or, if the duty of the goods exported were only ſecured, the ſame ſhall be diſcharged.

XL. §. 97. The commiſſioners of the cuſtoms ſhall provide ſeals, with which the imported linens ſhall be marked, and the commiſſioners for the ſaid duties ſhall provide ſeals (of another kind) for marking the ſaid ſilks, &c. printed, &c. in Great Britain; and the officers are required in uſing the ſame to do no damage to the goods; and, if any perſon ſhall counterfeit any ſeal provided in purſuance of this act, or the impreſſion of the ſame, to defraud her majeſty of the duties, ſuch perſon, being thereof convicted, ſhall be judged a felon without benefit of clergy; and, if any perſon ſhall ſell any printed, &c. ſilks, &c. with a counterfeit ſtamp, knowing the ſame to be counterfeited, and with an intent to defraud her majeſty, ſuch offenders, their aiders, abettors, and aſſiſtants (being convicted) ſhall forfeit to her majeſty 100 l. and ſtand in the pillory two hours.

XLI. §. 98. Upon oath made by any credible perſons, that they have reaſon to ſuſpect that any printed, &c. ſilks, &c. are in the cuſtody of any draper, or other perſon dealing therein, for ſale, without having ſuch marks as are required, it ſhall be lawful for the commiſſioners within the bills of mortality, or any two juſtices of peace in other parts of the kingdom, to iſſue their warrants, requiring any officer for the ſame duties (with the aſſiſtance of a conſtable or other officers of the peace) in the day time, to ſearch for the ſame, and to open doors, cheſts, and package, and to ſeize ſuch goods, and bring them to the office next the place where they ſhall be ſeized.

XLII. §. 99. All callicoes printed, painted, or ſtained, which ſhall be within one eighth of a yard of yard broad, or not exceeding one eighth of a yard of yard broad, ſhall pay as yard broad.

XLIII. Stat. 12 Ann. ſtat 2. cap. 9. §. 6. There ſhall be paid to her majeſty upon all chequered and ſtriped linens, and upon all linens printed, painted, ſtained, or dyed, after the manufacture, or in the thread and yarn before the manufacture, in any foreign parts (except buckrams, lawns, canvas, barras and Sileſia neckcloths) which during 32 years ſhall be imported into Great-Britain, and may lawfully be uſed there (over and above all other duties) 15 l. for every 100 l. value, to be paid by the importers.

XLIV. §. 7. There ſhall be paid to her majeſty upon all ſilks, callicoes, linens, and ſtuffs, which during 32 years ſhall be printed, ſtained, painted, or dyed in Great-Britain (ſuch callicoes, linens, and fuſtians, as ſhall be dyed throughout of one colour, and ſtuffs made of woollen, or whereof the greateſt part in value ſhall be woollen, excepted) the duties herein after expreſſed (over and above all other duties) viz. upon all ſilks ſo printed, ſtained, or painted (ſilk handkerchiefs excepted) 6 d. for every yard in length, reckoning half a yard for the breadth; and for all ſilk handkerchiefs ſo printed, &c. 1 d. for every yard ſquare; upon all callicoes ſo printed, ſtained, painted, or dyed, 3 d. for every yard in length, one yard wide; and upon all linen and ſtuffs printed, ſtained, painted, or dyed in Great-Britain, 1 d. $\frac{1}{2}$ for every yard in length, yard wide, as by 10 Ann. c. 19. The duties upon imported goods to be under the management of the commiſſioners of the cuſtoms.

Theſe duties are made perpetual by 6 Geo. I. cap. 4. and great part of them are ſubſcribed into the South-Sea-ſtock, and the reſidue is mortgaged to the Bank, by 2 Geo. II. cap. 3.

XLV. §. 15. Every perſon that ſhall export any ſilks, callicoes, or linens, that are printed, painted, ſtained, or dyed, for which a drawback is to be allowed, ſhall give notice to the officer, appointed by the commiſſioners of the cuſtoms, when and where he will pack up the goods to be exported; and the commiſſioners of the cuſtoms are directed to cauſe ſuch officer to ſee that the ſeals be taken off from every piece to be exported, and the officer ſhall take account of the kinds and quantities of the goods to be exported, and make a return thereof to the officer appointed to receive the ſame without fee.

XLVI. Stat. 12 Ann. ſtat. 2. cap. 19. Lawns, and ſtriped or chequered linens, being all white, and neckloths ſtriped at the end only, and alſo barras and packing canvas or buckrams, were not intended to be charged by the act 10 Ann. cap. 19. upon importation, with the duties by the ſame act granted.

XLVII. Stat. 12 Ann. ſtat. 2. cap. 21. The exception in the act 7 Ann. cap. 7. in relation to tapes or incles, ſhall extend to exempt European unwrought incle called ſhort ſpinnal, as well as wrought incle, from the payment of the two third ſubſidies.

XLVIII. Stat. 1 Geo. I. cap. 36. §. 21. All perſons who ſhall print, paint, ſtain, or dye any ſilks, callicoes, linens, or ſtuffs, at any other place than the uſual place of their reſidence or exerciſe of their trade, ſhall firſt make a particular entry thereof with the proper officer, and pay down the duties, on forfeiture of 50 l. to be recovered as by the laws of excife or action of debt, &c. and ſuch ſilks, &c. ſo printed, &c. without entry and payment of the duty, may be ſeized immediately by ſuch officer; one moiety of ſuch forfeitures to the crown, the other to the proſecutor or informer.

XLIX. Stat. 3 Geo. I. cap. 7. §. 38. It ſhall be lawful to import linſeed without paying any duty.

L. §. 39. It ſhall be lawful to export all ſorts of linen cloth of the manufacture of this kingdom, made of flax or hemp, free from all duties.

LI. Stat. 3 Geo. I. cap. 21. §. 1. The act 3 and 4 Ann cap. 8. to permit the exportation of Iriſh linen cloth to the plantations, &c. ſo far as the ſame relates to the exportation of Iriſh linen cloths to the Britiſh plantations, ſhall continue in force ſo long as the merchants, &c. of Great-Britain are permitted to import into Ireland, free of duties, white and brown Britiſh linen cloth made in Great-Britain.

LII. §. 2. All linens made in Ireland, and imported into this kingdom, may be ſhipped off again for any of his majeſty's plantations in America, without paying any duty.

LIII. Stat. 4 Geo. II. cap. 16. §. 1. All perſons who ſhall felonioufly ſteal, or hire any other felonioufly to ſteal, out of any whitening or bleaching croft, or place made uſe of by any whitſter, crofter, bowker, or bleacher, for whitening, bowking, bleaching, or drying any linen, fuſtian, or cotton cloth, or any thread, linen, or cotton yarn, tape, incle, filleting, laces or goods, expoſed to be whitened, bowked, bleached, or dried, to the value of 10 s. or who ſhall buy or receive any ſuch goods, knowing the ſame to be ſtolen, ſhall be adjudged felons without benefit of clergy, unleſs the court ſhall think it reaſonable that the party offending, inſtead of ſuffering death, ſhould be tranſported to ſome of his majeſty's plantations for ſeven years.

LIV. §. 2. If any perſon, ordered to be tranſported in purſuance of this act, ſhall refuſe ſo to be, or ſhall break priſon, eſcape, come on ſhore, or return into this realm, before the term expired, he ſhall, being convicted, ſuffer death.

Remarks.

The following authentic papers being annexed to the report from the committee appointed to examine and ſtate to the houſe of commons the matters of fact in the ſeveral petitions of the manufacturers of, and traders and dealers in, the Linen Manufactory; we have thought them uſeful, to give the reader an inſight into the real ſtate and progreſs of this manufacture in Ireland and Scotland.

Premiums given by the linen board of Ireland, for the encouragement of that manufactory.

Linen-Board.

The truſtees of the linen manufacture are reſolved to continue premiums on coarſe linens, with ſome alterations ſuited to the preſent ſtate of that growing manufacture.

They therefore propoſe to give to ſuch perſon or perſons as ſhall, after the 1ſt day of November next, manufacture, or cauſe to be manufactured, the greateſt quantities of ſound merchantable linen cloth, of the breadth of 26 inches or upwards, made of cleanſed yarn, and not leſs in value than 6 d. by the yard, being ſuch as is fit for the uſe of the ſervants and negroes in the Britiſh colonies and plantations, and ſhall cauſe the ſame to be exported to Great-Britain, or to any other part of his majeſty's dominion in Europe or America, on or before the 25th day of December in the year 1750, the following premiums, on the following conditions; provided that the quantities, ſo manufactured and exported, be not leſs than thoſe which correſpond to each premium, according to the following table:

	Sums.	No. of yards.
One premium - -	l. 300	60,000
One premium - -	250	50,000
One premium - - -	200	40,000
One premium - - -	150	30,000
Two premiums, each - -	100	20,000
Four premiums, each - -	50	10,000
Eight premiums, each - -	25	5,000
Ten premiums, each - -	20	4,000
Twenty premiums, each - -	10	2,000
Twenty premiums, each - -	5	1,000

Conditions.

I. All cloths for theſe premiums muſt be proved, upon oath, to have been made entirely of yarn ſpun in this kingdom, and,

and, all other things being equal, the preference ſhall be given to cloths, the yarn of which ſhall be ſpun from flax growing in this kingdom.

II. Strong well wrought cloths ſhall have a preference before a greater quantity of ſlighter, and not ſo well wrought cloths, provided that the leſſer quantity of better cloths be ſufficient to entitle the manufacturers to the premium applied for, according to the above table.

III. All cloths manufactured, in order to obtain any of the above premiums, ſhall be viewed, examined, and ſtamped, by an officer appointed by the board, publickly in the Linen-Hall in Dublin, or in ſome public place in the port towns from whence they are to be exported; and they ſhall be preſented to the ſaid officer, not lapped, but in folds.

IV. All perſons who have large quantities of linen to be viewed, ſhall give 15 days notice to the truſtees, or their ſecretary, of their intention to export any quantity of ſuch linen, not leſs than 4000 yards, to the end that an officer may be ſent to view, examine, and ſtamp the ſame, as aforeſaid, at that port from whence ſuch linens are to be exported, as aforeſaid; and they who have ſmaller quantities muſt give the like notice, to the end that their cloths may be viewed, examined, and ſtamped, at the ſame time, otherwiſe they muſt bring their cloths to the Linen-Hall in Dublin.

V. Indented patterns ſhall be ſent up to the ſecretary of the linen-board of each piece, and the full breadth of the cloth, marked and numbered in the piece and pattern alike, before any officer be ſent to any port whatſoever, to view, examine, and ſtamp linens.

VI. No perſon ſhall be entitled to more than one premium on thoſe coarſe linens; and, therefore,

N. B. All candidates ſhall be ſtrictly examined upon oath, as to their having really and bona fide manufactured, or cauſed to be manufactured, the linens by them entered and exported, as aforeſaid; particularly, whether any other perſon be at all concerned or intereſted in the ſaid cloths; and if, upon ſuch examination, it ſhall appear, that the ſaid cloths, or any part of them, were manufactured covertly, by or for the uſe of ſuch perſon or perſons as in their own, or in any other name, have applied for any other premium, all ſuch perſons, as well they to whom ſuch cloths are found to belong, as they in whoſe names they are entered, ſhall be for that time abſolutely incapable of any premium, although, before the diſcovery of ſuch fraud, they may have appeared or be entitled to it.

VII. Any number of manufacturers, joined in fair partnerſhip previous to the manufacturing theſe linens, are to be taken as one perſon.

VIII. Authentic certificates of the exportation muſt be produced from the collectors of the reſpective ports, at which the ſeveral cloths have been exported.

IX. No perſon is to be admitted a candidate for any of theſe premiums, who is under a contract with the linen-board, to make and export any quantity of thoſe cloths, for which theſe premiums are deſigned.

All perſons may be furniſhed with ſamples of cloths which are fit for the uſe of negroes, &c. at the Linen-Office in the caſtle of Dublin.

Dublin-Caſtle, the 7th of April, 1749. Signed by order, ARTHUR NEWBURGH.

LINEN-BOARD.

The truſtees of the linen manufacture, to encourage the raiſing and manufacturing of flax, the produce of this kingdom, have agreed to give the following premiums, viz.

I. That all perſons who ſhall, from the date hereof to the 1ſt of October, 1752, lodge, in the ſtores of the truſtees of the linen manufacture, any quantity of ſcutched flax, not leſs than 800 weight, ſhall receive 10 s. for every 100 of flax ſo lodged, provided the officers appointed by the truſtees ſhall eſtimate the ſaid flax to be worth not leſs than 35 s. per 100, and provided the ſaid perſon produce proper certificates, that he had, under the culture of flax, a quantity of ground, not leſs than two acres, and provided he makes oath, that the ſaid flax is the produce of the land ſo certified, and that he has never received the premium for it.

II. That all perſons who ſhall, from and to the time aforeſaid, lodge in the ſtores any quantity not leſs than the weight aforeſaid, ſhall receive 8 s. for every 100 weight ſo lodged, provided the officers ſhall eſtimate the ſaid flax to be worth not leſs than 30s. per 100, and provided the certificate and oath above-mentioned be alſo complied with.

III. That all perſons who ſhall, from and to the time aforeſaid, lodge, in the ſtores aforeſaid, any quantity not leſs than the weight aforeſaid, ſhall receive 6 s. for every 100 ſo lodged, provided the officers ſhall eſtimate the ſaid flax to be worth not leſs than 25 s. per 800, and provided the certificate and oath above-mentioned be alſo complied with.

Note, It is required that the quantity of ground on which the flax grew, ſhall be certified by two credible perſons in the neighbourhood, who have viewed the ſame whilſt the flax was growing thereon; and that the name of the townland, barony, and county, in which the ſaid land lies, ſhall be ſpecified in the certificate; which certificate ſhall be ſigned in the preſence of ſome neighbouring juſtice of the peace.

That the owner of the flax ſhall make oath, before two neighbouring juſtices of the peace, that the ſaid flax is his own property, and is the produce of the land certified and deſcribed as above; and that the land was in his own occupation at the time of ſowing the flax.

That the perſon who delivers the flax at the ſtores ſhall make oath, that he received the ſame from the perſon who has made the above-mentioned oath.

N. B. Such perſons who intend to apply for the above premiums, may be ſupplied with the proper form of the oath and certificate by addreſſing for the ſame to Arthur Newburgh, Eſq; in the caſtle of Dublin.

Dublin-Caſtle, the 7th of April, 1749. Signed by order, ARTH. NEWBURGH.

LINEN-BOARD.

The truſtees of the linen manufacture, finding the good effects of the premiums granted upon coarſe linens, have reſolved to extend them further: they therefore propoſe to give ſuch perſons as ſhall, after the 1ſt day of May next, manufacture, or cauſe to be manufactured, the greateſt quantity of ſound, ſtrong, thick linen cloth, of both, or either of the kinds herein after deſcribed, made of high white flaxen yarn, without any mixture of tow-yarn, and thoroughly well bleached, and ſhall cauſe the ſame to be exported to Great-Britain, or any part of his majeſty's dominions in Europe or America, between the 1ſt day of May aforeſaid, and the 1ſt day of November, 1750, the following premiums, on the following conditions, provided that the quantities of each kind, ſo exported by the reſpective candidates, be not leſs than the number of yards correſponding to each premium in the following tables:

Premiums on coarſe ſheeting, which muſt be a cloth of 800, or upwards, and of the full breadth of 40 inches and an half, or upwards when bleached.

	Sums.	No. of yards.
One premium - - -	l. 300	30,000
One premium - - -	250	25,000
One premium - - -	200	20,000
Two premiums, each - -	150	15,000
Two premiums, each - -	100	10,000
Five premiums, each - -	50	5,000

Premiums on finer ſheeting, which muſt be a cloth of 1200, or upwards, and of the full breadth of one ell, or upwards, when bleached.

	Sums.	No. of yards.
One premium - - -	l. 300	18,000
One premium - - -	250	15,000
One premium - - -	200	12,000
Two premiums, each - -	150	9,000
Two premiums, each - -	100	6,000
Five premiums, each - -	50	3,000

CONDITIONS.

I. All cloths entered and exported, in order to entitle the perſons entering and exporting to any of the above premiums, muſt be thoroughly bleached, without uſing rubbing-boards or rubbing-milns: and, to this and every other point that ſhall be thought neceſſary, the reſpective candidates ſhall be examined ſtrictly upon oath.

II. All cloths, as aforeſaid, muſt be brought to the Linen-Hall in Dublin (not lapped, but in the folds) to be there viewed, examined, and ſtamped, by an officer appointed by the truſtees for that purpoſe; and this view, examination, and ſtamping, ſhall be public in the Linen-Hall.

III. All thin, ill woven, or ill bleached goods, and all that ſhall be found deficient in breadth, or to have the leaſt mixture of tow-yarn, ſhall be abſolutely rejected.

IV. Thick, ſtrong, cloſe, well-wrought cloths, ſhall entitle the candidate to a premium preferably to a greater quantity of cloth, leſs thick and ſtrong, and not ſo well woven, provided the ſmaller quantity of better cloth be ſuch as intitles the candidate to the premium applied for, according to the above tables.

V. The ſame perſon may entitle himſelf to one premium on the coarſer ſheeting, and to another on the finer: but no perſon ſhall be qualified to demand or receive more than one premium on a manufacture of the ſame kind: and therefore

N. B. All candidates ſhall be ſtrictly examined upon oath, as to their having, really and bona fide, manufactured, or cauſed to be manufactured, the linens by them entered and exported, as above, particularly whether any other perſon be at all concerned or intereſted in the ſaid cloths; and if, upon examination, it ſhall appear that the ſaid cloths, or any part of them, were manufactured covertly, by or for the uſe of ſuch perſon or perſons, as

in

in their own or any other name have applied for any other premium, all ſuch perſons, as well they to whom ſuch cloths are found to belong, as they in whoſe names they are entered, ſhall be, for that time, abſolutely incapable of any premium, although, before the diſcovery of ſuch fraud, they may have appeared entitled to it.

VI. Any number of manufacturers joined in fair partnerſhip previous to the manufacturing theſe linens, are to be taken as one perſon.

VII. It is expected that all candidates ſhall mark, in the weaving, the hundreds and beares in each piece.

VIII. Authentic certificates of the exportation muſt be produced from the collectors of the reſpective ports, at which the ſeveral cloths have been exported. Such perſons as intend to apply for any of the above premiums, may be furniſhed at the Linen-Office, in the caſtle of Dublin, with ſamples of the ſeveral ſorts of cloths which are fit for ſheeting of either kind, and for which ſorts only the above premiums are intended.

Dublin-Caſtle, the 7th of April, 1749.

Signed by order,
ARTH. NEWBURGH.

An account of the quantity and duty of ſtatutable and unſtatutable linen-yarn, exported out of Ireland to Great-Britain, for twenty years, ending the 25th of March, 1750, each year diſtinguiſhed.

Years end the 25th of March.	Linen-yarn. Statutable.	Linen-yarn. Unſtatutable.	Duty.

The value chargeable by the Book of Rates is, 5 l. for ſtatutable, and 10 l. a hundred for unſtatutable, at 120 lb. to the hundred weight.

The ports from whence linen-yarn is chiefly exported, are, Londonderry, Belfaſt, Newry, Drogheda, and, in a leſs degree, Dublin, Dundalk, and Colerain.—The port to which ſuch yarn is exported is Liverpool.

The 5 l. per cent. is by the act of cuſtoms, anno 1661.—The additional 5 l. per cent. by an act of 2 George I. 1717. T. Lill. Exr. Cuſt.

An account of the nett quantities of cotton-wool imported into Great-Britain for ſeven years, after a deduction of the quantities exported; drawn from the accounts produced before the committee.

	Pounds weight.	
1743	1,100,841	Imported.

	1,658,365	
	330,998	Exported.
	1,327,367	

Which, on a medium of theſe laſt four years, amounts to 2,568,894 l. per annum.

The report for the year 1734.

It cannot eſcape your majeſty's obſervation, that the increaſe in the number of yards is not in this laſt year ſo conſiderable as in the former: but then your truſtees apprehend, that is, in a great meaſure, to be imputed to a very large exportation of linen-yarn, which bears hard upon the weavers: but as, according to your truſtees information, 40 or 50,000 l. worth of the yarn, ſo carried from this part of the kingdom, is brought into England, and employed in the manufactures that are carried on there, they cannot ſuffer themſelves to think of any expedient for preventing it, eſpecially ſince the demand for their yarn increaſes the ſpinning, though it is ſome mortification to them, that parcels of their yarn are bought up, and exported beyond the ſeas.

Report for 1736.

The chief cauſe of the decreaſe they impute to the great export of their linen-yarn to Mancheſter, and other parts of the north of England, to be wrought up with cottons there; which they can hardly complain of, becauſe it encourages their ſpinning, and is a benefit to the united kingdom, by preventing the purchaſing of linen-yarn from abroad.

Report for 1738.

One, and indeed the principal cauſe why the making of linen-cloth for ſale is not more rapidly extended, is, that very great quantities of linen-yarn are bought up every year in Scotland, to be wrought up with cotton, and other ways in England, which produces a ſcarcity of the very materials out of which linen is made in this country; inſomuch that the quantity of yarn, which was uſually purchaſed in Scotland for about 2 s. 4 d. two or three years ago, cannot be now bought under 2 s. 7 d. or 2 s. 8 d. and this proves ſo great a drawback on the manufacture of cloth in this country, that, did not the benefit of it redound to the other part of this your majeſty's kingdom, your truſtees would find themſelves under a neceſſity of applying to your majeſty for a remedy, by act of parliament, to this inconveniency. But, as the finding yarn fit for their purpoſe in this part of the iſland, may be a convenience to your majeſty's ſubjects in the other, and as the demand for yarn from hence muſt tend to propagate ſpinning here, your truſtees have laid aſide all thought of aſking for any ſuch remedy.

Another cauſe why the manufacturing yarn into linen does not make ſuch progreſs as were to be wiſhed, is, that great quantities of yarn, eſpecially of the finer ſort, are converted into thread for foreign, as well as for our own mercats: and, as the thread manufacture of this country gains conſiderable reputation, your truſtees humbly think it ought rather to be promoted than diſcouraged.

It being therefore, in your truſtees apprehenſion, improper to attempt to remove any of thoſe cauſes which drain our mercats of yarn, and raiſe the price of it, whereby the working up larger quantities of linen is prevented, the only thing remains for them to do, is, to try to increaſe the quantity of yarn, ſo as, if poſſible, to anſwer all demands, by encouraging the ſpinning of flax, where that art is leaſt known, and conſequently moſt neglected.

Royal Sign Manual.

GEORGE R.

Truſty and well-beloved, we greet you well. Having taken under our royal conſideration your report made to us laſt Chriſtmas, and the propoſition therein contained of publiſhing and eſtabliſhing for three years, from the ſaid Chriſtmas, a plan for diſtributing the monies applicable to improvements, in manner following, viz.

	l.	s.	d.
Item, For premiums, after the rate of 15s. per acre, for 2000 acres of ground to be ſown with lint-ſeed and hemp-ſeed, according to rules and conditions to be eſtabliſhed	1500	0	0
For a ſalary to a foreign-flax raiſer, at 30l. per annum	30	0	0
For defraying the maintenance of four young men, inſtructing to raiſe and break flax, at Mr. Hope of Rankeiller's lint-mill	50	0	0
For ſalaries to 12 young men inſtructed, or to be inſtructed in raiſing flax, to be ſtationed in different parts of the country, at 7l. 10s. per annum	90	0	0
For erecting two heckleries, for heckling flax, at 20l. per annum each	40	0	0
For inſtructing four young men in the art of heckling, at 4l. per annum each	16	0	0
For purchaſing four ſetts of heckles, to be given to theſe young men when inſtructed, at 6l. 10s. each ſett	26	0	0
For a ſalary to a perſon ſkilled in the raiſing, dreſſing, and heckling of flax, for ſurveying and examining the raiſers, dreſſers, and hecklers, at the places where they ſhall be ſtationed	60	0	0
For encouraging ſpinning-ſchools, for teaching the ſpinning of flax	46	0	0
For prizes to thoſe that ſhall ſpin the beſt yarn	50	0	0
For encouraging four Dutch weavers, to perfect journeymen-weavers, at 40l. per annum each	160	0	0
For purchaſing Dutch looms, with complete tackle, to be given to ſuch journeymen completed	190	0	0
For ſalaries to 55 lappers and ſtamp-maſters, at ſo many ſtations, at 10l. per annum each	550	0	0
For prizes to be given at ſuch ſtations as the truſtees ſhall appoint, to ſuch perſons as ſhall work the beſt webs of coarſe linen-cloth, of the qualities and ſizes by the truſtees to be limited	212	0	0
For ſalaries to two general riding-officers, at 125l. per annum each	250	0	0
For a ſalary to a ſkilful perſon, who ſhall viſit the ſeveral manufacturing counties, and there inſtruct the ſtamp-maſters, as well as the weavers, in the beſt method of waſhing, ſorting, ſlaying, and weaving of their yarn	130	0	0
For a ſalary to the warehouſe-keeper of the cambric	100	0	0
For defraying the expence of carrying on proſecutions againſt ſuch as tranſgreſs the laws concerning the linen and hempen manufactures	100	0	0
For procuring models of the beſt looms, and other inſtruments, for improving the linen and hempen manufactures	50	0	0
Making, in the whole, for the linen and hempen manufacture	3650	0	0

We are graciouſly pleaſed to approve of your purpoſe of publiſhing the aforeſaid plan for diſtribution of the monies intended for improvements, to continue and endure for three years from Chriſtmas laſt: and we are alſo graciouſly pleaſed to approve of the propoſitions aforeſaid, for employing 1205l. part of the ſavings in your caſhier's hands: and do hereby authorize and impower you to iſſue your precepts to your caſhier, to pay, out of the monies in his hands, the ſeveral ſums above-mentioned, to the ſeveral uſes and purpoſes aforeſaid: and this, together with your precepts to follow thereupon, and the receipts of the perſons to whom the precepts ſhall ſeverally be made paſſable, ſhall be to you, and your caſhier, a ſufficient authority and exoneration. And we do further will and direct, that, in your next annual report, you do lay before us a particular account of the monies that ſhall be ſo iſſued by you for theſe ſervices. Severally given at our court at St. James's the 12th day of May, 1740, in the 13th year of our reign.

By his MAJESTY's Command.

So ſigned, R. WALPOLE,
GEO. DODDINGTON,
SUNDON.

The duty upon yarn here, from 1739 to 1747, was 2d. ½ per pound weight: and, from 1748 to 1750, 2d. ⅞, beſides charges and freight, which, on coarſe linen-yarn, comes to near ¼ per pound.

Iriſh premiums, as publiſhed in the Daily Gazetteer of Tueſday, February 25, 1746.

IRELAND.

A bounty of 1d. ½ per yard being granted by the Britiſh parliament on all Britiſh or Iriſh linens, made of flax or hemp of the value of 6d. per yard, and not exceeding 12d. per yard, that ſhall be exported out of Great-Britain to the plantations, &c.—The Linen Board have agreed to give the following premiums, viz.

1ſt. 500l. To ſuch perſon or perſons as ſhall manufacture, or cauſe to be manufactured, the greateſt quantity

tity of ſound merchantable linen-cloth, of 26 inches breadth, or upwards, made of cleanſed yarn, not leſs in value than 6d. per yard, nor more than 10d. being ſuch as is fit for the uſe of the ſervants and negroes in the Britiſh colonies and plantations; and ſhall cauſe the ſame to be exported to Great-Britain between the 1ſt of May, 1746, and the 1ſt of May, 1747, provided the quantity ſo exported be not leſs than 50,000 yards.

2d. 400 l. On the like conditions, to ſuch as have not obtained the firſt premium, and to export not leſs than 40,000 yards.

3d. 300 l. On the like conditions, to ſuch as have not obtained the firſt or ſecond premiums, and to export not leſs than 30,000 yards.

4th. 200 l. To ſuch as have not obtained the firſt, ſecond, or third premiums, and to export not leſs than 20,000 yards.

5th. 100 l. To ſuch as have not obtained the firſt, ſecond, third, and fourth premiums, and to export not leſs than 10,000 yards.

1,500 l.

For exporting 150,000 yards is 2d. $\frac{4}{10}$ of a penny each yard, over-and-above 1d. $\frac{1}{2}$ per yard, given by the Engliſh parliament.

N. B. The Iriſh give all utenſils for the linen manufactory, as looms, reeds, hatchels, wheels, reels, and ſalaries to a foreman and a whitſter, beſides ſeed to ſow hemp and flax.

Dublin Caſtle, March 7, 1745.

The truſtees of the linen manufacture of Ireland give notice, that they will give conſiderable encouragement to ſuch flax-dreſſers (to be approved of by the truſtees) as ſhall come from any parts beyond the ſeas, into, and ſettle and carry on their trade in that kingdom.

Propoſals to be addreſſed to Arthur Newburgh, Eſq; at the caſtle of Dublin.

Signed by order,

ARTHUR NEWBURGH.

Premiums given by the Linen-Board of Ireland, for manufacturing, or cauſing to be manufactured, great quantities of coarſe linen, between the 1ſt of May, 1747, and the 1ſt of Auguſt, 1748, fit for the uſe of ſervants and negroes in the Britiſh colonies and plantations.

Jonathan Tanner of Bandon, who diſtinguiſhed himſelf as a uſeful manufacturer in that part of the kingdom, had an additional premium of —	——	40
	In all	1,930

The other premiums promiſed by the Linen-Board were not due in October 1750.

REMARKS on the LINEN MANUFACTURE in general.

From the ſtate of the caſe of the linen manufacture, as before given, the neceſſity of it's utmoſt advancement manifeſtly appears; and that not only amply to ſupply ourſelves and our plantations, but to put ourſelves in a condition to participate in the ſupply of foreign countries. And what weighty and concluſive objections can be made againſt the probability of ſo doing? Is not Great-Britain, in conjunction with Ireland, and the aid of her plantations, as capable of ſupplying themſelves with all flaxes and hempen linens, as France heretofore was to ſupply themſelves with the woollen manufactures? Do we not labour under far leſs difficulties and diſcouragements in the one reſpect, than that nation did in the other? If we are once arrived to the pitch of being able fully to furniſh ourſelves, what hinders that we cannot exclude the wear of foreign linens, as France has that of foreign woollen goods? There was a time, when it might, perhaps, be our intereſt, in ſome degree, to import foreign linen; it was ſo when thoſe foreign linen countries took an equal value, or more, of our woollen, or any other manufactures, than we did of their linens: but no one, I believe, will undertake to demonſtrate that the caſe is ſo at preſent.

On the contrary, the balance of trade is greatly in our diſfavour with the foreign linen countries in general; and, before the evil further increaſes, is it not prudential to think of a remedy? When diſadvantages of this kind grow to a certain height, they frequently become irremediable, without coming to an open rupture with ſuch foreign countries wherewith we are ſo circumſtanced: but, if we are wiſe enough gradually to decline purchaſing of their produce and manufacture, in the like proportion as they do ours, we ſhall not only ſave the national treaſure, but preſerve peace and tranquillity with thoſe very nations.—And, when this general manufacture ſhall be brought to a height ſufficient to ſupply ourſelves and plantations with a commodity as cheap and good in quality as foreign linens, what hinders but we may caſt about for foreign markets for the vent of our linens, as the French have done for their woollens? But, if we never put ourſelves into a condition of ſupplying ourſelves, how can we ever expect to have any ſhare in the ſupply of other nations?

Should it be ſaid, as has been, that the ineffectuality of the late cambric act ſhews the improbability, if not the impoſſibility of preventing the ſmuggling importation of foreign linens, and, therefore, it is in vain to attempt the advancement of our linen trade.—That the reſemblance between cambrics and other fine linens, both foreign and Britiſh, is ſuch, that very few, and thoſe only of the greateſt experience, can pretend to diſtinguiſh them.—That, this diſtinction being principally grounded on circumſtances capable of being eaſily varied or diſguiſed, ſuch as length, breadth, bleach, dreſs, and package, the moſt experienced dealer cannot determine with any degree of certainty, becauſe he can never be ſure that he ſees the goods in their original or cuſtomary form: and upon this principle it is, that the moſt ſkilful give up all remnants and waſhed linens, as utterly undiſtinguiſhable.—Whence it follows, ſay theſe objectors to the prohibition of foreign linens, that it can never be made to affect the wearer thereof; and, if ſo, it may from experience in other inſtances be concluded, that no penalties will be found ſufficient to deter the ſeller, though it ſhould be much eaſier to detect and convict him than from the nature of the thing is poſſible.—Should this, and much more, be urged in the like ſtrain, ought this to diſcourage us from attempting to go greater lengths in this lucrative manufacture? Does not the ſucceſsful example of France in the woollen manufacture ſhew the experimental invalidity of all arguments of this kind?

In relation to the reſemblance between foreign linens imported into this kingdom of the favoured nations, and that whoſe linens are intended to be excluded, it is to be feared that the latter can never be effected without the former is ſo too; and ſince our Britiſh and Iriſh linens do, in many reſpects, nearly reſemble the foreign linens at preſent, and are ſo daily improving, that no doubt can be made of their arriving at the like degree of perfection, if due encouragement is not wanting among ourſelves: ſince this is the caſe, our own linens can never take general place in the kingdom, 'till all foreign linens whatever are abſolutely excluded, becauſe thoſe of the favoured foreign nations cover, conceal, and increaſe the ſmuggling of the other. To lay the axe to the root of the evil, therefore, what expedient can be more natural and effectual than to prevent the importation of either, as we become capable to ſupply ourſelves? Theſe were the meaſures which the French ſucceſsfully took with regard to the eſtabliſhment of their woollen manufactory; for, when they ceaſed to

take

take the Engliſh woollen goods, Holland attempted to ſupply them, but they were reſolute, and excluded all foreign woollen manufacture, and contented themſelves with the wear of their own, though very coarſe and indifferent at their firſt attempt, rather than not gain the victory in trade which they ſo wiſely aimed at.

If this, on impartial examination, ſhould be found the beſt policy that Great-Britain and Ireland can purſue, in order to the ſucceſsful eſtabliſhment of the linen manufacture in general, what can be a more natural introduction to this deſireable end, than to take off the drawback upon foreign linens, and to encourage the production of flax and hemp in our own plantations to the utmoſt? And, when once theſe general manufactories, by our own conſumption and that of our plantations, are brought to a pitch of perfection no way inferior to thoſe of the foreign linen countries, have we not as good chance to partake of the ſupply of ſuch foreign nations as want them, as the French had in the woollen manufactory? Cannot the Britiſh and Iriſh linen manufactures imitate the lengths, breadths, bleach, dreſs, and package of foreign linens, as well as the French did with reſpect to the Engliſh woollen goods? See the article FRANCE.

If then, upon the whole, it ſhall appear to be right commercial policy to advance our linen manufactories to their full extent, upon thoſe principles which we have humbly ſuggeſted, can it be wrong policy to uſe every endeavour to prevent the importation of French cambrics, which ſwept away 200,000 l. a year of our ready * caſh? If the end has not hitherto been ſo effectually anſwered as could be wiſhed by every true friend to his country, is it prudential to ſlacken in our endeavours? Does it not more become the wiſdom of the nation to try every expedient, 'till the great end ſhall be anſwered, than to give up a point of ſuch national importance? Can any thing be inſuperable to the ſuperlative wiſdom and reſolution of a Britiſh parliament? The unſpeakable advantage which Scotland and Ireland have already received from the linen manufacture, ſhould fill every Briton with the warmeſt zeal for it's utmoſt encouragement in theſe kingdoms.—What immortal honour is deſervedly due to the great earl of Strafford, who firſt introduced the linen manufacture into Ireland, by ſowing great quantities of flax-ſeed, and ſetting up ſeveral looms at his own expence, to invite the Iriſh to follow that trade, without prejudice to England, which has proved, and is, at this day, their greateſt benefit and ſupport ‡? Is there not infinitely more glory in being the founder of a manufacture which has given bread to millions, than to have been the greateſt conqueror upon earth? See SCOTLAND and IRELAND, and the ſeveral other articles before referred to under this.

* While the French, at the beginning of the war, in 1742, were ſecretly aſſiſting the Spaniards, before hoſtilities commenced between the Engliſh and French, alderman Janſſen moſt zealouſly endeavoured to put the nation upon diſtreſſing the latter, by preventing the importation of their cambrics.—Among other meaſures taken by this gentleman, he was, as I am informed, at the expence of inſerting, for ſeveral months together, in the Daily Advertiſer, which contributed not a little to open the eyes of the kingdom, 'That two hundred thouſand pounds ſterling, paid 'annually to France for it's CAMBRICS, amount (from the 'time of the peace of Utrecht) to above SIX MILLIONS.' ——To this the author thereof ſubjoined the following very natural query,—'Whether our having furniſhed the French 'with ſo immenſe a ſum may not have greatly forwarded 'their deſtructive ſchemes, and partly have been the occa'ſion of this expenſive war, which we, conſequently, are 'the leſs able (by the above-mentioned ſum of ſix millions) 'to carry on, &c.'—Though the judicious efforts of this worthy gentleman have not hitherto anſwered the national expectation, yet it may prove a good ſtep towards it, if meaſures adequate to the evil are taken by the parliament. —If one expedient will not do, ſhould we ever ceaſe trying 'till we fall upon what will?

Though this gentleman's good intentions to ſerve his country, in this reſpect, have not hitherto ſo effectually anſwered as could be wiſhed, yet many of his endeavours have been ſucceſsful.—He attacked ſmuggling in general, and particularly that of teas and French brandies, as being the chief baſis of this deteſtable practice. He publiſhed ſeveral judicious pieces on this occaſion, and particularly a PLAN for reducing the exciſe on teas; which being afterwards adopted by the honourable Houſe of Commons, an act paſſed in 1745, which took place at Midſummer the ſame year; whereby the exciſe upon tea was reduced from 4s. to 2s. per pound, to prevent ſmuggling: by which wiſe meaſure the revenue was immediately doubled, and has continued to encreaſe ever ſince.—See our article TEA. In conſequence of the eyes of the nation being opened, an act paſſed in the year 1743-4 for prohibiting the wear of FRENCH CAMBRICS, which not proving effectual, ſeveral other acts paſſed afterwards to enforce this prohibition, which at length, had the deſired effect; inſomuch that at this day 1764, the manufacture of cambric in FRANCE is almoſt entirely broke up; and the ladies here wear nothing but plain flowered, and ſtriped MUSLINS, from the EAST-INDIES, with GAUSES, BLONDS, &c. &c. of BRITISH FABRIC. He was elected member of parliament for the city of London in the year 1747; and this worthy repreſentative has alſo been ſucceſsful in various other of his public-ſpirited attempts. At the breaking out of the late war, a memorial was drawn up, in order for it's being preſented to the duke of Newcaſtle, ſetting forth reaſons for the packets being continued between Dover and Calais; which memorial was begun to be ſigned by ſome merchants. Of this the alderman getting early intelligence, he drew up a counter-memorial to his grace, to which, in three days time, he obtained the ſignature of near 300 of the principal merchants of the city of London. This had ſo good an effect, that the injurious correſpondence by that channel was interrupted during the whole war.—Mr. Janſſen was likewiſe principally concerned at a moſt critical point of time (that of the rebellion 1745) in that capital meaſure for preſerving the public credit of the kingdom, by obtaining a ſubſcription of the principal merchants and traders of the city of London, to take bank-notes in payment; for which the alderman had the thanks of his late royal highneſs the prince of Wales, together with his picture, and thoſe likewiſe of the then prime miniſter.—He firſt ſet on foot, at a great expence, the revival of the herring-fiſhery in theſe kingdoms, in the year 1750, by which 20,000 perſons, at one time, have been employed in it's different branches; and it is to be hoped, that it will prove as inexhauſtible a mine of treaſure to Britain as it has done to a neighbouring nation.——Theſe things I mention in honour to this meritorious gentleman, not only to the end that ſuch virtues may never be forgot, but to inſpire others with the like public ſpirited principles; for, the more examples we have of this kind, the more will our commercial proſperity be advanced.—This is my only motive, having never exchanged a ſingle expreſſion with that gentleman in my life.

‡ See the earl of Strafford's Letters and Diſpatches, &c.—By the Rev. Mr. Knowler.—Dedication to the earl of Malton.

LINT, in regard to the linen manufacture. This manufactory can never arrive in England, Scotland, and Ireland, to that perfection it has done in foreign countries, unleſs every part of the whole operation, from the raiſing the flax to the completion of the intire manufacture, be vigilantly attended to.—The beſt flax-dreſſer [ſee FLAX] when he does his utmoſt, cannot finiſh of the beſt lint (for bad and unripe lint, or lint not fully watered, or ſpoiled in the watering, will not bear the expence of dreſſing, and is indeed not worth dreſſing, nor ought it to be dreſſed) above 12 pounds weight in a day; and a well contrived lint-mill will dreſs, at the rate of every hand employed in it, 16 pounds in a day. The cheapeſt that good lint can be dreſſed by the hand, is at leaſt one third more than it coſts by the mill.—A farmer where our linen manufactures are eſtabliſhed, and who is in the practice of ſummer-fallowing his ground, cannot, perhaps, do a thing more for his advantage than to ſend in an able-bodied young man to be bred to the Flanders way of flax-dreſſing, and to ſow annually an acre or more, of the richeſt fallow ground with lint, to keep this ſervant conſtantly employed in managing and dreſſing it; if his farm lies within a few miles of a lint-mill, he may raiſe as much flax as can be dreſſed by this ſervant, and the help of the mill, and ſend it, from time to time, to the market in ſmall parcels for ſale, ſo ſoon as it is ready for the firſt heckle.

There muſt be at every ſuch lint mill, beſides the boys that attend the breaking and the ſcutching of the mill, at leaſt two or three ſkilful flax-dreſſers, to finiſh the flax by the hand, and to pull and draw it in, in which they are careful never to put the root and ſeed-end together, as is too often done, through inadvertency, in Scotland and Ireland, but keep it always carefully in the ſame way it grew, to the very laſt operation, whether it be heckled or dreſſed for ſpinning by bruſhes, as the fine lint is; and, in ſpinning, the thread is always drawn from the root-end, and not by the bucht from the middle, according to the practice of ſome ordinary ſpinners.

There is a lint-mill in Scotland, upon the water of Eden, a little above Cowpar in Fife, which is ſaid to be brought to the greateſt perfection, and is a compleat pattern to be followed by all who intend to erect lint-mills, and to follow this uſeful and beneficial trade.—At the ſame mill the proprietor carries on another branch alſo, viz. the keeping heckles and ſkilful hecklers, for dreſſing the lint for ſpinning.

REMARKS.

The woollen manufacture of England never came to it's perfection 'till the buſineſs of the woollſtapler came to be a trade; and it muſt be the ſame with the linen.—Here is a fine branch of buſineſs for any gentleman who has the conveniency of water for erecting a lint-mill; he may either raiſe lint himſelf, or buy it in the boon from others, and dreſs it by his mill for the heckle; he may have his heckles in a convenient houſe near to it, for dreſſing and ſtapling the lint by proper heckles, into fine dreſſed flax, fine dreſſed tow, common tow, backings and beards, for the ſervice of the country ſpinners.

LITHUANIA, the great duchy, in Poland. This large country has Greater Poland and Pruſſia on the weſt; part of Muſcovy on the eaſt; Livonia, the Baltic Sea, and part of Muſcovy, on the north; Red Ruſſia, Volhinia, and Podolia, on the ſouth; and the Ukrain on the ſouth-eaſt.

It's chief rivers are the Boryſthenes, or Nieper, Dwina, and Niemen.

The

L I V

The air is generally thick and foggy, becauſe of it's many woods and lakes; that it is not near ſo fruitful as Poland, yet has plenty of wax, honey, mead, pitch, tar, and timber, and abounds with black cattle, ſheep, ermins, ſables, and all manner of furrs. But their greateſt trade of export is to Holland, &c. with their pitch, tar, and timber, for which they receive woollen cloth, ſalt, and wines.

VILNA, the capital of a palatinate ſo called, is a large populous town, with a good trade, but chiefly carried on by foreigners, the natives being poor and lazy.

GRODNO ſtands partly on a hill, by the river Niemen. Some reckon it the metropolis of Lithuania. The houſes are generally of wood and very mean; but it has a good trade, the merchandizes of ſeveral parts of Lithuania being tranſported from hence to Dantzic.

KOWNO, near the influx of the river Niemen into the Wilna, is a well-built town, and much frequented by German merchants.

MOHILOW, ſeated on the Nieper, is a large, well-built, and populous city: it's market is much frequented by the Muſcovites, who tranſmit their furrs from hence into Poland and Germany.

LIVES [ANNUITIES upon LIVES.] Under the article LEASES we were obliged to enter into the doctrine of annuities upon lives, which are computed upon the principles of the learned Dr. Halley and Mr. Abraham De Moivre, and tables formed therefrom by Mr. Richards, applicable to great variety of caſes. But, ſince the time that theſe great men wrote, there have been other ingenious gentlemen, who have entered into the rationale of their principles, and have made ſuch objections thereto that deſerve attention; for, when the intelligent reader has the ſubſtance impartially laid before him that has been urged on all ſides, he will be the better able to diſcern where the truth lies. This I ſhall do with all the brevity and perſpicuity that I can. See the article ANNUITIES.

The principal gentleman that diſſented from thoſe eminent mathematicians, with any ſort of reputation, is Weyman Lee, Eſq;—'I am ſenſible, ſays this ingenious author, that a man ought to go on good grounds when he preſumes to attack calculations made by ſo great a maſter of thoſe things as Dr. Halley, &c.'—With much more in the gentleman-like ſtrain, which becomes all men of ſcience. 'The chief exception, continues he, which I take to the doctor's table, is, that, where the value of an annuity for a life in one period of it is computed with the value of an annuity for a life in another period of it, the term to which ſuch value in one period is equal, does not vary by a proportional degree of decreaſe from the term to which ſuch value in another period is equal.—In conſequence whereof, the chance of the duration of the annuity does not ſink by the ſame degrees as the chance of vitality decreaſes: nor does the value of the annuity itſelf, could it be conſidered even abſtractedly from the dependent life, decreaſe, from one period of life to another, in a juſt proportion.

The meaning hereof will beſt appear by the following tables. An example, however, may be uſeful.—An annuity for the life of a perſon between the age of 15 and 20, is in value 13—33, which is equal to a term of 26—2—61; and an annuity for the life of a perſon between the age of 20 and 25, is in value 12—78, which is equal to a term of 25—0—00 according to the doctor's table; and, if we deduct 12—78 out of 13—33, the remainder will be 00—55, and this is the decreaſe in the value; and, if we deduct 25—0—00 out of 27—2—61, the remainder will be 2—2—61, and this is the difference in the term in thoſe two periods.

This will be more obvious if expreſſed thus: a perſon of the age between 15 and 20 has a chance to live 27 years, 2 quarters and 61 days; and one of the age between 20 and 25 has a chance to live 25 years; that is, leſs than a perſon of the precedent age 2 years, 2 quarters, and 61 days: this is what is called the difference of the term of years from one period of life to another: and, ſince the decreaſe in value will always correſpond to the difference in the term, the value of the annuity in the ſecond period is leſs than that in the firſt period by 00—15 in decimals, which is equal to a term of 2—2—61 in reverſion, after a term of 25—0—00.—So that the doctor's table does not preſerve a juſt proportion in this inſtance; that is, ſuch a proportion as can be juſtified by any bills of mortality, or be accounted for by any FACTS that ever happen in nature.

To ſhew this defect the clearer, I have inſerted the doctor's table in No. III. following; and, ſince the ſame exception lies againſt Mr. Hayes's, Mr. Richards's, and Mr. Morris's tables for the value of annuities on a life, I have inſerted a part of them likewiſe, in the tables No. IV, V, and VI; and to each of them I have added three calculations of my own: the firſt column of which contains an account of the term of years, and parts of a year, to which every life is equal, as it correſponds to the value on the tables reſpectively: the ſecond gives the ſeveral differences in the term of years, and the third the decreaſes in the value of the annuity, from one period of life to another, as they come out on the ſeveral tables reſpectively.—In my own table, No. II. I have inſerted ſolely the term to which a life is equal, becauſe the value of the annuity will of courſe attend on, and be equal to the term; and to *this* a third column is added, which gives this difference in the term, according to ſuch tables, and the decreaſe in the value will be in the very ſame proportion: from whence, and by an inſpection into the ſeveral tables, and a compariſon of them together, we may diſcern which of them beſt preſerves that proportional difference in the term and decreaſe in the value which ought to be obſerved in this caſe.

Since then theſe tables are all of them more or leſs defective in this material point, I ſhall confine my reflections ſolely to Dr. Halley's tables, though my reaſoning in general is applicable to all of them equally.

The particular periods of life, which are defective in this reſpect, are 20 and 40: in the firſt of which the difference in the term is much too great, and in the latter too ſmall. In the firſt column of this table, which contains the ages of perſons, we have 20, which is the period including the lives from 20 to 25; and againſt it, in the fourth column, which gives the difference between the term in that period, and the term in the preceding, we find the difference to be 2—2—61: and, in the ſame fourth column, we ſee the difference for the preceding period to be 00—2—30, and that of the ſubſequent one to be 2—0—46: and this difference 2—2—61, compared with ſuch the precedent and ſubſequent difference, is ſuch a proportion as cannot be maintained by any bills of mortality, at leaſt any that ever I ſaw, or by any reaſon in the nature of the thing.

If we conſult the modern bills of mortality for London, where the ages of perſons dying are diſtinguiſhed in periods from 10 years to 10 years; and, in the extract added in the following tables, it appears that the number of perſons dying in the period between 20 and 30 is leſs than the number dying between 30 and 40; and, if we ſhould ſuppoſe, of thoſe dying between 20 and 30, one half were of the age between 20 and 25, and the other half between 25 and 30, which is a more favourable ſuppoſition than there are juſt grounds to make, yet, ſince the difference in the intermediate period, viz. between 20 and 25, ought to bear a proportion to the precedent and ſubſequent one, it ſhould therefore be ſomething greater than the precedent, and ſomething leſs than the ſubſequent one: whereas, in this intermediate period, the difference is 2—0—31 more than in the precedent one, which is an extravagant decreaſe; and it is alſo more than the ſubſequent one by 00—2—15, when the ſubſequent difference, if there were any variation, ought undoubtedly to be the greater, for that fewer perſons, out of an equal number, die between 20 and 25, than between 25 and 30; and if we ſhould ſuppoſe, as before, that the number of perſons dying of the age between 20 and 25, and between 25 and 30, was the ſame; yet the number co-exiſting in the firſt of the two periods muſt be greater than in the ſecond, and, conſequently, the chance of mortality in the latter period muſt be greater than in the former, the ſame number dying out of a leſs number living: and, therefore, the difference in the latter ought to be greater.

At the time, indeed, when the doctor compoſed this table, the bills of mortality for London were not publiſhed with the diſtinction of the ages of the ſeveral perſons dying, ſo that theſe bills could be no guide to him. But then the Breſlaw table was before him when he wrote; and if this be the ſtandard, whereby to try this table for the value of annuities for life, my objection of the want of a proportionable difference in the term and decreaſe in the value is ſtronger upon an inſpection into that table, than in any other light whatever. If then we conſult the Breſlaw table, which we have inſerted among the following, it will appear that the number of perſons dying in a year between 15 and 20 is 30, the number between 20 and 25 is 31, and between 25 and 30 is 36. Upon which it may be obſerved, though the number co exiſting in the firſt of theſe periods is greater than that in the ſecond; yet that the number dying in the firſt is leſs than the number in the ſecond, and the ſame obſervation holds good in comparing the ſecond with the third period: whence it follows, that the difference in the term ought to be in proportion correſpondent, or, in other words, ſuch difference in the term ought to bear a proportion anſwering to the increaſe in the chance of mortality: and, if the Breſlaw table be a rule for the increaſe of the chance of mortality, it muſt be a rule for the difference in the term, and yet, for this difference in the term, we ſee that the proper proportion is directly contradicted, or unpreſerved.

Many have a notion, that the age of 30 is the beſt age on which to have an annuity depending, for that thoſe under this age are expoſed to more caſualties than thoſe arrived to ſome maturity of age and diſcretion; and, therefore, that the chance of vitality in the younger part of life is more uncertain than at the age of 30, or thereabouts. But Dr. Halley diſcovered no ſuch thing in the bills of mortality for Breſlaw, nor can any one diſcover it in the Breſlaw tables, which he formed from thence; for there the number of perſons dying in the period from 10 to 20 is 63, from 20 to 30 is 67, and from 30 to 40 is 86. If we look into the modern bills of mortality for London, and my extract from thence, there we find the caſe to be the ſame in the main, though not in the ſame proportion, and that the number of thoſe dying in

L I V

the older period of life greatly exceeds the number in the younger: and the account there ſtands thus. Out of every 1000 perſons dying, there die of the age between 10 and 20, 30; of the age between 20 and 30, 72: and, of the age between 30 and 40, 93: and from hence it appears evi dently, that this notion of the beſt age of life is not a juſt one.

But, if there was a better foundation for the notion than there appears to be, and if there was room for a latitude in the calculation of the chances of mortality for the age between 10 and 30, this can avail nothing in the age of 40 or thereabouts; and yet in the period of 40 we have an improper proportion in the difference of the term, for that it is too ſmall, when compared with the difference in the periods on both ſides of it. In this inſtance, indeed, the deviation is not great; but, if any difference were made, it ſhould have been greater in this than in the precedent, and leſs than in the ſubſequent period; that is, it ſhould grow greater and greater gradually, as the age of life advances: whereas the difference is leſs in this period, than in the periods on either ſide. And, ſince all that has been urged againſt the want of proportion by an over-difference, is equally applicable to this caſe of an under-difference; I ſhall only add, that I believe no bills of mortality whatever or any thing in nature do, and that I am very ſure the bills of mortality for Breſlaw or for London do not, warrant the one or the other.

Theſe are the ſingle articles in this table which are moſt exceptionable; but, in truth, this defect goes through the whole performance, which I will ſhew by an inſtance that demonſtrates the defect. The doctor, on the bills of mortality for Breſlaw, obſerves, and I believe all mankind will agree it to be true in the reſt of the world as well as there, that, out of a certain number of perſons in the decline of life, more die in a year, or any determinate number of years, than thoſe do out of an equal number of perſons in the youth and vigour of life: and he has himſelf given us the Breſlaw table, as a ſcheme of the increaſe of mortality, according to the advance in age. Now, if the chance of mortality increaſes, and the chance of vitality decreaſes, in proportion to the advance in age; and, if the value of an annuity for a life, or the number of years to which a life is equal, which differs in nothing but the manner of expreſſion, does depend on the chance of the vitality of the life, and on nothing elſe, as moſt certainly it does, it evidently follows, that the value of an annuity for a life, or the number of years to which a life is equal, muſt decreaſe faſter, and by greater degrees in the older than in the younger ſtages of life, and in the ſame proportion as the chance of vitality decreaſes

Let us ſee now how this difference or decreaſe in the term will ſtand, if we put together the whole of the decreaſes for the four periods of younger life, of middle life, and of the oldeſt life. The whole then for the firſt ſet is a term of 7—1—46, for the ſecond 7—0—15, and for the third 7—1—00: which, we ſee, is directly contrary to the rule laid down, and almoſt inverts the proportion. If we would know what is the right and juſt proportion to be obſerved, and might depend on the Breſlaw tables as giving us ſuch proportion, and this author's table for the value of annuities was framed from thoſe tables; on a computation from thence, the caſe, as between the perſons of the youngeſt and the oldeſt period of life, ſtands thus. The number of perſons co-exiſting above the age of 10, and under 30, which contains the four periods of younger life, conſiſting of 20 years, is in all 11875; and the number of perſons dying out of them in one year is 130; that is, one in 91, or thereabouts. The number of perſons exiſting above the age of 55, and under 75, which contains the four periods of older life, conſiſting likewiſe of 20 years, in all 3726; and the number of perſons dying out of them is 204, that is one in 18, or thereabouts. The proportion here then is plainly five to one: that is, of an equal number of perſons of each ſtage of life, the number of the older ſtage of life dying a year will be five, and of the younger ſtage one only: or, if one perſon only be nominated of each ſtage of life, the chance of mortality on the ſide of the perſon of the older ſtage of life againſt the perſon of the younger ſtage is five to one.

Whether this proportion of the increaſe of mortality, as it ariſes from a computation on the Breſlaw table, be a juſt one, I neither affirm nor deny; but, be it right or wrong, this author's table for the value of annuities for a life was framed from thence; and, therefore, the difference or decreaſe in the term, from one period of life to another, and between the periods of younger and elder life, ſhould bear ſuch a proportion to one another on the table for the value of annuities, as the increaſe of the chance of vitality in one period of life bears to that increaſe in another period, according to the Breſlaw table: and I may appeal to the doctor's own calculation, whether the decreaſes given in one table are conformable to the decreaſes in the other table, or are agreeable to any rule, which ariſes from the nature of the life of man.

I might reſt the matter here; but ſince it may be urged, although the proportional decreaſe contended for is not preſerved, when we compare it, as we have hitherto done, with the ſcheme of the difference of the term; yet if we compare it with a ſcheme of the decreaſe of the value, and the table of annuities is framed by a computation from the value and not from the term, there poſſibly the proper proportion may be well enough preſerved. For this reaſon I made the calculation inſerted in the fifth column of the table No. III. which contains an account of the decreaſe of the value of an annuity from one period of life to another, computed by the values only; and we find the very ſame defects here as we had before, and in the very ſame inſtances: and, indeed, it muſt of neceſſity ſo come out, ſince the value and the term do always reciprocally correſpond.

The ſingle periods of life which we found fault with, according to the ſcheme in the terms, were 20 and 40; and in theſe two articles the ſame error occurs upon this ſcheme as we met with on the former. On the period 20 we objected, that the decreaſe, when compared with the precedent and ſubſequent one, was too great; and here the ſeveral decreaſes of theſe three periods being, as ſtated decimally, 11,55,51, it appears plainly on the face of them that the middle one, viz. that for the period 20, is greater than the precedent one by a difference much too large, and alſo greater than the ſubſequent one, when undoubtedly it ought to be ſomething leſs. And as for the period 40, to avoid repetitions, I would refer you to the ſcheme itſelf; an inſpection into which does plainly enough diſcover the defect; for the decreaſe in that period is leſs than in either of thoſe on each ſide, and therefore cannot poſſibly be in a proper proportion to both of them.

Theſe, indeed, are not very great miſtakes, or however, by a ſmall variation might be rectified; but, if they were ſet right, yet the grand error will ſtill remain, viz. want of proportion through the whole ſcheme. The decreaſe in the four firſt ſtages of life is, indeed, in value, computed by way of decimals, 1—7; and in the latter ſtages is 3—91; notwithſtanding which, in reality, there is no great difference in theſe two decreaſes, and what difference there is lies on the wrong ſide, viz. on the ſide of 1—72, that being the greater decreaſe of the two. To ſay that 1—72 value in decimals, is ſomething greater than 3—91 value in decimals, ſeems to be a paradox, and, if ſaid of them ſimply and ſingly taken, is manifeſtly a contradiction: but then they may be ſo placed with reference to ſomething elſe, or may be conſidered as part of, or taken out of, ſomething elſe in ſuch a manner, as that the firſt ſhall be a value greater than the ſecond. For inſtance, 1, ſimply taken and by itſelf is certainly not ſo much as 2 ſo taken, but 1 conſidered as part of 10, or as drawn out of 10, is ſomething greater than 2, conſidered as part of 40, or as drawn out of 40; for the one is a tenth, and the other a twentieth part only of the thing to which it ſtands related: and that this is the caſe here will appear from hence.

A term for 90 years, intereſt computed at 6 per cent. is in value 16—58; and the proportion inverted is a true one; 16—58 in value is equal to a term of 90 years: now, if out of 16—58 we draw 41 decimals, the remainder will be 16—17, and 16—17 is equal to a term of 60 years, and no more; ſo that a ſubtraction of 41 decimals only leſſens the term here 30 years. A term for 21 years, at the ſame rate of intereſt, is in value 11—76; and, if we draw out of this 41 decimals, the remainder will be 11—35, and 11—35 is equal to a term of 12—2—30: ſo that the ſubtraction of 41 decimals out of the ſhorter term leſſens that term only one year and an half, or little more; whereas a ſubtraction of 41 decimals out of the longer term leſſens that term 30 years. From hence it is plainly ſeen, that one and the ſame value in decimals, drawn out of a greater given value in decimals, and out of the longer term to which ſuch given value is equal, leſſens the term out of which it is ſubtracted in a much greater degree, than the ſame value in decimals, drawn out of a leſs given value in decimals, and out of the ſhorter term to which ſuch given value is equal, leſſens the term out of which that is ſubtracted. Therefore it may be true, that 1—72 value in decimals, though not half ſo great a value as 3—91, drawn out of one value, ſhall leſſen the term out of which it is ſubtracted as much, or more, than 3—91 value in decimals, though more than double the value of the other, drawn out of another value, ſhall leſſen the term out of which that is ſubtracted.

If we examine out of what theſe two values 1—72, and 3—91, are reſpectively drawn, it appears that 1—72 is drawn out of the value 13—44, which is equal to a term of 28—1—00; that is, out of the greater given value, and the longer term correſponding: and 3—91 is drawn out of the value 9—21, which is equal to a term of 13—3—30, that is, out of the leſs given value and the ſhorter term correſponding. If we proceed in the computation, and apply this, it ſtands thus. The value 1—72, ſubtracted from 13—44, leaves a value 11—72: the value 11—72 is equal to a term of 20—3—45: a term of 20—3—45 ſubtracted from a term of 28—1—00 leaves a term of 7—1—46; and this is the decreaſe in the term for the four periods of younger life. The value 3—91, ſubtracted from 9—27, leaves a va-

lue

L I V

lue 5—30; the value 5—30 is equal to a term of 6—2—30; a term of 6—2—30, ſubtracted from a term of 13—3—30, leaves a term of 7—1—00; and this is the decreaſe in the term for the four periods of older life. Therefore, upon the whole, whether the decreaſe here be taken immediately from the term, or be computed from the value, and ſo to the term, this decreaſe in the term comes out to be one and the ſame; that is, the decreaſe of the term in the ſtages of younger life is greater than in the ſtages of older life: and, conſequently, the gradual decreaſe of the chance of vitality, in proportion to the increaſe of age, is not preſerved: which was the thing to be demonſtrated, and I think is fully done. Again:

By Dr. Halley's table for the value of annuities for lives, the life of a perſon aged 10 is equal to a term of 28—1—00; the life of the ſame perſon, when aged 30, is equal to a term of 20—3—45: the difference between theſe two terms is evidently 7—1—46: that is, in 20 years time the life of this perſon, whilſt in the younger periods of life, is decreaſed or grown leſs in computation a term of 7—1—46. The life of this perſon, when aged 30, is equal, as noted before, to a term of 20—3—45: the life of the ſame perſon, when aged 50, is equal to a term of 13—3—30; the difference between theſe two terms is 7—0—15; that is, in theſe 20 years time the life of this perſon, in theſe middle periods of life, is impaired or grown leſs, upon an eſtimate, a term of 7—0—15. The life of this perſon, when aged 50, is equal, as noted before, to a term 13—3—30; the life of the ſame perſon, when aged 70, is equal to a term of 6—2—30; the difference between theſe two terms is 7—1—00; that is, in 20 years time in the oldeſt periods of life, the life of this perſon is grown worſe and diminiſhed, upon the chance, a term of 7—1—00: ſo that the difference or decreaſes in the term will ſtand thus; for the 20 years in youngeſt life 7—1—46, for the 20 years in middle life 7—0—15, and in the oldeſt of all 7—1—00.

Now, ſince this table for the value of annuities is conſtructed on the foundation of the table of mortality for Breſlaw, it ought to agree with, and be conformable to that table, or there is a defect in the ſtructure; but, on looking into this latter table, it appears that the number of perſons dying in the firſt period, that is, between 10 and 31, is 138; in the ſecond period, between 30 and 51, the number is 196; and in the laſt period, between 50 and 71, the number is 215; and yet the number of perſons co-exiſting is greater in the younger than in the older period of life, and gradually decreaſes as age increaſes: from whence it is plainly ſeen in this calculation, as well as in the former, that the table of annuities has no ſort of conformity with the table of mortality, though the one be built, in the main, on the foundation of the other. And, as this want of conformity between theſe two tables, in a proportionable decreaſe, runs through the whole, ſo I cannot forbear obſerving the foul error that it makes in one particular inſtance, ſuch as moſt certainly overthrows the juſtice of this table for annuities, and of the rule too by which it was framed.

The value of an annuity for a life of 10 years of age is by this table 13—44, which is equal to a term of 28—1—00: and the value of an annuity for a life of 70 is 5—32, which is equal to a term of ſix years and two thirds. If we conſult the Breſlaw table, the even chance of the duration of the life of 10 years of age is 41 years and over, and the chance of the duration of the life of 70 is ſix years, and about two-thirds of a year. Now, that an annuity for the life of a perſon aged 10 years ſhould be in value 13—44, that is, ſhould be equal only to a term of 28—1—00, when his life, on the even chance, is equal only to ſix years and two-thirds: I ſay, that the chance of the duration of the annuity in one caſe ſhould fall ſhort of the chance of the duration of the life, and ſo much as thirteen years; and in the other caſe, that the chance of the duration of the annuity and of the life ſhould be ſo near an equality, or the very ſame, has ſomething in it ſo much of the abſurd, that I cannot reconcile it to my underſtanding. And yet, if we compute the value of an annuity for a life of 80, and make uſe of the rule which the doctor preſcribes and made uſe of in framing his table for ſuch value, we ſhall diſcover ſomething ſtill more extraordinary, viz. that an annuity for ſuch a life will be in value 3—84, which is equal to a term of four years and an half, when on the Breſlaw table, the even chance of the duration of ſuch a life is not full four years; which I think is ſo palpable a contradiction to common ſenſe, that nothing can maintain the rule by which it was produced.

A ſecond objection lies againſt Mr. Hayes's and Mr. Richards's tables, viz. that, being computed for the ſeveral rates of 4, 5, 6, 7, and 8 per cent. they give us ſuch a value of an annuity for a life, as that one and the ſame life is equal to different terms for each rate of intereſt. There is no room for this defect in Dr. Halley's or Mr. Morris's tables, they being computed for a ſingle rate of intereſt only; but, in truth, the objection does lie againſt the doctor's rule for forming theſe tables; for that any table drawn by this rule, and for more rates of intereſt than one, will have the ſame defect. This appears plainly enough by Mr. Richards's tables, which were conſtructed by this rule; and that this of neceſſity muſt be the caſe in all tables for variety of intereſts drawn by the rule, will appear, when I come to ſpeak to the rule itſelf.

As to Mr. Hayes's and Mr. Richards's tables, that theſe two tables for every rate of intereſt gives us ſuch a value of an annuity for a life, as does in fact make one and the ſame life equal to a different term of years, and what that variance is on each of them, may be beſt and moſt plainly ſeen by the ſhort ſchemes in tables No. VII. and No. VIII. The firſt of theſe gives us the value of an annuity for a life of 30 years of age, and the term to which ſuch value is equal at the ſeveral rates of intereſt, as ſtated by Mr. Hayes himſelf; and it is marvellous to me how he could make the computation, and not ſee the abſurdity of the ſuppoſition on which it muſt be grounded: and the other gives the value of an annuity for a life of 12 years of age, at the like ſeveral rates of intereſt, as ſtated by Mr. Richards, and the term to which ſuch value is equal, as I compute the ſame.

Now I ſay, that the values ſtated in theſe two tables, thus correſponding to, and producing a different term of years to which one and the ſame life is equal, according to the ſeveral rates of intereſt at which the calculation are made, undoubtedly are, and neceſſarily muſt be wrong for that reaſon, becauſe they produce ſuch different terms. This being the caſe on both theſe tables, and ſince Mr. Hayes has not acquainted us what rule he made uſe of in forming his table, and Mr. Richards informs us that he built on Dr. Halley's hypotheſis, and it is evident he did ſo: and, ſince one and the ſame defect goes through both tables, I ſhall apply myſelf chiefly to Mr. Richards's table, and the rule by which that was conſtructed: only I take notice here, that my obſervations on one of them, in moſt inſtances, and eſpecially in that which I have before-mentioned, will equally affect and be applicable to the other, whatever was the rule by which it was framed.

I ſuppoſe no one will controvert thoſe points: that he who has an annuity for the life of a perſon, has an annuity for ſuch a term of years as ſuch a perſon in fact ſhall live; and when he buys it, the term of years to which any perſon's life ſhall be prolonged being uncertain, that he buys it for ſuch a time as there is a chance or reaſonable probability that the perſon may live whoſe life is nominated: and I am ſure it is poſſible, that five ſeveral annuities, at the five ſeveral rates of intereſt in theſe tables, may be granted on one and the ſame life, as well as on different ones. To ſay then, that in caſe of one annuity there is a chance or probability that the perſon on whoſe life the annuity depends may live for 30 years, or near it; in caſe of a ſecond annuity, that he may live for 29 years, or thereabouts; and on a third, on a fourth, and on a fifth annuity, or each of them, that he can, and probably may, live for a different term of years, IS RIDICULOUS AND ABSURD TO THE LAST DEGREE *.

* Nor does the learned Mr. Lee ſtand alone in judgment upon this occaſion; the ingenious Mr. Hardy, who very lately wrote a tract, entitled, A complete Syſtem of Intereſt and Annuities; founded upon new, eaſy, and rational principles, &c. ſays in his preface, 'That having occaſion, ſome years ago, to compute the value of annuities on lives, I had recourſe to the rules delivered by Dr. Halley and Mr. De Moivre; when obſerving, that the purchaſeable term to be paid for, or the probable time that the ſame perſon ſhould live, was made to depend upon, and varied according to the RATE OF INTEREST, which, having no connection with the probability of living, put me upon conſidering thoſe purchaſes in an intire new light, and upon conſidering to find eaſy and univerſal rules for approximating their values.'—What this gentleman's rules are, and the foundation of them, we cannot enter into under this head, but refer what he and the judicious Mr. Simpſon have ſaid upon this occaſion, to the article MORTALITY [BILLS of MORTALITY], and ſuch other articles to which we have referred.

And, if we take a particular inſtance, and ſuppoſe two annuities only, at the two different rates of 4 and 8 l. per cent. to be granted to two diſtinct perſons on the life of one and the ſame nominee; to ſay, with regard to the annuitant who purchaſes at 8 per cent. that the nominee, on whoſe life the annuity depends, may or has an even chance to die in 25 years; but, with regard to the annuitant who purchaſes at 4 per cent. that the ſame individual perſon may probably live, or has a chance to live 30 years, is a flat contradiction; and is, in effect, to aſſert, either that one of the annuities will continue after the nominee is dead on whoſe life it depends, or that the other will ceaſe whilſt the nominee is living for whoſe life it is to continue; when the annuities muſt both determine at one and the ſame time, on the death of the nominee.

Now, if Mr. Richards's tables were the reſult of Dr. Halley's obſervations, and were calculated by the method preſcribed by him, or by Mr. De Moivre, as I believe they were; yet if the error I have mentioned proceeds from the foundation or the method, as moſt certainly it does, I apprehend it will prove, that the one or the other of them is wrong, much more ſtrongly, than the foundation or the method will prove that the calculations are right, notwithſtanding the great authority of the inventors of them: and, therefore, ſince

the operations upon them have produced ſuch abſurd effects, I don't ſee they are of any ſignificance, except to have demonſtrated that the inſtructions are wrong. I muſt confeſs I do not know any method, and very much queſtion whether there be any, to adjuſt the value of an annuity for a life, but by computing for what term there is a chance or probability ſuch life ſhall continue; and, when that is done, the common tables, which give us the value of any term of years at a ſtated intereſt, give us at the ſame time the value of an annuity for the life ſought after at that rate of intereſt. But, ſince Dr. Halley has found out and publiſhed another rule for this purpoſe, we will conſider it.

The rule then which he preſcribes, and which he and Mr. Richards made uſe of, to form theſe their tables for the value of annuities on a ſingle life, is grounded on the Breſlaw table, and ſome propoſitions deduced from thence. The Breſlaw table exhibits the whole number of people ſuppoſed to be living in that city at a certain time, and the ſuppoſed current age of them all, from the birth to the age of 84: and at preſent I will ſuppoſe, though I do by no means grant, that this table gives a true account of the perſons living there, and their ſeveral ages. To aſcertain the different degrees of vitality in all ages of life, this author advances this propoſition: 'If the number of perſons of any age remaining 'after one year, be divided by the difference between that 'and the number of the age propoſed, it ſhows the odds that 'there is, that a perſon of that age does not die in one 'year. For inſtance, a perſon of 25 years of age has the 'odds of 560 to 7, or 80 to 1, that he does not die in a 'year: becauſe that of 567 living, of 25 years of age, there 'do die no more than 7 in a year, leaving 560 of 26 years 'old.'

Here I have given the author's propoſition and inſtance in his own words; but, if I may beg leave to expreſs my meaning of them in my way, which, perhaps, may tend to explain and illuſtrate them, I ſhould ſay: That the number of perſons living of any age propoſed was the number of chances belonging to a perſon of that age; that the number of perſons living of any ſubſequent age, ſuppoſe at one year's, at ten years, or at twenty years diſtance, was the number of chances with him, or the number of chances that he had to live to ſuch ſubſequent age; and that the difference between the number of perſons living of the age propoſed, and the number of perſons living of the ſubſequent age, that is, the number of perſons dying in that time was the number of chances againſt him, as the chances that he would die within that time, or before he arrived at ſuch ſubſequent age.—In the inſtance here given, a perſon of the age of 25 has 567 chances, ſo many perſons being living of that age; of the age of 26, which is the next year, there are 560 perſons living, and within the compaſs of that year, there have died ſeven perſons, ſo that, on the life of a perſon of 25, there are 560 chances with him that he lives to the end of one year, ſo many being living at the end of that year, and there are ſeven chances againſt him that he dies within that time, ſo many being dead in that time.—This method, if purſued, gives the chances for him and againſt him in like manner, for any other ſubſequent year. For inſtance; the number of perſons living of the ſaid age of 25 is 567, the number of perſons living at ten years end, or of the age of 35, is 490; the difference between theſe two numbers, or the number of perſons dying in that time, is 77; therefore the chances with him, or the chances that the perſon lives to ten years end, are 490; and the chances againſt him, or the chances that he dies within that time, are 77.

I have here avoided the uſe of the word odds, becauſe it is an equivocal term, and may mean the odds in the number of chances, or the odds in the value of theſe chances; and inſtead thereof I make uſe of the expreſſion, chances with him, or chances againſt him, and ſhall do ſo hereafter. And, I am afraid, we ſhall find that the doctor, or Mr. de Moivre, or both, in the computation of the value of annuities for lives, have, in ſome inſtances, brought to account more chances of vitality on lives than belong to them; in other inſtances, have inſerted ſuch chances as do not and cannot belong to them; and in ſome caſes have aſſigned wrong values to right chances: and, where any of theſe miſtakes are committed, all the algebra in the univerſe will never prove that the ſum total of the values ariſing on ſuch computations will be the true value of the annuities enquired after.

The doctor having deduced his propoſition from the Breſlaw table, and aſſerted, that the valuation of annuities for lives depends on it; and having laid it down for a maxim, that a purchaſer of an annuity on a life ought to pay for ſuch parts only of the value of the annuity as he has chances that his nominee is living, which is undoubtedly true; and having told us how the preſent value of a ſum of money, payable at any future time, and at any rate of intereſt, may be known: and given us a ſcheme for that purpoſe, at the rate of 6 per cent. intereſt; he aſſumes, from the foregoing propoſition, 'That, as the number of perſons living after a year, or 'after any number of years, are to the number of perſons 'dead within that time, ſo are the number of chances with 'him to the number of chances againſt him, that the perſon nominated is then living:' in conſequence of which, the rule for aſcertaining the value of an annuity for a given life will be this: 'As a number of perſons living of an age 'propoſed is to the number living after one year, or after 'any number of years; ſo the preſent value of the ſum 'payable at the end of one year, or at the end of the given 'number of years, is to the ſum which ought to be paid 'for the chance which the perſon has to enjoy his annuity 'for that one year, or the given number of years.' And, in the concluſion he adds: 'If this operation be repeated 'for every year of the perſon's life, that the ſum of all the 'preſent values of theſe chances is the true value of an annuity for ſuch perſon's life:' and that by this rule he framed the table he gives us, which is for the value of annuities on a ſingle life at 6 per cent. intereſt.

I will not poſitively ſay, that the author, in forming his table, did not himſelf obſerve his own rule, becauſe he ſays he uſed ſome compendia in forming it; and in ſeeking a ſhorter way he might poſſibly miſs the right way.—The rule, in ſhort, is this: we are, in the firſt place, to compute what is the value of an annuity for one year of the life, beginning at the age of the perſon nominated, looking upon it as an abſolute annuity for one year, allowing out of it a value proportionate to the chance of mortality ariſing in that year, and this is done by the firſt part of the rule: and then we are to proceed in the ſame manner for every year of ſuch nominee's life; and it is aſſerted, that all theſe values, put together, are the value of the annuity on ſuch a life. But then the latter part of the rule, where it directs that this operation muſt be repeated for every year of the nominee's life, does not expreſsly ſay for what number of years this computation muſt be made: but I cannot find out that it is capable of any other meaning than one of theſe two; either that it muſt be made for ſo many years as the nominee has an even chance to live, or for ſo many years as he has any chance at all, or a poſſibility to live. However, let the computation be made, in which way of the two he pleaſes, it produces a value different from what this table gives; one of them a value much under, and the other a value little over, the value exhibited in the table, and this is the caſe in more inſtances than one.

The value exhibited in the table for an annuity on a life of ten years old, intereſt computed at 6 per cent. is 13—44; and, if an annuity be granted for 10,000l. per ann. ſuppoſe on the life of A of ten years old, the total value of it will be 130: 400l. To ſhow that this is not the true value of ſuch an annuity, even on a computation made according to the rule here laid down, I have made a calculation purſuant to that rule, for every year of ſuch a perſon's life, from the age of his life when nominated, that is, from ten years old, to the extremity of old age, that is, to 100 years old, and have ſet it forth in table No. IX. following. In this table, and in the ſecond column, we have the preſent value of ſuch an annuity, payable at the end of each year for 90 years on an abſolute term, tranſcribed from this author; and, in the ſixth and laſt column, we have the preſent value of ſuch an annuity, payable at the end of each year for 90 years, on the chance of mortality on the life of a perſon of ten years of age, formed exactly, I think, by the rule given. And, becauſe the chance of mortality is calculated by the Breſlaw table, I have inſerted that likewiſe in table No. X. with an additional computation for 16 years, from the age eighty-four to the age of an hundred, omitted in the former table.'

Remarks.

We have judged it neceſſary to enter ſo far into this delicate ſubject, and the objections made to the long embraced hypotheſis of the learned Dr. Halley, and the foundation built thereupon by Mr. De Moivre and others (for the objections againſt the latter are not leſs weighty than thoſe againſt the former, though we have not room fully to conſider them here) in order to ſhew the reader, who is deſirous to go to the root of this matter, that the works of the learned Wayman Lee, Eſq; are well deſerving his attentive peruſal.—There have, indeed, been ſome objections made to Mr. Lee's eſſay, but whoever compares them candidly and impartially with the reply that he has made to them, will hardly think, I am at preſent inclined to believe, that the fundamentals of his reaſoning are at all invalidated. However, thoſe who may ſtill be of opinion, that what Dr. Halley, Mr. De Moivre, and Mr. Richards have ſaid, will ſtand the teſt, will find the ſubſtance thereof in this work, under the articles Annuities and Leases; and the chief objections that have been made againſt them, under the articles Lives, and Mortality [Bills of Mortality.]

For the reader's further ſatisfaction, the following is the connected ſubſtance that Mr. Lee endeavours to prove, in oppoſition to Dr. Halley, Mr. De Moivre, Mr. Richards, and others, on Leases and Life-Annuities.

Part I.

That there is no ſure rule extant before his for valuing leaſes—The method of valuing leaſes for lives by much the moſt erroneous

L I V

erroneous.—A variety in the value of theſe eſtates ariſes from the difference of the land-tax, and in the quantity and quality of the buildings on them.—To aſcertain the value of leaſes, that they be reduced to annuities free from all reprizes, and that money be computed at 1 per cent. above the legal rate.—To do this, the rent, and all payments certain, to be deducted.—As alſo the land-tax, repairs, and incidental charges.—The author of a treatiſe called, The Value of Church and College Leaſes conſidered, charges theſe articles to the leſſee's account.—His reaſon for this aſſertion invalid. —His inſinuations that leaſeholders, in purchaſing and renewing their eſtates, make 6 per cent. of their money, not true.—Of the great difference between the value of lands of inheritance and leaſeholds, in the purchaſe, on any variation of the intereſt of money.—A riſe in the purchaſe of lands, of no ſervice to owners of leaſes, or of fee-ſimple lands, any farther than they have power to ſell their eſtates.—The reverend author, in ſtating his caſe, kept a reſerve of ſome money, to raiſe his tenant's fine for renewing; and therein acted cunningly, but not very fairly.—This fund will do very little, if any thing, more than raiſe the fine, and make the income of each purchaſer the ſame.—If intereſt of money ſinks, and fines are raiſed, the income of the leaſeholder muſt ſink in proportion to both of them.—The true ſtate of the compariſon between the purchaſers of one eſtate and the other, is, What is the natural produce of each, and how it will ariſe?—If the land-tax, repairs, and incidental charges, are to come out of the leſſee's eſtate; the owner, though the intereſt of his money reſerved comes in aid, will have only 3l. 10s. per cent. for his money.—Mr. Richards, in his treatiſe on this ſubject, admits a tenant to be conſidered for the two laſt articles; but not for the land-tax, for a reaſon very ſingular.—The author contends, that he ought to be conſidered on all the articles.—This aſſertion proved, from the caſe given by the reverend author, otherwiſe ſuch a purchaſer will not have 3 per cent. for his money ſo laid out. —The ſame proved from the reaſon and the juſtice of the thing.—The way to adjuſt the quantum of the land-tax for a term, ſtated at 10 per cent. per ann. at a medium.—The ſame on repairs, and ſtated at the ſame ſum in common caſes. —On this article, many exceptions to be made out of the general rule.—On houſes in particular, 20 per cent. might be little enough.—The common method, in caſe of houſes, viz. to compute the money laid out at a higher rate of intereſt, not a ſafe one, and compared with the author's in an inſtance.—The article for charges and accidental loſſes the author divides into two; one for managing the eſtate, the other for aſſuring it, and paying the rent in all events; and ſtates each at 5 per cent.—The deductions, the ſame as ſuppoſed by the reverend author, to be going out of a fee-ſimple eſtate, viz. 30 per cent.—Inſtead of theſe two allowances of 5 per cent, Mr. Richards, in ſtating the value of leaſes, computes the tenant's annuity at one rate of intereſt, and the outgoings in rent at another.—The method not right; the reaſons why not, and the abſurd conſequences ſhewn.—The objections of no weight, that tenants, eſpecially in public leaſes, covenant to pay their rents free from taxes and reprizes.—Money, laid out in theſe eſtate, to be computed at 6 per cent.—That a purchaſer, ſo valuing his money, will make 6 per cent. a vulgar error.—Shown, how money laid out in ſuch purchaſes is to be reimburſed, and computed what part is to ariſe from the ſurpluſage of the rents, what from the ſimple, and what from the compound intereſt of ſuch ſurpluſage.—This computation demonſtrates, that the leſſee is not to be charged with the land-tax, &c.—Though theſe eſtates are reduced to abſolute annuities, yet not ſo valuable as ſuch.—The author's method of computing the fine to be paid on renewals.—This compared with the common one, and a new one by Mr. Richards, and the difference ſhewn by inſtances.—A particular abſurdity following from Mr. Richards's method.—Where one year's rent only may be a juſt fine for renewing ſeven.—Mr. Richards ſtates the fine on ſuch renewal higher than his own rule admits.—He profeſſes here to have no conſideration of the land tax; and yet in ſome caſes, in effect, he does, or muſt conſider it.—The author doubts the truth of the fact alledged, that the laity, in renewing 7 years, generally take 2 ½ years value.—The reaſon for raiſing fines above the old price of one year's value, conſidered; with obſervations on Æcroid's tables.—The cenſure of tenants as impoſing on landlords in their fines, and landlords as ſubmitting to them, not well grounded.—Where churchmen and colleges can't get fines to the value of their eſtates, the remedy propoſed, by letting the leaſes expired, conſidered, and the ſucceſs of it doubted.—Such a procedure not an act of prudence, and a law to oblige them to it unreaſonable.—That they are not obliged to do it, either as a point of duty or juſtice to their ſucceſſors, as the law now ſtands.—Churchmen and colleges, now and then, to ſink a fine and augment the ſmall livings in their gift; a better project for promoting the intereſt of the Church of England and the univerſities, than taking their eſtates into their own hands.—What influence the decreaſe in the value of money, and the increaſe in the price of the neceſſaries of life, have in this matter, conſidered.—Of the nature and uſe of the tables for purchaſing annuities or leaſes, for years, or in renewing them.

Part II.

To eſtimate the chance of the duration of a life, and to aſcertain the value of leaſes and annuities for life, &c.—Leaſes for life, as well as for years, muſt be reduced to abſolute annuities.—The neceſſity of making ſuch computation, to put a right value on ſuch intereſts.—The author's table exhibits the term to which any ſingle life, therein mentioned, is equal.—Dr. Halley's table, for the value of annuities for a life, which were conſtructed by a different rule, not a right one.—The author's exception to it, viz. that it does not preſerve a proper decreaſe in the value of an annuity, or in the terms to which ſuch value is equal, from one period of life to another.—The ſame exception lies againſt Mr. Hayes's, Mr. Richards's, and Mr. Morris's tables, for the like annuities.—The author confines himſelf to Dr. Halley's table, and ſhows the defect in two remarkable inſtances, quoad the decreaſe in the term.—The age of 30 not the beſt age of life whereon to have an annuity, occaſionally ſhown.—This defect goes through the whole table.—This ſhown to be the caſe in the decreaſe of the value of the annuity, as well as in the term, in ſingle inſtances, and through the whole table. —The table, in this particular, in no ſort conformable to the Breſlaw table, though ſaid to be conſtructed from thence.—Objections to Mr. Hayes's and Mr. Richards's tables, that the value of the annuities there given is ſuch, that one and the ſame life is equal to a different term as the Rate of Interest varies.—Dr. Halley's rule for valuing theſe annuities conſidered.—The value of an annuity for a life of 10 years of age, given in his table, not the true value, as it ariſes on a calculation made by this rule, and the calculus ſet forth.—That the value of ſuch an annuity, where rightly computed by the rule, is not the true one, proved by poſitions of the doctor's.—The falſity of the rule ſhown from hence, for that it produces ſuch ſums as cannot be the value of ſuch annuities, proved by inſtances.—Shown wherein the error of the rule lies.—Theſe proofs deſtroy the foundations of Dr. Halley's and Mr. De Moivre's rule.—The chance of the duration of a life, the ſole meaſure of the value of the annuity depending thereon.—The author's method of forming his tables of the chances of vitality.—This table drawn chiefly from the bills of mortality of London.—Obſervations on a treatiſe, called, A true Eſtimate of the Value of Leaſehold Eſtates; in which a life of 30 years of age is ſtated as the beſt, and equal only to a term of 14 years, and other lives in proportion.—Obſervations on the bills of mortality for London; alſo on a certain ſociety known to the author, and on the nominees in the government annuities on ſurvivorſhip.

Part III.

To eſtimate the chance of the duration of two or more lives, and to aſcertain the value of annuities and leaſes for ſuch lives, &c.—This the moſt difficult part of the work, and moſt weakly performed by all writers on this ſubject.—The method of computing the value of theſe annuities preſcribed by the author, to whoſe tables Sir Iſaac Newton's name is prefixed, a very bad one.—Mr. Hayes's method worſe than the former.—Mr. Morris's the ſame with Mr. De Moivre's, and conſidered with it.—Mr. Richards's tables, formed by Mr. de Moivre's rule, do not give the true value of theſe annuities.—Theſe tables wrong, becauſe his tables for the value of annuities for a ſingle life are wrong.—A caſe ſtated by the author, which ſhews theſe tables to be falſe throughout. —Mr. de Moivre's rule for valuing theſe annuities conſidered, and ſhown to be falſe.—The doctor's and Mr. de Moivre's method, for aſcertaining the value of annuities for two or for three lives and the ſurvivor, not the ſame.—The doctor's hypotheſis, for adjuſting the chance of the duration of two lives, not right, ſhown by lines and figures.—The error of this hypotheſis, and Mr. De Moivre's method, ſhown by Mr. Richards's tables conſtructed from thence.—Mr. Richards's tables for the value of annuities for three lives, proved erroneous.—That the term, to which the value of annuities for one or more lives is equal, ſhould vary as the Rate of Interest varies, which is a neceſſary conſequence of the hypotheſis, greatly abſurd.—Mr. De Moivre's rule for valuing theſe annuities ſhown to be falſe.—That his rule does not agree with the doctor's rule for calculating the value of annuities either for two or three lives.—The author's rule for valuing annuities for two or more lives, by computing the chance of the duration of the given lives.—Compared with Mr. De Moivre's rule.—The juſtice of the author's method ſhown, and proved from Dr. Halley's own way of reaſoning.—A compariſon of the chance of the duration of two or three lives, where the computation is made in Dr. Halley's or Mr. De Moivre's method, and when in the author's.—The author's tables.

TABLE I.

Shewing the value of annuities for the term, and at the intereſt in the table, in years, quarters, and days, and the centeſimal parts of a year, correſponding to the quarters and days.

60	—	65	11	2	3	0
65	—	70	8	0	3	2
70	—	75	4	0	4	0
75	—	80	2	—	—	—
80,	&c.	—	1	—	—	—

From this, and the precedent table, is readily ſeen the value of an annuity for any life, given at any rate of intereſt: for this table gives the term to which the life is equal, and the precedent table gives the value, or years purchaſe, to which ſuch term is equal, that is the value of the annuity.

TABLE III.

Shewing, in the firſt column, the age of perſons; in the ſecond, the value of annuities for every fifth year of age, from the 10th to the 70th year of man's life, as ſtated by Dr. Halley, intereſt computed at 6 per cent.: to which I have added, in the third column, the years, quarters, and days, to which ſuch value correſponds; in the fourth column the difference, or decreaſe in the term, from one period to another; and, in the fifth, the difference or decreaſe in the value, in the ſame manner.

Ages of perſons.	Years value, or purchaſe.		Term to which ſuch value is equal.			Decreaſe in the term.			Decreaſe in the value.

Table VIII.

Shewing, in the firſt column, the rate of intereſt; in the ſecond, the value of an annuity for a life of 30 years of age, extracted from Mr. Hayes's tables: to which I have added, in the third column, the term of years to which ſuch value correſponds, as ſtated by Mr. Hayes himſelf.

Intereſt.	Value.	Term of years.
4	15 54	25
5	13 12	22
6	11 27	20
7	09 83	18
8	08 68	16

L I V

Mr. Hayes ſeems to me, in this table, firſt to have ſtated to what term of life of 30, or any other age, is equal, and from thence to have computed the values: now, in what way of thinking, or on what grounds, he could, in the firſt inſtance ſuppoſe that one and the ſame life could be equal only to a term of 16 years, and, at the ſame time, be equal to a term of 25 years, I confeſs exceeds my comprehenſion.

Table IX.

Exhibiting a computus of the value of an annuity of 10,000l. per annum, for a life of ten years of age, made according to Dr. Halley's rule, for every year of life to an hundred years of age.

Age.	Multiplied	By	Produces.	Integrals. Fract.

N. B. Where this computation is carried on for 41 years only, the produce is	130—265—347
Where carried on for 58 years, the produce is - - -	134—486—512
Where carried on for 90 years, the produce, as above, is - -	135—027—635
That is, in the firſt caſe, the value is -	13— 02
In the ſecond caſe, the value is - -	13— 44
In the laſt caſe, the value is - -	13— 50

From whence it is apparent, where the value of ſuch an annuity is ſtated at 13—44 only, as in Dr. Halley's table, that there is an omiſſion of 32 years in making the calculation.

TABLE X.

Shewing the number of perſons living in the city of Breſlau in Sileſia, and their ages current reſpectively, from 1 to 84 years of age.

Age current.	Perſons living	Age current.	Perſons living.
1	1000	6	710
2	855	7	692
3	798	8	680
4	760	9	670
5	732	10	661

The reſt of this table is inſerted in the third column of the precedent table, and need not be here repeated: and I have there added the age current, and perſons living from 84, where Dr. Halley breaks off, to age an hundred; and the table, with theſe additions, makes the total number of perſons there living to be the ſame as ſuppoſed by the doctor, viz. 34,000.

TABLE XI.

An extract of, and ſome calculations on, the BILLS of MORTALITY for LONDON, including only thoſe born alive.

LIVONIA, in Sweden, has the gulph of Finland on the north, that of Riga on the weſt, Muſcovy and Ingria on the eaſt, and part of Lithuania on the ſouth. Though in ſome parts it is marſhy, yet it is very fruitful, generally ſpeaking, yielding corn, paſture, and honey in abundance.

It is divided into two parts, viz.

I. ESTONIA, the moſt northern part of this country, bounded on the ſouth by Letten, on the eaſt by Muſcovy; on the north it has the gulph of Finland, and on the weſt the gulph Riga, or of Livonia.

REVEL, the capital of this diviſion, ſtands on the coaſt of the gulph of Finland, 225 miles eaſt from Stockholm.

It was not reckoned a town of great trade till about 1477, when it could eaſily preſerve it's commerce with Muſcovy, and other places, on account of its advantageous ſituation and commodious harbour. It broke off it's union with the Hanſe-towns in 1550, and it's trade was removed to Narva by the Czar: but the Muſcovites, having taken it in 1711, have reſtored it's trade, which they now are very careful to preſerve. See HANSE-TOWNS.

NARVA, ſtands on a river of the ſame. This city enjoyed for a long time the privilege of the Hanſe-Towns; but the wars between Sweden and Muſcovy had ſo ruined it's trade, that it could not recover it in many years, nor did it laſt, but at the expence of Revel. The war between the Engliſh and Dutch proved advantageous to it, the Archangel trade being then interrupted.

PARNAW, on the gulph of Riga, is a ſmall city, but a place of good trade, a great quantity of corn, eſpecially, being ſhipped hence for the Netherlands.

II. LETTEN, has the Baltic on the weſt, Eſtonia on the north, Muſcovy on the eaſt, and the river Dwina on the ſouth and ſouth-weſt.

RIGA, the capital, not only of Letten, but of all Livonia, is ſituated in a large plain on the weſtern bank of the river Dwina, 6 miles from the mouth of it, which makes a commodious harbour called the gulph of Riga.

The trade which this city drives with England, Holland, Muſcovy, and the towns of the Baltic, renders it extremely populous and very conſiderable. There are in the town almoſt as many ſhops as houſes. Above a thouſand veſſels arrive here yearly laden with corn, hemp, flax, pitch, tar, planks, furrs, and ſkins of all ſorts. Ruſſian leather, aſhes to make ſoap and glaſs, &c. all which are tranſported to England, France, Germany, Holland, and other countries, and exchanged for the commodities of the more ſouthern climates. They reckon that above 200 merchantmen arrive every year in the port of Riga.

LOADMANAGE, is the hire, ſometimes ſo called, which the pilot of a ſhip receives of the maſter, for conducting the ſhip up the river, or into port.

PETTY-LOADMANAGE, and primage is due, to the maſter and mariners for the uſe of his cables and ropes to diſcharge the goods, and to the mariners for loading and unloading of the ſhip or veſſel; it is commonly about 12 d. per ton. 32 Hen. VIII. 14.

If the ropes break in hoiſting of goods out of the ſhip into the lighter or boat, the maſter muſt anſwer if the goods be damnified or loſt. Leg. Oleron. cap. 10. See OLERON's LAWS.

But, if the ropes break at the crane in taking them out of the lighter (although, till they are landed, they are not out of the maſter's cuſtody) yet the wharfinger ſhall anſwer.

LODESMAN, a kind of pilot eſtabliſhed for the ſafe-conduct of veſſels in and out of harbour, or up and down navigable rivers.

With

With regard to France, in places where it is found neceſſary to eſtabliſh pilots and lodeſmen to conduct veſſels into, and out of the entries of ports and navigable rivers, their number ſhall be regulated by the officers of the admiralty, with the advice of the aldermen and moſt eminent merchants of the place.

II. No perſon ſhall exerciſe that function 'till he is arrived to the age of 25, and received before the officers of the admiralty, after having been examined in their preſence, and in that of two aldermen, or eminent merchants, and two ancient pilots, with the like number of ancient maſters of ſhips.

III. The pilots, lodeſmen, ſhall be examined in the knowledge and experience they ought to have of the fabric and working of ſhips, and of the courſes of the tide, of the ſand banks, currents, ſhelves, rocks, and other impediments, that may render difficult the entry of the rivers, ports, and harbours, in which they are eſtabliſhed.

IV. They ſhall be obliged to have their ſhallops always provided with anchors and oars, and to be in a condition to go to ſuccour ſhips upon the firſt order or ſignal, under pain of ten livres, and a greater penalty, according to the exigency of the caſe.

V. We forbid, under pain of corporal puniſhment, all mariners, not being received pilots, lodeſmen, to offer themſelves to conduct ſhips into, or out of ports or rivers.

VI. However, the maſters of ſhips, for want of pilots, may make uſe of fiſhermen to conduct them.

VII. If a pilot comes aboard a ſhip, where there is already a fiſherman, before ſhe be paſt the dangerous places, the pilot ſhall be received, but the fiſherman's hire ſhall be deducted from his.

VIII. A pilot, undertaking to conduct a veſſel while he is drunk, ſhall be fined in five livres, and ſhall not exert the function of pilot during one month.

IX. We enjoin the pilots to conduct firſt the ſhips that firſt require their ſervice; and we forbid them to prefer the moſt remote to the neareſt, under pain of 25 livres.

X. We likewiſe forbid them to go farther than to the roads, to meet veſſels coming into ports or harbours, to go aboard of ſhips without the maſter's conſent, and to leave the ſhips they bring in, 'till they are come to an anchor and moored in the port; and thoſe they carry out, 'till they are in the high ſea, under pain of the loſs of their wages, and a fine of 30 livres.

XI. The maſter of the ſhip ſhall be obliged, as ſoon as the pilot gets aboard, to tell him how much his veſſel draws, under pain of 25 livres fine, to the benefit of the pilot, for every foot concealed.

XII. In every port ſhall be made, at the ſuit of our attorney, with the advice of the magiſtrates or two eminent merchants, a regulation for the wages of pilots; which ſhall be inſerted in a public writing, and a copy of which ſhall be left in the admiralty-office, and another affixed upon the key.

XIII. The pilots and mariners ſhall not exact greater ſums than thoſe ſpecified by the regulation, under pain of corporal puniſhment, except in time of a ſtorm and imminent danger; in which caſe the officers of the admiralty, with the advice of two merchants, may tax their wages higher, having regard to the work they have done, and the danger they have run.

XIV. We declare null all promiſes made to pilots and mariners while in danger of ſhipwreck.

XV. We enjoin the pilots daily to view the roads of the places where they are eſtabliſhed, to hoiſt the anchors left there, and, within 24 hours afterwards, to make their declarations to the officers of the admiralty.

XVI. If they diſcover any alteration in the channel, and ordinary paſſage of ſhips, or that the buoys and ſea-marks are not right placed, they ſhall be obliged, under pain of ten livres, to acquaint the officers of the admiralty, and the maſter of the key therewith.

XVII. It ſhall be free for the maſters and captains of French or foreign ſhips to take ſuch pilots as they pleaſe to conduct them into the ports and harbours, without being obliged to make uſe of the ſame to conduct them out again.

XVIII. A pilot that ignorantly runs a ſhip aground, ſhall be whipped by the hand of the hangman, and for ever deprived of his employment; and as for ſuch as maliciouſly and deſignedly run a ſhip upon a rock, bank, or ſhore, he ſhall be puniſhed with death, and his body hung up upon a maſt planted near the place of the ſhipwreck.

For the laws by which pilots are regulated, ſee the article PILOTS.

LOGWOOD, or CAMPEACHY-WOOD, as ſome call it, is called alſo BRASILETTO, or JAMAICA-WOOD; and is, ſays Pomet, the heart of the trunk of a large tree, which grows plentifully in Campeachy and Jamaica, and in Santa Cruz in America, where there are whole foreſts of it. And, according to Lemery, it grows in ſeveral other parts of the Weſt-Indies.

The tree is bigger or leſs, according to the ſoil that produces it; it riſes with a trunk thick and ſtrait, covered with a thin bark plain and ſmooth, of a ſilver grey or yelloviſh colour; the leaves are like thoſe of the bay, and, held in the mouth, afford a ſcent like the clove, which has made it to be oftener taken for the clove-tree than any other, by reaſon of the delicate flavour, which has given it the name of the Indian aromatic laurel. Among the leaves comes a ſmall fruit, adhering to the branches by a little ſtalk like the cubeb, and has at the other end a ſmall crown; the fruit is of a dun colour, the taſte ſharp and piquant, but agreeable enough, taſting like a clove, and therefore called moſtly clove-berry; it contains three ſmall kernels like muſk-ſeed.

We may obſerve here, that it affords three ſorts of commodities very good and ſaleable; the firſt is the wood, which ſhould be choſen firm and undecayed; and cut, not ſawed at the ends. This wood chiefly employs the dyers, who uſe it to dye blue and black. The ſecond commodity is the leaf, which may be uſed inſtead of malabathrum, where that is ordered, as this leaf has more virtues than that; the Americans uſe them for fomentations, to cure the palſy, and other diſeaſes proceeding from cold cauſes. The third is the fruit, which the French uſe in imitation of the Engliſh, as being a very ſtrong aromatic, and proper on ſeveral occaſions: as this has been known but of late years, the French have had but little commerce therein, beſides what their privateers of St. Maloes in time of war have taken from England. The grocers in France call it clove-berry, from it's likeneſs to that ſpice in ſmell and taſte, and it is called with us all-ſpice, as having analogy to cinnamon, cloves, mace, and nutmegs, and is very much uſed in all ſauces. Lemery thinks it poſſeſſes all the ſeveral properties, qualities, and virtues of thoſe ſpices, though poſſibly not in ſo large a meaſure, in reſpect to it's body; for that it conſiſts of more earthy parts than any of them, except cinnamon; but the tincture, or oil of it, extracted from it's feculent part, are not much inferior to what may be extracted from thoſe: ſo that we muſt allow this drug to be ſtomachic, cephalic, cardiac, uterine, nephritic, and arthritic; it is alexipharmic and diuretic, comforts the brain and nervous parts, refreſhes and ſtrengthens the whole animal œconomy, and reſtores the natural functions of life where weakened.

It has been long known among the dyers, for the dyeing of blacks and blues, as intimated, but it is only of late that it has been introduced into medicine: it is found to be chiefly an excellent aſtringent, and is given in form of an extract in diarrhœas with great ſucceſs.

A repreſentation from the honourable board of trade to his late majeſty king George I. aſſerting and proving the right of the ſubjects of Great-Britain to cut logwood in the bay of Campeachy, September 25, 1717.

To the king's moſt excellent majeſty.

May it pleaſe your majeſty,

The right honourable Paul Methuen, Eſq; one of your majeſty's principal ſecretaries of ſtate, having tranſmitted to us on the 15th of November laſt, by order of his royal highneſs, a letter or memorial he had received from the marquis de Monteleone, ambaſſador extraordinary from his Catholic majeſty, relating to the trade carrying on in the Weſt-Indies, and to the ſettlement made by your majeſty's ſubjects on the iſland of Triſt, and on or near the lake or marſh de Terminos, in the province of Jucatan: in which parts he repreſents, 'That they employ themſelves in cutting of log-'wood, or (as the Spaniards call it) Campeachy-wood; and 'that the Spaniſh viceroy and governor had propoſed to 'diſlodge them from thence, but that his ſaid Catholic ma-'jeſty would not ſend his orders before he had given your 'majeſty notice of it, not doubting, but that according to 'all the treaties of peace, and particularly that made at 'Utrecht, your majeſty would oblige your ſaid ſubjects to 'leave the aforeſaid lake de Terminos, and give poſitive or-'ders to your governors at Jamaica, and of the other iſlands, 'not to ſuffer the leaſt trade to be carried on for Campeachy-'wood, and to declare, that if, in the ſpace of eight months, 'they do not leave the ſaid place, they ſhall be looked upon 'and deemed as pirates.'

We beg leave to repreſent to your majeſty, that, although we did humbly propoſe ſuch methods as we eſteemed proper and neceſſary to ſupport the cutting of logwood in the Weſt-Indies, when the ſaid Mr. Methuen was on his departure for Madrid; yet on this occaſion, when a trade of ſo great importance to our navigation and the American colonies is in danger of being loſt, we have again carefully peruſed the books and papers in our office, and received from the merchants and others the fulleſt information we can hope to obtain, which hath taken up much time: and we do now humbly crave leave to lay before your majeſty the paſt and preſent ſtate of this trade, with the arguments that formerly engaged your majeſty's royal predeceſſors to protect and ſupport the ſame; to which we ſhall add ſome obſervations, and the reaſons that induce us to conclude your majeſty's ſubjects have now as full and ample right to this trade, as to any other liberty or privilege that has been allowed by the crown of

Spain, and enjoyed by them, by virtue of any treaty whatſoever.

In the firſt place, therefore, it muſt be obſerved, that logwood is one of the products of the province of Jucatan, which extends itſelf into the north ſea in form of a peninſula, about 100 leagues in length. The Spaniards are poſſeſſed of San Franciſco de Campeachy, it's capital town and port, which has been thrice taken by the Engliſh; and, beſides, they have two other inland towns, Merida and Valladolid, of no great importance, having few inhabitants; but the reſt of the province, before the logwood-cutters were ſettled, was in a manner wholly deſolate and uninhabited.

Nevertheleſs, it muſt be allowed, that the Spaniards had, from time to time, cut wood in ſeveral places near their own ſettlements; but, during the hoſtilities that were committed in the Weſt-Indies before the year 1667, they deſerted that employment, being frequently interrupted by the privateers, both by ſea and land, who by degrees became acquainted with the coaſt, and with thoſe parts where the wood grew, that were moſt remote from the Spaniards, they at laſt fell into the trade, and laid the foundation of their future eſtabliſhment.

Their firſt ſettlements were near to Cape Catoche: but upon (if not before) the publication of the treaty concluded at Madrid in 1667, by the earl of Sandwich, they likewiſe ſettled near Suma Sunta, adjacent to the Laguna de Terminos, and to Triſt and Beef Iſlands, which being the moſt convenient place for cutting of wood, and a tolerable harbour for their ſhips and veſſels, the whole trade ſoon centered there. For, notwithſtanding the aforeſaid treaty was principally intended to ſettle and adjuſt our commerce with his Catholic majeſty's dominions in Europe, yet, 'a general, 'firm, and perfect amity, confederation, and peace, being 'thereby agreed and concluded (as in the firſt article) between 'the two crowns, to be obſerved inviolably, as well by land 'as by ſea and freſh waters, and between the countries, king-'doms, dominions, and territories belonging unto, or under 'the obedience of either of them, &c.' It was concluded, that the peace extended to America as well as Europe; whereupon many of the Britiſh privateers that had before uſed thoſe ſeas, to the great interruption of commerce, were then induced to quit their former courſe, and to ſettle with the logwood-cutters in the Laguna de Terminos; ſo that, in the year 1669, their numbers were conſiderably increaſed, and great quantities of wood were tranſported both to Jamaica and New England.

The American treaty for reſtraining depredations in thoſe parts, being afterwards concluded by Sir William Godolphin in July 1670, added to their ſtrength, by encouraging ſeveral others of the privateers, or ſeamen, to fall in with this employment of cutting wood, to which it was now generally ſuppoſed they had a right by the ſaid treaty.

And, as the logwood-trade was of the greateſt importance to Jamaica, on the 10th of March 1671, Sir Thomas Lynch, then governor of that iſland, not having received any orders how to govern himſelf in this affair, tranſmitted to the lords of the council the reaſons that induced him to encourage the ſame under proper regulations.

1ſt, That the Engliſh had done ſo divers years.

2dly, It was in deſolate and uninhabited places.

3dly, That this ſeems a poſſeſſion granted by the American treaty.

4thly, It might give a right to ſeclude the Dutch and the French, if we ſhould break with Spain.

5thly, The Spaniards had not, to that time, made any complaints of it.

6thly, This employ makes the reducing of the privateers more eaſy. And,

7thly, That it will employ 100 ſail annually, and bring in more to his majeſty's cuſtoms and the nation's trade, than any colony the king hath.

While theſe arguments were under conſideration, the earl of Arlington laid, before the lords of the committee, a letter from Sir Thomas Modyford, the late governor of Jamaica, dated the 16th of May 1672, wherein, after he had given an account of the great extent or compaſs of the country, in which the logwood grows; how meanly the Spaniſh towns on the foreſaid tract of land were peopled, and of the places frequented by the Engliſh; he adds,

That they have uſed this trade for three years paſt, at firſt finding it by the ſea ſide, but afterwards, being forced to go four or five miles up into the country for their refreſhment, they had planted Indian proviſions, and built houſes there to keep themſelves and their proviſions from the ſun and rain: that, in general, they had affirmed to him, never to have ſeen any Spaniards or other perſon, in all the time of their working, although they had gone ſix or ſeven miles farther into the country to kill deer, &c. This poſſeſſion, he ſays, in the Weſt Indies, is held the ſtrongeſt that can be, viz. felling of wood, building of houſes, and clearing and planting the ground.

Sir Thomas Lynch, to confirm what he had before aſſerted, and to juſtify his proceedings, in November 1672, ſends home the copies of ſeveral depoſitions he had taken from the maſters of ſhips, and others concerned in the logwood-trade, and a proclamation he had iſſued out for the better regulation and ſecurity thereof, importing,

That whereas he was informed, by the oaths of many credible witneſſes, that his majeſty's ſubjects have uſed to hunt, fiſh, and cut wood in divers bays, iſlands, and parts of the continent, not frequented or poſſeſſed by any of the ſubjects of his Catholic majeſty, and had, for ſome years, peaceably done the ſame without any moleſtation; nevertheleſs, divers veſſels having been ſeized at anchor and under ſail, by ſome pirates and fugitives of this iſland, and being in danger of being ſo ſurprized again, therefore he orders and appoints all veſſels ſailing out of Port Royal, for the aforeſaid lawful employments, to go out together in ſmall ſquadrons, four at leaſt in company, and to give bond to keep company with, and to obey him, whom he ſhould make commander for the voyage, and their mutual defence, and what they ſhould lawfully do in their own defence, and for the preſervation of his majeſty's ſubjects, their ſhips and goods, be authorized and warranted, &c.

In January following, the ſecretary to the lords of the committee, by their order, adviſes the ſaid Sir Thomas Lynch, that he had acquainted him with their lordſhip's pleaſure fully, concerning cutting of logwood, and that they did altogether allow of the ſame, provided thoſe rules were obſerved, which they had formerly directed, and which were agreeable to what the ſaid governor himſelf had already mentioned.

This allowance of carrying on the trade, as aforeſaid, gave freſh vigour to thoſe engaged in it, though about this time the Spaniards began to interrupt them in the proſecution thereof, and to diſpute their right to that liberty they had ſo long quietly enjoyed.

For we muſt inſiſt on it, as an undoubted and unconteſted fact, that from the publication of the treaty of 1667, until about two years after the concluſion of the American treaty, the logwood-cutters had never been in the leaſt diſturbed or moleſted in their employment, either directly or indirectly; nor does it appear that the Spaniſh governors took any umbrage at it, or made any complaint about it; much leſs did they pretend to an excluſive right, or that it was contrary to the laws of their commerce.

Nay, ſo far were they from expreſſing any reſentment on this account, or making it a pretence to juſtify the firſt hoſtilities they committed, in violation of the treaties both of 1667 and 1670; that when Sir Thomas Lynch ſent to Don Fernando Franciſco Deſcavedo, the governor of St. Franciſco de Campeachy, to demand ſatisfaction for two Engliſh ſhips, which had logwood on board, and were taken by ſome Spaniſh men of war; in his anſwer to that charge on the 6th of April 1672, he takes no notice of our cutting logwood, or that thoſe ſhips had any on board, or that we had ſettled on the Laguna de Terminos; nor had he any other complaint to make by way of retaliation, ſave that an Engliſh veſſel had taken a Spaniſh bark at the Laguna de Terminos bound to Tobaſco; which is the more remarkable, becauſe the ſaid Laguna was, at that time, and had been ſeveral years actually in our poſſeſſion.

It muſt likewiſe be farther urged, that before the queen-regent of Spain had publiſhed a royal cedula, bearing date the 22d of June 1672, which orders, 'That ſuch as ſhould 'make invaſion, or trade without licence in the ports of the 'Indies, ſhould be proceeded againſt as pirates, &c.' It does not appear that cutting of logwood was eſteemed by the Spaniards to be an invaſion, and trading without licence; but, by virtue of this cedula, it was at length carried to that height, that, if our ſhips had but any logwood on board, they were confiſcated without remedy.

Upon this ſubject, the earl of Arlington, on the 19th of March 1674, wrote to Sir William Godolphin, then ambaſſador at Madrid, as follows:

'In a word, his majeſty is ſo ſenſible of the ſufferings of his 'ſubjects in this particular, that you muſt endeavour, by all 'the ſkill you have, to procure ſome liberty for the cutting of 'logwood, in thoſe remote parts, where the Spaniards have 'none, and his majeſty's ſubjects have had long abode and 'reſidence; and the rather, for that we find, by all the re-'plies we have ſeen, they juſtify themſelves by that ſingle 'point of cutting logwood, nay, even of finding it on board, 'our veſſels, which to us appears very unreaſonable.'

And Sir Lionel Jenkins, the judge of the admiralty, in his report to his late majeſty king Charles II. of the 8th of October 1675, intimated, 'That the American treaty does re-'quire a farther elucidation and adjuſtment between your 'majeſty and the crown of Spain; for it appears by the judg-'ment of the queen in the matter of Campeachy, and by their 'cedulas reales, that they affix a new interpretation upon 'that treaty, in declaring what ſhall be private or not pri-'vate, prize or not prize, without communicating, it ſeems, 'with your majeſty, and without publication, that may 'reach your majeſty's ſubjects.'

Thus by a Spaniſh auto, or a decree of that court, which was inconſiſtent with, and made (ex poſt facto) after the ratifications of a public and ſolemn treaty, it was manifeſtly intended, not only to debar the Britiſh ſubjects of that liberty

berty they enjoyed before the said treaty was made, but, in some measure, to deprive them of their common right of all nations; whereas, if your majesty's subjects did actually hold and possess the Laguna de Terminos, and the parts adjacent, at the time of the conclusion of the American treaty, as hath been already proved, the last clause of the 7th article will determine to whom the same belongs, viz.

'Moreover it is agreed, that the most serene king of Great-'Britain, his heirs and successors, shall have, hold, and 'keep, and always possess, in full right of sovereignty, seigni-'ority, possession, and propriety, all the lands, countries, 'islands, colonies, and other places, be they what they will, 'lying and situate in the West-Indies, or in any part of Ame-'rica, which the said king of Great-Britain and his subjects 'now hold and possess, insomuch that they neither can nor 'ought hereafter to be contested or called in question for them, 'upon any account, or under any pretence whatsoever.'

And, as long as the 8th article of the same treaty subsists, it will appear very extraordinary, that the Spaniards should pretend to any dominion or power in the ports or havens where they neither had fortifications nor magazines, or in those places which were not possessed by them, because these descriptions are undoubtedly laid down by the treaty, as the sole and distinguishing marks of the sovereignty of the crown of Spain in those parts and places, which only we were to forbear sailing to and trafficking in, while all other ports and places were left open and free.

But, notwithstanding the said treaty was so strong in our favour, the Spaniards having thereby compassed the two main ends they proposed to themselves, viz.

1st, The securing their West-India trade to themselves, by excluding us, and consequently all other nations, from trafficking with them: a point which could never be before obtained, though it was strenuously insisted on in the reign of king James I. and afterwards in 1630.

2dly, The dispersion of the privateers, who had long miserably harrassed and distressed the Spaniard's settlements, and notably checked the increase both of their power and trade in those parts, but are now entirely reduced, by the great care of the English governors, and by their entering into the logwood-trade.

Yet the only advantages Great-Britain aimed at by the treaty, viz. that her subjects might carry on their trade without interruption, and peaceably enjoy those places they then held and possessed, were, in a great measure, absolutely defeated.

For, after the publication of the aforesaid royal cedula, many of our ships were made prizes under that pretence, sometimes by Spanish men of war, at other times by English pirates, seduced by the governors into the service of Spain, and afterwards by the Biscayneers, that were sent to cruize on those seas.

And, upon the same pretence, in April 1680, several ships under the command of Don Philippo de Varedda Villegas, arrived at the island of Trist and the Laguna de Terminos, attacked our logwood-cutters, while separated from one another, and dislodged them from thence.

Moreover, the Spanish governors encouraged by this success, and little regarding the just right of your majesty, or your subjects, even to plantations still more distant from their dominions, did soon resolve upon another expedition, and, in 1682, surprized New Providence, one of the Bahama Islands.

But these places were again soon re-peopled, and the trade from Trist and the Laguna, in 1682, was greater than ever.

The rise and progress of the logwood-trade, from about the year 1667 to the year 1682, being thus stated, and laid before your majesty, we presume it would be too tedious, and not very material to the point in question, to enter into the particulars, how, and in what manner, it was afterwards constantly carried on; and how it has been from time to time interrupted and supported until the year 1713, when the adjustment and settlement thereof was again under consideration, both at Madrid and Utrecht.

But since the Spanish ambassador insists on it, that by the treaty of peace made at Utrecht, in which (he says) it is stipulated, 'That the lands or other places, which had been 'taken in the Indies during the war, should be evacuated; 'your majesty is engaged to oblige your subjects who are 'come to the lake de Terminos, to leave it immediately.'

We most humbly take leave to represent farther to your majesty:

That if his excellency would hereby insinuate, that your majesty's subjects are but lately, and during the war, come to the Laguna de Terminos, that is a mistake in fact; for it appears by the aforementioned depositions, sent by Sir Thomas Lynch and Sir Thomas Modyford, that they were there in 1669, and for some time, or years before; and it is well known to the Spaniards, that they have been ever since possessed of that part of the country, except for two or three months after the aforesaid assault in 1680.

Neither will what the said ambassador asserts from the treaty, answer the end for which it was produced.

By the 8th article it is, indeed, agreed by his Catholic majesty, 'not to alienate any of his territories in the West-'Indies, to the French or any other nation; and upon this 'condition her late majesty engages, that she will endeavour 'and give assistance to the Spaniards, that the ancient limits 'of their dominions in America be restored, &c. if it shall 'appear that they have in any manner been broken into, and 'lessened in any part, since the death of king Charles II.'

But to argue from hence, that the Laguna de Terminos, in possession of the English before the year 1670, must be evacuated, when this treaty has only reference to what has passed since the demise of the said king Charles II. is very extraordinary.

But, if the ambassador refers to the memorial on the affairs of commerce, that was signed at Madrid the 13th of July 1713, by the lord Lexington and the marquis de Bedmar, we must confess, that the article relating to the logwood-trade, proposed therein by his lordship, had not then it's effect: but we are assured it was from thence, among other things, referred to the discussion of the plenipotentiaries at Utrecht.

What passed particularly on this affair at Utrecht, doth not appear to us; but by the treaty of commerce concluded the 28th of November following (of which the said ambassador takes no notice in this memorial) and wherein the several interests of the two crowns and their subjects, with respect to commerce, were more particularly under consideration, it is manifest, that the rights and liberties, insisted on by the British subjects in the West-Indies, were adjusted by the lords plenipotentiaries; and that a clause in the treaty, which determines this contest relating to the cutting of logwood, beyond all possibility of dispute for the future, was then agreed upon and concluded; it being expresly stipulated in the first article after the confirmation and ratification of the American treaty in 1670, as follows: 'Without any prejudice, how-'ever, to any LIBERTY, or POWER, which the subjects 'of Great-Britain enjoyed before, either through RIGHT, 'SUFFERANCE, or INDULGENCE.'

If therefore this comprehensive clause (which relates only to the West-Indies) confirms, secures, and re-establishes those liberties, which the subjects of Great-Britain enjoyed in America before the treaty in 1670, it necessarily follows:

That they having then enjoyed the liberty of cutting logwood, without any interruption (as hath been fully proved) either through RIGHT, SUFFERANCE, or INDULGENCE, they are again entitled by this treaty, to the same liberty, in as plain and express words as can be used or imagined.

And, that your majesty may be more fully apprized of the importance of this trade, the same will be effectually demonstrated by the following account of the quantities of logwood imported since the war, viz.

	T.	C.	Q.	lb.
In 1713 - - - -	2189	15	3	22
1714 - - - -	4878	14	3	24
1715 - - - -	5863	12	1	14
1716 - - - -	2032	17	2	9
In four years,	14965	00	3	9

That is, communibus annis, tons 3741, which cannot be computed at less than 60,000 l. per ann. though the price is at present reduced from 40 l. to 16 l. per ton, whereas, before your majesty's subject were settled there, it was worth 100 l. the ton.

Nor is this trade less necessary than beneficial to your majesty's dominions, by reason of the great encouragement it gives to our seamen and shipping, which at all times require a particular attention, but now especially, when it is daily observed, that very many British mariners, either through defect of the laws, for want of employment at home, or in hopes of greater advantage abroad, enter themselves into foreign service.

Upon the whole, therefore, we are humbly of opinion,

That the subjects of this your majesty's kingdom, for some years before, as well as after the conclusion of the American treaty in 1670, did enjoy an uninterrupted liberty of cutting logwood in the Laguna de Terminos, and in other places not inhabited by the Spaniards in the province of Jucatan, either through right, sufferance, or indulgence.

That the said American treaty did establish a right in the crown of Great-Britain to the Laguna de Terminos and the parts adjacent, those places at the time of the treaty, and for some years before, being actually in the possession of the British subjects.

That the royal cedula, issued out by the court of Spain, was a violation of the aforesaid treaty, forasmuch as the carrying on the trade to the Laguna de Terminos was thereby interpreted an invasion, and the logwood-cutters accounted pirates.

And that your majesty's subjects having been (at least) suffered to enjoy the liberty of cutting logwood as aforesaid, before the conclusion of the American treaty (although your majesty should not insist on your said right to the Laguna de Terminos) yet that the same liberty is absolutely granted and confirmed by the treaty of commerce made at Utrecht.

And

And we do farther think it our duty to repreſent to your majeſty, that, although the ſaid Spaniſh ambaſſador ſeems to declare, in his memorial, that no attempt ſhould be made to diſlodge your ſubjects ſettled on the Laguna de Terminos, in a leſs time than eight months from the date of his ſaid memorial; yet they were diſlodged and taken priſoners in the ſame month the memorial was delivered, as appears by ſeveral affidavits ſent to this board by general Hamilton, your majeſty's governor of the Leeward Iſlands.
All which is moſt humbly ſubmitted.

SUFFOLK,
J. CHETWYND,
CHARLES COOKE,
J. MOLESWORTH,
D. PULTENEY,
M. BLADEN.

Whitehall, Sept. 25, 1717.

REMARKS.

We find, by the foregoing repreſentation, that the logwood-trade, as carried on by us in the bay of Campeachy, came to be conſidered with the utmoſt care and circumſpection by the Board of Trade and Plantations, in the year 1717, who ſolemnly reported to his late majeſty George I. that we had an undoubted right to that trade, in which the ſubjects of the crown of England had been maintained and ſupported by former kings, his majeſty's predeceſſors.
This logwood-trade having been a bone of contention between England and Spain, ever ſince the American treaty of 1670, and the principal, if not the only cauſe of the late war with Spain, which hath coſt the two nations ſo much blood and treaſure, and being not yet ſettled, may poſſibly be the cauſe of another war between us and Spain, wherein all Europe may be involved; I ſhall take leave, with all humble ſubmiſſion, to ſuggeſt an expedient, in the ſequel, to public conſideration, which may probably prove happily inſtrumental to prevent the calamities and miſeries of war, in future, upon the like occaſion. Previous to which, I ſhall briefly ſtate the origin and nature of this commerce, as it has been carried on by the Engliſh in the bay of Campeachy; which may ſerve to elucidate ſome parts of the foregoing repreſentation made by the lords of trade to the late king.
Campeachy is ſituated within the great bay of Mexico; yet the bay of Campeachy itſelf is a pretty large bay: it extends from Cape Condeſedo, on the eaſt point, to St. Martin's, on the weſt, which is about 120 leagues: it bends into the ſouthward ſomething in the form of an half-moon. The eaſt part of this bay is in the province of Yucatan. Compeachy is the only ſea-port of this province, and is ſituate on the ſouth-eaſt of the bay; Merida is the capital, and many other towns lie further up the country. The land hereabouts is ſandy, and not very fruitful; the inhabitants make a coarſe ſort of cotton cloth, and gather ſalt-petre and ſalt, with which they ſupply the neighbouring places.
Near the bottom of this bay is a tract of land that was long in poſſeſſion of the ſubjects of the crown of England, who carried on the logwood trade from thence to Jamaica, and our northern colonies. This tract of land includes the iſlands called Port-Royal, Triſt, and Beef-Iſland; which form a ſound between them and the main land, about three or four leagues wide. Into this ſound ſtream various rivers and creeks, which run far into the country; and, upon the banks of theſe rivers and creeks, are produced groves of logwood-trees. Theſe three iſlands, and the land within them, comprehend all that the Engliſh poſſeſſed after the conqueſt of Jamaica, and are in length no more than about 20 leagues, but not quite ſo much in breadth, including the ſpace of water in the harbours and ſound. The chief town and harbour where the Engliſh reſided, was Triſt, in latitude 18° north, and longitude 101° weſt of London.
The origin of this logwood-ſettlement was thus: after the conqueſt of Jamaica, the privateers frequently cruized in the bay of Campeachy for prizes, which they often met with: and ſome of theſe, having logwood only on board, the privateers deſtroyed, as being ignorant of it's value at that time of day. At length one Capt. James brought a Spaniſh capture laden with this wood to England; which, proving a good prize, firſt taught the worth of this commodity; and, before the war was over, the privateer's men, having learned where this wood grew, ſettled themſelves in the beforeſaid places, and employed their time in cutting of this wood honeſtly, and preparing it for ſale, and carrying the ſame to Jamaica and New England; from whence the logwood-traders imported ſupplies of what they wanted. At length the knowledge of this trade reaching England, upwards of 200 ſail of ſhips were employed in it in a ſeaſon: ſo conſiderable a trade was once carried on by the Engliſh in the bay of Campeachy; and the ſame might have been continued uninterruptedly to this day, had it not been for an unpardonable neglect in the government of England at that time. For had advantage been taken to have eſtabliſhed the Engliſh government at this ſettlement, when there were above 1700 of the ſubjects of the crown of England then; and had proper fortifications been raiſed for the ſecurity of this trade and ſettlers, we ſhould have had no diſputes, perhaps, at this time of day with Spain, about our right of trade and poſſeſſion.
At the time we are ſpeaking of, others of the Britiſh logwood-cutters and traders had ſettled themſelves within the bay of Honduras, upon a large river, called the river Belleſe, which abounds alſo with logwood, and where the bulk of the logwood that has come to England for ſeveral years paſt has been cut: and this river has been uninterruptedly, to this day, in the poſſeſſion of the Britiſh logwood-cutters and traders, and their ſlaves. And, about 42 miles up this river, the ſubjects of the crown of England have built a large town, with palmeta and oſnabrigs, and hoiſted Engliſh colours, as a teſtimony of their dependency on theſe kingdoms, and of their trading under the banner of Great-Britain.
During the poſſeſſion of this ſettlement by the ſubjects of the crown of England, they have cut and exported large quantities of logwood to Europe, and imported whatever they had occaſion for; and this ſometimes in Britiſh bottoms, and ſometimes in ſhips belonging to the inhabitants, many of whom have been men of worth, even from 10 to 30,000 l. ſterling.
By a letter which I received, dated March 20, 1740-1, from a merchant of South Carolina, a man of known veracity, who had himſelf, as a captain of a merchantman, uſed the logwood-trade to this river for above twenty years, and thereby acquired a fortune competent to commence merchant; I was informed that the logwood-traders had, at their own expence, fortified, in ſome meaſure, the mouth of this river; and, as the Britiſh government had not been pleaſed to take ſuch notice of them as they judged the importance of the trade required, they had alſo conſtituted a kind of government among themſelves, and eſtabliſhed a governor to their fort, whoſe name was ——— Sharpe, and him alſo they made the factor-general for their logwood, allowing him good commiſſion for acting in this capacity, as alſo a handſome ſalary as governor of the fortreſs: all which, I have good reaſon to believe, was done at the inſtigation, and by the advice and direction of my correſpondent, who was not a little beloved by the logwood-traders at this river.
At the firſt ſettlement of this logwood colony in the river Belleſe, which was at the time when that of Campeachy was, the Engliſh were aſſiſted by the Moſketoe Indians, who acknowledge the ſovereignty of the crown of Great-Britain, and pay homage, and take the oaths to every new governor of Jamaica, on his firſt arrival: and theſe Indians have ever ſince been ſteady and faithful friends and allies to thoſe traders, in the ſupport and preſervation of this colony. In 1718, the Spaniards of Patent attempted to diſpoſſeſs the Britiſh logwood traders from the town and river of Belleſe; but his excellency governor Shute, of the province of Maſſachuſets, having commiſſioned to their protection Capt. William Wier, of the ſhip King George, together with the aſſiſtance of their old friends and allies, the Moſketoe Indians, they repulſed the Spaniards; and the Engliſh have remained in poſſeſſion of this logwood ſettlement ever ſince; and, from a poſſeſſion equal in time to that of the bay of Campeachy, from the felling of wood, clearing and planting the ground, and building of houſes where no Spaniards were ever known to inhabit, they judge they have as good a right to this colony as any of the Britiſh planters have to their eſtates in America; ſuch acts as theſe being deemed, in the Weſt-Indies, to give the ſtrongeſt right and title to ſuch plantations. Moreover, this river, and the land circumadjacent thereto, has been claimed, from time immemorial, by the Moſketoe Indians, who being the original natives of this place, and of the lands hereabouts, and having never been conquered by the Spaniards, nor ſubmitted to their dominion, but have long been faithful friends and allies to the Engliſh nation; they have, by virtue of ſubmitting to the ſovereignty of the crown of England, and that crown's acceptance of ſuch their ſubmiſſion, put themſelves and all their lands and territories under the dominion of the Britiſh government; and, therefore, in conſequence hereof, this river, and land adjoining thereto, claimed by the Britiſh logwood-cutters and traders, became annexed to the crown of England, from our firſt poſſeſſion of the ſame. This gives England even a much ſtronger right and title to this logwood colony, than the lords commiſſioners of Trade and Plantations aſſert, in the preceding repreſentation to his late majeſty, we have to that of Campeachy. And although this identical river, and lands adjoining thereto, are not expreſsly mentioned by the lords of Trade and Plantations, yet they are neceſſary implied in the UTI POSSIDETIS, and alſo under theſe expreſs terms, where their lordſhips ſay, 'Whereas, if 'your majeſty's ſubjects did actually hold and poſſeſs the La-'guna de Terminos, and the PARTS ADJACENT, at the 'time of the concluſion of the American treaty, as hath been 'already proved, the laſt clauſe of the ſeventh article will 'determine to whom the ſame belongs, &c.'—For this river Belleſe, and the lands adjoining thereto, inhabited by the Britiſh logwood traders, are the parts adjacent to the Laguna de Terminos, this river, though in the bay of Honduras, ſtretching itſelf to the Laguna de Terminos within a few leagues, through moraſs and impaſſable land, and therefore, may as juſtly be ſaid to be PARTS ADJACENT to the ſaid

LOG

ſaid Laguna de Terminos, as Triſt and Beef-Iſland in the bay of Campeachy may. And, when the Spaniards diſpoſſeſſed the ſubjects of the crown of England from the Laguna de Terminos, and Triſt and Beef-Iſland in the bay of Campeachy, many of thoſe logwood-traders joined their brethren on this river Belleſe, by the way of Honduras Bay, they not being able to come at the ſame by the way of the Laguna de Terminos in the bay of Campeachy.

When we hear of ſhips being taken in the bay of Honduras with logwood, I do not ever remember to have heard, in any of our public accounts, the particular place ſpecified from whence the ſubjects of the crown of England got their logwood; which has occaſioned an egregious miſtake, many imagining that no Britiſh veſſel has any right to go into the bay of Honduras at all, and, therefore, that whatever ſhips are found there muſt certainly have been engaged in the illicit trade, and, conſequently, ſuch ſhips are legal captures to the Spaniards: whereas the caſe may be, and generally is, quite otherwiſe; for thoſe veſſels go from Jamaica to this Britiſh logwood colony that has been ſo long ſettled on the river Belleſe, and which, to the beſt of my recollection, lies near to Aſcenſion Bay*; about two degrees and a quarter to the northward of the gulph of Honduras; for I never yet ſaw it in any map whatever.

* From the minute intelligence which I received from the beforementioned captain of a merchantman, who had uſed the logwood-trade to this river above twenty years, I drew two maps of this river, upon a large ſheet of vellum; the one I preſented to Sir Robert Walpole, late lord Orford, in the year 1738, and the other I have ſomehow loſt; but, as that which I preſented to the late Orford, may very probably be ſtill in the hands of ſome body belonging to that noble family; I ſhall be greatly obliged if they would be pleaſed to favour me with the ſame, in order to have it engraved for this work, and the original ſhall be returned. If they ſhould be ſo kind, let them pleaſe to ſend the map to Meſſ. John and Paul Knapton, bookſellers in Ludgate-Street, or to my houſe at Brompton, near Kenſigton.

The iſland of Ratan, in the bay of Honduras, was taken poſſeſſion of in order to ſecure the logwood-trade of the river Belleſe; and I have ſome reaſon to believe, in conſequence of what I did myſelf the honour to lay before Sir Robert Walpole, in relation thereto; for the poſſeſſion of this iſland, and the aid of the Moſketoe Indians, would have always protected the logwood-trade of this part.

But as this logwood colony, as well as that in the bay of Campeachy, gives ſuch umbrage and jealouſy to the Spaniards, that this trade is carried on chiefly to cover and promote an illicit commerce with their colonies, where we have no more right to trade directly to, than other nations have to the Britiſh colonies: as the ſituation of theſe colonies are likely ever to create miſunderſtandings and heart-burnings between the crowns of England and Spain, it would be happy for both nations if ſome reaſonable and moderate expedient could be thought of, to prevent any future rupture, upon this occaſion, between the two kingdoms. To which end I crave leave, with all humble ſubmiſſion, to ſuggeſt the following meaſures, viz.

1. That although it is apparent we have an undoubted right to the logwood-trade in the bay of Campeachy, as repreſented by the honourable the lords of Trade and Plantations; and alſo the ſame right to this trade in the aforeſaid river Belleſe, in the bay of Honduras; yet, in order to convince his Catholic majeſty, and the whole world, that the Britiſh nation is deſirous to maintain a ſtrict and inviolable amity with Spain, let the crown of Great-Britain abſolutely give up and renounce their right to the logwood-trade in the one or the other of theſe places; and let the renunciation of the one, and the right of the other, be ratified and confirmed by a new and explicit convention, as ſhall be agreed upon between the two crowns.—And as the abſolute right to the whole of the Campeachy ſettlement may be judged by the court of Spain to be of more conſequence to them, and the logwood-trade carried on there by the Britiſh nation more likely to cover an illicit trade than the ſettlement on the river Belleſe, in the bay of Honduras; let Great-Britain abſolutely give up and renounce, by ſuch convention, her right to the logwood-trade in the bay of Campeachy, upon expreſs condition only, that her abſolute right to the logwood-trade upon the ſaid river Belleſe be alſo ratified and confirmed by the ſaid logwood convention.

2. That all the logwood, cut by the Spaniards in the bay of Campeachy, ſhall be carried in Spaniſh bottoms to Jamaica, and there ſold to the Britiſh ſubjects, at ſuch a fixed price as ſhall be ſtipulated in the ſaid new convention.

3. That the ſubjects of all other powers whatſoever ſhall be excluded from the cutting of logwood in the bay of Campeachy, or the purchaſe of logwood at firſt hand of the Spaniards, in any part of the ſaid bay of Campeachy.

4. That the ſubjects of the crown of England ſhall have the free and uninterrupted liberty of trade and navigation to the ſaid river Belleſe, in the bay of Honduras, and to fortify the ſame in ſuch a manner as they ſhall judge proper for their ſecurity.

5. That logwood on board of any Britiſh ſhip ſhall not be deemed contraband goods, nor ſhall any Britiſh ſhip whatever be ſearched by the Spaniards upon the high ſeas.

6. That all Britiſh ſhips catched in the ports of New Spain, ſave in the logwood port at Belleſe river, and except drove thither by ſtreſs of weather, &c. as agreed by ſubſiſting treaties, ſhall be liable to be taken, with their cargoes, and confiſcated by the Spaniards to their ſole uſe.

Theſe are the outlines of what I would humbly ſubmit to public conſideration, in order to prevent any future broils between the crowns of Great-Britain and Spain, in regard to this branch of commerce; leaving ſuch additions and alterations to be made as ſhall be judged requiſite to anſwer the end propoſed.—If the Spaniards ſhould not acquieſce to ſome meaſures of this, or ſome other kind, in order to regulate the logwood-trade, it is apparent that they have no intention to keep friendſhip with this nation.

Further Remarks, on the unreaſonableneſs of the Spaniards to inſiſt upon the ſearch of Britiſh ſhips upon the high ſeas of America.

That Great-Britain does not inſiſt upon this point of No Search of their ſhips upon the open ſeas, from any chicaning motive or view, to cover an illicit trade to the Spaniſh colonies in America, but from an upright and honourable intention, to ſecure and maintain an uninterrupted freedom of navigation to and from her own colonies in America; will appear, it is humbly preſumed, from the cleareſt evidence and conviction, that the court of Spain can reaſonably deſire or expect. For,

1. The courſe of the winds in thoſe ſeas between the tropics, it muſt be obſerved, is generally between the eaſt and north-eaſt, which are diſtinguiſhed commonly by the name of trade-winds; and, cloſe to the coaſts of the great iſlands of Cuba, Hiſpaniola, Jamaica, and Porto-Rico, there are alſo alternate land and ſea-winds. The land-winds blow right off from the iſlands, on which ſide ſoever you are; they begin about ſun-ſet, and blow ſometimes 'till eight or nine o'clock in the morning, and are ſucceeded by ſea-breezes.

2. There is likewiſe a ſtrong rapid current to the weſtward, along the ſouth ſide of all theſe beforementioned iſlands; and this is occaſioned by the trade-winds blowing from the Canary iſlands over all the Atlantic Ocean. This current forces the ſea very violently upon the coaſt of Guaiana, which turns it through between the iſlands of Trinidada and Barbadoes: this rapid current is confined between the continent and the iſlands of Porto-Rico, Hiſpaniola, Jamaica, and Cuba, and continues it's force to Cape Gratias Dios, being all the way accelerated in it's violent rapidity by the wind that ſtill follows it.

3. At Cape Gratias Dios the ſame current bends it's courſe to the northward; and, as it paſſes between Cape Catoche, on the iſthmus of Jucatan and the weſt end of Cuba, becomes ſtill far more rapid and violent than any where elſe. Theſe things premiſed, the neceſſity, the abſolute and indiſpenſible neceſſity Britiſh ſhips are under, for ſecurity of their navigation only, of keeping as cloſe as they poſſibly can to the Spaniſh coaſt, will appear obvious and indiſputable. For,

The neareſt courſe of our ſhips from Great-Britain, or from our northern colonies to Jamaica, is, either along the ſouth ſide of Porto-Rico and Hiſpaniola, or directly between thoſe two iſlands, or between Hiſpaniola and the iſland of Cuba. It is very true, indeed, upon a bare ſurvey of the map, it does not appear, to the theoriſt and unexperienced land-man, that Britiſh ſhips are under the abſolute neceſſity of approaching very near to the Spaniſh coaſts; but thoſe who have been experienced in the navigation of thoſe ſeas, well know, that, even in the greateſt calms, they are continually forced extremely near; nay, ſo near as within piſtol-ſhot of the Spaniſh coaſts, and are ſometimes forced full upon the Spaniſh ſhore, to the immediate deſtruction of their veſſels: and this is occaſioned by the inceſſant rapidity of the beforementioned current, and the chopping ſeas our ſhips meet with between theſe iſlands, even after a calm; for it muſt be obſerved, that the dying winds, after any thing of tempeſtuous weather, always leave a ſtrong ſea running to the weſtward: ſo that our outward-bound ſhips, not from any view to an illicit trade, are neceſſitated, for the ſecurity of their navigation only, to keep as near to the Spaniſh ſhore as they poſſibly can, with ſafety from the ſhore itſelf, for the benefit of the land-winds, and to avoid the dangerous and often fatal effects of the rapid current, and the chopping ſeas.

And, with regard to thoſe ſhips which are homeward-bound from Jamaica, there is ſtill a far greater neceſſity for their ſailing as cloſe to the Spaniſh coaſt as, with ſafety, they poſſibly can. For thoſe ſhips which load at King's-Town or Spaniſh-Town in Jamaica, or any where to the eaſtward thereof, frequently attempt to return to England and our northern colonies thro' the Windward Paſſage, between Cuba and Hiſpaniola, where they are always certain of meeting with the wind and current againſt them from the eaſtward, except they haul cloſe over upon the coaſt of Cuba, for the benefit of a land-wind, as before obſerved, and to avoid the violence of the current, which runs againſt them.

Without our ſhips keeping thus cloſe to the Spaniſh coaſt, it is abſolutely impoſſible to ſail to the eaſtward at all, through

the Windward Paſſage: and, notwithſtanding they do keep as cloſe to the ſhore as they can, and take all imaginable advantage of the ſhelter of the land, and of the land-winds; yet, in ſpite of all the aſſiſtance they can thus receive, they frequently lie beating there for ſeveral weeks together; and, after all their endeavours, are at laſt too frequently compelled to bear away round cape St. Anthony, at the weſt end of the iſland of Cuba, from whence they ſteer their courſe through the gulph of Florida: and this courſe moſt of our ſhips which load to the weſtward of King's-Town, or Port-Royal, chuſe, as being the quickeſt paſſage.

And, in the paſſage of Britiſh ſhips from Jamaica, through the gulph, we are alſo under the ſame neceſſity of keeping as cloſe to the ſouth-weſt part of Cuba, and as cloſe to the weſt and north-weſt part, as the ſhoal of the Collarado will, with ſecurity, admit: for, if our ſhips do not keep cloſe to the land in this critical place, the north-weſt current is here ſo exceſſively ſtrong, violent, and rapid, that it forces our ſhips often 50 or 60 leagues, or more, to the weſtward; and, when they are at ſuch a diſtance from the land in this place, it is with the greateſt difficulty they are able to recover it again; but, if they do, it may be ſeveral months firſt, which is certainly no little injury to our trade and navigation.

We have a memorable inſtance of the danger of this north-weſt current, in the late confederate war of queen Anne. A conſiderable fleet of merchantmen, under the convoy of a large ſquadron of men of war, made this miſtake of keeping too wide of the land, upon doubling the weſt end of Cuba, and ſtretched ſo far to the north that they judged themſelves out of the ſight of Cuba, and plied the wind in that latitude 'till they thought themſelves the height of the gulph of Florida; then ſtood to the northward accordingly, 'till they imagined themſelves quite clear of the gulph, and congratulated the admiral upon the occaſion, whoſe name at preſent I do not recollect, but I think it was admiral Benbow. After which, crowding full ſail with a briſk gale of wind in the night, to their great aſtoniſhment, ſaw the land right a-head, which proved to be in the very bottom of the bay of Apalache. This was occaſioned by the rapidity of the north-weſt current; and, had not the whole fleet immediately changed their courſe, this miſtake would certainly have proved fatal to them. There are numberleſs inſtances of merchantmen, which, by not keeping as cloſe to the Spaniſh coaſt as they poſſibly could, with ſafety from the ſhore, in this place have met with this current; which has either proved the loſs of their veſſels, or ſeveral months retarded their voyage.

Should it be objected, by the Spaniſh miniſtry, that the current, all the way taken notice of, does not always ſet ſtrong to the weſtward, but that it ſometimes changes, and ſets to the eaſtward. To this it is anſwered, That, although, it is certain the main current does ſometimes ſet to the eaſtward; yet this is but very ſeldom, and never of any long continuance on that point: beſides, the time of ſuch changes is altogether uncertain, and, therefore, our ſhips cannot take the advantage of ſetting out when the current ſhould happen to favour them.

Unleſs, therefore, the Engliſh nation can make the winds and the currents to obey them in the ſeas of America, they cannot, conſiſtent with their natural rights of navigation, ſubmit to have their ſhips ſearched, under any colour or pretence whatſoever; nor can they ſubmit to any limitation of courſe or diſtance whatever, in ſailing by the Spaniſh coaſts, ſo as to preſerve and maintain a freedom and ſafety of navigation to and from their own plantations.

I have dwelt the longer upon this point, judging it of the laſt importence to our navigation in America; and never having heard this point, in all the debates that have been, for above theſe 20 years about it, ſtated in it's clear and full light, I hope it will not prove an unacceptable ſervice to my country to make this public, having had the ſame confirmed to me for ſeveral years paſt, by a great number of ſkilful and experienced captains of merchantmen, who, I am perſuaded, could have no view to deceive me in my enquiries.

Of the illicit, or contraband trade, ſaid by the Spaniards to be carried on by the Engliſh, and other nations, in Spaniſh America.

The ſubject on which I am at preſent engaged, naturally leading to the conſideration of that part of the trade of the Spaniſh Weſt-Indies which is commonly called illicit, or contraband, it may not be uſeleſs to take ſome notice of it, in this place; and, firſt, it may be neceſſary to be informed of the ſentiments of the Spaniards themſelves in relation to this matter; which we find in the works of the learned Spaniard Don Geronymo de Uztariz *.

* See vol. I. cap. 29.

'In a treatiſe already mentioned, ſays this great ſtateſman, 'entitled, The Intereſt of England ill underſtood; in the war 'which was carried on in the year 1704, we have a detail of 'the various ſorts of merchandize brought from England to 'Spain and Portugal, of which the principal is fiſh, with a re-'mark that three parts are for Spain, and the fourth for Portu-'gal; but that the profits are very different. The returns from

'Portugal are made in commodities and fruits exported, ſuch 'as tobacco, wine, ſugar, ſpices, and ſalt; while thoſe of Spain 'are much more advantageous to the Engliſh, as they princi-'pally conſiſt of bullion, and bars of ſilver: for the wine, 'wooll, and other commodities they take back, are far from 'being a balance for the goods brought into Spain.

'In the ſame book it is alſo ſaid, That one of the principal 'branches of commerce which the Engliſh poſſeſs in America, 'conſiſts of an illicit traffic with his majeſty's provinces, by 'introducing their merchandize by way of Jamaica; and the 'return is uſually in bullion, wood, and cocheneal; and they 'eſtimate their gain by this ſingle traffic at ſix millions of 'dollars yearly, and draw even more money from the Spaniſh 'dominions by way of Jamaica than Cadiz: nor ought this 'to be ſtrange, ſince, in the month of Auguſt 1722, there 'arrived in England 30 veſſels freighted from Jamaica; and, 'if we conſider the barrenneſs of that iſland, one muſt be 'convinced that a principal part of their loading had been 'drawn from Spaniſh America: and the caſe is the ſame with 'the other numerous and frequent convoys that paſs back-'wards and forwards from England to Jamaica, where, for 'the reaſon given above, and the few inhabitants of that 'iſland, a ſmall part of the numerous goods carried over will 'be conſumed there; and, therefore, they diſpoſe of the reſt 'to the Spaniards, as the Engliſh themſelves confeſs. More-'over, the ſame book mentions the danger this branch of 'their commerce will be expoſed to in the courſe of a war *, 'they had unjuſtly declared againſt us, ſince we could put a 'ſtop to it with ſix frigates, ſtationed to ſcour thoſe ſeas.'

* However good an opinion the learned Spaniard may entertain of this Engliſh writer, yet the advantage reaped in the late war, as well as in that of queen Anne, in Jamaica, by means of the Spaniſh Weſt-India trade carried on from thence, ſhews that this author was much out in that foreſight to which he pretended. Some years ſince I met with this author, tranſlated into French; and, if I remember right, the original was reputed to have been wrote by a noted Engliſh Jeſuit, who reſided in the city of London, and who, of courſe, was no friend to the Proteſtant intereſt; and, therefore, wiſhed ſucceſs to the Popiſh confederacy at that time, and wrote that treatiſe then to ſpirit up the Spaniards and French againſt England and her allies. But if foreigners form their judgment of the commerce and power of this kingdom, from the party writings of either ſide, with which we abound, it is not to be admired that they are frequently miſled in regard to ſome very eſſential points.—And ſome of thoſe writers, who would be thought very zealous in their country's intereſt, have been the inſtruments of doing her the greateſt miſchief. We would by no means be underſtood to reſtrain the liberty of the preſs in any degree, while a becoming decency, and the character of the gentleman is preſerved, that privilege being the great palladium of all our liberties: but I would obſerve, that our own people at home, as well as foreigners abroad, are too often egregiouſly impoſed upon by the party writings of all ſides. This many wiſe and good men have lamented; and, I am willing to flatter myſelf, that this work wherein I am engaged will, in relation to commercial affairs, prevent evils of this nature; for party artifice has too often a great ſhare in thoſe concerns; having endeavoured, to the utmoſt of my ability, to guard againſt every thing of that kind; for the grand pole-ſtar by which I have endeavoured to conduct myſelf, is the general proſperity and happineſs of Great-Britain in particular; and that without any intention whatever to injure any other nation, unleſs the rouſing of my countrymen to beat them in honeſt induſtry, art, and ingenuity, will be ſaid to be ſo.

That an illicit and contraband trade hath ſometimes been carried on by the ſubjects of the crown of England, from Jamaica to the Spaniſh Weſt-Indies, will hardly be denied; and ſo it hath been, and daily is, by the ſubjects of other nations. This, however, is no palliation of what is wrong in itſelf. Such is the ineffectuality both of divine and human laws, that no trading nation can abſolutely prevent the ſmuggling and contraband trade, even within their own dominions, much leſs are they able to prevent their ſubjects from practiſing the like in foreign countries. No nation is more ſenſible of theſe things than that of Spain; for, although their laws are very rigorous and ſevere againſt ſmuggling in Spaniſh America: though they erected a gallows at Panama, to put a ſtop to it: yet they have not hitherto been able to do it. And, while their own ſubjects will carry on an illicit trade with foreigners, it is no wonder that the latter will run the hazard likewiſe.

Every nation has a right to enact what laws they judge proper for the regulation, as well of the trade and navigation of their reſpective colonies and plantations, as of the mother-ſtate. But theſe laws and regulations ſhould never interfere with ſubſiſting public treaties, nor with the laws of nations, which give every ſtate a right and freedom of navigation to and from their ſeveral colonies and plantations: for ſuch laws and regulations which interfere with public treaties, and the laws of nations, muſt tend to deſtroy all amity with ſuch nations who make them.

If the ſhips of Spain, in their navigation to and from their American colonies, ſail near to any of the Engliſh or French colonies, would not the Spaniards highly reſent it, if the Engliſh

liſh or French ſhould detain and ſearch their ſhips on the high ſeas, upon the pretence of their having been concerned in an illicit and contraband trade? But if the Engliſh or the French, or any other nation, catched the ſhips of Spain in the ports of any of their colonies and plantations, carrying on an illicit and contraband trade, Spain neither could or would complain, if ſuch of their ſhips and cargoes were ſeized and confiſcated: Spain would not think this any infraction of treaties, or any violation of the law of nations; it would be uſing ſmugglers as they deſerve.—So whenever the Spaniſh officers in America have really catched either the Engliſh, French, or Dutch ſhips or veſſels, in any of the Spaniſh ports, carrying on an illicit and contraband traffic, thoſe courts never have, or ever will complain, if the Spaniards ſeize and confiſcate ſuch ſhips and veſſels; nor will the captures themſelves ever have the confidence to complain, whenever this is the caſe: all ſtates, on theſe occaſions, muſt ſubmit to the laws of nations for the reciprocal ſecurity of their commerce and their revenues.

This ſeems to be the natural and right light wherein the Spaniards, if unbiaſſed by ſelf-partiality, ſhould conſider this matter; they ſhould, as England, and every wiſe trading nation muſt and will, enact the moſt ſalutary laws for the government of their colonies and plantations, to prevent evils of this nature; and have ſuch upright governors and active and vigilant officers, as will ſuppreſs, inſtead of promote and encourage, for private intereſt, this infamous traffic. What difficulties has not the government of England had to ſuppreſs ſmuggling, and yet has not been able to eradicate it; though it is certain, that, from the vigilance, vigour, and reſolution of the adminiſtration, the knot is broke of the moſt notorious and enormous villains of this ſtamp; whereby this deteſtable commerce is greatly decreaſed. But every trading nation has theſe mal-practices to bear with more or leſs: and, would the court of Spain take the like meaſures that England has been obliged to do, and hang up thoſe of their own ſubjects, whom they find any way concerned in, and in any reſpect encouraging a contraband trade, they might ſoon, perhaps, put a ſtop to it, notwithſtanding the great extent of their coaſts; and, in ſuch caſe, the ſubjects of England, France, and Holland, muſt of courſe ceaſe to be concerned therein.

But, if the Spaniards are really in earneſt to ſuppreſs this illicit traffic in their American dominions, and do not ſuffer the ſame to be countenanced with a view to make a handle of; ſhould they not let their ſubjects in thoſe parts have a conſtant and full ſupply of ſuch aſſortments of merchandizes, by the legal way of Old Spain, wherein they know they ſtand in need? If this is not regularly and effectually done, how can it be expected that the ſubjects of the crown of Spain, in any part of America, will want ſuch merchandizes wherein they ſtand in need, if there is a poſſibility of coming at them in any ſhape? If then the principal cauſe of the illicit and contraband trade carried on in Spaniſh America by the ſubjects of the ſeveral other ſtates of Europe, as well as by the ſubjects of the crown of Great-Britain, may be aſcribed to the deficiency of the laws of Spain, or to the bad execution of their laws in New Spain; if the commerce from Old Spain to New is not ſo wiſely regulated by the due ſailing of their galloons and regiſter-ſhips, &c. as it might be, to afford their ſubjects in America ſuch a conſtant ſupply of merchandize as they muſt and will have, does not the fault in this reſpect lie in the court of Spain itſelf?

When the South Sea company poſſeſſed and exerciſed the Aſſiento contract, Spain was inceſſantly complaining of the illicit commerce carried on by the means, and under the cover of the exerciſe of that contract: that is now at an end; and, if there was any truth in theſe ſuggeſtions of the crown of Spain, all illicit trade occaſioned thereby has ceaſed with the Aſſiento itſelf.

There may be probably enough ſtill ſome degree of illicit trade carried on as well by the ſubjects of the crown of England in Spaniſh America, as by the ſubjects of other powers: but, will a mere ſuſpicion of this in the crown of Spain juſtify their detention and ſearch of Britiſh or any other ſhips, indeed, upon the high ſeas? We have ſeen the apparent and inevitable neceſſity under which our Britiſh ſhips in particular lie, to ſail as near as poſſibly they can, with ſafety, to the Spaniſh coaſts, in their lawful navigation to and from the Britiſh colonies and plantations; without which, our people are frequently liable either to loſe their lives and ſhips, by reaſon of the winds and currents, or to have their voyage ſome months retarded: we have ſeen likewiſe the foundation of our right, by treaties, to the logwood-trade in the bays of Campeachy and Honduras; and the unreaſonableneſs of the Spaniards, in preſuming to detain and ſearch our ſhips upon the high ſeas, in their navigation to and from our logwood or other colonies, under the pretext of having been engaged in illicit trade: we have alſo ſeen, that logwood, the produce of thoſe places which have been particularized in the bays of Campeachy and Honduras, is as much a Britiſh commodity, as ſugar, rice, and tobacco are Britiſh commodities, in any of our other colonies; and that the Spaniards have not the leaſt foundation to condemn any Britiſh veſſel for having logwood on board; for that ſuch conduct is an apparent violation of ſubſiſting treaties.

With reſpect to the article of cacao-nuts, that may be on board Britiſh ſhips, it is well known that they likewiſe are the product of our own ſettlements in America; ſo that all the diſpute between Great-Britain and Spain is reduced to the ſimple point of pieces of eight, which is the current coin of the Spaniſh Weſt-Indies. To which we would obſerve, this is a ſpecie, that all the European nations which trade in a lawful manner by way of Old Spain to New, have in return together with other commodities from Spaniſh America, for the merchandizes which they ſend thither; and it is well known, that Spaniſh pieces of eight are looked upon in the light of a commodity, by all thoſe nations who traffic with Spain, and is accordingly bought and ſold among them; and, indeed, ſo are the foreign coins, more or leſs, of the principal trading nations of Europe: nay, the chief current coins of Europe are, in ſome degree, in a perpetual circulation over the whole traffickable world. And theſe pieces of eight, which the other European nations receive from Old Spain, are again carried back to America, and diſſeminated among all the colonies and plantations belonging to the ſeveral potentates therein intereſted: in the French, Dutch, and Portugueze colonies, there are Spaniſh pieces of eight to be ſeen in the way of traffic, and ſo there are guineas and louis d'ors, &c. Our northern colonies trade with the French iſlands, and our iſlands frequently trade with the Dutch in America, whereby, in the currency of trade, Spaniſh pieces of eight, as well as divers other foreign coins, are conſtantly paſſing from colony to colony; but this will not prove that, when ſuch Spaniſh pieces of eight are found on board Britiſh, or any other veſſels belonging to theſe European nations who have ſettlements in America, theſe veſſels have been carrying on an illicit and contraband trade with the Spaniards in the Spaniſh Weſt-Indies; theſe identical pieces of eight might come into their hands, in conſequence of the legal commerce of Old Spain; and, if they are afterwards carried to circulate among all the colonies in America, which is frequently the caſe; will this juſtify the Spaniards in ſearching, much leſs in taking or condemning the ſhips of any European power, for having ſuch ſpecie on board, who have any right to trade in America? This will juſtify them the leaſt of any, in taking Britiſh ſhips on the high ſeas of America; becauſe theſe ſhips often take out this ſpecie with them, wherewith to facilitate their commerce among the Britiſh colonies in general; and are obliged, as we have ſeen, to navigate even within gun-ſhot of the Spaniſh coaſt, merely for ſecurity of their lives, their ſhips, and their cargoes.

Such was the ſituation of the Engliſh and Spaniſh intereſts in America, before the year 1667, that the latter attempted an expreſs prohibition of trade to all other nations, to the Spaniſh Weſt Indies; this they laboured long but ineffectually to procure; they met with conſtant oppoſition to any ſtipulation of this kind in their favour, in the reigns both of queen Elizabeth and king James; and this was thought to be one of the principal cauſes that brought the brave Sir Walter Ralegh to the block

In the reign of Charles the Iſt, the Spaniards renewed their ſollicitations for a clauſe of this nature in the treaty, then concluded between Spain and England, and offered a conſiderable ſum of money to procure it, but they were ſtill unſucceſsful; nor could all the honours and favour they heaped upon Charles II. during his exile, prevail with him to grant them any promiſe for that purpoſe, in caſe he was reſtored to the crown. In conſequence of this being the ſtate of the caſe, at the time we are ſpeaking of, between England and Spain, the Spaniſh governors were abſolutely reſtrained, by orders from the court of Madrid, from permitting any other nation to trade with the Spaniſh Weſt-Indies. Nay, we endeavoured to have this liberty explicitly confirmed by treaty to us; but this being contrary to maxims, which, by long uſage, had acquired the ſtrength of fundamental laws in that monarchy, we could never obtain it. This was the intent of the embaſſy of Sir Richard Fanſhaw in the year 1664. However, in later days we have been more moderate: Great-Britain ſeems, at preſent, to require nothing of the crown of Spain, in order to preſerve an inviolable friendſhip with that nation, but what is her indiſputable right; and that ſhe certainly has to the cutting of logwood in ſuch parts of the bays of Campeachy and Honduras, as have been before repreſented. She alſo has an indiſputable right to a free and uninterrupted navigation to and from her own colonies in America, as well as the Spaniards have to theirs; and that without any detention or ſearch of their ſhips whatſoever upon the high ſeas, by Spaniſh guarda coſtas or others, under pretence of ſuſpecting them to have contraband goods on board.

REMARKS upon the whole of this article of LOGWOOD, before the laſt war.

It is too notorious to need proof, that the late war was occaſioned by the depredations, which were committed by the Spaniards upon Britiſh ſhips trading to and from our logwood and other Britiſh colonies in America; and it is well enough

enough known to the whole world, that the long forbearance of the court of Great-Britain to come to an open rupture with the crown of Spain, upon this occaſion, is ſcarce to be paralleled in hiſtory: and, if the accounts we have of late received from Jamaica and the northern colonies be true, there is too much reaſon to believe, that the Spaniards are about to act the like ſcene over again, that occaſioned the war. If this ſhould be the caſe, as I hope it will not, I have humbly ſubmitted an expedient to public conſideration, to prevent thoſe evils with regard to the logwood-trade, that is as much calculated for the intereſt of Spain as that of Great-Britain. In what has been urged in relation to that point, and the ſearch of Britiſh ſhips upon the high ſeas of America, I have not ſhewed the leaſt partiality towards my own country; I have ſtated only the naked facts without exaggeration, which generally eclipſes the truth.

It is to be wiſhed, that our logwood ſettlements were ſituated elſewhere, that might give no umbrage or jealouſy to the Spaniards; it is therefore I have propoſed the aſcertaining our right to that colony in the RIVER BELLESE; in ſailing to and from which, our Britiſh traders can give no cauſe of ſuſpicion that they intend an illicit and contraband trade, under colour of the logwood-trade: and every impartial Spaniard muſt allow, that it is condeſcenſion enough in the crown of England to give up their right to the logwood-trade, in Campeachy, upon the conditions ſuggeſted, in caſe the Britiſh right is explicitly aſcertained, by treaty, to that ſmall river Belleſe. But, if the court of Spain ſhould not acquieſce in ſo fair and equitable a propoſition, which I have done myſelf the honour humbly to ſubmit to conſideration; it will demonſtrate that the crown of Spain is determined to break with Great-Britain at all events, if they ſhould continue to take our ſhips in the manner they did before the late war, in 1741. And, if this ſhould prove to be the real diſpoſition of that court, if we were even to give up the whole logwood-trade, they would nevertheleſs take our ſhips in ſailing to and from our other colonies; ſo that there would be no end of conceſſion upon conceſſion.

If this ſhould ever come to be the caſe, the regulations of the logwood-trade, propoſed by Sir Thomas Lynch governor of Jamaica, may, perhaps, be firſt naceſſary to be ſettled, viz. that all ſhips trading to our logwood colonies ſhould ſail together in ſmall ſquadrons, as is taken notice of in the repreſentation of the lords commiſſioners of trade before quoted. In a word, every prudential meaſure ſhould be tried to ſettle this point in an amicable manner between the two crowns, if there is a poſſibility of ſo doing.—But the moſt effectual pacific meaſures to be taken, we humbly apprehend, ſhould be in ſuch a commercial way, as would pinch the Spaniard in the moſt tender point.—Whatever could be thought of in this ſhape ſhould be eſſayed, before the ſword is again drawn upon the like occaſion; and, if every endeavour of this kind in the court of Great-Britain proves fruitleſs, then all imaginable weight and dignity ſhould be given to the adminiſtration by unanimity at home, that ſuch alliances with foreign powers might be made, and ſuch effectual meaſures taken by the parliament, as would bring the Spaniards to terms of reaſon and juſtice with a nation, by which they gain more than by any other whatſoever, and in whoſe power it may one day be to do them more miſchief than another ſtate whatever *.—But nothing can be a greater folly, we conceive, than for a trading nation to go to war, 'till every meaſure, poſſible to be thought of, is tried to prevent it; and yet every wiſe meaſure taken previouſly to prepare for it, before we ever attempt to ſtrike the blow again, that, when do ſtrike, we may do it with ſuch ſecrecy and effectuality, as may make the Spaniards repent their maltreatment of a nation that has bore ſo much to preſerve peace with them: and, if once, as I heard a great man ſay, previouſly to a declaration of war with Spain, it was the ſenſe of a Britiſh parliament to addreſs the throne, that they would grant ſupplies to carry on a war againſt Spain, upon condition only that Great-Britain ſhould HOLD WHAT POSSESSIONS THEY GOT IN THE WAR, this would be no ill-judged ſtep to prevent one; but, if we had one, it would occaſion our whole ſtrength to be levelled, where it would be moſt ſenſibly felt.

* Did not the Spaniards experience this, by our taking the Havannah in the laſt war?

REMARKS.

The foregoing was the ſtate of our LOGWOOD article, before the laſt war; but by the DEFINITIVE TREATY of 1763, that point is ſettled as follows, in the XVIIth article of the ſaid treaty, "His Britannic majeſty ſhall cauſe to be demoliſhed all the FORTIFICATIONS which his ſubjects ſhall "have erected in the BAY OF HONDURAS, and OTHER "PLACES of the territory of Spain in that part of the world, "four months after the ratification of the preſent treaty: "And his Catholic majeſty ſhall not permit his Britannic "majeſty's ſubjects, or their workmen, to be diſturbed, or "moleſted, under any pretence whatſoever, in the SAID "PLACES, in their occupation of CUTTING, LOADING, and "CARRYING AWAY LOGWOOD. And for this purpoſe, "they may build without hindrance, and occupy without "interruption, the houſes and magazines which are neceſſary for them, for their families, and for their effects: "And his Catholic majeſty aſſures to them, by this article, the full enjoyment of thoſe advantages and powers on "the Spaniſh coaſts and territories, as above ſtipulated, immediately after the ratifications of the preſent treaty."

We find that, at length, this long conteſted point, reſpecting the LOGWOOD TRADE, is ſettled by treaty, which it never was explicitly before. For the Spaniards would never before acknowledge, that we had any right to cut logwood in the BAY OF HONDURAS; but by the ſaid article, the ſubjects of his Britannic majeſty are permitted to CUT, LOAD, and CARRY AWAY logwood from the ſaid bay, and wherever elſe they had erected fortifications, upon condition only of their demoliſhing ſuch fortifications.

But ſince the ſaid DEFINITIVE TREATY has been made between the crowns of Great-Britain and Spain, the following accounts having been reported to be tranſmitted to the court of London, it will be neceſſary to record the ſame in this work; though we are willing to hope, that the court of Spain will diſavow what follows, or it may poſſibly be attended with a freſh war; for the conſequences of which, ſee our article NEW MEXICO.

Philadelphia, May 10. By the Olive Branch, captain Robinſon, from Honduras bay, we have advice, that the Spaniards had forbad the Engliſh from cutting wood in the bay; upon which they had ſent an expreſs to Jamaica for aſſiſtance. The following is a tranſlatton of a letter from the Spaniſh general to the commanding officer in the bay.

SIR,

The king, my maſter, having appointed me to the employment of governor and captain-general of this province, with eſpecial order to comply entirely with what his majeſty granted to the crown of England, and ſtipulated in the 17th article of the definitive treaty of peace, ſigned at Paris the 10th day of February, this year, commanding me likewiſe that with all poſſible diſpatch, I ſhould proceed on my voyage, which I could not do ſo ſoon as I deſired, for various diſappointments which happened. I arrived at Campeachy the 7th inſtant, and having taken poſſeſſion the 24th, I was informed of your arrival at Balis in the month of April, alſo five veſſels, and that immediately the people were diſperſed as far as Rio Hondo, practiſing from that time the cutting of logwood, by virtne of the treaty of peace. You did not preſent the royal ſchedule that my ſovereign expedited for this end, nor the licence of the king of England for the aforeſaid effect.

This being granted, I am obliged by the king, my lord, in his royal confidence of the government of this province, and to comply entirely with the ſaid 17th article of the definitive treaty of peace, as I ſaid before, to diſpatch the commandant of the fort of Bacalar, don Joſeph Roſado, with this, requiring you, that in conſideration of the want of inſtruments for your introduction, and having extended yourſelves, gathering fruits as in your own country, without waiting to ſettle the limits with the neceſſary ſolemnity that ſhould have ſecured your eſtabliſhment, you will be pleaſed, with all ſpeed, to give the neceſſary advice to all your community that are in Rio Hondo, to retire to Balis; and I expect you will preſent me with the royal ſchedule, that the king, my maſter, diſpatched to this end, or with orders from the king of Great-Britain for this effect; and there is no doubt but I ſhall then attend to it with that care and equity I am commanded; iſſuing for that purpoſe the neceſſary orders to all the commandants, cabos, military and juſticiary of all the diſtricts in their juriſdiction; by which means the ſuſpicion of the fatal conſequences will ceaſe, which will be inevitable if ſuch conduct is continued, ſufficient to deſtroy the good harmony between the two nations, and happy tranquillity we enjoy, if the remedy is not occurred to in time, and our ſovereign will manifeſtly ſee how we intereſt ourſelves, that their juſt and laudable intentions take effect, for which I am ſo ready on my part, as is manifeſt by my toleration, that you and all your nation remain at Balis, and I promiſe myſelf the ſame on your parts, proteſting always that for the reſult of what may happen by ſuch irregular introduction and exceſs of cutting logwood, thoſe who commit, or do not remedy them, will be reſponſible after all. I hope you will favour me with an anſwer by hand of the ſaid commandant of Bacalar, and other commands moſt to your ſatisfaction, to manifeſt to you the deſire I have to ſerve you. God guard you many years, as he can, and I deſire. Your moſt humble ſervant, kiſſes your hands,

PHILIPE REMIRES DE ESTINOS.

Marida, in Jucatan, 29th of December, 1763.

Seir Don JOSEPH MAUD.

Don Joſeph Roſado, lieutenant of infantry in the hatallion of Caſtillia, and commandant of this garriſon and royal fort of St Philip, of Bacalar, and it's juriſdictions.

Notwithſtanding that the ſerjeant Dioniſius Chavaria, who is detachedto the look-out of St. Anthony, has the neceſ-

ſary

ſary orders, that the Engliſh logwood cutters of Rio Hondo, do retreat to Balis, without permitting them to make any demur, becauſe that ſince the 4th inſtant, when the order of the governor and captain-general was by me intimated to them, they have had competent time to evacuate the river, carrying away the utenſils of their houſes. I order and command the ſaid ſerjeant, that he receive eleven ſoldiers of this garriſon, well armed, which, with four there before, completes the number of fifteen, to remain at the ſaid look-out; that with them he is not to permit any Engliſh veſſel, under any pretext, to enter the mouth of this river; on the contrary, if any flats remain in the river, they are to go out, with the utenſils of their houſes, with ſo much brevity, as not to permit them to ſtop any where, but retire totally; as likewiſe thoſe from the New River; beeauſe in the order intimated to them, it is expreſſed, that the retreat ſhall be to Balis, and no other part; and to act on the contrary, they expoſe themſelves to evident danger, as by their diſobedience they loſe their negroes, and find themſelves under a violent arreſt. This order he ſhall manifeſt to as many as are not yet gone out, that by this means it arrive at the notice of all the baymen, and at no time they may plead ignorance. And all that is done on the ſubject by the ſaid ſerjeant, he ſhall give me punctual advice; as alſo of what may occur, to adviſe his excellency the governor and captain-general, from whom I have orders to execute what may be needful;—in caſe of contumacy, diſobedience, or rebellion, laying to the charge of the baymen, all the reſults that may happen between the ſovereigns, for not executing what they are ordered, and that it appear to the ſaid ſerjeant what is hereby ordered; and that he fulfil his obligation with that zeal, love and conduct he ought. This order is given in this garriſon and royal fort of St. Philip, Bacalar, this 22d of February, 1764.

JOSEPH ROSADO.

I, the ſerjeant Dioniſius Chavaria, certify, that the above is a true copy of the order I received this day from the commandant don Joſeph Roſada,

Jo. MAUD,
JA. GRANT, DIONISIUS CHAVARIA.
STEPHEN ARCHHOLD.

To his excellency William Henry Littleton, Eſq; governor and captain-general of the iſland of Jamaica, and other the territories thereunto belonging, chancellor and vice-admiral of the ſame, &c. the humble petition of the principal ſettlers on the Bay of Honduras, for cutting of logwood, and the commanders of veſſels now lying there to load,

Humbly ſheweth,

That your petitioners by virtue of the preliminary treaty of peace (in the 17th article whereof it is ſtipulated, that the ſubjects of his Britannic majeſty ſhall have the privilege of cutting and carrying away logwood in the Bay of Honduras; with liberty to build houſes and magazines, neceſſary for themſelves and families) in the month of April 1763, came down here for the aforeſaid purpoſe of cutting logwood; and on their firſt arrival, diſpatched a letter to the commandant of Bacalar, being the neareſt Spaniſh ſettlement; who returned for anſwer, that he would tranſmit it to the governor and captain-general of the province of Jucatan; whoſe orders on the ſubject, he, the ſaid commandant, communicated to your petitioners, which was to comply entirely with the 16th article of the preliminary treaty of peace.

That afterwards, by virtue of a letter from the ſaid governor of Jucatan, No. 1, in the anſwer to a letter from Joſeph Maud, one of your petitioners, a copy of which is No. 2, ſeveral of your petitioners went into Rio Hondo, to cut logwood; and from that time unmoleſted followed their occupations, till the 4th of this inſtant February, in good harmony and correſpondence with the Spaniards, by frequent letters from the governor of Jucatan, and anſwers by Joſeph Maud, one of your petitioners, all hereunto annexed, at which time don Joſeph Roſado, commandant of Bacalar, delivered the ſaid Joſeph Maud, one of your petitioners, the letter from the governor of Jucatan aforeſaid, No. 3, ordering your petitioners to retreat to Balis, 'till they produce either a ſchedule from his Catholic majeſty, or orders from the king of Great-Britain, to authorize them to cut logwood. In conſequence whereof, your petitioners, with all poſſible diſpatch, endeavoured to withdraw their effects to the New River and Balis, in both which rivers your petitioners had formerly ſettlements. But on the 23d inſtant they were again diſturbed, by an order from the commandant of Bacalar, directed to the ſerjeant of the guard at the mouth of Rio Hondo, an authentic copy of which is likewiſe annexed, No. 4, by which your petitioners are ordered to evacuate every river except Balis, where it is admitted them to ſtay a little while, but, as your petitioners believe, not to have the privilege of cutting logwood even there; that your petitioners are hereby driven to the greateſt diſtreſs, not having any plantations to maintain themſelves and families; that by means of ſo total a ſtagnation of buſineſs, many of your petitioners, and commanders of veſſels, that have lain for ſome time here, are in the greateſt danger of wanting proviſions; that they have diſpoſed of their cargoes to your petitioners, the ſettlers, who, by reaſon of being driven from their occupations, are incapable of paying for them; and that the veſſels lately arrived, not ſeeing any proſpect of immediate payment, refuſe to ſell their proviſions. Theſe are the miſeries your petitioners experience from the inhumanity of the Spaniards.

And your petitioners likewiſe humbly repreſent to your excellency, that not having any legal authority for ſettling diſputes with each other, they find themſelves reduced to a ſtate of anarchy and confuſion, nor have the injured any method to ſeek redreſs; that your petitioners humbly apprehend, that without order it is impoſſible for any community long to ſubſiſt.

Your petitioners therefore humbly pray, that your excellency will be pleaſed to grant them ſuch relief as their own diſtreſſed circumſtances require, and your great wiſdom ſhall direct; and your petitioners ſhall ever pray.

Further REMARKS.

In anſwer to the ſaid petition of the logwood-cutters to governor Littleton, it has been obſerved, that it is evident, from the ſaid petition, that from the month of April 1763, to the 4th day of February 1764, the logwood cutters had remained undiſturbed in the occupation and poſſeſſion of all that had been ſtipulated by the treaty of peace; and that the ſuſpenſion of their logwood cutting, had been in conſequence of a letter of the 29th of December 1763, written to Joſeph Maud, by Philipe Remires de Eſtinos, captain-general of Jucatan, who had arrived at Campeachy the 7th of the ſame month. Before the arrival of this Spaniard, the letter of the 17th article had been ſtrictly obſerved on the part of his countrymen in America: but as ſomething relative to ſecuring this trade to the Engliſh, and preventing the Spaniards from being impoſed on by PRETENDERS TO THE RIGHTS OF BRITISH SUBJECTS, had been foreſeen to be abſolutely neceſſary to be eſtabliſhed, that ſtipulation had been agreed on between the crowns of Great-Britain and Spain, and, according to don Remires's words, it conſiſted in obliging the logwood-cutters, either to be furniſhed with the ROYAL SCHEDULE WHICH SPAIN HAD EXPEDITED TO THIS END, OR WITH THE LICENCE OF THE KING OF ENGLAND, FOR THE AFORESAID EFFECT, and which was unknown before his arrival.

It appears, that it had been foreſeen by the contracting parties, that the merchants of Holland, France, and of all the maritime powers, would diſcern the advantages that might be derived from the above article of the treaty of peace; and from ſuch view, that ſhips would be fitted out in thoſe countries, and navigated by Engliſh ſeamen, would undoubtedly be ſent to the BAY OF HONDURAS, to poſſeſs themſelves of thoſe advantageous ſtipulations, which were intended for Great-Britain only.

And the late war having deſtined ſuch numbers of the Engliſh to the ſea-ſervice, more than peace can employ, and by that means forced the Engliſh ſailors into foreign ſervice, ſailors for the above purpoſe could not be wanting. Whence it ſhould ſeem, it became abſolutely neceſſary, that either the above-mentioned SCHEDULE or LICENCE ſhould be found in the hands of thoſe who were cutting logwood, as the beſt preſervative both of THE ENGLISH AND SPANISH RIGHTS, from the invaſion of others by fallacious means, and a mutual benefit to both nations.

That the want of thoſe authorities is the chief reaſon for the ſuſpenſion of the logwood-cutting, ſeems evident from the words of don Philip Remires, that in conſideration of the want of inſtruments for your introduction, &c. " And I ' expect you will preſent me with the royal ſchedule that ' the king my maſter diſpatched to this end, or orders from ' the king of Great-Britain for this effect; and there is no ' doubt but I ſhall then attend to it with the care and ' equity I am commanded, iſſuing for that purpoſe the ne- ' ceſſary orders to all the commanders, cabos, military and ' juſticiary of all the diſtricts of their juriſdiction, &c."

By the 17th article of the treaty, the Engliſh are entitled to the cutting of logwood only: but it ſeems by the words of Remires, uncontradicted by the petitioners to governor Littleton, ' that they had extended themſelves, gathering fruits ' as in their own country, and without waiting to ſettle ' the limits with the neceſſary ſolemnity that ſhould have ' ſecured their eſtabliſhment.'

That ſome proper meaſures are neceſſary to reſtrain the privilege of cutting, loading, and carrying away logwood from the Bay of Honduras, to the ſubjects of Great-Britain only, and to preclude the ſubjects of all other ſtates and empires from the like privileges, was certainly what was intended by their Britannic and Catholic majeſties: but if foreign merchants, by the means of Engliſh ſailors in their ſervice, ſhall invade the rights of Britiſh ſubjects, and reap in part, or in whole, thoſe advantages that were intended for the ſubjects of Great-Britain only, this is an injury to the mercantile ſubjects of England, as well as detrimental to Spain; and ought to be prevented for their mutual benefit.

And it ſeeming by DON REMIRES's conduct, that a SCHEDULE or a LICENCE is to be the touchſtone ſignifying ſuch Britiſh right and privilege, by both courts, it ſhould be complied with: and it is a pity that this point was not explicitly ſtipulated by the treaty; but if the diſadvantages on both ſides were not foreſeen till experienced, and the matter has ſince the treaty took effect, been agreed on by both crowns as Don Remires has repreſented, it ſhews that a good harmony ſubſiſts between them, and that the expedient intimated is to be exerciſed in future to ſtrengthen that deſirable harmony. And certain it is, that the indiſcriminate permiſſion of all who ſhall call themſelves Engliſhmen, to this beneficial right of cutting logwood, would, in a great meaſure, defeat the advantages which are fixed by treaty to the ſubjects and merchants of this iſland: and if the reſident logwood-cutters at Honduras, and the Britiſh merchants who ſend ſhips thither to trade with Britiſh logwood-cutters, are both duly authorized by ſchedule or royal licence, it will prevent foreign interlopers from partaking of thoſe Britiſh rights, under the mark of being Engliſh merchants, becauſe they have a few Engliſh ſailors on ſhip-board to countenance them in their unjuſtifiable logwood traffic.—And if the meaſures mentioned, or any other that may prove ſtill more effectual to anſwer the end propoſed ſhould do ſo, then England will enjoy the excluſive right and privilege of cutting, loading, and carrying away logwood, which may prove a greater benefit to us, than was perhaps apprehended to ariſe from the logwood article in the DEFINITIVE TREATY.

To this it has been obſerved, that if a ſchedule from the court of Spain, or a licence from the court of England had been agreed on, or known to be neceſſary for our logwood-cutters to have carried with them to the coaſt of Honduras, why has this nation been kept ſo long in ignorance thereof? Why were not the governors of our colonies, and particularly of Jamaica, duly furniſhed with them, in order to give the requiſite authority to thoſe who engaged in that buſineſs? But it appears, our governors were no way apprized that ſuch authorities were needful, and therefore were furniſhed with no ſuch to diſtribute, nor knew how to act upon diſcovery of the conduct of Spain towards the logwood-cutters; they could only tranſmit accounts thereof to the court of England, while the poor people were ruining, by expences and loſs of time, occaſioned by Spaniſh chicanery.

But if the care of our logwood-trade might not have been entruſted to our ſelf-intereſted traders, who would hardly fail to diſcover all illicit intruders, for the ſake of not being interfered with in what ſo nearly concerns themſelves; it was certainly neceſſary to prevent any miſunderſtanding between the contracting crowns, to have had it EXPRESSLY STIPULATED IN THE DEFINITIVE TREATY, that ſuch royal ſchedules and licences were the authorities required by treaty to entitle Britiſh ſubjects to their right in the logwood-trade in the Bay of Honduras; and then none, we may preſume, would have attempted the trade, without being furniſhed with ſuch: and if this has been an overſight in the treaty, it may eaſily be ſupplied, without drawing the ſword again upon this account, provided the Spaniards are not inſincere; if they are, they may ſoon rue it, perhaps. See our article MEXICO, our laſt REMARKS thereon.

While this work is printing, we find the following paragraph in the LONDON GAZETTE. ST. JAMES's, July 21, 1764.—'In anſwer to the repreſentations made by his majeſty's ambaſſador at the court of Madrid, upon the late tranſactions of the governor of Jucatan, and his proceedings towards the Britiſh ſubjects employed in cutting LOGWOOD in the BAY OF HONDURAS, the Spaniſh miniſtry have replied, That they have not received any advices from that governor relative to this affair; but that it is certain the Catholic king has given poſitive orders to the governor of Jucatan to abide by, and obſerve the XVIIth article of the laſt treaty of peace, and that he will not approve of the conduct of his ſubjects who act in contravention to it. That it is the intention of his Catholic majeſty, that no one ſhall impede the Engliſh in their cutting LOGWOOD in the ſtipulated places; and he will diſapprove of the governors and miniſters whenever they act to the contrary, and renew the moſt ſtrict orders to that effect.'

LONGITUDE, as it regards navigation, to which our work has an affinity, is the diſtance of a ſhip or place, eaſt or weſt from another, computed in degrees of the equator. This diſtance being reckoned in leagues or miles, or in degrees of the meridian, and not in thoſe proper to the parallel of latitude, is uſually called departure *.

* Departure, in navigation, ſignifies the eaſting or weſting of a ſhip, with reſpect to the meridian(a) it departed or ſailed from. Or, it is the difference of longitude, either eaſt or weſt, between the preſent meridian the ſhip is under, and that where the laſt reckoning or obſervation was made — This departure any where, but under the equator, muſt be accounted according to the number of miles in a degree, proper to the parallel the ſhip is under.

(a) The meridian is an imaginary circle ſuppoſed to paſs through the poles of the earth, and any given place. So that the plane of the terreſtrial meridian is in the plane of the celeſtial one. Hence, 1. As the meridian inverts the whole earth, there are ſeveral places ſituated under the ſame meridian. 2. As it is noon-tide whenever the center of the ſun is in the meridian of the heavens, and as the meridian of the earth is in the plane of the former, it follows, that it is noon at the ſame time, in all places ſituate under the ſame meridian. 3. There are as many meridians on the earth, as there are points conceived in the equator. In effect, the meridians always change, as you change the longitude of the place; and may be ſaid to be infinite, each place from eaſt to weſt having it's ſeveral meridians.

To diſcover the longitude at ſea is a problem that has hitherto perplexed all mathematicians; although, for the ſolution thereof, great rewards have been publickly offered by the Engliſh, French, Dutch, Spaniards, and other nations: this being the only thing wanting to render navigation perfect. Various are the attempts that authors have made for this purpoſe, and various the methods they have propoſed, but without ſucceſs, ſo that the palm is ſtill unaſcertained. The methods taken to arrive at this point are different. What moſt of them aim at, is a method of determining the difference of time between any two points on the earth: for every 15 degrees of the equator anſwering to an hour, i. e. one degree to 4 minutes of time, and one minute of a degree to 15 ſeconds of time; the difference of time being known, and turned into degrees, will give the longitude, and vice verſa. This ſome have pretended to effect, by chronometers and automata of various kinds, but always in vain; no time-keeper, excepting a pendulum (which cannot be applied at ſea) being ſufficiently exact for the purpoſe.

Others ſearch for a means to find the longitude in the heavens: for, if the exact times of any celeſtial appearance be known for two places, the difference for thoſe times gives that of the longitude of thoſe places. Now, in the ephemerides *, we have the motions of the planets, and the times of the celeſtial phænomena; as the beginning and ending of eclipſes, conjunctions of the moon with other planets, it's entrance into the ecliptic, &c. accurately calculated for ſome one place. Therefore, if the hour and minute be known, wherein any of the ſame phænomena are obſerved in an unknown place, the difference between the hour and minute of that place, and that other to which the tables are computed, and conſequently the difference of their meridians and their longitude from each other, are known alſo.

* Ephemerides in aſtronomy, ſignifies tables calculated by aſtronomers, ſhewing the preſent ſtate of the heavens for every day at noon; that is, the place wherein all the planets are found at that time.—It is from theſe tables, that the eclipſes, conjunctions, and aſpects of the planets are determined, and horoſcopes, or celeſtial ſchemes, conſtructed, &c.

The difficulty here, does not conſiſt in the exact finding of the time, which is eaſily had from the ſun's altitude or azimuth, but the defect lies in the fewneſs of proper celeſtial appearances capable of being thus obſerved: for all ſlow motions (v. gr. that of Saturn) are excluded, as ſhewing but a little difference in a conſiderable ſpace of time; and it being required in this caſe, that the phænomenon be ſenſibly varied in two minutes time, an error of two minutes in time produces another of thirty miles in the longitude.—Now there are no phænomena in the heavens that have theſe requiſites, excepting the ſeveral ſtages of an eclipſe of the moon, her longitude, or place in the zodiac; her diſtance from the fixed ſtars, or appulſe to them; her ingreſs into the ecliptic, or the points of her orbit, where that cuts the ecliptic; and the conjunction, diſtance, and eclipſes of Jupiter's ſatellites.

1. The method by the eclipſes of the moon is eaſy, and ſufficiently accurate, were theſe eclipſes every night. At the moment wherein we ſee the beginning or middle of a lunar eclipſe by a teleſcope, we have nothing to do but take the altitude or azimuth of ſome fixed ſtar, from which the hour and minute are eaſily found; or without the altitude, if the ſtar be in the meridian.—This hour and minute, therefore, thus found, and compared with that expreſſed in the tables, gives the longitude.

2. The moon's place in the zodiac is a phænomenon more frequent than that of her eclipſes; but then the obſervation thereof is difficult, the calculus complicated, by reaſon of two parallaxes, ſo that it is ſcarce practicable at ſea, in general, to any tolerable degree of accuracy.—Indeed, by waiting 'till the moon comes into the meridian of the place, and then taking the altitude of ſome remarkable ſtar (the altitude being ſuppoſed to be firſt known) from this altitude and the latitude, we ſhall be able to find the time pretty accurately, though it will be better to do it by ſome ſtar in the meridian. —Now, the time being found, it will be eaſy to find what point of the ecliptic is then in the meridians or mid heaven. —Thus we ſhall have the moon's place in the zodiac, correſponding to the time of our place.—Then, in the ephemeris, we find what hour it is in the meridian of the ephemeris, when the moon is in that part of the zodiac: thus we ſhall have the hour and minute of the two places for the ſame time, the difference of which will give the difference of longitude.

3. In regard there are many times when the moon cannot be obſerved in the meridian, there is therefore another ſtill more

frequent phænomenon, from which the longitude is ſought, viz. the moon's appulſe and receſs from the fixed ſtars: for from thence the moon's true place may be inveſtigated for the given time of obſervation.—But this method, by reaſon of the parallaxes, and the ſolution of oblique ſpherical triangles, and the various caſes, is ſo difficult and perplexed, that mariners will ſcarce ever be able to make uſe of it.

4. To find the longitude by the moon's ingreſs into the ecliptic, obſerve the moment of that ingreſs: then, in the ephemeris, ſee what hour it is in the meridian of the ephemeris, when that ingreſs happens.—The difference between theſe times gives the difference of longitude.

5. The phænomena of Jupiter's ſatellites are generally preferred to thoſe of the moon, for finding the longitude; by reaſon the former are leſs liable to parallaxes, and do further afford a very commodious obſervation, in every ſituation of that planet above the horizon.—Their motion is very ſwift, and muſt be calculated for every hour, and for that reaſon are not found in the common ephemerides.—Now, to find the longitude by means of theſe ſatellites, with a good teleſcope, obſerve a conjunction of two of them, or of one of them with Jupiter, or any other the like appearance: and, at the ſame time find the hour and minute from the meridian altitude of ſome ſtar; then, conſulting tables of the ſatellites, obſerve the hour and minute wherein ſuch appearance happens in the meridian of the place to which the tables are calculated.—This difference of time, as before, will give the longitude.

All methods, which depend on the phænomena of the heavens having this one defect, that they cannot be obſerved at all times; and being, beſides, difficult of application at ſea, by reaſon of the motion of the ſhip; there are ſome, who leaving the moon and the ſatellites, have recourſe to clocks, and other automata; which, could they be made perfectly juſt and regular, ſo as to move with the ſun, without either gaining or loſing, and without being affected with the change of air and of climates, the longitude would be had with all the eaſe and accuracy imaginable: nothing more being required, but to ſet the machine by the ſun at the time of departure, and when the longitude of any place is deſired, to find the hour and minute from the heavens (which is done at night by the ſtars, and in the day by the ſun;) for the difference between the time thus obſerved, and that of the machine, gives the longitude.—But no ſuch machine has been yet diſcovered, wherefore recourſe has been ſtill further had to other methods.

Mr. Whiſton and Mr. Ditton have propoſed a method of determining the longitude by the flaſh and report of great guns.—Sounds, it is known, move pretty equably in all their ſtages: if then a mortar or great gun be exploded at a place whoſe longitude is known, the difference, it was judged, between the time wherein the flaſh (which moves, as it were, inſtantaneouſly) is ſeen, and the ſound, which moves at the rate of four ſeconds in a mile, is heard, will give the diſtance of thoſe places from each other; whence, if their latitudes be known, the difference of longitude will be likewiſe known. Moreover,

If the hour and minute of the exploſion be known, ſay they, (for the place where it is made) by obſerving the hour and minute from the ſun and ſtars, at the place whoſe longitude is required; the difference between thoſe times will give the difference of longitude. And,

If the ſaid mortar be loaded with an iron-ſhell full of combuſtible matter, and hoiſted perpendicularly, it will carry the ſame a mile high, which will be ſeen near an hundred miles; if therefore neither the ſound ſhould be heard, nor the flaſh ſeen, the diſtance of any remote place from that of the mortar may be determined from the altitude of the ſhell above the horizon of the place unknown: and, the diſtance and latitude known, the longitude is eaſily found.

According to this ſcheme, it was propoſed to have ſuch mortars fixed at proper diſtances and at known ſtations, on all the frequented coaſts, iſlands, capes, &c. and to be exploded at certain hours, for the obſervation of mariners.

This method, however, plauſible in theory, has the fate of all the reſt, and is found uſeleſs in the practice, as being extremely troubleſome, and yet precarious.—It ſuppoſes that ſounds may be heard 40, 50, or 60 miles: of which, it is true, we have inſtances, but they are very rare: and, ordinarily, the report of a cannon is not heard above half ſo far, and ſometimes much leſs.—It ſuppoſes ſound to move always with equal velocity; whereas, in fact, it's velocity is increaſed or diminiſhed as it moves with or againſt the wind.—It ſuppoſes alſo, the ſtrength of powder uniform, and that the ſame quantity carries the ſame range: the contrary whereof is known to every gunner.—We ſay nothing of thick cloudy nights, when no lights can be ſeen; nor of ſtormy nights, when no ſound can be heard, even at inconſiderable diſtances.

We have another method of finding the longitude, propoſed by the ſame Mr. Whiſton, viz. by the inclinatory, or DIPPING NEEDLE. This dipping, or inclinatory-needle, is a magnetical needle ſo hung, as that, inſtead of playing horizontally, and pointing out north and ſouth, one end dips, or inclines to the horizon, and the other points to a certain degree of elevation above it. Or,

A dipping-needle may be defined to be a long ſtraight piece of ſteel, every way equally poiſed on it's center, and afterwards touched with a load-ſtone, but ſo contrived, as not to play on the point of a pin, as does the common horizontal needle, but to ſwing in a vertical plane, about an axis parallel to the horizon: and this in order to diſcover the exact tendency of the power of magnetiſm.

The inventor of the dipping-needle was an Engliſhman, Robert Norman, a compaſs-maker for mariners, in Wapping, near the city of London, about the year 1576. The occaſion of the diſcovery he himſelf relates, viz. that it being his cuſtom to finiſh and hang the needles of his compaſſes, before he touched them, he always found that, immediately after the touch, the north point would bend, or decline downwards, under the horizon: inſomuch that, to balance the needle again, he was always forced to put a piece of wax on the ſouth end, as a counterpoiſe.

The conſtancy of this effect led him, at length, to obſerve the preciſe quantity of the DIPS, or to meaſure the greateſt angle which the needle would make with the horizon. This, in the year 1576, he found at London to be 71° 50′; but the dip varies, as well as the horizontal direction.

Burrows, Gilbert, Ridley, Bond, &c. endeavoured to apply this diſcovery to the finding of the latitude; and the laſt author, going farther, propoſed likewiſe the finding of the longitude thereby: but, for want of obſervations and experiments, he could go no length.

Mr. Whiſton, being furniſhed with the further obſervations of Col. Windham, Dr. Halley, Mr. Pound, Mr. Cunningham, Pere Noel, Pere Feuillee, and his own, has improved greatly on the doctrine and uſe of this needle, brought it to more certain rules, and endeavoured to find the longitude thereby.

In order to this he obſerves, 1ſt, That the true tendency of the north or ſouth ends of every magnetic needle is not to that point in the horizon to which the horizontal needle points, but towards another directly under it, in the ſame vertical, and in different degrees under it, in different ages, and at different places.

2dly, That the power by which a horizontal needle is governed, and all our navigation ordinarily directed, is proved to be but one quarter of the power, by which the dipping-needle is moved; which ſhould render the latter far the more effectual and accurate inſtrument.

3dly, That a dipping-needle, a foot long, will plainly ſhew an alteration of the angle of inclination, in theſe parts of the world, in half a quarter of a degree, or $7\frac{1}{2}$ geographical miles; i. e. ſuppoſing that diſtance taken along, or near a meridian; and a needle of four feet, in two or three miles.

4thly, A dipping-needle, four feet long, in theſe parts of the world, will ſhew an equal alteration along a parallel; as one of a foot long will ſhew along a meridian, i. e. this will, with equal exactneſs, ſhew the longitude, as that the latitude.

This depends on the poſition of the lines of equal dip, in theſe parts of the world, which are found to lie about 14 or 15 degrees from the parallels.

Hence he argues, that, as we can have needles of 5, 6, 7, 8, or more feet long, which will move with ſtrength ſufficient for exact obſervation; and ſince microſcopes may be applied to the viewing of the ſmalleſt diviſions of degrees on the limb of the inſtrument; it is evident the longitude at land may be found thereby, to leſs than four miles.

And, as there have been many obſervations made at ſea with the ſame inſtrument, by Noel, Feuillee, &c. which have determined the dip uſually within a degree, ſometimes within half, or a third of a degree, and this with ſmall needles of five or ſix, or, at the moſt, nine inches long; it is evident, the longitude may be found even at ſea, to leſs than half a quarter of a degree. Thus much premiſed, the obſervation itſelf follows:

To find the longitude or latitude by the dipping-needle.—If the lines of equal dip below the horizon be drawn on maps, or ſea-charts, for good obſervations, it will be eaſy, from the longitude known, to find the latitude; and, from the latitude known to find the longitude, either at ſea or land.

Suppoſe, e. gr. you were travelling, or ſailing, along the meridian of London, and found the angle of dip, with a needle of one foot, to be 75°; the chart will ſhew, that this meridian, and the time of dip, meet in the latitude of 50° 11′; which, therefore, is the latitude ſought. Or,

Suppoſe you was travelling, or ſailing, along the parallel of London, i. e. in 51° 32′ north latitude, and you found the angle of the dip to be 74°; this parallel, and the line of this dip, will meet in the map in 1° 46′ of eaſt longitude from London; which is, therefore, the longitude ſought: yet this ſcheme alſo, has proved impracticable and unſucceſsful in it's application.

Since every method which hath been hitherto attempted, hath proved abortive, and the diſcovery of the longitude at ſea remains ſtill the great deſideratum in navigation; it is imprudent to depend longer upon any one of thoſe methods which have been yet tried; the difficulties in each being palpable, and, perhaps, abſolutely inſuperable.

Another

Another method, lately ſtarted, whereby this important diſcovery has been attempted, is, by A NEW AND UNIVERSAL PROBLEM, BY WHICH THE LONGITUDE AT SEA, IN THE DEAD-RECKONING, AND THE DISTANCE OF THE SHIP'S RUN, ARE SAID TO BE CORRECTED BY THE SAME OBSERVATION THAT THE LATITUDE IS, AND TO THE SAME CERTAINTY, WITHOUT ANY REGARD TO LEE-WAY, CURRENT OF THE SEA, OR VARIATION OF THE COMPASS. By the Rev. Richard Locke, an Engliſhman.

As this is a problem, ſaid by the reverend author to be entirely new, and the truth thereof to be not only founded upon geometrical demonſtration, but experimental practice at ſea, where he affirms he has tried the ſame; it ſeems to deſerve due public notice and attention.

That the public might be informed of this diſcovery, the author firſt printed and publiſhed the fact, as he declares, the 24th of January, 1751, in the London Evening-Poſt. After which he was adviſed to publiſh the problem, and the demonſtration thereof, in a pamphlet; which he has done, within the compaſs of 14 pages, addreſſed to the honourable the COMMISSIONERS appointed to inſpect the longitude, and to the PUBLIC in general. Which being ſent to me the laſt year, and recommended by ſeveral worthy gentlemen, as a matter conſiſtent with a Dictionary of Commerce, and neceſſary to be publiſhed therein; I was prevailed upon to give the ſame a place in this work, under the firſt head that occurred, where I could do it with any ſort of propriety: and the reader will find the whole under the article COMMANDERS of SHIPS; with an addreſs to them, as requeſted to try the ſame experimentally at ſea. But,

As thoſe gentlemen, without diſparagement to their high importance and utility to the ſtate, are, in the general, better acquainted with the ordinary practical rules of navigation*, as they are commonly taught them by rote, and not by reaſon and demonſtration, they may be preſumed not to be competent judges of the demonſtrative part, which, Mr. Locke ſays, he has given, and, therefore, may not as yet be attentive to the experimental trial and practice of what that gentleman has offered for their ſervice: wherefore, the author has thought proper to reduce his diſcovery, for the benefit of all practical navigators, to the few following plain rules and precepts; which, he ſays, are the reſult of his demonſtration. See the article COMMANDERS of SHIPS, for the whole of what he has communicated.

* An objection that ſome have made againſt the ſtudy of mathematical learning is, that we ſee, in the ordinary buſineſs of life, theſe affairs are carried on and managed by ſuch as are no great mathematicians, as ſea men, ſhip-wrights, engineers, mill-wrights, ſurveyors, gaugers, clock-makers, glaſs-grinders, &c. and that the mathematicians are commonly ſpeculative, retired, ſtudious men, that are not for an active life and buſineſs, but content themſelves to ſit in their ſtudies, and pore over a ſcheme or a calculation. To which there is this plain and eaſy anſwer: The mathematicians have not only invented and ordered all the arts above-mentioned, and moſt others by which theſe grand affairs are managed, but have laid down precepts, contrived inſtruments and abridgments ſo plainly, that common artificers are capable of practiſing by them, though they underſtand not a tittle of the grounds on which the precepts are built: and in this they have conſulted the good and neceſſities of mankind.

Thoſe affairs demand ſo great a number of people to manage them, that it is impoſſible to breed ſo many good, or even tolerable mathematicians. The only thing then to be done was, to make their precepts ſo plain, that they might be underſtood and practiſed by a multitude of men. This will beſt appear by examples. Nothing is more ordinary than diſpatch of buſiueſs by common arithmetic, by the tables of ſimple and compound intereſt, annuities, &c. yet how few men of buſineſs underſtand the reaſons of the rules given in common arithmetic, or the conſtruction of thoſe tables that are made, but ſecurely rely on them as true. They were the good and the thorough mathematicians, that gave theſe precepts ſo plain, and calculated theſe tables, that facilitate the practice ſo much. Nothing is more univerſally neceſſary than the meaſuring of planes and ſolids: and it is impoſſible to breed ſo many good mathematicians, as that there may be one that underſtands all the geometry requiſite for ſurveying, and meaſuring of priſms and pyramids, and their parts, and meaſuring ſruſtums of conoids and ſpheroids, in every market-town, where ſuch work is neceſſary.

The mathematicians, therefore, have inſcribed ſuch lines on their common rulers, and ſliding-rules, and adapted ſo plain precepts to them, that every country carpenter and gauger can do the buſineſs accurately enough, though he knows no more of the rationale of thoſe inſtruments, tables, and precepts he makes uſe of, than a hobby-horſe. So, in navigation, it is impoſſible to breed ſo many good mathematicians as would be neceſſary to ſail the hundredth part of the ſhips of the nation. But the mathematicians have laid down ſo plain and diſtinct precepts, calculated neceſſary tables, and contrived convenient inſtruments, ſo that a ſeaman, that knows not the truths on which his precepts and tables depend, may practiſe ſafely by them. They reſolve triangles every day, that know not the reaſon of any one of their operations. Seamen, in their calculations, make uſe of artificial numbers, or logarithms, that know nothing of their contrivance: and, indeed, all thoſe great inventions of the moſt famous mathematicians had been almoſt uſeleſs for thoſe common and great affairs, had not the practice of them been made eaſy to thoſe who cannot underſtand them. From hence it is plain, that it is to thoſe ſpeculative retired men we owe the rules, the inſtruments, the precepts for uſing them, and the tables which facilitate the diſpatch of ſo many great affairs, and ſupply mankind with ſo many conveniencies of life. They were the men that taught the world to apply arithmetic, aſtronomy, and geometry to ſailing, without which the needle would be ſtill uſeleſs. Juſt the ſame way, in the other parts of mathematics, the precepts that are practiſed by multitudes, without being underſtood, were contrived by ſome few great mathematicians.

The rules as given by Mr. Locke, for the uſe of practical navigators, are as follow: which I am requeſted to add to what has been ſaid under the preceding article of COMMANDERS of SHIPS; and, if they ſhould prove to be true, it will be very extraordinary that the moſt eſſential part of the practical art of navigation ſhould be reducible to a quarter of a ſheet of paper.

TO ALL GENTLEMEN SEAMEN, MARINERS, AND OTHERS, OF ALL NATIONS, WHO ARE ANY WAY CONCERNED IN PRACTICAL NAVIGATION:

A plain, eaſy, and practical method to diſcover the LONGITUDE AT SEA, for the ſafety and preſervation of ſhipping. By RICHARD LOCKE, an ENGLISHMAN.

The two principal things to be regarded, to obtain the true longitude at ſea, are, to meaſure as correct a diſtance of the ſhip's run as can be, by the half-minute glaſs and log-line, and to make a true obſervation of latitude.

And, when you caſt up the day's work, or traverſe, to find the longitude and latitude in the common way, take their courſes as entered on the log-board, without making any allowance for lee-way, variation, or currents; and, if you find the latitude in the traverſe to be more than the latitude in the obſervation, take, or ſubtract, the difference from the latitude in the traverſe, and add it to the longitude.—But, if you find it leſs in the traverſe than in the obſervation, take the difference from the longitude, and add it to the latitude; always remembering, that the latitude in the traverſe muſt be made equal to the latitude in the obſervation; and, what is more or leſs, to add to, or ſubtract from the longitude.—This is to be done every time you make an obſervation; and when you have got the miles of eaſting or weſting, if they are in the ſame latitude, divide them by the miles of one degree in that latitude.—If of different latitudes, divide them by the miles of the middle latitude, between the two obſervations.—And this will give the longitude in degrees, as mentioned in my book, or it may be found by the following eaſy table.

By theſe inſtructions, carefully obſerved, any iſland or place, whoſe longitude and latitude are known, may be hit upon a meridian, as near as you can make your obſervation of latitude.

A TABLE of the geometrical miles of one degree of LONGITUDE for every degree of latitude.

Lat.	Miles.	Lat.	Miles.	Lat.	Miles.
1	59,8	31	51,0	61	29
2	59,6	32	50,5	62	28
3	59,4	33	50,0	63	27
4	59,2	34	49,5	64	26
5	59,0	35	49,0	65	25
6	58,8	36	48,5	66	24
7	58,6	37	48,0	67	23
8	58,4	38	47,5	68	22
9	58,2	39	47,0	69	21
10	58,0	40	46,5	70	20
11	57,8	41	46,0	71	19
12	57,6	42	45,5	72	18
13	57,4	43	45,0	73	17
14	57,2	44	44,5	74	16
15	57,0	45	44,0	75	15
16	56,6	46	43,5	76	14
17	56,3	47	43,0	77	13
18	56,0	48	42	78	12
19	55,6	49	41	79	11
20	55,3	50	40	80	10
21	55,0	51	39	81	9
22	54,6	52	38	82	8
23	54,3	53	37	83	7
24	54,0	54	36	84	6
25	53,6	55	35	85	5
26	53,3	56	34	86	4
27	53,0	57	33	87	3
28	52,5	58	32	88	2
29	52,0	59	31	89	1
30	51,5	60	30.	90	0

N. B. To find the middle latititude by this table, add the miles of the two obſerved latitudes together, and divide the ſum by 2, which gives the middle latitude.

RICHARD LOCKE.

RE-

REMARKS.

This gentleman, Mr. Locke, appears to be very ſanguine with regard to the truth of his diſcovery; and therefore has, in his before-mentioned book, given a general challenge to all the mathematicians in the world to confute it, or ſhew any other method of diſcovering the longitude at ſea, that may be depended upon.—The cauſe of this challenge, it ſeems, was, if I am rightly informed, by reaſon of ſome perſonal maltreatment that the author thinks he met with, from ſome mathematicians in England, upon the publication of the firſt edition of his pamphlet.—How this matter ſtands between thoſe gentlemen, I am no otherwiſe acquainted than by hear-ſay.—It is pity that men of ſcience ſhould have any rancour towards each other — Time and experience will ſhew whether the problem is true or falſe, in the application made of it to the diſcovery of the longitude at ſea.

There is one thing I would beg leave to obſerve, before I diſmiſs this matter; that, as Mr. Locke has generouſly communicated his problem to the public, ſo that every body now may be maſters of it, and put the ſame in practice at ſea, without any difficulty or expence; it is neceſſary that the public ſhould be put upon their guard, and not be impoſed upon by granting rewards to ſuch who may pretend to diſcover the longitude at ſea, by other ways and means, when they really make uſe of Mr. Locke's diſcovery for that purpoſe.

OBSERVATIONS, ſince the above, upon the article LONGITUDE.

Under the article of COMMANDERS OF MERCHANTS SHIPS, is contained the whole of Mr. Locke's new problem for the diſcovery of the LONGITUDE AT SEA; which the author was requeſted to infert ſeveral years ago, in the firſt edition of this work, as a record, (if the demonſtration therein ſaid to be given, ſhould be found to be true, as well from experience as theory) to aſcertain Mr. Locke's right to the reward promiſed, to the diſcoverer of a matter of ſuch importance. The ſame was alſo inſerted in the ſecond edition of this work; and the ſame is requeſted to be continued in this the third edition of this work, made in the preſent year 1765, by the executors of Mr. Locke, who has ſeveral years ſince been dead, in going to America, to make a further trial of the truth of his new problem; of which he had often declared he was thoroughly convinced, by what he had experienced at ſea: but, he was deſirous to have repeated and inconteſtible evidence and conviction thereof, before he made proper application to the Britiſh parliament, as was his intention.

In conſequence of the death of Mr. Locke, it is requeſted that ALL GENTLEMEN, who are thorough judges of the ſaid new problem, and are of opinion that the ſame is demonſtrably true, and is actually the diſcovery of THE LONGITUDE AT SEA; or has been any way conducive to the diſcovery thereof; and any COMMANDERS OR MASTERS OF SHIPS, who ſhall have tried and experienced the truth of Mr. Locke's diſcovery, would apply to MR. POSTLETHWAYT, the author of this Dictionary, AT HIS HOUSE IN PINNERS-COURT, NEAR THE PAY-OFFICE, IN BROAD-STREET, NEAR THE ROYAL-EXCHANGE, LONDON; and if they prove any way inſtrumental to obtain any public reward for Mr. Locke's diſcovery, Mr. Poſtlethwayt is authorized by the executors of Mr. Locke, to treat with them upon the occaſion.

The ACTS of PARLIAMENT relating to the diſcovery of the LONGITUDE at SEA.

An act for providing a public reward for ſuch perſon or perſons as ſhall diſcover the longitude at ſea, in the 12th of queen Anne.

Whereas it is well known, by all that are acquainted with the art of navigation, that nothing is ſo much wanted and deſired at ſea, as the diſcovery of the longitude, for the ſafety and quickneſs of voyages, the preſervation of ſhips, and the lives of men: and whereas, in the judgment of able mathematicians and navigators, ſeveral methods have already been diſcovered, true in theory, though very difficult in practice, ſome of which (there is reaſon to expect) may be capable of improvement, ſome already diſcovered may be propoſed to the public, and others may be invented hereafter: and whereas ſuch a diſcovery would be of particular advantage to the trade of Great-Britain, and very much for the honour of this kingdom; but, beſides the great difficulty of the thing itſelf, partly for the want of ſome public reward, to be ſettled as an encouragement for ſo uſeful and beneficial a work, and partly for want of money for trials and experiments neceſſary thereto, no ſuch inventions or propoſals, hitherto made, have been brought to perfection: be it therefore enacted, by the queen's moſt excellent majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in parliament aſſembled, and by the authority of the ſame, That the lord high admiral of Great-Britain, or the firſt commiſſioner of the admiralty, the ſpeaker of the honourable houſe of commons, the firſt commiſſioner of the navy, the firſt commiſſioner of trade, the admirals of the red, white, and blue ſquadrons, the maſter of the Trinity-Houſe, the preſident of the Royal Society, the royal aſtronomer of Greenwich, the Savilian, Lucaſian, and Plumian profeſſors of the mathematics in Oxford and Cambridge, all for the time being; the right honourable Thomas earl of Pembroke and Montgomery, Philip lord biſhop of Hereford, George lord biſhop of Briſtol, Thomas lord Trevor, the honourable Sir Thomas Hanmer, Bart. ſpeaker of the honourable houſe of commons, the honourable Francis Robarts, Eſq; James Stanhope, Eſq; William Clayton, Eſq; and William Lowndes, Eſq; be conſtituted, and they are hereby conſtituted commiſſioners for the diſcovery of the longitude at ſea, and for examining, trying, and judging of all propoſals, experiments, and improvements relating to the ſame; and that the ſaid commiſſioners, or any five or more of them, have full power to hear and receive any propoſal or propoſals that ſhall be made to them for diſcovering the ſaid longitude; and in caſe the ſaid commiſſioners, or any five or more of them, ſhall be ſo far ſatisfied of the probability of any ſuch diſcovery, as to think it proper to make experiments thereof, they ſhall certify the ſame, under their hands and ſeals, to the commiſſioners of the navy for the time being, together with the perſons names who are the authors of ſuch propoſals; and, upon producing ſuch certificate, the ſaid commiſſioners are hereby authorized and required to make out a bill or bills for any ſuch ſum or ſums of money, not exceeding two thouſand pounds, as the ſaid commiſſioners for the diſcovery of the ſaid longitude, or any five or more of them, ſhall think neceſſary for making the experiments, payable by the treaſurer of the navy: which ſum or ſums the treaſurer of the navy is hereby required to pay immediately to ſuch perſon or perſons as ſhall be appointed by the commiſſioners for the diſcovery of the ſaid longitude, to make thoſe experiments, out of any money that ſhall be in his hands, unapplied for the uſe of the navy.

And be it further enacted, by the authority aforeſaid, That, after experiments made of any propoſal or propoſals for the diſcovery of the ſaid longitude, the commiſſioners appointed by this act, or the major part of them, ſhall declare and determine how far the ſame is found practicable, and to what degree of exactneſs.

And, for a due and ſufficient encouragement to any ſuch perſon or perſons as ſhall diſcover a proper method for finding the ſaid longitude, be it enacted, by the authority aforeſaid, That the firſt author or authors, diſcoverer or diſcoverers, of any ſuch method, his or their executors, adminiſtrators, or aſſigns, ſhall be intitled to, and have ſuch reward as herein after is mentioned; that is to ſay, to a reward, or ſum of ten thouſand pounds, if it determines the ſaid longitude to one degree of a great circle, or ſixty geographical miles; to fifteen thouſand pounds, if it determines the ſame to two thirds of that diſtance; and to twenty thouſand pounds, if it determines the ſame to one half of the ſame diſtance; and that one moiety, or half-part of ſuch reward, or ſum, ſhall be due and paid, when the ſaid commiſſioners, or the major part of them, do agree that any ſuch method extends to the ſecurity of ſhips within eighty geographical miles of the ſhores, which are places of the greateſt danger; and the other moiety, or half part, when a ſhip, by the appointment of the ſaid commiſſioners, or the major part of them, ſhall thereby actually ſail over the ocean, from Great Britain to any ſuch port of the Weſt-Indies, as thoſe commiſſioners, or the major part of them, ſhall chuſe or nominate for the experiment, without loſing their longitude beyond the limits before mentioned.

And be it further enacted, by the authority aforeſaid, That, as ſoon as ſuch method for the diſcovery of the ſaid longitude ſhall have been tried and found practicable and uſeful at ſea, within any of the degrees aforeſaid, that the ſaid commiſſioners, or the major part of them, ſhall certify the ſame accordingly, under their hands and ſeals, to the commiſſioners of the navy for the time being, together with the perſon or perſons names who are the authors of ſuch propoſal; and, upon ſuch certificate, the ſaid commiſſioners are hereby authorized and required to make out a bill or bills for the reſpective ſum or ſums of money, to which the author or authors of ſuch propoſal, their executors, adminiſtrators, or aſſigns, ſhall be intitled, by virtue of this act; which ſum or ſums the treaſurer of the navy is hereby required to pay to the ſaid author or authors, their executors, adminiſtrators, or aſſigns, out of any money that ſhall be in his hands, unapplied to the uſe of the navy, according to the true intent and meaning of this act.

And it is hereby further enacted, by the authority aforeſaid, That if any ſuch propoſal ſhall not, on trial, be found of ſo great uſe as afore-mentioned, yet if the ſame, on trial, in the judgment of the ſaid commiſſioners, or the major part of them, be found of conſiderable uſe to the public, that then, in ſuch caſe, the ſaid author or authors, their executors, adminiſtrators, or aſſigns, ſhall have and receive ſuch leſs reward therefore, as the ſaid commiſſioners, or the major part of them, ſhall think reaſonable, to be paid by the treaſurer of the navy on ſuch certificate, as aforeſaid.

An act to render more effectual an act made in the twelfth year of the reign of her late majesty queen Anne, intitled, An act for providing a public reward for such person or persons as shall discover the longitude at sea; with regard to the making experiments of proposals made for discovering the longitude; and to enlarge the number of commissioners for putting in execution the said act, in the 26th of George II.

Whereas by an act of parliament made in the twelfth year of the reign of her late majesty queen Anne, intitled, An act for providing a public reward for such person or persons as shall discover the longitude at sea; the commissioners therein and thereby named and constituted, or any five or more of them, have full power to hear and receive any proposal or proposals that shall be made to them for discovering the said longitude; and, in case the said commissioners, or any five or more of them, shall be so far satisfied of the probability of any such discovery, as to think it proper to make experiment thereof, they shall certify the same, under their hands and seals, to the commissioners of the navy for the time being, together with the persons names who are authors of such proposals; and, upon producing such certificate, the said commissioners are thereby authorized and required to make out a bill or bills for any such sum or sums of money not exceeding two thousand pounds, as the said commissioners for the discovery of the said longitude, or any five or more of them, shall think necessary for making the experiments, payable by the treasurer of the navy; which sum or sums the treasurer of the navy is, by the said act, required to pay immediately to such person or persons as shall be appointed by the commissioners for discovery of the said longitude to make those experiments, out of any money that shall be in his hands unapplied for the use of the navy: and whereas, for a due and sufficient encouragement to any such person or persons as shall discover a proper method for finding the said longitude, it is likewise enacted by the said act, That the first author or authors, discoverer or discoverers, of any such method, his or their executors, administrators, or assigns, shall be intitled to and have such reward, as in the said act is particularly mentioned: and whereas, by another act of parliament made in the fourteenth year of the reign of his present majesty, intitled, An act for surveying the chief ports and head-lands on the coasts of Great-Britain and Ireland, and the islands and plantations thereto belonging, in order to the more exact determination of the longitude and latitude thereof; reciting in part of the said act of parliament, made in the twelfth year of the reign of her said late majesty queen Anne; and also reciting that it was absolutely necessary, for making the discovery useful at sea, and for the security of ships approaching near the shores, that the chief ports and head-lands on the coasts of Great-Britain and Ireland, and the islands and plantations thereto belonging, should be first surveyed, and the longitude and latitude of such places determined more exactly than had then been done; and likewise reciting that some doubts had arisen, whether, by the words of the said act of parliament made in the twelfth year of queen Anne, the said sum of two thousand pounds appointed for making such experiments, or any part thereof, could be applied for such survey, or fixing the longitude or latitude of such places, it was enacted by the said act made in the fourteenth year of the reign of his present majesty, That the said commissioners for discovering the longitude, or any five or more of them, should have full power to apply such part of the said sum of two thousand pounds, mentioned in the said first recited act, as had not then been laid out in experiments, as they shall think necessary for the making such survey, and determining the longitude and latitude of the chief ports and head-lands, on the coasts of Great-Britain and Ireland, and the islands and plantations thereto belonging; and that such sum or sums, part of the said two thousand pounds; which the said commissioners, or any five or more of them, should think necessary, should be paid immediately by the treasurer of the navy, to such person or persons as should be appointed by the said commissioners for the discovery of the longitude, to make such survey, and determine such longitude and latitude, out of the money that should be in the hands of such treasurer unapplied for the use of the navy; and whereas a competent number of the said commissioners for the discovery of the said longitude, have (by virtue of the powers vested in them, by the said act made in the twelfth year of the reign of queen Anne) heard and received several proposals made to them at different times, for discovering the said longitude, and were so far satisfied of the probabilities of such discoveries, that they thought it proper to make experiments thereof, and accordingly certified the same, from time to time, to the commissioners of the navy for the time being, together with the name of master John Harrison, who was author of the said proposals; whereupon bills were made out for several sums of money, amounting in the whole to one thousand two hundred and fifty pounds, all which respective sums were paid to the said John Harrison by the treasurer of the navy, pursuant to the directions of the said last mentioned act of parliament, as parts of the said two thousand pounds therein mentioned; which the said commissioners for discovering the said longitude thought necessary for making the said experiment: and whereas a like competent number of the said commissioners for the discovery of the said longitude did (by virtue and in pursuance of the powers vested in them by the said several above-mentioned acts of parliament) appoint master William Whiston to survey and determine the longitude and latitude of the chief ports and head-lands on the coasts of Great-Britain and Ireland, and the islands and plantations thereto belonging; and did also apply the further sum of five hundred pounds (other part of the said sum of two thousand pounds mentioned in the said act made in the twelfth year of the reign of queen Anne (which they thought necessary for the making such survey, and determining the said last mentioned longitude and latitude, and which said sum of five hundred pounds was paid to the said William Whiston accordingly by the treasurer of the navy: and whereas by reason of the several payments made by the treasurer of the navy to the said John Harrison and William Whiston respectively, as aforesaid, amounting in the whole to one thousand seven hundred and fifty pounds, the said commissioners for discovering the said longitude have at present, by virtue of the said acts of parliament, power only to apply the sum of two hundred and fifty pounds and no more (being the remainder of the said two thousand pounds) towards making any further experiments which they may think proper and necessary to be made, in order to discover the longitude: and whereas, from the experiments which have already been made in pursuance of the powers vested in the said commissioners as aforesaid, there is great reason to expect, that by continuing to encourage ingenious persons to invent and make further improvements and experiments, in order to discover the said longitude, such discoveries may at length be produced as will effectually answer that end, and thereby contribute very much to the advantage of the trade and honour of this kingdom: therefore, for enabling the said commissioners to cause such further experiments to be made as they shall think proper for the purposes aforesaid, be it enacted by the king's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That the said commissioners constituted by the said act of parliament made in the twelfth year of the reign of the late queen Anne, for the discovery of the longitude at sea, and for examining, trying, and judging of all proposals, experiments, and improvements, relating to the same, or any five or more of them, have full power to hear and receive any proposal or proposals that have been or shall hereafter be made to them for discovering the longitude at sea; and in case the said commissioners, or any five or more of them, shall be so far satisfied of the probability of any such proposal or discovery, as to think it proper to make experiment thereof, they shall certify the same under their hands and seals to the commissioners of the navy for the time being, together with the persons names who shall be the authors of such proposals; and, upon producing such certificate, the said commissioners of the navy are hereby authorized and required to make out a bill or bills for any such sum or sums of money, not exceeding two thousand pounds, over and above the aforesaid sum of two hundred and fifty pounds, being the remainder of the two thousand pounds mentioned in the said act made in the twelfth year of the reign of the late queen Anne, as the said commissioners for the discovery of the said longitude, or any five or more of them, shall think necessary for making any experiments in pursuance of this act, or either of the said former acts above-mentioned, payable by the treasurer of the navy; which sum or sums the treasurer of the navy for the time being is hereby required to pay immediately to such person or persons as shall be appointed by the commissioners for the discovery of the said longitude to make those experiments, out of any money that shall be in his the said treasurer's hands unapplied for the use of the navy.

And whereas many of the commissioners, appointed by the said act made in the twelfth year of the reign of her late majesty queen Anne, are deceased; be it therefore enacted by the authority aforesaid, That the governor of the royal hospital for seamen at Greenwich for the time being, the judge of the high court of admiralty for the time being, the secretaries of the treasury for the time being, the secretary of the admiralty for the time being, and the comptroller of the navy for the time being, shall be, and they are hereby added to, and joined with, such of the commissioners appointed by the said act for discovering the longitude, as are surviving; and the said persons, hereby appointed commissioners, shall and may act, to all intents and purposes, for putting in execution the said former acts, and this present act, as fully and effectually, as if they had been appointed commissioners by the said act made in the twelfth year of the reign of her late majesty queen Anne.

Anno Secundo Georgii III. Regis. CAP. XVIII.

An act for rendering more effectual an act made in the twelfth year of the reign of her late majesty queen Anne, intitled,

intitled, An act for providing a public reward for such person or persons as shall discover the longitude at sea, with regard to the making experiments of proposals made for discovering the longitude.

Whereas by an act of parliament made in the twelfth year of the reign of her late majesty queen Anne, intitled, An act for providing a public reward for such person or persons as shall discover the longitude at sea, the commissioners therein named, or any five or more of them, have full power to hear and receive any proposal or proposals that shall be made to them for discovering the said longitude; and in case the said commissioners, or any five or more of them, shall be so far satisfied of the probability of any such discovery, as to think it proper to make experiment thereof, they shall certify the same, under their hands and seals, to the commissioners of the navy for the time being, together with the persons names who are authors of such proposals; and upon producing such certificate, the said commissioners are thereby authorized and required to make out a bill or bills for any such sum or sums of money, not exceeding two thousand pounds, as the said commissioners for the discovery of the said longitude, or any five or more of them, shall think necessary, for making the experiments, payable by the treasurer of the navy; which sum or sums the treasurer of the navy is, by the said act, required to pay immediately to such person or persons as shall be appointed by the said commissioners to make those experiments, out of any money that shall be in his hands unapplied, for the use of the navy. And whereas, for a due and sufficient encouragement to any such person or persons as shall discover a proper method for finding the said longitude, it is likewise enacted by the said act, That the first author or authors, discoverer or discoverers, of any such method, his or their executors, administrators, or assigns, shall be intitled to, and have, such reward as in the said act is particularly mentioned: and whereas by another act of parliament made in the fourteenth year of the reign of his late majesty king George the second, intitled, An act for surveying the chief ports and head-lands on the coasts of Great-Britain and Ireland, and the islands and plantations thereto belonging, in order to the more exact determination of the longitude and latitude thereof, it was enacted, That the said commissioners for discovering the said longitude, or any five or more of them, should have full power to apply such part of the said sum of two thousand pounds, mentioned in the said first recited act, as had not then been laid out in experiments, as they should think necessary for the making such survey, and determining the longitude and latitude of the chief ports and head-lands on the coasts of Great-Britain and Ireland, and the islands and plantations thereto belonging; and that such sum or sums, part of the said two thousand pounds, which the said commissioners, or any five, or more of them, should think necessary, should be paid immediately by the treasurer of the navy, to such person or persons as should be appointed by the said commissioners to make such survey, and determine such longitude and latitude, out of the money that should be in the hands of such treasurer unapplied, for the use of the navy: and whereas by an act made in the twenty-sixth year of the reign of his late majesty king George the second, intitled, An act to render more effectual an act made in the twelfth year of the reign of her late majesty queen Anne, intitled, An act for providing a public reward for such person or persons as shall discover the longitude at sea, with regard to the making experiments of proposals made for discovering the longitude, and to enlarge the number of commissioners for putting in execution the said act, the further sum of two thousand pounds was directed to be applied in such manner as the commissioners for the discovery of the longitude should think necessary, for making further experiments: and whereas the said commissioners have, by virtue of the powers vested in them by the said several acts before-mentioned, heard and received several proposals made to them, at different times, for discovering the said longitude, and have, accordingly, certified the same, from time to time, to the commissioners of the navy for the time being, whereupon, bills have been made out for several sums of money, amounting in the whole to four thousand pounds: all which respective sums have been paid to several persons, by the treasurer of the navy, pursuant to the directions of the said acts of parliament; which the said commissioners, for discovering the longitude, thought necessary for making the said experiments: and whereas, by reason of the several payments made by the treasurer of the navy to the several persons as aforesaid, the said commissioners have, by virtue of the said acts of parliament, expended the whole of the sums thereby granted for the purposes aforesaid: and whereas, from the experiments which have already been made in pursuance of the powers vested in the said commissioners as aforesaid, there is great reason to expect that, by continuing to encourage ingenious persons to invent and make further improvements and experiments, in order to discover the said longitude, such discoveries may at length be produced as will effectually answer that end, and thereby contribute very much to the advantage of the trade and honour of this kingdom: therefore, for enabling the said commissioners to cause such further experiments to be made as they shall think proper for the purposes aforesaid, be it enacted by the king's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That the said commissioners, constituted by the said several acts of parliament before-mentioned, for the discovery of the longitude at sea, and for examining, trying, and judging, of all proposals, experiments, and improvements, relating to the same; or any five or more of them, shall have full power to hear and receive any proposal or proposals that have been, or shall hereafter be, made to them for discovering the said longitude at sea; and in case the said commissioners, or any five, or more of them, shall be so far satisfied of the probability of any such proposal or discovery, as to think it proper to make experiment thereof, they shall certify the same, under their hands and seals, to the commissioners of the navy for the time being, together with the persons names who shall be the authors of such proposals; and, upon producing such certificate, the said commissioners of the navy are hereby authorized and required to make out a bill or bills for any such sum or sums of money, not exceeding two thousand pounds, as the said commissioners for the discovery of the said longitude, or any five, or more of them, shall think necessary for making any experiments in pursuance of this act, or any of the said former acts above-mentioned, payable by the treasurer of the navy; which sum, or sums, the treasurer of the navy, for the time being, is hereby required to pay immediately to such person or persons as shall be appointed by the commissioners for the discovery of the said longitude, to make those experiments, out of any money that shall be in his the said treasurer's hands, unapplied for the use of the navy.

LORINERS, bridle-smiths, or bit-makers. They make all the metallic appurtenances belonging to bridles, harness, &c.

LORRAIN and BAR, belonging to France, is bounded on the north by Luxemburgh and the palatinate of the Rhine, on the east by Alsace, on the south by Franche Comté, and on the west by Champagne. It's length from north to south is about 110 English miles, and it's greatest breadth from east to west about 100.

This country is divided into three parts, viz. I. The dutchy of Lorrain. II. The dutchy of Bar. And III. The three bishopricks.

The air in general is very temperate and wholesome, and the soil fruitful in corn, wine, hemp, and pastures: there are a great many mines of iron, lead, and some of silver and copper.

Their salt-springs are so numerous, that they yield 200,000 l. per ann. The chief rivers are the Maese, the Moselle, and the Sarre, which rise in the south of Lorrain, and run north through this country. In the last war between France and the emperor Charles VI. which ended in a peace concluded in the year 1735, one of the articles was, That the duke of Lorrain should yield his country to France; at least that king Stanislaus, father of the present queen of France, should have the dominion of Lorrain, with the title of duke during his life; and that, after his decease, Lorrain should be united to the crown of France; and that the duke of Lorrain, in consequence thereof, should be constituted grand duke of Tuscany in Italy, after the death of the then reigning grand duke; which happening anno 1737, the duke of Lorrain took possession of Tuscany, and yet remains sovereign of it, and is since elected emperor. See FRANCE, in regard to LORRAIN.

LOTTERY, a kind of public game at hazard, frequent in England, France, and Holland, in order to raise money for the service of the state, which is appointed with us by the authority of parliament, and managed by commissioners appointed by the lords of the treasury for that purpose.

It consists of a certain number of blanks and prizes, which are drawn out of wheels, one of which contains the numbers, and the other the corresponding blanks or prizes.

The LAWS of ENGLAND relating thereto.

I. Stat. 10 and 11 Will. III. cap. 17. §. 1. All lotteries are public nuisances, and all patents for lotteries are void and against the law.

II. §. 2. No person shall keep open or draw, or throw at, any lottery, either by dice, lots, cards, balls, numbers, figures, or any other way whatsoever; and every person that shall open or shew, to be played or drawn at, any lottery, shall forfeit 500 l. one third part to his majesty, one other third part to the poor of the parish, and the other third, with double costs, to the party that shall sue for the same; and the parties offending shall likewise be prosecuted as common rogues.

III. §. 3. Every person that shall play, throw, or draw at, any lottery, shall forfeit 200 l. one third part to his majesty, one third to the poor of the parish, and the other third with double costs, to the person that shall sue for the same.

IV. Stat. 9 Ann. cap. 6. §. 56. Justices of peace, mayors, bailiffs, head officers, constables, and other her majesty's civil officers,

officers, are required to uſe their utmoſt endeavours to prevent the drawing of any ſuch unlawful lottery; and every perſon who ſhall ſet up, or publiſh the ſetting up, any unlawful lottery, with intent to have ſuch lottery drawn, ſhall forfeit 100l. one third part to her majeſty, one other third to the poor of the pariſh, and the other third with coſts, to the party who ſhall ſue for the ſame.

V. Stat. 10 Ann. cap. 26. §. 109. Every perſon who ſhall keep any office for making inſurances on marriages, births, chriſtenings or ſervice, or any office under the denominations of ſales of gloves, of fans, of cards, of numbers, of the queen's picture, for the improvement of ſmall ſums, or the like offices, under the pretence of improving ſmall ſums, ſhall forfeit 500l. one third part to her majeſty, one other third to the poor of the pariſh, and the other third, with coſts, to the perſon who ſhall ſue for the ſame; and every printer or other perſon, who ſhall publiſh the keeping any ſuch office, ſhall forfeit 100l. to be diſtributed as the penalty laſt mentioned; and every perſon who in any office, before the 24th of June 1712, ſet up for making inſurances on marriages, &c. or under any other the denominations aforeſaid, or any like denominations, for improvement of ſmall ſums, ſhall make, or ſuffer to be made, any new inſurances on marriages, births, chriſtenings, or ſervice, or receive any payments for improvement of ſmall ſums, ſhall forfeit 100l. to be diſtributed in like manner.

VI. Stat. 5 Geo. I. cap. 9. §. 43. All ſubſcriptions for ſale of the chances, or part of the chances, to ariſe on the tickets iſſued by virtue of the act of this ſeſſion; and all ſuch kind of undertaking, ſhall be within the meaning of the acts againſt private lotteries, and the perſons buying, ſelling, ſubſcribing, or taking ſubſcriptions for the purchaſe of ſuch chances of any tickets made out in purſuance of any act for a public lottery, or on the numbers of ſuch tickets, without having the original tickets in their cuſtody and right, ſhall be liable to the penalties inflicted on ſuch as ſhall be concerned in private lotteries; and every ſuch offender ſhall for every chance, ſo ſold or ſubſcribed for, forfeit 100l. over and above any former penalties; one moiety to the crown, the other to ſuch perſon as in his own right ſhall, at the commencement of the drawing of ſuch lottery, be poſſeſſed of the ticket on which ſuch chance ſhall be ſold or ſubſcribed for.

VII. Stat. 8 Geo. I. cap. 2. §. 36. Every perſon who ſhall ſet up or keep any office or place under the denomination of ſales of houſes, lands, advowſons, preſentations to livings, plate, jewels, ſhips, goods, or other things, for the improvement of ſmall ſums of money; or ſhall ſell or expoſe to ſale any houſes, &c. by way of lottery, or by lots, tickets, numbers, or figures; or ſhall make, print, advertiſe, or publiſh, propoſals or ſchemes for advancing ſmall ſums of money by ſeveral perſons, amounting in the whole to large ſums, to be divided amongſt them by the chances of the prizes in any public lottery; or ſhall deliver out tickets to perſons advancing ſuch ſums, to intitle them to a ſhare of the money, according to ſuch propoſals or ſchemes; or ſhall make, print, or publiſh any propoſal or ſcheme of the like kind, and ſhall be thereof convicted on the oath of one witneſs by two juſtices of peace where ſuch offence ſhall be committed or the offender found, the perſon ſo convicted ſhall (over and above any former penalties) forfeit 500l. one third to the crown, one other third to the informer, and the remaining third to the poor of the pariſh where the offence ſhall be committed, to be levied by diſtreſs and ſale of goods by warrant of the juſtices, and ſhall alſo be committed to the county gaol for one year, and 'till the 500l. be paid; perſons aggrieved may appeal to the next quarter ſeſſions.

VIII. §. 37. All perſons who ſhall be adventures in ſuch ſales or lotteries, or ſhall contribute to ſuch ſales or lotteries, ſhall forfeit double the ſum contributed, to be recovered with coſts; one moiety to the crown, the other to the informer.

IX. Stat. 9 Geo. I. cap. 16. §. 4. If any perſons ſhall, by colour of any authority from any foreign prince or ſtate, ſet up or keep any lottery, or undertaking in the nature of a lottery, or ſhall make, print, or publiſh, any propoſals or ſcheme for ſuch lottery, and ſhall within this kingdom ſell or diſpoſe of any tickets in any foreign lottery, and ſhall be convicted on the oath of one witneſs before two juſtices, &c. where ſuch offence ſhall be committed, or the offender found, ſuch offender ſhall (over and above any former penalties) forfeit 200l. one third to the crown, one other third to the informer, and the remaining third to the poor of the pariſh, to be levied by diſtreſs and ſale of goods by warrant of the juſtices, and ſhall alſo be committed to the county gaol for one year, and 'till the ſaid ſum be ſatisfied.

X. §. 5. Perſons, aggrieved by the judgment of the juſtices may appeal to the next quarter ſeſſions.

XI. Stat. 4 Geo. II. cap. 9. §. 12.[3] A yearly ſum of 24,000l. out of the additional duties on ſtamped vellum, parchment, and paper (granted by 9 and 10 Will. III. cap. 25.) ſhall be a fund for annuities of three per cent. to contributors in a lottery, until redemption by parliament, and ſhall be paid half-yearly at Chriſtmas and Midſummer to the caſhier of the bank.

XII. §. 13. It ſhall be lawful for any perſons to contribute ſums of 10l. and for every ſuch ſum of 10l. they ſhall be intereſted in ſuch lot in the ſaid yearly fund, as is herein directed.

XIII. §. 31. The ſaid annuities of three per cent. ſhall be free from taxes.

XIV. §. 32. The bank of England ſhall employ one to be their chief caſhier, and one other to be their accountant-general; and the ſaid caſhier, to whom the ſaid monies ſhall be iſſued for payment of the ſaid annuities, ſhall without delay apply the ſame accordingly, and render his account thereof according to the courſe of the Exchequer; and the ſaid accountant-general ſhall inſpect all receipts and payments of the ſaid caſhier, and the vouchers relating thereunto; and all perſons who ſhall be intitled to any of the ſame annuities ſhall be poſſeſſed thereof as a perſonal eſtate, and the ſame ſhall not be deſcendable to the heir, and ſhall not be liable to foreign attachment.

XV. §. 33. The ſaid annuities of three per cent. ſhall be of one capital or joint ſtock, on which the ſame annuities ſhall be attending, and ſhall be called the joint ſtock of lottery annuities for the year 1731; and all perſons, in proportion to their reſpective annuities, ſhall have a ſhare in ſuch ſtock; and ſuch ſhares ſhall be transferrable and deviſeable in the ſame manner as is preſcribed by act of parliament in the firſt year of his late majeſty's reign, touching the annuities after the rate of 5 per cent. and no ſtamp duties ſhall be chargeable on ſuch transfers, and the governor and company of the bank of England ſhall continue a corporation 'till the ſame ſhall be redeemed.

XVI. §. 34. No fee ſhall be taken for paying the ſaid annuities of three per cent. by the ſaid caſhier; and no fee ſhall be taken for any transfer, upon pain that any officer offending ſhall forfeit 20l. to the party aggrieved.

XVII. §. 35. Theſe additional duties upon ſtamped vellum, &c. ſhall be applied (charges excepted) to pay the annuities of 3l. 10s. per cent. and then to pay the ſaid annuities of three per cent.

XVIII. §. 36. Deficiencies ſhall be made good out of ſupplies to be granted by parliament, or out of the ſinking fund.

XIX. §. 37. Monies iſſued out of the ſinking fund ſhall be replaced out of the firſt ſupplies to be granted in parliament.

XX. §. 38. The ſurplus of the additional ſtamp duties ſhall be reſerved for the diſpoſition of parliament.

XXI. §. 39. Upon one year's notice in the London Gazette, and upon the Royal Exchange, by authority of parliament, at any of the half-yearly days for payment, and upon repayment of the principal ſum and all arrearages, the ſaid annuities ſhall ceaſe; and the ſaid additional duties upon ſtamped vellum, &c. ſhall be redeemed. And any vote of the houſe of commons to be ſignified by the ſpeaker in writing ſhall be ſufficient notice.

XXII. Stat. 6. Geo. II. cap. 35. If any perſon ſhall ſell or deliver any ticket in any foreign lottery, and ſhall be convicted upon action or information, or upon oath or affirmation of one witneſs before two juſtices of peace where ſuch offence ſhall be committed or the offender found, the perſon ſo convicted ſhall forfeit 200l. one third to his majeſty, one third to him who ſhall make information of the offence, and the remaining third to the poor of the pariſh, to be levied by diſtreſs and ſale of goods, and alſo ſhall be committed to the county goal for one year, and from thence 'till the ſum of 200l. be paid.

XXIII. §. 30. Any perſons aggrieved by the judgment of ſuch juſtices, ſhall have liberty to appeal to the next quarter ſeſſions.

Remarks.

In France there have been ſeveral lotteries, in favour of hoſpitals.

M. Le Clerc has compoſed a treatiſe of lotteries, wherein is ſhewn what is laudable, and what blameable in them.—Gregory Leti has alſo a book on the ſubject of lotteries.—Father Meneſtrier has a treatiſe on the ſame, publiſhed in 1700, where he ſhews their origin and uſe among the Romans.—He diſtinguiſhes ſeveral kinds of lotteries, and ſpeaks of chances, and reſolves ſeveral caſes of conſcience relating thereto.

The preſent lottery in England, eſtabliſhed by authority, may be judged very uſeful; the motive thereto being for the purchaſe of the Museum, or collection of Sir Hans Sloane, and of the Harleian collection of manuſcripts; and for providing one general repoſitory for the better reception and more convenient uſe of the ſaid collection, and alſo of the Cottonian library, and of the additions thereto. See the article Museum.

Among the ſeveral miſtakes that are committed about chance, ſays the ingenious Mr. de Moivre, one of the moſt common, and leaſt ſuſpected, is that which relates to lotteries. Thus, ſuppoſing a lottery, wherein the proportion of the blanks to the prizes is as five to one, it is very natural to conclude, that therefore five tickets are requiſite for the chance of a prize; and yet it may be proved demonſtratively, that four tickets are more than ſufficient for that purpoſe, which will be confirmed by often repeated experience.

In the like manner ſuppoſing a lottery, wherein the proportion of the blanks to the prizes is as 39 to 1 (ſuch as was the lottery in England of 1710), it may be proved, that, in 28

tickets, a prize is as likely to be taken as not; which, though it may ſeem to contradict the common notions, is nevertheleſs grounded upon infallible demonſtration.

When the play of the royal oak was in uſe, ſome perſons who loſt conſiderably by it, had their loſſes chiefly occaſioned by an argument of which they could not perceive the fallacy. The odds againſt any particular point of the ball were 31 to 1, which intitled the adventurers, in caſe they were winners, to have 32 ſtakes returned, including their own; inſtead of which they having but 28, it was very plain, that, on the ſingle account of the diſadvantage of the play, they loſt $\frac{1}{8}$ of all the money they played for. But the maſter of the ball maintained that they had no reaſon to complain, ſince he would undertake that any particular point of the ball ſhould come up in 22 throws; of this he would offer to lay a wager, and actually laid it when required. The ſeeming contradiction between the odds of 31 to 1, and 22 throws for any chance to come up, ſo perplexed the adventurers, that they begun to think the advantage was on their ſide, for which reaſon they played on and continued to loſe.

The principles whereon a knowledge in the doctrine of chances is founded, are as follow, viz.

1. The probability of an event is greater or leſs, according to the number of chances by which it may happen, compared with the whole number of chances by which it may either happen or fail.

2. Wherefore, if we conſtitute a fraction whereof the numerator is the number of chances whereby an event may happen, and the denominator and number of all the chances whereby it may either happen or fail, that fraction will be a proper deſignation of the probability of happening. Thus, if an event has 3 chances to happen and 2 to fail, the fraction $\frac{3}{5}$ will fitly repreſent the probability of it's happening, and may be taken to be the meaſure of it.

The ſame thing may be ſaid of the probability of failing, which will likewiſe be meaſured by a fraction, whoſe numerator is the number of chances whereby it may fail, and the denominator the whole number of chances, both for it's happening and failing: thus the probability of the failing of that event, which has 2 chances to fail and 3 to happen, will be meaſured by the fraction $\frac{2}{5}$.

3. The fractions, which repreſent the probabilities of happening and failing, being added together, their ſum will always be equal to unity, ſince the ſum of their numerators will be equal to their common denominator: now, it being a certainty that an event will either happen or fail, it follows, that certainty, which may be conceived under the notion of an infinitely great degree of probability, is fitly repreſented by unity.

Theſe things will eaſily be apprehended, if it be conſidered that the word probability includes a double idea; firſt, of the number of chances whereby an event may happen; ſecondly, of the number of chances whereby it may either happen or fail.

If I ſay that I have three chances to win any ſum of money, it is impoſſible from that bare aſſertion, to judge whether I am like to obtain it; but if I add that the number of chances either to obtain it or to miſs it, is 5 in all, from hence will enſue a compariſon between the chances that favour me, and the whole number of chances that are for or againſt me, whereby a true judgment will be formed of my probability of ſucceſs: whence it neceſſarily follows, that it is the comparative magnitude of the number of chances to happen, in reſpect to the whole number of chances either to happen or to fail, which is the true meaſure of probability.

4. If, upon the happening of an event, I be intitled to a ſum of money, my expectation of obtaining that ſum has a determinate value before the happening of the event.

Thus, if I am to have 10 l. in caſe of the happening of an event which has an equal probability of happening and failing, my expectation before the happening of the event is worth 5 l. for I am preciſely in the ſame circumſtances as he who at equal play ventures 5 l. either to have 10 l. or to loſe his 5 l. Now he who ventures 5 l. in an equal play, is poſſeſſor of 5 l. before the deciſion of the play; therefore my expectation, in the caſe above-mentioned, muſt alſo be worth 5 l.

5. In all caſes, the expectation of obtaining any ſum is eſtimated by multiplying the value of the ſum expected by the fraction which repreſents the probability of obtaining it.

Thus, if I have 3 chances in 5 to obtain 100 l. I ſay that the preſent value of my expectation is the product of 100 l. by the fraction $\frac{3}{5}$, and conſequently that my expectation is worth 60 l. For,

Suppoſing that an event may equally happen to any one of 5 different perſons, and that the perſon to whom it happens, ſhould, in conſequence of it, obtain the ſum of 100 l. it is plain, that the right which each of them in particular has upon the ſum expected is $\frac{1}{5}$ of 100 l. which right is founded in this; that if the 5 perſons, concerned in the happening of the event, ſhould agree not to ſtand the chance of it, but to divide the ſum expected among themſelves, then each of them muſt have $\frac{1}{5}$ of 100 l. for his pretenſion.

Now, whether they agree to divide that ſum equally among themſelves, or rather chuſe to ſtand the chance of the event, no one has thereby any advantage or diſadvantage, ſince they are all upon an equal foot, and conſequently each perſon's expectation is worth $\frac{1}{5}$ of 100 l. Let us ſuppoſe farther, that 2 of the 5 perſons concerned in the happening of the event, ſhould be willing to reſign their chance to one of the other three, then the perſon to whom theſe two chances are thus reſigned, has now three chances that favour him, and conſequently has now a right triple of that which he had before, and therefore his expectation is now worth $\frac{3}{5}$ of 100 l.

Now, if we conſider that the fraction $\frac{3}{5}$ expreſſes the probability of obtaining the ſum of 100 l. and that $\frac{3}{5}$ of 100 is the ſame thing as $\frac{3}{5}$ multiplied by 100, we muſt naturally fall into this concluſion, which has been laid down as a principle, that the value of the expectation of any ſum is determined by multiplying the ſum expected by the probability of obtaining it.

This manner of reaſoning, though deduced from a particular caſe, will eaſily be perceived to be general, and applicable to any other caſe.

Corollary.

From what precedes it neceſſarily follows, that if the value of an expectation be given, as alſo the value of the thing expected, then dividing the firſt value by the ſecond, the quotient will expreſs the probability of obtaining the ſum expected; thus if I have an expectation worth 60 l. and that the ſum which I may obtain be worth 100 l. the probability of obtaining it will be expreſſed by the quotient of 60 divided by 100, that is, by the fraction $\frac{60}{100}$, or $\frac{3}{5}$.

6. The riſk of loſing any ſum is the reverſe of expectation, and the true meaſure of it is the product of the ſum adventured, multiplied by the probability of the loſs.

7. Advantage or diſadvantage, in play, reſults from the combination of the ſeveral expectations of the gameſters, and of their ſeveral riſks.

Thus ſuppoſing that A and B play together, that A has depoſited 5 l. and B 3 l. that the number of chances which A has to win is 4, and the number of chances which B has to win is 2, and that it were required in this circumſtance to determine the advantage or diſadvantage of the adventurers, we may reaſon in this manner: ſince the whole ſum depoſited is 8, and that the probability which A has of getting it is $\frac{4}{6}$, it follows, that the expectation of A, upon the whole ſum depoſited, is $8 \times \frac{4}{6} = 5\frac{1}{3}$, and for the ſame reaſon the expectation of B, upon that whole ſum depoſited, is $8 \times \frac{2}{6} = 2\frac{2}{3}$.

Now, if, from the reſpective expectations which the adventurers have upon the whole ſum depoſited, be ſubtracted the particular ſums which they depoſit, that is, their own ſtakes, there will remain the advantage or diſadvantage of either, according as the difference is poſitive or negative.

And therefore, if from $5\frac{1}{3}$, which is the expectation of A upon the whole ſum depoſited, 5, which is his own ſtake, be ſubtracted, there will remain $\frac{1}{3}$ for his advantage; likewiſe, if from $2\frac{2}{3}$, which is the expectation of B, 3, which is his own ſtake, be ſubtracted, there will remain $\frac{1}{3}$, which, being negative, ſhews that his diſadvantage is $\frac{1}{3}$.

Theſe concluſions may alſo be derived from another conſideration; for if from the expectation, which either adventurer has upon the ſum depoſited by his adverſary, be ſubtracted the riſk of what he himſelf depoſits, there will likewiſe remain his advantage or diſadvantage, according as the difference is poſitive or negative.

Thus in the preceding caſe, the ſtake of B being 3, and the probability which A has of winning it, being $\frac{4}{6}$, the expectation of A upon that ſtake is $3 \times \frac{4}{6} = 2$; moreover, the ſtake of A being 5, and the probability of loſing it being $\frac{2}{6}$, his riſk ought to be eſtimated by $5 \times \frac{2}{6} = 1\frac{2}{3}$; wherefore, if from the expectation 2 the riſk $1\frac{2}{3}$ be ſubtracted, there will remain $\frac{1}{3}$ as before for the advantage of A; and, by the ſame way of proceeding, the diſadvantage of B will be found to be $\frac{1}{3}$.

It is very carefully to be obſerved, that what is here called advantage or diſadvantage, and which may properly be called gain or loſs, is always eſtimated before the event is come to paſs; and, although it be not cuſtomary to call that gain or loſs, which is to be derived from an event not yet determined, nevertheleſs, in the doctrine of chances, that appellation is equivalent to what in common diſcourſe is called gain or loſs.

For in the ſame manner as that he who ventures a guinea in an equal game, may, before the determination of the play, be ſaid to be poſſeſſor of that guinea, and may, in conſideration of that ſum, reſign his place to another; ſo he may be ſaid to be a gainer or loſer who would get ſome profit, or ſuffer ſome loſs, if he would ſell his expectation upon equi-

table terms, and ſecure his own ſtake for a ſum equal to the riſk of loſing it.

8. If the obtaining of any ſum requires the happening of ſeveral events that are independent on each other, then the value of the expectation of that ſum is found, by multiplying together the ſeveral probabilities of happening, and again multiplying the product by the value of the ſum expected.

Thus ſuppoſing, that in order to obtain 90l. two events muſt happen, the firſt whereof has 3 chances to happen and 2 to fail, the ſecond has 4 chances to happen and 5 to fail, and I would know the value of that expectation; I ſay,

The probability of the firſt's happening is $\frac{3}{5}$, the probability of the ſecond's happening is $\frac{4}{9}$; now, multiplying theſe two probabilities together, the product will be $\frac{12}{45}$, or $\frac{4}{15}$, and this product being again multiplied by 90, the new product will be $\frac{360}{15}$ or 24, therefore that expectation is worth 24l.

The demonſtration of this will be very eaſy, if it be conſidered, that, ſuppoſing the firſt event had happened, then that expectation, depending now entirely upon the ſecond, would, before the determination of the ſecond, be found to be exactly worth $\frac{4}{9} \times$ 90l. or 40l. (by art. 5.) We may therefore look upon the happening of the firſt, as a condition of obtaining an expectation worth 40l. but the probability of the firſt happening has been ſuppoſed $\frac{3}{5}$, wherefore the expectation ſought for is to be eſtimated by $\frac{3}{5} \times 40$ or by $\frac{3}{5} \times \frac{4}{9} \times 90$, that is, by the product of the two probabilities of happening multiplied by the ſum expected.

And likewiſe, if an expectation depends on the happening of one event, and the failing of another, then it's value will be the product of the probability of the firſt happening, by the probability of the ſecond's failing, and of that again by the value of the ſum expected.

And again, if an expectation depends on the failing of two events, the rule will be the ſame, for that expectation will be found by multiplying together the two probabilities of failing, and multiplying that again by the value of the ſum expected.

And the ſame rule is applicable to the happening or failing of as many events as may be aſſigned.

Corollary.

If we make abſtraction of the value of the ſum to be obtained, the bare probability of obtaining it will be the product of the ſeveral probabilities of happening, which evidently appears from this 8th article, and from the corollary to the 4th.

Hitherto I have confined myſelf to the conſideration of events independent; but for fear that, in what is to be ſaid afterwards, the terms independent or dependent might occaſion ſome obſcurity, it will be neceſſary, before I proceed any farther, to ſettle entirely the notion of theſe terms.

Two events are independent, when they have no connection one with the other, and that the happening of one neither forwards nor obſtructs the happening of the other.

Two events are dependent, when they are ſo connected together, as that the probability of either's happening is altered by the happening of the other.

In order to illuſtrate this, it will not be amiſs to propoſe the two following eaſy problems.

1. Suppoſe there is a heap of 13 cards of one colour, and another heap of 13 cards of another colour, what is the probability of taking two cards at a venture out of each heap, I ſhall take the two aces?

The probability of taking the ace out of the firſt heap is $\frac{1}{13}$; now it being very plain, that the taking or not taking the ace out of the firſt heap has no influence in the taking or not taking the ace out of the ſecond, it follows, that, ſuppoſing that ace taken out, the probability of taking the ace out of the ſecond will alſo be $\frac{1}{13}$; and therefore thoſe two events being independent, the probability of theſe both happening will be $\frac{1}{13} \times \frac{1}{13} = \frac{1}{169}$.

2. Suppoſe that, out of one ſingle heap of 13 cards of one colour, it ſhould be deſigned to take out the ace in the firſt place, and then the deux; and that it were required to aſſign the probability of doing it; we are to conſider, that although the probability of the ace's being in the firſt place be $\frac{1}{13}$, and that the probability of the deux's being in the ſecond place would alſo be $\frac{1}{13}$, if that ſecond event were conſidered in itſelf without any relation to the firſt; yet that, the ace being ſuppoſed as taken out at firſt, there will remain but 12 cards in the heap, and therefore that, upon the ſuppoſition of the ace being taken out at firſt, the probability of the deux's being next taken will be altered, and become $\frac{1}{12}$; and therefore we may conclude, that thoſe two events are dependent, and that the probability of their both happening will be $\frac{1}{13} \times \frac{1}{12} = \frac{1}{156}$.

From whence it may be inferred, that the probability of the happening of two events dependent is the product of the probability of the happening of one of them, by the probability which the other will have of happening, when the firſt ſhall have been conſidered as having happened; and the ſame rule will extend to the happening of as many events as may be aſſigned.

9. But to determine in the eaſieſt manner poſſible, the probability of the happening of ſeveral events dependent, it will be convenient to diſtinguiſh, by thought, the order of thoſe events, and to ſuppoſe one of them to be the firſt, another to be the ſecond, and ſo on: which being done, the probability of the happening of the firſt may be looked upon as independent; the probability of the happening of the ſecond is to be determined from the ſuppoſition of the firſt's having happened; the probability of the third's happening is to be determined from the ſuppoſition of the firſt's and ſecond's having happened, and ſo on: then the probability of the happening of them all will be the product of the multiplication of the ſeveral probabilities, which have been determined in the manner preſcribed.

We have ſeen before how to determine the probability of the happening or failing of as many events independent, as may be aſſigned; we have ſeen, likewiſe, in the preceding article, how to determine the probability of the happening of as many events dependent, as may be aſſigned; but, in the caſe of events dependent, how to determine the probability of the happening of ſome of them, and, at the ſame time, the probability of the failing of ſome others, is a diſquiſition of a greater degree of difficulty; which, for that reaſon, will be more conveniently transferred to another place.

10. If I have ſeveral expectations upon ſeveral ſums, it is very evident that my expectation upon the whole is the ſum of the expectations I have upon the particulars.

Thus ſuppoſe two events ſuch, that the firſt may have three chances to happen, and two to fail; and the ſecond four chances to happen, and five to fail; and that I be intitled to 90l. in caſe the firſt happens, and to another like ſum of 90l. in caſe the ſecond happens alſo, and that I would know the value of my expectation upon the whole: I ſay, the ſum expected in the firſt caſe being 90l. and the probability of obtaining it being $\frac{3}{5}$, it follows that my expectation, on that account is worth $90 \times \frac{3}{5} = 54$; and again, the ſum expected in the ſecond caſe being 90, and the probability of obtaining it being $\frac{4}{9}$, it follows that my expectation of that ſecond ſum is worth $90 \times \frac{4}{9} = 40$; and, therefore, my expectation upon the whole is worth 54l. + 40l. = 94l.

But if I am to have 90l. once for all, for the happening of one or the other of the two aforementioned events, the method of proceſs, in determining the value of my expectation, will be ſomewhat altered; for, although my expectation of the firſt event be worth 54l. as it was in the preceding example, yet I conſider that my expectation of the ſecond will ceaſe upon the happening of the firſt, and that, therefore, this expectation takes place only in caſe the firſt does happen to fail. Now the probability of the firſt's failing is $\frac{2}{5}$; and, ſuppoſing it has failed, then my expectation will be 40; wherefore $\frac{2}{5}$ being the meaſure of the probability of my obtaining an expectation worth 40l. it follows, that this expectation (to eſtimate it before the time of the firſt's being determined) will be worth $40 \times \frac{2}{5} = 16$, and, therefore, my expectation upon the whole is worth 54l. + 16l. = 70l.

If that which was called the ſecond event, be now conſidered as the firſt, and that which was called the firſt, be now conſidered as the ſecond, the concluſion will be the ſame as before.

For the application of theſe principles to the doctrine of chances in general, and, among the reſt, to the article of lotteries. But, to underſtand the rationale of the theorems raiſed by Mr. De Moivre, for this and other purpoſes of play, I would refer the reader to that ingenious writer himſelf; but the reader ſhould be prepared with a competent knowledge of algebra, and then the ſteps which that gentleman has taken to come at the ſolution of the various problems he gives, will be eaſily followed.

In a lottery, whereof the number of blanks is to the number of prizes as 39 *to* 1 *(ſuch as was the lottery in* 1710*) to find how many tickets one muſt take to make it an equal chance for prizes.*

Multiply 39 by 0,7*, and the product, 27,3, will ſhew that the number of tickets requiſite to that effect will be 27, or 28 at moſt. Likewiſe in a lottery, whereof the number of blanks is to the number of prizes as 5 to 1, multiply 5 by 0,7, and the product, 3,5, will ſhew that there is more than

equality

equality of chance in four tickets, for one or more prizes, but leſs than equality in three.

* For the reaſon of this and the following rules, as applied to lotteries, ſee De Moivre's Introduction to the Doctrine of Chances.

REMARK.

In a lottery, whereof the blanks are to the prizes as 39 to 1, if the number of tickets in all were but 40, the proportion abovementioned would be altered, for 20 tickets would be a ſufficient number for the juſt expectation of the ſingle prize, it being evident that the prize may be as well among the tickets which are taken, as among thoſe that are left behind.

Again: if the number of tickets in all were 80, ſtill preſerving the proportion of 39 blanks to one prize, and, conſequently, ſuppoſing 78 blanks to two prizes, this proportion would ſtill be altered; for, by the doctrine of combinations, it will appear that the probability of taking one prize or both, in 20 tickets, would be but $\frac{139}{361}$, and the probability of taking none would be $\frac{177}{316}$; wherefore the odds againſt taking any prize would be as 177 to 139, or very near as 9 to 7.

And, by the ſame doctrine of combinations, it will be found that 23 tickets would not be quite ſufficient for the expectation of a prize in this lottery, but that 24 would rather be too many; ſo that one might with advantage lay an even wager of taking a prize in 24 tickets.

If the proportion of 39 to 1 be oftener repeated, the number of tickets requiſite for the equal chance of a prize will ſtill increaſe with that repetition; yet let the proportion of 39 to 1 be repeated never ſo many times, nay an infinite number of times, the number of tickets requiſite for the equal chance of a prize would never exceed $\frac{7}{10}$ of 39, that is, about 27 or 28.

Wherefore, if the proportion of the blanks to the prizes is often repeated, as it uſually is in lotteries, the number of tickets requiſite for a prize will always be found, by taking $\frac{7}{10}$ of the proportion of the blanks to the prizes.

In a lottery, conſiſting of 40,000 *tickets, among which are three particular benefits, what is the probability that, taking* 8000 *of them, one or more of the particular benefits ſhall be amongſt them?*

SOLUTION.

Firſt, In the theorem belonging to the remark in Mr. De Moivre's Doctrine of Chances, page 76, ſecond edition, there being ſubſtituted reſpectively 8,000, 40,000, 32,000 3, and 1, in the room of c, n, d, a, and p, it will appear that the probability of taking one preciſely of the three particular benefits, will be $\frac{8000.\ 32000.\ 31999.\ 3}{40000.\ 39999.\ 39998.} = \frac{48}{125}$ nearly.

Secondly, c, n, d, a, being interpreted as before, let us ſuppoſe $p = 2$, hence the probability of taking preciſely two of the particular benefits will be found to be $\frac{8000.\ 7999.\ 32000.\ 3}{40000.\ 39999.\ 39998.} = \frac{12}{125}$ nearly.

Thirdly, Making $p = 3$, the probability of taking all the three particular benefits will be found to be $\frac{8000.\ 7000.}{40000.\ 39999.}$ $\frac{7008}{39998} = \frac{1}{125}$, very near. Wherefore, the probability of taking one or more of the three particular benefits will be $\frac{48 + 12 + 1}{125}$, or $\frac{61}{125}$, very near.

It is to be obſerved, that thoſe three operations might have been contracted into one, by inquiring the probability of not taking any of three particular benefits, which will be found to be $\frac{32000.\ 31999.\ 31998}{40000.\ 39999.\ 39998} = \frac{64}{125}$, nearly; which being ſubtracted from unity, the remainder, $1 - \frac{64}{125}$, or $\frac{61}{125}$, will ſhew the probability required, and, therefore, the odds againſt taking any of three particular benefits will be 64 to 61 nearly.

To find how many tickets ought to be taken, in a lottery conſiſting of 40,000, *among which are three particular benefits, to make it as probable that one or more of thoſe three may be taken as not.*

SOLUTION.

Let the number of tickets requiſite to be taken be $= x$, it will follow, therefore, from the remark belonging to the XXth problem in De Moivre, page 76, that the probability

of not taking any of the particular benefits will be $\frac{n-x}{n} \times \frac{n-x-1}{n-1} \times \frac{n-x-2}{n-2}$; but this probability is equal to $\frac{1}{2}$; ſince, by hypotheſis, the probability of taking one or more of them is equal to $\frac{1}{2}$, from whence we ſhall have the equation $\frac{n-x}{n} \times \frac{n-x-1}{n-1} \times \frac{n-x-2}{n-2} = \frac{1}{2}$; which equation being ſolved, the value of x will be found to be nearly 8252.

N. B. The factors whereof both the numerator and denominator are compoſed, being but few, and in arithmetic progreſſion, and beſides, the difference being very ſmall in reſpect of n, thoſe terms may be conſidered as being in geometric progreſſion: wherefore, the cube of the middle term, $\frac{n-x-1}{n-1}$, may be ſuppoſed equal to the product of the multiplication of thoſe terms; from whence will ariſe the equation $\frac{\overline{n-x-1}^{3}}{\overline{n-1}} = \frac{1}{2}$, or, neglecting unity in both numerator and denominator, $\frac{\overline{n-x}^{3}}{n^3} = \frac{1}{2}$, and, conſequently, x will be found to be $= n \times 1 - \sqrt[3]{\frac{1}{2}}$, or $n \times 1 - \frac{1}{2}\sqrt[3]{4}$, but $n = 40{,}000$, and $-1\frac{1}{2}\sqrt[3]{4} = 0.2063$; wherefore $x = 8252$.

In the remark belonging to the ſecond problem, a rule was given for finding the number of tickets that were to be taken to make it as probable that one or more of the benefits would be taken as not; but in that rule it was ſuppoſed, that the proportion of the blanks to the prizes was often repeated, as it uſually is in lotteries: now, in the caſe of the preſent problem, the particular benefits being but three in all, the remaining tickets are to be conſidered as blanks in reſpect of them; from whence it follows, that the proportion of the number of blanks to one prize being very near as 13332 to 1, and that proportion being repeated but three times in the whole number of tickets, the rule there given would not have been ſufficiently exact; for which reaſon it was thought neceſſary to give another rule in this place.

Suppoſing a lottery of 100,000 *tickets, whereof* 90,000 *are blanks, and* 10,000 *are benefits, to determine accurately what the odds are of taking or not taking a benefit in any number of tickets aſſigned.*

SOLUTION.

Suppoſe the number of tickets to be ſix; then let us inquire into the probability of taking no prize in ſix tickets: which to find, let us make uſe of the theorem ſet down in the corollary of the XIXth problem [ſee De Moivre, page 75 and 76] wherein it will appear that the number of chances for taking no prize in 6 tickets, making $a = 10{,}000$, $b = 90{,}000$, $c = 6$, $p = 0$, $n = 100{,}000$, will be $\frac{90000}{1} \times \frac{89999}{2} \times \frac{89998}{3} \times \frac{89997}{4} \times \frac{89996}{5} \times \frac{89995}{6}$, and that the whole number of chances will be $\frac{100000}{1} \times \frac{99999}{2} \times \frac{99998}{3} \times \frac{99997}{4} \times \frac{99996}{5} \times \frac{99995}{6}$; then dividing the firſt number of chances by the ſecond, which may eaſily be done by logarithms, the quotient will be 0.53143; and this ſhews the probability of taking no prize in 6 tickets; and, this decimal fraction being ſubtracted from unity, the remainder, 0.46857, ſhews the probability of taking one or more prize in 6 tickets; wherefore the odds againſt taking any prize in 6 tickets will be 53143 to 46857.

If we ſuppoſe now, that the number of tickets taken is 7, then carrying each number of chances above written one ſtep farther, we ſhall find that the probability of taking no prize in 7 tickets is 0.47828, which fraction being ſubtracted from unity, the remainder will be 0.52172, which ſhews the odds of taking one prize, or more, in 7 tickets, to be 52172 to 47828.

REMARK.

When the number of tickets taken bear a very inconſiderable proportion to the whole number of tickets, as it happens in the caſe of this problem, the queſtion may be reſolved as a problem depending on the caſt of a die; we may, therefore, ſuppoſe a die of 10 faces, having one of it's faces ſuch as the ace, repreſenting a benefit, and all the other nine repreſenting blanks, and inquire into the probability of miſſing the ace ſix times

times together, which, by the rules given in the Introduction *, will be found to be $\frac{9^6}{10^6} = 0.53144$, differing from what we had found before but one unit in the fifth place of decimals: now, if we inquire into the probability of miſſing the ace ſeven times, we ſhall find it 0.47829, differing alſo but one unit in the fifth of decimals, from what had been found before; and, therefore, in ſuch caſes as this, we may uſe both methods indifferently, but the firſt will be exact, if we actually multiply the numbers together; the ſecond is only an approximation.

* See De Moivre's Introduction to the Doctrine of Chances, page 9, 10, 11, &c.

But both methods confirm the truth of the practical rule given in the third problem [in De Moivre's Introduction] about finding what number of tickets is neceſſary for the equal chance of a prize; for multiplying as it is there directed, the number 9 repreſenting the blanks, by 0.7, the product, 6.3, will ſhew that the number requiſite is between 6 and 7.

The ſame things being given as in the before-mentioned problem, ſuppoſe the price of each ticket to be 10l. and that, after the lottery is drawn, 7l. 10s. be returned to the blanks, to find in this lottery the value of the chance of a prize.

Solution.

There being 90,000 blanks, to every one of which 7l. 10s. is returned, the total value of the blanks is 675,000l. and, conſequently, the total value of the benefits is 325,000l. which being divided by 10,000, the number of the benefits, the quotient is 32l. 10s. and therefore one might, for the ſum of 32l. 10s. be intitled to have a benefit certain, taken at random, out of the whole number of benefits: the purchaſer of a chance has, therefore, one chance in ten for the ſum of 32l. 10s. and nine chances in ten for loſing his money; from whence it follows, that the value of his chance is the tenth part of 32l. 10s. that is, 3l. 5s. and, therefore, the purchaſer of a chance, by giving the ſeller 3l. 5s. is intitled to the chance of a benefit, and ought not to return any thing to the ſeller, although he ſhould have a prize; for the ſeller having 3l. 5s. ſure, and nine chances in ten for 7l. 10s. the value of which chances is 6l. 15s. it follows that he has his 10l.

Suppoſing ſtill the ſame lottery as has been mentioned in the two preceding problems of De Moivre, let A engage to furniſh B with a chance, on condition that, whenever the ticket on which the chance depends, ſhall happen to be drawn, whether it proves a blank or a prize, A ſhall furniſh B with a new chance, and ſo on, as often as there is occaſion, 'till the whole lottery be drawn; to find what conſideration B ought to give A, before the lottery begins to be drawn, for the chance or chances of one or more prizes, admitting that the lottery will be 40 days in drawing.

Solution.

Let 3l. 5s. which is the abſolute value of a chance, be called s.

1. A, who is the ſeller, ought to conſider, that the firſt day he furniſhes neceſſarily a chance, whoſe value is s.

2. That the ſecond day he does not neceſſarily furniſh a chance, but conditionally, viz. if it ſo happen that the ticket on which the chance depends, ſhould be drawn on the firſt day; but the probability of it's being drawn on the firſt day is $\frac{1}{40}$; and, therefore, he ought to take $\frac{1}{40}s$ for the conſideration of the ſecond day.

3. That, in the ſame manner, he does not neceſſarily furniſh a chance on the third day, but conditionally, in caſe the only ticket depending (for there can be but one) ſhould happen to be drawn on the ſecond day, of which the probability being $\frac{1}{39}$, by reaſon of the remaining 39 days, from the ſecond incluſive to the laſt, it follows, that the value of that chance is $\frac{1}{39}s$.

4. And, for the ſame reaſon, the value of the next is $\frac{1}{38}s$, and ſo on.

The purchaſer ought therefore to give the ſeller $1 + \frac{1}{40} + \frac{1}{39} + \frac{1}{38} + \frac{1}{37} \ldots\ldots + \frac{1}{2}$, the whole multiplied by s, or $1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5} + \frac{1}{6} \ldots\ldots + \frac{1}{40}$, the whole multiplied by s. Now, it being pretty laborious to ſum up thoſe 40 terms, we have here made uſe of a rule which Mr. De Moivre has given in the ſupplement to his Miſcellanea Analytica, whereby may be ſummed up, in a very ſhort time, as many of thoſe terms as one pleaſes, though they were 10,000 or more; and, by that rule, the ſum of thoſe 40 terms will be found to be 4.2785 very near, which being multiplied by s, which in this caſe is 3.25, the product is 13.9. will ſhew that the purchaſer ought to give the ſeller about 13l. 18s.

Corollary.

The value of the chance s for one ſingle day that ſhall be fixed upon, is the value of that chance divided by the number of days intercepted between that day incluſive, and the number of days remaining to the end of the lottery: which, however, muſt be underſtood with that reſtriction, that the day fixed upon muſt be choſe before the lottery begins, or that, if it be done on any other day, the ſtate of the lottery muſt be known, and a new calculation made accordingly for the value of s.

Remarks.

A knowledge in the doctrine of chances is not only applicable to all kinds of hazards of this nature, but may likewiſe be a help to cure a kind of ſuperſtition, which has been of long ſtanding in the world, viz. that there is in play ſuch a thing as luck, good or bad. I own there are a great many judicious people, who, without any other aſſiſtance than that of their own reaſon, are ſatisfied, that the notion of luck is merely chimerical; yet I conceive, that the ground they have to look upon it as ſuch, may ſtill be farther inforced from ſome of the following conſiderations.

If, by ſaying that a man has good luck, nothing more was meant, than that he has been generally a gainer at play, the expreſſion might be allowed as very proper in a ſhort way of ſpeaking: but, if the word good luck be underſtood to ſignify a certain predominant quality, ſo inherent in a man, that he muſt win whenever he plays, or at leaſt win oftener than loſe, it may be denied, that there is any ſuch thing in nature.

The aſſertors of luck are very ſure, from their own experience, that at ſome times they have been very lucky, and that at other times they have had a prodigious run of ill luck againſt them, which, whilſt it continued, obliged them to be very cautious in engaging with the fortunate; but how chance ſhould produce theſe extraordinary events, is what they cannot conceive: they would be glad, for inſtance, to be ſatisfied, how they could loſe fifteen games together at piquet, if ill luck had not ſtrangely prevailed againſt them. But, if they will be pleaſed to conſider the rules given by Mr. De Moivre, they will ſee, that though the odds againſt their loſing ſo many times together be very great, viz. 32767 to 1, yet that the poſſibility of it is not deſtroyed by the greatneſs of the odds, there being one chance in 32768 that it may ſo happen; from whence it follows, that it was ſtill poſſible to come to paſs, without the intervention of what they call ill luck.

Beſides, this accident of loſing fifteen times together at piquet is no more to be imputed to ill luck, than the winning with one ſingle ticket the higheſt prize in a lottery of 32768 tickets is to be imputed to good luck, ſince the chances in both caſes are perfectly equal. But if it be ſaid, that luck has been concerned in this latter caſe, the anſwer will be eaſy; for let us ſuppoſe luck not exiſting, or, at leaſt, let us ſuppoſe it's influence to be ſuſpended, yet the higheſt prize muſt fall into ſome hand or other, not by luck (for by the hypotheſis that has been laid aſide) but from the mere neceſſity of it's falling ſomewhere.

Thoſe who contend for luck, may, if they pleaſe, alledge other caſes at play, much more unlikely to happen than the winning or loſing fifteen games together, yet ſtill their opinion will never receive any addition of ſtrength from ſuch ſuppoſition. For, by the rules of chance, a time may be computed, in which thoſe caſes may as probably happen as not; nay, not only ſo, but a time may be computed in which there may be any proportion of odds for their ſo happening.

But ſuppoſing that gain and loſs were ſo fluctuating, as always to be diſtributed equally, whereby luck would certainly be annihilated, would it be reaſonable in this caſe to attribute the events of play to chance alone? I think, on the contrary, it would be quite otherwiſe, for then there would be more reaſon to ſuſpect that ſome unaccountable fatality did rule in it: thus, if two perſons play at croſs and pile, and chance alone be ſuppoſed to be concerned in regulating the fall of the piece, is it probable that there ſhould be an equality of heads and croſſes?

It is 5 to 3 that in 4 times there will be an inequality; it is 11 to 5 in 6, 93 to 35 in 8, and about 12 to 1 in 100 times: wherefore, chance alone by it's nature conſtitutes the inequalities of play, and there is no need to have recourſe to luck to explain them.

Further, the ſame arguments which explode the notion of luck, may, on the other ſide, be uſeful in ſome caſes to eſtabliſh a due compariſon between chance and deſign: we may imagine chance and deſign to be, as it were, in competition with each other, for the production of ſome ſorts of events, and may calculate what probability there is, that thoſe events ſhould be rather owing to one than to the other. To give a familiar inſtance of this; let us ſuppoſe that, two packs of piquet cards being ſent for, it ſhould be perceived that there is, from top to bottom, the ſame diſpoſition of the cards in both packs; let us likewiſe ſuppoſe that, ſome doubt ariſing about this diſpoſition of the cards, it ſhould be queſtioned,

tioned, whether it ought to be attributed to chance, or to the maker's deſign: in this caſe, the doctrine of combinations decides the queſtion, ſince it may be proved by it's rules, that there are the odds of above 26,313,083 millions of millions, of millions of millions, to one, that the cards were deſignedly ſet in the order in which they were found.

From this laſt conſideration we may learn, in many caſes, how to diſtinguiſh the events, which are the effect of chance, from thoſe which are produced by deſign: the very doctrine, that finds chance where it really is, being able to prove by a gradual increaſe of probability, 'till it arrive at demonſtration; that where uniformity, order, and conſtancy reſide, there alſo reſide choice and deſign.

Laſtly, one of the principal uſes to which this doctrine of chances may be applied, is the diſcovering of ſome truths, which cannot fail of pleaſing the mind, by their generality and ſimplicity; the admirable connection of it's conſequences will increaſe the pleaſure of the diſcovery; and the ſeeming paradoxes wherewith it abounds, will afford very great matter of ſurprize and entertainment to the inquiſitive. A very remarkable inſtance of this nature may be ſeen in the prodigious advantage which the repetition of odds will amount to; thus, ſuppoſing I play with an adverſary who allows me the odds of 43 to 40, and agrees with me to play 'till 100 ſtakes are won or loſt on either ſide, on condition that I gave him an equivalent for the gain I am intitled to by the advantage of my odds; the queſtion is, what I am to give him, on ſuppoſing we play a guinea a ſtake? The anſwer is 99 guineas, and above eighteen ſhillings*, which will ſeem almoſt incredible, conſidering the ſmallneſs of the odds of 43 to 40. Now, let the odds be in any proportion given, and let the number of ſtakes played for be never ſo great, yet one general concluſion will include all the poſſible caſes, and the application of it to numbers may be wrought in leſs than a minute's time.

* Guineas were then at 21 s. 6 d.

I have explained, in my introduction to the Doctrine of Chances, ſays Mr. De Moivre, the chief rules on which the whole art of chances depends; I have done it in the plaineſt manner that I could think of, to the end it might be (as much as poſſible) of general uſe. I flatter myſelf that thoſe who are acquainted with arithmetical operations, will, by the help of the introduction alone, be able to ſolve a great variety of queſtions depending on chance; I wiſh, for the ſake of ſome gentlemen who have been pleaſed to ſubſcribe to the printing of my book, that I could every where have been as plain as in the introduction; but this was hardly practicable, the invention of the greateſt part of the rules being entirely owing to algebra; yet I have, as much as poſſible, endeavoured to deduce from the algebraical calculation ſeveral practical rules, the truth of which may be depended upon, and which may be very uſeful to thoſe who have contented themſelves to learn only common arithmetic.

On this occaſion, I muſt take notice to ſuch of my readers as are well verſed in vulgar arithmetic, that it would not be difficult for them to make themſelves maſters, not only of all the practical rules in this book, but alſo of more uſeful diſcoveries, if they would take the ſmall pains of being acquainted with the bare notation of algebra, that might be done in the hundreth part of the time that is ſpent in learning to write ſhort-hand.

On the abuſe of LOTTERIES.

At the beginning of this article we have touched upon the ordinary uſe that is made of lotteries; it may be likewiſe neceſſary to take notice of the ill conſequences that attend them; which will be more briefly done from the few following queries.

1. Whether public or ſtate lotteries have not a tendency to uphold the ſpirit of gaming among the people in general; and whether this does not ſo corrupt and vitiate the minds of the maſs of the people, as to draw them from honeſt labour and induſtry in their trading employments, thereby render them poor and indigent, and occaſion a general depravity of morals.

2. Whether experience has not ſhewn, that even the fortunate who become ſuddenly rich by this means, are more generally unhappy than otherwiſe they would be?

3. Whether the wiſeſt and beſt intentioned acts of parliament, in relation to lotteries, are not too often ſhamefully and ſcandalouſly evaded, and give room to lottery jobbing and public impoſition; and whether there have not been ſome late inſtances of this, in open defiance and violation of the beſt laws for the regulation of a lottery, which has given a general diſguſt to the nation?

4. Whether ways and means, far more eligible than thoſe of lotteries, may not always be fell upon, to raiſe money for any public exigency; and whether lotteries ought not to be the laſt reſource upon theſe occaſions?

LOUISIANA, the extent, as well as the natural hiſtory of this country has been variouſly repreſented. In relation to the former, father Hennipin and Mr. Sale have extended it at an extravagant rate; nor have the French, who have aſſumed a right to this part of America, thought proper yet to aſcertain it's boundaries at all, for by their accounts it remains boundleſs. See our firſt map of NORTH AMERICA, in oppoſition to that of the Sieur D'Anville, which was executed under the patronage of Louis duke of Orleans, firſt prince of the blood. See alſo our article MAPS.

The more modeſt of their geographers, who are aſhamed to aſſert that this province is without any limitation at all, ſay it is bounded on the ſouth by the gulph of Mexico, on the north by the Illinois, and by the territories of the Paniaſſus, Paoducas, Oſages, Tionontetecagas, Chavanons, and other wild nations, on the eaſt by the part of Florida, Georgia, and Carolina, and on the weſt by New Mexico and New Spain. They ſay further, it extends itſelf from north to ſouth about 15 degrees, that is, from 25 to the 40th of north latitude, and from eaſt to weſt about 10 or 11, that is, from 86 to 96, or 97, for the boundaries are nothing leſs than certain, according to father Charlevoix. And,

The maps of Mr. De Liſle give thoſe boundaries at a much greater extent, eſpecially on the north ſide, where they make it contiguous to Canada, ſo that part of it is bounded, according to him, by New York, Penſylvania, Virginia, &c. and on the weſt by the rivers called Rio Bravo and Salado. Other French maps publiſhed at Amſterdam, anno 1720, extend it's northern boundaries ſtill farther on the authority of Monſ. Le Sueur, who ſailed up the river of St. Lewis or Miſſiſſippi above 706 leagues from it's mouth, and adds, that the river is known to flow 100 leagues ſtill higher; ſo that, according to him, the northern boundaries of Louiſiana may reach as far as the northern pole.

Neither are thoſe on the north-weſt leſs uncertain, the Miſſouri, a great river, which gives name to a vaſt tract of land, flowing from that point into the Miſſiſſippi, more than 400 leagues above it's mouth; ſo that if we except the ſouth, where the ſea bounds it, all the reſt muſt be left to uncertainty, and ſo it is like to remain 'till theſe boundaries are ſettled on the eaſt with the Engliſh, and on the weſt with Spain: 'till then, they will be ſtill liable to diſputes, and, perhaps, to a continual fluctuation, according as either of the three nations ſhall have opportunity to enlarge their conqueſts in this part of America.

Certain, however, it is, that Louiſiana contains the greateſt part of thoſe new diſcovered lands eaſt and weſt of the Miſſiſſippi river, which, at firſt, had the name of Florida given to them by Sebaſtian Cabot, a Portugueze, who was ſent upon this deſign by our Henry VII. See the article FLORIDA.

The Spaniards, indeed, lay claim, if not to the firſt diſcovery, at leaſt to the firſt ſettlement on this continent, anno 1512, when John Pontio de Leon firſt unſucceſsfully landed and built a fort there. The Spaniards, ſince then, made ſeveral attempts upon this country, but the adventurers were maſſacred by the Indians, ſo that it was not 'till the reign of Charles X. of France, that his ſubjects attempted a ſettlement on this coaſt, yet they were defea ed by the Spaniards. Theſe laſt, however, were ſoon after puniſhed in the ſame kind by the French, but nevertheleſs theſe could not obtain ſufficient help to ſettle a colony there, 'till anno 1684, when Monſ. de la Sale diſcovered, with great difficulty, the mouth of the Miſſiſſippi, and built fort St. Lewis on that bay; and, he being aſſaſſinated, the place was again abandoned 'till anno 1698, when Capt. Iberville diſcovered the river Miſſiſſippi, and chriſtened the whole country Louiſiana, and made ſeveral ſettlements, which have been ſince very much improved, eſpecially from the year 1720.

For 'till that time the Spaniards had ſome forts on the coaſt, particularly that of Penſacola, about 14 leagues eaſt of the iſle of Dauphin, the moſt conſiderable ſettlement belonging to the French, where they were ever oppoſing the French from ſettling in that country, and diſputing their title to it; ſo that they cannot be properly ſaid to have been rightly fixed in thoſe poſſeſſions 'till then: of ſo late date is their eſtabliſhment there.

Authors and travellers give variety of accounts in relation to the natural hiſtory of Louiſiana. With reſpect to it's being extravagantly extolled about the year 1720, as the Frenchmen's paradiſe, great allowances muſt be made for all that was ſaid at that time, by reaſon of the uſe that was intended to be made thereof, in order to countenance the ſyſtem, as it was called in France, which was partly bottomed on the Miſſiſſippi ſcheme. See MISSISSIPPI COMPANY.

Certain it is, that ſeveral of their rivers, which overflow at certain ſeaſons, render the country very fertile and pleaſant. Nothing is ſaid to be more delightful than their meadows, which are fit for the reception of any ſeed. In ſome parts, the ſoil yields three or four crops in a year, for the winter conſiſts of heavy rains, without nipping froſts. We find there not only all the variety of trees, in great quantities, which Europe affords, but divers others unknown to the Europeans, ſome of them very valuable, ſuch as their tall and excellent cedars, a tree which diſtils a gum, ſaid to exceed our nobleſt perfumes; and the cotton-trees, which are here of a prodigious height. The whole country abounds with no little

variety of game, fowl, cattle, and every thing that life can deſire.

The chief rivers wherewith Louiſiana abounds, beſides thoſe before-mentioned, are the St. Francis, St. Anthony, Tombeau, River of Oxen, the Black River, the Oviſconſing, Illinois, Sabloniere, and many more; but the moſt conſiderable is the Mobile, by reaſon of the fine country it waters on both ſides, and the ſettlement of the Chicachas, Cattas, Nanibas, Mobilans, and other nations that inhabit on each ſide of it, but more eſpecially for it's fine bay, and the French ſettlement upon it. It deſcends from the mountains in the country of the Illinois, about 20 leagues, or more, north of the Chicachas, and, after a courſe of above 200 leagues ſouthward, through ſome fine fertile plains and rich meadows, empties itſelf into the gulph of Mexico. The bay of this river is reckoned 30 leagues broad, and receives two others, viz. that of the Alibamons, which comes from the eaſt, and that of the Chicachas, which flows from the north. It is on the weſt coaſt of this bay that the French have ſettled the moſt conſiderable colony they have in all Louiſiana, which is likewiſe inhabited by ſeveral nations, ſuch as the Tomez, Apachi, Mobilans, Chattas, &c. who traffic with them at Fort Lewis, on the ſame bay. They are none of them conſiderable, except that their vicinity to Georgia, Carolina, and Florida, makes their friendſhip ſo valuable, that they are much courted on all ſides, eſpecially by the Engliſh, who leave no means untried to gain them over to their intereſt. In regard to the other rivers of Louiſiana, their names, courſes, lengths, mouths, &c. we refer the reader to our map of North America, they being too many in number to admit of a particular deſcription in a work of this nature.

The chief bays of this country, beſides thoſe of the Miſſiſſippi and that of the Mobile, are thoſe of St. Roſe, Penſacola, St. Andrew, or Sandy Bay, St. Joſeph and St. Bernard, or St. Lewis. That of St. Roſe is guarded by an iſland of the ſame name, which is very long, and extends itſelf quite to the bay of Penſacola. The channel between it and the land is wide and deep enough for any ſhips to ſail from one to the other of thoſe bays. The iſland is well wooded, and abounds with variety of game. The tides here are more regular, according to Charlevoix, than in other parts of the Mexican gulph; and the tide flows in 12 hours regularly. Penſacola hath often paſſed from the Spaniards to the French, and been fortified and diſmantled by turns, but was, at length, yielded by the latter to the former, and is now part of Florida.

The bay of St. Lewis, called by the Spaniards St. Bernard, is moſt weſtern on all this coaſt, is large and commodious. It was diſcovered, according to the French, by Monſ. de la Salle, a French gentleman, anno 1685, who landed and made a ſettlement, and built a fort there, and called it St. Lewis. This bay, however, muſt not be confounded with another ſmall one of the ſame name, which lies more eaſtward of this, over-againſt Pont-Chartrain. This ſettlement proved but of ſhort duration.

The places of note in Louiſiana, beſides thoſe we have already had occaſion to mention, are New Orleans, Pont-Chartrain, and Maurepas, about 10 or 12 leagues above the country of the Oumas, and 18 from the ſea, which yet may be ſailed, with a good wind, in 20 hours. The ſoil about it is rich and fertile, and the climate, in general, excellent.

Pont-Chartrain is chiefly noted for the lake of it's name, by which the French have found out a more ſafe and expeditious communication with the river Miſſiſſippi, to avoid the danger and difficulty of ſailing up that river by it's principal mouth. From this lake they enter into that of Maurepas, from which they go on, by means of the canal or river Iberville, into that of Miſſiſſippi. When that cannot be eaſily done, they carry their merchandizes by land from the bay, into the lake Pont-Chartrain, which diſcharges itſelf quite to the country of the Oumas, who are ſeated on the banks of the Miſſiſſippi, a little above New Orleans, and thence purſue their journey up that river, according to La Martiniere. If this be the caſe, it ſhews that this mouth and bay is not of ſo eaſy and quick paſſage to that town as father Charlevoix would inſinuate.

Remarks on Louisiana before the laſt war.

Under the articles British America, Canada, and Florida, we have ſhewed the nature and extent of thoſe colonies, and alſo of the dangers that may one day attend the vicinity of the two latter to the Britiſh colonies in North America.

That the boundaries of Louiſiana and Canada are very great, and yet very uncertain, is manifeſt from all the accounts the French have given of them. To what end can the limits of ſo extenſive a country, cloſe upon the back of all our colonies in North America, be left in ſuch a ſtate of uncertainty by the French, but with a view that, when the occaſion offers, they may become as near neighbours as they pleaſe to the Britiſh colonies, in order to take ſuch advantage therefrom as may beſt quadrate with their grand ſyſtem of commercial dominion in America? See British America. Is it not neceſſary, therefore, that the boundaries of the French, as well as thoſe of the Spaniards at Florida, ſhould be ſo juſtly ſettled and aſcertained, that no miſunderſtandings may thereby be occaſioned between the ſaid crowns? Have not the Spaniards, as well as the Engliſh, experienced what unjuſtifiable incroachments have been made by the other power in this part of America? Should not the late accounts which we have had from America, in relation to a very conſiderable illicit commerce ſaid to be carried on by the French, from the Miſſiſſippi to Mexico, alarm the Spaniards infinitely more than a little logwood-trade being carried on by the Engliſh in the bays of Campeachy and Honduras, where the Engliſh have ſo apparent a right of trade? See the article Logwood. Will not a large contraband trade, carried on by the French from hence to Spaniſh America, proportionably injure the lawful trade carried on by the Engliſh and Dutch, by the way of Old Spain to New Spain? Is the neighbourhood of the French to the Spaniards upon the Miſſiſſippi leſs dangerous to the latter than to the Britiſh colonies? If the before-mentioned accounts from America ſhould prove true, does not an opportunity offer itſelf to the Engliſh and Dutch, to make ſome advantage of with the court of Madrid?

Is it not notorious, that the French, by virtue of their Louiſianian and Canadian ſettlements, have gained, and are ſtill endeavouring more and more to gain, ſuch an aſcendancy over the Indian nations in general, that may one day prove unſpeakably injurious, if not abſolutely deſtructive of the very being of the Britiſh colonies; provided the Indian affairs are not made as much the ſtudy of the Engliſh as of their politic competitors?

Nothing more manifeſts the wiſdom of the French meaſures purſued in North America than that, although there is hardly any ſingle neighbouring colony but what might ſoon become a match for all Canada alone, yet the French, by a proper management of their Indian Allies, keep all the Britiſh northern colonies, both in time of peace and war, in a conſtant alarm, dread, and apprehenſion of danger. But it is to be feared, that thoſe affairs have not been ſo clearly and faithfully repreſented in England as could be deſired by every true friend to the intereſts of this kingdom; for, had that been the caſe, it is not to be doubted but the moſt effectual meaſures would have been taken by the crown of Great-Britain, to prevent every kind of danger that might be reaſonably apprehended to attend thoſe colonies, which England has nurſed with ſo much tenderneſs, and with ſo great proſperity to thoſe colonies themſelves, as well as emolument to herſelf. And that the reciprocal ties of intereſts may be the more and more cemented between this kingdom and her American colonies in general, is a point which I have ſincerely laboured throughout this work; and, as the article before us affords me a freſh opportunity to purſue the ſame principles, I ſhall, with what brevity I can, ſubmit a ſummary of the beſt intelligence I have been able to collect in relation to the further ſecure poſſeſſion and the commercial proſperity of thoſe colonies.

The crown of England, it is certain, has not hitherto been ſparing in expence to cheriſh thoſe important plantations, in order to raiſe them to the pitch of ſplendor wherein we at preſent behold them; and, therefore, thoſe plantations themſelves ſhould not, nor do I believe they will, be at all lukewarm, now it is in their power, in regard to their own maintenance, ſafety, and felicity: they have, indeed, given teſtimony to the contrary, and the crown and parliament have not ſhewed any inſenſibility to their late laudable zeal; nor will they ever ſhew, we may preſume, any indifference towards their trading intereſts, when they are not repugnant to thoſe of their mother-ſtate.

The people of England are already ſufficiently incumbered with taxes, though it muſt be allowed that many wiſe meaſures have been taken to render the burden light and eaſy; and it is to be hoped, that the like conſiſtency of public meaſures will prevail, to render it lighter and lighter. The colonies themſelves, therefore, jointly, ſhould chearfully contribute towards whatever expence may attend the more effectual regulation of their trade and frontiers; for it is full time that they ſhould look to their ſecurity, and moſt unnatural to expect ever to hang on the breaſt of their mother-country.

Whatever pretences may be made, it is moſt certainly true, that the preſervation of the whole range of Britiſh colonies upon the continent of America depends in a great meaſure upon a proper regulation of the Six Indian Nations, and the ſecurity of the frontiers of New York, both to the northward and ſouthward. It has been, therefore, propoſed by thoſe who ſeem to be well acquainted with the intereſt of thoſe colonies, and to have their welfare and proſperity at heart,

1. That a good ſtrong regular fortification is abſolutely neceſſary to be erected, without delay, at Wood Creek, or near it, becauſe it is not impoſſible to bring great guns to bear againſt it from Crown-Point; from whence the French always pour in their parties upon our more northern colonies, in time of war. Here, alſo, it will be neceſſary to have a magazine of all kinds of warlike ſtores, both for the offenſive and defenſive, with ſnow ſhoes, ſmall hatchets, &c.— This will, in a great meaſure, protect the Britiſh poſſeſſions; and from thence a deſcent upon Canada, when occaſion ſhall require, may not be impracticable.

2. That

2. That ſuch fort be able to contain 500 men in time of war, and never leſs than 100 in time of peace.
3. That there be an addition of 200 independent companies, to the four already eſtabliſhed here, from the Highlands of Scotland; the wilder the better for a common garriſon there.
4. That all the lands from FORT NICHOLSON to FORT ANNE, that is, all the lands upon the CARRYING-PLACE, and thoſe adjacent, be ſet apart for the uſe of ſuch Highlanders only as will ſettle there, and to be properly aſſiſted in their ſettling for the firſt two or three years: to each man and his wife 100 acres, and to each ſingle perſon 50 acres, without fee or reward, to them and their heirs for ever.
5. That near this fort, at a proper diſtance, there be erected a ſmall BLOCK-HOUSE, ſufficient for 30 Indians, to be maintained there on conſtant pay, during a war, viz. five from each of the Six Nations, to be relieved and regulated in ſuch manner as the Six Nations themſelves think moſt proper.
6. That commiſſioners from all the colonies be appointed to meet annually at NEW YORK, or ALBANY, in order to ſettle their reſpective quota's towards the general expence, and for the erecting ſuch other forts and block-houſes as may be thought neceſſary.
7. That thoſe commiſſioners jointly be impowered to lay out lands (not already granted) moſt conveniently ſituated for a good frontier; and that theſe lands be laid out in townſhips, after the NEW ENGLAND manner, for a competent number of families, to be granted to them and their heirs, ten years at leaſt, clear of all taxes and quit-rents.
8. That in each townſhip there be erected a good ſtrong church, with loop holes, and a few field pieces, which may ſerve for a retreat upon occaſion.—That theſe townſhips ſhould not conſiſt wholly of Germans, or other foreigners *.

* 'Philadelphia may one day repent,' ſays our author, who ſeems to be a worthy, honeſt, old Britiſh ſoldier, 'the vaſt 'importation of thoſe people among them; they are moſt 'of them old ſoldiers. I have reaſon to know ſomething 'of their ſpirit, having had ſome hand in diſarming 600 'of them, upon account of a mutiny in this province; and 'it was my fortune to command ſome of them upon the 'expedition againſt Canada, in 1711. A ſociety of free-'men, as the Philadelphians are, abſolutely diſclaiming 'the uſe of arms, and, at the ſame time, encouraging the 'introduction of great numbers of old foreign ſoldiers, who 'hardly know what the word Liberty means, is a contraſt 'which they only can account for.' See the Importance of gaining and preſerving the Friendſhip of the Indians to the Britiſh intereſt conſidered.

9. That a ſtring of block-houſes be erected, ſo as to make the communication, or an alarm, from one garriſon, or block-houſe, to another, eaſy, by ſmoaks, properly diſpoſed, in the day-time; or by throwing up a number of rockets, or firing great guns in the night-time *.—Such an expedient would be of great uſe during the war, as the Indians never attack but by ſurprize, and would greatly diſcourage the parties of the Indian enemies, as it would keep our own garriſons upon the watch, and our out-ſcouts ſtrictly to their duty.

* I do not think it at all impracticable to convey an alarm from Albany to New York in one night, if rockets or great guns were properly diſpoſed and attended. Let us ſuppoſe, for example, a party of French and Indians abroad, which ſeldom happens without being diſcovered by ſome out-ſcout or other: upon diſcovery, if in the day-time, let there be one great ſmoak, and one great gun fired; which, if taken up by the other garriſons, I am confident that party would hardly proceed. In order to diſcover what courſe the party may take, let there be three ſmoaks, two pretty near to one another, and the third at a proper diſtance, either to the eaſtward or weſtward, &c. which will point out the courſe taken.—This may be improved.

10. That in each of the SIX NATIONS there be built a fort of ſome kind or other, where, and in what manner, that particular nation ſhall beſt approve.
11. That in the ONONDAGO country, where their general councils are held, and the archives of the Six Nations are preſerved, ſomething more than common be erected: this will do honour to the Britiſh nation, and greatly encourage the Indians, eſpecially in time of war; and while their old men, women, and children, are ſecure in a fort, with a ſmall party of Chriſtians, their excurſions will be more free and frequent: but this ſecurity ought to be left altogether to their own choice; whether by erecting one ſingle fortification for the retreat of the whole (the SENECAS I ſhould chuſe, being a fine country, where great encouragement ought to be given to ſettlers, and where the Indians are leſs tainted with Chriſtian vices) or whether each nation ſhould have their proper retreat, or ſecurity.

What has hitherto prevented our Indians in their excurſions againſt the enemy is, in my humble opinion, in a great meaſure owing to the apprehenſions of having their cattles cut off in their abſence; they have been often threatened, and, indeed, at preſent, they have nothing to truſt to but their heels. And nothing has prevented the attempt, but the reſolutions of the CACHNAWAGES, their principal fighters (but deſerters from our MOHAWKS) not to ſpill the blood of their relations and countrymen.

And the ſame natural affection has prevented our Indians from doing, what I am confident they would have done, had they been ſure not to have met with their friends and countrymen, the CACHNAWAGES. Proper methods, therefore, ought to be taken to recover thoſe Indians; which, I conceive, is very far from impracticable.

The villainous treatment thoſe people have met with at ALBANY, from the handlers, was the original cauſe of that deſertion: and undoubtedly, for the ſame reaſons, many more do, and will deſert, if proper remedies are not ſpeedily applied.

For this purpoſe it is requiſite to obſerve, that, without a proper REGULATION OF THE TRADE BETWEEN THE INDIANS AND THE ENGLISH, ALL OTHER ENDEAVOURS ON THE SIDE OF THE LATTER, TO GAIN AND PRESERVE THE FRIENDSHIP OF THE FORMER, WILL AVAIL BUT LITTLE. I ſhall not, at preſent, enter into a detail of the GREAT INJURIES DONE BY THE ENGLISH TO THE INDIANS, IN THEIR INTERCOURSE OF COMMERCE: certain it is, that theſe poor people have, for many years, been under the direction of the people of ALBANY, whoſe intereſt it was TO DECEIVE AND DEFRAUD THEM; and, that they have been deceived and defrauded, is too notorious to be gainſaid: inſtances in abundance might be produced, but they are really too ſhocking to relate. Nor is this any new thing, as appears from the following preamble to an act of parliament of the 13th of queen Anne.—But I have not heard of any act of the like kind ſince, though the miſchief has been daily increaſing.

'Whereas great endeavours have, from time to time, been 'uſed by her majeſty's governors and commanders in chief of 'this colony, to ſettle a trade, and to have commerce with 'ſuch Indian nations as live beyond our five confederated na-'tions; which, in proceſs of time, might not only be very 'advantageous, but alſo of great ſecurity to the frontiers of 'this colony, at or near Albany, in time of war; and ſeve-'ral of the ſaid Indians being lately come to the city of Al-'bany, in order to trade with the inhabitants thereof; but 'ſeveral private perſons, not regarding the ſafety of this colo-'ny, but only deſigning their own private lucre, have, and 'do daily, uſe many indirect means to ENGROSS THE TRADE 'INTO THEIR HANDS, by their contrivance with thoſe who 'are employed by the ſaid Indians to carry them in their wag-'gons to Albany; and, having once gotten the peltry, bea-'vers, or other furrs of the ſaid Indians, in their poſſeſſion, 'hinder them to make the beſt of their market, to the ruin 'of the ſaid trade, and the ALIENATION OF THE AFFEC-'TIONS OF THE SAID INDIANS FROM THIS COLONY; and, 'inſtead of ſecuring the friendſhip of the ſaid Indians, will, 'if not prevented, cauſe them to be our enemies, &c.' This act to continue for two years.

The chief principles to be laid down in the management of our Indians are, firſt, by all means to endeavour to underſell the French: and the next is to do juſtice to the Indians in thoſe ſales. For which reaſon, I ſhould adviſe that this trade, inſtead of being wholly under the direction of the people of Albany, who are moſt of them, if not altogether, traders or handlers, and whoſe intereſt it is to take all advantages of thoſe poor people, and that with impunity, as they have no body to complain to, the principal directors being all traders themſelves, and, of courſe, Socii criminis.

2. That it be put under the direction of one ſingle perſon of capacity and integrity, of his majeſty's appointment, during good behaviour, with a handſome allowance, in the nature of a SUPERINTENDENT OF INDIAN AFFAIRS, with full powers to do ſummary juſtice upon all occaſions.
3. That he be debarred trading directly or indirectly, upon the ſevereſt penalties.
4. That he take his inſtructions from the governor and council; and report to them, at leaſt twice a year, a ſtate of our Indian affairs, in order to be laid before his majeſty or the board of trade.
5. That he be obliged to make a tour through the SIX NATIONS, once a year at leaſt, with a proper equipage, and ſome ſmall preſents for the chief men; when and where he may receive complaints, and redreſs grievances.
6. In order to ſave the crown the expence of ſuch an officer, it may be adviſeable, that, as there are two ſurveyors-general of the cuſtoms upon this continent, at an allowance of a guinea a day, and 60l. ſterling yearly, each of them, for a clerk, upon the demiſe of either, that officer be ſet apart for this uſe: one ſurveyor-general being ſufficient here for all the purpoſes of the cuſtoms, thoſe officers being rather in the nature of preventive officers, that is, their chief buſineſs is to prevent any European goods being imported from any part but from Great-Britain and Ireland, and to prevent the exportation of any of the enumerated commodities to any parts but to Great-Britain, &c. There are no revenues collected by the officers here, nor no accounts worth mentioning to comptroll: ſo that it ſeems, that one of thoſe officers at leaſt, may be very well ſpared for the above purpoſes, and much better employed.
7. That there be a handſome allowance made for two interpreters at leaſt; one, indeed, for each nation, I ſhould not think too much, and one of them always to attend the principal officer.

8. That

8. That there be a ſmith * appointed by the principal officer, with a proper allowance, in each nation, with two apprentices, in order to multiply interpreters; for want of which, I doubt, we have often been miſled and impoſed on; and, if thoſe ſmiths were obliged to teach one or two Indian youths of the beſt capacities to read and write Engliſh, it might be of no ſmall ſervice, as nothing is more wanted than honeſt interpreters.

* This is the moſt uſeful mechanic than can be among the Indians, eſpecially a gunſmith to keep their arms conſtantly in good order, their whole ſubſiſtence and traffic depending on hunting and ſhooting.

9. That every perſon, employed by the public in this ſervice be prohibited trading, directly or indirectly, under ſevere penalties, and give ſecurity for the due execution of his duty; and to be on oath obliged to repreſent faithfully, every grievance which, he conceives, the Indians meet with from the traders. As monopolies in general are the bane of trade, this commerce ſhould be open and free for all his majeſty's ſubjects; by which means a number of buſh-lopers, as the Dutch call them, and the French, who are indefatigable in this point, coureurs de bois, are created; a ſet of men, who, from their acquaintance with the woods and Indians, are importantly uſeful upon many occaſions, eſpecially, in time of war.

10. That there be lodged in the hands of every ſmith, or agent for that purpoſe, Indian goods, to the value of l. always by them, which they are to diſpoſe of for the uſe of the public, according to invoices from New York, fixing the prices of the goods, as well as of the furrs and ſkins, and by no means to exact further upon the Indians. This is the method, and the only method, I humbly conceive, by which we can underſell the French, and will prove a means to regulate the whole Indian trade: and this is the method taken in the government of New-England, which is in the following manner, viz.

By an act of 12 Geo. I. it is enacted, 'That proviſions, 'cloathing, &c. ſuitable for carrying on a trade with the 'Indians, not exceeding the value of 4000 l. be procured 'at the coſt and charge of the province, and the produce ap'plied for ſupplying the Indians, by ſuch perſons as ſhall be 'annually choſen, &c. and likewiſe annually produce fair ac'counts of their proceedings; which ſupplies ſhall be lodged 'to the eaſtward, at, &c.

'That a ſuitable perſon be choſen annually at each of the 'places where any of the goods, &c. are lodged, which 'truck-maſters ſhall be under oath, and give ſufficient ſecu'rity for the faithful diſcharge of that truſt, and ſuch in'ſtructions as they ſhall receive from time to time: and 'ſhall keep fair accounts of their trade, and dealings with 'the Indians, and ſhall return the ſame, together with the 'produce, to the perſon or perſons who ſhall be appointed to 'ſupply them with goods. And they ſhall not trade with 'the Indians, directly or indirectly. That the truck-maſ'ters ſell to the Indians at the price ſet in the invoices ſent 'them from time to time, without any advance thereon; 'and ſhall allow the Indians for their furrs, and other goods, 'as the markets ſhall be at Boſton, according to the lateſt 'advices from the perſon or perſons that ſhall ſupply them 'for the ſame commodities of equal goodneſs.

'Rum to be given to the Indians in moderate quantities, by 'the truck-maſters only.

'No perſon whatſoever, other than the truck-maſters, and 'they only as ſuch, ſhall or may preſume by themſelves, or 'any other for them, directly or indirectly, to ſell, truck, 'barter, or exchange, with any Indian or Indians, any wares, 'merchandizes, or proviſions, within ſix miles of any 'truck-houſe, &c. on penalty of forfeiting 50 l. or ſix 'months impriſonment.'

From hence I have only to obſerve, that, had our Indian trade been under ſuch a regulation, or indeed any regulation at all, we ſhould have leſs to apprehend at this time of day; and it is certainly high time to make a beginning.

11. A grand fair yearly eſtabliſhed in the Six Nations, to be kept alternately, would be extremely uſeful; to begin firſt in the ONONDAGO country, the next year in the SENECA country, &c. of which all the nations, far and near, may have due notice; and where the ſuperintendant, or inſpector-general before humbly propoſed, ſhould always attend: and, the prices of goods being fixed from the lateſt invoices from NEW YORK, it would be a great inducement to the diſtant nations of Indians, as well as our own, to purchaſe, and would at the ſame time be a check upon the handlers at OSWEGO, as well as elſewhere.

One eſſential article in our trade with the Indians, and upon which, in a great meaſure, the whole depends, has been hitherto much neglected on our part; and that is, from us they have the cheapeſt Engliſh arms and ammunition, and of courſe the worſt upon the face of the earth: the French take the utmoſt care to ſupply them with what is really good, and at a cheaper rate than we can afford the beſt of ours: by which means, I doubt, they will ever be able to underſell us in that eſſential article, unleſs ſome effectual methods are fallen upon to prevent it. The French purchaſe Indian goods both in Holland and in England for thoſe very Indians. Or, why might not thoſe colonies manufacture their own powder in the MOHAWK's country, where ſaltpetre may be had in abundance, from thoſe vaſt beds of pigeon's-dung? In ſhort, the Indians muſt have good powder and arms; and, where the beſt is, there they will go; and, according to the preſent ſituation of things, they will depend upon the French for it. Could we get the better of this one article, all that attachment and intercourſe our Indians have at preſent with CANADA, would, I am confident, ſoon be at an end.—This is a matter well deſerving conſideration.

12. That inſtead of ſupporting this trade by way of licence, which has hitherto been but oddly managed, there be a duty, applicable only to Indian affairs, and thrown into the joint ſtock, upon all Indian goods exported hither by land or water; and likewiſe upon all furrs and ſkins imported, under the direction of the officers of his majeſty's cuſtoms; thoſe, appointed by the country, have generally more regard to their friends than their duty. This has been formerly practiſed, and, it is humbly conceived, will anſwer every purpoſe much better.

As this affair will create a yearly expence, ſuch as no one colony can well bear, let there be a ſcheme prepared for each colony's paying their proportion. Moſt certain it is, as before obſerved, that, if ever NEW YORK, ALBANY, and HUDSON's river, ſhould get into other hands, every other colony would ſoon follow; and, while that is ſecure, all the more northern colonies will be ſo too. If what has been ſaid ſhould appear true, is it poſſible to doubt but that they will readily comply? In anſwer to that trite objection, viz. as we have all the trade to this part [meaning NEW YORK and ALBANY] we ought to be at all the expence: in God's name, let each contributing colony have it's townſhip upon the frontiers, with proper magazines, and one or more trading houſes, and a ſloop, and make the moſt of it.

The names of the provinces that form the republic of Holland, with their ſeveral rates towards the yearly expence of the government, according to the proportion of 100 guilders, and the order in which their deputies to the ſtates general vote, are as follows:

	Guil.	Stiv.	Den.
Guelderland, with the county of Zutphen	5	12	3
Holland, with Weſt Frieſland or North Holland	58	6	2½
Zealand	9	3	8
Utrecht	5	16	5
Frieſland	11	13	2
Overyſſel	3	11	5
Groningen, with the Omlands	5	16	7½
	100	00	0

(This may ſerve for ſomething of a model.)

The people of New York have been at an infinite expence upon the whole, from the beginning, in fortifying, and in preſents to the Indians, with very little aſſiſtance from their neighbour colonies; a charge which that province is hardly able to bear, and moſt unreaſonable, as every other colony upon the continent is, in ſome degree or other, concerned in the preſervation of the friendſhip of the Indians, and the ſecurity of our frontiers. This, however, has been but palliating matters, and doing things by halves: whenever the colonies think fit to join, the Indian affairs will wear quite another aſpect. The very name of ſuch an happy confederacy will greatly encourage our Indians, ſtrike terror into the French, and be a means to prevent their inſupportable inſults and incroachments, which they daily make with impunity.

A long ſeries of ill uſage from the traders has given the Indians but a very indifferent opinion of our morals; and of late, from ſeveral abortive expeditions, they begin, I doubt, to ſuſpect our courage; than which, nothing can more affect our intereſt with them. They of themſelves are honeſt, ſuch at leaſt as have not been debauched by the Chriſtians, and brave in their way, and deſpiſe knaves and cowards. It will, therefore, require ſome addreſs, and not a little expence to recover our character.

If all this is to no purpoſe, and that they will ſtand out, let us not deſpair, but that, upon a proper repreſentation to his majeſty, of the abſolute impoſſibility for this colony alone to bear the expence of ſettling and preſerving our Indian affairs upon ſuch a footing as they really ought to be, his majeſty, from his wonted goodneſs, will undoubtedly, not only aſſiſt them himſelf, but oblige the other colonies to aſſiſt them; in proof of which paternal care, give me leave here to inſert ſome of his inſtructions to the late governor Montgomerie in 1727, upon this very occaſion.

Inſtruction 83. 'Whereas it has been thought requiſite, that 'the general ſecurity of our plantations upon the continent 'of America be provided for by a contribution, in proportion 'to the reſpective abilities of each plantation: and whereas 'the northern frontiers of the province of New York, being 'moſt expoſed to an enemy, do require an extraordinary

'charge

'charge for the erecting and maintaining of forts neceſſary 'for the defence thereof: and whereas orders were given by 'king William III. for the advancing 500 l. ſterling, to- 'wards a fort in the ONONDAGO country, and of 2000 l. 'ſterling, towards building the forts at ALBANY and SCHE- 'NECTADY; and likewiſe by letters under his royal ſign 'manual, directed to the governors of divers of the planta- 'tions, to recommend to the councils and general aſſemblies 'of the ſaid plantations, that they reſpectively furniſh a pro- 'portionable ſum towards the fortifications on the northern 'frontiers of our ſaid province of New York, viz.

RHODE ISLAND and PROVIDENCE.

Plantations l.	150
'CONNECTICUT	450
'PENSYLVANIA	350
'MARYLAND	650
'VIRGINIA	900
Making together	2500

'And whereas we have thought fit to direct, that you alſo 'ſignify to our province of NOVA CÆSAREA, or NEW 'JERSEY, that the ſums which we have at preſent thought 'fit to be contributed by them, if not already done, in pro- 'portion to what has been directed, to be ſupplied by our 'other plantations as aforeſaid, are 250 l. ſterling for the di- 'viſion of EAST NEW JERSEY, and 250 l. ſterling for the 'diviſion of WEST NEW JERSEY: you are, therefore, to 'inform yourſelf what has been done therein, and what re- 'mains further to be done, and to ſend an account thereof 'to us, and to our commiſſioners for trade and plantations, 'as aforeſaid.

'84. And you are alſo, in our name, inſtantly to recom- 'mend to our council, and the general aſſembly of our ſaid 'province of NEW YORK, that they exert the utmoſt of 'their power, in providing, without delay, what further 'ſhall be requiſite for preparing, erecting, and maintaining 'of ſuch forts in all parts of that province, as you and they 'ſhall agree upon.

'85. And you are likewiſe to ſignify to our ſaid council, 'and the ſaid general aſſembly, that for further encourage- 'ment, that beſides the contributions to be made towards 'the raiſing and maintaining of forts and fortifications on 'that frontier as above-mentioned, it is our will and plea- 'ſure, in caſe the ſaid frontier be at any time invaded by an 'enemy, the neighbouring colonies and plantations upon 'the continent ſhall make good, in men, or money in lieu 'thereof, their quota of aſſiſtance, according to the follow- 'ing repartition, viz.

	Men.
'MASSACHUSET'S BAY	350
'NEW HAMPSHIRE	40
'RHODE ISLAND	48
'CONNECTICUT	120
'NEW YORK	200

'WEST NEW JERSEY	60
'PENSYLVANIA	80
'MARYLAND	160
'VIRGINIA	240
Making together	1358

'Purſuant whereunto you are, as occaſion requires, to call 'for the ſame; and, in caſe of any invaſion upon the 'neighbouring plantations, you are, upon application of the 'reſpective governors thereof, to be aiding and aſſiſting to 'them in the beſt manner you, and as the condition of your 'government will permit.'

As to this inſtruction, his majeſty, I doubt, has not been thoroughly informed, becauſe, upon an invaſion, conſider- ing the diſtance and dilatorineſs of aſſemblies, the miſchief, in all probability, would be over before we could have any aſſiſtance. I ſhould, therefore, think it adviſeable, that thoſe proportions be immediately detached to the frontiers, upon the firſt news of a war; there to remain, and to be re- cruited during the war, at the expence of the ſaid colonies. I ſhudder, continues the author, to think what would have been the fate of ALBANY, had not theſe troops, deſigned againſt CANADA, been accidentally there; more eſpeci- ally as the people of ALBANY, at that time, where afflict- ed with an epidemical diſtemper, which carried off great numbers.

From hence his majeſty's care is apparent; and why thoſe in- ſtructions have not been hitherto duly obſerved, is what I ſhall not take upon me to determine: I cannot, however, help thinking, that, from upwards of forty years obſerva- tions upon the conduct of our colony aſſemblies, and the little regard paid by them to the royal inſtructions; if it is left altogether to them, the whole will end in words and alterca- tion only. By the above inſtructions it appears, that his ma- jeſty has been fully apprized of the conſequences of leaving this colony unguarded, as well as of it's inability to anſwer his moſt gracious intentions.

I ſhould therefore adviſe, that the quota's be doubled; which they can now very well bear, and both the CAROLINA's added, and the whole inforced by an act of the Britiſh legiſlature. In that caſe, if this ſcheme, or ſomething ſimilar to it (as I am very far from thinking but that it will admit of many im- provements, and for that purpoſe it is offered) is duly exe- cuted; I will venture to propheſy, that, in a few years the whole furr-trade will be in Britiſh hands, and that the furr- trade company in CANADA will ſink, upon which the very being of that company depends.

I have only further, adds this honeſt gentleman, with great ſubmiſſion to adviſe, that the meeting of the Indians be alter- nate, one year at New York, which will add but very little to the expence, and where the commiſſioners from thoſe con- tributing colonies may more conveniently attend; and where, it is to be hoped, the Indians may receive ſome better im- preſſions of our people than they have hitherto done at AL- BANY; the next year any where but at ALBANY or SCHE- NECTADY: that the preſents made to the Indians upon thoſe occaſions, as ſoon as viewed, and divided by the particular nations, be packed up again, in ſuch manner as may make the carriage the eaſieſt, of which they themſelves will be the beſt judges, and locked up, and the keys to be delivered to the principal SACHEM of each nation, and not to be opened 'till they arrive in their own country: for I believe I may venture to affirm, that the greateſt part of thoſe preſents, made them upon theſe ſolemn occaſions, ſeldom go further than ALBANY or SCHENECTADY, but are bought up by the handlers for rum, and afterwards ſold to the Indians, when drunk, at an exorbitant rate: I would propoſe this method, being well aſſured there is no law can be contrived, or oath framed, to bind a handler.

As to our ſouthern frontiers, the city, &c. I mean of NEW YORK, let thoſe be altogether under the direction, and at the expence of the colony of NEW YORK, hoping withal, his majeſty will be graciouſly pleaſed to favour them with a ſmall detachment of gunners, and one engineer, for a time at leaſt, together with ſome artillery and ammunition. Large ſums have been expended, or rather ſquandered away, on this ac- count, by the country, to very little purpoſe. Let there be two batteries erected at the NARROWS, one on each ſide, in proper places, and with breaſt-works only; any fortifica- tions there may fall into the enemy's hands, and have bad conſequences. Theſe batteries ſhould be under the care of the adjoining counties; that on the eaſt ſide under the care of the regiment of King's County, and that on the weſt ſide under the care of the regiment of Richmond County.

Our utmoſt endeavours muſt be, in the firſt place, to prevent the enemy's landing; and alſo, in the next place, to prevent a bombardment. For this purpoſe it may be neceſſary to view the coaſt below the two firſt batteries. Should an ene- my land at or near NEW UTRECHT, the march is eaſy, even with cannon, from thence to the ferry, of which we ſhould ſoon feel the effects. Low batteries, as I would have all thoſe to be, even with the water if poſſible, at RED or YELLOW HOOK, will be a means to prevent a bombard ment, and the enemy's landing upon LONG ISLAND. A ſmall battery upon KENEDY's ISLAND may be of uſe. Let there be ſeveral ſmall batteries fixed round NUTTEN ISLAND, of heavy cannon, and it were to be wiſhed they were all ſuch; and one ſtrong intrenchment in the middle, for a number of troops.

At the eaſt end of the town a good battery will be neceſſary, as well as ſeveral along HUDSON's RIVER.

I would not have any of thoſe batteries exceed five guns, but to be placed the thicker: ſhips generally aim at one battery at a time; beſides, it is impoſſible to know where a ſhip may lie: in this caſe, it is odds but ſome of our batteries may take her up. Breaſt-works, with block-houſes, inſtead of ſtockadoes, would anſwer all purpoſes much better, be of much leſs ex- pence, and laſt longer.

As to the fort, and the lower batteries, they are altogether ill deſigned, and as badly executed; but as our late engineer has reported, to his excellency the governor, the failures, and the improvements that may be made, ſo as to reſiſt any ſud- den attack, we hope a matter of this conſequence will be no longer diſregarded.

It is a conſtant rule, that every detached work, however in- ſignificant in itſelf, ſhould have it's ammunition at hand, to be come at without difficulty or danger; one hundred weight at leaſt of powder to each gun.

The regiments of Suffolk, Queen's, and King's Counties, Richmond, and Weſtcheſter, will be force ſufficient to de- fend the city, if they can be brought together with regula- rity and certainty: to which, however, may be added the militia of Connecticut and Eſſex County. Let all the other counties bend their force towards the frontiers.

Beacons, or rather ſmokes, in the day-time, and rockets, or great guns, in the night, for this purpoſe, will be abſolutely neceſſary. It will be no great difficulty to carry an alarm to the caſt end of Long Iſland, to Richmond County, and Weſtcheſter, at the ſame time, in a very few hours; upon which, every man that keeps a horſe ought to make the beſt of his way to the city, and not to wait the forming into com-

Our ancient poſſeſſions in North America, between the ſea and mountains, appear from many ſurveys, as well as from all the maps and other accounts we have of them, to be, at a medium, about three degrees of longitude, or 140 miles broad, in a ſtrait line: and they extend from GEORGIA, in latitude 32°, to the BAY OF FUNDY, in latitude 45°, (which is much farther, both north and ſouth, than the lands appear to be of any great value) which makes 13 degrees difference of latitude, or 780 miles: this length, multiplied by the breadth 140, makes 109,200 ſquare miles. This is not above as much land as is contained in Britain and Ireland; which, by Templeman's ſurvey, make 105,634 ſquare miles. Inſtead of being as large as a great part of Europe, as we are commonly told, all the lands we poſſeſs in North America, between the ſea and mountains, do not amount to much more than theſe two iſlands. This appears farther, from the particular ſurveys of each of our colonies, as well as from this general eſtimate of the whole.

Of the extremity of theſe lands, both north and ſouth, which we poſſeſs, are very poor and barren, and produce little or nothing, at leaſt for Britain. It is only in our middle plantations, Virginia, Maryland, and Carolina, chiefly, where the lands produce any ſtaple commodities for this kingdom. In ſhort, it is only the more rich and fertile lands on and about Cheſapeak bay, with the ſwamps in the Carolina's, &c. like the lands on the Miſſiſſippi, that turn to any great account to this nation, in all NORTH AMERICA.

This makes the quantity of lands, that produce any ſtaple commodity for Britain in North America, incredibly ſmall, and vaſtly leſs than what is commonly imagined. It is reckoned, that there are more ſuch lands in Virginia, than in all the reſt of our colonies; and yet it appeared from the public records, about 26 years ago, that there was not more land patented in that colony, which is the oldeſt of any in all North America, than is in the county of Yorkſhire in England, to wit, 4684 ſquare miles; although the country was then ſettled to the mountains.

If we examine all our other colonies, there will appear to be as great a ſcarcity and want of good lands in them, at leaſt to anſwer the great end of colonies, the making of ſtaple commodities for Britain, and exportation. In a word, our colonies are already ſettled to the mountains, and have no lands, either to extend their ſettlements, as they increaſe and multiply, to keep up their plantations of ſtaple commodities, or to enlarge the Britiſh dominions, by the number of foreigners that remove to them, 'till they paſs thoſe mountains and ſettle on the MISSISSIPPI.

This ſcarcity of land in our colonies, proceeds from the mountains with which they are ſurrounded, and by which they are confined to this narrow tract, and a low vale along the ſea-ſide. The breadth of the continent, from the Atlantic ocean to the Miſſiſſippi, appears to be above 600 miles (of 60 to a degree) of which there is about 140 at a medium, or 150 at moſt, that lie between the ſea and mountains; and there is ſuch another and rather more fertile tract of level and improveable lands, about the ſame breadth, between the weſtern parts of thoſe mountains and the Miſſiſſippi: ſo that the mountainous country, which lies between theſe two, is equal to them both, and makes one half of all the lands between the MISSISSIPPI and ATLANTIC ocean; if we except a ſmall tract of a level champaign country upon the heads of the OHIO, which is poſſeſſed by the SIX NATIONS and their dependants. Theſe mountainous and barren deſerts, which lie immediately beyond our preſent ſettlements, are not only unfit for culture themſelves, and ſo inconvenient to navigation, whether to the ocean or to the Miſſiſſippi, that little or no uſe can be made of them; but they likewiſe preclude us from any acceſs to thoſe more fertile lands that lie beyond them, which would otherwiſe have been occupied long ago, but never can be ſettled, ſo at leaſt as to turn to any account to BRITAIN, without the navigation of the MISSISSIPPI; WHICH IS, AS IT WERE, THE OCEAN OF ALL THE INLAND PARTS OF NORTH AMERICA, BEYOND THE APALACHEAN MOUNTAINS, WITHOUT WHICH THOSE INLAND PARTS OF THAT CONTINENT CAN NEVER TURN TO ANY ACCOUNT TO THIS NATION.

It is our ſituation in NORTH AMERICA, that renders all that continent beyond our preſent ſettlements, of little or no uſe to theſe kingdoms, and makes the poſſeſſion of the MISSISSIPPI abſolutely neceſſary to reap the benefit of it.

How neceſſary ſuch ſettlements on the MISSISSIPPI may be, will farther appear from what we poſſeſs on this ſide of it. The lands in North America are, in the general, very poor and barren; and if any of them are more fertile, the ſoil is light and ſhallow, and ſoon worn out with culture. It is only the virgin fertility of freſh lands, ſuch as thoſe on the MISSISSIPPI, that can render this part of the world permanently advantageous to their mother country. Such lands in our colonies, that have hitherto produced their ſtaple commodities, are now pretty well exhauſted and worn out; and when their lands are worn out, neither the value of their commodities, nor the circumſtances of the planters, will admit of manuring them, at leaſt to any great advantage to this nation.

The ſtaple commodities of North America are ſo groſs and bulky, and of ſo ſmall value, that it generally takes one half of them to pay the freight, and other charges in ſending them to England; ſo that unleſs our planters have ſome advantage in making them, ſuch as cheap, rich, and freſh lands, they never can make any; their returns to England are then neglected, and the trade is gained by others who have theſe advantages, ſuch as thoſe who may be poſſeſſed of the Miſſiſſippi, or by the Germans, Ruſſians, Turks, &c. who have plenty of lands, and labour cheap: by which means they make more of our ſtaple of North America, TOBACCO, than we do ourſelves; while we cannot make their ſtaple of HEMP, FLAX, IRON, POT-ASH, &c. By that means our people are obliged to interfere with their mother-country, for want of the uſe of thoſe lands, of which there is ſuch plenty in North America, to produce theſe commodities that are ſo much wanted from thence.

The conſequences of this may be much more prejudicial to this nation, than is commonly apprehended. This trade of North America, whatever may be the income of it, conſiſts in thoſe groſs and bulky commodities, that are the chief and principal ſources of navigation; which maintain whole countries to make them, whole fleets to tranſport them, and numbers of people to manufacture them at home; on which account, this trade is more profitable to a nation, than the mines of Mexico and Peru. Though our fiſhery and ſugar trades are of great advantage to us, yet the tobacco trade alone employs more ſeamen in Britain, than either the fiſhery or the ſugar trade *; and brings in as much money to the nation, as moſt of the other products of all America at preſent.

* There were 4000 ſeamen employed in the tobacco trade in the year 1733, when that trade was under conſideration of the legiſlature; and we may at leaſt reckon them now 4500.
By the ſame accounts taken by the cuſtom-houſe officers, it appeared, that the number of Britiſh ſhips employed in all America, including the fiſhery, was 1400, with 17,000 ſeamen; beſides between 9 and 10,000 ſeamen belonging to North America, who are all ready to enter into the ſervice of Britain, on any emergency or encouragement. Of theſe there were but 4000 ſeamen employed in the fiſhery from Britain; and about as many, or 3600, in the ſugar trade. In ſhort, the trade of North America is the capital nurſery for Britiſh ſeamen, and muſt be rendered more and more ſo, as the great ſtaples of hemp, flax, iron, pot-aſh, ſilk, wine, indico, timber, pitch and tar, and every ſpecies of naval ſtores, &c. ſhall increaſe.

But thoſe commodities that afford theſe ſources of navigation, however valuable they may prove to the public, and this kingdom in particular, are far from being ſo to individuals: they are cheap, and of ſmall value, either to make or trade in; and for that reaſon they are neglected by private people, unleſs the public takes care to give them all due encouragement, and to ſet them about thoſe employments; for which purpoſe nothing can be more abſolutely neceſſary, than the proviſion of good and proper lands, ſuch as thoſe on the Miſſiſſippi; without which, our deſirable improvements in this part cannot be expected.

The many advantages of ſuch lands that produce a ſtaple for this nation in North America, are with difficulty duly repreſented. The whole intereſt of the nation in thoſe colonies depends upon them, if not the colonies themſelves. Such lands alone enable the colonies to take their manufactures and other neceſſaries from Great-Britain, to the mutual advantage of both. How neceſſary that may be, will appear from the ſtate of thoſe colonies in North America, which do not make one with another, as much as is ſufficient to ſupply them only with the neceſſary article of cloathing; not to mention the numerous other things they ſtand in need of, and take from their mother-country; and how they are enabled to pay, is ſome difficulty to reconcile. Our colonies in North America, have found it extremely difficult to make equivalent returns for what they take from us; and they would find it ſcarce poſſible to ſubſiſt much longer, if at all, in a ſtate of dependance for all their manufactures, and other neceſſaries, unleſs they are provided with other lands that may enable them to purchaſe them; and where they will find any ſuch lands, but upon the Miſſiſſippi, is more than we can tell.

When their lands are worn out, are poor and barren, or in an improper climate or ſituation, ſo that they will produce nothing to ſend to Britain, ſuch lands can only be converted into corn and paſture grounds; and the people in our colonies are thereby neceſſarily obliged, for a bare ſubſiſtence, to interfere with Britain, not only in manufactures, but the produce of their lands.

By this we may perceive the abſurdity of the popular outcry, that we have already LAND ENOUGH, and more than we can make uſe of in NORTH AMERICA. They who may be of that opinion ſhould ſhew us, where that land is to be found, and what it will produce, that may turn to any account

to the nation. Thoſe people derive their opinion from what they ſee in Europe, where the quantity of land that we poſſeſs in NORTH AMERICA will, no doubt, maintain a greater number of people than we have there. But they ſhould conſider, that thoſe people in Europe are not maintained by the planting of a bare raw commodity, with ſuch immenſe charges upon it, but by farming, manufactures, trade, and commerce; which they will ſoon reduce our colonies to, who would confine them to their preſent ſettlements, between the ſea-coaſt and the mountains that ſurround them.—For more matter, ſee our article MISSISSIPPI, our REMARKS thereon ſince the DEFINITIVE TREATY OF PEACE, 1763.

LUBECKERS.

As of old time the common councils of the free and imperial city of Lubeck, and ſeveral other towns upon the North and Eaſt Seas, have been in union with divers towns of the United Provinces, for defence of the liberty of trade, and of the rights belonging thereunto: and as now the States-General of the United Provinces, together with the burgomaſters and common council of Lubeck, have found it convenient, in the preſent conjuncture, to treat about renewing the aforeſaid union and amity, by their reſpective deputies, who, after ſeveral conferences, and reports made, agreed upon the articles following:

I. That this union ſhall not be offenſive, but only for preſerving the freedom of commerce, &c. that the reſpective citizens and ſubjects of the union may enjoy the ſame without moleſtation, and mutually protect each other; ſo that the manifold difficulties detrimental to their common trade may be removed.

II. The union ſhall not, however, prejudice the friendſhip of the emperor, or holy empire, or of France and Great-Britain. And alſo the town of Lubeck is willing to remain in obedience to the emperor; and none of the leagues, rights, &c. they have together, ſhall be changed by theſe perſents, but remain in full power, ſalvo præſenti fœdere.

III. Thoſe of the union ſhall faithfully obſerve the articles, and confirm them by oath.

IV. The States-General ſhall manage this union to the beſt advantage of the common cauſe; but ſo as the common council of Lubeck may have a vote in all the deliberations; for which purpoſe, a perſon from that town ſhall always reſide at the Hague, or ſuch other place as the ſtates may meet at. And the States-General may depute ſome perſon to reſide at Lubeck: provided always, that, if any other of the Hanſe-Towns enter into the union, it may be determined, whether it may not be fit the ſaid deputy ſhould reſide elſewhere.

V. Thoſe of the union ſhall contribute to the charges to furniſh ſhips, foot and horſe, in ſuch manner as ſhall be neceſſary.

VI. And if thoſe who interrupt commerce and navigation, on being amicably required to deſiſt, refuſe, thoſe of the union ſhall defend themſelves vigorouſly againſt them.

VII. And, if war ſhould follow, thoſe of the union ſhall recall their ſubjects from the ſervice of the adverſe party, on pain of death and confiſcation of eſtates. Nor ſhall it be allowable to procure or ſend to the adverſe party money, troops, ſhips, &c. on pain of corporal puniſhment.

VIII. And if the adverſe party ſhould arreſt the ſubjects perſons, ſhips, &c. of thoſe of the union, or ſurprize them at ſea, orders ſhall be given to make reprizals, and mutually to aſſiſt each other on that occaſion.

IX. The ſhips of thoſe of the union may freely enter each other's harbours, to victual or refit, uſing no violence, and thankfully paying for what they take.

X. The ſubjects of the union ſhall, in all their countries, enjoy the privileges of a citizen, and even the right of ſucceſſion, without diſtinction of religion, as that is practiſed in the holy empire, ſo they ſubmit to the laws of the place.

XI. None of thoſe of the union ſhall enter into any treaty, without conſent of the others, nor do any thing prejudicial to the others, but mutually endeavour to maintain each other in poſſeſſion of their liberties and privileges.

XII. So that no truce nor peace ſhall be made with the enemy, but with common and reciprocal deliberation and conſent of all the members.

XIII. This league ſhall remain in force fifty years; which term, with common conſent, may be prolonged; but if, during the ſame, or when expired, any of the union receive damage by reaſon of it, they ſhall mutually aſſiſt each other againſt all perſons whatſoever.

XIV. If any potentate, country, or city, eſpecially any of the other Hanſe-Towns, deſire to enter into this union, they ſhall be received on reaſonable conditions. See HANSE-TOWNS.

In witneſs whereof, two copies of theſe preſents have been made, and confirmed by oath, and ſealed with the ſeals of the States-General, and town of Lubeck, and ſigned by their reſpective clerk and ſyndic, each party retaining one copy. Done in May 1613, and underwritten,

By order of the States-General,

Signed AERSSEN.

And by order of the honourable the common council of the town of Lubeck,

Signed MARTIN NORDAMUS,
Syndic of the Republic of Lubeck.

Duchy of LUXEMBURG, in the Auſtrian Netherlands. This province is bounded on the north by the biſhopric of Liege, a ſmall part of Limburg, and the territory of Strablo; on the eaſt by the country of Eyffel, and the electorate of Treves; on the ſouth by Lorrain, or rather now by French Luxemburg; and on the weſt it extends to the river Maes.

The climate here is mild and temperate; but the ſoil is not equally fruitful every where; but it abounds with game, as ſtags, deers, hares, &c. There are iron mines here, which furniſh almoſt all Germany with that metal.

Chief rivers are the Moſelle, Owitz, Sour, and Semoy.

LUXEMBURG is the capital of this province.

ARLON, ſituate near the ſpring-head of the river Semoy, was formerly a conſiderable place, very well peopled; but having ſuffered very much by the wars, and been diſmantled, it is now only a borough.

BASTOGNE, near the foreſt of Ardenne, is ſo well peopled, has ſuch a good trade, and is ſo well built, that the people of the country call it Paris in Ardenne; though it is conſiderably decayed from what it once was.

VIANDEN has a conſiderable trade in woollen cloths, with which they furniſh the whole province. There are alſo here a great many tanners. The adjacent hills produce ſome wine, pretty much like the Moſelle wine.

SAINT VIST has a good trade in cattle, and is the ſtaple town of the whoſe province, it lying in the great road to Liege, Cologne, Treves, and other cities in Germany.

GRAVE-MACHEREN is a ſmall, but a pretty town, the inhabitants of which have a good trade of Moſelle wine, which grows plentifully on the neighbouring hills.

LYONNOIS, in France. This government, or province, is bounded on the north by that part of Burgundy called Mâconnois; on the eaſt by the Saone and the Rhône, which part it from Breſſe and Dauphiné; on the ſouth by Vivarais and Velay; and, on the weſt, by the mountains of Auvergne.

This province is pretty fruitful in corn, wine, and fruit; it produces particularly excellent cheſtnuts.

It's chief rivers are the Rhône, Saone, and Loire, beſides ſeveral others of leſs note.

The trade carried on in this government is pretty conſiderable, and conſiſts chiefly in cheſtnuts, paper, fine toys, guns, muſkets, piſtols, and all ſorts of iron-works.

The capital city is LYONS, on the conflux of the Saone and the Rhône, and one of the fineſt and moſt conſiderable cities in Europe, for it's ſituation, extent, and riches, it carrying on a moſt flouriſhing trade.

THE BUSINESS OF THE CUSTOMS, WITH RELATION TO THE FOLLOWING PARTICULARS, viz.

SOME LAWS CONCERNING LINENS. See article LINENS.

LINENS, chekered, ſtriped, printed, painted, ſtained, or dyed, imported, after payment of the duties, are to be marked or ſtamped with a ſeal or mark, to denote the ſame. 10 Ann. c. 19. §. 67. and 12 Ann. c. 9. §. 14, 16.

——— Stamps or ſeals to be provided by the commiſſioners of the cuſtoms, which they may alter as occaſion requires.

——— Counterfeiting the ſtamps, felony.

——— People ſelling linen knowingly with ſuch counterfeit ſtamps, their aiders, abettors, and aſſiſtants, are to forfeit 100l. and to ſtand in the pillory for two hours. 10 Ann. c. 19. §. 94. and 12 Ann. c. 9. §. 15.

——— If deſigned to be again exported; before ſhipping, notice muſt be given to the proper officer appointed by the commiſſioners of the cuſtoms, when and where they are to be packed up, who is to take off the ſeals, and return an account of the kinds and quantities to the officer appointed to receive the ſame. 12 Ann. c. 9. §. 17.

LINENS IRISH, imported into this kingdom, may afterwards be exported to the Britiſh plantations in America, DUTY FREE. 3 Geo. I. c. 21. §. 2.

——— In SCOTLAND, expoſed to ſale, or deſigned to be exported, not marked with the ſtamp of a royal burgh, &c. penalty 5 s. per piece. 10 Ann. c. 12. §. 3.

——— Counterfeiting ſuch ſtamp, penalty 50l. or a year's impriſonment, if the offender prove inſolvent. 10 Ann. c. 21. §. 4.

——— Printed, ſtained, painted or dyed, &c. in Great-Britain, exported, the DRAWBACK and REGULATIONS of exportation. See the END OF LETTER D.

——— Britiſh and Iriſh, the bounty and regulations of exportation. See Ditto.

WITH RESPECT TO LOGWOOD.

LOGWOOD, alias blockwood, may be imported by any perſons, and freely uſed in dyeing. 13 & 14 Car. II. c. 11. §. 26. See the latter end of P. containing an abſtract of the laws relative to the PLANTATIONS.

M.

MACE. In the deſcription of the nutmeg, we have occaſionally mentioned this ſpice, which is the ſecond coat or covering of the kernel of that fruit. It is a thin and flat membranaceous ſubſtance, of an oleaginous nature, and of a yellowiſh colour. We meet with it in flakes of an inch or more in length, which are divided into a multitude of irregular ramifications; it is of an extremely ſmooth ſurface, and of a tolerable cloſe texture, yet friable, and very eaſily cut to pieces. It is of an extremely fragrant, aromatic, and agreeable ſmell, and of a pleaſant, but acrid and oleaginous taſte. It is to be choſen new, not dry, and of a fragant ſmell, tough, oleaginous, and of a good yellow. The people who collect the nutmeg fruit, cut it open and throw away the pulpy ſubſtance or external coat; they then ſee the mace covering the nutmeg, wrapping itſelf every way round it's outer woody ſhell. The mace is at this time of a red colour; they take it carefully off from the nutmeg, and lay it in the ſun for the whole day. In this time, it's colour, from a ſtrong blood-red, becomes duſky; it is after this carried to another place where the ſun has leſs power, and there expoſed again to it's rays the few hours they reach thither.

By this means it dries gently, and remains tough, and retains it's fragrancy and colour in a great degree; if it were dried more haſtily, it would be whitiſh, brittle, and would loſe much of it's ſmell. After this it is ſlightly ſprinkled over with ſea-water, and then put up into bales, in which it is preſſed down firm and cloſe, by way of preſerving it's fragrance and conſiſtence.

There is great caution to be had to the ſtate in which it is packed up, for, if it be too dry, it will be broke and loſe much of it's fragrance; and, on the other hand, if too moiſt, it will be ſubject to breed worms and other inſects.

Mace abounds with the ſame ſort of oil that is found in the nutmeg; but it is thinner in the mace, and is in a greater quantity. If the oil be ſeparated by diſtillation, what comes firſt over of it is thin and limpid like water, and is of the moſt fragrant ſmell; what follows this is yellowiſh and ſomewhat thicker; and, finally, a third kind comes over if the fire be made more violent, which is reddiſh; and all three of theſe are ſo ſubtile and volatile, that, if they are not kept in veſſels very cloſely ſtopped, they will in great part evaporate into the air, all their finer parts flying off. An oil may alſo be drawn from mace in the ſame manner as from the nutmeg, by expreſſion; it is afforded in a larger quantity this way than from the nutmeg, and is of a ſomewhat ſofter conſiſtence.

Mace is carminative, ſtomachic, and aſtringent; it poſſeſſes all the virtues of the nutmeg, but has it's aſtringency in a ſmaller degree. It affects the head in the ſame manner as the nutmeg, if taken in a large doſe, and people have become delirious for ſome hours, after an immoderate uſe of it. The oils of mace and nutmeg, whether prepared by diſtillation or by expreſſion, are ſo much of the ſame nature, that they may be indiſcriminately uſed for one another on all occaſions. They give eaſe in cholics, and often in nephritic caſes, taken internally from one drop to five or ſix of the diſtilled oil, or an equal quantity of the expreſſed; and, externally, they are of uſe to rub paralytic limbs; they alſo aſſiſt digeſtion, and will often ſtop vomitings and hiccoughs, only by being rubbed on the regions of the ſtomach. The nurſes have a cuſtom of applying oil of mace by expreſſion to children's navels to eaſe their gripes, and that often with ſucceſs; and we are aſſured by authors of credit, that, rubbed on the temples, it promotes ſleep. The oils by diſtillation are very properly added to the ſtronger cathartics in form of pills, and prove excellent correctives.

MACEDONIA; it's boundaries are Servia and Bulgaria on the north, Bulgaria and the Archipelago on the eaſt, Levadia on the ſouth, and Albania on the weſt. It is rich in divers mines of gold, abounds with corn, paſture, cattle, veniſon, and in ſome parts it produces wine and oil. Here are many rivers and mountains, but none very remarkable, except mount Athos.

The Turks divide it into three parts, viz. JAMBOLI, which extends, from the gulph of Salonichi on the ſouth, to the borders of Romania on the north-eaſt and north, having Macedonia Proper on the weſt, and the Archipelago on the eaſt.

MACEDONIA PROPER, has Jamboli on the eaſt, Comenolitari on the ſouth, Albania on the weſt, and Bulgaria on the north.

COMENOLITARI, is the moſt weſtern and ſouthern part of Macedonia.

SOLONICHI, or SALONICA, the metropolis of all Macedonia, and the ſeat of a Turkiſh præfect, ſtands at the bottom of a gulph, to which it gives it's name. It is 150 miles diſtant from Sofia in Bulgaria towards the ſouth, 260 from Conſtantinople to the weſt, 160 from the iſthmus of Corinth to the north-weſt, and 140 from the neareſt coaſt of the Adriatic Sea to the eaſt. In the neighbourhood of it, towards the weſt, runs the river Vardar, which abounds with fiſh, and the banks of which are adorned with beautiful trees.

MACHINE, in general, ſignifies any thing that ſerves to augment, or to regulate moving powers: or it may be defined any body deſtined to produce motion, ſo as to ſave either time or force.

Machines are divided into ſimple and compound.

Simple machines, are thoſe otherwiſe called mechanical powers. See MECHANICAL POWERS.

The ſimple machines are the balance, lever, pulley, wheel, wedge, and ſcrew; the compound are conſtituted of ſeveral ſimple ones combined together. The latter are innumerable, as well in their form as their application.

REMARKS.

The lower branches of manufacture, wherein the price is paid chiefly to labour, contribute moſt to the increaſe of labouring hands. The price of art riſes above mere labour, in proportion as genius is a ſcarcer commodity than ſtrength. Commercial ſtates regard an increaſe of riches as ſynonymous to an increaſe of power, though it be only a mark or ſign of it, and that not infallible. The following inſtance may ſerve to ſet the worth of ingenuity above bodily ſtrength in a full light, as well as to ſhew their different effects on numbers and real power.

In Ruſſia, they had no other way of making planks, 'till near the end of the laſt century, but by hewing or chipping away a whole tree to the neceſſary thickneſs; notwithſtanding which, they could afford to ſell them cheaper than their neighbours. Two Ruſſians might, poſſibly, with hard labour, finiſh a plank in a day in this inartificial way, in the ſame time, two common ſawyers could, with eaſe, cut out 20 good planks.—Without troubling ourſelves with the loſs of timber, if both are ſold at a neighbouring port for the ſame money, it is plain the Ruſſian muſt work for $\frac{1}{20}$ part of the ſawyer's wages: if a ſawyer in Sweden can get ten pence a day, the Ruſſian muſt be paid with one halfpenny. It is ſaid their renowned Czar, when in London, gave a hundred guineas for the picture of a favourite lady, finiſhed probably in the ſpace of a day. This ſum is more than one of his ſubjects would earn, in the above-mentioned way of hewing planks, by the labour of ſixty-nine years and fifteen days, or as much as fifty thouſand four hundred of them would gain in one day. Should the returns of two nations be equal, whilſt one traded in paintings alone, and the other in planks, hewed in this method, it is evident there muſt be fifty thouſand four hundred ſubjects in the latter, for every ſingle one in the former.

An increaſe of wealth may attend a decreaſe of numbers and real ſtrength, for which reaſon the balance of money is leſs to be regarded. The exports of our nation may, at preſent, exceed a million in the lower branches of bays, ſerges, druggets, and flannels, and this may employ a million of hands. In a courſe of years we will ſuppoſe this trade to be changed for that of wrought works, tapeſtry, painting, and ſtatuary, in which our exports might amount to two millions; for which a thouſand hands, full employed, would be more than ſufficient.

Here we ſee it poſſible that our wealth may be annually increaſed a million, whilſt our real ſtrength is decreaſed in the

proportion

proportion of a thouſand to one. There is nothing incompatible in the arts of ingenuity and thoſe of labour, and all the plainer trades may be retained, notwithſtanding the higher arts are introduced, in which caſe we ſhould be both a richer and greater people.

The above inſtances may bear a farther application; the carpenter, by the contrivance of the long ſaw, performs as much in a day, as twenty Ruſſians with the axe; but, beyond this, there are in Sweden a kind of mills turned by water, and ſo contrived, as to take in large trees on the upper ſide the ſtream, and deliver them out on the lower, ſawed into planks, in a few minutes. One of theſe mills will, at leaſt, make 500 planks, whilſt the poor Ruſſian could hew out a ſingle one, when the way of hewing was practiſed; ſo that it performs the buſineſs of 1000 Ruſſians, or 50 common ſawyers, in a day, with the attendance of a ſingle perſon.

If theſe two nations yearly brought to market an equal quantity of planks at the ſame price, they who uſed the method moſt artificial, would be leaſt numerous; but, as there would be a greater plenty of money in proportion to inhabitants here, they would to appearance be richer, in the ſame proportion as they were fewer. Apparent plenty of money is a ſtrong attractive. The conveniencies of life are generally plentiful, where money appears ſo. Perhaps the ſmaller nation may make up it's numbers equal to the other, by theſe temptations to invite ſtrangers. Ingenuity in one inſtance is never ſingle, the ſame genius will ſtrike out NEW TRADES, which invents compendious methods of performing the old ones, and new employments call for new hands.

The more ingenious nation will likewiſe ſtand the beſt chance to gain the whole market; for, beſides that MACHINES generally do the work truer and better than the hand, the labour ſaved by them is ſo very great, that, if the materials are equally plentiful, they who uſe the machine muſt underſell the others in a vaſt diſproportion. For, as in this inſtance, both are ſuppoſed to work only to live, proviſions can be in no part of the world dearer than another, in the proportion of 500 to 1. A larger quantity, wrought in a more compendious manner, may call for as many hands, as a leſs quantity in a way more laborious. All theſe conſiderations tend to make up their numbers, which will be richer, more improved, and more ingenious, either to defend or acquire; for ingenuity is generally an overmatch for ſtrength.

On the other hand it may be argued, that here, as in the mechanics, what we gain in expedition we loſe in ſtrength: it can never be that the foreign market, by the uſe of the MACHINE, or all the conſequences of ingenuity, can be ſo much increaſed as the home one is leſſened, or in the proportion of 500 to 1. Numbers of men are real power: an equal number of labourers are generally ſtronger than the ſame number of mechanics. A good writer of the preſent age explodes the uſe of machines, even of water-mills for grinding corn, L'Eſp. des Loix, vol. ii. p. 116, 117. The beſt conſtituted ſtates have reſtrained them by laws; by what appears from authors, the Romans uſed chiefly hand-mills, and, if we may judge from the ſilence of Ariſtotle, Pliny, and Seneca, machines were very few and ſimple, either amongſt the Greeks or Romans. Theſe arguments a little vindicate the abſurd policy of the old duke of Muſcovy, who, when a perſon offered him a project for towing up a barge with eighteen hands, which then employed an hundred and ten, ordered him immediately into baniſhment.

In ſuch a variety of reaſons, it is not eaſy to determine, to what degree the uſe of machines in general ſhould be admitted. States without commerce regard chiefly the increaſe of numbers and their home markets; and commercial ſtates are too apt to conſider wealth alone, and foreign markets. Without prejudice to either, machines or engines may be allowed in the following caſes.

1. When they do ſuch buſineſs as cannot be performed by hand at all. Of this kind are pumps, fire-engines, water-engines, looms, wine and oil-preſſes, hand-mills for grain, and perhaps horſe-mills.

2. Where the commodities wrought by them are ſuch as would not be uſed at all, except they were done by the machine, either being not cheap enough or not good enough for conſumption, when prepared by hand. Under this head are the mills for making paper, thoſe for forging, drawing, ſlitting, iron, copper, fulling of cloth and leather, and making gunpowder.

A people without commerce may ſafely refuſe to admit ſtocking-looms, ſawing-mills, throwing-engines, weaving or ſpinning-engines, mills for ſtriking files, cutting watch-wheels, making nails, and all the variety of inventions produced by a rivalſhip amongſt nations contending for commerce; and private men for orders.

Commercial ſtates muſt have their eyes on their neighbours, and, if they deſign to engroſs foreign markets, muſt provide for the cheapneſs of labour at home; goods muſt be made cheap to render them of general uſe abroad and at home. Engines for ſhortening buſineſs ought to be rejected, or not admitted in commercial ſtates; when the commodity is not at all ſold abroad, when it affects not the price of labour, when the machines would leſſen our home markets, more than increaſe our foreign ones. See the article LABOUR.

MADDER, is one of the long and ſmall roots, diſtinguiſhable from all the others by it's remarkable red colour and firm texture. It is brought to us in pieces of four, five, or more inches in length, but ſeldom in the thickeſt part exceeding the bigneſs of a gooſe quill. It's ſurface is wrinkled, with a number of furrows running principally in a longitudinal direction; it is light, though of a firm texture, and, for a root of that ſmall ſize, not eaſily cut. It's colour is a ſtrong but ſomewhat duſky red, both on the outſide and within, but ſomewhat brighteſt where freſh cut. It has very little ſmell, but it is of a very remarkable taſte, and diſtinguiſhes plainly in it a mixture of ſweet and bitter, and a very manifeſt aſtringency with this.

Madder is to be choſen in long and thick roots ſound throughout, hard to be broken in any part, and, when cut, of a good colour. It is not ſubject to adulterations, ſo that, if it be ſound and well dried, it is always good, unleſs it have been kept too long, and this is eaſily diſcovered by it's wanting taſte. Madder is cultivated in vaſt quantities in ſeveral parts of Holland; the Dutch ſupply all Europe with it, and make a vaſt advantage of the trade in it; it is very wonderful, that no other nation has attempted the cultivating it; there is no doubt but it would ſucceed very well in France, Germany, or with us, and much ground might be employed this way, to ten times the advantage that it is at preſent. What the Dutch ſend over for medicinal uſe is in the root, which is only dried and ſent over without any preparation; the greateſt quantity, however, is uſed by the dyers: this they uſually ſend in coarſe powder, ground in mills; they make two kinds of this ground madder, the one is the whole root ground, juſt as taken out of the earth and dried; the other is cleaned from the cortical part, which is of a duſkier colour than the reſt, and then ground to powder. This is diſtinguiſhed from the other, by it's being of a paler and more agreeable colour.

The plant which produces the rubia root is of the number of the tetandria monogynia of Linnæus, and one of the herbæ ſtellatæ of Mr. Ray. It grows to two feet high; it's ſtalks are ſquare and rough; it's leaves are oblong and narrow, and ſtand four at a joint in manner of a ſtar. It's flowers grow in cluſters at the upper part of the ſtalks, and are very ſmall, and of a pale yellowiſh-green colour; theſe are followed by a fruit conſiſting of two ſeeds. It has been deſcribed by all the botanical writers under the name of rubia ſativa, and rubia tinctorum.

The root is an attenuant, and has the credit of being a vulnerary of the firſt rank. It is at preſent given with ſucceſs in chronic caſes, where there are obſtructions of the viſcera. It promotes the menſes and urine, and is good in jaundices, dropſies, and obſtructions of the ſpleen. It's doſe is from five grains to fifteen, but it is ſeldom given ſingly. It frequently makes an ingredient in infuſions and decoctions, among other medicines of the ſame intention, and it gives theſe an elegant colour.

It is alſo uſed in great quantities by the dyers, for red and other colours.

MALT, is barley prepared, to fit it for making a potable liquor called beer or ale.

OBSERVATIONS on the manner of MALTING.

This ſubject is of large extent, and, if duly proſecuted, might tend to the enrichment of the preſent arts, or the diſcovery of new ones. For, on regulating the growth, and curing of vegetable productions, depends the perfection of corn, wines, malt, bread, ſugar, tobacco, ſpice, drugs, ſimples, dyeing ſtuffs, and the like. And new diſcoveries, either in vegetation, or curation of vegetables, might eaſily introduce new trades; as has been the caſe in ſugar, tobacco, wines, ſpirits, &c.

By experiments in vegetation, we here propoſe to ſhew the methods of regulating or conducting this natural power for the ſervice of arts, by directing it to anſwer particular ends. Thus, by ſtopping ſhort towards the beginning of vegetation in barley, we procure malt; and, by permitting the grapes to hang 'till they grow not only ripe, but almoſt dry, upon the vine, we procure rich ſweet wines. And thus we may ſtop vegetation at any period, or continue it longer than ordinary, according as the occaſions of different arts require.

By experiments in curation of vegetables, we have ſhewn the methods of collecting, preparing, and ſecuring vegetable commodities, ſo as that they may long remain ſound, perfect, and fit for ſervice. And thus our preſent deſign will conſiſt of two parts: the one relating to the ways of growing vegetables, according to the uſes for which they are intended; and the other to the gathering and preſerving them, ſo as to have them conſtantly ready at hand, when they come to be required in uſe.

The firſt experiment, therefore, is calculated to ſhew the method of ſtopping the natural proceſs of vegetation in the ſeed, ſo as to prepare grain, pulſe, nuts, maſt, and roots, for the making of beer, vinegar, and ſpirits. The ſecond is

is deſigned to ſhew the method of curing both fermented and unfermented vegetable juices, ſo as to make them keep ſound and good for ſeveral years. The third experiment tends to ſhew the method of curing vegetable juices by decoction, or inſpiſſation, for the ſervice of brewing and diſtilling.

A parcel of garden-beans being plucked up, after they had been ſuffered to lie in the ground about ſix weeks in the winter ſeaſon, each bean was found beginning to ſplit, or ſeparate, into it's two lobes; whilſt the radicle was ſhot out ſome inches downwards, and had begun to take root in the ground; the plume alſo, which becomes the ſtalk of the bean, being riſen to the height of two inches. In this ſtate a few, being dried over a clear fire, were found turned to a kind of bean-malt, that taſted ſweetiſh, but mealy betwixt the teeth, and diſſolved freely in warm water, ſo as to afford a wort fit for fermenting, with yeaſt, into a kind of beer or ale.

This experiment inſtructs us in the ordinary proceſs of malting, which, in the caſe of barley, is conformable hereto; and, in the caſe of malting Indian corn, is the proceſs itſelf.

In making malt from barley, the uſual method is to ſteep the grain in a ſufficient quantity of water for two or three days, 'till it ſwells, becomes plump, ſomewhat tender, and tinges the water of a bright brown, or reddiſh colour. Then, this water being drained away, the barley is removed from the ſteeping-ciſtern to the floor, where it is thrown into what they call the wet couch; that is, an even heap, riſing to the height of about two feet. In this wet couch the capital part of the operation is performed; for here the barley ſpontaneouſly heats and begins to grow, exactly in the ſame manner as in our preſent example of beans; ſhooting out firſt the radicle, and, if ſuffered to continue, then the plume, ſpire, or blade. But the proceſs is to be ſtopped ſhort at the eruption of the radicle, otherwiſe the malt would be ſpoiled. The way of ſtopping it, is to ſpread this wet couch thin over a large floor, and keep it turning once in four or five hours, for the ſpace of two days, laying it ſomewhat thicker each time. After this, the malt is again thrown in a large heap, and there ſuffered to grow ſenſibly hot to the hand, as it uſually will in twenty or thirty hours time; then, being ſpread abroad again and cooled, it is thrown upon the kiln, to be dried criſp without ſcorching.

This is the general proceſs of malting, wherein almoſt every malſter has his ſecret, or particular way of working. But, to render the operation perfect, the following cautions muſt be obſerved: (1.) That the barley be newly thraſhed, or at leaſt newly winnowed. (2.) That it be not mixed, or made up of different ſorts. (3.) That it be not over-ſteeped in the ciſtern, or ſo long as to make it ſoft. (4.) That it be well drained. (5.) That it be carefully looked after in the wet couch, ſo as to ſtop the firſt tendency of the blade to ſhooting. (6.) Another caution is, to turn the wet couch inſide outermoſt, if the barley comes, that it ſhoots more in the middle than on the ſides. (7.) To keep it duly turning after it is out of the wet couch. (8.) To give it the proper heating in the dry heap. (9.) To dry and criſp it thoroughly upon the kiln, but without a fierce fire, ſo as to be ſeveral days in drying a kiln of pale malt. And, if theſe directions be carefully obſerved, the malt will always be good.

The method of malting Indian corn, or Virginia wheat, is much leſs laborious. For, if this corn be buried two or three inches deep in the earth, and covered with the looſe mould, dug up to make room for it, in ten or twelve days time the corn will ſprout, and appear like a green field; at which time being taken up, and waſhed or fanned from it's dirt, it is immediately committed to the kiln, and by this means it becomes good malt, exactly as beans ſo treated would do.

It is obſervable of this corn, that both it's root and blade muſt ſhoot to a conſiderable length, before it will make malt. And, perhaps, this is the caſe, in all large-bodied grain and nuts.

Remarks.

It might be of ſervice to tranſer this eaſy experiment to the making of malt for barley, rice, and the other ſmall grains and ſeeds; but the attempt may be attended with difficulties, becauſe, in the making of malt, the barley muſt only be ſuffered to grow in it's root, and not in the blade; whence it would be difficult, at firſt, to hit the exact time for taking it out of the ground. And, again, as the grain is ſo ſmall, it might prove troubleſome to ſeparate it from the earth or mould. However, the thing may deſerve to be tried.

It is a conſideration of a higher nature to determine the phyſical effect procured by malting, and whether the end may not be obtained by cheaper and leſs laborious means. The phyſical difference betwixt malted and unmalted corn appears to be the production, or extrication of a ſweet ſaccharine ſubſtance in the malt, which is wanting under that form in the corn. And it is this ſweet ſubſtance alone, which we require in malt for the making of beer, ale, vinegar, and inflammable ſpirits. But even unmalted corn, duly treated, may be made to afford beer, ale, vinegar, and ſpirits: this, therefore, may intimate to us a way of making ſuch liquors, without the formal extrication of any remarkably ſweet ſaccharine ſubſtance. And, according to ſome trials, unmalted corn affords half the quantity of inflammable ſpirit by fermentation and diſtillation, as the ſame corn would do when malted. And, ſuppoſe that unmalted corn were to be made into a kind of dough or paſte, fermented with yeaſt, as is uſual for bread, and then baked, would not this be a cheap ſubſtitute for malting? They are ſaid to brew after this manner in ſome countries. At leaſt it deſerves to be tried, how much beer, ale, vinegar, and ſpirit, might be procured this way, compared with that other of malting.

On the other hand, if only a ſweet ſaccharine ſubſtance be required in malt, are there not cheaper and eaſier ways of procuring it than by malting? Do not many trees afford ſuch a ſaccharine juice, by tapping in the ſpring, without prejudicing the trees? Is not young green corn itſelf remarkably ſweet; and does not this ſweet juice enter the compoſition of the ear, and there remain fixed, or almoſt loſt in a ſaccharine form, 'till recovered by malting? Here is a door opened for explaining the nature of ſweetneſs, and deducing the particular hiſtory of ſugar; which is a work, that, for it's uſefulneſs in trades and ordinary life, deſerves to be conſidered. And, 'till ſome conſiderable progreſs is made in a work of this kind, the art of malting, and all thoſe that depend upon it, will not arrive at perfection. See the article Sugar.

Thoſe who are diſpoſed to go upon the enquiry, may pleaſe to compare the art of ſtarch-making with that of malting; and particularly try, whether ſome conſiderable uſes might not be made of the refuſe liquors produced in both arts. The high-coloured liquor drained away in the ſteeping ciſtern is a vegetable tincture, that might, if not by itſelf, yet by being uſed inſtead of water to ground malt, be worth fermenting and diſtilling for ſpirit: and the ſtarch-makers refuſe liquors have been obſerved to contain a quantity of inflammable ſpirit.

Our preſent experiment may in this reſpect be made general, that it ſhews us there are different times of ſtopping, or preventing, the farther growth of vegetables, for the ſervice of arts. And this doctrine may be extended to the forming a ſett of general rules, for gathering the different parts of plants, at different ſeaſons of the year, for different uſes.

Thus roots, for inſtance, to be had perfect, ſhould be gathered and dried in the ſpring, before the leaves are formed; leaves ſhould be gathered, when they are fully opened, but before the flowers appear; flowers when they are not fully opened, and ſome, as red roſes, in the bud. Seeds are to be gathered when full ripe, and beginning to dry, before they fall ſpontaneouſly; and trees are generally beſt felled and ſlawed for their bark in the beginning of the ſpring. But all this is to be underſtood of the common uſes of the ſubjects; for there are many particular occaſions, which require them immature. Thus buckthorn-berries ſhould be ripe gathered, for making the ſyrup; but unripe, for making the painter's colour called ſap-green.

An Abstract of the acts of parliament which have been made in relation to Malt.

I. Malt imported from beyond the ſeas before the 24th of June yearly, forfeited, or the value. See the acts of 13 and 14 of Will. III. cap. 5. §. 27. and 12 Ann. ſeſſ. 1. cap. 2. §. 25, 28.—12 Ann. ſeſſ. 2. cap. 3.—And the malt act yearly.

II. —— Made in Scotland, and brought into England, Wales, or Berwick upon Tweed,

By ſea, { Muſt be entered with the proper officer of the port, and the 6d. per buſhel paid before landing, unleſs certificates be produced that the 3d. per buſhel has been paid in Scotland; in which caſe only 3d muſt be paid, on forfeiture, or the value.

By land, { Muſt paſs through Berwick or Carliſle, and be there entered, and the like duty of 6d. or 3d. per buſhel paid in ready money, on forfeiture, or the value.

III. —— Brought by land beyond the ſaid towns, without entry, or payment of duty, forfeited, or the value. 11 Geo. I. cap. 8. §. 6. 12 Geo. I. cap. 4. §. 10. And ſee the malt-act yearly.

IV. —— Exported, not to draw back the exciſe.—9 Geo. I. cap. 3. 11 Geo. I. cap. 8. §. 7. 12 Geo. I. cap. 4. §. 48. For the bounty and regulations of exportation, ſee the article Corn.

V. —— Barley, oats, or other grain unmalted, mixt therewith for exportation, the forfeiture is 5s. per buſhel.—1 Geo. I. cap. 2. §. 13. 6 Geo. I. cap. 21. §. 4.

VI. —— Entered and made for exportation only, not to be charged with exciſe. 13 and 14 Will. III. cap. 5. §. 22, 23, 24, 32. 12 Geo. I. cap. 4. §. 48.

VII. —— Deſigned to be made for exportation, previous notice muſt be given to the malt officer, of the quantity of corn intended to be continued in each ſteeping, and of the hour when it is deſigned to be taken off the kiln. 12 Geo. I. cap. 4. §. 49. 3 Geo. II. cap. 7. §. 16, 17.

VIII. ——Such corn to be kept ſeparate, upon forfeiture of 5 s. per buſhel; and each ſteeping to be kept ſeparate 'till meaſured, upon forfeiture of 50 l.—And ſee the malt-act yearly.

IX. —— When fit for exportation, muſt be meaſured, in the preſence of an officer, and carried directly on ſhip-board, or elſe locked up ſeparately, under the joint locks of the proprietor and officer, 'till delivered out for exportation, upon forfeiture of 50 l. 12 Geo. I. cap. 4. §. 51. 3 Geo. II. cap. 7. §. 17.—And ſee the malt-act yearly.

X. —— Locks or doors opened, or entrance made into the ſtorehouſe where ſecured, or any quantity of the malt conveyed away without the knowledge or conſent of the officer, the penalty is 100 l. 3 Geo. II. cap. 7. §. 18.—And ſee the malt-act yearly.

XI. —— Storehouſes to be cleared, and all the malt therein exported within every nine months after the beginning to make uſe of them, upon penalty of 50 l. 12 Geo. I. cap. 4. §. 57. 3 Geo. II. cap. 7. §. 19, 20.—And ſee the malt-act yearly.

XII. —— When deſigned to be removed for exportation, 40 hours previous notice muſt be given to the officer, that he may ſee the ſame meaſured and delivered out, and remain on board the veſſel 'till it is cleared out. 6 Geo. I. cap. 21. §. 5, 53, 55. 12 Geo. I. cap. 4.

XIII. —— The officer to give a certificate, directed to the officer at the place of exportation, expreſſing the quantity, maker's name and place. 12 Geo. I. cap. 4. §. 54.

XIV. —— Such certificate not delivered, forfeiture 50 l.

XV. —— When deſigned to be ſhipped, at leaſt 48 hours previous notice muſt be given to the officers, on forfeiture of 5 s. per buſhel. 6 Geo. I. cap. 21. §. 6. 12 Geo. I. cap. 4. §. 57.

XVI. —— During the time of ſhipping, when goods are not actually putting on board, the hatches muſt be locked down, with two locks to each hatch, one to be provided at the charge of, and to be kept by the proprietor, and the other by the officer: the hatches to be kept ſo locked down from the time of being fully loaded, 'till the time of ſailing out of port. 12 Geo. I. cap. 4. §. 56.

XVII. —— Makers, neglecting or refuſing to perform the requiſites of this act, forfeit 50 l.

XVIII. —— Oppoſing officers, or breaking the hatches locked down, penalty 50 l. 12 Geo. I. cap. 4. §. 58.

XIX. —— Makers to be allowed 3 d. per quarter, in conſideration of the charges of ſtorehouſes, meaſuring, &c. 12 Geo. I. cap. 4. §. 59.

An exciſe certificate for malt made for exportation.

No. 9.—Hants collection.—Southampton diviſion.—January 2, 1730.

Theſe are to certify whom it may concern, that Mr. A. B. of C. maltſter, did, between the 29th day of November and the 14th day of December 1730, enter one hundred and five quarters and one buſhel of barley [or other grain] and made the ſame into one hundred and ſeventeen quarters and two buſhels of malt, for exportation; and that, on exportation thereof, the ſaid A. B. is, by virtue of an act of the 3d of George II. intitled to the bounty, or premium, of 2 s. 6 d. per quarter, upon one hundred fifty-ſeven quarters and four buſhels of malt, being according to the allowance of thirty quarters of malt for every twenty quarters of barley, or other grain, ſo malted for exportation: which ſaid allowance amounts to the ſum of 19 l. 13 s. 9 d.

D. E. Officer.

One of which certificates muſt be produced for every ſeparate parcel of malt ſhipped on each veſſel, and muſt be carefully examined by the collector and comptroller, and, if found to be interlined, obliterated, or erazed, muſt not be accepted; but, if regularly made out, muſt be preſerved, in order to be annexed to the debenture, as a voucher for the computation of the bounty.

A debenture for malt.

As to the form of a debenture for malt exported, it will appear, by the following example *, that it is not much different from thoſe before preſcribed under the article CORN; but that which is to be particularly noted is, that the bounty for malt is not to be computed on the real quantity ſhipped off, as for all other corn, but † after the rate of thirty quarters, and no more, for every twenty quarters of barley, or other corn or grain entered and made into malt, as ſhall appear by a certificate from the officers with whom the corn or grain intended to be made into malt for exportation was entered; although, in the making of ſuch malt, the barley, or other grain, ſhould either be actually run out to a greater, or ſhould not be run out to ſo great a quantity, as is in proportion to thirty quarters of malt, for every twenty quarters of corn from which it was made.

* 12 and 13 Will. III. cap. 10. §. 91, &c.
† 3 Geo. II. cap. 7. §. 14, 15.

The form of the debenture.

Port of Southampton.

Jurat A. B. That the malt herein mentioned is not relanded, or intended to be relanded in Great-Britain, or the iſlands of Guernſey or Jerſey.

14° die Januarii 1730, coram nobis,

B. C. Collector.
D. E. Comptroller.

Theſe are to certify, That I A. B. of Southampton, did, on the 10th day of January, 1730, enter for Rotterdam, on the ſhip Goodfellow of Hull, a Britiſh ſhip, whereof William Miller the maſter, and two-thirds of the mariners, are his majeſty's ſubjects, one hundred and ſeventeen quarters and two buſhels of malt, Wincheſter meaſure, and that the price of malt, Wincheſter meaſure, in the port of Southampton, the laſt market-day, did not exceed twenty-four ſhillings per quarter.
Witneſs my hand, the 10th day of January, 1730.

A. B. ——

Juravit A. B. That the contents of the abovementioned certificate are true, coram nobis,

B. C. Collector.
D. E. Comptroller.

By a certificate produced to us from the proper officers of exciſe (which is hereunto annexed) it appears, that the aforeſaid one hundred and ſeventeen quarters and two buſhels of malt were made from one hundred and five quarters and one buſhel of barley, or other grain.

Bond is taken in the penalty of 50 l. that the malt abovementioned (the danger of the ſeas excepted) ſhall be exported into parts beyond the ſeas, and not be again landed in the kingdom of Great-Britain, or the iſlands of Guernſey or Jerſey.

And, by an act of the 3d of Geo. II. the ſaid A. B. is intitled to a bounty, or premium, of two ſhillings and ſixpence per quarter, upon one hundred fifty-ſeven quarters four buſhels of malt, being according to the rate of thirty quarters of malt for every twenty quarters of barley, or other grain, malted for exportation.

B. C. Collector,
C. D. Cuſtomer,
D. E. Comptroller.

B. C. Collector,
D. E. Comptroller.

The one hundred and ſeventeen quarters and two buſhels of malt abovementioned were ſhipped in the ſaid ſhip, the 12th day of January, 1730.
Certified the 14th of January, 1730.

E. F. Searcher,
F. G. Surveyor,
G. H. Land-Waiter.

The veſſel abovementioned is Britiſh-built, the maſter and two-thirds of the mariners his majeſty's ſubjects.

H. J. Surveyor of the act of navigation.

On the back of the aforegoing malt debenture.

The bounty money to be paid for the malt within mentioned, amounts to nineteen pounds, thirteen ſhillings, and nine-pence - - -	l.	s.	d.
	19	13	9

B. C. Collector, C. D. Cuſtomer, D. E. Comptroller.

And, if the collector has not money in his hands ſufficient to pay the bounty, it muſt be certified to the commiſſioners, in like manner as for other corn.
And to theſe debentures muſt be annexed the exciſe certificate or certificates, from which the bodies of the debentures were filled up, as a voucher for the computation of the bounty.
And when, for want of money, any corn-debentures are not paid at the port, but certified to the commiſſioners of the cuſtoms, before they are delivered to the exporters, they muſt be entered in a particular book, to be kept for that purpoſe, after the following form: and from thence muſt be tranſcribed a duplicate, in the ſame form, which muſt be ſigned by the collector and comptroller, and tranſmitted to the commiſſioners as often as any debentures are made out and certified, in order to be compared with the debentures when produced for payment.

Port of Southampton.

Corn-debentures certified to the honourable the commiſſioners of his majeſty's cuſtoms.

When certified.	Date of debentures.	Exporter's name.	Ship's name. and place.	Maſter's name.	Whither bound.	Species of corn. Wheat. Q.	B.	Rye. Quart.	Barley. Q.	B.	Malt. Q.	B.	Bounty, or ſums certified. l.	s.	d.	When duplicates ſent to the commiſſioners.

A. B. Collector.
B. C. Comptroller.

A bond for the exportation of malt.

Noverint univerſi, &c.

Whereas, in purſuance of an act of parliament paſſed in the 3d year of his majeſty's reign, intitled, 'An act for continuing the duties upon malt, mum, cyder, and perry, in that part of Great-Britain called England, and for granting to his majeſty certain duties upon malt, mum, cyder, and perry, in that part of Great-Britain called Scotland, for the ſervice of the year 1730; for exempting from the ſaid duties cyder and perry uſed for diſtilling; for aſcertaining the bounty for malt exported; for the better preventing fraud in the malting corn for exportation; for making good the deficiency of a late malt-act; and for giving further time to clerks and apprentices to pay duties omitted to be paid for their indentures and contracts:' the above-bounden Caleb White hath produced, unto the collector of his majeſty's cuſtoms in the port of Southampton, a certificate from the office of Exciſe, certifying that the ſaid Caleb White did, between the 29th day of November and the 14th day of December, 1730, enter one hundred and five quarters and one buſhel of barley [or other grain] and made the ſame into one hundred and ſeventeen quarters and two buſhels of malt, for exportation; and that, on exportation, the ſaid Caleb White is, by virtue of the aforeſaid act, intitled to the bounty, or premium, of two ſhillings and ſix-pence per quarter, upon one hundred fifty-ſeven quarters and four buſhels of malt, being according to the allowance of thirty quarters of malt for every twenty quarters of barley, or other grain, ſo malted for exportation: which ſaid allowance amounts to the ſum of nineteen pounds, thirteen ſhillings, and nine-pence.

And whereas the ſaid Caleb White hath entered for exportation the ſaid one hundred and ſeventeen quarters and two buſhels of malt, on board the Goodfellow of Hull, Britiſh-built, whereof William Miller, the maſter, and two-thirds of the mariners, are Britiſh, bound for Rotterdam.

Now the condition of this obligation is ſuch, That, if the ſaid one hundred and ſeventeen quarters and two buſhels of malt, and every part thereof, ſhall be exported into parts beyond the ſeas (the dangers of the ſeas excepted) and that the ſaid malt, or any part thereof, ſhall not be again landed in Great-Britain, or the iſlands of Guernſey or Jerſey; then this preſent obligation to be void, and of none effect, or elſe to remain in full force and virtue.

But, for the greater eaſe of the exporters, by preventing any difficulties that they may lie under, by being obliged to give bond at the time of entry; it is thought that the intention of the law will be fully anſwered, though ſuch bond be not taken 'till after the malt is ſhipped; and then the bond may be taken in the following form:

A bond for the exportation of malt, to be taken after the ſhipping.

Noverint univerſi, &c.

Whereas the above-bounden Caleb White hath this day entered for exportation, with the collector of his majeſty's cuſtoms in the port of Southampton, to be ſhipped on board the Goodfellow of Hull, whereof William Miller is maſter, now riding at an anchor in ———, and bound for Rotterdam, one hundred and ſeventeen quarters and two buſhels of malt.

Now the condition of this obligation is ſuch, That, if the ſaid one hundred and ſeventeen quarters and two buſhels of malt, and every part thereof (except ſo much thereof as ſhall be endorſed on the back of this bond, by the above-bounden Caleb White, and certified by the ſearcher not to have been ſhipped) ſhall be exported into parts beyond the ſeas (the danger of the ſeas excepted) and that the ſaid malt, or any part thereof, ſhall not be landed again in Great-Britain, or in the iſlands of Guernſey or Jerſey: that then this obligation ſhall be void and of none effect, or elſe remain in full force and virtue.

Sealed and delivered in the preſence of

A. B. Collector,
B. C. Comptroller.

The form of the certificate to be produced, in order to diſcharge the aforementioned, and all other bonds, and the confirmation of the truth thereof, may be as follows:

We the under-written Britiſh merchants, reſiding at Rotterdam, do certify that there were landed, out of the Goodfellow of Hull, William Miller maſter, ninety-one quarters of wheat, forty-nine quarters of rye, thirty-eight quarters five buſhels of barley, for the account of Caleb White, merchant in Southampton. In witneſs whereof, we have hereunto ſet our hands and ſeals. Dated in Rotterdam, the 17th of March, 1730, N. S.

Charles Wells *,
Joſeph Farrel *.

I know the above ſigning to be the hand-writing of Mr. Charles Wells of Rotterdam.

George Jones.

I know the above ſigning to be the hand-writing of Mr. Joſeph Farrel of Rotterdam.

Samuel Palmer.

And if, upon a careful and diligent examination, the collector is ſatisfied of the truth and reality of ſuch certificates, and of the credit of the perſons certifying, he may cancel the bonds taken at expiration, and forthwith deliver them up, noting the ſame on the certificate, as follows:

5th of April, 1731.
Cancelled the bond, by virtue of the above certificate.

A. B. Collector,
B. C. Comptroller.

In the 26th year of the reign of his late majeſty Geo. II. an act was made for allowing intereſt upon certain debentures for the bounty granted on the exportation of corn, the ſubſtance of which is as follows, viz.

That whereas, by an act in the 1ſt year of Will. and Mar. for encouraging the exportation of corn, &c. [ſee the article CORN] every one who ſhall put on ſhip-board, in ſuch manner as by the ſaid act directed, any ſort of corn therein mentioned, with intent to export the ſame to parts beyond the ſea, and ſhall duly perform every requiſite therein required, as before ſhewn, ſhall have and receive of the commiſſioners, collectors, or other perſons appointed to collect the duties of cuſtoms, in any port where the ſame corn ſhall be ſo ſhipped, for every quarter of barley or malt, 2s. 6d. for every quarter of rye, 3s. 6d. for every quarter of wheat, 5s. which ſums the ſaid commiſſioners or collectors are authorized and required to pay to ſuch exporter, on demand: and whereas, by a clauſe in an act made in the 12th and 13th years of the reign of king William III. for granting an aid to his majeſty for defraying the expence of his navy, &c. it is enacted, That, if the collector of the cuſtoms of any port wherein corn ſhall be exported, ſhall not have ſufficient in his hands to pay ſuch ſums of money which ſhall be due to any exporter, by virtue of the ſaid act of Will. and Mar. ariſing out of the duties out of which it ought to be paid, upon demand, that then ſuch collector ſhall give the exporter, without fee or reward, a certificate under his hand of what is due to ſuch perſon for the corn, &c. exported; certifying to the cummiſſioners of the cuſtoms at London that he hath not monies in his hands to pay the ſame; which certificate being annexed to the debenture, and produced at London as aforeſaid, the ſaid commiſſioners of the cuſtoms there are authorized and required, on demand by the perſon that ſhall bring the ſame, to cauſe the monies thereby due to be paid in three months, by the general receiver or caſhier of the cuſtoms, &c. And

Whereas, by reaſon of the great quantity of corn which of late hath been exported, the revenue applicable to the payment of ſuch bounties, &c. hath not been ſufficient to pay all ſuch monies, and divers debentures for ſuch monies remain unpaid: now, for making a reaſonable compenſation for ſuch delay of payment, and to the end that the nation may continue to enjoy the benefits deſigned by the ſaid bounties, be it enacted, &c.

That if, after the 25th day of March, 1753, any debenture for the bounty on corn exported, payable as aforeſaid, ſhall remain unſatisfied more than ſix months next following the day when the ſame ſhall have been produced to the commiſſioners of the cuſtoms at London, then, and in ſuch caſe, for the forbearance of ſuch money as, after the expiration of the

ſaid

aid ſix months, ſhall be due on ſuch debenture, intereſt, after the rate of three pounds per cent. per annum, ſhall be allowed to the proprietors thereof, his, her, or their executors, adminiſtrators, or aſſigns, ſuch intereſt money to be computed from the end of the ſaid ſix months, until the money due on ſuch debenture, together with ſuch intereſt, ſhall be paid, or until money ſufficient ſhall be received in the hands of the ſaid general receiver of the cuſtoms for that purpoſe, and proper notice ſhall be given thereof.

That ſuch to whom ſuch monies may be due, may not avail themſelves of their neglect to demand the ſame, it is further enacted, That, when money ſufficient ſhall be reſerved as aforeſaid, for payment of the principal and intereſt due on ſuch debentures, the ſaid general receiver ſhall give notice in writing, to be fixed on three or more doors of ſome public place or places in the Cuſtom-Houſe London, and to be adverti ſed in the London Gazette, that, on a certain day, to be limited in the ſaid notice, and on the four days next following ſuch day (ſo as ſix days, at the leaſt, intervene between the date of ſuch notice, and the day ſo limited, and ſo as Sundays and holidays be not included in the number of ſuch four days) he ſhall be ready to pay the principal and intereſt due on ſuch debentures; after the expiration of which five days, if the payment of ſuch principal and intereſt ſhall not be demanded purſuant to the ſaid notice, all intereſt on ſuch debenture ſhall ceaſe.

Provided always, that the principal monies due thereon, with ſuch intereſt as ſhall be likewiſe due thereupon, before the expiration of the time limited in the ſaid notice, ſhall be paid on demand, at any time afterwards.

And if there ſhall be, at any time thereafter, money in hand ſufficient to diſcharge the debentures, and notice be given thereof, the intereſt thereon ſhall ceaſe, &c.

Provided nevertheleſs, that the principal and intereſt be paid in courſe, without undue preference to any of the proprietors.

The day of preſentment to be indorſed on the certificate of debenture; and an order for the payment and intereſt to be ſigned by the commiſſioners, &c.

The payment to be made of the principal and intereſt without fee.

Debentures made aſſignable.

Where there is not money in hand to pay the bounty on corn exported from Scotland, a certificate to be granted. And

The debenture to be paid by the receiver-general in three months.

Such debentures, remaining unſatisfied for ſix months, to carry 3l. per cent. intereſt.

Notice to be given when the ſame are ready to be diſcharged, and intereſt to ceaſe from thence.

If there ſhall be, at any time thereafter, money in hand ſufficient to pay off the debentures, and notice be given thereof, the intereſt thereon ſhall ceaſe, &c.

Debentures in Scotland to be paid by the general receiver, and without undue preference.

MAN, [the ISLE of MAN,] lies between Britain and Ireland. It is, from north to ſouth, twenty-eight miles long, nine broad, and 160 ſquare miles. The ſoil is very fruitful, and produces ſuch ſtore of barley, wheat, rye, and oats, as does not only furniſh the neceſſary uſes of the iſland, but likewiſe gives leave for the exportation of great quantities. According to the diſtinction of north and ſouth it is different; in the firſt it is healthy and gravelly, and in the other they have good meadow and paſture-ground; and the air in general is eſteemed extremely wholeſome.

A ridge of mountains runs almoſt the length of the iſland, which ſupply the inhabitants with exceeding good water, and excellent peat for fuel.

The black cattle are generally leſs than thoſe of England; the gentlemen have good draught and ſaddle-horſes: there is a very ſmall ſort bred in the mountains, about three feet three inches high.

They have no coal-mines yet diſcovered, but good quarries of a black marble, and other ſtones for building. They have mines of lead, copper, and iron, which have formerly been worked to good advantage.

This iſland was given by Henry IV. anno 1405, to John lord Stanley; and in this honourable houſe it has ever ſince continued, except for 12 years during the civil wars, when it was granted to the lord Fairfax, but returned to it's ancient lords at the Reſtoration.

Upon the death of the late lord Derby without iſſue male, it devolved to the heirs female; and the preſent lord of Man and the Iſles is the duke of Athol.—They have moſt of the prerogatives of kings.—The number of inhabitants are about 20,000.

The principal towns are only four, which are all ſituate near the ſea; each of them has it's harbour, or a caſtle or fort to defend it.

CASTLE-TOWN, to the ſouth, about 210 miles from London, longitude 4. 37. latitude 53. 56.—Here the governor and moſt of the lord's officers reſide; and here the courts of juſtice are held.

PEEL, or HOLM-TOWN, to the weſt.—Within theſe few years ſeveral merchants have ſettled here, and built good houſes and noble vaults, &c.

DOUGLAS-TOWN is much the richeſt, has the beſt market, and is the moſt populous of any in the whole iſland. As it has of late increaſed in trade, it has done ſo in buildings. The harbour, for ſhips of tolerable burthen, is the ſafeſt in the iſland; and, within theſe few years, they have built a fine mole into the ſea, which, when perfected, will be one of the beſt harbours in any part of the three kingdoms, and will be of great ſervice for ſhips to find ſhelter in diſtreſs.

RAMSEA, to the north, is the moſt noted for a ſpacious bay, in which the greateſt fleet may ride at anchor, with ſafety enough in all winds, but the north-eaſt; and, in that caſe, they need not be embayed. They have lately made a good harbour, that will bring more trade to the town, which formerly ſubſiſted on fiſhing.

The trade of this iſland was very much improved before the year 1726, when foreign merchants found it their intereſt to touch here, and leave part of their cargoes, either to bring the remainder under the cuſtom of butlerage, or becauſe the duties of the whole would be too great a ſum to be paid at once in England; or, laſtly, to lie here for a market, the duties and cellarage being ſo ſmall.—But, the late lord Derby having farmed out his cuſtoms to foreigners, the farmers inſolence and impudence drew on the juſt reſentment of the government of England, who paſſed an act, anno 1726, by which the people of the iſland were cut off from the liberties and privileges of a fair trade with England.

They improve their lands either by lime, by ſea-wreck, or by folding their ſheep and cattle in the night, and during the heat of the day, in little incloſures, which are removed from place to place every year; and the lands are ſoon ſo inriched by the urine and dung of the cattle, that they yield plentiful crops of corn; but oat-cakes are the common bread of the country.

The commodities of this iſland, beſides their black cattle (of which 600 may, by the act of navigation, be imported yearly into England) are lamb's-wool, fine and coarſe linen, and coarſe woollen cloth, hides, ſkins, honey, and tallow; but it's great and ſtaple commodity heretofore was herrings, of which near 20,000 barrels have been exported in one year.

The herring-fiſhing ſeaſon is between July and Allhallows-Tide. The fleet of boats (which are about two tons burthen) is under the government of the water-bailiff on ſhore, and under one called a vice-admiral at ſea, who, by the ſignal of a flag, directs them when to ſhoot their nets, &c.

There is due to the lord of the iſle, as a royalty, 10s. out of every boat that takes above 10 meaſe (every meaſe being 500 herrings) and 1s. to the water-bailiff.

Here are mills both for corn and fulling of cloth, which are worked in the ſummer-time, when there is greateſt plenty of water, many of the rivulets not having ſufficient to drive a mill the greateſt part of the year; which has put them upon inventing a ſort of mill, ſo cheap that it is no great loſs, though it ſhould ſtand ſtill ſix months in the year.

Notwithſtanding the ſtrictneſs of the laws againſt offences committed in the iſland, it is a place of refuge for crimes that are committed out of it, as well as for debts that are not incurred in it.—This iſland is alſo a ſanctuary for goods, there being no cuſtom paid, nor officers to receive it; ſo that wine and brandy from France, rum from the Weſt-Indies, and callicoes, and other Eaſt-India goods from Holland, are often put aſhore here into warehouſes, and afterwards run, in ſmall boats, into Ireland, Scotland, and the weſt of England.

Since the inhabitants, who were formerly chiefly employed in huſbandry, have turned their heads to this more gainful trade of ſmuggling, they have much more ſhipping than they had, and dwell more upon the ſea-coaſt than they uſed to do, where, as may be judged of the increaſe of their port-towns, new buildings, and gay appearance, &c. they grow rich. This coaſt, except the harbours abovementioned, is rocky and dangerous, and not practicable without good pilots.

REMARKS on the SMUGGLING TRADE carried on at the ISLE of MAN before the laſt WAR.

Extract of a letter from Newry, dated October 3, 1753, concerning running of goods from the Iſle of Man, and publiſhed in the principal news-papers in London, and in the country.

'Our tea-trade is long ſince loſt, and is likely to be followed by that for ſpirits and tobacco, ſuch quantities being daily run from the Iſle of Man, that, if the commiſſioners do not ſoon find ſome means of effectually preventing it, the fair trader muſt be obliged either to fall in with the practice, or be ruined. It is computed that his majeſty's revenue ſuffers at leaſt 10,000l. per annum by ſuch clandeſtine dealings in thoſe parts, as this illicit trade is now moſt in the hands of perſons of property: ſo that the dealers all around are ſupplied at home, on much eaſier terms than they can be from the fair trader here. One great encouragement is, the freight being paid down on ſhipping the goods, and the wherries, if taken, not only ſuffered to eſcape, but the boatmen rewarded with a few anchors, to induc

induce them not to be over-diligent in getting away another time; ſo that, when a barge is not in ſight, they boldly make their port in open day, and thus find their account in this deſtructive commerce, their freight being two Engliſh ſhillings for an anchor of 10 gallons, which is almoſt equal to that for goods imported from the Weſt-Indies.

Nor are the ſmugglers here leſs daring than numerous; for, notice being lately ſent by them to the coaſt-officers, that ſuch a day they intended to carry a conſiderable quantity of run goods from the neighbouring mountains, the officers and their aſſiſtants, on coming to prevent it, found near 60 perſons, mounted and in arms, who divided into parties, and the officers doing the like, and, by this means being prevented from aſſiſting each other, they attacked, diſarmed, and groſsly abuſed them. One of the officers having in the engagement fired among them, and ſhattered a man's leg, examinations have been ſworn againſt him, and all his companions, to take off their evidence: who muſt now undergo a trial, for having endeavoured to diſcharge their duty.

Theſe are the effects of a petty independent ſovereignty ſubſiſting in the heart of the Britiſh dominions, which ſerves for an aſylum to out-laws and bankrupts, and may be conſidered as a fortreſs in the hands of our enemies (that trade being principally ſupported by the French) a conſtant drain of our caſh, and the ruin both of his majeſty's revenue, and the fair trade of theſe kingdoms.'

Some Reasons for annexing the Isle of Man to the Crown of Great Britain.

In the 12th of George I. cap. 28. by an act then paſſed, the lords of the Treaſury were impowered to treat with the earl of Derby, and his heirs, for the purchaſe of all right to the Iſle of Man; and this act was founded upon the almoſt impoſſibility of preventing ſmuggling from that iſland, while it remained as a petty ſovereignty in the hands of a proprietor.

The late lord Derby, from ſome notion he had formed of being able to leave the Iſle of Man by will, would not treat with the Treaſury. The duke of Athol, the preſent proprietor, may probably be diſpoſed to part with it, upon good terms, eſpecially when it is conſidered the moſt part of his revenues ariſe from ſmall duties and cuſtoms paid the iſland upon prohibited goods entered, and afterwards ſmuggled upon the coaſts of England, Wales, Ireland, and Scotland, which, though no method has yet been found out to prevent in any degree (not one in an hundred of the boats or veſſels concerned in the ſmuggling trade being taken at ſea, or ſeized afterwards) it cannot therefore be ſuppoſed that the legiſlature will ſuffer it long to be carried on to ſuch an enormous height, which now calls loudly for the ſerious attention of every perſon that wiſhes well to the trade and welfare of theſe kingdoms.

The Iſle of Man is ſituated in the midſt of the three kingdoms, not above ſix or ſeven hours ſail from the neareſt parts of Scotland, Ireland and England. It is the greateſt ſtore-houſe, or magazine, for the French, and other nations, to depoſit prodigious quantities of wines, brandies, coffee, teas, and other India goods, which are carried off in ſmall boats and wherries, built for that purpoſe. To aſcertain the quantity, the houſe of commons may order the collectors of the noble proprietor's cuſtoms in the iſland, to lay before them their books of entries, for the laſt ſeven years, of goods; 999 parts of which, out of 1000, are ſmuggled upon our coaſts; upon ſuch an examination of theſe officers, the whole ſcene would come out.

Of late years, a new and deſtructive trade has been ſet up by Iriſh Papiſts, who have cheated their creditors, and carried their effects to the Iſle of Man; and that is, by importing ſuch quantities of teas, and other India goods, as ought greatly to alarm the India company. Perhaps they do not know to what a height it is come; or elſe it is hardly poſſible they ſhould ſit ſtill, and not complain of whole ſhip-loads of teas, and other India goods, brought in for ſome years paſt from Denmark, as well as Holland and France; and all ſmuggled upon our coaſts. The captain of a cruizer, did venture to do his duty, and attempted (as he thought he was warranted to do by act of parliament) to ſeize a Dutch dogger, valued at 12,000l. ſterling, which run from him aſhore upon the iſland, where ſhe was bound. But the man found himſelf miſtaken. Acts of parliament, and Engliſh commiſſions, could not protect him in that petty principality; they ſeized his men, who had taken poſſeſſion of the dogger, threw them into a goal, where 5 of them will lie, perhaps, till their death. The captain himſelf narrowly eſcaped, with two men and a boy, to Whitehaven, from which place he wrote his complaints to the commiſſioners of the cuſtoms. If theſe gentlemen were called upon by the houſe of commons, not only for theſe papers, but alſo for ſuch informations as they have received for ſome years paſſed, from the collectors of Whitehaven and Liverpool, and their officer in the Iſle of Man, no doubt could remain of the abſolute neceſſity of annexing this iſland immediately to the crown of Great-Britain.

Query, Whether the officers in the Iſle of Man are not guilty of an act of rebellion, in ſeizing the king's boats and arms, and detaining them? Another pernicious practice carried on by ſome Iriſh fugitive Papiſts ſettled in the iſland, who are countenanced and protected, is this; they enter tobacco in rolls from ſeveral ports of Great-Britain for ſome foreign parts, receive the drawback, then carry it to the iſle of Man, and run it back again from thence to Scotland, England, or Ireland, and Wales. This muſt always be attended with perjuries, very little regarded by ſuch perſons who have firſt cheated their own creditors, and then rob the public. Here the cuſtoms are actually robbed of great ſums of money.

The iſle of Man is likewiſe a great detriment to the Britiſh diſtillery. Moſt of the ſhips that now go from Liverpool to Guinea, &c. touch there for their brandies, wines, and India and other goods, &c. not of Britiſh manufacture.

Theſe, and many other inconveniencies and miſchiefs ariſe from ſuffering this iſland any longer to be in a manner independent of Great-Britain. And a fuller account of the practices carrying on there will be publiſhed, if theſe be not ſufficient to awaken all true friends of Great-Britain.

The remedy propoſed is, To agree with the preſent proprietor to relinquiſh his right to the Iſle of Man, and, in lieu of it, to grant him, and his heirs, an annual ſum out of the cuſtoms of England for ever, or in any other way that ſhall be deemed more eligible: and ſuch an annuity will be a ſaving to the government of ſome thouſands a year, expended to very little purpoſe, in maintaining cruizers and officers, &c. to guard againſt it's illicit and pernicious trade, and ten times the number will never prevent ſmuggling from that iſland. This article alone cannot be leſs than 15 or 20,000l. a year, including, in this eſtimation, the officers in Ireland, who are kept there on the ſame account; beſides the loſs to the revenue, upon the moſt moderate computation, of at leaſt 200,000l. a year; and the loſs to the fair trader, and particularly the India company, which may be as much more.

The late purchaſe of the hereditable juriſdictions in Scotland, hath ſet an excellent example, which deſerves imitation. And, indeed, the reaſons of annexing this petty royalty to the crown hold ſtronger than in any of the others. For the detriment which the whole kingdom ſuſtains by the alienation of it, is much greater than that which aroſe from all the royalties and juriſdictions of Scotland. The loſs to the nation, and the gains to the French, are inexpreſſibly great. And, as all the ſums drained from us are employed by them, in time of war, to hire troops, and pay armies to fight againſt us, it will be no exaggeration of the truth to ſay, that, ſince the peace of Utrecht, they have drawn more money from us, by means of their trade with this ſmall iſland, than was ſufficient to maintain 30,000 men with a train of artillery, during the late war in Flanders. Would the French have ſuffered a like ſovereignty of Belliſle, formerly in poſſeſſion of the family of the famous duke of that name? It plainly ſhews they would not.

In ſhort, this iſland may be looked upon as a fortreſs in the hands of our enemies, draining us of our ſpecie (for all theſe goods are paid for with Engliſh coin): and alſo continually annoying us in the ſenſible parts, our trade and commerce. And the whole queſtion is, Whether we ought to diſpoſſeſs them or not? A queſtion that admits of no diſpute, if the public good and welfare of our country are to determine it! —Nor can there be any one good reaſon aſſigned, why this iſland ſhould remain ſo long in a manner independent of Great-Britain.

If we look back, and conſider how many millions of debt the honeſt part of theſe kingdoms is burthened with, by ſubmitting for ſo many years to be plundered by ſuch gangs of thieves, can we poſſibly call ourſelves a civilized people? Have we the leaſt right to complain of groaning under ſuch a load of taxes, without ſo much as looking back to one of the principal cauſes of our miſeries, or even thinking, as the paſt is irretrievable, of a preventive remedy, againſt our abſolute future deſtruction, and againſt our becoming, if not a prey to one another, certain victims to a power, ever aiming at our ruin? Now then, let that Britiſh ſpirit awaken, with that attention to the national good, it has ſo often ſignalized itſelf for; directed by thoſe calm, ſerious, and deliberate conſultations, which are alone the ſureſt means, to perfect the cure of the greateſt evils, without pique or reſentment againſt any ſett of men, without ſeeking vengeance for, but rather pardoning all paſt offences. Thus ſhall we ſee the morals of our people, corrupted by the little attention paid to the enforcing the execution of the laws, recover their former ſoundneſs, and thoſe innumerable and invaluable lives preſerved for our employment, ſtrength, and happineſs, which are now ſuffered to be waſted by ſpirituous liquors, under the thin pretence of incapacity of redreſs, leſt the revenue ſhould ſuffer a diminution. See Smuggling.

MANUFACTURERS.

The principal Laws of England relating to Manufacturers and Artificers.

Perſons employed in making up the woollen, linen, fuſtian, cotton, or iron manufactures, embezzling or purloining any

wefts, thrums, or ends of yarn, or any other materials of wool, hemp, flax, cotton, or iron, with which intruſted, or that ſhall reel falſe or ſhort yarn, being thereof convicted by oath of one witneſs, or confeſſion, before one juſtice, &c. ſhall forfeit double the value of damages done, for the uſe of the poor. On neglect or refuſal to pay, to be ſent to the houſe of correction 'till ſatisfaction made; if not able, to be kept there not above fourteen days, publickly whipped, and kept to hard labour. Buyers and receivers of, &c. liable to the ſame puniſhment, 1 Ann. c. 18. This act at firſt was temporal, but by 9 Ann. c. 30. was made perpetual.

By 13 Geo. II. If any perſon working woollen, linen, fuſtian, cotton, or iron manufactures, ſhall embezzle or illegally diſpoſe of the materials, or ſhall reel ſhort yarn, being convicted as preſcribed by 1 Ann. ſhall forfeit double the damages ſuſtained with coſts: and, in caſe immediate payment ſhall be neglected, the juſtice ſhall commit the offender to the houſe of correction, to be whipped, and hard labour, not exceeding fourteen days. And, on further conviction for embezzling any of the materials, the perſons ſhall forfeit four times the value (whether the ſame be or be not made up) ſuſtained, with coſts. And, if payment with coſts be neglected, ſuch juſtice ſhall commit to the houſe of correction and to hard labour, not exceeding three months, nor leſs than one, and to be publickly whipped in the market-town, at the market-place or croſs, once or oftener. And, by Geo. II. every perſon who ſhall buy or take by way of gift, pawn, ſale, &c. from any in the act of 1 Ann. mentioned, any woollen, linen, fuſtian, cotton, or iron manufactures, knowing the ſame to be embezzled, ſhall ſuffer the like forfeiture as the perſons purloining the materials; all which forfeitures are by 13 Geo. II. to be applied, one moiety to the uſe of the party injured, and the other to the poor of the pariſh, with benefit of appealing. If any perſon employed in cutting or manufacturing of gloves, breeches, leather, boots, ſhoes, or other goods, ſhall fraudulently embezzle any of the ſaid goods or materials, or ſhall purloin or exchange any gloves, &c. when manufactured, or leſſen the value, either before or after made into wares, the perſon muſt make a reaſonable recompence, not exceeding double the value of the goods; one half thereof to the party aggrieved, and the other to the poor. But if no goods, and ſhall refuſe to pay, the offender ſhall be for every offence committed to priſon, and kept to labour fourteen days, and ſhall be whipped; and for a ſecond offence ſhall forfeit four times the value which the owners ſhall ſuſtain, with coſts adjudged by the juſtice. And, not paid, ſuch juſtice may commit to the houſe of correction or priſon to labour, not exceeding three, nor leſs than one month, and ſhall cauſe the offenders to be whipped in the market-place or croſs once or oftener. And every perſon, who ſhall knowingly buy or receive by way of pawn, &c. from any perſon whatſoever (except of or from the perſon in whom the property is) ſuch perſon ſhall make ſuch ſuitable recompence, within two days after the fact ſhall be determined, or elſe be ſubject to diſtreſs, and, for want thereof, liable to the like puniſhment as is directed on perſons as ſhall embezzle goods, &c. and ſo for any ſubſequent offence. The ſtat. 13 Geo. II. proving deficient, the 22d of Geo. II. enacts, if any perſon hired to make any felt or hat, or work up any woollen, linen, fuſtian, cotton, iron, leather, furr, hemp, flax, mohair, or ſilk manufactures made up of wool, &c. or any of the ſaid materials mixed, ſhall, after the 24th of June 1749, purloin or diſpoſe of materials, whether wrought or not into merchantable wares, or ſhall reel falſe or ſhort yarn, the juſtices may commit the perſon to the houſe of correction or public priſon, to labour, for fourteen days, and to be once publickly whipped at ſome public place; and, if a further offence, the juſtices may commit to the houſe of correction or public priſon to labour, not exceeding three, nor leſs than one month, and may order the perſons to be whipped at ſome public place, &c. twice or oftener.

If perſons ſhall buy, or take in gift, pawn, &c. from any employed to make any felt or hat, to work up the woollen, linen, &c. manufactures made of wool, &c. or ſilk, or any of the ſaid materials mixed, thrums, or ends of yarn, whether made up or not, knowing the perſon to be hired, and not having the conſent of the perſon hiring; or ſhall buy or take, in any manner whatſoever, from any perſon, any of the ſaid materials, whether wrought or not, knowing the ſame to be embezzled, the perſon convicted ſhall, for the firſt offence, forfeit 20l. and, if not paid, ſhall be committed to labour for fourteen days, or 'till payment; and, if within two days before the ſaid fourteen, the ſame ſhall not be paid, may order the perſon to be publickly whipped, once or oftener; and, if a further conviction, ſhall forfeit 40l. and, in caſe the ſame be not immediately paid, the juſtice ſhall commit to labour, not exceeding three, nor leſs than one month, unleſs forfeitures be ſooner paid; and, if not paid within ſeven days before the time, may order ſuch offenders to be publickly whipped twice, or oftener; and the ſaid forfeitures of 20l. and 40l. after ſatisfaction to the party injured, with coſts, ſhall be diſtributed amongſt the poor.

If aggrieved, may appeal; and the juſtices, in the general or quarter-ſeſſions, are finally to determine the appeal, and award coſts; and if, on hearing, the judgment of the juſtice ſhall be affirmed, ſuch appellant ſhall pay the ſum adjudged, or, in default, ſhall ſuffer the penalties inflicted upon perſons who ſhall neglect to pay.

If any ſhall be convicted of purloining the materials, or receiving the ſame, juſtices may iſſue a warrant to any perſon, in the preſence of a conſtable, &c. in the day to ſearch the houſes, and other places, and, if there ſhall be found any materials of wool, &c. to bring ſuch materials before the ſaid juſtice, to be detained; and, if within 24 days, it ſhall appear the perſons from whoſe houſes, &c. the ſaid materials ſhall be taken, are the owners, then ſuch materials ſhall be reſtored; but, if it ſhall not appear, the ſame ſhall be deemed purloined, and the juſtices may direct them to be ſold, and the money (charges deducted) to be diſtributed to the poor. The ſaid juſtices ſhall, within three days after materials brought, give notice, under hand and ſeal, to the perſon convicted, appointing time and place for his proving his property ſo detained, which ſhall be within twenty, and not leſs than eighteen days, after notice is given; and, if the perſon convicted ſhall be detained in priſon, the juſtice may cauſe a copy of the notice to be delivered to the keeper, who is to bring before ſuch juſtice the perſon named in ſuch notice; and, if ſuch keeper refuſe, he ſhall forfeit to the perſon in ſuch notice the value of the materials, to be recovered by diſtreſs and ſale of the goods of ſuch keeper.

Any aggrieved may appeal to the general or quarter-ſeſſions; and, in the mean time, the diſpoſal of materials ſhall be poſtponed. Notice under the hand of the perſon intending to appeal, ſignifying his intention, given to the juſtice before the diſpoſal of ſuch materials. The juſtices may ſummon and examine witneſſes, and may determine the appeal, and, if the appellant ſhould not proſecute, the judgment of the juſtice ſhall be affirmed, and may award coſts.

If any perſons, intruſted with materials to manufacture, ſhall not uſe them, and ſhall delay, for twenty days after ſuch materials ſhall be manufactured, to return (if required by the owner) ſo much as ſhall not be uſed, ſuch neglect ſhall be an embezzling; and, being convicted, ſhall ſuffer as perſons convicted of embezzling.

Any one juſtice, upon complaint on oath or affirmation of any offence within the county, may iſſue his warrant, and may determine the matter.

If any perſon who, after the 24th of June, 1749, ſhall work up any of the manufactures for any one maſter, ſhall neglect the performance thereof, by procuring himſelf to be retained by any other, before he ſhall have compleated the work, he ſhall be ſent to hard labour, not exceeding one month.

This act not to repeal any of the proviſions in the 13th, 14th, and 20th Car. II. for regulating the trade of ſilk-throwing, or in 8 and 9 Will. III. for the further encouragement of the manufacture of luſtrings.

No perſon ſhall, by virtue of the ſaid acts, or of this act, ſuffer puniſhments twice for one fact.

By 22 Geo. II. the ſeveral clauſes in the 12th of Geo. I. and all the proviſions and forfeitures ſhall, after the 24th of June, 1749, extend to journeymen dyers, hot-preſſers, and all employed about the woollen manufactures, and journeymen, ſervants, and labourers, and others, making of felts or hats, or in any of the manufactures of ſilk, mohair, furr, hemp, flax, linen, cotton, fuſtian, iron, or leather, or about any manufactures of wool, &c. or of any materials mixed, in as ample manner as the proviſions and forfeitures are by the ſaid act to extend to the ſeveral perſons therein: and the forfeitures incurred againſt the ſaid act, by any employed about the ſaid manufactures, ſhall be recovered as the forfeitures contained in the act of 12 Geo. I. are directed to be recovered.

Remarks on the Encouragement of Manufactures in Foreign Countries.

It is a maxim generally received, that one of the moſt effectual means to ſettle and improve commerce, or any other political intereſt, is the patronage of princes. Diſpenſing rewards, and exciting emulation, by inveſting with honours, and other marks of diſtinction, thoſe perſons who, by the force of genius or application, have made new diſcoveries, or improved upon any thing laudable, and conducive to the intereſt of the public; more eſpecially ſuch as, upon the ſtrength of their own genius, and at their ſole charge, have ſet up and maintained manufactures, and other works beneficial to the community; and when the introduction of them has been intirely owing to their induſtry and public ſpirit.

This point we ſhall only treat in a general way, as it is not poſſible to preſcribe rules for the conduct of it on particular occaſions, ſince the honours, as well as rewards and encouragements, are always to be diſpenſed according to the ſtation, and other circumſtances of the claimants, and with an eye to the charge they ſhall have been at, and the benefits that ſhall reſult to the public from them.

It is good policy to give yearly penſions, in order to draw over, and engage to ſtay in any country, able maſters in manufactures, fulling, dyeing, and other works, either to introduce

introduce theſe ſorts of buſineſſes, or to improve ſuch as have been already eſtabliſhed, by advancing them to a degree of perfection and goodneſs that is certain to make them eſteemed, and procure them a market every where.

As this has been the caſe of the tapeſtries of Flanders, the cloths of Abbeville, England and Holland, as alſo the ſilks of Lyons in France, ſo artificers, or workmen, ſetting up new and profitable manufactories in foreign countries, it is uſual alſo to allow, for a certain term, an immunity from all troubleſome offices, houſes to live in, workſhops, and a diſpenſation from ſome duties; numerous inſtances of which have been produced in divers parts of this work; and, at the ſame time, for a further encouragement, ſums of money have been granted, to enable them to bear the firſt expence, which uſually runs high. But, in reſpect to this advance of money, or the other encouragements, we are as little able to preſcribe ſtated rules, as there muſt neceſſarily be a variety of caſes, according to the ſituation of the projectors, and the benefit that will ariſe from the undertaking. However, it will be always prudent and neceſſary, perhaps, for them to give ſufficient ſecurity to repay, at ſtated times, all monies that ſhall be advanced to ſet up and maintain the manufactories, and other works, which they have laid themſelves under an obligation to do, both in reſpect to the number of looms, the quality of the manufacture, and the time that ſhall be ſtipulated with them; all of them circumſtances very eſſential, and for which it behoves trading ſtates to explain and covenant very fully; for, ſhould there be a failure in any one of them, the main purpoſe would not be attained, all the pains, and all the indulgences that had been diſpenſed them, thrown away, and the prince have a juſt right to with-hold what had been offered on his ſide, as alſo to put their bonds in execution; and, if there be ſtill a deficiency, to call upon their ſecurities immediately to replace the monies that had been advanced, and to return the houſes, and other things, in the ſtate and condition they were received.

And yet it will be always reaſonable to ſhew ſome favour and moderation, and not treat them with the utmoſt rigour, when it ſhall appear that the miſcarriage aroſe from accidents that could not be foreſeen, and not from villainy, or a deliberate intent to defraud; both becauſe they merit indulgence, as they erred involuntarily, and, for fear of the rigour they ſhall be treated with, diſcourage the honeſt and ingenious from entering into the like covenant and undertakings.

As often as maſters or directors of any manufactures faithfully execute what they undertake and covenant, and from the eſtabliſhment and continuance of their manufactures there will enſue great advantages to the public, it is alſo cuſtomary, and good policy, to remit them a part, or even the whole advance-money: for it may ſerve as a reward, and a freſh encouragement, and alſo a means of raiſing emulation in others, to project ſuch other things that are conducive to the public intereſts.

It has been uſual, alſo, to grant an excluſive privilege for undertakings of this kind, that, for a certain number of years, no other perſon manufacture the commodities they are under an obligation to introduce and eſtabliſh; but, before indulgences of this nature are ever diſpenſed, we ought to conſider the affair thoroughly; and when, for ſpecial reaſons, it is found abſolutely neceſſary, in order to obtain a national end, they are even then to be limited and guarded with the utmoſt precaution, leſt they be converted into monopolies, that are of great profit to the proprietor, but of the utmoſt prejudice to the public. Moreover, in diſpenſing them, though it be with all poſſible precaution, it ought at leaſt to be attended with the following circumſtances; of it's being a new fabric of ſome kind, and very difficult to be ſet on foot; that there will enſue an improvement to commerce, and a conſiderable advantage to the public, as it happened in France, and lately in Spain, in order to revive and eſtabliſh glaſs-houſes.

To this end was granted an excluſive privilege, for a certain number of years, in conſideration of it's being an undertaking of great fatigue and conſiderable charge; and as the event was uncertain, they put to great riſque their pains and money therein employed.

Lewis XIV. king of France, in the year 1665, during the miniſtry of John Baptiſt Colbert, granted alſo an excluſive privilege, and other advantages, in order to ſettle a tin manufacture in ſeveral parts of that kingdom, as it is a very uſeful commodity, and of great conſumption every-where; and, at the expiration of the term covenanted, the patent was renewed, in the year 1695, in favour of Iſaac Robelin, engineer, director of the fortifications of Burgundy, and company; to which partnerſhip, it was renewed for another term, in the year 1700, as appears from the patent granted them.

When it ſhall be found expedient to grant an excluſive privilege, it ſhould be done for as ſhort a time as poſſible, and under due limitations, in order that the manufacture and traffic thereof may become the more freely and expeditiouſly extended. But thoſe privileges ought to be the more generally reſtrained to fabrics that are entirely new, or of an extraordinary improvement upon the old.

Other advantages, of an inferior kind, and attended with leſs public inconvenience, will prove ſufficient for works and inventions of a lower nature. When goods, taken to be manufactured by private hands, are nearly of the ſame ſort as ſome already made in the country, though they may be of ſuperior quality, as it is from this very ſuperiority that, with a little diligence, they may be imitated in their own manufactures, there will be no reaſon to grant privileges, indulgences, and other diſtinguiſhing encouragements, which ſome have moved for, as in ſuch caſes they ought to be common and general; for any thing ſingular and excluſive would be a great prejudice to other manufactories of the kingdom; which being of equal moment, or little inferior, may, with equal propriety, claim and enjoy the ſame advantage; and, if they ſhould not obtain it, the conſequence will certainly be, that, favouring a branch, we ſhall deſtroy the root.

The ſage Spaniard Uztaritz obſerves, That, by the tariff which Lewis XIV. aſſiſted by the great penetration and ſkill of his vigilant miniſter, John Baptiſt Colbert, publiſhed in the years 1664 and 1667, all foreign cloths imported into France paid a duty of above 25 per cent. while thoſe manufactured in his own kingdom were allowed to go abroad, paying only one per cent. and other commodities were exported free of all duty. This appears from the various edicts, and other ordinances, that we have quoted throughout this work; and I may add, that, to encourage the manufactories of that large and plentiful province of Languedoc, the government of France ſettled a premium, of about 13 ſhillings ſterling, to be given to the maſters for every piece of fine cloth meaſuring 30 French yards, that they ſhould manufacture and ſend abroad.

In regard to materials, they obſerve a rule ſo contrary (but equally advantageous) that they impoſe heavy duties upon the exportation of them, and ſometimes prohibit it entirely, under rigorous penalties, as we do in England with our wool, that our own country may reap the benefit of that large gain which ariſes from working it up. But they lay very ſmall duties, often none at all, upon the importation of materials which they are in want of, eſpecially for their manufactures. This is practiſed in Holland with reſpect to Spaniſh wool, which is imported free, as appears from their own tariff, publiſhed at Amſterdam in the year 1710; for ſo dextrous are they, and attentive to the general intereſt of the ſtate, that they have conſtantly in their eye, and gather the fruits of a piece of experience, that this is a mine more fruitful of gain, riches, and plenty, than thoſe of Potoſi; ſince, by working up into cloth a certain portion of wool, that ſtands them in 20 ſhillings, they produce from it the amount of above five times that ſum: [ſee the article WOOL:] for they calculate that, in a yard of fine cloth, the wool it is made of amounts to a fifth of it's value, and the reſt is labour, dyeing, and other expences: ſo that there remains, as it were, to the manufacturer, an intereſt of four fifths; and a million of money in materials he can improve to the value of five millions: and this ſhews how expedient it is to encourage manufactures, in order to trade, in a great meaſure at leaſt, without our own commodities.

The preſent ſyſtem of Spain to advance in their manufactories of every kind, as publiſhed before the laſt war.

The ſame author adds, in another place, in order to rouze the Spaniards to trade, that, in regard to manufactories, care muſt be taken to eſtimate the advantages of each particular, according to the quality, number of people, materials, fruits, and addreſs of the reſpective diſtricts: for, in the article of manufactories, ſucceſs does not entirely depend upon the goodneſs and plenty of fruits and materials a country produces: theſe defects and wants may be made up by management and induſtry. In proof of it, many examples might be produced, were it not ſufficient to mention Holland and Genoa, in whoſe diſtricts, though barren of ſilk, good wool, and dyeing materials, many and prime manufactories of theſe and other ſorts are flouriſhing. And, as Spain poſſeſſes theſe and other materials in great plenty and perfection, and is equally furniſhed with all the neceſſary proviſions for the working hands, which the territories of Holland and Genoa are alſo deſtitute of, and the nation is ſtill the ſame as in former times, there is reaſon to believe that every thing which has been formerly, may be again, whenever due encouragement ſhall be given by them in power, eſpecially when thoſe heavy fetters are taken off, which with our own hands we have laid upon the manufactures, and the ſale of them both at home and abroad, as well by exceſſive taxes upon proviſions conſumed by the working hands, and the materials they make uſe of, as by the heavy and repeated duty of the alcavala at every ſale of them, and the 15 per cent. which manufacturers, by the book of rates, are to pay upon exportation, contrary to the natural and political maxim obſerved by other nations.

Nor can I forbear dwelling upon theſe two points, manufactures and a reform of the duties, and frequent mention of them, as they are the root, which, by a prudent cultivation, is to produce the remedy for our misfortunes, and give new

life to the monarchy: for it is certain, that the exceſs of theſe duties is the original cauſe of the deſtruction of our manufactories, a neceſſary conſequence of which is the loſs of an advantageous commerce (which is now fallen into the hands of foreigners) as alſo the diſpeopling, and preſent inability of Spain.

For a better illuſtration of this point, and the happy conſequences that depend upon it, ſuppoſe there were ſet on foot, for inſtance, 60,000 new looms in theſe kingdoms, which would be replacing a conſiderable part of thoſe which are ſaid to be in ancient times.

As I am ſatisfied there are now in the kingdom of Valencia above 2000 looms, of ſilk and wool; in the principality of Catalonia above 500: and in the kingdom of Granada 1000, including both ſorts; and there are alſo in other provinces manufactures of ſilk, though not very conſiderable, and in almoſt all of them no contemptible number of looms for the ſeveral fabrics of wool, ſuch as the middling and coarſe cloths, bays, ſerges, camblets, druggets, &c. one may, I think, without raſhneſs, ſuppoſe the ſilk and woollen looms that are now in Spain, to be 10,000. Now theſe, with the 60,000 new ones that have been imagined to be ſet up, would amount to 70,000; and one may reckon 14,000, or about a fifth part of them, to be ſilk looms, and the remaining 56,000 of fine, middling, and coarſe wool, of which laſt there is no leſs conſumption, &c. See the article CATALONIA.

REMARKS.

Throughout the whole of this work, much has been urged for the encouragement of manufactures in general, from repreſentations of what has been done to this end in France and Holland, &c. as well as what is, at preſent, doing in Spain, for revival of their old manufactures, and the eſtabliſhment of new of every kind that their country will advantageouſly admit of. We have likewiſe endeavoured to animate our artiſts of every denomination with ſuch a ſpirit of emulation, not only in relation to each other, but foreigners, as we hope may tend to the advancement of our old, as well as the invention of new arts and manufactures. Some of the articles, under which theſe particulars may be turned to are, ARTIFICERS, BISCAY, BLEACHING, BLACK, BLUE, CALLICO-PRINTING, CANDIDATE, CATALONIA, CHEMISTRY, CLOTH, FLAX, HEMP, FRANCE, FULLER'S-EARTH, GLASS, ROYAL SOCIETY, and divers other heads referred to from theſe.

We begin to be now convinced, that we are nearly as much enriched by the labours of our fellow-creatures, as by the productions of the earth; and, if we have reaſon to rejoice at the abundance which nature, from year to year, produces for us, we may reap no leſs reaſonable ſatisfaction from all the variety of employments in human ſociety, and eſpecially by means of our manufactural arts. The firſt proofs of this have been taken from the numberleſs kinds of buſineſs, which our ſervants and the very meaneſt labourers perform for us; not in our houſes only, but from one end of the earth to the other: what they are doing on the banks of Newfoundland, at Potoſi, at Mocha, or in the iſland of Amboyna, concerns us no leſs than the being decent in our apparel and habitations. Let us conſider the reaſons we have to eſteem artizans of every kind for their induſtry, and find new motives, from the numberleſs ſervices they do us, to rectify our way of thinking concerning them.

It is cuſtomary for all ſuch as are under no neceſſity of labouring with their hands, to place themſelves at an infinite diſtance above the working trading people; ſome affix an idea of meanneſs to their condition, and their contempt of it is univerſal. The man who draws up a coveyance, or a bill in Chancery, would think himſelf diſgraced by marrying his daughter to a clothier, a weaver, or a taylor. He may, indeed, be very dextrous, cautious, and judicious, in his draughts and pleadings, and extremely well verſed in the forms and precedents of the courts; but theſe qualifications demand not leſs the admiration which is due to the induſtry of a man, who makes us cloth and ſilk for our apparel.

A perſon, whoſe buſineſs is to recover certain rights, is treated by us with abundance of ceremony and reſpect, and yet we ſcarce vouchſafe to take notice of a labourer or a gardener, to whom our enjoyment of the fruits of the earth is owing. But this miſtake is not a new thing: it has conſtantly made it's way into the moſt polite nations, in proportion as their luxury had introduced a falſe taſte of delicacy. That Scipio*, who had declared war againſt Jugurtha, ſtanding candidate for the office of curule ædile, when he was a young man, and, (as the cuſtom was) paſſing through the place where the country tribes, as well as thoſe who reſided at Rome, were then aſſembled, bowed to one, ſpake obligingly to another, and, amongſt the reſt, ſhaking hands with a labouring man whom he knew, and feeling them hard and callous, he could not forbear joking with him upon it. We gentlemen, ſays he, walk only upon our feet, and ſhall you bring up a faſhion of walking upon your hands alſo? This jeſt coſt him dear; for it was told immediately from one to another, even thro' the very loweſt ranks; and all the tribes, being offended to think they were reproached for their love of labour, unanimouſly rejected this banterer, whom the effeminacy of the city had rendered arrogant and impertinent.

* Scipio Naſica Valer. Maxim. Lib. VII. cap. 5. n. 2.

Moſt of thoſe who follow a working trade, have been ſo accuſtomed, among us, to be ſet aſide, and treated without any ſort of civility or regard, that we find them quite confounded, or appearing under an extreme ſurprize, whenever the magiſtrates, the clergy, or other perſons of diſtinction, condeſcend to converſe or talk with them as to fellow-citizens and freemen; ſuch they are in reality: our treatment of them is therefore a diſhonour to ourſelves, and our own haughty airs ought to make us bluſh.

The laws of ſubordination have never, in ſtrict juſtice, authorized any perſon to talk to manufacturers as if they were ſlaves. We ſhould inſpire them with ſome ſentiments of honour, and encourage their induſtry, would we only ſeem to be ſenſible of their worth, and ſpeak to them with good nature and affability. But we ſhall be always very far from forming their manners, or attaching them to us, if we entertain a contempt for their perſons, or remain ſo ignorant as we are at preſent of the excellency of their arts: our very ignorance of their merit in ſociety is the cauſe of our indifference towards them.

When our reaſon firſt begins to open, we are talked to for ſix years together about the future in rus, and the ſupine in um, without hearing one word of the perfection and uſefulneſs of the arts, or the induſtry of people that follow employments by which our lives are ſupported. When our reaſon begins to acquire more ſtrength, it is put under the direction of maſters, who, after a vaſt deal of preparation, demonſtrate that we have a body, and that there are other bodies round us: or ſpend whole hours, nay even days in proving, that of two propoſitions contradictorily laid down, concerning a poſſible future which may never happen, the one is determinately true, and the other determinately falſe, and the like metaphyſical jargon.

The learning to diſtinguiſh rightly the productions of the globe which we inhabit, the ties whereby all the people dwelling on it are united, and the various labours they are employed in, are things the moſt neglected. Every one of us has ſeen the ſail of a windmill, and the wheel of a water-mill in action: we know alſo, that theſe machines grind corn, and reduce the bark of trees to powder: but we know nothing of the ſtructure of them, and can hardly avoid confounding a carpenter with an hewer of wood.

We all carry watches in our pockets, but do we know the mechaniſm of the fuſee round which the chain is wound? Do we underſtand the uſe of the ſpiral line which accompanies the balance? It is juſt the ſame as to the moſt common trades: we know the names of them, and no more. Inſtead of endeavouring to gain a reaſonable knowledge of commerce, manufactures, and mechanics, which are the delight and ornament of that ſociety wherein we are to ſpend our lives; we pique ourſelves on attaining all the niceties of quadrille, or bury ourſelves in ſolitude, upon ſpeculations that have no foundation but in our whimſical imaginations. And, if little judgment is ſhewn in the choice of our pleaſures, a ſtill greater want of it will probably appear in our ſtudies. We run after whatever makes the moſt noiſe, and the moſt ſenſible people are at laſt obliged to confeſs, that they repent more the loſs of the time they have employed in ſtudying the ſubtleties and fooleries of the ſchools, the arts of pedantry, and the crack-brained altercations of enthuſiaſtic zealots, than of what they have ſpent in the learning of muſic, which is ſometimes an amuſement to them.

The father or mother of a family, the head of a community, a merchant, a lawyer, a juſtice of peace, or any of thoſe who have the government either of the actions or conſciences of others, may be never the worſe for not underſtanding the monades of Leibnitz, or the diſputative bombaſt of the dogmatiſts. But there is no one of them who would not acquit himſelf better in his employment, was he to acquire a true knowledge of the arts and trades wherein the common people are buſied. This kind of philoſophy is a thouſand times more to be eſteemed, than thoſe ſyſtems whoſe inutility is their leaſt fault.

Some philoſophers, conſidering that diverſity which appears in the labours and inclination whereby men are diſtinguiſhed, have attributed the cauſe of it to the diſpoſitions alone of certain bodies that govern them, and have from thence drawn objections againſt the ſpirituality of the ſoul; being more forward, as is commonly the caſe, to decide concerning the nature of ſuch things as God has hid from us, than to make us ſee and adore that all-wiſe hand, which, by regulating the differences of our abilities as well as of our wants, has thereby prepared all the links of the great chain of ſociety. Others have been of opinion, that the variety of arts is owing to the diſcovery philoſophy has made of the wants of mankind, and the means of providing for them. The only reaſon they have not mentioned, is what they ſhould have found out firſt.

If we are ſupplied with ſhoes, linen, and woollen cloths, or candles, &c. it is not becauſe there are pedantic philoſophers

in the world. It is not they who have taught us to whiten the wax, or handle the ſhuttle: they move commonly in ſpheres very diſtant from us; and, if they ever do condeſcend to give their opinion of the inſtruments we make uſe of, it is only to inform us, that ſuch and ſuch a thing is wanting, without endeavouring in the leaſt to ſupply ſuch defects by any better inventions. The chiefs of colonies have aſſembled workmen, and legiſlatures have appointed regulations for different profeſſions: but the workmens, as well as peoples wants, were before the colonies were founded; and the legiſlature, who eſtabliſhes rules for the exerciſe of mens talents, is by no means the inventor of them. Human prudence employs what it has received, not what it has created. Moſt ſpeculative philoſophers have nothing to be proud of: they cannot claim any thing as their own, except uſeleſs opinions and queſtions that cannot be anſwered. We owe every thing to a wiſe providence, which has made no account of them, as to bearing any part of the labours neceſſary to ſociety, but which has provided for them effectually by the rich variety it has infuſed into the minds of men. In a word, we don't invite a man of a very mean capacity to take upon him the conduct of great affairs, nor one of a fine genius to lop the trees in a foreſt.

The different biaſs of our minds precedes our wants; and, as God is the author of our wants, he is alſo the real author of the different diſpoſitions which are found proper to provide for them. He has likewiſe, by another precaution, rendered his work infallible: for, leſt the wants, the intereſts, or the conſtitution of each particular ſhould be inſufficient to breed up and perpetuate the different kinds of workmen neceſſary to the bulk of mankind, God has inſpired an inclination in all children to imitate whatever hits their fancy.

We regard this as a trifle of no conſequence; whereas it is, in truth, ſomething reſembling, as it were, an inſpiration of the Deity, productive of the greateſt good; for it is this that affords us a conſtant ſupply of the moſt uſeful workmen, and fills the meaneſt profeſſions as well as the moſt exalted.

A child conceives an advantageous idea of what he ſees his father do: he follows him ſtep by ſtep, and goes on in his profeſſion; or, if he quits it, it is becauſe he is more induſtrious, and finds himſelf capable of riſing higher. One may truly affirm, that imitation is of much greater ſervice to us than invention; for inventions appear but very ſeldom, whereas imitation is found in all countries, and at all times.

If, from the firſt and only original of ſo many uſeful trades, we would deſcend to what is to be found curious in them (and often the moſt common things deſerve our greateſt attention) we ſhould find throughout, that the progreſs we may make in theſe entertaining and really uſeful reſearches, leads the mind equally to emulation and gratitude.

Our countryman Mr. Locke ſays, in his treatiſe of Education, 'that I have one thing more to add, which, as ſoon as 'I mention, I ſhall run the danger of being ſuſpected to 'have forgot what I am about, and what I have above written concerning education, all tending towards a gentleman's calling, with which a trade ſeems wholly to be inconſiſtent. And yet, I cannot forbear to ſay, I would 'have our young gentlemen learn a trade, a MANUAL 'TRADE; nay, two or three, but one more particularly.

'The buſy inclination of children being always to be directed to ſomething that may be uſeful to them, the advantages, 'propoſed from what they are ſet about, may be conſidered 'in two kinds; 1. Where the ſkill itſelf that is got by exerciſe, is worth the having. Thus ſkill not only in languages, and learned ſciences, but in painting, turning, 'gardening, tempering, and working in iron, and all other 'uſeful arts, is worth the having. 2. Where the exerciſe 'itſelf, without any conſideration, is neceſſary or uſeful for 'health. Knowlege in ſome things is ſo neceſſary to be 'got by children whilſt they are young, that ſome part of 'their time is to be allotted to their improvement in them, 'though theſe employments contribute nothing at all to 'their health: ſuch are reading and writing, and all other 'ſedentary ſtudies, for the cultivating of the mind, which 'unavoidably take up a great part of gentlemens time, quite 'from their cradles.

'Other manual arts, which are both got and exerciſed by 'labour, do many of them, by that exerciſe, not only in 'creaſe our dexterity and ſkill, but contribute to our health 'too, eſpecially ſuch as employ us in the open air. In theſe, 'then, health and improvement may be joined together, 'and of theſe ſhould ſome fit ones be choſen, to be made 'the recreation of one, whoſe chief buſineſs is with books 'and ſtudy.

'For a country gentleman I ſhould propoſe one, or rather 'both theſe, viz. gardening or huſbandry in general, and 'working in wood, as a carpenter, joiner, or turner, theſe 'being fit and healthy recreations for a man of ſtudy or buſineſs. For, ſince the mind endures not to be conſtantly 'employed in the ſame thing or way, and ſedentary and ſtudious men ſhould have ſome exerciſe, that at the ſame 'time might divert their minds and employ their bodies; I 'know none that could do it better for a country gentleman 'than theſe two, the one of them affording him exerciſes 'when the weather or ſeaſon kept him from the other, &c.

'The great men among the ancients underſtood very well 'how to reconcile manual labour with affairs of ſtate, and 'thought it no leſſening to their dignity, to make the one 'the recreation of the other. That, indeed, which ſeems 'moſt generally to have employed and diverted their ſpare 'hours, was agriculture. Gideon amongſt the Jews was 'taken from threſhing, as well as Cincinnatus amongſt the Romans, from the plough, to command the armies of their 'countries againſt their enemies; and it is plain, their dexterous handling of the flail, or the plough, and being good 'workmen with theſe tools, did not hinder their ſkill in 'arms, nor make them leſs able in the arts of war or government. They were great captains and ſtateſmen, as 'well as huſbandmen. Cato Major, who had with great 'reputation borne all the great offices of the commonwealth, 'has left us an evidence under his own hand, how much he 'was verſed in country affairs; and, as I remember, Cyrus 'thought gardening ſo little beneath the dignity and grandeur of a throne, that he ſhewed Xenophon a large field 'of fruit-trees, all of his planting. The records of antiquity, both amongſt the Jews and Gentiles, are full of 'inſtances of this kind, if it were neceſſary to recommend 'uſeful recreations by examples.

'Nor let it be thought that I miſtake, when I call theſe, or 'the like exerciſes of manual arts, diverſions or recreations: 'for recreation is not being idle (as every one may obſerve) but eaſing the wearied part by change of buſineſs: 'and he that thinks diverſion may not lie in hard and painful labour, forgets the early riſing, hard riding, heat, cold 'and hunger of huntſmen, which is yet known to be the 'conſtant recreation of men of the greateſt condition. 'Delving, planting, inoculating, or any the like profitable 'employments, would be no leſs a diverſion, than any of 'the idle ſports in faſhion, if men could but be brought to 'delight in them, which CUSTOM AND SKILL IN A TRADE 'will quickly bring any one to do. And I doubt not, but 'there are to be found thoſe, who, being frequently called 'to cards, or any other play, by thoſe they could not refuſe, have been more tired with theſe recreations, than 'with any the moſt ſerious empoyment of life; though the 'play has been ſuch as they have naturally had no averſion 'to, and with which they could willingly ſometimes divert 'themſelves.

'Play, wherein perſons of condition, eſpecially ladies, waſte 'ſo much of their time, is a plain inſtance to me, that men 'cannot be perfectly idle, they muſt be doing ſomething. 'For how elſe ſhould they ſit ſo many hours toiling at that, 'which generally gives more vexation than delight to people, 'whilſt they are actually engaged in it? It is certain, GAMING leaves no ſatisfaction behind it to thoſe who reflect 'when it is over, and it no way profits either body or mind: 'as to their eſtates, if it ſtrikes ſo deep as to concern them, 'it is a TRADE then, and not a RECREATION, wherein few, 'that have any thing elſe to live on, thrive; and, at beſt, 'a thriving gameſter has but a poor trade on it, who fills 'his pockets at the price of his reputation.'—Thus far Mr. Locke.

Altho' this recommendation of the exerciſe of manual trades to the gentry, by ſo great a man as Mr. Locke, ſeems to be intended only for health and recreation, yet I cannot help thinking but this remark may be extended ſtill to a greater degree of public utility. For, if the Britiſh nobles and gentry were, from their infancy, habituated to the manual exerciſe of any manufacture, and thereby became ſo far experimentally knowing in it's nature and operation, as to have a diſtinct idea of each part, and thence be capable of forming a good judgment of the whole thereof: if our people of diſtinction in general ſhould, by this means, obtain a reliſh to pry deeply into the practical nature of the various manufactural and mechanic arts, and, to this recreative knowledge and ſalubrious exerciſe, they ſhould add the political ſtudy of the commercial and money affairs of the ſtate; is it not reaſonable to conceive, that the conjunctive wiſdom of the repreſentatives of the nation, in general, could never be liable to deceit and impoſition by any diſtinct order of manufacturers, in oppoſition to the intereſt of the whole? Among a numerous gentry, if this once becomes faſhionable, there would ariſe taſtes for the exerciſe of different manual trades and arts; and, from their united knowledge, they would diſcern not only the true intereſt of every diſtinct branch, but the connection and dependency of each upon the other, and be thereby capaciated to judge of the real benefit of the whole, without detriment to any peculiar part: committees of the honourable houſe of commons would be capable of ſo prying into the nature of all trades, and every branch of commerce, foreign as well as domeſtic, that it would be ſcarce poſſible to be deceived by thoſe who conſulted their own advantage, in oppoſition to that of the community. Would not manual exerciſes of this kind tend more to the intereſt and glory of the nation, as well as the benefit of individuals, than that

itch of gaming which ſo unhappily prevails, for want of more rational amuſements, which contribute to invigorate the body, and inſtruct the mind in uſeful practical arts?

Would if not be more honour for a gentleman in parliament to be able to ſay, when any thing in relation to the woollen, linen, ſilken, &c. manufactures, came before that great aſſembly, that I have exercifed myſelf at the loom, and made ſeveral pieces of woollen or linen cloth, and ſilk, &c. and I know the management of the wool from the fleece, and the flax from the ſeed, and the ſilk from the worm; and, therefore, in what ſuch manufacturers repreſent to the houſe is falſe and impoſitious in ſuch reſpects, &c.—Would not, I ſay, this rebound infinitely more to the glory of ſuch a gentleman, than to have the reputation of the keeneſt gameſter, or the boldeſt fox-hunter?

Throughout ſeveral parts of this work we have ſhewn the uſefulneſs of many branches of experimental philoſophy to the intereſts of land and trade; and, as gentlemen ſtand in need of exerciſe and amuſement, here alſo is another ſcene, which will for ever delight and inform; a ſcene that will adminiſter endleſs improvement to all the manufactural and mechanic arts.

But, leſt ſome perſons of honour and quality ſhould ſtill remain unconvinced from what we have already urged throughout this work, in relation to the reciprocal dependency between the intereſt of land and trade, it may be uſeful to give a further idea of the national advantages ariſing from the manufactural arts.

It would certainly be worth the while of any gentleman to underſtand the whole progreſs of a manufacture, from it's commencement to it's conſumption, and how much it pays to the ſubſiſtence of the people. This appears from the ſuppoſition of 100 broad cloths ſent to Turkey, and the returns of raw ſilk, that are manufactured for our own conſumption, which is as follows:

	l.	s.	d.
Suppoſe a clothier buys at market 50 packs of wool, picked and ſorted, at 10 l. per pack	500	—	—
With which wool he makes 100 broad cloths; and the manufacture thereof, in carding, ſpinning, weaving, milling, dreſſing, &c. as they are uſually brought to, and ſold white at Blackwell-Hall, will amount to about the firſt coſt of the wool - -	500	—	—
So that theſe 100 cloths are ſold by the clothier to the merchant at 10 l. per cloth - -	1000	—	—
And the merchant pays for dyeing of the ſaid 100 cloths, $\frac{1}{3}$ part in grain colours, at 7 l. and two-thirds in ordinary colours, at 30 s. per cloth - - -	333	6	8
Alſo, for ſetting, drawing, preſſing, packing, &c. 15 s. per cloth - -	75	—	—
The ſaid 100 cloths will coſt the merchant 14 l. 1 s. 8 d. per cloth on board, which amounts to - - -	1408	6	8
And, to repay him their coſt and charges here, and their charges abroad, with a bare allowance for inſurance, and the intereſt of his money, they cannot purchaſe leſs, I ſhould think, than 22 great pounds of ſherbaffee (or Perſia fine raw ſilk) for every cloth.			
Thus he probably receives, for the ſaid 100 cloths, 2200 pounds weight of the ſaid raw ſilk.			
Now, if the half-part of this ſilk is wrought up into plain coloured tabbies, the manufacturers will receive 13 s. 7 d. per lb. -	747	1	8
And, if the other half-part is wrought up into rich flowered ſilks brocaded, the manufacturers will receive 1 l. 19 s. 9 d. per lb.	2186	5	—
And the additional charge of dyeing, ſuppoſe but of $\frac{1}{8}$ part of the ſaid ſilk, into grain colours, at 9 s. per lb. - -	123	15	—
Then the coſt and charges of 100 woollen cloths, ſhipped from London to Turkey, and the manufacture of the raw ſilk, brought from thence in return thereof, muſt amount to - - - -	4465	8	4
The freight of the ſaid 100 cloths, and of the ſaid 2200 lb. of raw ſilk, is computed at	40	12	6
Cuſtoms on the ſaid 2200 lb. of raw ſilk, at - - - -	156	15	—
Engliſh factor's commiſſion abroad on the ſale of the cloth, and on inveſting the returns in ſilk as aforeſaid, computed at - -	100	—	—

It is here clearly repreſented to the view of the reader, that every 2200 lb. weight of raw ſilk imported from Turkey, and manufactured here for our conſumption, without paying any thing to the merchant's or mercer's gain, pays to the landholders, the labourers, and the crown, the ſum of - - 4762 l. 15 s. 10 d.

If any thing is to be added for the merchant's and the mercer's gain (and we may depend upon it they will not be at the trouble of driving their trades for nothing) we may very well affirm that the whole coſt of this manufacture for conſumption cannot be leſs than 5000 l. ſo that 2200 pounds weight of Turkey raw ſilk, manufactured here, pays the ſum of 5000 l. to the ſubſiſtence of our own people.

This account takes the return upon 100 cloths exported to Turkey, and makes them pay 5000 l. to the ſubſiſtence of our people; but we have heretofore exported annually two hundred times as many cloths for Turkey, and received, for about half that quantity of cloth, the ſame kind of returns in raw ſilk for our own conſumption; and, conſequently, our own conſumption of Turkey ſilk paid for the ſubſiſtence of our own people the ſum of 500,000 l. per annum, beſides what is paid by the other half of that trade.

But if the conſumption of 5000 l. value of Turkey ſilk manufactured pays 500 l. to the landed intereſt, for the wool that is exported to Turkey in manufacture, then the annual conſumption of 500,000 l. value of that ſilk muſt pay 50,000 l. per annum to the landed intereſt.

And yet this is not all that the landed intereſt might receive annually by means of this half-part of the Turkey trade; the crown and the ſubjects, who receive nine times as much for cuſtoms and labour, pay, perhaps, a ninth part of what they receive to the landed intereſt for cloaths and proviſions; by which means the conſumption of Turkey ſilk manufactured in England, either directly or indirectly, pays a fifth part of it's whole value to the landed intereſt; that is, it pays directly one tenth part of the value of the ſilk by the woollen manufacture exported, and as much more by enabling the people to purchaſe neceſſary cloaths and proviſions, of which as much more is paid to the landed intereſt.

It will be objected here, that the 10 l. above-mentioned upon a pack of wool is not paid to the landed intereſt, ſince a part of it is paid to the ſhepherd's wages, and a part to the labour of picking and ſorting this wool.

It is very true: but then, conſidering how much of the product of the lands is exported to purchaſe dyeing goods, and eſpecially cocheneal, for our purchaſing of which with Engliſh manufactures, the tenth part of the price of the whole ſilk manufacture may be very well ſaid to be paid for the product to the landed intereſt.

But what a condition would the lands be in, if it were not for this trade and manufacture? It is evident, that, of every 5000 l. value of manufacture from Turkey ſilk, 500 l. is paid for the manufacturing of the Engliſh wool that is ſent abroad, 333 l. 6 s. 8 d. to the charge and labour of dyeing, 75 l. to other labour beſtowed on that manufacture, 747 l. 1 s. 8 d. for manufacturing one half of our returns, and 2186 l. 5 s. of the other, beſides 123 l. 15 s. for dyeing the ſame in grain colours; add to this the freight of 40 l. 12 s. 6 d. beſides the charges to factors abroad, and merchants and mercers at home; and it will appear that near 4000 of every 5000 l. value, or that near 400,000 of every 500,000 l. value of Turkey ſilk wrought in England, is paid to the labour of the manufactures and others beſtowed upon it.

Now what ſhall the people do for ſubſiſtence, when they are deprived of this 400,000 l.? Certainly they muſt come to the pariſh and the lands for a maintenance. We are obliged, therefore, to this part of the Turkey trade, this which imports raw ſilk from that country, that it has payed formerly 100,000 l. per annum to our lands, and ſaved them from maintaining as many people as are now ſubſiſted, at their own charge, to the value of 400,000 l. per annum. I think this is enough to ſhew, that the TURKEY TRADE ought to be the care of every gentleman in England.

Further REMARKS.

The improvement of practical arts and manufactures does greatly depend on the judgment and ingenuity of artizans and manufacturers themſelves; I mean, chiefly upon thoſe who are at the head of any manufacture; for the fancies of mankind are ſoon tired with the ſame faſhion; artiſts and manufacturers, therefore, muſt ever be upon the wing of invention: our neighbour nation, we know, is famous for being the grand parent of all modes and faſhions in dreſs, furniture, and almoſt every thing elſe. From hence they ſeem to derive a ſort of dominion, in this reſpect, over the whole world, the conſequence of which may, one day, give them the dominion in commerce; for that nation which ſhall carry the neweſt and moſt ornamental modes to foreign countries, in their manufactural and mechanic trafficable inventions, will, at length, carry away the trade.—If our Britiſh manufacturers will plod merely in their old-faſhioned roads, while our competitors are daily ſtriking into ſuch new ones as pleaſe the general taſte more, will not the trade of the one gradually grow out of date, whilſt that of the other is ever growing young and flouriſhing?

We are ſurprized that French faſhions ſhould be ſo prevalent in England, as well as all Europe. Is not this a ſign that they have, ſome-how and by ſome means, obtained the knack of gaining an aſcendency, in this reſpect, over all other nations? Our Britiſh manufacturers, and other well-meaning Britons, may blame the taſte of the world herein, and may be ſo fond of their own modes, 'till they may only keep them within themſelves, and thereby loſe all their foreign traffic. The taſte of the world muſt be pleaſed, and our artiſts muſt follow that taſte, or the traffic will inſenſibly leave them.—We may boaſt of our being the old ſhop for the woollen manufacture, but the French have cut us out with their new one; we may value ourſelves upon the ſubſtance, ſtrength, and excellency of our manufactures, but, if foreign nations like rather the ſlight and tawdry than what we call the ſolid and ſubſtantial, the ſubſtance will be converted into ſhadow, and the ſhadow into ſubſtance: I mean, in plain Engliſh, the French ſlight and ſhowy manufactures, which can be had for two thirds, perhaps, of the expence of what the Engliſh call their ſolid and ſubſtantial, will become the ſubſtantial commodities, and the ſolid the ſhadowy; for, in this ſenſe, I term that manufacture the ſubſtantial, which ſells the more univerſally.

It is not my intention to inſinuate any thing to the diſparagement of our Britiſh manufactories in general, or to depreciate the ſkill and ingenuity of our artiſts: on the contrary, I am perſuaded their labours, in general, are rather ſuperior, than otherwiſe, to any nation whatever.—All that I would mean to ſignify is, that I have obſerved an over-fondneſs in our manufacturers to ſtick too tenaciouſly to one and the ſame form of fabrics, whereby they loſe the trade, while our rivals, who purſue the contrary meaſures, gain it out of their hands.—This I take to be the true ſtate of the caſe; and, therefore, may deſerve the moſt ſerious attention of the public.

Throughout the courſe of this work I have ſhewn, from numerous inſtances, founded on FACT and REALITY, the wiſe and vigilant meaſures that have been, for above half a century, and ſtill are ſteadily taken, by our moſt dangerous trading competitor, to bring every branch of their mechanic and manufactural arts to the laſt perfection.—This is done by bringing up every claſs of their practical artiſts to excel in their reſpective employments.—None are admitted to the freedom of any of their trading corporations, without the actual performance of a maſter-piece of workmanſhip, in the real preſence of a number of jurats, ſolemnly ſworn for that purpoſe. See the article CANDIDATE. See alſo the various manufactural trades and arts deſcribed in this performance.—The ſervitude of their apprentices to the arts and manufactures is longer, and better regulated, than that of other countries.—See the article APPRENTICE.—The art of DESIGNING, which highly tends to the improvement of our capital manufactures, has been long publickly encouraged in FRANCE, and ſhamefully neglected in England. See the article DESIGN, and the article ENGRAVING.—In ſhort, the men of learning in France have, within theſe few years, greatly turned their ſtudies to the improvement of the old, and invention of new arts and trades, thinking the value of their old-faſhioned ſtudies of infinite leſs uſe to their country than what they have adopted.—To ſuch a degree is this ſpirit now arrived in that kingdom, that, by late accounts from thence, we are informed that they have begun to ſet on foot SOCIETIES FOR THE PERFECTING OF TRADES AND MANUFACTURES, EXCLUSIVE OF THEIR SEVERAL ACADEMIES, IN HOPES THE FORMER MAY HAVE AS APPARENT AN EFFECT IN PROMOTING THE MECHANIC AND MANUFACTURAL SKILL AND INDUSTRY, AS THE LATTER HAVE VISIBLY CONTRIBUTED TO PROMOTE TRUE SCIENCE, AND A SPIRIT OF ENQUIRY. Would it be any diſcredit to copy MODES of this kind from our neighbours?

So unſpeakably great are the advantages ariſing to commercial ſtates from manufactures, that it is not to be admired thoſe ſtates ſhould endeavour to decoy the ſubjects of ſuch importance from each other. Nor will the moſt rigorous laws and ſevereſt penalties prevent it; there ſeem to be but two things which will prove effectual to this purpoſe: the one is, a love that ſuch people muſt have to their native country; the other is, to live comfortably and get money.

In regard to the former of theſe, nothing can be more conducive thereto than the wiſdom of our conſtitution, both in church and ſtate; yet experience ſhews that alone will not do; for men will ſooner live proſperouſly under the worſt government, than they will ſtarve under the beſt. The great point, therefore, is to advance our commerce, that they may all live well, and their families proſper, ſo that we may have a conſtant race and ſucceſſion of the moſt experienced and adroit artiſts of this kind.

As ſo much depends upon the art and ingenuity of this claſs of people, ſhould any wiſe meaſure tending thereto be neglected? With reſpect to apprentices in this employment, we have ſhewn, throughout this work, what other nations do; but the ordinary methods taken by us, in relation to this great point, are nothing like ſo wiſely calculated to render them ingenious.—Nor, when they are out of this juvenile ſtate of ſervitude, the methods taken by us to know whether they have well or ill ſpent their time, are not ſo well adapted as thoſe of our competitors, which we have repeatedly ſhewn. How, therefore, can we but expect that our own artiſts ſhould decline in ingenuity, while thoſe of our rival nation are advancing.—This is the caſe of our common laborious working manufacturers and artizans, when comparatively conſidered with thoſe of France.—And, in regard to the principal undertakers and conductors of our capital manufactures, who find the fortunes wherewith to carry them on, and who are, or ſhould be, the great inſtruments to improve our old manufactures, as well as to ſtrike out ſuch new that will hit the taſte of foreign countries, they have met with no encouragement in this kingdom like unto what they have met with in France, as hath been made appear in variety of inſtances.

People are convinced now, that the chief ſtates of Europe are ſtriving for the dominion in commerce; knowing, if they once obtain that, they cannot want the like in empire. And, ſince it is ſelf-apparent, that the ſuperiority and dominion in commerce ſo materially depends on our manufactural arts, does it not nearly concern the conſtant proſperity and happineſs of theſe kingdoms, to think of every meaſure that may contribute to the advancement of thoſe important arts amongſt us?

In the management of the more eſtimable manufactures, there is required not only an extraordinary dexterity, care, and ingenuity, on the part of the common workmen, to execute their reſpective parts to the neceſſary perfection; but there is required alſo, in the principal undertakers and managers of ſuch manufactures, a judgment and ſagacity requiſite to conduct and controul every diſtinct part, in order that the whole may turn to profit and honour.

Too many, perhaps, may imagine, that the meaneſt capacity and the moſt awkward wretches are equal to the working and laborious part of our manufactures, and therefore that the ordinary methods whereby thoſe perſons are trained up from their infancy, are adequate to their employment. I cannot help differing from ſuch who think ſo. Where great agility and dexterity of limbs are required in a manufacture, the ſtature, make, and diſpoſition of youth, ſhould be taken into conſideration, in order that a right judgment might be made, whether he is formed by nature for the employment intended. The human ſpecies differ as much among themſelves as the brute creation; the horſe that is fitted by nature for the race or the ſaddle, will not do for the coach, the waggon, or the plough, &c.

Thoſe children who are brought up at the public expence, either in charity-ſchools or hoſpitals, &c. are ſo much the children of the public, that they have a right to diſpoſe of them. And, as the nation ſtands in need of a conſtant ſupply of the manufactural and mechanical artiſts, the public have a right to bring up theſe children who are maintained by charitable benefaction, in ſuch a manner as they ſhall judge proper, in order to render theſe children the more ſkilful and ingenious in thoſe arts. Wherefore, in regard hereunto, the following queries are ſubmitted, viz.

1. Whether the education of the children of the poor, who are maintained by public charity, does not require a general reformation, to the end that they may become more ingenious in the mechanical and manufactural arts, than their preſent manner of bringing up will admit of?

2. Whether ſuch children of the public ſhould not be duly claſſed out, from their make and genius, at a ſuitable age, by proper governors, inſpectors, and directors of pariſhes, &c. and apprenticed out to ſuch manufactural and mechanic buſineſs, as they may prove the moſt fitted for by nature?

3. Whether the ſooner they are brought to practiſe thoſe manual trades, that do not require ſtrength beyond their years or their natural make, the nation is not likely to have a more dextrous and ingenious race of working manufacturers, &c.?

4. Whether ſuch ſchools ſhould not be conſtituted, by LAW, WORKING SCHOOLS, and that only two hours of their time in the day ſhould be allotted to learn to read and write, &c.?

5. Whether it may not be expedient to think of proper ways and means to excite an emulation among theſe manufactural children, to excel in their reſpective manual trades?

6. Whether thoſe children, being apprenticed out to maſter-manufacturers 'till they are 24 years of age, might not ſomewhat contribute to enable our manufacturers ſo to lower the price of their goods, that the nation might not ſuſtain ſuch injury as we do, from other countries underſelling us?

7. Whether maſter-manufacturers ſhould not be allowed a certain number of thoſe children for apprentices, and no more; and whether thoſe trades, that are in the moſt declining condition, ſhould not be entitled to more of theſe children as apprentices, than thoſe which are in a pretty flouriſhing condition?

8. Whether infant children at two years of age, whoſe parents cannot maintain them, and therefore are willing to reſign them to the public to be brought up to ſome honeſt manufacture, ſhould not be duly provided for by the public for

that

that purpoſe; and whether ſuch meaſures would not prevent many infant children being brought up by their diſtreſſed parents, in a ſcene of theft and iniquity; and whether this would not be making ſuch a uſeful and happy proviſion for poor children, as to lay the axe to the root of thoſe immoralities, which might otherwiſe grow up with them, from the bad example of their parents?

9. Whether it would not greatly conduce to encourage theſe youths, to excel in their peculiar manual arts, provided they were entitled, after the expiration of their apprenticeſhip, to a certain premium, proportionate to their ingenuity and good behaviour in their maſter's ſervice?

If, from the preceding, or ſuch-like meaſures, the kingdom ſhould be always well ſupplied with a ſucceſſion of adroit and ingenious working manufacturers, the maſter-manufacturers and undertakers will never want hands to execute their moſt delicate inventions, which will greatly contribute to the national improvement of theſe arts; for, if thoſe upon whom the inventive arts depend, cannot have a number of proper workmen to execute what they contrive, it is a diſcouragement to invention.

The next matter that naturally falls under conſideration, according to this train of thinking, is, how, and in what manner, the inventive faculty of our maſter-manufacturers may be ſo aſſiſted, as to deſign ſuch a perpetual ſeries of new modes and faſhions in their fabrics, as may ſcarce ever fail to hit the taſte of foreign nations.

Having dwelt ſo long upon this head already, for brevity's ſake, what I have further to ſuggeſt, may be beſt done by a few ſhort general propoſitions.

1. That, in order conſtantly to pleaſe the taſte of foreign countries in our Britiſh manufactures, it is neceſſary to conſult the climate, the diſpoſition, and way of thinking and judging of the ſeveral ranks of people in ſuch countries, what manufacturers they ſupply themſelves with, and what they generally import from other nations.

2. Of theſe particulars our maſter-manufacturers ſhould not only inform themſelves by reading the beſt accounts we have of theſe things, but ſhould conſult and adviſe with our merchants; and, before they put themſelves to too great an expence in their inventions, to get ſuch merchants to ſend over patterns of their new improvements to ſuch foreign countries, in order to have the opinion thereon of the foreign merchants and tradeſmen in ſuch countries.

3. That various foreign markets be thus tried with one and the ſame improved manufactures: for what will ſuit one, frequently will many.

4. That our maſter-manufacturers conſtantly obtain of our merchants, from foreign countries, the patterns of ſuch manufacture as are ſent by France, or any other foreign nation, and ſell well in other countries, and the price which our merchant exporters can afford to give our maſter-manufacturers for ſuch goods.

5. That our maſter-manufacturers think of every kind of materials which the earth, or the brute creation, affords, whereby they might chiefly improve any ſort of our old manufactures, or by means thereof might invent any new kind.

6. That our maſter-manufacturers, from having all ſorts of ſuch-like materials always before them, may think of the moſt natural, cheap, and elegant methods of compounding and working divers materials together, ſo as always to afford ſome new improvement.

7. That they make conſtant enquiry after various ſorts of foreign materials, and obtain ſuch ſmall ſamples of them, as may be compounded and worked ſtrongly and beautifully with ſome of our own materials, or with our own and the materials of ſeveral foreign countries, &c.

8. That our maſter-manufacturers gain a knowledge of any new invented looms, or other machines, or any kind of inventions, which are uſed in foreign countries, whereby they make ſuch fabrics that pleaſe the taſte of foreign nations better than the preſent Britiſh.

9. That, in order to obtain ſuch knowledge, the maſter-manufacturers concerned in the ſame branches contribute by a joint purſe, to ſend deputies over to any foreign country, either ſome one or more of their own body, with intent to get a thorough knowledge of ſuch new invented looms, machines, &c.——Or, that they ſend a perſon abroad for that purpoſe, who is well ſkilled in mechanics, ſo as they may be able to bring away ſuch new invention into their own country.

10. That, as ſome peculiar improvement in divers ſorts of fabrics of wool, ſilk, velvet, tapeſtry, &c. may frequently depend on new invented machines, &c. it ſeems neceſſary that our maſter-manufacturers ſhould endeavour ſo to inform themſelves of the principles of mechanical powers, as to be able to think for themſelves, in what manner any improvements in their fabrics might be made, by means of ſuch new invented looms, machines, &c.—Or, when they have deſigned any new invention in their mind, which they cannot execute, by means of their ordinary looms and machines, ſuch manufacturers, if they cannot themſelves invent a machine ſuitable to the occaſion, ſhould apply to ſome able practical mechanic, or conſult ſome ſkilful mathematician, who may have more particularly turned himſelf to mechanical inventions, &c.

11. That our maſter-manufacturers be bred up regularly to the art of DESIGNING; more particularly thoſe in the ſilk, linen, velvet, and tapeſtry, &c. fabrics, which will greatly help their invention with what may pleaſe the fancies of foreigners. See the articles DESIGN and ENGRAVING.

12. That public rewards be given to all ſuch, although they are not manufacturers, who ſhall make any capital improvements in any of the old Britiſh fabrics which are exported to foreign markets, or ſhall invent any new ones for the benefit of exportation.

13. That all Britiſh maſter-manufacturers endeavour, to their utmoſt, to keep their capital diſcoveries as much as they can a ſecret from foreigners, who may ſend their ſpies over to obtain a knowledge of them.

For more matter that has conſonancy herewith, ſee the ſeveral articles referred to at the beginning of this article.

An abſtract of an act of parliament for the effectual puniſhing of perſons convicted of ſeducing artificers in the manufactures of Great-Britain or Ireland, out of the dominions of the crown of Great-Britain; and to prevent the exportation of utenſils made uſe of in the woollen and ſilk manufactures from Great-Britain or Ireland, into foreign parts, and for the more eaſy and ſpeedy determination of appeals, allowed by another act relating to perſons employed in the ſame manufactures therein mentioned. 23 Geo. II.

Whereas by an act of the 5th of Geo. I. intitled, An act to prevent the inconveniencies ariſing from ſeducing artificers in the manufactures of Great-Britain into foreign parts, it is enacted, That if any perſon or perſons ſhall contract with, or endeavour to entice, any manufacturer or artificer of or in wool, iron, ſteel, braſs, or any other metal, clock-maker, watch-maker, or any other artificer or manufacturer of Great-Britain, to go out of this kingdom, into any foreign country out of his majeſty's dominions, and ſhall be lawfully convicted thereof, in the manner preſcribed by the ſaid act, the perſon or perſons, ſo convict, ſhall be fined any ſum not exceeding 100l. for ſuch firſt offence, &c. and ſhall be impriſoned for the ſpace of three months, 'till ſuch fine ſhall be paid.—And, if any perſon or perſons, having been once convict as aforeſaid, ſhall offend again, and be ſo convict a ſecond time of the like offence, in ſuch caſe, the perſon, ſo convict a ſecond time, ſhall be fined at the diſcretion of the court, and ſhall be impriſoned for twelve months, 'till ſuch fine be paid.—And whereas, notwithſtanding the penalties to which offenders againſt the ſaid act are thereby ſubjected, divers wicked perſons have of late ſeduced into foreign parts ſeveral artificers in the woollen and other manufactures; and it is become neceſſary to make ſome more effectual proviſion to prevent evils ſo deſtructive to the trade of this kingdom, &c. Therefore, for preventing the ſaid pernicious practice for the future, &c. be it enacted, &c. That if, at any time after the 24th of June 1750, any perſon or perſons ſhall contract with, entice, perſuade, or endeavour to perſuade, ſolicit, or ſeduce any manufacturer or artificer, of or in wool, mohair, cotton, or ſilk, or of or in any manufactures made of wool, mohair, cotton, or ſilk, or any of the ſaid materials mixed one with another, or of or in iron, ſteel, braſs, or any other metal, or any clock-maker, watch-maker, or any other manufacturer, workman, or artificer, of or in any other of the manufactures of Great-Britain or Ireland, of what nature or kind ſoever, to go out of this kingdom, or out of the kingdom of Ireland, into any foreign country, not within the dominions of, or belonging to, the crown of Great-Britain, and ſhall be lawfully convict thereof, &c. the perſon or perſons ſo convict ſhall, for every artificer, workman, or manufacturer, ſo by him, her, or them, reſpectively contracted with, enticed, perſuaded, ſollicited, or ſeduced, ſeverally forfeit the ſum of 500l. and ſhall ſuffer impriſonment for 12 calendar months without bail or mainprize, and until ſuch forfeiture ſhall be paid.—And, for a ſecond offence, they ſhall forfeit 1000l. and be impriſoned for two years.—Proſecution to be commenced within twelve months after the offence committed.

Perſons, exporting the utenſils made uſe of in the woollen and ſilk manufactures from Great-Britain or Ireland into foreign parts, ſhall forfeit the tools and 200l. penalty.

Officers of the cuſtoms and revenue impowered to ſeize all ſuch tools as ſhall be found on board ſhips bound to foreign parts, and the ſame to be ſold after condemnation, and the produce to go to the king and the officer. Captains of veſſels, permitting ſuch utenſils to be put on board, to forfeit 100l. Captains of his majeſty's ſhips to forfeit 100l. and to be caſhiered.

Officers of the cuſtom-houſe, ſigning cockets, &c. for the exporting of ſuch tools to forfeit 100l. and his employment. One moiety of the forfeitures to go to the king, the other to the proſecutor.

Proſecutions to commence within ſix months after the fact committed, and the perſon ſo ſued may file common bail, and plead

plead the general iſſue.—And, if found not guilty, may give this act, and the ſpecial matter in evidence.—If the proſecutor become nonſuit, &c. the defendant ſhall recover treble coſts.

MANURE for land. The matters uſed for this purpoſe are various, as well in different countries, as in different parts of the ſame countries. The moſt ordinary are dung, lime marle, and peat, ſea-ſhells, ſuch as thoſe of cockles, periwinkles; all which muſt be applied according to the quality of the ſoil.

REMARKS.

The temperaments of earth in general may be diſtinguiſhed into three claſſes, ſand, loam, and clay. Sand is a collection of ſolid, ſtony, and looſe particles, and ſcarce capable of coheſion alone. The parts of this earth, in proportion to their enlargement and variation from a globular figure, are gradually changed into gravel, or a couch of pebbles. Theſe different ſtony ſoils are capable of receiving water, oil, ſalts, fire, air, and all the principles of vegetation into their interſtices; but can never retain them for any conſiderable time, ſince the nutrimental mixtures ſlide through the vacuities as eaſily as they at firſt filled them. To prepare this kind of land for cultivation, it muſt be properly tempered with a ſuitable loam, clay, or marle.

Pure earth is a maſs of little clods, extremely fine, and qualified for an immediate conjunction with each other, and for continuing imbodied in that manner. When the earth is very compact, and it's conſtituent particulars are not ſeparated by any cavities, it forms ſoils of clay, marle, or chalk, which retain the juices they receive, but are not very tractable to the impreſſions of water, heat, or air. The fibres of plants can hardly penetrate theſe ſoils, and their culture is rendered very difficult; but, if theſe are duly mixed with a ſand that will keep them ſuitably open, they may be profitably cultivated.

Loam, or, that earth which is a medium between ſand and clay, is a powder which partakes of the pliancy of ſand and the conſiſtency of pure earth, and may be called a compoſition of minute ſupple maſſes, ſomething ſpongy in their nature, and eaſily diſunited by labour. They readily open to the influences of the air, and are very retentive of what they receive. Plants can ſhoot their fibres into this ſoil without obſtruction, and are accommodated with a copious nutriment.

The juſt temperament of the ſoil, which we call loam, is manifeſt by the pliancy of the parts that compoſe it, and by the vigour of it's productions. But we too often meet with a diſproportion in it's qualities, and this earth of an intermediate nature may be ſandy in ſeveral degrees, without being ſand itſelf; or it may reſemble marle, without having any real intermixture of that ſubſtance.

When a ſoil is either too lean or compact, they are corrected with variety of manures, according to the intention. Horſe-dung, which is light and dry, is laid to advantage on a ſoil of mould, where little clods are apt to imbody with each other; and an intermixture of cow-dung, which is fat and binding, is appropriated to a ſandy ſoil. By theſe expedients conſiſtence is given to the one, and rarefraction to the other, which is a judicious and profitable proceeding.

The more induſtrious have recourſe to a method ſtill more efficacious and durable in it's effects, ſince it ſtrikes at the cauſe of the evil. They open the ground to a certain depth, either in their garden or ſome adjoining ſpot, and endeavour to find a bed of earth entirely different in it's qualities from the land they would rectify. They intermix and thicken a dry and ſandy ſoil with a proper quantity of mould, or at leaſt with a marſhy earth, which is frequently no more than a black and binding loam. But they open and diſunite a marly earth, by mixing it with a large quantity either of river ſand, or of that which is found in ſubterranean veins of gravel.. When the earths are thus blended together, they are thrown into heaps, 'till the different ingredients have had time to incorporate in a proper manner. The beams of the ſun, the winds and froſts, together with the conſtant action of the air, will complete the preparation of the whole, and we may then plant in a ſoil entirely new.

But, as we acquire knowledge by very imperfect ſteps and degrees, and may be eaſily deceived in the choice of a ſoil, which appeared to us ſufficiently qualified to improve our own land; it will be prudent to make the firſt experiments on a ſmall quantity of earth, 'till we are ſatisfied by very apparent ſucceſs, that our endeavours to meliorate the whole will not prove ineffectual.

The eſſential particulars to be regarded are, your permitting the blended, or artificial ſort, to be fallow, a year at leaſt, before you begin to plant; and your compleating the mixture not in a parſimonious manner, but to the depth of three or four feet: otherwiſe, whatever you plant will inevitably periſh, when their roots begin to penetrate into another vein of earth, which will wound them by it's unpliant coheſion, or parch them up by it's dryneſs.

If the ſoil be groſs and difficult to be moved, or ſpongy to an extreme degree, your lands ſhould be raiſed towards the middle, and ſunk at the extremities into ſuitable ſlopes; by which means the water that would otherwiſe chill your lands, were it to remain upon them too long, flows off towards the alleys, and may ſink into ſuch a drain, as will convey it to the ditch that bounds the fields.

Whatever may be the nature of the ſoil, we find an excellent effect from clearing the alleys, in the winter-ſeaſon, of their ſnow, and throwing it on the beds, where fertility is greatly improved by this method.

Upon eſtates of any conſiderable ſize, where lands lie united, there are often variety of ſoils, and by a proper mixture and compoſition of the one with the other, according to the principles before laid down, the one ſort of land or ſoil will contribute, in a great meaſure, to meliorate the other; ſo that, with due judgment, grounded upon repeated experimental trials, by ſmall quantities, the proper manures for many lands very frequently lie contiguous to each other, and yet remain unknown to the proprietor or the farmer, for want of a competent knowledge in the proper mixture and compoſitions of earths, ſo as reciprocally to aid and aſſiſt each other; in order to make a compoſt ſoil, which will help to forward, expedite, and increaſe the general principle of fertility. But,

I fear there is one general miſtake, in relation to the nature of manure, that runs through all our practical principles of agriculture; which is, that we are too apt to imagine that the great principle of fertility depends upon the application of certain kinds of groſs matter to particular ſoils: whereas I humbly conceive, that all groſs matter, as dung, lime, marle, or any other groſs earth whatever, have not inherent and eſſential to them thoſe great virtues which are generally imagined; but, by the admixture and incorporation of theſe ſorts of earths with others, either to open or ſhut different ſoils, ſuitable to their reſpective qualities; ſuch compoſitions of earths contribute to prepare ſoils only for the more effectual reception of the virtues of fertility; for thoſe augmentative virtues of fertility may, perhaps, upon due experimental trials, be found to exiſt in the water, the air, the dew, ſnow, light, and fire; and that ſoils, or groſs earths of any kind, are no more helpful to the great principle of vegetation than as a MATRIX, conſtantly to receive and nouriſh the inceſſant influence of fertility.

If then it ſhall appear, that the nature of vegetation in general, by repeated unerring experience, is grounded upon theſe plain and obvious principles, it may poſſibly open an extraordinary door for univerſal improvements in every branch of vegetation. For, if this be the real caſe, it will naturally lead us to the mixture of ſuch ſorts of earths as will neceſſarily tend either to looſen or ſhut others, ſo that the ſpongy principle may be the better promoted, in order to receive more copiouſly the influences of fertility that are inherent and eſſential to the water, the rain, the dew of heaven, as the ſacred oracles of God ſtile it, light and fire, &c.

We are but too ſenſible that our reaſonings about the wonderful and intricate operations of nature are ſo full of uncertainty, that, as the wiſe man truly obſerves, hardly do we gueſs aright at the things upon earth, and with labour do we find the things that are before us.

And this obſervation we find ſufficiently verified in vegetable nature, whoſe abundant productions, though they are moſt viſible and obvious to us, yet are we much in the dark about the nature of them; becauſe the texture of the veſſels of plants is ſo intricate and fine, that we can trace but few of them, though aſſiſted with the beſt microſcopes.

We find, by the chemical analyſis of vegetables, that their ſubſtance is compoſed of ſulphur, volatile ſalt, water, and earth; which principles are all endued with mutually attracting powers, and alſo a large portion of air, which has a wonderful property of ſtrongly attracting in a fixed ſtate, with a power which is ſuperior to vaſt compreſſing forces; and it is by the infinite combinations, action, and reaction of theſe principles, that all the operations in animal, as well as vegetable bodies, are affected.

Theſe ſhort obſervations may excite to further reſearches of this nature, which is the chief end of introducing them in a work of this kind. See AGRICULTURE, CHEMISTRY, EARTH, FARMING, HUSBANDRY.

On the MANURING and CULTIVATING the LANDS of GREAT-BRITAIN and IRELAND in general, in order to render LABOUR and COMMODITIES cheap.

In order to introduce what I have further to ſay upon the manuring or cultivating of lands, which is, at preſent, a point arduouſly laboured in France, with a view to leſſen the price of commodities in general, it may be proper to lay down and illuſtrate ſome principles relating to money, which may deſerve to be regarded as maxims perhaps.

This, indeed, I intended to have done under the article MONEY; but, conſidering that it would not be ſo properly adapted to what I would urge in relation to lands, and alſo that I ſhould have matter of a different kind to come under the head of MONEY; I judge, upon the whole, it will be beſt to come in here.

I. Money, i. e. gold and ſilver, being, by the conſent of moſt nations, become counters for adjuſting the value of all things elſe, and balancing accounts between man and man, and the means by which commodities of all kinds are procured and transferred from one to another, is hence become the ſole medium of trade.

II. Money can be brought into a nation that hath no mines, by the means of trade only, i. e. by ſuch nations exporting more goods in value than they import: for, in proportion as the value of the exports exceeds the value of the imports, money, which muſt balance the account, increaſeth faſter or ſlower [ſee the article BALANCE of TRADE]; and, contrariwiſe, where the imports exceed the value of the exports, the caſh of ſuch nation muſt proportionably diminiſh: this is called, and doth conſtitute, the general balance of the trade of all nations that have not mines.

III. Money will be moſt plentiful where the mines are: as the quantity of coals will be greater at Newcaſtle, than at any place that is ſupplied only with coals from thence: and, conſequently, I mean, that gold and ſilver will as certainly be leſs valuable where the mines are, than at any other place which is ſupplied by them with thoſe metals.

IV. That the prices of the produce of manufactures of every nation will be higher or lower, according as the quantity of caſh circulating in ſuch nation is greater or leſs, in proportion to the number of people inhabiting ſuch nation. See the article CASH.

To illuſtrate this, let it be ſuppoſed that we have ten millions of caſh, and as many people in England; it is evident they have twice as much money amongſt them, in proportion to their number, as they would have, if their number were doubled, and the quantity of caſh remained juſt the ſame. And therefore I think, they could give but half the price for things in general in this caſe, that they could do when they were but half the number, with the ſame quantity of money circulating amongſt them. Wherefore, if the people increaſe, and the caſh doth not increaſe in like proportion, the prices of things muſt fall; for all the people muſt have neceſſaries, to procure which they muſt all have money: this will divide the ſame quantity of caſh into more parts, that is, leſſen the parts; and then it is evident they cannot pay ſo much for their neceſſaries, as when the ſame caſh, divided into fewer parts, makes the parts greater.

The prices of all things in this kingdom, ſome centuries ago, were vaſtly lower than they are now. In the reign of king Henry VIII. it was enacted, that butchers ſhould ſell their meat by weight; beef at an halfpenny, and mutton at three farthings per pound: and, if we look back to the reign of king Edward III. we find wheat was ſold at two ſhillings per quarter, a fat ox for a noble, a fat ſheep for ſixpence, ſix pigeons for a penny, a fat gooſe for two pence, a pig for a penny, and other things in proportion. See Baker's Chronicle.

Since the great difference of the prices of theſe things now, to what they then ſold for, is undoubtedly owing to the great quantity of gold and ſilver, which ſince that time hath been brought into this kingdom by commerce, it follows, that the prices of things will certainly riſe in every nation, as the gold and ſilver increaſe among the people; and, conſequently, that, where the gold and ſilver decreaſe in any nation, the prices of all things muſt fall proportionably to ſuch decreaſe of money, or the people muſt be diſtreſſed, unleſs the number of people decreaſe in as great proportion, as the caſh decreaſeth in any ſuch nation.

V. Banking, ſo far as one is paid with the money of another, that is, where more caſh notes are circulated, than all the caſh the bankers are really poſſeſſed of will immediately anſwer; ſo long, we ſay, as this credit is maintained, it hath the ſame effect, as if there was ſo much more caſh really circulating amongſt the people, and will be attended with thoſe conſequences; that, as the price of things will hence be raiſed, it muſt and will make us the market, to receive the commodities of every country whoſe prices of things are cheaper than ours.

And, though we ſhould lay on duties, or prohibit ſuch goods, this will not prevent the miſchief, becauſe we ſhall not be able to carry our commodities thus raiſed to any nation, where things are cheaper than ours; and becauſe ſuch nations will hence be enabled to ſet up many of our manufactures, &c. and by their cheapneſs ſo interfere in our trade at all other foreign markets, as to turn the balance of trade againſt us, which will diminiſh the caſh of the nation. The ſame thing muſt be underſtood of all public ſecurities whatever, that operate as money amongſt us.—This ſhews the ill effects to commerce of a large paper circulation, by means of our national debts, ſtocks, funds, duties, and taxes. See the articles CIRCULATION, DEBTS [NATIONAL DEBTS], FUNDS, DUTIES, BUBBLES, TAXES.

VI. The plenty or ſcarcity of any particular thing is the ſole cauſe whence any commodity or thing can become higher or lower in price; or, in other words, as the demand is greater or leſs, in proportion to the quantity of any thing, ſo will ſuch thing, whatſoever it is, be cheaper or dearer. Nor can any arts or laws make this otherwiſe, any more than laws or arts can alter the nature of things.

VII. All things that are in the world, are the produce of the ground originally, and thence muſt all things be raiſed. The more land, therefore, ſhall be improved and cultivated, &c. the greater will the plenty of all things be, and the more people will it alſo employ. And, as the produce will hence be increaſed, ſo will the conſumption of all things increaſe too; and, the greater the plenty becomes this way, the cheaper will every thing be.

And thus will money become plentiful, becauſe leſs money will purchaſe every thing, in juſt the ſame proportion as the plenty of every thing ſhall reduce the prices, by the increaſe of every thing in reſpect of the demand. And, if this method be ſufficiently purſued, the plenty may be increaſed ſo much, as to make victuals and drink half the price that they are at now; which will make the price of the labour of working people much lower, for the rates of labour are always ſettled and conſtituted of the price of victuals and drink: and all manufactures will be vaſtly cheaper, for the value of all manufactures is chiefly conſtituted of the price or charge of the labour beſtowed thereon. This therefore ſhews how to make money plentiful, viz.

Firſt, By thus making the neceſſaries of life cheaper, to ſuch a degree as ſhall be found effectual to reduce the preſent rates of labour, and thereby the price of every thing elſe ſo much, that the money, now circulating amongſt the people, may extend a vaſt deal further than it now will do.

Secondly, We ſhall hence be enabled to make and export our manufactures at much lower prices, and this muſt needs cauſe us to export abundance more of them to thoſe nations that now take them of us; beſides, this will enable us to carry our produce, &c. further and cheaper, to induce other nations to take them of us, who now perhaps do not take any of our goods; whence the caſh of the nation will certainly increaſe, by raiſing the value of our exports above the value of our imports; that is, the general balance of trade will thus be in our favour, or money will thus be made plentiful.

VIII. Plenty of money never fails to make trade flouriſh; becauſe, where money is plentiful, the people in general are thereby enabled, and will not fail to be as much greater conſumers of every thing, as ſuch plenty of money can make them: therefore trade is always found to flouriſh, i. e. increaſe, as money grows more plentiful amongſt the people. The year 1720 was a proof in fact of this maxim. And hence the revenue muſt needs increaſe likewiſe, if the duties are always levied on the things which the people conſume and uſe.

IX. Where trade flouriſhes (we mean where the balance of trade is conſiderably in favour of any nation) there the people always increaſe greatly, and become generally happy, whence ſuch nations ever grow potent and formidable. This hath always been found true in fact, and is almoſt ſelf-evident.

X. It is the ſtrength, honour, and intereſt of every government, that their ſubjects be as numerous, as the continent they govern will ſupport in an happy condition; and, as the happineſs (i. e. the riches) and numbers of the ſubjects are greater or leſs, ſo will the ſtrength, honour, and revenue of every government be.

XI. A kingdom or ſtate may have more people in it, than the land it contains can well ſupport; that people therefore muſt be wretched, and that government weak, 'till ſo many of the poor people, as diſtreſs each other by their numbers, are removed where they can have land to ſupport them. The caſe is the ſame exactly in every nation, where the land which is cultivated doth not afford enough to make all things very plentiful, for this alone can make people happy.

XII. The quantity of land to be further put to cultivation and tillage, muſt be ſo great, as to increaſe the plenty of every thing to ſuch a degree, that the PRICE of every thing may by that plenty be ſo greatly lowered, that the rates of labour may alſo thereby be lowered, 'till MONEY thence come to be plentiful amongſt the people in general. 'Till this end be anſwered, nothing material is effected, nor can trade be effectually enlarged abroad, or relieved at home: for the cultivation of land is the principal natural encouragement which trade can receive; becauſe all things muſt firſt come out of the ground, and, according as the produce of the earth is more or leſs plentiful, ſo will the conſumption of all things be greater or leſs; that is, ſo much more or leſs trade will there be amongſt the people. On this the revenue of the nation doth ſo much depend, that the whole amount of it will be greater or leſs, as this is, or is not duly encouraged; beſides, the ſame ſums will effect more or leſs accordingly.

XIII. The caſh of any nation will always decreaſe and become ſcarce, in proportion as the rents are raiſed, above what the plenty of money, circulating in trade amongſt the people, will well enable them to pay; and, where there is not land enough cultivated to keep down the rents, and thereby to remedy this miſchief and ſupport the people, it may go to ſuch an extream, as to leave very little money in the nation. For, where rents are raiſed, every thing elſe muſt and will riſe too: whence other nations will be able to

ſupply

ſupply our market; and, as moſt of our commodities will hence become too dear to be taken by them in return, ſo we ſhall ſend much leſs of our goods to other foreign markets; whereby the balance of trade will turn againſt us, and draw off our money, as long we have any.

XIV. Rents have been advanced, from this principle, which alone can poſſibly raiſe the price of any thing, viz. a demand for farms, &c. in greater proportion than they were well to be had.

And, as this hath in a greater meaſure hindered the people from going on, as ſuch demand for farms ſhews they naturally would, in cultivating more land as they increaſed in numbers, ſo that the ſurplus or increaſe of the people have been obliged to employ themſelves in TRADES, MANUFACTURES, and PROFESSIONS, 'till they have ſo much overſtocked and embaraſſed all theſe, that their trades, &c. will not anſwer to ſupport them, whilſt at the ſame time the neceſſaries of life, and rents have been greatly advanced, to what they were formerly.

This, therefore, muſt be remedied, or multitudes muſt be ruined: nor can the gentleman eſcape: for, if money becomes ſo ſcarce (as it certainly in a great meaſure is at preſent amongſt the people) that the fruits of the earth will hardly bring money enough to ſupport the farmers, and pay all charges excluſive of rent; as many gentlemen already find, who, on that account, are obliged to take their farms into their own management: this being the caſe, the gentlemen, we ſay, can fare no better than to become ſkilful induſtrious farmers themſelves, and get their living by that means, 'till money, as it hath herctofore been, becomes plentiful enough to pay all charges, with a ſurplus to pay rent; which will be done, whenever the rents are lowered enough to make money plentiful amongſt the trading part of the people, but not ſooner.

XV. If all the gentlemen in the nation would lower their rents at the requeſt of the people, this could not anſwer the end; becauſe the demand for the fruits of the earth, which the land at preſent cultivated can produce, is, and will continue to be ſo great, if the people be not diminiſhed, as neceſſarily to keep the price higher than the money circulating amongſt them will well enable them to pay for; and becauſe, until many more of the people are employed in cultivation, &c. to leſſen the number of poor, and make greater plenty, all kinds of trade, manufactures, and profeſſions, muſt needs continue ſo overſtocked with numbers of people employed in them, as abſolutely to ſpoil them all, as to the profits, which is the ſole end of trade. Wherefore, the natural way to lower the rents, can only be, by putting ſuch very great tracts of waſte land into cultivation, as may make farms abound; which will lower and make the rents eaſy, and will employ the people, not in cultivation only, but in every kind of manufacture, trade, and calling. For all this will be the neceſſary conſequence of cultivating ſuch large tracts of waſte land, as muſt be cultivated to make farms abound, and rents eaſy.

Senſible we are, that propoſitions of this kind, 'till they are thoroughly examined and ſcrutinized, will meet with objections at firſt from gentlemen of landed eſtates: ſince, ſay they, if the plenty of all productions of the land be ſo greatly increaſed, that the whole thereof ſhould become a great deal cheaper than at preſent, the general rental of the kingdom muſt neceſſarily be lowered, in proportion thereto: we are ſo apprehenſive of the temporary prevalence of this prejudice againſt what has been ſuggeſted on this head, that it may not be eaſily removed: but, ſuppoſing that the conſequence of incloſing and cultivating great quantities of more lands, both in Great-Britain and Ireland, ſhould occaſion a fall in the general rental, we conceive it will not prove any real loſs to the proprietors. For,

What has been urged is a weighty argument to ſhew, that the ſcarcity of money among the people will unavoidably diſable the farmers to pay their rents. To this cauſe, which naturally leſſens the conſumption of all things, in proportion as the national caſh grows ſcarcer, and thereby keeps the fruits of the earth from riſing to a price, that might enable the farmers to pay their rents, it muſt be aſcribed, that corn, &c. frequently ſcarce fetches money enough to pay all charges, excluſive of rent, and not to the plenty of corn, conſidered in itſelf. For, cheap as corn is, the number of poor, as moſt pariſhes find, is greatly increaſed of late years: this is apparent, from the numbers we are continually tranſporting, and the neceſſity of erecting workhouſes for the poor, and the complaints of tradeſmen all over the kingdom, which have been, and are very great, and very juſt. Now ſuppoſe corn, &c. conſiderably advanced, to enable the farmers to pay their rents, what muſt become of the trading part of the nation, who already, with juſtice, complain they can hardly get money to ſupport themſelves at the preſent rates of things? And how much more would the poor and their calamities increaſe, by ſuch a riſe of neceſſaries, together with the ſtill greater decay of trade it muſt occaſion; ſince, if the prices of things were to be advanced, the people in general, for want of money, muſt, if poſſible, be ſtill leſs conſumers, and conſequently occaſion juſt ſo much leſs buſineſs amongſt them, who have already much too little? Beſides, it is always found that as trade leſſens (or is divided amongſt more particulars, which is much the ſame thing in effect) the profits of trade leſſen in ſtill greater proportion to the buſineſs tranſacted.

But to proceed: To ſhew that gentlemen will loſe nothing by falling the rents, let it be ſuppoſed, that all the land in the kingdom were to be raiſed 20 l. per cent. per ann. ſince the land would bear no more corn, graze no more cattle, &c. than it now doth, muſt not the corn and cattle, &c. be conſiderably advanced? and muſt not the labourer, whoſe neceſſaries muſt then coſt more, have more for his labour? and muſt not timber to make carriages, and for every other uſe, coſt more to fell and hew it, &c. and muſt not horſes, to draw the fruits of the earth, &c. to market, be more valuable; and conſequently carriage, and every manufacture coſt more too? All things would certainly thus be raiſed, if money could be found to circulate them at ſuch an advance. And then, ſince gentlemen are conſumers, and muſt buy every thing as well as others at this advance, what would they be advantaged by receiving 20 per cent. per ann. more, and paying that at leaſt, if not more, for what they want?

But if gentlemen ſhould ſay, this would be ſo as to what they ſpend, yet what they ſave and lay up, would be more: for inſtance, Suppoſe a gentleman of 1000 l. per ann. now ſpends 500 l, and lays up 500 l. per ann. if eſtates were thus raiſed, he would at the ſame rate ſpend 600 l. and lay up 600 l. per ann. But how would he be the richer, ſince, the price of every thing being raiſed in like proportion at leaſt, which is an unavoidable conſequence, his 600 l. would purchaſe no more than 500 l. did before? Wherefore, gentlemen would, in this caſe, be not one jot advantaged.

If, therefore, rents ſhould fall 30 per cent. per ann. every thing would certainly fall, in at leaſt the ſame proportion; ſo that gentlemen would loſe nothing but the name of ſo much per annum; which, I think, the argument above doth ſufficiently evince. But, leſt the name of loſing ſo much per annum ſhould be a prejudice, ſtrong enough to prevent the execution of this ſo neceſſary propoſal, let it be further conſidered, that empty houſes, the number of which at preſent is very great, and will be greater ſtill, if this method be not taken to fill them; I ſay, empty houſes, if they can be filled, are real eſtates as well as land. Now, if money be thus made plentiful, as it certainly may, this plenty of money will ſoon make trade flouriſh; and a flouriſhing trade will ſoon enable the people to occupy more houſes, and hereby the NUMBER OF PEOPLE likewiſe will ſoon be increaſed; ſo that landlords taken in their full extent *, including landlords of houſes, as well as of land, will thus certainly be gainers, by falling their eſtates ſo much as ſhall be needful to make money plentiful, which will ſoon fill their houſes.

* Dr. Nichols, in his Conference with a Theiſt, page 64, ſays, To conſider farther, how mightily this nation of ours hath increaſed within a century or two; notwithſtanding the many civil and external wars, and thoſe vaſt drains of people that have been made into our plantations, ſince the diſcovery of America: how the city of London hath doubled itſelf within theſe forty years, notwithſtanding the laſt great plague; and how the country hath increaſed, though not in the like, yet in a conſiderable proportion, &c.

But it may be ſaid, if lands muſt fall 30 per cent. which is near a third, to fill the houſes, and but an eighth, or a ninth of the number of houſes, as I ſhall ſhew, remain to be filled; how are landlords, taken in the full ſenſe of the word, including landlords of houſes as well as of land, gainers? To which we anſwer, that the rents are now raiſed above their proper value; for the proper value of any thing is really no other than what the money circulating among the people will well enable them to pay; nor can any greater value be long ſupported, by any means whatſoever.

But it will be aſked, How ſhall we know when the prices of things are at this proper value? I anſwer, that as the price of labour is always conſtituted of the price of neceſſaries, and the price of all other things chiefly of the price of labour, whenever the price of neceſſaries is ſuch, that the labouring man's wages will not, ſuitably to his low rank and ſtation as a labouring man, ſupport ſuch a family, as is commonly the lot of many of them to have, the price of neceſſaries being then evidently ſo much too high, every thing elſe is ſo too, or then may the prices of things juſtly be ſaid to be above this proper value.

But it will appear, perhaps, that gentlemen will be the richer for falling all the lands in the kingdom 20 or 30 per cent. per ann. provided this fall be effected only by the addition and cultivation of ſo much more land, as will make farms ſo plentiful, as to reduce the rents of lands to ſuch degree. For,

If it ſhall appear that landed gentlemen would be the poorer, if all the lands in the kingdom were raiſed 20 per cent. per ann. it ſhould ſeem the reverſe muſt neceſſarily follow; i. e. that he would be the richer, if all the lands were fallen 20 or 30 per cent. per annum; that is to ſay, 70 or 80 l. would certainly

certainly purchaſe more, if all the lands were ſo fallen, than 120l. would do, if all the lands were ſo raiſed: which we ſhall endeavour to prove.

If all the lands were raiſed 20 per cent. per ann. it is certain they would not produce more, but, perhaps, leſs, than they now do, by putting it, in ſome degree, out of the farmer's power to exerciſe ſo much ſkill and be at ſo much expence to cultivate them, as they could do before the rents were ſo raiſed: we ſay, ſince the land could, however, produce no more than it now does, all the produce, whatever it conſiſts of, muſt be ſold, not only for all the 20 pounds more, but there muſt be profits likewiſe on all thoſe 20 pounds to enable the farmers to buy whatever they want at higher prices; which every thing muſt needs be advanced to, from thus raiſing the produce; which, as it paſſes through every mechanical and manufactural hand, muſt ſtill have proportionably increaſed profits on the thus raiſed prime coſt, before it comes to the conſumer; who, therefore, muſt thus certainly, in the end, not only pay all the advanced 20l. rent, but likewiſe the neceſſary profits thereon through all the ſeveral hands it muſt paſs: and, ſince the price of labour [ſee the articles LABOUR and MANUFACTURERS] which adds the greateſt value to every thing, muſt be enhanced alſo, it is manifeſt, the ſame quantity of produce muſt be dearer, by all the firſt advanced 20l. rent, and by ſuitable profits to all the ſeveral hands through which it muſt paſs, together with a greater charge of labour thereon; whence it follows, that if the ſame quantity of produce muſt thus coſt a great deal more, than all the 20l. rent, by which it was firſt enhanced, the parts muſt coſt more too in ſuch proportion; ſo that we need not ſcruple to aſſert, that 140l. could not, in this caſe, purchaſe what 100l. now doth: whence it appears, that gentlemen, who are conſumers in common with others, would thus evidently be much the poorer for ſo raiſing their eſtates; and, therefore, it ſhould ſeem an undeniable conſequence, that they would be the richer by lowering their eſtates 20 or 30 per cent. per ann. ſince it muſt be equally certain, that 70 or 80l. would purchaſe more, in this caſe, than 100l. does at preſent; as it is certain 120l. in the other caſe, would not purchaſe ſo much as 100l. now does.

And this both accounts for, and verifies an obſervation, which ſome gentlemen make, and wonder at, viz. that they experience they cannot live ſo hoſpitably on the ſame eſtates as their anceſtors did, who had vaſtly much leſs income from them, than their ſucceſſors now have, who make this obſervation.

If therefore, gentlemen find themſelves ſtraitened, by raiſing rents above what the circulating money will enable them to pay, how great muſt the ſtraits and difficulties prove which are brought on the people, out of whom ſuch heavy rents are raiſed?

It may probably be objected, that this argument concludes too much; ſince, if 70l. will, in this caſe, purchaſe more than 120l. why will not nothing purchaſe more than ſomething? To which it may be anſwered, There is a proper point, at which it will ſtop of itſelf, which is this: whenever the wages of the labouring man and price of neceſſaries are made ſo near equal, that he can, ſuitably to that low rank in life, maintain ſuch a family as he, in common with all the human kind, may be preſumed to raiſe: when the labouring man's wages will do this, the rent the lands will then bear, is that proper and fit rent, which will enable gentlemen to purchaſe more of every thing, than any larger rents can enable them to do: which may be proved thus:

Suppoſe the rents raiſed ſo much, as neceſſarily to carry the price of goods, to conſumers in general, to higher rates than the money they can get will enable them to purchaſe what they really want; this will make a kind of unnatural plenty of goods, preſenting themſelves for buyers, who, though they really want them, cannot find money wherewith to purchaſe them, and therefore are compelled to abridge their neceſſary wants as much as they can: this depreſſes the value of thoſe goods (which thus in the end muſt want buyers) below the rates which the rents have made neceſſary; and this will inevitably keep the produce of the land which the farmers bring to market ſo low, that they cannot make it anſwer to bear all charges, and pay their rents; whence gentlemen muſt find it difficult, if not impoſſible, to get their rents; whilſt, at the time, whatever they buy, as hath been proved, will neceſſarily be dearer in a greater proportion, than ever the rents can be raiſed; whereby it ſeems plain, that ſuch rents of land in general, as will neareſt comport with the point above-mentioned, will always purchaſe moſt of every thing.

There is yet another weighty argument to induce gentlemen to make money plentiful, by an annual additional culture of a due proportion of land; that is, a due regard to the happineſs of their own families. For, let it be conſidered, that men come into this world to raiſe a new generation, and depart out of it. Now, the term of life, men will be found to have one with another, from the time of marriage to their death, is very little more than 20 years: in which time, one marriage with another, we may ſuppoſe, produces about four children, who live to man's eſtate: ſuppoſe a gentleman of 2000l. per ann. to make proviſion for his children, lays up 500l. per ann. which, in 20 years, will be 10,000l. ſaved for them, and which divided into four parts, including the widow's ſhare, which muſt often happen, can be but 2500l. for each child's ſhare: and, ſince this is not only much inferior to the eſtate it was ſaved out of, but hardly ſufficient, viz. the intereſt thereof, to maintain a ſingle perſon handſomely, moſt of the children muſt be introduced into trade, to improve their money for their families, or they will ſoon reduce it to nothing. If trade be languiſhing and diſtreſſed, it cannot be expected but many ſuch will ſink in the general difficulties trade lies under: wherefore, if there be any way practicable to make the money plentiful amongſt the people in general, which never fails to make trade flouriſh, it ought to be done, not only from a common principle of affection to the public good, but for the particular benefit of every gentleman's own immediate offspring, many of whom are ſure to be affected, as trade proſpers or decays.

But the languiſhing condition of trade is by ſome aſcribed to the luxury of people, concerning which let it be conſidered:

It is expected of every man, that he provide for himſelf and family a ſupport; but this expectation is unreaſonable, if things are not ſo wiſely conſtituted in their own nature, that every one may attain this end.

The ways men have to attain this ſupport, are the exerciſe of their ſeveral occupations.

Theſe ariſe ſolely out of the mutual wants, &c. of mankind. Children, who can do little or nothing towards ſupplying themſelves, make about half the buſineſs of the world, ſince more than half the human race die under 17 years of age.

If the people muſt retrench in their expence, they muſt do ſome or all theſe things, viz. wear fewer and worſe cloaths, &c. eat leſs and worſe victuals, employ fewer or no ſervants, occupy leſs houſe-room, and uſe leſs light and fuel, and ſpend little or no money in any pleaſure or diverſion; and, inſtead of wine or ſtrong beer, drink ſmall beer or water, and avoid marriage, as many certainly do, becauſe it creates a greater expence than they can ſupport. Would not this leſſen the conſumption of every thing, and hinder many from ſupporting themſelves and families, by making ſo much leſs buſineſs amongſt the people, and thereby greatly increaſe the number of poor; who, if no other way be found to employ them, which tillage alone in this caſe can do, muſt become a much greater burthen than they are? Beſides, where the poor increaſe, the profits of trade will be ſtill more and more reduced, through loſſes, and want of trade, and the efforts of ſuch great numbers of indigent people, as muſt be ſtriving to ſupport themſelves in the reduced quantity of trade that remains. And muſt not the revenue be greatly diminiſhed likewiſe, ſince in this caſe the conſumption of things, on which the revenue entirely depends, muſt be leſſened very much? A beggarly people can neither pay great taxes or great rents.

Inſtead, therefore, of urging the people to be leſs conſumers, things ſhould be made ſo plentiful, that they might be greater conſumers, that trade and commerce might increaſe, and not diminiſh. Hereby luxury would find it's natural and proper bounds, which, if any man tranſgreſſed in an extraordinary meaſure, he would be ſufficiently whipped with his own rod.

Moreover, with reſpect to the nature of luxury, thoſe that are not influenced by the natural motives to frugality, will not eaſily be reſtrained by any other whatſoever.

The natural motives to frugality are theſe, preſent proviſion for families, and fortunes for children.

They who neglect the former, muſt ſoon ſuffer want; and they who would provide for the latter, muſt conſider what the term of life is, which they may reaſonably hope for, and take care that their gains and expences are proportioned to the end deſigned.

As perſons muſt, generally at leaſt, have tolerable fortunes themſelves, who ſhall be able to provide fortunes for their children, let it be ſuppoſed, that a man ſets out with 2000l. and by ſkilful and prudent management he gains, one year with another, about 500l. If men who have ſuch fortunes muſt not live a little decently, whence can trade, which entirely depends on, and terminates wholly in the conſumption of things, ariſe? How can landlords expect any conſiderable rents for their houſes, &c. and to pay rent and taxes, and all other charges, and maintain a middling family in London, with decency ſuitable to a reputable tradeſman, when 250l. per ann. is nothing ſuperfluous, even where all things are managed with great œconomy?

But ſuppoſe, in this caſe, ſuch a man ſhould lay up, one year with another, 200l. and that for 20 years, which is, I believe, much about the term men have to raiſe and provide for families, he then would add 4000l. to his firſt 2000l. which makes 6000l. together, to be divided amongſt four children, which I take to be the number one marriage with another raiſes; this ſum, therefore, will be but 1200l. for each child's ſhare, if a like ſum be reſerved for the widow; and if there ſhould be no widow, but 1500l. for each child, which will not often ſet them in better circumſtances than their parents

rents ſet out in: but, if things muſt be worſe than this, families muſt ſoon ſink into poverty. And, ſince theſe things are ſubject to many and great contingencies, nobody ought to think 25 l. per cent. per ann. even on ſuch a capital employed in trade, too great gain; eſpecially, conſidering what ſkill and pains are neceſſary to reach this end, and to what great riſk money employed in trade is always expoſed, beſide the preſent and future proviſion with which families are to be ſupplied out of it.

Nothing ought to be deemed luxury in a tradeſman, whilſt he lives at about half the income of his buſineſs; yet in prudence he ought not to make too great a figure, becauſe of the uncertain and fluctuating nature of trade, which may happen ſome time or other, by misfortune, if not otherwiſe, to turn againſt him; and becauſe, the more he can lay up for his children, the more will he have done towards raiſing them to better ſtations in life.

Nor ought it to be deemed luxury in a tradeſman if he ſpends the whole income of his buſineſs, if ſuch expence be unavoidable, when the utmoſt frugality and good management are exerciſed in ſuch a man's family.

Peace and plenty comprehend all the felicity mankind were deſigned to enjoy in this mortal ſtate; and are ſo well known to conſtitute the happineſs of the world, that they are proverbial terms to expreſs the compleateſt general felicity; which undoubtedly ſuggeſts, that they have by experience been found to anſwer the end.

Wherefore, if there be any difficulty among the people, it muſt be owing to the defect of one or both of theſe.

As we are now in peace, it muſt be owing to the deficiency of plenty that the trade of this nation is in ſuch a languiſhing condition; the truth of which the numerous complaints to the parliament, and great number of empty houſes, abundantly evince.

Where tillage and cultivation of land are not annually to a conſiderable degree increaſed, even peace, and the natural increaſe of mankind, do neceſſarily produce a general decay of trade.

For peace, which puts an end to the vaſt buſineſs which war neceſſarily creates, obliges thoſe that were employed, and found their livelihood by the affairs of war, to employ themſelves in the trade and buſineſs which the peaceable ſtate of affairs produce; and, as hereby there is a much greater number of people to be ſubſiſted on ſo much leſs buſineſs as the ending a war puts a period to, it is apparent this muſt divide the remaining buſineſs into a great many more parts; whence the profits, which ought to be ſo much augmented as the buſineſs to each particular becomes leſs (becauſe the expence of living will not be leſs) are always found by experience to leſſen, in a greater proportion than the buſineſs to each particular leſſens. This is the inevitable conſequence of having a greater number of people in any trade, where the buſineſs tranſacted by them all is no greater than when the ſame trade and buſineſs were in ſo much fewer hands; and hence ruin muſt happen to many whoſe trades are thus unhappily circumſtanced.

Beſides, peace, lowering the intereſt of money, brings many more people into trade, who either cannot live on the reduced intereſt of their money, or are not ſatisfied to do ſo, and, therefore, enter on trade to improve their money to better advantage; and ſuch, having abundance of money to employ, muſt needs take a great deal of buſineſs from thoſe that had it before, by doing buſineſs at much leſs profit than it was before done, that they may employ the large ſums they bring into trade. This muſt needs make it very difficult for people of much leſs fortunes to get a living, greatly increaſe the number of poor, and empty the houſes too, by diſabling the people to pay ſuch rents as they did before. This ſtate of things will alſo drive many out of the nation, to get their livings by the arts they have learned here.

The heavy debts and taxes which war hath laid this nation under, ſufficiently evince that war is not the natural means to make trade flouriſh, ſince the conſequences are ſtill ſo burthenſome to us. And, if we look back to the condition France was reduced to by queen Anne's war, which introduced both famine and peſtilence amongſt them, and occaſioned the people to ſurround the dauphin's coach in crowds, and cry out, Peace and bread! Bread and peace! Surely theſe things may fully convince us that war is a very great calamity.

Peace, therefore, being the only natural foundation of happineſs to any nation, and trade the particular means whereby the people can be employed and ſubſiſted, the promoting and improving trade ſhould be always conſulted, and eſpecially in time of peace, which is favourable to ſuch a deſign.

In general, there ſhould never be any reſtraints of any kind on trade, nor any greater taxes than are abſolutely unavoidable; for if any trade, by this means, be cramped and fettered, thoſe who ſubſiſted by the buſineſs, which now hath reſtraints and burthens laid upon it, will be rendered incapable of purſuing it, and, of conſequence, they muſt be employed ſome other way, or drove out of the kingdom, or maintained at the public charge; which laſt is always an additional grievance, and ultimately falls upon trade, and ſhould, if there be any poſſible way which might employ them, be prevented.

That there are natural means to ſubſiſt all mankind in a happy condition, manifeſtly appears from the wiſdom and goodneſs of the Supreme Being, who hath taken ſuch ample care of all the creatures below us, that they want no good thing, nor ſuffer any hardſhips but what unreaſonable men bring upon them. Wherefore, if the Almighty hath ſo wiſely and graciouſly provided for all the creatures below us, for whoſe happineſs other beings evidently appear to be deſigned, it muſt be abſurd to imagine he hath diſpoſed things ſo, that unhappineſs in any degree ſhould unavoidably ariſe to man, whom he hath placed at the head of all his works in this world. Therefore, whatever difficulties mankind meet with muſt be owing to their own miſmanagement, in not looking through the nature of providence with reſpect to themſelves.

One branch of that providence, which men ſhould attend to and conſider, is, that mankind as certainly increaſe as other animals and vegetables, and, therefore, that increaſe muſt continually be employed in cultivating proportionably more land: for otherwiſe, being all conſumers, there muſt continually be greater numbers ſubſiſted on the produce of the ſame land which was before cultivated; and this will increaſe the demand for the produce, and inhance the price of it, whilſt the increaſing people muſt employ themſelves ſolely in trades, manufactures, &c. to enable them to ſubſiſt: whence it muſt needs come to paſs, that trades, manufactures, &c. will ſoon be overſtocked; that all the increaſe of the people cannot be ſubſiſted this way, ſeeing the neceſſaries of life, for which they all ultimately work, will all the while be growing dearer, and the people leſs able to purchaſe them. And, as I take this to be very much our preſent caſe, ſo this propoſition of cultivating proportionably more land, appears to me to be one natural remedy to be applied; the happy effects of which, if ſufficiently executed, will ſoon diſcover to be an univerſal benefit, notwithſtanding any imaginary appearances to the contrary.

But I think it needful here to obſerve at what rate mankind increaſe, becauſe their happineſs certainly depends on cultivating ſtill more and more land in ſuch proportion. We will conſider this matter upon the principles of Sir William Petty, who has endeavoured to ſhew that mankind will abſolutely double themſelves in 360 years, notwithſtanding the contingency of wars and plagues; therefore, accordingly, the quantity of land which every year ſhould be taken in and new cultivated, muſt be at leaſt a 360th part of the quantity at preſent in cultivation.

Now, if England be 320 miles long, and 290 miles wide, it muſt, ſuppoſing it's length and breadth to be every-where alike, contain 92,800 ſquare miles: but, as England is not ſo regular a figure, I ſuppoſe it will be needful to deduct a third of it's contents for it's irregularity, towns, and rivers, and then there will be about 62,000 ſquare miles contained in it.

Suppoſe that at preſent but about half, that is, 31,000 ſquare miles, are cultivated, a 360th part of that, viz. 86 ſquare miles at leaſt, ſhould every year be further added, and taken into cultivation, to hold proportion to the natural increaſe of mankind: and if a greater part of England be already improved than I have ſuppoſed, or if mankind increaſe much faſter than Sir William Petty above aſſerts, then the addition every year muſt be greater in ſuch proportion.

But, as nothing like this hath hitherto been done, it is evident to demonſtration that hence all trades, occupations, manufactures, and profeſſions, are overſtocked with numbers, and embarraſſed: and hence rents have been advanced, by the demand which the increaſe of people hath occaſioned for land; conſequently living is become much more chargeable than formerly, and the people leſs able to ſupport themſelves: beſides, the inhancing the price of neceſſaries hath either advanced our commodities, or made them ſo much worſe in quality, that our neighbour-nations have not taken ſo many of them as they would otherwiſe have done; and we probably muſt have taken more commodities from them for this reaſon. And thus, it is to be feared, that the general balance of trade and money is againſt us; that is, the gold and ſilver of this nation have, by this means, been really diminiſhed, notwithſtanding the great increaſe of paper credit and circulation; and the prodigious exportation of gold and ſilver, of late years, is a ſtrong indication of it, whatever pretences may be advanced concerning it to the contrary.

And, if our trade goes on ſo, and our competitors, more or leſs, ſupplant us therein, we ſhall, in time, loſe our real caſh, and be obliged to carry on our buſineſs with paper currency only.

But if, to prevent theſe evils, we do, as faſt as poſſible, put a very great quantity of land into cultivation more than at preſent is cultivated, our poor will be employed, the empty houſes filled, and our manufactures become much cheaper and better; and this will both increaſe our exportations to the nations we now trade with, and give riſe to other foreign markets to vend our goods at, and prevent the exceſſive importation of foreign goods amongſt ourſelves: by which po-

ſcy, the general balance of commerce will not only be turned in our favour, pro tempore, but, in conjunction with the other meaſures we have ſubmitted throughout this work, the ſame may always be kept ſo, and money thereby become plentiful enough amongſt the people in general, and their happineſs be increaſed in proportion to their ſteady purſuit of ſuch honeſt and induſtrious meaſures: and, perhaps, there is no other way in nature to compaſs this end, and effectually to recover the trade of the nation: for thoſe nations that can work cheapeſt, muſt have the money, ſo certain as they always will have the commerce; to which I will add, that the people will always flow into thoſe nations that get the money (i. e. have the general balance of trade in their favour) becauſe trade, which is the means of procuring money and landed eſtates, is that which employs and ſubſiſts them.

And it may deſerve conſideration, whether theſe meaſures, ſteadily backed and forwarded by ſuch others which we have occaſionally ſubmitted, may not prove a more effectual way than ſome that have been propoſed, ſo to multiply our own people, without giving any diſguſt or uneaſineſs to the native-born ſubjects, that we may have as little ſcarcity as dearneſs of labour among ourſelves.

And as to the purchaſe of eſtates, which is always governed by the intereſt of money, they will be valued at as many years purchaſe as they would, if the annual rental had not fallen; and, though the ſums they ſell for muſt be leſs in proportion as the rents ſhall be lowered, yet the money will have, at leaſt, all the ſame effects apply it how you pleaſe.

The great number of empty houſes within the cities of London and Weſtminſter, and places within the bills of mortality*, will certainly, in time, be attended with reducing the rents, perhaps, full one half, if the methods propoſed be not applied to prevent it.

* By the bills of mortality of the year 1730, which, by the preceding and ſucceeding years, appears to be a moderate year, there died in London and Weſtminſter, and the ſuburbs thereof,

		Perſons.	The medium of which age is	One year makes amongſt them	Years.

By the no. of deaths, 26,761, div. the yea. they lived, 623,713, and 23 years, and about one third, according to this bill of mortality, appears to be the par-term of human life; multiply the deaths by this term, ſhews the number of people living in the bills of mortality to be about 624,423 perſons; and, if we ſuppoſe the houſes, one with another, to contain 10 fouls, then the number of houſes inhabited will be 62,442.

By a ſurvey taken in the year 1732, 8000 houſes appeared to be empty in the cities of London and Weſtminſter, and places within the bills of mortality; moſt of which lett, at an average, for 20l. per ann. at which rate, there was upwards of 160,000l. rent yearly loſt in the bills of mortality, more than a ninth part of the whole building being empty. By this bill of mortality it alſo appears, that more than half the human race die under 10 years of age: and, if we conſider the number of young perſons, under and over this age, who live to ſupply the places of thoſe that die in all the ſtages of life above this term, there can be no doubt that children make about half the buſineſs of the world, as I have aſſerted. And though it appears, by this bill of mortality, that the term of life, on the par, is about 49 years, excluding all thoſe that die at 20 years and under, yet I cannot imagine the term men have to raiſe and provide for families in the marriage-ſtate doth much exceed 20 years, ſince it is pretty certain marriages in general commence a few years at leaſt later than the age of 20 years, and are undoubtedly generally diſſolved by the death of one of the parties, before they both reach the term of 49 years.

We are ſenſible the great number of empty houſes is aſcribed to the increaſe of buildings: but, whoever conſiders that there are not leſs than 6 or 700,000 people in the bills of mortality, and that, according to the natural increaſe of mankind, at the loweſt computation, of doubling in 360 years, the increaſe will be near 40,000 people ſince that time*; he will be neceſſarily obliged to aſcribe the empty houſes to other cauſes, and not to the increaſe of building ſolely. However, ſince they are built, and their being inhabited, or ſtanding empty, will certainly have ſuch an influence on the rents of the kingdom, and the revenue likewiſe, it behoves us to take the proper methods to fill them; which I am confident will ſoon be effected by cultivating land enough to make a plenty of money amongſt the trading part of the people in general, but not otherwiſe.

* We are not inſenſible that Mr. Derham, in his Phyſico-Theology, ſhews that the deaths in London, as in moſt great cities, are greater than the births; whence an objection may ſeem to ariſe to the increaſe above-mentioned; which I think is of no weight, becauſe if a nation will abſolutely double itſelf in about 360 years, notwithſtanding wars and plagues, cities muſt do ſo too: nay it is plain, by what Dr. Nichols ſays, London increaſed at ſo much greater rate as to double itſelf in 40 years, notwithſtanding the laſt great plague, which happened in that period.

But further, if the people increaſed, as Dr. Nichols ſays they did, ſo as to double themſelves in London in forty years, notwithſtanding the laſt great plague, which happened within the period he wrote of; and the country increaſed, though not in the like, yet in a conſiderable proportion (and I hope his authority is ſufficient to bear me out) then the buildings ſince the peace of Utrecht, which hath by no means, I think, been in proportion to one fourth of ſuch an increaſe of people, cannot be the reaſon to which the vaſt number of empty houſes can be aſcribed.

But the empty houſes muſt be aſcribed to ſuch a diminution of trade, and, conſequently, of caſh amongſt the people, which makes it ſo difficult for the people to get money to ſupport them, that many are become incapable to pay their rents, and many muſt have forſaken the nation on this account: for the people will diminiſh where the means of getting a livelihood is not well to be attained ſuitable to their ſeveral ranks and ſtations; which is a neceſſary conſequence where the general balance of trade becomes againſt any nation.

For it is evident, ſuch a nation hath amongſt them juſt ſo much buſineſs leſs than their own ſeveral wants create, as the amount of the balance againſt them is, which leſſening their caſh, at the ſame time, in the like proportion, brings a double inconvenience with it, viz. want of money and employment: and, if things are ſuffered to go on ſo, the people muſt diſperſe and diminiſh. And therefore this maxim, well known amongſt merchants, appears well founded, it being only the reverſe of what is ſhewn above, That the people always increaſe in whoſe favour the balance of trade is conſiderable; as it muſt needs have been in ours, in that period of time Dr. Nichols wrote of; ſince, notwithſtanding ſo great an increaſe of the people, the prices of every thing, as is well known, rather advanced all the time, which they could not have done if the caſh of the nation (without the great paper circulation, occaſioned ſince by our public debts and taxes) had not increaſed in yet greater proportion than the people increaſed, as I think the illuſtration of the fourth preceding maxim evinces.

Hence therefore it appears, that every nation ought to keep trade on ſuch a foot, as always, on the whole, to have the balance in their favour: for, if mankind double themſelves only in 360 years, if the real caſh of the nation be not augmented every year 360th part, the people muſt in a few years be diſtreſſed for want of money, unleſs all things be made at leaſt ſo much cheaper to prevent it.

And, as the means of doing this is in the power of every nation, that has waſte land enough to improve to increaſe their plenty*, and thereby reduce the price of things; ſo the improving ſo much waſte land as anſwers this end; will furniſh employment, and conſequently a livelihood for the people; and will always, not only prevent a conſiderable number of houſes from ſtanding long empty, but will continually cauſe more to be added all over the kingdom; as the vaſt increaſe Dr. Nichols aſſerts there was, particularly in London, within forty years, beſides the great increaſe in the country in the ſame time, doth fully ſhew.

* Dr. John Laurence, in his Syſtem of Agriculture, p. 45, ſays, Without all queſtion, improvement of lands, of what kind ſoever, makes riches and plenty, and plenty calls together inhabitants, and people to conſume it. And p. 47, he ſays, So plain it is, that incloſure is the greateſt encouragement to good huſbandry and remedy for beggary, the poor being employed by the continual labour beſtowed on ſuch land, which is doubly repaid by the fruitful crops it annually yields.

That we may put this matter paſt all doubt, let it only at preſent be granted, which we ſhall ſhew hereafter, that the people in London and Weſtminſter were really doubled in about forty years; ſince this, nor any thing like this, could be the effect of the natural increaſe of mankind, it muſt have ſome other powerful cauſe: this cauſe, we apprehend, was a flouriſhing trade, which we thus prove, viz.

The

The people were doubled in the city of London, and increaſed too in the country, though not in the like, yet in a conſiderable proportion; nevertheleſs, the prices of neceſſaries, and all other things in general, were higher than thoſe things were forty years before: now this, by our fourth preceding maxim, was abſolutely impoſſible, if the caſh of the nation had not been vaſtly increaſed alſo. Wherefore, as we have no mines, the caſh could be increaſed only by exporting ſo many more goods in value than we imported. As this is, in itſelf, that which conſtitutes a flouriſhing trade in any nation; ſo we ſee the effect was the doubling the people in London; wherefore, let our trade be again put on ſuch a foot, that we may be able to raiſe our produce and commodities of every kind, as cheap as any nation can raiſe, or make any thing, whereby they may interfere in any branch of our trade; and the ſame effect will again manifeſt itſelf, and conſequently not only fill the empty houſes, but cauſe more to be added.

As it hence appears abſolutely needful to keep trade on a foot, whereby the balance may always, on the whole, be in our favour; ſo it is certain, the mines which are continually giving gold and ſilver, do afford ſufficient to ſupply ſuch a needful balance. For the gold and ſilver, which the mines, ſince the Europeans have poſſeſſed them, have not only furniſhed Europe in general with quantities equal to the increaſe of mankind ſince that time, but ſo much more gold and ſilver, as to enhance the price of all kinds of commodities throughout Europe in general; and eſpecially in thoſe nations who have, either directly or indirectly, had the moſt conſiderable trade with the countries where the mines are: and this, in all probability, they will always continue to do; but, if not, we ſhall ſhew, in ſome future parts of this work, how to do that which will always be equivalent.

And, with reſpect to the countries which are thus continually furniſhing this balance to the reſt of the world, they, having the mines, have that which is equivalent to ſuch a balance in their favour.

We have before laid it down as a maxim, that gold and ſilver (i. e. money) will be moſt plenty where the mines are: let it then be ſuppoſed, that the people poſſeſſed of the mines could furniſh themſelves with the neceſſaries and pleaſures of life by the produce of their own country, and therefore ſhould think fit to prohibit the exportation of gold and ſilver, and ſhould thereby be effectually able to prevent the exportation thereof, which is undoubtedly impoſſible: if we ſuppoſe theſe nations to make ſuch prohibition, and at the ſame time continue to work thoſe mines, ſo that they are perpetually yielding more and more gold and ſilver, how great muſt the increaſe of thoſe commodities ſoon become? And, ſince gold and ſilver are of little uſe, beſides procuring the neceſſaries and conveniencies of life, which alone are real riches, and for which gold and ſilver are now univerſally exchanged; would not the great plenty of theſe commodities, thus continually increaſing, cauſe proportionably ſo much more gold and ſilver (with which they would at length be incumbered) to be given for the more neceſſary produce and fruits of the earth? And would not this ſo depreſs the value of gold and ſilver, by their plenty amongſt them, as to give occaſion and encouragement to all the world to go to this market with their produce and manufactures, which they can and will ſell for a vaſt deal leſs gold and ſilver, than what ſuch goods of their own raiſing would in this caſe be ſold for? Nay, they would find it a convenience to be eaſed of the burthen of the gold and ſilver, which the mines, if continually worked, would produce, as certainly as it is a relief to any country to export any other ſuperfluous commodities: for, if they do not ceaſe to work the mines, when they have raiſed gold and ſilver enough to be burthenſome, they muſt and will certainly drop their cultivation and manufactures; ſince men will not eaſily be induced to labour and toil, for what they can get with much leſs trouble, by exchanging ſome of their exceſs of gold and ſilver for what they want.

And, if they ſhould be ſuppoſed, as is natural enough in this caſe to drop their cultivation of land and manufactures, which are much the ſloweſt and moſt laborious way of ſupplying themſelves with what they could ſo eaſily and readily procure by exchanging gold and ſilver, which they too much abound in, they would certainly, in a great meaſure, loſe the arts of cultivation of land, and that of manufactures alſo; which has long been the caſe of a neighbouring nation, by the acceſſion of wealth which the Weſt-Indies afforded: whence they are at beſt but a beggarly nation, with their immenſe treaſure, and the conduit pipes to diſperſe the gold and ſilver thro' other parts of the world; which other nations drain them of, by making goods cheaper than they can do, and that to ſuch a degree, that the mines are ſcarcely ſufficient to anſwer their ordinary occaſions, even in times of peace: and, though they are ſenſible of this, yet they find by experience they can't prevent it.

The caſe is the very ſame, in ſome degree, in every nation, whoſe quantity of real or artificial caſh is large enough to ſupport the prices of their goods, conſiderably above the rates ſuch goods bear in other nations round about them. Whence it is obvious, that all prohibitions, with regard to coin and bullion, as well as all other commodities, muſt be injurious to commerce; becauſe, beſides all other miſchiefs thereby occaſioned, they are always deſigned to reſtrain the money from going out of the nation; which will be eternally impracticable, whilſt the general balance of trade is againſt a nation.

We confeſs that we judge it moſt nationally beneficial to prevent the importation of all foreign commodities, as much as poſſible, but not by acts of parliament, ſuch reſtraints, perhaps, being no good to commerce in general; it is therefore we recommend the raiſing ſuch goods ourſelves, ſo cheap as to make it impoſſible for other nations to find their account in bringing them to us: as this is the only natural and effectual prohibition of ſuch things as we would not receive from abroad; ſo I wiſh every nation in the world would do the like, as much as ever they can; for then the plenty of every thing would be ſo great, that all mankind would be happy, if this world is capable of making them ſo; for we are not partial to our own country, but wiſh all mankind to be as happy as I wiſh my country and myſelf. Upon the whole, the reader will obſerve what we aim at.

Firſt, That it is of no conſequence, whether any nation hath a vaſt deal of gold and ſilver, or very little money amongſt them, if ſufficient care be taken to make the plenty of every thing great enough, to render the money they have amply extenſive, to circulate their trade in every branch, and fully to employ and ſupport all their people; which muſt and will make them all happy, and certainly cauſe them to have vaſtly more foreign trade, by their thus being able to make and ſell their manufactures, and produce them at lower rates than their neighbour nations can do. And this is abſolutely in the power of every nation, that will cultivate land enough to effect it, unleſs any nation ſhould have more people in it than they have land to ſupport them; which may eaſily be known, from the demand there will be for land, and raiſing the rents in conſequence thereof, 'till the prices of neceſſaries become ſo dear, that the wages of the labouring people will not purchaſe what is needful for the ſupport of their families; and there be no more land left to cultivate, and remove this miſchief, which will fall more or leſs on every occupation, in proportion as the poor become thereby poorer and more and more diſtreſſed.

In this caſe, there is no relief but tranſporting the people where they can have land enough for them.

Secondly, It is of little or no conſequence to the trade of any nation, whether the people ſpend near or all their gains, provided they do not ſpend more than they really gain, for this diſables them to make good their contracts; or whether they are generally frugal, and lay up conſiderably. For the trade of a nation doth very little depend on theſe things, but entirely on employing the people in cultivation of land in general, in proportion to the other employments of mankind; that the neceſſaries of life, which all ultimately work for, may be ſo plentiful, that the meaneſt of the people may eaſily attain a ſufficiency of them, for plenty of theſe comprehends all human felicity.

Remarks on the whole of this article of Manuring and Cultivating additional quantities of Land.

Reducing the preſent Rates of Labour appears ſo abſolutely neceſſary to increaſe our foreign and domeſtic trade, that we have endeavoured to ſhew, as well under this head, as others ſynonimous and correſpondent therewith, how this very important and intereſting matter may be effected, to the great advantage of every claſs of people within the community; and the way that has been propoſed at preſent, 'till taxes upon our native commodities can be greatly leſſened, or abſolutely annihilated, is, perhaps, the only one whereby to procure ſo great a bleſſing: and this method will cauſe multitudes of the Britiſh ſubjects to become the poſſeſſors of property, who otherwiſe will never have a ſhilling to ſpare.

What we have urged, upon this occaſion, we ſhall endeavour to corroborate in the ſequel, where any natural opportunity ſhall offer: for, as the principles of trade in general, whereon we have endeavoured to proceed, ſeem to be founded in the eternal and immutable nature of things, and the conſtitution of the world itſelf; ſo we are inclined to think that they are capable of ſtrict demonſtration, let them be viewed in whatever national light they can.—As certain branches of trade, indeed, may, in the proceſs of time vary, either by increaſing or otherwiſe, or ſhifting their channel, or by any great alteration in the ſtate of public affairs, &c. in ſuch caſes, perhaps, it may be neceſſary to deviate occaſionally from ſome of thoſe maxims which prevail throughout this work.—This will ever be the fate of what is mutable; but the neceſſity of any temporary variation, in the application of our general principles, will ſcarce be thought an argument of their imperfection and invalidity.

MAP, a plain figure, repreſenting the ſurface of the earth, or a part thereof, according to the rules of perſpective *.

* Perſpective is the art of delineating viſible objects on a plain ſurface, ſuch as they appear at a given diſtance or height, upon a tranſparent plane, placed perpendicularly to the horizon between the eye and the object.

Though

Though nothing can repreſent the heavens or the earth in their natural appearances ſo exactly as a globe, yet the two hemiſpheres, either of the heavens or of the earth, may be repreſented upon a plain ſuperfices, which are generally called projections of the ſphere *.

* Projection of the ſphere in plano, is a repreſentation of the ſeveral points or places of the ſurface of the ſphere, and of the circles deſcribed thereon, or of any aſſigned parts thereof, ſuch as they appear to the eye ſituate at a given diſtance, upon a tranſparent plane placed between the eye and the ſphere.
The moſt uſual projection of maps of the world is that on the plane of the meridian, which exhibits a right ſphere, the firſt meridian being the horizon: the next is that on the plane of the equator, wherein the pole is in the center, and the meridians the radii of the circle.—This repreſents a parallel ſphere.

If you ſuppoſe a globe to be cut in halves juſt at the equator, and each hemiſphere repreſented on a plane, it is called a projection of the globe upon the plane of the equator. Then the equinoctial line will be the circumference, and the two poles of the world will be the centers of thoſe two projections, and all the meridian lines will be ſo many ſtraight lines, or ſemidiameters, meeting in the center. This is the moſt common method of repreſenting the celeſtial globe and the ſtars.
If the globe be cut aſunder at the horizon of any particular place, and thus repreſented on a plane, it is called the projection on the plane of the horizon: then the zenith and nadir will be the centers of thoſe projections, and the horizon is the circumference: the two poles will be placed at ſuch a diſtance from the circumference, as the pole of the world is elevated above the horizon of that place; and the meridian will be repreſented as curve lines, meeting in the pole-point, excepting only that meridian that paſſes through the zenith, which is always a right line. This is a more uncommon projection of the ſphere, tho' it is much uſed in dialling.
The moſt uſual way of deſcribing the earthly globe on a plane, or a map, is to ſuppoſe the globe cut in halves about the firſt meridian, at the iſland Faro, or Teneriff: this is a projection on the plane of the meridian; then the firſt meridian will determine the circumference: the pole-point will ſtand in the upper and lower parts of that circle, and the other meridians will be curve lines, meeting in the pole-points, except that which paſſes through the center of the projection, which is a right line.
Here the equator will be a ſtraight line, or diameter, croſſing all the meridians at right angles, and at equal diſtances from the two poles.
Here the two tropics of Cancer and Capricorn are drawn at their proper diſtances, of $23\frac{1}{2}$ degrees from the equator; and the two polar circles are at the ſame diſtance from the poles.
In this projection the ecliptic is ſometimes a ſtraight line, cutting the middle of the equator obliquely in each hemiſphere, and ending where the two tropics meet the meridian: but ſometimes the ecliptic is drawn as a curve line, or an arch, beginning where the equator meets the meridian, and carried upward juſt to touch the tropic of Cancer in one hemiſphere, and downward to touch the tropic of Capricon in the other. It is in this form the maps of the world are generally drawn, in two large hemiſpheres.
Note here, that it is impoſſible to repreſent a ſpherical body exactly in it's due proportion upon a plane; and, therefore, the artificial meridians, or lines of longitude, parallels of latitude, &c. are placed at ſuch different diſtances, by certain rules of art, and the degrees, marked on them, are often unequal, but ſo drawn as may moſt commodiouſly repreſent the ſituation of the ſeveral parts of the earth with regard to one another.
The meridian, or circumference of theſe circles, is divided into four quarters, and each marked with 90 degrees, beginning from the equator, and proceeding towards the poles. Theſe figures, or numbers, ſhew the latitude of every place in the earth, or it's diſtance from the equator; and, at every 10 degrees, there is a parallel of latitude drawn on purpoſe to guide and direct the eye in ſeeking the latitude of any place.
The equator of each hemiſphere is divided into 180 parts, which makes 360 in the whole; and the ſeveral meridians, or lines of longitude, cutting the equator at every 10 degrees, direct the eye to find the longitude of any place required.
As the equator, the ſeveral lines of longitude, of latitude, &c. cannot be repreſented on a plane exactly as they are on a globe, ſo neither can the ſeveral parts of the world, kingdoms, provinces, iſlands, and ſeas, be repreſented in a map exactly in the ſame proportion as they ſtand on a globe; but, as the diviſions of degrees in a map are bigger or leſs, ſo the parts of the land and ſea are repreſented there bigger or leſs, in a moſt exact proportion to thoſe lines of longitude and latitude amongſt which they are placed.
Therefore, though the length, breadth, or diſtance of places on a map of the world, cannot be meaſured by a pair of compaſſes, as they may be on a globe, yet you may count the

number of degrees to which ſuch lengths, breadths, or diſtances correſpond, and thereby you may compute their real dimenſions, though not always ſo well as on a globe.
Thus much ſhall ſuffice concerning maps that repreſent the whole world, or the globe of earth and water. Let us next conſider thoſe maps which repreſent particular parts of the world, kingdoms or provinces: theſe are generally drawn in a large ſquare, and are to be conſidered as parts of a projection on the plane of the meridian.
From the top to or toward the bottom of the ſquare are drawn meridians or lines of longitude; and the number of degrees of longitude are divided, and marked on the upper and undermoſt line of the ſquare.
From ſide to ſide are drawn parallels of latitude, and the degrees of latitude are marked on the two ſide lines.
Thus you may eaſily find on a map what is the longitude or latitude of any place given, or you may find the point where any town ſtands, or ſhould ſtand, when the true longitude and latitude of it are given.
Note, In ſuch maps of particular countries the longitude is not always reckoned from the firſt meridian, as Faro, or Teneriff, but oftentimes it is reckoned from the chief city of that kingdom which is deſcribed in the map.
Obſerve farther, that, though in globes and maps of the whole world the longitude is reckoned from the weſt toward the eaſt, yet, in ſmaller maps, it is often reckoned both ways, as Briſtol is $2\frac{1}{2}$ degrees of weſtern longitude from London, Amſterdam has near five degrees of eaſtern longitude.
Note alſo, that, when a ſmall country is repreſented in a large map, the lines of longitude and parallels of latitude are drawn not merely at every 10 degrees, as in the globe, but ſometimes at every five degrees, and ſometimes at every ſingle degree.
Let it be obſerved, alſo, in large maps, that deſcribe any particular country or province, as a ſingle or double crooked waving line ſignifies a river, when it is made ſtrong and black; ſo a public road is deſcribed by a ſingle or a double line, drawn from town to town, not quite ſo curled nor ſo ſtrong as a river is, but ſtraight or winding, as the road itſelf happens: and, where the roads lie through a broad plain, or great common, without houſes or hedges, they are ſometimes deſcribed by a double row of points.
As villages and ſmaller towns are deſcribed by a little circle, or ſmall round o, in maps of larger countries, where the cities are repreſented by the figure of a houſe or two, with a ſpire or ſteeple: ſo, in maps of ſmaller countries or provinces, the little towns and villages are deſcribed by the figure of a houſe or two, and great towns or cities are marked like ſeveral buildings put together, in proſpect, or elſe the naked plan of thoſe very towns or cities is drawn there, and diſtinguiſhed according to their ſtreets.
As maps are drawn to deſcribe particular countries by land, ſo a deſcription of coaſts or ſhores, and of the ſeas, for the uſe of mariners, is called a ſea-chart; and it differs from a map chiefly in theſe particulars:
I. A map of the land is full of names and marks, deſcribing all the towns, countries, rivers, mountains, &c. but, in a ſea-chart, there are ſeldom many parts of the land marked or deſcribed, beſides the coaſts or ſhores and the ſea-ports, the towns or cities that border upon the ſea, and the mouths of rivers.
II. In a map the ſea is left as an empty ſpace, except where the lines of longitude and latitude, &c. are placed: but, in ſea charts, all the ſhoals or ſand, and ſhallow waters, are marked exactly according to their ſhape, as they have been found to lie in the ſea, by ſounding the depth in every part of them.
III. In ſea-charts, the meridians are often drawn in ſtraight and parallel lines, and the lines of latitude are alſo ſtraight parallels, croſſing the meridians at right angles. This is called Mercator's projection; and the points of the compaſs are frequently repeated and extended through the whole chart, in a multitude of croſſing lines, that whereſoever the mariner is upon the ſea, he may know toward what point of the compaſs he muſt ſteer, or direct his veſſel, to carry it toward any particular port; and that we may be able to ſee, with one caſt of an eye, the various bearings of any port, coaſt, iſland, cape, &c. toward each other.
IV. The ſea is alſo filled, in ſea-charts, with various numbers or figures, which denote the depth of water, and ſhew how many fathom deep the ſea is in thoſe places where the number ſtands: theſe are called ſoundings.
V. In ſea-charts there is not ſuch care taken to place the north parts of the world always directly upright and before the face of the reader; but the coaſts and countries are uſually deſcribed in ſuch a poſition as may afford the fitteſt room to bring in the greateſt variety of ſhores and ſeas within the compaſs of the ſame chart, whether the eaſt, weſt, or north, be placed directly before the reader.
Maps are laid down and proportioned to a certain ſcale, which is always taken from the degrees of latitude.
The degrees of latitude are always marked on the eaſt and weſt ſides of the map.

The degrees of longitude are always marked on the north and fouth ſides of the map.

A degree of latitude is always of the ſame breadth: wherefore the diſtance of two places ſeated directly north and ſouth, is immediately known by knowing the different latitudes; but a degree of longitude is of different extent, for this is the diſtance of a place from the firſt, or ſome other meridian.

When Ptolemy invented the way of diſtinguiſhing the ſituation of places, he did it by parallel and meridian lines; the latter paſſing round the globe through the equator and poles, and the former lying parallel to the equator; which parallel lines were found very convenient for marking the latitude into degrees and minutes. Then, for longitude, he fixed upon Teneriff, one of the Canary Iſlands, as the moſt weſtern part of the then known world; which, having a very high mountain, was a good mark for mariners, and the fitteſt place from whence to begin a general computation.

Accordingly, all the old maps begin their eaſt longitude from Teneriff; and, becauſe then only one ſide of the globe was known, the degrees were only 180; but, ſince the diſcovery of America, they are carried quite round to 360. This method was always eſteemed, and Teneriff reckoned a good ſtandard meridian, 'till the French, who like nothing which they themſelves do not invent, thought proper to alter it, and make the iſland of Faro their new meridian, which, by late obſervation, lies juſt two degrees more weſt: wherefore, to prevent confuſion, our modern geographers and delineators of maps make the metropolis of their own nation the firſt real meridian: and, in this caſe, longitude is two-fold, being, from London, either weſt or eaſt, as at ſea it is computed from ſome known port or head-land. The longitude of any place from London being known, the difference in the hour of the day is alſo known: for, as the ſun performs his diurnal circuit in 24 hours, he gains in each hour 15 degrees, being a 24th part of 360, or one degree in four minutes; ſo that, at any place 15 degrees eaſt of us, noon is an hour ſooner with them, as it is an hour later with thoſe who live 15 degrees weſt from us.

If a clock, or any time-piece, could be ſo made as to go equal and true, at any ſeaſon or diſtance, the theory of longitude at ſea would be no longer a myſtery: but, as that is impracticable, our modern aſtronomers have contented themſelves with obſerving the ſolar and lunar eclipſes; for, if their appearances and calculations are exactly known with us, and the ſame appearances are obſerved in any other part of this globe, the difference ariſing from thoſe times will ſettle the difference in longitude, by the foregoing rule. See LONGITUDE. The eclipſes alſo of Jupiter's moons, and the ſpheroidal figure of the earth, two important diſcoveries of the ſeventeenth century, will each, in their turn, lead us farther on a true ſyſtem of longitude.

Laſtly, though all degrees of latitude are equal in length, yet degrees of longitude vary in every new parallel of latitude: for, all the meridian lines meeting and interſecting each other at the poles, the degrees of longitude do naturally diminiſh, as they proceed either way from the equator.

The latitude and longitude of a place being known, you may find it immediately in the map, by drawing a line or thread croſs the map both ways, and, where the two lines cut one another, the place ſtands.

The earth being a globe, a map of the whole earth moſt neceſſarily conſiſts of two parts, both ſides of the globe not being viſible at once. Accordingly, in an univerſal map, the right-hand circle ſhews the old world, or Europe, Aſia, and Africa; and the left-hand circle ſhews the new world, or America.

Upon the general map are marked the circles correſpondent to thoſe in the ſphere, namely, the equinoctial line, the two tropics, and the two polar circles, all which croſs the map from eaſt to weſt; and the firſt meridian ſurrounding the two hemiſpheres from north to ſouth, the parallels lying from north to ſouth, at 10 degrees diſtance; and the meridians, at the ſame diſtance from weſt to eaſt, are alſo marked upon general maps. Particular maps, being part of this, retain the meridians and parallels belonging to that particular part, which are made ſmaller or larger, as the paper on which it is drawn will admit; and the diſtance of places mentioned in it are always exactly proportioned to the breadth of the parallels: ſo that, let a map be ever ſo ſmall, the diſtance of places is exactly ſhewn, if meaſured according to the degrees of latitude in that particular map.

REMARKS RELATIVE TO THE PERFIDIOUS DESIGN OF FRANCE IN THEIR MAP-MAKING.

The utility of maps and charts is ſo well known, that it is needleſs to ſay any thing concerning them, in relation to that point: but they have their abuſe, as well as uſe, more eſpecially the former, viz. maps; and this has been practiſed with no little artifice and effrontery, in order to deceive the whole world, if ſuch a thing was poſſible: for certain it is, that ſome foreign map-makers have taken unaccountable liberties in parcelling out the globe of the world at their pleaſure. Whether this may be looked upon as their own Sic volo, ſic jubeo, or that of ſome body elſe behind the curtain, with a view to anſwer ſome purpoſes not ſo honeſt and laudable as could be wiſhed, we ſhall not take upon ourſelves to determine: yet we think it incumbent on us to take ſome notice of a matter of this nature, that the Engliſh reader may be ſo put on his guard as not to receive French coin for ſterling.

Whoever is acquainted with the hiſtory of our Britiſh colonies and plantations, and the cauſe and foundation of thoſe firſt royal grants and charters given by the crown of Great-Britain to it's ſubjects, for raiſing theſe colonies and plantations, muſt be ſenſible, that ſome neighbouring nations have attempted to make unwarrantable and ſhameful incroachments upon the Britiſh rights of trade and poſſeſſions in the American world, as well as elſewhere: and thoſe rights are not only uſurped by their map-makers by dint of ſcale and compaſs, but are aſſumed and juſtified in many reſpects elſewhere; which always has, and ever will tend to deſtroy the public tranquillity, 'till thoſe points are impartially and honourably ſettled and adjuſted between the intereſted potentates.

We are ſorry to be under the diſagreeable neceſſity of ſaying this, in regard to any nation, the end of our labours being to promote peace and good harmony with all, and to be as little inſtrumental in ſtirring up broils between one foreign country and another, was it in our power, as between our own and others. But nothing can be ſo effectually preſervative of general peace and tranquillity among all nations, as the juſt eclairciſſement of their reſpective rights of commerce and poſſeſſions; for, if theſe are left unaſcertained, it will always give a handle for animoſities.

That our readers may judge how far our Britiſh rights of commerce and poſſeſſion remain as yet undetermined, we refer them to the following articles, viz. BRITISH AMERICA, CANADA, CALIFORNIA, FLORIDA, LOUISIANA. And how far a certain foreign map-maker has attempted to invade the Britiſh rights, by the means of pen, ink, and paper, we alſo refer the reader to our MAPS of NORTH AMERICA, placed at the end of our Firſt Volume, where he will find the following rectification of the French map by Monſieur D'Anville, viz.

That Monſ. D'Anville has very partially included within the bounds of French Canada, to the ſouth and eaſt of the lake Ontario, the country poſſeſſed by the five Indian nations, named by the French the Iroquois: whereas they are the allies, and under the protection of the crown of Great-Britain by treaty*: ſo that, in right of them, the Engliſh have a claim, not only to all the lands ſouth of the river St. Lawrence (including the French ſettlements about the Champlain, and other lakes) which were the original property of thoſe Indians and their dependents, but alſo all the lands in and about the five great lakes, viz. lake ONTARIO, ERIE, the HURONS, MICHIGAN, and the UPPER LAKE, which the Five Nations have ſubdued, or made tributary.

* According to the treaty of Utrecht it is ſtipulated,—Galliæ ſubditi Canadam incolentes, aliique, quinque nationes (a), ſive cantones Indorum, Magnæ Britanniæ imperio ſubjectas, ut & cæteros Americæ indigenas eidem amicitiâ conjunctos, nullo in poſterum impedimento aut moleſtiâ afficiant, &c. That is to ſay, the ſubjects of France inhabiting Canada, and others, ſhall hereafter give no hindrance or moleſtation to the five nations, or cantons of Indians, ſubjects to the dominion of Great-Britain, nor to the other natives of America, who are friends to the ſame, &c.

(a) The five original confederate Indian nations are the SENEKAS, CAYNGAS, ONONDAGAS, ONEEDAS, and MOHOCKS; the TUSCARROES, MISSASAGOS, and other tribes, and ſince incorporated with them. Therefore, as all the land ſouth of St. Lawrence's River is the original property of the Five Nations, with their allies and tributaries, the French can have no ſhadow of pretence to any part of this country; and their ſettlement about CHAMPLAIN LAKE is mere depredation, contrary to the Britiſh title, which is derived from agreement and purchaſe.

The limits of NEW SCOTLAND, or ACADIA, by the ſame treaty, are St. Lawrence's River on the north, Penobſcut River on the weſt, and St. Lawrence's Gulph on the eaſt: therefore the boundary line drawn by Monſ. D'Anville in his map, croſs theſe provinces, from lake ONTARIO to the ISTHMUS at the bottom of FUNDY BAY, is an ARBITRARY FICTION, falſe and unjuſt, and ſeems to be done for our Britiſh map-makers to copy, and miſguide the whole nation, if poſſible; for which reaſon we have ſtruck it out, having juſt authority ſo to do, and have put the whole word CANADA on the weſt ſide of St. Lawrence's River.

The line that parts French Canada from Britiſh Canada was ſettled by commiſſaries after the peace of Utrecht, making a curve from Davis's Inlet, in the Atlantic Sea, down to the 49th degree, through the lake Abitibis to the North-weſt Ocean: wherefore Monſ. D'Anville's dotted line eaſt of James's Bay is likewiſe falſe.

The French map-makers having alſo exciſed near one half of our ſettlements, by drawing a pretended line from St. Lawrence's River down to Georgia, we think it our duty to inform the public that the ſame is a romantic preſumption, void of all authority; for, by public Indian treaties, our right is far beyond the great lakes, and ſouth-weſt to the Chickaſas

nation, by the branches of the Miſſiſſippi: and, ſince many of the Indian people among the ſaid lakes are united with the Iroquois Indians near New York, either by covenant or conqueſt, it is an idle vanity to ſuppoſe a dotted line in a French map will exclude the Engliſh from all thoſe nations, where their trade and dominions ſo viſibly extend.

In this reſpect, alſo, we have in our maps endeavoured to reſtore the Engliſh ſettlements to part of their juſt pretenſions: and, indeed, by the grants of our kings we might, perhaps, have carried our pretenſions quite through Louiſiana, weſtward to the South Sea, without being guilty of incroaching on the juſt rights of the French, as the French map-makers have been of incroaching on ours.

By ſeveral treaties made and renewed with the CHERAKEES, the CHIKASAS, the NAUTCHES, and the other CREEK NATIONS, the ſubjects of his BRITANNIC MAJESTY have a right of poſſeſſion at leaſt from LAKE ERIE to the CHIKASAS, at the river Miſſiſſipi: whereas, in many of thoſe parts, the French have no other title but that of intruſion and force. Their map-makers, therefore, are adviſed to put their LOUISIANA farther weſt, as is partly rectified in our firſt map of North America, for no part of the APALACHY MOUNTAINS is any fixed boundary to the BRITISH EMPIRE in AMERICA.

Theſe inſtances, with a great many others we could give, which relate as well to other countries as our own, point out, perhaps, the true reaſon and motive why the French have long endeavoured to engroſs the care of geography to themſelves; and it muſt be confeſſed, by the meaſures taken by them, they have brought it to greater perfection than any nation in Europe. This is owing to the proper encouragement which it's profeſſors meet with in France, who were never ſo numerous as at preſent.

Our neighbours appear to be particularly zealous for the advancement of geography, in order, it may be, to extend their commerce and dominions firſt upon paper, to pave the way to do it hereafter in reality; for, by their map-makers throwing out their incroachments and depredations in this ſeemingly harmleſs and inoffenſive way firſt, they ſo feel the pulſe of other nations, that they can paſs a good judgment what lengths they may preſume to go in any important n———n; and may, with a better grace, authenticate their pretenſions, by producing to our commiſſaries their own infallible maps.

There is an office in the French marine, for depoſiting charts and plans, to be made uſe of for the benefit of navigation: a regulation proper to be eſtabliſhed in every maritime trading nation *.

* Monſ. Bellin on this occaſion obſerves, in the preface to his Collection of Memoirs, 'That it is difficult to correct 'the chartseffectually, ſince it requires extraordinary helps, 'out of the power of a private man to procure, and which 'thoſe only who are at the head of affairs are able to provide. There is no poſſibility of collecting all the materials neceſſary for ſuch a deſign, but by eſtabliſhing an 'office for the purpoſe, like that of charts, plans, and 'journals, belonging to the marine of France.'—And will not the ſame hold good in relation to maps? And would not ſuch an inſtitution as this, both with regard to charts and maps, and the journals of all curious navigators, well become the wiſdom of the Britiſh nation? Certain it is, that the great diſagreement which is apparent between charts and maps, renders ſomething of this kind abſolutely neceſſary. Thoſe maps publiſhed by Monſ. D'Anville, and which we have tranſlated into Engliſh for this work, and greatly corrected and improved, eſpecially in regard to the ſecurity of our Britiſh rights of trade and poſſeſſions, coſt the duke of Orleans, by whoſe order they were undertaken, ſeveral thouſand pounds ſterling: and whether our maps, engraved by thoſe great artiſts Mr. Emanuel Bowen, geographer royal to his Britannic majeſty, Mr. Kitchen, and Mr. Seale, are not executed with reſpect to the engraving parts full as well as the French, and better than any before done in England, is ſubmitted to the public. But theſe are not the only ſpecimens we have of the great abilities of thoſe Engliſh artiſts in the art of engraving: their general maps of England and Wales, together with their particular maps of the counties, printed on ſuperfine atlas paper, and ſold by J. Tinney, at the Golden Lion in Fleet-ſtreet, London, demonſtrate that they are inferior to no artiſts in their way, in the whole world. And, 'till theſe gentlemen did exert themſelves, it cannot be denied but the French greatly excelled us in this particular; but, ſince we have ſuch celebrated artiſts of our own, it is to be hoped they will receive all encouragement from the public, that their merits entitle them to. Maps are not only of important uſe to the nation, by aſſerting our rights of commerce and poſſeſſion to the face of the whole world; but, by being a general manufacture, will now be acceptable in all foreign nations, ſince, at length, we have the honour of being inferior to no country whatever in this particular. I am very ſorry to ſay, but it is matter of fact, that not only our map-makers and map-engravers, but our engravers in general, have long laboured under great difficulties and diſcouragements. There is one thing I would crave leave to mention at preſent; that, as a neighbouring nation gives ſuch remarkable encouragement for the advancement of geography, it is very ſtrange the royal geographer of Great-Britain ſhould enjoy only the title without a ſalary. Certain I am, if this matter was properly repreſented to his moſt gracious majeſty, ſo ſuperlatively good and benevolent is our beloved ſovereign, that he would as chearfully grant his geographer a ſtipend as a title.

The count de Maurepas, being at the head of the marine, about the year 1737, to remove the complaints which at that juncture lay againſt the French charts, and provide an accurate ſett for the uſe of the king's ſhips, ordered Mr. Bellin to undertake the taſk, and publiſh by degrees a ſett of new charts, for all parts of the ocean: which taſk he has at length in a great meaſure performed.

Another inſtance we have of the care of this nation to excel in their charts, is that of Le Neptune Oriental, ou Routier Général de Côtes des Indes Orientales, & de la Chine, par Monſ. Mannevillette, publiſhed in the year 1745, and dedicated to Monſeigneur Orry de Fulvy, counſellor of ſtate, intendant of the finances, and royal commiſſary to the Eaſt-India company.

The ingenious and elaborate author tells his patron in the dedication, 'That 'till now, my lord, ſays he, our navigation to the Eaſt-Indies hath depended on foreigners. Guided 'only by the Engliſh and Dutch charts, we learnt, as it 'were, only from thoſe two nations, the way to conduct ourſelves at our firſt eſtabliſhment. Upon their inſtructions 'the good or ill ſucceſs of our voyages depended. At the 'beginning of our navigation into theſe ſeas, it was neceſſary 'to make uſe of their helps, they having more frequented 'thoſe ſeas than we. But, ſince our own experience has 'procured us more certain knowledge to be relied on, we 'have diſcovered their charts to be very erroneous; they are 'no longer uſeful to navigators, than to reunite in one body 'all the diſcoveries ſucceſſively made, and therefrom to compoſe charts more correct.'

ESSENTIAL REMARKS on MAPS, ſince the laſt war, and the DEFINITIVE TREATY of 1763.

The foregoing remarks, we think proper to let remain, that poſterity may know in what a precarious and unſettled ſtate our poſſeſſions were in NORTH AMERICA, before the DEFINITIVE TREATY aſcertained their boundaries; which are now ſo clear and explicit as to admit of no future diſputes, either between Great-Britain and France, or the former and Spain, with relation to the colonies upon the American continents. See AMERICA, for the DEFINITIVE TREATY at large, BRITISH AMERICA, FRENCH AMERICA, CANADA, LOUISIANA, and ſuch other articles we from them refer to.

MARBLE is a kind of beautiful ſtone, dug out of quarries, in large maſſes; and is of ſo compact a texture, as to take a delicate poliſh: it is greatly uſed by way of ornament in columns, ſtatuary, tombs, altar-pieces, chimney-pieces, ſlabs, tables, &c.

There are great varieties of marble, which are denominated from their colour, their country, their grain, their degree of compactneſs and hardneſs, their weight, &c. Some are of one colour, as white or black, others variegated with ſtains, clouds, and veins, &c. They are all opake, excepting the white, which, when cut thin, is ſomething tranſparent.

It is both endleſs and uſeleſs to deſcribe the infinite different varieties; it is ſufficient to obſerve, that thoſe which are of the firmeſt texture, and greateſt gravity, and take the fineſt poliſh, appear the moſt beautiful to the eye, and are the moſt eſtimable for every kind of ornament.

MARCASITE, a ſulphureous metallic mineral.

As it is generally found among the metallic ores, it is always impregnated with the qualities of them, and of other foſſils, whence they aſſume various colours, and degrees of coheſion. There are only three diſtinct ſpecies of it in the ſhops, viz. marcaſite of gold, ſilver, and copper; the one of a bright ſilver colour, the other of a bright gold colour, and the third of a dull white.

The ſilver-coloured is a very beautiful body, of compact texture, though ſomewhat irregular, and very ponderous. It is found conſtituting whole ſtrata of great extent, though not of great thickneſs; ſometimes, like many other bodies naturally conſiſting of ſtrata, it is found in irregular and broken maſſes. It is, when broken, of an uneven ſurface, and made up of multitudes of irregularly ſhaped flaky bodies, of various ſizes, wrapping round one another.

It very freely and readily gives fire with ſteel, and makes no effervescence with aqua fortis.—When put into the fire, it cracks and burſts, yielding a blue flame with a ſulphureous ſmell: it burns thus for a conſiderable time, and calcines to a ſtrong deep red.

This is it's uſual appearance, but it is liable to great varieties; ſometimes it contains a lead ore, ſometimes of tin, and often a ferrugineous matter.

It is found in abundance in the lead and tin mines of ſeveral parts of England, and is no leſs common in other countries; our counties of Devonſhire, Derbyſhire, and Cornwall, have large quantities of it.

The

The golden-coloured marcaſite is rather more beautiful and glittering than the former. It is of leſs compact texture than any other marcaſite. It is conſiderably heavy, and uſually found in long but thin ſtrata, ſometimes in large and miſſhapen modules. In ſome parts the texture is, as in the other marcaſites, more lax and open than in others; and it is to this irregularly foliaceous ſtructure, that all their other varieties are owing. It is naturally of a fine ſtrong gold yellow, but varies at times into a paler or redder hue, and, like the others, ſometimes exhibit the rainbow colours in reflection.

It gives fire pretty readily with ſteel, but much leſs freely than the ſilver ſpecies. It makes no efferveſcence with aqua fortis, and, when put into the fire, it ſeldom burſts, but is gradually covered with a pale blue flame, which burns leſs time than that of the former, and calcines to a deep purple.

The other ſort is a ſpecies of leſs beauty than the preceding kinds in it's ordinary ſtate; it is a very ſolid ſubſtance, of a compact and firm texture, and is conſiderably heavier than any of the other. It is extremely hard, and requires a ſtrong blow to break it: and is of a pale and dead white, like the colour of tarniſhed pewter, and ſomewhat bright, but much leſs ſo than the other kinds: when broken, it appears at a ſlight view an uniform maſs, but, when more ſtrictly examined, is found compoſed of irregular flakes like the other kinds; but theſe are more cloſely laid together than in any other ſpecies, and differ from all the reſt, in that, when ſtrictly examined, they are found to be of an obſcurely ſtriated texture.

It freely and readily ſtrikes fire with ſteel, and gives larger and brighter ſparks than any other body of this ſort.

It makes no efferveſcence with acids, and burſts in the fire, burning violently with a deep blue flame of a ſtrong ſulphureous ſcent.

It is liable to all the varieties of the firſt kind, but has them much more rarely; it is common in Devonſhire, Cornwall, and many other counties, and lies at all depths, ſometimes in regular ſtrata, ſometimes filling up the horizontal cavities of thoſe of coal, or different ſtones.

Remarks.

By marcaſites, metallurgiſts generally underſtand all thoſe mineral, earthy, and ſulphureous matters, that are otherwiſe called pyrites, fire-ſtones, braſs lumps, mundics, or the like. For, though theſe may be diſtinguiſhed in reſpect of leſſer differences, yet in general they are all a compoſition of ſulphur, uninflammable earth, and a ſmall proportion of metal.

A ſhort analyſis of marcaſites.

Take half a pound thereof reduced into powder, and put it into an earthen retort; which being placed in a naked fire, fit on a capacious glaſs receiver, and lute the junctures well with a mixture of loam and horſe-dung, then give degrees of fire up to the ſtrongeſt: let all cool, and take off; you will find at the bottom of the receiver a ſmall proportion of acid liquor, like the ſpirit of ſulphur made by the bell, and a conſiderable quantity of flowers of ſulphur ſublimed to the top.

The caput mortuum being taken out, and fluxed with about half it's weights of iron filings, will afford generally a ſmall lump of a reguline metallic ſubſtance.

Hence we ſee, that marcaſites chiefly reſolve into ſulphur, and a more fixed earthy part; which, being treated as an ore, yields a proportion of metal. And hence, perhaps, all the pyrites, braſs lumps, mundics, and marcaſites, are but cruder kinds of ore, and, if brought to maturity, they would have proved real ores.

Marcaſites, upon lying long in the open air, attract it's humidity, and thence grow hot, in ſome meaſure diſſolve, form an efferveſcence on their ſurface, and gradually turn into a vitriol, of the ſame kind with the metal they contain. Thus, if that metal were iron, the vitriol becomes green or martial; if copper, blue or cupereous. On this is founded the artificial method of making vitriol, now practiſed in ſeveral parts of England. See Vitriol.

From the heating, fuming, and firing of theſe ſulphureous earths, by the moiſture of the air, we may, perhaps, learn the origin of hot baths, mineral waters, damps, and fires in mines. For it is found, that a pile of theſe ſulphureous earths, being barely moiſtened, will at firſt ſmoke, and at length take fire, and burn like glowing coals.

Theſe experiments likewiſe ſhew us a way of examining theſe marcaſites (which have been taken frequently for rich ores, both in England and elſewhere) and of extracting the metal they may hold, after having firſt ſeparated their ſulphur. Many ſkilful metalliſts have been impoſed upon by a ſpecious ſhew of theſe marcaſites, for they uſually have a great ſpecific gravity, and ſome of them a greater than real ores: whence again they may poſſibly contain the matter of metals, though in a crude, imperfect, or unfixed ſtate. But to bring this matter to the teſt, to try the validity thereof, requires a more than ordinary knowledge in metallurgy. See Metallurgy.

MARINERS.

Of mariners and ſeamen.

A mariner, or ſeaman, is under the command of the maſter of a ſhip, that is hired to work therein, and do all common buſineſs for the ſailing and preſervation of the ſhip. The ſhip's crew are called mariners, and owe obedience to the maſter, who hath the ſupreme rule on ſhipboard, and therefore his authority is much countenanced by law.

If a mariner rebels or commits a fault, and the maſter lifts up the towel three times before him and he do not ſubmit, the maſter at the next place of land may diſcharge him: and, if he refuſes to go aſhore, he ſhall loſe half his wages, and all his goods in the ſhip; but, if the mariner ſubmits, he is to receive his whole wages.

A maſter of a ſhip may juſtify the giving moderate and due correction to his men: but, if a mariner aſſaults the maſter on ſhipboard, he ſhall pay five ſols, or loſe his hand; yet it is ſaid he may after one ſtroke defend himſelf. Leg. Oleron. c. 14. By the ancient Rhodian laws, the maſters, mariners, &c. that ſail together, were to take an oath of fidelity, or mutual engagement. Sea Laws 83.

Mariners are not to depart from on ſhipboard when they are in full pay (which is always when they break ground) without the maſter's licence for ſo doing; nor may they in any caſe quit the ſhip, without leaving a ſufficient number to guard her: they muſt aſſiſt one another both at ſea and in port, or upon the oath of their fellows of any refuſal ſhall loſe their wages: if mariners in a ſtrange port leave their ſhip, not having the licence of the maſter, or without faſtening her with four ropes, the loſs, if any happen, falls upon them; they are alſo to attend the ſhip until ſhe be diſcharged, and ballaſted anew; and, if any mariner, during the time of her diſcharge or lading, labours not with the reſt of the mariners but abſents himſelf, he ſhall pay a fine to the others pro rata: and the mariners are not only to diſcharge and deliver goods out of the ſhip, but likewiſe, if no porters or carriers be in thoſe parts, they muſt carry the ſame themſelves for ſuch hire as other workmen ſhould have had for it. Lex Mercat. Malines, 104, 105.

In a ſtrange country, the one half of the ſeaman, at leaſt, ought to remain on ſhipboard; and thoſe who go aſhore, are to keep ſobriety and abſtain from ſuſpected places, and not be abſent on pain of being puniſhed, like unto him who abſents, when the ſhip is ready to ſail. If it happens otherwiſe than well with the maſter, the mariners are obliged to bring the ſhip to the port from whence ſhe was freighted, without any delay, except it be otherwiſe provided: and a mariner ſhall forfeit his wages, if the ſhip break in any part, and he doth not help with all his diligence to ſave the goods on board. Ibid.

Where a mariner is hired, and he deſerts the ſervice before the voyage is ended, by the law marine and the common law, he ſhall loſe his wages: and it has been adjudged, that if the ſhip do not return, but periſhes at ſea, either by tempeſt, enemies, fire, &c. the mariners ſhall not have their wages; for, if they were allowed to have wages in theſe caſes, it is preſumed their beſt endeavours would be wanting to preſerve the ſhip; and the mariners ſhall loſe their wages, as well as the owners their freight. If the ſhip unlade any part of the cargo, the mariners ſhall have their wages; but, if after they have unladen the veſſel at any port abroad, they demand the ſame, with an intention of leaving the ſhip, the maſter may detain a reaſonable proportion thereof as his ſecurity, 'till they have brought back the ſhip. Leg. Oleron. c. 18. 1 Siderf. Rep. 179. 1 Keb. 830.

It was held by Holt chief juſtice, That, if a ſhip is loſt before ſhe arrives at any port of delivery, the ſeamen loſe all their wages; if ſhe be loſt after ſhe comes to a port of delivery, then they only loſe their wages from the laſt port of delivery; but in caſe they run away, though after they come to any port of delivery, they loſe all their wages. Hil. 13 Will. III. 3 Salk. Rep. 23.

A mariner being hired for a ſimple mariner, if afterwards in the voyage he finds hiring to be a pilot, or other officer of a ſhip, by the law marine he may paſs over, reſtoring his former hire, and ſo it is, if he marry abroad: but if a mariner ſhall depart the ſhip, at the maſter's command, and the maſter do not take another, if any damage happens to the ſhip or goods, the maſter muſt anſwer. Mariners may not carry out of the ſhip any drink, nor above one meal of meat; and, if they embezzle the goods on board, &c. they are accountable to the maſter, the maſter to the owners, and the owners to the merchant or freighter. Though in caſe of a ſtorm, if goods are caſt overboard for lightening the ſhip, the mariners, making oath that it was done for preſerving the veſſel, ſhall diſcharge the maſter: ſo if goods or merchandize in ſuch caſe receive damage at ſea, by the oath of the maſter and mariners they may be cleared. Leg. Oleron. c. 7, 14.

If a mariner ſhall commit any fault, by reaſon of which the maſter, owners, or the ſhip, anſwers damage to the merchant, an action will lie againſt him. But, when a mariner is on ſhipboard, he ought not to be arreſted by any one

for debt, nor to be taken away from thence, for the ſhip is compared to a man's dwelling-houſe, which is as his caſtle, and a ſure refuge by law; unleſs it be for a ſworn debt, or penalty to the king, &c. the wages and goods of ſuch mariners ſhall in theſe caſes be liable; and, if a mariner takes up money or buys clothes on credit, and the ſame is entered in the purſer's books, this will entitle a diſcount of ſo much of his wages, as the ſame amounts unto. Moll. 212. Lex Mercat. of Malines, 105.

In caſe a ſhip happens to be ſeized for debt, or otherwiſe become forfeited, the mariners ſhall receive their wages, except, through any act of theirs, there be a forfeiture of all; if the ſhip be laden with prohibited goods, as wool, and the like, though it ſubjects the veſſel to forfeiture, yet it deprives not the mariners of their hire, who have faithfully performed their parts, and for which the ſhip is obliged. Trin. 7 Jac. B. R. A mariner may either keep his portage or allowance of goods in his hands, or let the ſame out to freight, by the laws of Oleron. Lex Mercat. of Malines, 104.

The act 2 Geo. II. c. 36, for better regulations of ſeamen in merchants ſervice, has ordained, That no maſter or commander of any ſhip or veſſel ſhall carry any ſeaman or mariner, except his apprentices, to ſea, without firſt coming to an agreement or contract for their wages; which agreement ſhall be in writing, ſigned by the maſter and mariners, on pain of forfeiting 5 l. to the uſe of Greenwich-hoſpital, to be recovered by information, upon the oath of one or more witneſſes, before a juſtice of peace, &c.

And, if any ſeaman or mariner ſhall deſert, or refuſe to proceed in the voyage on board any veſſel, after he has ſigned ſuch contract, he ſhall forfeit to the owners of the ſhip the wages due to him at the time of his deſerting, or refuſing as aforeſaid: and, in caſe he deſerts or abſents from any ſuch ſhip, wherein he hath ſo contracted to ſerve, upon application to any juſtice of the peace, he may iſſue his warrant to apprehend ſuch ſeaman; and, on his refuſal to proceed on the voyage, the juſtice may commit him to the houſe of correction, to be kept to hard labour not exceeding thirty days, nor leſs than fourteen. And by the ſame ſtatute, if any ſeaman ſhall abſent himſelf from the veſſel to which he belongs, without leave of the maſter, or other chief officer having the charge of ſuch ſhip, he ſhall, for every day's abſence, forfeit two days pay, for the uſe of Greenwich-hoſpital; and, if he ſhall leave the veſſel to which he belongs, before he hath a diſcharge in writing from the maſter, he ſhall forfeit one month's pay, to the uſes aforeſaid: and the maſters or owners of ſhips are impowered to deduct, out of the wages of any ſeaman, the penalties and forfeitures incurred by this act; and thoſe penalties which are to be applied to the uſe of Greenwich-hoſpital, ſhall be paid by the maſters of ſhips, to the officer at any port, who collects the 6 d. a month, deducted out of ſeamen's wages for the uſe of the ſaid hoſpital; and, neglecting to do it within three months, they ſhall forfeit treble value. Ibid.

Alſo by the ſaid act, on the arriving of any ſhip in Great-Britain, from parts beyond the ſeas, the maſter ſhall be obliged to pay his ſeamen their wages, within thirty days, if demanded (except the contract for ſerving be to the contrary) or at the time the ſeamen ſhall be diſcharged, which ſhall firſt happen; deducting thereout the penalties and forfeitures, and not paying the ſame, ſhall be liable to a penalty of 20 s. over and above the wages due to each ſeaman, to be recovered by the ſame ways as the ſaid wages are recoverable; and no ſeaman or mariner ſhall fail in any ſuit for recovery of his wages, for want of producing the contract with the maſter on whom it lies, to produce the ſame, if neceſſary. This act ſhall not extend to debar any mariner or ſeaman, belonging to any merchant ſhip or veſſel, from entering into his majeſty's ſervice, on board any of his ſhips; nor ſhall ſuch ſeamen or mariner, for his entry therein, forfeit the wages due to him during the time of his ſervice in ſuch merchant-ſhip or veſſel; nor ſhall ſuch entry be judged a deſertion from the ſhip. Stat. 2 Geo. II.

By the ſtatute of 1 Geo. II. ſeſſ. 2. c. 14. for encouraging ſeamen voluntarily to enter into the king's ſervice, &c. the governors, miniſters, and conſuls in foreign parts, or where none ſuch are reſident, any two or more Britiſh merchants there reſiding, are authorized and required to provide for all ſeamen, ſubjects of Great-Britain, that ſhall by ſhipwreck, or other unavoidable accident, be driven or caſt away in ſuch foreign parts or places, and ſhall ſubſiſt them by an allowance after the rate of 6 d. per diem each, &c. and put them on board the firſt ſhip of war arriving there in convenient time, or they may be ſent by any merchant ſhips wanting men, or others bound for any port in Great-Britain.

Maſters of ſhips abroad ſhall take on board four men for each hundred tons of which their veſſels conſiſt, and receive from the commiſſioners of the navy 6 d. a day, for the paſſage and proviſion of every ſeaman, from the day of their imbarkation homewards, on producing a certificate of the man's being taken on board, and the time when, &c.

By the acts 9 Geo. II. c. 25. and 10 Geo. II. c. 14. a ſmall ſum of ſo much per ton is to be paid by all maſters of veſſels, &c. trading from any part of his majeſty's dominions to Cadiz, and port St. Mary's in Spain, or to the port of Leghorn, to perſons appointed by the conſuls and a majority of Britiſh merchants there; and ſuch maſters paying it ſhall be reimburſed by their freighters, or the perſons to whom the goods are conſigned, &c. and the money to be applied for relieving ſeamen ſhipwrecked, or taken in war, and other perſons being Engliſh ſubjects in diſtreſs in the ſaid ports.

Remarks ſince the laſt War, and the Definitive Treaty of 1763.

In what a precarious and unſettled ſtate the boundaries as well as the trade of our colonies in North America have been for many years, ſee our articles British America, French America, Louisiana, Canada, and the article Map. In what manner the boundaries of the colonies on that continent have been aſcertained between Great-Britain and France, by the Definitive Treaty, ſee our article America, and ſuch other to which from the preceding we refer.

As it is expected, that from the preſent Britiſh ſouthern colonies on the continent of America, we ſhall produce hemp, flax, ſilk, pot-aſh, wine, oil, raiſins and currants, we may hope for a proportionable increaſe in our navigation to theſe parts, and in conſequence thereof a ſuitable augmentation of British Mariners, who will contribute to defend our new acquiſitions in time of war, and advance their trade in time of peace.

Some authentic law caſes, determined in the courts of judicature in England, in relation to mariners.

Hooke verſus Moreton.

Mr. Eyre moved for a prohibition to be directed to the admiralty court, to ſtay a ſuit there upon a libel by the mate of a ſhip for mariners wages, upon ſuggeſtion of the ſeveral ſtatutes, which reſtrain the admiralty from proceeding upon contracts made upon the land. And (by him) the admiralty has no original juriſdiction of ſuch ſuits, 13 Rep. 51. And, though they are in their nature maritime, yet the place where the contract is made, alters the caſe, 12 Rep. 79, 80. Therefore the admiralty has no juriſdiction of charter-parties, nor of policies of aſſurance, 4 Inſt. 141. Prohibition granted to a ſuit is for a mariner's wages, 1 Sid. 331. Beſides, that in this caſe the ſuit is by a ſingle mariner; and, therefore, it is the ſame thing to him, to ſue here at common law, or in the admiralty. And the caſe of Woodward verſ. Bonithon, Raym. 3, is a caſe in point. For, though the ſuit was for other things as well as for mariners wages, yet, if a prohibition had not lain for the wages, the prohibition ſhould have been granted quoad, &c. Objection, 1 Ventr. 343. Anſwer, That is no authority in this caſe, becauſe the motion was made there after ſentence; and, if it does not appear in the libel that the court had not juriſdiction, no prohibition ſhall be granted after ſentence. See 2 Roll. Abr. 318. 12 Co. 77.

Mr. Pratt againſt the prohibition argued, That, if all the mariners ſue for wages in the admiralty, the King's-Bench at this day will never grant a prohibition, 1 Ventr. 343. and there is no difference where the ſuit is by one mariner or many, 2 Ventr. 181. Alleſon v. Marſh, in point; and the mate of the ſhip is but one mariner. Objection. Raym. 3. Woodward v. Bonithon. Anſwer. There the contract was for other things as well as for mariners wages, and the contract is entire; and, per curiam, there is no difference where one mariner libels and where many: for the reaſon why the King's-Bench permits mariners to libel in the admiralty for their wages, is not only becauſe they are privileged to join in ſuit in the admiralty, whereas they ought to ſever at common law, becauſe the contracts are ſeveral; but alſo by the maritime law mariners have ſecurity in the ſhip for their wages, and it is a ſort of implied hypothecation to them: therefore the King's-Bench allows mariners to ſue in the admiralty for their wages, becauſe they have the ſhip there for ſecurity.

But the queſtion is here, whether the mate of a ſhip differs from any other mariner; for, if the plaintiff had been a ſingle mariner, doubtleſs no prohibition would have been granted. And it ſeemed to the court, that the mate is but a mariner; and, per Holt chief juſtice, heretofore the common law was too ſevere againſt the admiralty, it did not allow ſtipulations; but at this day they are always allowed. Ruled, That Mr. Pratt move the court for their opinion at another day. Lord Raymond, 397.

Clay verſus Snelgrave.

The defendant, as executrix to the maſter of a ſhip, libelled in the admiralty court for the wages owing to the teſtator by the owner. On which the plaintiff, to have a prohibition, ſuggeſted the ſtatute of 15 Rich. II. cap. 3. that the admiralty court ſhall not have cognizance of contracts made upon the land, and ſhews this contract to have been made upon the land. And this caſe was ſeveral times moved by Sir Bartholomew Shower, and Mr. Acherley, for the prohibition, as well

well in Michaelmas as Hilary and Eaſter terms laſt paſt, as in this preſent term; and it was oppoſed by Mr. Northey and Mr. Hall; and the counſel for the prohibition argued, That prohibitions are grantable de jure, and are not diſcretionary in the court. Raym. 3, 4. That the caſe in Winch rep. 8. was the firſt caſe where a prohibition was denied in caſe of a ſuit by mariners for their wages in the admiralty court; and the denial was grounded upon compaſſionate reaſons, becauſe they were poor men, and becauſe there they might join in action, but here they muſt ſever; but the ſaid caſe is contrary to the reaſon and grounds of the law, for, where the contract is made upon the land, though the ſervice was done upon the ſea, it is out of the juriſdiction of the admiralty; and ſo vice verſa, if the ſervice was done upon the land, and the contract upon the ſea. 12 Co. 79, 80. Staunf. 51. C. Hob. 212. A conſultation is always denied in caſe of a ſuit by mariners, if there is a charter-party [ſee CHARTER-PARTY] and the ſealing of a writing cannot make any difference in reaſon, Raym. 3, a prohibition granted where the maſter libelled alone. Mr. Northey and Mr. Hall è contra for the defendant ſaid, That the caſe of mariners was now ſettled, and ought not to be ſtirred; but that the great reaſon why they are permitted to ſue there is, the ſhip is the debtor, and, by the law of the admiralty, they may attack her, which they cannot do by the common law; and, in the admiralty court, they may all join in ſuit, whereas, by the common law, they muſt bring ſeveral actions: that the caſe of the maſter is not different, for the ſhip is ſecurity to him, and he is but a mariner, and his wages are wages at ſea.

But however, where the maſter dies in the voyage, as he did in this caſe, there can be no reaſon to exclude his executors from ſuing in the admiralty, becauſe he had no opportunity of bringing his wages to account with the owners; and in 2 Ventr. 181, Alleſon verſus Marſh, the purſer, though an officer of the ſhip, was allowed to ſue for his wages in the admiralty; and in 2 Keb. 779. Pl. 6. Rex verſus Pike, a prohibition was denied, where the maſter and mariners joined in a ſuit in the admiralty for their wages. (But Holt ſaid, that a prohibition ought to have been granted quoad in the ſaid caſe.) And he cited a caſe, Hil. 27 and 28 Car. II. C. B. between Cooker and Older, where Atkins and Ellis juſtices were of opinion, That a prohibition ought to be granted to the ſuit in the admiralty court by the maſter of a ſhip for his wages; but North chief juſtice, and Windham juſtice, held the contrary opinion. But Holt chief juſtice ſaid, That it is an indulgence that the courts at Weſtminſter permit mariners to ſue for their wages in the admiralty court, becauſe they may all join in ſuit; and it is grounded upon the principle, Quod communis error facit jus; but they will not extend it to the maſter of the ſhip, eſpecially if he was maſter at the beginning of the voyage here in England, and the contract was made with him here. Poſſibly if the maſter of a ſhip died in the voyage, and another man took upon him the charge of the ſhip upon the ſea, ſuch caſe might be different. As in the caſe of Groſſwick verſus Louthſley, where it was held in this court lately, that, if a ſhip was hypothecated, and money borrowed upon her, at Amſterdam, upon the voyage, he who lent the money may ſue the admiralty for it: and this court granted a conſultation in the ſaid caſe. But in another caſe, where the money was borrowed upon the ſhip before the voyage, the King's-Bench granted a prohibition, and the parties acquieſced under it. There are many precedents, in the court of admiralty, of ſuits by the mariners for their wages, but none for the maſter of the ſhip. And the caſes differ; for the mariners contract upon the credit of the ſhip, and the maſter upon the credit of the owners of the ſhip, of whom generally he is one. The opinion of lord Hobart, That, where there is matter of property to be tried, a prohibition ſhall be granted is a little too hard. Gould juſtice agreed with Holt, and ſaid, he was of opinion that prohibitions were grantable of right, though it had been controverted in his time. To which Holt chief juſtice ſaid, That Hale chief juſtice, and Windham juſtice, held prohibitions to be diſcretionary in all caſes; but Kelynge chief juſtice was of the contrary opinion; and he ſaid, He did not eſteem them to be matter of right. Then Mr. Northey moved, That the court would compel the plaintiff to put in bail to the action, to be brought for the wages at common law, or otherwiſe deny the prohibition; which, he ſaid, had been done often. Holt chief juſtice confeſſed, That the court had ſometimes interpoſed, and procured bail to be given; but it was by conſent, and in caſe of the proprietor himſelf; but, in regard that in this caſe the plaintiff was a purchaſer without notice, there was no reaſon; and a prohibition was granted. Lord Raymond, vol. i. p. 397.

Baily verſus Grant.

Upon the motion of Mr. Raymond, towards the end of laſt Michaelmas term, a rule was made to hear counſel of both ſides, the firſt day of this term, why a prohibition ſhould not be granted to the court of admiralty, to ſtay a ſuit there by the mate of a ſhip, for his wages. And he urged, That the admitting the mariners to ſue there, was rather an indulgence than any proper juriſdiction that they had to hold plea there of wages ariſing upon a contract made upon the land; and that it was a long while before it was permitted, but that now it ought not to be extended any farther: that, in the caſe of a maſter of a ſhip, a prohibition was granted laſt Trinity term, between Clay and Snelgrave (ante 576.) that this ſeemed to be a middle caſe, but rather inclining to that of the maſter; becauſe, in caſe of the death of the maſter, he ſucceeded in the government of the ſhip, and was always overſeer of all the other mariners: that the ſame motion was made Mich. 10 Will. III. B. R between Hooke and Moreton (ante 397.) and that the rule was made as here, to hear counſel, &c. and, upon it's being many times moved, no prohibition was made, and they proceeded no farther in the admiralty; for which, &c. But è contra ſerjeant Hall argued, That no prohibition ought to be granted; and of that opinion was the whole court, becauſe the mate is not diſtinguiſhable from other mariners, only in title: he contracts with the maſter, and is as his ſervant, and, therefore, does not differ from the mariners. But the maſter contracts with the owners upon their credit; whereas the mate contracts only with the maſter, and not upon the credit of the owners, but upon the credit of the ſhip: and, therefore, the rule was diſcharged. The ſame rule was made this term, upon a motion in the Common-Pleas. See 2 Ventr. 181. Marſh verſus Alleſon. Lord Raymond, vol. i. p. 632.

Upon a motion for a new trial in an action for a ſeaman's wages, Holt chief juſtice ſaid, That, if the ſhip be loſt before the firſt port of delivery, then the ſeamen loſe all their wages; but, if after ſhe has been at the firſt port of delivery, then they loſe only thoſe from the laſt port of delivery; but if they run all away, although they have been at a port of delivery, yet they loſe all their wages. Lord Raymond, vol. i. page 639.

John Edwards, and Elizabeth his wife, widow and executrix of Capt. Jenefer, verſus Sir Richard Child, Shepherd, and others, owners of the ſhip Succeſs, and the Eaſt-India company.

In 1693, Jenefer was appointed captain of the ſhip Succeſs, on a voyage to India, at 10l. per month wages, and to have two ſervants, the one at 30s. per month, and the other at 20s. per month wages. Jenefer, the maſter, and the defendants, the part-owners, enter into a charter-party with the Eaſt-India company, in which recital was made, that the company had paid to the maſter and mariners in part of freight, 1200l. by way of impreſt-money; and further agreed, that the ſeamen, at the end of every ſix months during the voyage, ſhould receive one months wages, and that, until ſix days after the return of the ſhip to the port of London, the Eaſt India company were not to pay any freight, ſave the ſaid impreſt-money, which was not to be returned, although the ſhip ſhould be loſt in the voyage: and therefore, by the direction of the company, Jenefer the commander, when he hired the ſeamen, took bonds from them not to demand any wages 'till the return of the ſhip to the port of London, and that they ſhould not demand any wages, if the ſhip was loſt before her return to London.

The ſhip ſailed to Bengal, and there delivered her outward-bound cargo. In her return home the ſhip was taken by the French, on the coaſt of Ireland, and the captain and mariners made priſoners.

The captain was ſued by the mariners for their wages, being four months, that became due at Bengal, the firſt delivering port; and, although the bonds were given in evidence, yet the mariners recovered their wages, in an action tried before the lord chief juſtice Holt.

The bill by the plaintiffs, the wife being the executrix of Capt. Jenefer, was to recover about 800l. he had been forced to pay to the mariners, and likewiſe to have the captain's own wages, and the wages of his ſervants, for four months, that became due at Bengal, the firſt delivering port.

Upon producing of precedents, where relief had been given in like caſes, viz. the caſe of Sir Humphry Edwin and Capt. Stafford, againſt the Eaſt India-company, in 1695, and the caſe of Buck and Sir Thomas Rawlinſon, affirmed upon an appeal in the houſe of peers: notwithſtanding the Eaſt-India company had taken bonds from the mariners, not to demand their wages, unleſs the ſhip returned to the port of London, the lord chancellor decreed the plaintiffs to be paid the wages due to Capt. Jenefer, for himſelf and ſervants, and likewiſe what Jenefer had paid to the ſeamen, with intereſt and coſts. Vernon's Reports, vol. ii. p. 727.

MARITIME, or MARINE AFFAIRS, and MARINE TREATIES, relating to trade and navigation.

Under the following articles we have repreſented, in our Firſt Volume, many eſſential particulars which have relation to marine commerce, of which it may be requiſite to apprize the reader; viz. ADMIRALTY, ASSURANCE of ſhipping and merchandizes, AVERAGE, BARATRY, BILLS of LADING, BOTTOMRY, CAP MERCHANT, CHARTER-PARTY, CONVOYS and CRUIZERS, FLOTSAM, GREEN-

WICH HOSPITAL, HANSE-TOWNS, HYPOTHECATION, and INDULTO.

In this our Second Volume we continue the ſame ſubject, under theſe ſeveral particular heads, viz. MARINERS, MARQUE, LETTERS of, MASTERS of SHIPS, NAVAL AFFAIRS, OLERON, it's LAW of marine trade, PILOTS, PORTS and HAVENS, PIRACY, PRIZES, QUARENTINE, RHODIAN LAWS of marine trade, SEA LAWS, SALVAGE, SHIPPING, WISBUY LAWS of marine trade, WRECKS, &c. &c.

Under the preſent article, we ſhall give an abſtract of the principal MARINE TREATIES concluded ſince the year 1600, between the chief princes, ſtates, and ſovereigns of Europe, which may be uſeful to have recourſe to upon peculiar occaſions.

The firſt piece of this nature that occurs is the memorable league into which the STATES-GENERAL entered with the republic of LUBECK, in the year 1613, which was ſolemnly confirmed about two years and eight months afterwards, and ſtrengthened by the acceſſion of moſt of the other HANSE-TOWNS, upon the following occaſion:

The king of Denmark having, ſome time before, laid heavy taxes upon their ſhips ſailing through the ſtraights of the Sound, &c. [ſee the article DENMARK] they found the new impoſitions not a little detrimental to their navigation; and the northern traffic being none of the moſt inconſiderable branches of the Dutch trade, as well as of that of the HANSE-TOWNS, they ſoon began to let their uneaſineſs appear, and ſo negociated their buſineſs among themſelves; and the town of Lubeck firſt brought the buſineſs to a concluſion, by means of the following treaty with the States-General; in which, though not a word is ſaid of his Daniſh majeſty, that prince eaſily penetrated into the deſign of that combination; and, the new confederates being, on the other ſide, apprehenſive of his reſentment, it was thought convenient to fortify the alliance, by receiving into it ſeveral of the other HANSE-TOWNS, who judged it their intereſt to join with the others, with a deſign to enter into a vigorous war with the king of Denmark, whoſe late impoſitions they were reſolved not to pay: for though they pretended that their alliance was only defenſive, they certainly intended to reduce that prince to a neceſſity of aboliſhing the beforementioned taxes; which may be gathered from the treaty as it hereunder follows:

A treaty between the States of the United Provinces of the Low-Countries, and the town of Lubeck, concluded in the year 1613.

As of ancient time the honourable the common-council of the free and imperial city of Lubeck, and ſeveral other towns ſituate on the northern and eaſtern ſeas, have been in union and amity with divers towns of the free United Provinces, for the defence of the liberty of navigation, trade, and commerce, &c.—And as now their high mightineſſes the States-General of the United Provinces, &c. have found it neceſſary to negotiate and treat about the renewing the aforeſaid union, by the noble deputies, &c.—Who, after ſeveral conferences, have agreed together, treated, conſented, and concluded upon the points and articles following:

I. That this union be only for maintaining the freedom of navigation and commerce in the northern and eaſtern ſeas, the ſole intent being, that the reſpective ſubjects of the union, according to the law of nations, &c. may accordingly enjoy the ſame without moleſtation; ſo that the ſubjects of the ſaid union may reciprocally defend and protect each other, againſt ſuch as would diſturb them, that the difficulties detrimental to the common trade and navigation may be removed, &c.

II. In ſo doing, this union ſhall not be prejudicial to the friendſhip of his imperial majeſty, nor the holy empire, nor to their royal majeſties of France and Great-Britain. &c.

III. Thoſe of the union ſhall faithfully obſerve theſe articles, and confirm them by oath.

IV. The States-General ſhall manage this union to the beſt advantage of the common cauſe; but in ſuch manner, as the common-council of Lubeck may give a voice in all the deliberations; for which purpoſe a perſon from Lubeck ſhall always reſide at the Hague, on behalf of the town; and the States-General may depute ſome perſon to reſide at Lubeck, the better to deliberate with the council of that place.

V. Thoſe of the union ſhall contribute towards the charges, according to the obligations into which they are entered, in order to furniſh ſhips, foot and horſe, &c.

VI. If ſuch who interrupt commerce and navigation, after having been amicably required to deſiſt, refuſe, againſt juſtice and reaſon, to do it, thoſe of the union ſhall defend themſelves vigorouſly, to ſecure to them ſuch liberty of commerce and navigation.

VII. If the conſequence hereof ſhould be a war, thoſe of the union ſhall recall their ſubjects from the ſervice of the adverſe party, on pain of death, and confiſcation of their eſtates. Nor ſhall it be allowable to procure, or ſend to the adverſe party, money, troops, ſhips, ammunition, arms, proviſions, &c. on pain of corporal puniſhment; and all endeavours ſhall be uſed to prevent their receiving ſuch ſuccours from other places.

VIII. And, if the adverſe party ſhall arreſt the ſubjects, ſhips, merchandizes, or debts of thoſe of the union, or ſurprize them at ſea, and carry them off, orders ſhall be given to the towns and countries of the union to make reprizals, and mutually to aſſiſt each other.

IX. The ſhips of thoſe of the union may freely enter into the harbours and rivers of each other, to provide neceſſaries, or to refit; but no violence ſhall be uſed, and they ſhall pay for what they take.

X. The ſubjects of the union ſhall, in all their countries, enjoy the privileges of a citizen, and even the right of ſucceſſion, which ſhall deſcend without diſtinction of religion, as permitted in the holy empire; but every one ſhall ſubmit himſelf to the laws of the place.

XI. None of thoſe of the union ſhall enter into any treaty, or be reconciled to the enemy, without the conſent of the others: on the contrary, all the members ſhall endeavour to keep their citizens, inhabitants, ſhips, merchandizes, and effects, free from all damage, and to maintain them in their liberties and privileges, &c.

XII. So that no peace or truce ſhall be made with the enemy, but with the reciprocal conſent of all the members.

XIII. This league ſhall remain in force for 50 years, which, with the common conſent, may be prolonged.—If, during the ſame, or even after the expiration thereof, any of the union receive any damage by reaſon thereof, whether by ſea or land, they ſhall mutually aſſiſt each other againſt all perſons whatſoever.

XIV. If any potentate, country, or city, and eſpecially if any of the other Hanſe-Towns, deſire to enter into this union, they ſhall be received upon reaſonable conditions.

In witneſs whereof, two copies of theſe preſents have been made, and confirmed by oath. and ſealed with the ſeals of their high mightineſſes the States-General, and of the ſaid town of Lubeck, and ſigned by their reſpective clerk and ſyndic; of which copies each party has retained one.—Done in the month of May, in the year 1613, and underwritten,

By order of the States-General,

Signed AERSSEN.

And, by order of the honourable the council of the town of Lubeck,

Signed MARTIN NORDAMUS,

Syndic of the republic of Lubeck.

Here follows the ſecond league, concluded between the Dutch and the republic of Lubeck, together with ſeveral of the other Hanſe-Towns; which, though it be much to the ſame effect with the former, is of too great importance not to deſerve a place in this work.

A treaty of alliance, between the United Provinces of the Low-Countries and the Hanſe-Towns, concluded in the month of December, 1615, in conſequence of that concluded with the town of Lubeck in the year 1613.

As not only the Hanſe-Towns of the eaſt, ſituate upon the Eaſtern Sea, together with thoſe upon the Wexel, the Oder, the Elbe, and the Weſer, and the neighbourhood thereof, but likewiſe ſeveral towns of the Low-Countries, ſituate upon the Northern and Southern Seas, as alſo thoſe ſituate on the Maeſe, the Wale, the Rhine, and the Yſſel, and other ſtreams and rivers flowing into the Northern and Southern Seas have been comprehended in the common league of the Hanſe-Towns, and have remained in a firm union and friendſhip with one another, and have obtained of the neighbouring kingdoms and countries many common liberties, privileges, and prerogatives, which, by their united counſels, ſtrength, and forces, and by the defenſive arms of ſeveral of them, have been defended and maintained; and, as the Hanſe-Towns of the Low-Countries have, in latter times, by reaſon of a tedious war, and other accidental miſunderſtandings, being hindered from aſſiſting at the general meetings of the Hanſe-Towns, and, by reaſon of their own burthens, have not been able to bear the charges of the common league, which ſome of their neighbours have taken to be a rupture and ſeparation, and which has occaſioned ſeveral uneaſy burthens upon the freedom of traffic, commerce, and navigation, which ought to be remedied; that has put a freſh obligation upon the parties concerned, to think of ways and means by which, with the divine aſſiſtance, theſe inconveniencies may be removed, and the aforeſaid liberties and common rights and prerogatives may be re-eſtabliſhed and confirmed. And as, in this ſucceſſion of time, the greater part of the Hanſe-Towns do look upon their high mightineſſes the States-General of the United Provinces as members of their ſtate, and not judging it convenient to labour ſeparately towards the ſaid re-eſtabliſhment,

re-eſtabliſhment, but in conjunction with their high mightineſſes, ſince, by that means, the treaty that ſhall be concluded will be more uſeful, more profitable, and more convenient, there having been of late years, ſeveral deliberations upon that ſubject, upon which the burghermaſters and the common-council of the free and imperial city of Lubeck did treat with the aforeſaid lords the States-General, in the month of May in the year 1613: for theſe cauſes, after mature deliberation, the ſaid lords the States-General have, by their deputies, together with thoſe of the Hanſe Towns of the eaſt, renewed the antient friendſhip and union that was between them; and, in order to unite themſelves yet more cloſely, have concluded and agreed upon the points and articles following:

I. That this union ſhall not be offenſive with regard to any; but only for maintaining and preſerving the freedom of navigation and commerce in the Northern and Eaſtern Seas, and ſhall not be any otherwiſe underſtood: ſo that thoſe of the union reſpectively, and their ſubjects, may, without any impediment, enjoy the benefit of the laws of nations, and all the liberties, rights, and privileges uſual in the aforeſaid Northern and Eaſtern Seas, and in the rivers, ſtreams, and other currents. All thoſe of the union ſhall defend conjointly, and protect their citizens, inhabitants, and ſubjects, who may be by unjuſt means moleſted by others, and to whom commerce may be forbidden, or upon whoſe merchandizes any particular impoſt may be laid in going or coming; to the end that the ſaid impediments and redoubled impoſts, ſo prejudicial to commerce and navigation, may be aboliſhed, and the ſame may be freely carried on throughout the holy German empire, and may be increaſed for the benefit and advantage of thoſe of the union.

II. Wherefore this union ſhall not be prejudicial to the friendſhip contracted with his imperial majeſty and the holy empire, with their majeſties of France and Great Britain, and with the evangelical electors and circles of the holy empire, and which has been hitherto maintained with their lordſhips the States-General, and likewiſe with the honourable Hanſe-Towns, who have been 'till now under the protection and obedience of his imperial majeſty and the holy empire, and every town that has a mediate authority, all the leagues, rights, ſtatutes, ordinances, and obligations, ſhall remain in their full force; the whole, however, Salvo præſenti fœdere.

III. Thoſe of the union ſhall ſincerely obſerve and maintain the preſent articles, which they ſhall confirm by oath.

IV. Their lordſhips the States-General ſhall manage this union to the beſt advantage of all the members thereof; but in ſuch a manner, however, that in all undertakings, each party ſhall freely give their voice: for which end there ſhall always be a reſident at the Hague from the Hanſe-Towns of the eaſt, who ſhall give his advice in what concerns the union; and the States General may appoint another perſon to reſide at Lubeck, or at ſuch other place as occaſion ſhall require; to the end that the mutual advices and opinions may be the more eaſily communicated, and what ſhall be neceſſary may be effected.

V. Thoſe of the union ſhall keep in good order, and well provided, at their expences, the ſhips, and troops of foot and horſe, and all things belonging thereto, according to the contributions which each is obliged to furniſh, and for the time that ſhall be judged convenient; and ſhall cauſe them to repair to the places whither it ſhall be thought neceſſary to ſend them, according as the name of every Hanſe-Town of the union, and the quotas of the ſaid contributions, are contained in the particular writings.

VI. And, in caſe it happens that thoſe that would cauſe any impediments to be given to navigation and commerce, againſt the aforeſaid privileges and treaties agreed to, will not deſiſt, after having been thereto amicably required, and according to the rules of juſtice, reaſon, and equity, thoſe of the union ſhall proceed againſt them defenſively; the deſign of the union being only to aſſure the liberty of commerce and navigation. And if it ſhould happen that any of the towns of the union ſhould, becauſe thereof, or by reaſon of any particular privilege, ſuffer any damage, the ſaid town ſhall be forthwith aſſiſted, 'till liberty is obtained, and reparation of damage made.

VII. And if, by the common conſent, war ſhould break out, thoſe of the union ſhall command their inhabitants and ſubjects, whether ſeamen or ſoldiers, that are in the ſervice of the adverſe party, to abandon the ſame under pain of death and confiſcation of effects. Nor ſhall it be allowable to ſend from the towns and countries of their obedience, to the ſaid adverſe party, money, troops, ſhips, ammunition, arms, proviſions, or ſuch other things; but, on the contrary, that ſhall be forbidden, on pain of corporal puniſhment; and all endeavours ſhall be uſed, as far as it is poſſible, to hinder others from furniſhing them.

VIII. And in caſe, alſo, the adverſe party ſhould arreſt the perſons, ſhips, merchandizes, and debts of the ſubjects of thoſe of the union, or if they are ſurprized at ſea, or taken or carried off, they ſhall make reprizals in the countries of thoſe of the union; and, in that caſe, they ſhall mutually aſſiſt and defend one another.

IX. The ſhips of thoſe of the union may frequent the rivers and harbours of each other, without any let or hindrance, and there refit their veſſels, and provide themſelves with all manner of neceſſaries; upon condition that no violence be uſed, but that they thankfully pay for every thing they take.

X. The ſubjects of thoſe of the union ſhall every-where enjoy, in the towns and countries thereof, the rights of citizens, and ſhall inherit ſuch ſucceſſions as belong to them, according to the cuſtoms of the place, without any diſtinction of religion, as it is practiſed and permitted in the holy empire; but every one ſhall behave himſelf as a citizen, and ſhall ſubmit and conform himſelf to the laws of the place.

XI. None of thoſe of the union ſhall make any agreement with the adverſe party, without the conſent of the others, nor ſuffer any thing to be done to the prejudice and damage of the others; but, on the contrary, ſhall endeavour to maintain the common tranquillity, and to keep each others citizens, inhabitants, ſubjects, ſhips, merchandizes, and effects, free from all moleſtation, and ſecure to them the enjoyment of the liberties and privileges aforeſaid.

XII. A peace, or truce, with the adverſe party, muſt be concluded with the common advice and conſent of all, and not otherwiſe.

XIII. This league ſhall remain in force twelve years, and ſhall be prolonged with the common conſent. But if any of thoſe of the union, during the ſaid league, or even after the expiration thereof, ſhould be attacked or injured by reaſon thereof, all the members ſhall mutually aſſiſt one another.

XIV. If any potentate, country, or town, deſire to enter into this league, they ſhall be received, with the common conſent, upon reaſonable terms.

In witneſs whereof, divers uniform copies of theſe preſents have been drawn up, for their high mightineſſes and the Hanſe-Towns, which ſhall be confirmed by oath, and by the appoſition of the reciprocal ſeals, after that a report thereof has been made. Concluded in the month of December, in the year 1615.

REMARKS.

Theſe leagues having, for the moſt part, wrought the deſired effect, and deterred the enemies of the Hanſeatic liberties from proſecuting the deſigns that were ſuſpected to have been formed againſt them, things continued much in the ſame condition till the year 1640, or thereabouts, that the Hanſe-Towns, being again diſturbed with freſh jealouſies, began to renew and fortify their former league, and take all the other neceſſary meaſures for preventing a ſurpriſal from any of their real or ſuppoſed enemies.

In order thereunto, the towns of Lubeck, Bremen, and Hamburgh, firſt began to enter into a ſtrict alliance among themſelves, by a negotiation then ſet on foot, and at laſt brought to a concluſion between them, by a treaty dated the 24th of November, 1641; which being pretty long, we ſhall here content ourſelves with taking notice only of what is moſt material.

In the preface to that treaty they declare, That, finding the preſent poſture of affairs to be ſuch as might give them juſt grounds to provide for the ſecurity of their proper rights and privileges, both in ſpiritual and in temporal matters, the moſt effectual means, for preſerving them from being liable to foreign violence and oppreſſion, would be to renew the ancient amity and good intelligence with the reſt of the Hanſe-Towns; in order to which, and for the intereſt and advantage of his imperial majeſty, and of the holy empire, they agree upon the following articles:

I. That they ſhall forthwith put themſelves in a good poſture of defence, by fortifying all their towns, and raiſing in proportion to their ſtrength, a competent number of regular troops, and putting their own citizens and ſervants in condition to protect them againſt all ſudden inſults and attempts that might be made againſt the Hanſeatic towns, or any of them.

II. That they ſhall upon all occaſions, and eſpecially in the preſent critical conjuncture, live in a perfect repoſe and union with one another, and without giving any ſubject of offence to any other perſon or perſons whatſoever.

III. That, in caſe of any ſudden hoſtility committed againſt any of their members, the injured party ſhall not expect any ſuccour from the others, 'till, by their interpoſition in an amicable manner, the others endeavour to compoſe the differences, and procure them a reaſonable ſatisfaction.

IV. But that, if ſuch friendly methods of proceeding ſhould prove at laſt ineffectual, and the aggreſſor ſhould unreaſonably perſiſt in oppreſſing any of their towns, in their ſpiritual or temporal rights, liberties, privileges, prerogatives, commerce, navigation, perſons, or effects, by ſieges, blockades, building of fortreſſes, hoſtile invaſions, exacting of contributions, arms, ammunitions, proviſions, or other violent and unjuſt oppreſſions, then the party injured ſhall be ſpeedily and effectually aſſiſted, according to the neceſſity and circumſtances of the caſe, with men and money, and every other thing that might be neceſſary for them.

V. That none of the confederates, nor their ſubjects, ſhall give in any manner of ſuccour or neceſſaries to the enemy, openly

openly or ſecretly; and that ſuch as ſhall be convicted of the ſame ſhall be ſeverely puniſhed.
VI. The aforementioned ſuccours and aſſiſtance ſhall be given as is above expreſſed, againſt all and every perſon and perſons that ſhall do any damage to any of the league, by ſea or land, or in the ports and rivers.
VII. If the town inſulted be of opinion that the imminency of the danger cannot admit of a preliminary deliberation, the inhabitants may immediately call the others to their aſſiſtance, and then an aſſembly ſhall be appointed.
VIII. If any town be ſo ſuddenly attacked that the others cannot ſend a timely ſuccour, thoſe that are neareſt ſhall not only ſend thither their ſoldiers, but ſhall likewiſe advance at leaſt one month's pay, and ſhall alſo raiſe immediately other troops; of which charges they ſhall be reimburſed by the other confederate towns, with all convenient ſpeed, &c.
IX. If two or three towns ſhould be attacked at one time, the whole confederate towns ſhall nevertheleſs ſuccour and aſſiſt one another, to the utmoſt of their power.
X. For the more ſpeedy diſpatch of affairs, the oppreſſed town ſhall immediately make known it's condition to it's neareſt neighbours, who ſhall forthwith acquaint the other confederates that they, without any delay, may appoint a diet, and ſend thither their deputies.
XI. And, if the danger be very imminent, the oppreſſed town ſhall have power to appoint a diet, according to the exigency of the caſe.
XII. The direction of any defenſive war ſhall reſide in thoſe to whom the ſuccour is ſent; but, if they require it at their hands, the other confederates ſhall ſend deputies to aſſiſt at the deliberations.
XIII. If any town is ſo ſuddenly attacked or blocked up, as that the others cannot ſend in any perſons to them, they ſhall endeavour to find means to ſend out one or more perſons, to let their confederates know their circumſtances.
XIV. However, ſuch as have been, or ſtill are oppreſſed, being ſuccoured by the confederates, ſhall not conclude any treaty without their privacy and conſent.
XV. And, if things can be brought to any reaſonable accommodation, all poſſible endeavours ſhall be uſed to obtain ſatisfaction to the injured party, and to bring the treaty to ſuch a concluſion that the parties may have no occaſion left for future quarrels.
XVI. This league, which is in confirmation of the eighth article of the former, ſhall ſubſiſt during ten years, and may then be renewed and prolonged; and, in caſe of a war, reaſonable ſatisfaction ſhall be made to ſuch as have been at the charge thereof.
XVII. If, after the expiration of this league, any of the members thereof ſhould come to be attacked by reaſon of it, they ſhall, notwithſtanding that the league be expired, mutually aſſiſt each other.
XVIII. Laſtly, all the Hanſeatic towns that will enter into this league upon the aforementioned conditions, ſhall be received by the common conſent.
All which articles ſhall be faithfully and ſincerely obſerved. Signed and ſealed, &c.

Remarks.

This treaty being ſo concluded, the ſtates of Holland found it their intereſt to enter into another, with the towns of Bremen and Hamburgh, on the 4th day of Auguſt, in the year 1645; of which you may take the following ſhort account, which I have carefully extracted out of the Latin original.
The preface to the treaty inſinuates, That there having been of ancient time a firm and ſincere friendſhip between their high mightineſſes the States-General and the honourable cities of Bremen and Hamburgh, and the other Hanſeatic towns, and it being neceſſary, for their common intereſt and ſecurity, to cultivate and augment that good intelligence, by renewing their former engagements, they oblige themſelves to obſerve the following articles:
I. The league ſhall not be offenſive to any, but ſhall only tend to the ſecurity and freedom of commerce and navigation, according to the laws of nations, and the rights and privileges formerly granted them by ſeveral treaties and contracts.
II. The ſaid league ſhall not be prejudicial to the friendſhips of the ſtates and their confederates with his imperial majeſty and the holy empire, nor to the obedience that ſome of the ſaid confederates owe to his ſaid majeſty; and that the other confederates ſhall not, by virtue of this league, be under any obligation to concern themſelves in the preſent war between the king of Spain and them.
III. That if any of the confedeaates ſhould be oppreſſed in their trade, or otherwiſe, the other ſhall endeavour to compoſe all matters amicably; and, that means failing, all the members ſhould contribute toward the charges of a defenſive war.
IV. That the ſtates ſhall manage the affairs of the confederates, to the common advantage, with the advice of the other members; and deputies ſhall be appointed to reſide for that purpoſe, at convenient places.
V. That the ſhips of all the confederated towns, &c. ſhall freely enjoy each other's ports and harbours, &c. paying for what proviſions they ſhall have occaſion.
VI. That if any diſſenſion ſhould happen among the confederates themſelves, they ſhall be amicably compoſed.
VII. That none of the parties ſhall act any thing to the prejudice of the other members, or any of them, but ſhall, as much as in them lies, contribute to the intereſt, honour, and advantage of each other.
VIII. That the league ſhall ſubſiſt fifteen years.
IX. That the other Hanſeatic towns ſhall be received with the common conſent.
X. And, laſtly, That the ratifications ſhall be exchanged within two months.
Signed and ſealed the 4th of Auguſt, 1645.

Remarks.

This treaty being ſo concluded, nine days afterwards another was brought to a period at Chriſtianople, between the ambaſſador of the king of Denmark and thoſe of the States-General; by which it is agreed:
I. That there ſhall be a firm and ſincere friendſhip between the ſubjects of both parties, who ſhall mutually perform all good offices to one another, in ſo far as the treaties of either party with other princes and eſtates could allow it.
II. That, for the forty years next enſuing, the tolls ſhall be paid in the Baltic Sea according to a regulation ſigned and confirmed between them; and that, during that time, they ſhould not be augmented; but that, after the expiration thereof, things ſhould be regulated according to the treaty concluded in the year 1544, except another treaty ſhould intervene within the aforeſaid time.
III. The ſearching of the ſhips and goods belonging to the inhabitants of the United Provinces, and paſſing through the Baltic Sea, ſhall ceaſe, and intire credit ſhall be given to the mariners that produce their cockets*, who, thereupon paying the toll, ſhall be diſmiſſed without any trouble or moleſtation, and ſhall not be detained in the cuſtomary place (called Den Drooghen) near Copenhagen. But if, in time to come, it ſhould appear that his Daniſh majeſty is defrauded in the toll, their high mightineſſes, being acquainted therewith, ſhall think upon convenient methods for remedying the ſame, and ſhall take care that no injuſtice of any nature be done to his majeſty.

* Cocket ſignifies a certificate and clearance, ordinarily given by the officers of any cuſtom-houſe to ſhips going to ſea.

IV. The tranſportation of no goods (what name ſoever they bear) ſhall be forbid through the Baltic Sea.
V. All goods that ſhall be proved really to belong to the ſubjects of the United Provinces, whether exported or imported, ſhall not pay any greater duties in the kingdom of Denmark and Norway, than are paid by the ſubjects and inhabitants of the ſaid kingdoms themſelves: nor ſhall his Daniſh majeſty's ſubjects pay any greater duties in the ſaid provinces than the inhabitants.
VI. Ships fully laden in any port of the kingdom of Norway, being once ſearched there, and having paid their tolls, ſhall not be ſearched again in the ſame, nor in any other port at which they may touch, but, upon producing the receipt thereof, ſhall be freely diſmiſſed; but, if they lade in ſeveral ports, they ſhall be ſearched there, and not elſewhere: and, as the exportation of oak is prohibited and forbidden, if any perſon is convicted of exporting any of the ſaid wood, he ſhall be fined in double the price of the oak.
VII. The toll ſhall be paid in Norway, in the ſame quantity and manner that was uſual in the year 1628, nor ſhall any greater be exacted 'till his Daniſh majeſty and their high mightineſſes agree about the method of exacting the duties for all ſorts of wood; concerning which affair his majeſty and their high mightineſſes ſhall enter into a treaty, as ſoon as that can be conveniently done, that ſomething more certain may be determined about it.
VIII. The merchants and mariners of the United Provinces, ſhall by no means be obliged to purchaſe their planks of ſome certain perſons in Norway, but ſhall buy the ſame at ſuch places, and of ſuch perſons as they pleaſe.
IX. The ſhips of the ſubjects of the United Provinces trading to Norway, ſhall be meaſured by two Norwegian and as many Dutch mariners, to whom that ſervice ſhall be intruſted; and, being ſigned by them, ſhall be confirmed by the magiſtrates of the place, and recorded in the books of his judicature, that the mariners, in caſe of neceſſity, may have recourſe to the ſame; and afterwards the meaſure ſhall be marked upon the maſt and beak-head of the ſhip, that the toll may be the more conveniently determined, 'till it be otherwiſe agreed, as is already ſaid.
X. Full and ample reſtitution ſhall be made for all the extortions that the ſubjects of the United Provinces can prove to have been made, againſt his Daniſh majeſty's command, after the year 1641 (4 per cent. of the price or quantity of the wood being deducted) as of every thing that has been exacted contrary to the treaty then entered into.
XI. The preſent treaty concluded between his Daniſh majeſty and their high mightineſſes ſhall be ſigned and ſealed by his majeſty and the moſt ſerene prince of Denmark, and all and every one of the counſellors of the kingdom.

XII. The rights and privileges granted to the towns of the United Provinces of the Low-Countries by the treaty of Spires, and publiſhed and confirmed by the authority of the ancient kings of Denmark, ſhall not be in any manner diminiſhed by the preſent treaty, but ſhall remain as formerly, in their full and entire force, &c.

XIII. His Daniſh majeſty obliges himſelf that he ſhall not, upon any account, detain any of the ſhips belonging to the ſubjects of the United Provinces, nor take any goods or merchandizes out of them, nor force any of them into his ſervice, without firſt agreeing with the maſters and proprietors thereof, and paying them the full price of the ſame; nor ſhall he, without the conſent of the poſſeſſors, take out of the ſaid ſhip any men or warlike neceſſaries, or other things, under any pretence whatſoever; and it ſhall be free for them to ſail through the mouth of the Baltic, and to trade through all his majeſty's dominions.

XIV. Goods exported out of the United Provinces, in foreign ſhips, ſhall be ſuffered freely to paſs through the mouth of the Baltic Sea, paying the ſame toll that is uſually paid for goods exported out of the United Provinces: but, upon this condition, that it ſhall be made appear, by ſufficient teſtimonies either from the cities of the ſaid United Provinces, or others ſituate upon the ocean, that the ſaid goods belong to no other but the ſubjects and inhabitants thereof.

XV. All the ſubjects of the ſaid provinces that reſide in the eaſtern cities, carrying either their own goods, or thoſe of the other ſubjects or inhabitants of the ſaid provinces through the Baltic, ſhall be treated in the ſame manner as the other inhabitants thereof.

XVI. The ſhips of the United Provinces having paid the toll, and being ſearched in any port of Denmark, ſhall not again be ſearched in any other port of Denmark and Norway, except they take aboard goods there; but, on the contrary, they ſhall be freely diſmiſſed.

XVII. The receivers, and other officers of the tolls in Norway, ſhall not exact of the mariners any more than what is due, nor take any more for their diſcharge, than the king's order bears; and his majeſty ſhall cauſe ſuch as do otherwiſe to be ſeverely puniſhed.

XVIII. As to what concerns the toll at Gluckſtadt, if that affair cannot be accommodated by the treaty now commenced for that effect with the city of Hamburgh, the ſubjects of the United Provinces, producing their ordinary certificate, ſhall be free from the effect thereof.

XIX. And as, by virtue of the preſent articles, all differences between his Daniſh majeſty, and their high mightineſſes the States-General of the United Provinces, are compoſed and entirely removed, it is mutually agreed and promiſed, by the ambaſſadors and commiſſaries of either part, that the ratifications ſhall be delivered on both ſides within three months.

Signed and ſealed, &c. at Chriſtianople, the 13th day of Auguſt, 1645.

Remarks.

To this treaty (of which we have left out ſome tedious formalities, not material to our point) there is annexed a promiſe of the Daniſh ambaſſadors, by which they oblige themſelves, in the king's name, to cauſe the * tariff, according to which the tolls were paid by the Hollanders in the year 1628, to be renewed and publiſhed with all convenient ſpeed, and that nothing ſhould be exacted of the ſubjects of the United Provinces, contrary to the contents of the ſaid tariff.

* Tariff is a term properly expreſſing what we call the book of rates in England, being a book in which are written down the duties and cuſtoms to be paid on all ſorts of goods.

Thus much being ſaid of the circumſtances and affairs of the Hollanders, and of the Hanſe-Towns with the Danes, we thought it neceſſary to interrupt, for ſome time, the relation given of their marine intrigues and negociations; to oblige the public with a treaty concluded on the very ſame day, viz. the 13th of Auguſt 1645, between the crowns of Sweden and Denmark, which being a curious and uſeful piece, and pertinent to our preſent ſubject, we ſhall here give a tranſlation of as much as concerns navigation and marine affairs.

In the preamble of this treaty, the ambaſſadors, &c. of all parties ſet forth, That ſeveral miſunderſtandings and differences having of late aroſe between the crowns of Sweden and Denmark, and that eſpecially concerning the immunity of commerce and navigation, and of the duties, &c. exacted in the narrow paſſage of the Sound; which differences having at laſt broke out into a war, to the great loſs and diſadvantage of both kingdoms, in the name of the moſt ſerene and mighty prince Lewis XIV. the moſt Chriſtian king of France and of Navarre, his mother, the queen-regent, out of her ſincere compaſſion towards thoſe kingdoms, and her care for the welfare of all Chriſtendom, and deſire to prevent the further miſeries and calamities of war, and to give repoſe and peace to Chriſtendom, his moſt Chriſtian majeſty aforeſaid, having, for that effect, ſent the year before his ambaſſador extraordinary in the North, to the courts of Sweden and Denmark, with orders to exhort both to a reconciliation, by repreſenting to them the miſerable condition of the Chriſtian world, and by offering to interpoſe the mediation of France, for the compoſition of their differences. For thoſe cauſes her Swediſh majeſty, out of reſpect to his moſt Chriſtian majeſty, as well as out of the earneſt deſire ſhe has to put an end to the war, and to enjoy and preſerve peace within the limits of her kingdom, and to maintain a ſincere friendſhip, and good correſpondence with all her neighbours, and eſpecially with Denmark and Norway, who, becauſe of the vicinity of their ſituation, and for ſeveral other reaſons, have many things in common with the kingdom of Sweden, has received the friendly counſel of his moſt Chriſtian majeſty, and accepts and acquieſces in the offers made of the interpoſition of the mediation of France, and his Daniſh majeſty having likewiſe declared, that he accepts of the ſame mediation, a meeting being appointed at Bromſbroo upon the frontiers, on the 3d of February, between the commiſſaries and plenipotentiaries of both kingdoms, being four on each ſide, and of equal quality, where the ſaid ambaſſadors being aſſembled, with the help and aſſiſtance of the ambaſſador of France as mediator, they concluded a firm and ſolid peace, and agreed to the following articles:

I. As to the paſſage and navigation through the ſtraight of the Sound and Belt, and from the Baltic ſea into the ocean, and likewiſe from the ocean into the Baltic ſea, and the immunity from paying all tolls and taxes, becauſe of the ſaid paſſage and navigation, the certificates for goods, and the ſearching, viſiting, ſtopping, and juſticiary arreſts and proceedings, eſtabliſhed for ſhips and goods to prevent fraud, and preſerve the ſhips and goods from all danger, and likewiſe for preſerving the liberty of commerce, the interruption of which has given occaſion to the preſent war and commotions, after many conferences, in which all means of reconciliation have been propoſed and examined, it is agreed as under, viz.

I. It is promiſed in the name and on the behalf of his Daniſh majeſty and his ſucceſſors, and of the kingdom of Denmark, that, in time to come, her Swediſh majeſty, and her ſucceſſors, kings and queens of Sweden, and their ſubjects and inhabitants in the kingdom of Sweden, great dutchy of Finland, Ingria, Eſthonia, and Livonia, ſhall have right, liberty, and power to navigate, whether in their own, or in hired ſhips, with all ſorts of veſſels great or ſmall, armed or unarmed, men of war or merchantmen, and to tranſport their goods and effects of any kind or ſort whatſoever, through the ſtraights of the Sound and the Belt, according to the opportunity and pleaſure of every man; nor ſhall that privilege be forbid them, nor they any ways troubled and moleſted in the enjoyment of the premiſes.

II. And this ſhall be ſo underſtood, that it ſhall be free for her Swediſh majeſty and her ſucceſſors, and her and their ſaid ſubjects, inhabiting in Sweden, Finland, Ingria, Eſthonia, and Livonia, to tranſport, according to their power and pleaſure, through the ſtraights of the Sound and the Belt, all ſorts of merchandize and effects, without diſtinction, exemption, or limitation, whether it be goods bought or purchaſed in other towns or kingdoms, or whether it be the product of the earth or manufactures; more eſpecially all ſorts of munitions of war, and every thing that may be uſeful therein, and particularly braſs or iron guns, great or ſmall fuſils, muſquets and arms, ſwords, ball, gunpowder, ſalt-petre, and every other thing belonging to war or arms, by what name ſoever it may be called, without any impediment, detention, inhibition, charge, or tax; whether ſuch things be tranſported from Sweden, Finland, Ingria, Eſthonia, Livonia, Pomerania, Mecklenburgh, Lubeck, or from the towns of Pruſſia and Courland, into the lands along the ocean; or whether they be tranſported from the aforeſaid places thro' the Baltic ſea into Sweden, and the aforeſaid provinces, or directly into Pomerania, Mecklenburgh, Lubeck, the towns of Pruſſia and Courland, or others.

III. All ſhips and goods of what kind ſoever, belonging to her Swediſh majeſty, and her ſubjects and inhabitants in Sweden, Finland, Ingria, Eſthonia, and Livonia, their mariners, merchants, and other paſſengers, whether the ſhips belong entirely to them, or whether they have only a ſhare in the ſame, ſhall be free from all tolls and taxes in the ſtraights of the Sound and the Belt, that now are in practice, or that the mind of men can in time to come invent, under any pretence whatſoever, not only during their abode in the ſaid ſtraights of the Sound and the Belt, but likewiſe during the whole courſe of the voyage, whether in going or coming; but, if the veſſels do wholly belong to ſtrangers, or if they have any ſhare therein, and the ſame may be only failed by her Swediſh majeſty's ſubjects, they ſhall pay to the king of Denmark, for their paſſage through the Sound and the Belt, what ought to be paid according to treaties and cuſtoms, whether for the whole ſhip, if it entirely belongs to ſtrangers, or for any part thereof proportionably; preſerving, however, in every thing, the liberties and immunities of the Swediſh ſhips, effects, and perſons.

IV. It is agreed, as to the liberty of navigation of the Swedes and their exemption from tolls, and his Daniſh majeſty promiſes

miſes and determines them in this manner, in his own name, and in that of his ſucceſſors, kings of Denmark, and of that kingdom, that her Swediſh majeſty, and her ſubjects in Sweden, Finland, Ingria, Eſthonia, and Livonia, ſhall, without diſtinction, enjoy theſe rights and liberties, in their perſons, ſhips, goods, and merchandizes, whether of the product of the earth, or manufactures; and, in time to come, all the aforeſaid ſhips of Sweden, and all others carrying Swediſh goods and effects, writings and perſons, ſhall be free from all ſearching, viſiting, meaſuring, and other vexations in the paſſage of the Sound and the Belt, and that no right of ſuperiority or juriſdiction ſhall be exerciſed over them in any thing concerning their paſſage, traffic, and navigation; and much leſs ſhall any ſhips be ſeized, or any effects taken out of the ſhips, or any ſhips forced into the Daniſh ſervice, without the conſent of the owners.

V. And becauſe the certificates, and the different expoſitions and explications of them, have very much contributed to the eſtabliſhing of the cuſtom of ſearching of ſhips in the paſſage of the Sound, and given occaſion to the differences that have happened, and to the preſent war between theſe kingdoms: for theſe cauſes, and for preventing ſuch miſunderſtandings in time to come, and for the more eaſy diſtinguiſhing between the free ſhips and goods of Sweden, and thoſe that are ſubject to the taxes, it is finally concluded and agreed by theſe preſents, that all Swediſh ſhips of war, great or ſmall, laded or unladed, whether there be one alone, or ſeveral together, paſſing through the ſtraights of the Sound, and ſailing to Cronenborg (which ſhall not be practiſed in any other place of the paſſage of the Sound) ſhall ſtrike the main ſail in paſſing by the citadel of Cronenborg, and ſalute the ſame with the ordnance, which ſalutation ſhall likewiſe be returned by the citadel; and, if the ſhips of war continue their voyage, without coming to an anchor, it ſhall be free for them to ſail on without any further ceremony; but, if it happens that any Swediſh man of war come to an anchor in the ſtraight of the Sound, and the governor of Cronenborg ſend to the captain to enquire of him, in a friendly manner, whence he comes, and deſire him to ſhew his certificate, without picking otherwiſe any quarrel with him; the captain ſhall not decline ſhewing his paſſport to the perſon ſent by the governor, but they ſhall receive and entertain one another with all imaginable reſpect and civility, and the captain ſhall not be troubled in any other manner whatſoever. And, as for the narrow paſſage of the Belt, the Swediſh ſhips of war may freely paſs by Nyburgh, according as the wind and their conveniency will allow tham; but, if they come to an anchor, before, or near the citadel, the ſame thing ſhall be obſerved, that has been already expreſſed concerning the citadel of Cronenborg in the ſtraight of the Sound.

VI. And beſides, that all Swediſh ſhips or veſſels belonging to her Swediſh majeſty's ſubjects, and to the inhabitants of her majeſty's dominions in Sweden, Finland, Ingria, Eſthonia, and Livonia, wholly laden with the goods and effects of the merchants and inhabitants, ſhall be according to theſe articles and conventions free from all charge and vexation, provided they have general certificates for their free paſſage from her majeſty and her officers in ſpecial matters, and in other caſes from the conſuls and ſenators of the towns, to have a juriſdiction over the ſhips and goods belonging to the citizens and inhabitants of the kingdom, by which it ſhall be certified in general terms, that the ſhips and goods do really belong to the ſubjects and inhabitants of Sweden, which certificate ſhall be conceived according to the following manner:

A form of the general maritime paſſport for a Swediſh ſhip, entirely laded with Swediſh goods; which (changing what is to be changed) may likewiſe ſerve for foreign ſhips, entirely laded with Swediſh goods.

We conſuls and ſenators of the town of certify, that the ſhip commanded by belongs to our town of (or ſome other town) in Sweden, and is only laded with goods belonging to Swedes, and is bound for the ocean, as the maſter and the owners thereof (if they be more than one) have declared before us in our court, deſiring this certificate as a proof thereof: the ſhip and goods being thereby to be exempted from all taxes and vexations in the paſſage of the Sound and the Belt, according to the treaties between the two kingdoms. In teſtimony whereof, we have cauſed the ſeal of the town to be put to theſe preſents, which we have likewiſe cauſed to be ſigned by the clerk. Given, &c.

Which certificate ſhall be ſhewn and conſigned in the hands of the officers of his Daniſh majeſty's cuſtom-houſes at Elſineur and Nyburgh, in the paſſages of the Sound and the Belt, who thereupon ſhall be obliged forthwith to diſcharge the ſhips, with a teſtimony that they have paſſed with their lading; which teſtimony ſhall be conceived according to the following model:

A model of the teſtimony to be given by the officers of the cuſtom-houſes of Elſineur and Nyburgh, to ſuch as ſhew their certificates.

In the year one thouſand N. N. maſter of the ſhip the belonging to the town of B. has delivered his certificate for ſhips and goods, dated at B. the day of in the year In witneſs whereof we have given him this teſtimony, &c.

Which being done, ſuch maſters may freely depart with their goods and men, without any hinderance, prejudice, charge, or vexation.

VII. Ships hired by merchants and inhabitants in Sweden, and only laded with Swediſh goods, ſhall be treated in the ſame manner; and after ſhewing their certificates conceived in general terms, and leaving the ſame at Elſineur or at Nyburgh, and receiving a teſtimony thereof (which is to be done without delay) paying what is due for ſhips that are wholly, or partly foreign, without prejudice to the rights of Swediſh perſons and goods, according to their proportions, it ſhall likewiſe be free for them to continue their voyage, without any further trouble or moleſtation.

VIII. And ſo if any Swediſh merchant-ſhip, not laded, paſs through the ſtraights of the Sound and Belt, the maſter ſhall make it appear (as is already ſaid) at Elſineur and Nyburgh, by a general certificate, that he belongs to Sweden, Finland, Ingria, Eſthonia, or Livonia, after which he ſhall pay what is due, and depart at his own conveniency, without any other tax, vexation, hinderance, or detention.

IX. If any veſſel, great or ſmall, paſs through the ſtraights of the Sound or the Belt, laden partly with Swediſh, and partly with foreign goods (which latter are liable to pay all the duties levied at that place) the maſter muſt have certificates of all the goods and effects he has aboard, belonging to the merchants of Sweden, Finland, Ingria, Eſthonia, and Livonia, in which ſhall be particularly expreſſed the weight of the goods in ſuch manner as one may diſtinctly ſee all the heavy goods that are uncovered, and are not bound or packed up, with their weight, number, and meaſure, according to the cuſtom of the ſea; ſuch as copper, braſs, iron, pitch, of all ſorts, corn, ſalt, ſalt-fiſh, butter, tallow, hemp, flax, and ſuch other goods; and, as for ſmall goods that can be put up in caſks and barrels, they ſhall not be ſpecified, but they ſhall be marked with a Swediſh mark upon the caſks and barrels, and it ſhall be expreſſed in the certificate, that the ſaid caſks and barrels, and the goods they contain, and which are not ſpecified, belong to merchants and inhabitants of Sweden. And for the greater clearneſs of the thing, and avoiding all occaſions of difference, there is here under added a model of the ſaid certificates.

A form of the certificates to be given to the Swediſh ſhips, laden partly with Swediſh, and partly with foreign goods, which are ſubject to pay the taxes; which, making ſome alterations, may likewiſe ſerve for foreign ſhips hired by Swedes.

We conſuls and ſenators of the town of N. certify, that, upon the day under-mentioned, P. P. citizen (or inhabitant) of our town of N. (or ſome other town) in Sweden, appearing before us at our court, declared, that he had ſhipped on board of the ſhip R. of which his owner S. S. and maſter T. T. the number of pounds of copper, iron, or flax, or tons of wheat, rye, or barley; or the number of beams, planks, or maſts, or of tons of wine, or the number of caſks or barrels of goods and merchandizes, marked L. L. belonging to Q. Q. citizen (or inhabitant) of the town of C. in Sweden; and the ſaid P. P. requiring this certificate to indemnify the ſhip and goods from all taxes and vexations in the ſtraights of the Sound and the Belt, according to the treaties between the two kingdoms; we have granted him the ſame, after having cauſed it to be ſealed with the ſeal of the town, and ſigned by the clerk. Given, &c.

Which certificate agreeing with the quantity of goods, and being ſhewn to the officers of the Daniſh cuſtom-houſes at Elſineur and Nyburgh, the ſaid Swediſh goods, expreſſed in the certificate, ſhall be free and exempt from all other ſearching, viſiting, detention, juſticiary proceeding, or confiſcation. But, if it happens that there be reaſon to ſearch the ſhip for other prohibited goods, or others that are ſubject to the taxes; in that caſe, ſuch goods as ſhall be called in queſtion, ſhall be taken out of the ſhip and depoſited, and examined at Elſineur or Nyburgh, which ſhall be performed within the ſpace of eight days at moſt, ſo that, within the ſaid time at furtheſt, any Swediſh or other ſhip, freighted by Swedes, may be free to depart with all the Swediſh goods, without any further retardment; and that the ſhips and veſſels, merchandizes and effects, belonging to the ſubjects and inhabitants of Sweden, Finland, Ingria, Eſthonia, and Livonia, be not in

in the leaſt tormented with unneceſſary ſearchings and vexations, by reaſon of the ſaid miſtakes and errors.

X. If any ſhip of Sweden, Finland, Ingria, Eſthonia, or Livonia, be freighted by ſtrangers, and laden with foreign goods that are ſubject to pay the taxes, the ſhip and perſons ſhall nevertheleſs enjoy the liberties, privileges, and immunities, which are rightly due; as by theſe preſent articles are granted to the Swedes, and the foreign merchant ſhall give an account of his goods, without any violation of the immunities of the Swedes in the ſtraights of the Sound and the Belt.

XI. And, that no retardment or damage may be cauſed to the Swediſh ſhips and goods in their voyages, contrary to the intent of theſe preſents, it has been promiſed in the name of his Daniſh majeſty, that things ſhall be diſpoſed at Elſineur and Nyburgh; that the maſter of the cuſtom-houſe, or ſome other officer in his place, ſhall attend at certain hours, before and after noon, every day at the ſaid cuſtom-houſe, there to receive the certificates; and, immediately upon the receipt thereof, to give others to the maſters in the form above preſcribed, in ſuch manner that the Swediſh ſhips and goods may continue their voyages, and freely paſs, without any hinderance or moleſtation.

XII. And, if it afterwards ſhould happen, that her Swediſh majeſty's ſhips, or thoſe of her ſubjects, whether they be their own or hired ſhips, being forced by tempeſt, or otherwiſe, ſhould deſire a ſafe port in Norway, or any other place of the king of Denmark's dominions, it ſhall be freely granted them, and they ſhall not be moleſted in any manner, neither for taxes, ſearches, nor any other thing, but ſhall only pay the duties that other friends and ſtrangers pay for anchorage, and ſuch other conveniencies, in places where ſuch things are uſually levied. But, as to their goods and merchandizes, they ſhall have the liberty to purchaſe neceſ ſaries for their money; and the Daniſh ſhips of war, and others, ſhall have the ſame privilege in the like caſe in the ports in Sweden.

XIII. If it happens, that either her preſent Swediſh majeſty, or her ſucceſſors, kings of Sweden, ſhould levy ſoldiers, either horſe or foot, in the kingdoms or dominions of their friends along the ocean, or ſend any to the provinces in their neighbourhood of the Baltic ſea, or into Oſtrogoth, and they paſs on one ſide or other through the Baltic ſea, it is agreed, that her majeſty and her ſucceſſors ſhall have entire liberty to do it without any oppoſition; provided, however, that there ſhall not paſs together above 1200 men, and that notice be given to his Daniſh majeſty three weeks before, that thereby all ſuſpicions may be removed, and the paſſage may be free. But, if any Swediſh officers, or others, would paſs through the Baltic ſea, with their own horſes and equipages, they may freely do it in one, or ſeveral ſhips, without giving any notice.

XIV. And, to prevent differences between the two kingdoms in time to come, or if the fleets of the two kingdoms meet, or one ſhip of war meets another; or if by accident the Swediſh fleet enters into any of the ſtraights of the Baltic ſea or the Belt, and there meets that of Denmark; or if the ſhips or fleet of the latter enters into any place or port where the Swedes are before them; it is agreed in the following manner, that if the fleet of either of the kingdoms meet the other in the Baltic ſea, or in the ocean, they ſhall mutually receive one another with marks of friendſhip, and ſhall ſalute and honour one another in the ſame manner, firing guns according to the cuſtom; and neither the one nor the other ſhall attempt any thing further, nor endeavour to exerciſe any act of ſuperiority, whatever pretenſion they may believe they have; the ſame ſhall be obſerved when one or two ſhips meet; but, if one or two ſhips of either of the kingdoms meet the fleet of the other, they ſhall ſalute it by firing of guns, and ſtriking their main topſail, 'till the fleet be paſt, or 'till it come to an anchor in ſome port, but they ſhall not be obliged to ſtrike their flags: and, if there be more than two ſhips of either ſide together, and they form a fleet, they ſhall content themſelves to fire guns on both ſides without ſtriking their ſails, and the one ſhall not oblige the other to do it.

XV. It ſhall be free for one, two, three, four, or at moſt five, Swediſh men of war, to paſs through the ſtraights of the Sound or the Belt, without giving previous notice to his Daniſh majeſty or his ſucceſſors; and when they are arrived at the ſtraight of the Sound, and have ſaluted after the Swediſh manner, with two guns (as has been already ſaid) they ſhall lower their main topſails before the caſtle of Cronenborg 'till they be paſt it; and, if it happens that his Daniſh majeſty's ſhips or fleet be there before them, they ſhall be ſatisfied with the two guns aforeſaid, without being obliged to any thing further, and much leſs ſhall any other marks of honour or deference be required of them. But if her Swediſh majeſty or her ſucceſſors be obliged to paſs the ſtraight of the Sound or the Belt, with a fleet of ſhips of war, it is agreed that his Daniſh majeſty ſhall have notice of it three weeks beforehand, that the arrival of ſuch a fleet may give no ground of ſuſpicion or miſtruſt; and, ſuch notice being given, the Swedes ſhall have free liberty to paſs without any oppoſition or damage to the Danes.

XVI. And as to what concerns the iſland of Burgen, where his Daniſh majeſty has kept for ſome time a gallery, and levied cuſtom; his ſaid majeſty by theſe preſents yields, and entirely renounces that practice, and promiſes to make uſe of the ſame no more, and that henceforth he will not pretend to exact any toll there.

XVII. With reſpect to the duty which his Daniſh majeſty has levied of late years at Gluckſtadt, upon ſhips and goods going from one place or another to Hamburgh, it is likewiſe agreed in the following manner, that, as his Daniſh majeſty is now in a negociation with the Hamburghers, concerning the differences between them, and for abrogating of that cuſtom, if they agree between themſelves, and the aforeſaid duty be abrogated, the ſubjects of his Swediſh majeſty who trade that way, ſhall alſo enjoy the ſame privileges; and though, againſt all appearance, the difference with the Hamburghers about that duty continue, or though they ſhould conſent to pay it, in that caſe the Daniſh commiſſioners have promiſed in his Daniſh majeſty's name, and in that of the duke of Holſtein, and have obliged themſelves, that all her Swediſh majeſty's ſubjects and inhabitants in Sweden, Finland, Ingria, Eſthonia, and Livonia, that trade upon the Elbe, ſhall be freed therefrom; and that they ſhall not be moleſted nor detained, by reaſon thereof, by any of his Daniſh majeſty's, nor the duke of Holſtein's miniſters, whether they reſide in forts or ſhips; and that they ſhall be free from all taxes and uneaſy ſearchings, and further that they ſhall not ſo much as be obliged to ſhew any teſtimonies in writing, and much leſs to produce certificates, or give any other account of that nature.

XVIII. And, as the experience of by-paſt times has demonſtrated, that the privileges and liberties granted to the Swedes in Denmark and Norway, and to the Danes and Norwegians in Sweden, to trade together, and be exempted from all duties introduced partly by ancient cuſtom, and partly by the tranſactions and treaties concluded between the two kingdoms, has given birth to ſeveral differences, and has even occaſioned a hatred and animoſity between the kingdoms, and as often ſet the king and ſubjects of the kingdoms at variance with thoſe of the other, inſomuch that that has been the principal cauſe of breaking the ancient friendſhip which ſubſiſted between the two kingdoms, and there has ſcarce been any conference between the commiſſioners of both parties where that grievance has not been repreſented; beſides that, at this time, that liberty cannot be ſo conveniently continued as it formerly was. For theſe cauſes, it is agreed on both ſides, that all immunities of duties and taxes ceaſe and be removed, for the Danes and Norwegians in Sweden, and for the Swedes in Denmark and Norway, without prejudice of the exemption of duties, and of the free paſſage of the Swedes in the ſtraights of the Sound and the Belt, and likewiſe paſſage ſhall be forbidden to the Swediſh merchants with their merchandizes, to go into Denmark and Norway beyond their limits; and the ſame thing ſhall be forbidden to the Danes and Norwegians to go into Sweden, as well into the country as into the maritime towns and provinces. However, any Swediſh merchant trading, for the time to come, into Denmark and Norway, ſhall have the privilege of trafficking in the maritime ſtaple towns appointed for it, whither it is lawful for merchants to go; and he ſhall there enjoy the ſame liberties and privileges granted to other friends and foreigners, according to the laws and ſtatutes of Denmark, preſerving always the privileges of the towns; and, on the other hand, a Daniſh or Norwegian merchant, trading in Sweden or any of the provinces depending upon it, ſhall enjoy the ſame privileges and liberties of trading in ſtaple ports appointed for that purpoſe, and in which other foreigners and friends are allowed to come, according to the ſtatutes and laws of Sweden, preſerving always the privileges of the town. And, to the end that their Swediſh and Daniſh majeſties may not be troubled and moleſted in their kingdoms, they ſhall diſpoſe of their ſubjects, according as every one's occaſion and condition requires.

XIX. The trade and navigation upon the river of Trotheat between Weſtgoth and the territory of Bahus, ſhall remain under the ſame condition, liberty, and privilege, that it anciently was, and ſhall not be hindered nor interrupted at either of the entries towards Gothburg and Kongel, and all buildings that have been erected, or other things that have been ſunk in it's channel, that may be any ways prejudicial to the one or the other, ſhall be removed, and the channel ſhall be cleanſed without any oppoſition, and eſpecially what was thrown into it, to ſtop it's entry towards Bahus, ſhall be taken away, and, after an exact ſearch, it's ancient current ſhall be reſtored to it, and what damage is done ſhall be repaired. The Swedes ſhall not be in any manner diſturbed by the Danes and Norwegians, nor ſhall the latter by them; but, on the contrary, navigation and commerce ſhall be carried on with equity, and ſhips ſhall go up and come down the ſame river on the ſide of Gothburg, without any hinderance, charge, or grievance, as it has been formerly practiſed.

XX. And further it is agreed, that her Swediſh majeſty ſhall have in time to come, as ſhe has had hitherto, a poſt-maſter

at

at Elſineur, and a poſt between Sweden and Hamburgh, who ſhall paſs on all ſides without hinderance or moleſtation; and ſhe ſhall likewiſe have perſons to carry her majeſty's letters, and thoſe of her ſubjects, and others that are ſent out of the kingdom, or into it, and that without any obſtacle, retardment, or ſearching; and his Daniſh majeſty ſhall have the like power, that is to ſay, to keep an agent at Stockholm, for his own and his ſubjects buſineſs.

XXI. The eſtates enjoyed by the Swediſh gentry in Denmark and Norway, and thoſe enjoyed by the Daniſh and Norwegian gentry in Sweden before this war, ſhall be reſtored to the right owners, who ſhall poſſeſs the ſame according to the ancient treaties, and according to the laws and ſtatutes of each kingdom, without any moleſtation or hinderance whatſoever.

XXII. And, becauſe the war has occaſioned ſome confiſcations on both ſides, and ſome loſſes to the ſubjects whilſt it laſted, all things ſhall be forgot on either ſide, upon conſideration of this peace, and all that has been adjudged, and actually confiſcated, and all private loſers ſhall remain in the condition they now are, and nothing ſhall be paid on either ſide by the ſubjects; nor ſhall any moleſtation be given, nor any action intended againſt ſuch as by reaſon thereof have contracted debts, and have not lawfully paid the ſame as well within as without the kingdom.

XXIII. But, if any thing be found (whether it be adjudged or not) that is not actually confiſcated, and all debts that the ſubjects and inhabitants of Sweden had right to demand before this war of his Daniſh majeſty, or the Danes and Norwegians of her Swediſh majeſty, upon due proof, ſhall be forthwith paid on both ſides.

XXIV. And if, during the courſe of this war, any ſentence has been given either in Sweden or Denmark, to the prejudice of any Swede in Denmark, or to the prejudice of any Dane or Norwegian in Sweden, it ſhall be of no effect; and it ſhall now be free for every man to purſue and prove his right.

XXV. As her majeſty the queen Chriſtiana of Sweden has, during this war, reduced to her obedience ſeveral of his Daniſh majeſty's forts, provinces, territorities, and towns in Jutland, Scania, Halland, Belking, Bornholm, and Holſtein; and likewiſe in Stormaren and Ditmarſen, and namely Chriſtianople, Pinnenberg, Helſingburgh, Lanſcroon, Laholm, Engelholm, Saltzburgh, Hammerſuſen, or by what other names ſoever they are or may be called, now poſſeſſed by right of war; for that, and ſeveral other conſiderations, and by the mediation and diligence, and the continual exhortation and perſuaſions of his moſt Chriſtian majeſty's ambaſſador; her majeſty, the queen of Sweden, makes over, and conſents to give, to his Daniſh majeſty and his ſucceſſors, all the title ſhe may have acquired, by the right of war, to the ſaid provinces, lands, forts, houſes, fields, towns and territories; all which things ſhall depend on him and his ſucceſſors, according to the tenor of this peace; and that, becauſe of the deſire ſhe has to prevent the extraordinary miſeries with which the continuation of the war would be attended; well conſidering how neceſſary a reconciliation between the northern kingdoms is, for breaking a way for the peace and repoſe of Chriſtendom, ſo long wiſhed for: and, that the care and deſire of their majeſties, the moſt Chriſtian king, and the queen regent his mother, to end the differences and wars between theſe kingdoms, may not be without effect, his Daniſh majeſty eſpecially, being perſuaded by his moſt Chriſtian majeſty's ambaſſadors, having promiſed in his own name, and for his ſucceſſor, and the kingdoms of Denmark and Norway, as effectually by theſe preſents, he conſents and promiſes to her Swediſh majeſty and her ſucceſſors, kings of Sweden, and to the ſaid kingdom, that, in compenſation for the provinces, fortreſſes, towns, and territories, which are to be reſtored, he makes over all Jemptland, including Heredalia, &c. as likewiſe Gothland, and the town and citadel of Wiſby, and the iſlands and arms of the ſea depending on the ſame, as likewiſe Oeſel and Arnſburgh, with all the iſlands and appurtenances, and every thing depending thereon, with the ſuperiority, royal privileges, and eccleſiaſtical and political juriſdiction, tributes, revenues, and dues, by ſea and land, in the ſame manner as the kings of Denmark, and particularly Chriſtian IV. now reigning, has enjoyed the ſame; which ſhall belong, and appertain in time to come, to her Swediſh majeſty, and her ſucceſſors to the kingdom of Sweden, to be by them poſſeſſed by a perpetual right, as the ſpecial inſtrument of ceſſion drawn up for that, and ſigned and ſealed by his majeſty, and by the counſellors of Denmark, do more fully teſtify.

And, beſides, his Daniſh majeſty conſents and promiſes in his name, and for his ſucceſſors, and for the kingdom of Denmark, to the end that her Swediſh majeſty, and her ſucceſſors, and ſubjects in Sweden, Finland, Ingria, Eſthonia, and Livonia, may have ſecurity for enjoying, without moleſtation, the freedom of commerce and navigation in the ſtraights of the Sound and the Baltic ſea, according to theſe preſent articles, to give to the ſaid queen, her ſucceſſors, and to the kingdom of Sweden, as a pledge and ſecurity for the obſervation of the ſaid articles and conventions for the thirty years next enſuing, all Halland with it's forts, Holm, Helmſtadt, and Warburg, together with all the towns and villages ſituated within that territory, as well the aforeſaid Holm, Helmſtadt, and Warburg, as Falkenburg and Kaningſlachen, and all the lands and fiefs there contained, according to the ancient bounds, limits, and borders of the aforeſaid countries; upon condition that her majeſty and her ſucceſſors, and the kingdom of Sweden, ſhall enjoy and poſſeſs the ſaid province of Halland, with all it's forts, towns, magiſtracies and rights, revenues, ordinary and extraordinary ſuperiorities, royal rights and juriſdictions, eccleſiaſtical and civil, and all other emoluments ariſing from the lands, waters, rivers, ſeas, iſles, ports and fields, without excepting any thing whatſoever, by whatſoever name it may be called, in the manner that the kings of Denmark have poſſeſſed the ſame, and eſpecially in the manner that the preſent king Chriſtian IV. poſſeſſes and enjoys them, and all the inhabitants of that province, as well in the country as in the towns, eccleſiaſtical or ſecular, gentry and commonalty, inhabiting and dwelling therein, ſhall not be obliged, during the aforeſaid term of thirty years, to take any oath of allegiance, fidelity, or obedience, but to her Swediſh majeſty and her ſucceſſors, and to the kingdom of Sweden, until the ſaid term of thirty years, without any interruption, be expired, according to the tenor of the preſent convention, as in the particular inſtrument for the pledge and ſecurity given by his Daniſh majeſty, and ſigned and ſealed by all the counſellors of his kingdom, it is more fully expreſſed. And it is further agreed, concerning this pledge and ſecurity, That, the aforeſaid term of thirty years being expired, his Daniſh majeſty and the kingdom of Denmark ſhall be obliged, before the reſtitution of the ſaid province, either to let it ſtill remain for ſecurity to her Swediſh majeſty, and to the kings her ſucceſſors, and to the kingdom of Sweden, or to give in lieu thereof as good a pledge, with which her ſaid majeſty, and the kings her ſucceſſors, and the kingdom of Sweden may be ſatisfied, that they may have ſecurity for the obſervation of the preſent articles.

Remarks.

As this long article does not particularly concern the marine affairs, I ſhould not have troubled the reader with it, if I had not obſerved a very remarkable paſſage, from which a weighty inference may be reaſonably drawn, in favour of what we have ſaid under the article Sea, viz. that the ſea is capable of, and ſubject to, dominion; which, we think, does very plainly appear to have been the ſentiment of the princes concerned, and of the plenipotentiaries and other politicians employed in the management of this treaty, ſince in the perpetual and temporary ceſſion that the king of Denmark makes, in favour of the crown and kingdom of Sweden, of ſeveral lands and territories, moſt expreſs mention is made of the arms of the ſea, ſeas, waters, &c. depending on the ſame, &c.

As the fifteen following articles have but little relation to maritime affairs, we ſhall leave them out, in order to have the more room for what is moſt eſſential to my preſent purpoſe.

XLI. It is alſo agreed by theſe articles, that all the towns, comprehended in the Hanſeatic league, ſhall have a ſhare therein, and ſhall enjoy the freedom of commerce by land and ſea in both kingdoms, reſerving the obſervation of the ancient treaties between theſe kingdoms and the Hanſeatic Towns for a better time; and no injury ſhall be done to any town, citizen, or ſubject, for any action perpetrated during the war.

XLII. Particularly the town of Dantzick is comprehended in this peace, and ſhall enjoy, in the ſame manner it has hitherto done, the liberty of commerce by ſea and land, in both the kingdoms; and all offences, happened during this war, ſhall be buried in perpetual oblivion.

XLIII. This treaty, for the greater ſecurity, ſhall be ratified, and ſigned and ſealed with the privy-ſeal of Sweden and Denmark, and likewiſe ſhall be ſigned and ſealed by the counſellors of both kingdoms.

XLIV. Each kingdom ſhall ſend a ſplendid ambaſſy, into France, to return thanks for their mediation, and invite that kingdom to take care of the obſervation of the treaty concluded the 13th of Auguſt 1645, &c.

Remarks.

This treaty being ſo brought to a concluſion on the 13th of Auguſt, two days afterwards another treaty of guarantee was concluded at Suder-Okra, between the miniſters of the queen of Sweden and the States-General, by which thoſe two powers agreed, That, in caſe the king of Denmark ſhould in any manner infringe his treaties with either party, they ſhould mutually aſſiſt each other, and ſtrenuouſly vindicate and maintain the freedom and immunity of commerce and navigation, according to the laws of nations to ancient cuſtom, and to the particular conventions and treaties between them.

The 25th of November following, was brought to a concluſion, at Copenhagen, a treaty between Lewis XIV. and his

his mother the queen regent of France on one part, and the king and kingdom of Denmark on the other, by which they agree:

I. That there ſhall be in time to come, between the two kingdoms, a perfect and inviolable friendſhip, &c.

II. The ſubjects of either prince ſhall freely trade between the two kingdoms, according to the reſpective laws eſtabliſhed in the ſame.

III. His moſt Chriſtian majeſty's ſubjects going into Denmark or Norway, about their own or their maſter's affairs, whether concerning commerce or any other thing, ſhall have liberty of conſcience; and the king's miniſters, reſiding there, ſhall be allowed the exerciſe of the Roman Catholic religion in their own houſes.

IV. The ſhips of either kingdom, entering into the ports of the other, ſhall be favourably received and kindly treated, &c.

V. The ſubjects of either crown trafficking by ſea, and paſſing by the coaſts of the other kingdom, ſhall not be forced to enter into any port whatſoever, except they be bound thither; and, if they come to an anchor, they ſhall not be obliged to unlade their goods, nor to exchange or ſell them, but ſhall have free liberty to do what they think moſt convenient and advantageous for their affairs.

VI. When French ſhips, or ſhips hired or laded by Frenchmen, paſs through the ſtraights of the Sound, whitherſoever they are bound, or from whatſoever place they come, or what goods ſoever they may have aboard, they ſhall not be obliged to pay any other toll than that which the king of Denmark has ordered in a ſpecial treaty upon this ſubject, concluded the 27th of September of this preſent year, under the counter-ſeal, of which there is a table of the tax or toll. And if, in time to come, the Dutch pay any thing for ſea-marks and fires, the French ſhall do the ſame.

VII. The ſubjects of the king of France that ſhall carry into Norway the product of their country, or ſhall go thither in ballaſt to purchaſe the commodities they have uſe for, ſhall pay no more for the entry of the goods they carry thither, nor for the cuſtom of thoſe they purchaſe there, than what is now, or ſhall be in time to come, impoſed upon the king of Denmark's own ſubjects.

VIII. And likewiſe the ſubjects of the king of Denmark, trading into France, ſhall not pay any other, nor greater duties than the French themſelves, or their other friends or confederates; and they ſhall be allowed to ſell and diſpoſe of their goods to whom they pleaſe, and at the price they think fit.

IX. Ships of war and others, going into the ports of either kingdom, ſhall be kindly received, paying for the neceſſaries they want.

X. No ſhips of war or others, belonging to either of the kingdoms, ſhall be forced into the ſervice of the other, without the conſent of the prince, the ſhips of war belonging to or of the owners of the others; and that, though the captain of the veſſel ſhould conſent.

XI. The two kingdoms ſhall uſe their utmoſt endeavours for the advancement of commerce and navigation, and ſhall ſuppreſs pirates, &c.

XII. And, as the liberty of commerce does principally conſiſt in maintaining the ſtate of things in the weſtern, northern, and Baltic ſea, in the ſame condition that they have been hitherto, both kings ſhall uſe their endeavours to preſerve entire, and without any alteration, the ancient balance and equilibrium that has been hitherto found to be the ſureſt foundation for the public peace and tranquillity.

Note, The other five articles of this treaty are not very material to our point.

Signed and ſealed at Copenhagen, Nov. 15, 1645, &c.

REMARKS.

The next treaty of this nature that occurs, is that by which the town of Lubeck renewed their old league with the States-General, who notwithſtanding their late accommodation with Denmark, the better to bring that court to a compliance with their deſires, gladly entered into a freſh alliance with the ſaid towns, in which they more plainly diſcovered their diſcontents with the Daniſh impoſts upon their ſhips than in any precedent treaty; for there they plainly declare their reſolution of maintaining the freedom of their navigation in the Baltic; which reſolution of theirs, and the meaſures they had fallen upon to make it effectual, did probably incline the court of Denmark to come to an agreement with them, by a treaty concluded by his ambaſſador at the Hague, the 12th of February, 1647; which treaty, though it be very long, as it contains a great many things that are not unworthy the peruſal of the curious and attentive reader, we have thought fit to give the world a full and exact tranſlation thereof in the following terms: to which I was ſo much the more inclined, that it may ſerve to give the world ſome diſtinct notions of the great trade that the Hollanders have drove in the Northern Seas.

ARTICLE III.

A treaty of commerce concluded between Chriſtian IV, king of Denmark, and the United Provinces of the Low Countries, concluded at the Hague the 12th of February, in the year 1647.

I Corfits Uleſeldt, counſellor of ſtate, firſt maſter of the houſhold, and governor of the iſle of Moon, &c. ambaſſador extraordinary from his majeſty the king of Denmark, Norway, &c. my moſt gracious king and lord, to the high and mighty lords the States-General of the United Provinces; on one part: and we John lord of Ghent, and one of the nobles of Guelderland; Gerard Scaep, ancient burghermaſter and counſellor of the univerſity of Leyden; Nanning Keyſer, counſellor and penſioner of the town of Horn in Weſt-Friezland; Jacob Veth, counſellor and penſionary of the town of Middleburgh in Zealand; Gilbert Vander Hoolick, ancient burghermaſter of the town of Utrecht; Charles Van Roorda, grietman of Idaderabel; John Vander Beeck of Doornick and Crytenberg, burghermaſter of the town of Daventer; Hieronymus Eyben, hoovelingh of Niehoue, burghermaſter of the town of Groningen, commiſſaries deputies, and provided with full powers from the high and mighty lords the States-General of the United Provinces, on the other part: be it known by theſe preſents, that, on the 13th day of the month of Auguſt, in the year laſt paſt, 1645, there was a treaty agreed to, and concluded at Chriſtianople, between his majeſty the king of Denmark and Norway, and the high and mighty lords the States-General of the United Provinces, containing, amongſt other things, that, in time to come, there ſhould not be levied any greater duties, or toll, in Norway, nor in any other manner, or upon any other account, than was practiſed in the year 1628, 'till his majeſty and their high mightineſſes ſhould agree upon a ſure and certain method, according to which the tolls and taxes upon wood ſhould be paid at ſo much per laſt: and, his majeſty having offered to treat with their high mightineſſes concerning that affair, with all convenient ſpeed, we the abovementioned lords commiſſioners, being for that effect aſſembled, have, after a diligent negociation, agreed and concluded what is under:

I. In the firſt place, all the ſubjects of the United Provinces of the Low Countries, from the day of the date of this treaty 'till the 23d of Auguſt, N. S. in the year 1685, ſhall pay the tax or toll in Norway as follows:

II. All ſhips, ſailing from the ſaid United Provinces of the Low Countries to Norway, ſhall repair to five or ſix commodious havens of the ſaid provinces, to be there meaſured and marked by ſuch as ſhall be appointed for that ſervice on both ſides; for which there ſhall be three perſons named by the king of Denmark, beſides another perſon who ſhall have an inſpection over them; and their high mightineſſes, if they pleaſe, may alſo appoint the like number of perſons, with one inſpector, alſo on their ſide.

III. The ſhips ſhall be exactly and faithfully meaſured, according to their depth, length, and breadth.

IV. And, that no miſunderſtanding may ariſe between the Daniſh and Dutch meaſurers and inſpectors, we have thought it convenient to propoſe a model, according to which thoſe calculations and meaſures ſhall be made, copies of which model, or table, as it is here incorporated in this treaty, ſhall be delivered into the hands of the meaſurers and inſpectors, who ſhall be regulated thereby.

A table, or model, for meaſuring the ſhips, according to the meaſure of Amſterdam.

The length ſhall be taken from the exterior part above the beak or beak-head of the ſhips in one end, to the ſame part of the beak in the other end.

The breadth ſhall be taken from the oppoſite inner planks of both ſides of the ſhip, before the main-maſt.

The depth, or capacity of ſhips, ſhall be meaſured between the main-maſt and the mizen-maſt, where it is moſt ſhallow; and wideſt near the pump, from one ſide to the other, and afterwards they ſhall meaſure from the middle of the meaſuring line, through the wood, to the bottom of the hold; after which they ſhall proceed in the following manner:

A ſhip 125 feet in length, 25 feet in breadth, and 14 feet in depth, with a half-deck the length of the hatches, ſhall be adjudged to contain 155 laſts.

A ſhip 123 feet in length, 24 ½ in breadth, and 14 in depth, with a half-deck, 146 laſts.

A ſhip 122 feet in length, 24 ½ in breadth, and 13 ½ in depth, with a half-deck, 138 laſts.

A ſhip 120 feet in length, 24 in breadth, and 13 ½ in depth, having a half-deck, 130 laſts.

A ſhip 118 feet in length, and 13 in breadth, with a half-deck, 123 laſts.

A ſhip 116 feet in length, and 13 in breadth, with a half-deck, 118 laſts.

A ſhip 114 feet in length, 23 ½ in breadth, and 13 in depth, with a half-deck, 112 laſts.

A ſhip 112 feet in length, 23 in breadth, and 13 in depth, with a half-deck, 107 laſts.

A ſhip 110 feet in length, 23 in breadth, and 12 ½ in depth, with a half-deck, 101 laſts.

A ſhip 108 feet in length, 22 ½ in breadth, and 12 ½ in depth, with a half-deck, 96 laſts.

A ſhip 106 feet in length, 22 in breadth, and 12 ½ in depth, with a half deck, 91 laſts.
A ſhip 103 feet in length, 22 in breadth, and 12 ½ in depth, with a half-deck, 86 laſts.
A ſhip 95 feet in length, 21 ½ in breadth, and 12 in depth, 73 laſts.
A ſhip 90 feet in length, 21 ½ in breadth, and 12 in depth, 66 laſts.
A ſhip 85 feet in length, 21 in breadth, and 11 ½ in depth, 60 laſts.
A ſhip 80 feet in length, 21 in breadth, and 11 in depth, 50 laſts.
A ſhip 126 feet in length, 25 in breadth, and 13 in depth, with a complete upper-deck, having four feet in height between decks, ſhall be judged to contain about 172 laſts.
A ſhip 124 feet in length, 25 in breadth, and 13 in depth, with a full deck, 3 ½ feet high, 162 laſts.
A ſhip 122 feet in length, 24 ½ in breadth, and 13 in depth, with a deck of 3 ½ feet high, 153 laſts.
A ſhip 120 feet in length, 24 ½ in breadth, and 13 in depth, with a deck 3 ½ feet high, 145 laſts.
A ſhip 118 feet in length, 24 in breadth, and 12 ½ in depth, with a deck of 3 ½ feet, 134 laſts.
A ſhip 130 feet in length, 28 in breadth, and 12 in depth, with an upper deck 6 feet high, ſhall be judged capable of carrying about 195 laſts.
A ſhip 126 feet in length, 26 in breadth, 12 in depth, and having a deck as above, 170 laſts.
A ſhip 124 feet in length, 25 in breadth, and 11 ½ in depth, having a deck 5 ½ feet high, 166 laſts.
A ſhip 122 feet in length, 25 in breadth, and 11 in depth, with a deck 5 feet high, 156 laſts.
A ſhip 120 feet in length, 24 ½ in breadth, and 11 in depth, with a deck 4 ½ feet high, 146 laſts.
A ſhip 118 feet in length, 24 in breadth, and 10 ½ in depth, with a deck of 4 ½ feet high, 135 laſts.
A ſhip 116 feet in length, 23 ½ in breadth, and 10 in depth, with a deck of 4 ½ feet high, 120 laſts.
A ſhip 112 feet in length, 23 in breadth, and 10 in depth, with a deck of 4 ½ feet high, 113 laſts.
A ſhip 110 feet in length, 22 in breadth, and 10 in depth, with a deck of 4 ½ feet high, 110 laſts.
Such veſſels as ſhall not be found to be preciſely of the ſame form or burthen abovementioned, ſhall be taxed by the meaſurers and inſpectors, conformably to the aforeſaid regulation, and in proportion to their burthen.
And the aforeſaid calculation being made by the laſt of St. Ubes, of corn or ſalt, as the veſſels cannot be ſo deeply laded with wood, becauſe of it's lightneſs and ſtiffneſs, one fifth part of the calculation of every veſſel ſhall be abated.
V. The ſhips, being meaſured in the aforeſaid manner, ſhall be marked upon the ſail-yards and upon the beak-heads, fore and aft, with a hot iron; and two acts, or certificates, ſhall be drawn up for the ſhip, which ſhall be ſigned by the meaſurers and inſpectors of both ſides, one of which ſhall be delivered to the maſter of the ſhip, and another depoſited in the hands of the magiſtrates of the place where the ſhip is meaſured.
VI. There ſhall likewiſe be kept two records, or comptrolls, of ſhips ſo meaſured, which ſhall likewiſe be ſigned by all the perſons that meaſure the ſame, one of which ſhall be ſent into Denmark, to be communicated to the commanders of the caſtles, and other officers, that recourſe may be had to the ſame, in caſe of need, and the other ſhall remain at the diſpoſal of their high mightineſſes.
VII. Such veſſels ſhall be meaſured before the end of the month of April at lateſt, and ſooner, if it be poſſible, in order to which, both parties ſhall uſe the utmoſt diligence.
VIII. All veſſels ſailing from the United Provinces to Norway, and having aboard a certificate of their meaſure in due form, ſhall pay, at their going out of the kingdom, according to their burthen, as under: that is to ſay, any ſhips carrying, according to the certificate of the meaſures, 125 laſts, ſhall pay the tax but for 100; and ſo all ſhips carrying wood out of Norway ſhall pay but for four-fifths of their burthen, the other fifth being abated, in conſideration that they have been well and faithfully meaſured; concerning which, his majeſty ſhall give the neceſſary orders to all his cuſtom-houſes of Norway.
IX. Veſſels ſailing from the United Provinces of the Low-Countries to Norway, and carrying merchandizes thither, ſhall only pay for ſuch merchandizes the duties his Daniſh majeſty's ſubjects are obliged to pay; ſo that the inhabitants of the ſaid Low Countries ſhall not be at any greater charge than thoſe of Denmark and Norway.
X. All the ſhips ſailing from the United Provinces of the Low-Countries to Norway, and having aboard a faithful certificate of their meaſure, as is above expreſſed, ſhall give a rixdollar per laſt, deducting, as is aboveſaid, one fifth of the number of laſts.
XI. The ſaid veſſels, lading wood, may likewiſe, in the ſame harbours, lade pitch, tar, ſkins, iſinglaſs, or any other commodity that may be tranſported, paying the aforeſaid duty of one rixdollar per laſt, and no more.
XII. This ſhall only be underſtood of veſſels tranſporting wood from Norway, and in the harbours where wood is ſold, but not from other places, and eſpecially from Bergen, where that trade is not driven; in which harbours the ſubjects of the United Provinces ſhall pay the ſame duties for other goods that his Daniſh majeſty's ſubjects pay; and this ſhall only be underſtood of veſſels laden with wood from Norway, and from the harbours where that trade is driven, and no where elſe.
XIII. All the other duties and by-tolls, of what name ſoever, that have been hitherto impoſed upon that trade, ſhall be, and are aboliſhed, by theſe preſents, and none other ſhall be impoſed in time to come but that already mentioned, called the toll of the laſt of the wood, of whatſoever name or nature it may be.
XIV. Any of the ſaid veſſels laded with wood, having paid the toll according to the certificate of it's meaſure, the ſaid fifth part being deducted, ſhall be no further troubled or moleſted with ſearching or unlading, under any pretence whatſoever, but ſhall be in full liberty to depart, upon the payment of the ſaid duty or toll.
XV. There ſhall be no diſtinction made of the quality of the wood that is laded, whether it be of the beſt, or of the middle, or coarſeſt ſort; and much leſs ſhall ſuch veſſels be ſearched, unladed, or detained; ſo that, if the ſaid veſſels of the United Provinces of the Low Countries ſhould load any oak, or other prohibited wood, no ſearch ſhall be ordained, but the prohibited wood ſhall be detained, only when it is found out of the veſſels: in which caſe the ſubjects of the ſaid United Provinces ſhall not ſuffer in any manner, neither in their perſons or effects, nor ſhall be incommoded or moleſted, under any pretence whatſoever.
XVI. The expences laid out in the harbours of Norway, for the preſervation of foreign ſhips, ſuch as iron rings, and other conveniencies, ſhall not be required of the ſhips that have been taxed and meaſured, as is above expreſſed; but, on the contrary, all neceſſary conveniencies and aſſiſtance ſhall be given them, without any further charge.
XVII. During the term expreſſed in this treaty, no alteration nor innovation ſhall be made, directly nor indirectly, by heightening the tolls of taxes upon the laſt of wood, or in any other manner, or under any pretence whatſoever; but all things ſhall remain in the ſame ſtate as is herein expreſſed, viz. one rixdollar per laſt for every ſhip lading wood, and carrying it out of the kingdom.
XVIII. If any new ſhip, or others not meaſured, ſail to Norway to lade wood, they ſhall be meaſured and taxed in Norway, by three or more Danes or Norwegians, and as many Dutch boat-men, according to the model already inſerted; and the exact capacity, or burthen of the ſhips, ſhall be marked and ſigned by thoſe that meaſure them, and the duties paid accordingly, deducting one fifth as above.
XIX. And it ſhall be henceforth allowable for the ſubjects of the United Provinces of the Low Countries to tranſport from Norway linden trees, aſh-trees, elm-trees, wood for ſail-yards, and maſts, from 16 to 20 palms, and no diſtinction ſhall be made with regard to the toll between the different ſorts of wood that are exported, but all ſhall pay by the laſt, as is above expreſſed.
XX. When his Daniſh majeſty, for the exigencies of his own dominions, ſhall have need of linden, aſh, and elm-trees, and of ſail-yards and maſts of 16 palms, the merchants ſhall not, in that caſe, export ſuch timber without his majeſty's expreſs permiſſion, provided, however, that, in that caſe, what is ſaid and ſtipulated in the 15th article concerning oak be duly conſidered.
XXI. If, in any time to come, it ſhould happen that the tolls and duties ſhould be diminiſhed in Norway, in favour of his majeſty's ſubjects, or thoſe of other nations that tranſport wood out of Norway, and not into the proper dominions of his majeſty, but into foreign countries, in that caſe the ſubjects of their high mightineſſes ſhall pay no more than they, but be taxed conformably to them.
XXII. The whole without prejudice to the precedent treaty of the 13th of Auguſt, N. S. in the year 1645, concluded at Chriſtianople, between his ſaid majeſty and their high mightineſſes, which, in all it's parts, ſhall remain in full force and power, in as far as it is not altered by this.
XXIII. And as, by the precedent articles agreed to by us the reſpective ambaſſadors and commiſſaries, ſuch things as could not be brought to a concluſion concerning the 7th and 9th articles of the aforeſaid treaty, in the year 1645, between his majeſty the king of Denmark and Norway, and the high and mighty lords the States-General, are now entirely determined: we have reciprocally conſented and promiſed to each other, that each party ſhall cauſe to be delivered to the other, in the name of their reſpective maſters, within three months after the delivery of this treaty, a ratification thereof in good and due form: and their high mightineſſes may make uſe of their reſident in the Sound, or any other that they think convenient for the delivery of theirs, which, as ſoon as his majeſty has received, he ſhall ſign the other, and cauſe it to be ſigned by the prince of Denmark and the lords of the council, in order to the delivery thereof.
XXIV. All which points and articles have been agreed to and concluded by us, the reſpective plenipotentiaries and com-

commiſſaries mentioned at the beginning of this treaty: in witneſs whereof we have ſigned theſe preſents with our hands, and confirmed the ſame with our ſeals; of which two inſtruments have been drawn up of the ſame tenor, of which each party has taken one. Done at the Hague the 12th of February, 1647.

The moſt illuſtrious and moſt mighty prince and lord, Chriſtian IV. king of Denmark, Norway, and of the Goths and Vandals, &c. having been pleaſed to ſend, to their high mightineſſes the States-General of the United Provinces, the Heer Corfits Ulefeldt, Knt. and governor of the iſle of Moon, &c. firſt ſteward of the houſhold, and counſellor of ſtate to his Daniſh majeſty, and his ambaſſador extraordinary, to negociate with the ſaid lords the States-General concerning ſeveral matters of importance, and, among other things, to agree upon a duty, or toll, at ſo much per laſt, on all the wood tranſported out of Norway: and, at the ſame time, his excellency having been acquainted, by an order of their high mightineſſes, with the great inconveniencies occaſioned to the veſſels of the United Provinces navigating through the Sound towards the eaſt, by reaſon of paſſes from the cuſtom-houſe, and the counting of 12 barrels of round ſeed for a laſt, inſtead of 24 barrels; the ſaid lord ambaſſador has promiſed and obliged himſelf to uſe his endeavours with his ſaid majeſty for obtaining orders for cauſing the ſaid complaints to ceaſe, and that the veſſels belonging to the ſubjects of their high mightineſſes may be and remain free from all extortion of money, and from the inconveniencies of ſearching, and other retardments. And further, that 24 barrels of lint-ſeed, and other round ſeeds, be allowed to the laſt, according to the cuſtom of merchants, and in conſequence of the 3d article of the laſt treaty, concluded between his Daniſh majeſty and their high mightineſſes, in the year 1645.

And the ſaid lord ambaſſador has further promiſed, in the name of his ſaid majeſty, that, in time to come, for preventing all misfortunes, there ſhould be buoys, and other ſea-marks put up, for the utility and conveniency of commerce and navigation, provided that each ſhip in her lading ſhould pay to his majeſty, or his officers, four rixdollars, and each ſhip in ballaſt two. In witneſs whereof, we his majeſty's ſaid ambaſſadors, and we the commiſſaries and deputies of the ſaid lords the States General, have ſigned theſe preſents with our hands, and put our reſpective ſeals thereto, by virtue of our reciprocal full powers and procurations; and two inſtruments of the ſame tenor have been drawn up, one for each party. Delivered at the Hague, the 12th of February, in the year 1647.

And as, during the years 1645 and 1646, ſeveral laded veſſels belonging to the United Provinces have paſſed the Sound towards the eaſt, and likewiſe veſſels in the ballaſt, without having paid in paſſing or repaſſing, any toll or impoſt, or without having been any-where recorded, ſo that on this occaſion it might be difficult to ſtate a clear account: for theſe cauſes, I Crofits Ulefeldt, ambaſſador, &c. aforeſaid, as one part, and we the commiſſaries and deputies of the States-General, likewiſe aforeſaid, on the other part, have conſented and agreed that the ſtates ſhall pay for the ſaid failures, in paying of tolls upon the ſum of 120,000 rixdollars, which ſhall be paid in this country, upon the production of his majeſty's diſcharge, by ſuch as his ſaid majeſty ſhall authorize for that effect, at the delivery of the ratifications of this preſent treaty, which are to be interchanged on both ſides, within three months after the date of theſe preſents. In witneſs whereof, we the ambaſſadors of the ſaid king, and we the commiſſaries and deputies of the States-General, have ſigned theſe preſents with our hands, and confirmed them with our reſpective ſeals, by virtue of our full powers. And two inſtruments of the ſame tenor have been drawn up, and one delivered to each party at the Hague, the 12th of February, 1647.

Remarks.

After this account of the ſituation of the marine affairs in the northern countries, and the treaties between the crowns of Sweden and Denmark, the United Provinces and the Hanſe-Towns, we ſhall now return to Britain, where civil diſſenſions were at the greateſt height.

The firſt of theſe acts that comes in order to be mentioned, is a manifeſto publiſhed by the parliament of England againſt the States-General of the United Provinces, the 31ſt of July, 1652, in which they ſet forth, That it is an almoſt incredible ingratitude in the Dutch, ſo baſely to requite the generous efforts by which the people of this nation had reſcued them from the tyrannical oppreſſion of the Spaniard, at a great expence of Engliſh blood and treaſure; in return of which, they repreſent, That the Dutch, after having ſeverely fomented the diviſions during the civil wars of England, did afterwards, both openly and ſecretly, obſtruct the peace of the kingdom; and, in the year 1648, made conſiderable preparations to carry on a war againſt it.

They likewiſe call to mind the cruelty and treachery with which they aſſaulted and maſſacred the Engliſh in Amboyna, and tranſiently accuſe them of many other ſiniſter attempts of the like nature.

In the next place, they accuſe them of having neglected the friendly meaſures propoſed by the parliament of England for accommodating of all differences, and confirming their mutual liberty and freedom, &c. adding, That, after they had ſent an envoy to the Hague, and the States had refuſed him audience, the parliament having ſent thither a ſecond, he was there moſt barbarouſly and villainouſly murdered; and the States had not taken any care to puniſh the perpetrators of that horrid crime.

They further repreſent, That, while the Dutch ambaſſadors were in England, to amuſe the government with diſingenuous promiſes and proteſtations, they ſecretly and clandeſtinely aſſiſted the enemies thereof, and only ſpun out the time with ſham pretences, without any likeneſs of reality or ſincerity. To which they add, That the commonwealth of England having, after the pacification of their own inteſtine diviſions, ſent over a ſplendid embaſſy to Holland, with ſufficient inſtructions for ending all former controverſies; and to give all poſſible marks of their ſincerity and good-will towards thoſe of the United Provinces; their ambaſſadors were contumelioufly uſed and reviled, and all ſorts of indignities offered to them, without any regard to their character, or reſpect to the nation they repreſented: they themſelves having been inſulted and affronted, and their ſervants and attendants abuſed to a high degree, and no notice taken, nor ſatisfaction given to the States, for ſuch an unaccountable practice.

But that, notwithſtanding the ſincere inclinations of the commonwealth of England, to cultivate a good friendſhip and correſpondence with the United Provinces, they always delayed and protracted the negociations concerning the ſame; 'till, ſeeing the ſucceſs the Engliſh had every where obtained, they at laſt ſent over their ambaſſadors to England, where, when they were arrived, they ſtill delayed, under various pretences, the negociations that were ſet a-foot, alledging that they were not ſufficiently impowered, and pretending to write over about thoſe matters to their principals, ſo that nothing could be determined 'till the States-General ſhould be conveniently aſſembled; by all which it plainly enough appeared, that the friendſhip they affected was no ways real or ſincere.

After which their ambaſſadors having, during the conferences, acquainted the parliament that the States had reſolved to arm 150 ſhips, beſides the fleet they already had at ſea, which they only did with a deſign to protect their trade, and encourage navigation, without any inſidious intention againſt England; though the States themſelves are not ignorant of the deſign they had in ſetting out ſo great a fleet, and though there was no appearance of any thing like an enemy in theſe ſeas.

To all this, however, the parliament (which they thought to have lulled aſleep by theſe pretences) did not give any anſwer, but ſedulouſly applied themſelves to provide for their own defence; and, in the mean time, omitted nothing that was in their power to bring the negociations that were depending with the Dutch to a happy concluſion.

Notwithſtanding which, the Dutch immediately got together their whole fleet in one place, under admiral Trump, whoſe deſign will ſufficiently appear to any perſon that conſiders his behaviour, joined to ſome other paſſages precedent to that equipment, and particularly that of a certain Dutch ſhip, who, meeting an Engliſh man of war, commanded by Capt. Young, and being friendly required by him to pay the honour that is uſually paid to the ſhips of war of this nation, as another ſhip in company with the ſame had done, and that not only as a cuſtomary piece of civility, but as a teſtimony of the undoubted right the Engliſh have to the dominion of the adjacent ſea, which is acknowledged by all the neighbouring princes and republics, and which, particularly, the States themſelves, and their predeceſſors, have acknowledged; the maſter of the ſaid ſhip did nevertheleſs refuſe to comply with that deſire, affirming that it would be deemed a capital crime in him to do it.

This paſſage was followed by that hoſtile and heinous inſult of admiral Trump, perpetrated againſt friends and neighbours that had given many remarkable teſtimonies of their ſincere deſire to continue and confirm the ſame; and with ſo much arrogance and injuſtice was that action performed, even during the conferences that were holding in order to enter into a ſtricter league, that Trump himſelf pretended to uſurp what he refuſed to pay to us (though our own undoubted right) and carried the affront to ſuch a height, that, purſuing the ſhips of this republic, he attacked them in an hoſtile manner, upon their own coaſts, and in their own friths and roads, with a deſign to begin an unexpected war, in hopes to ruin entirely the trade and navigation of the commonwealth of England.

The reſt of this manifeſto does only contain ſome further remonſtrances, by which the then government of England endeavoured to vindicate their proceedings againſt the States of Holland, with whom they declare that they are forced, againſt their inclination, to go to war; who anſwered the Engliſh manifeſto with a declaration given at the Hague, the 2d of Auguſt following; in which they, on the other hand, pretend to lay all the blame of thoſe confuſions upon the Engliſh; whoſe manifeſto, as well as that of the Dutch, is, in

effect,

effect, nothing elſe but a declaration of war, as may be obſerved by the foregoing compendium of the firſt, and the following abridgment of the latter.

ARTICLE IV.

An abridgment of the manifeſto of the States-General againſt the nation and government, &c. of England. Given at the Hague the 2d of Auguſt, 1652.

The States General, &c. being ſenſible that all lawful powers being ordained of God, for the good of their ſubjects, are not only obliged to govern them with moderation and order, but likewiſe to endeavour to prevent, and prudently to avert whatever may threaten them from abroad; and being alſo ſenſible of the neceſſity of living well with, and procuring, by all ſorts of good offices, the amity and friendſhip of other States, and eſpecially of their neighbours, knowing that, in caſe of any accidental, or other miſunderſtandings, they ought to exert themſelves to the utmoſt of their power, by endeavouring to remove the ſame in a peaceable and friendly manner; they are not, however, ignorant, that, when all other methods prove ineffectual, it is reaſonable and neceſſary to make uſe of the power that God has put in their hands, and to repulſe vigorouſly and courageouſly, by force of arms, the violence and injuries exerciſed upon their ſubjects and people, in order to procure ſatisfaction and reparation for the damages ſuffered, and reſtitution for what has been unjuſtly taken away.

And accordingly, having hitherto endeavoured to maintain our ancient amity and friendſhip with the Engliſh nation, and having of late ſeen that nation divided in itſelf, and torn to pieces by inteſtine commotions, our hearts were filled with grief and heavineſs, and we took as much care as in us lay, that nothing ſhould be tranſported from our country and ports that might foment their diviſions, and, by the continuation of the war, might render their cure more difficult, and leſs poſſible; but, on the contrary, underſtanding that their diviſions had produced very great deſolations and miſeries, and that the famine raged in ſeveral of their provinces, being thereto required by both houſes of the then parliament, we and our good ſubjects were ſo ſenſibly touched at the recital of ſo many complicated miſeries and miſchiefs, that, by virtue of our permiſſion, granted at the earneſt deſire of the parliament aforeſaid, a conſiderable ſum of money, amounting to ſeveral tons of gold, was raiſed by the liberality of theſe provinces, and ſent over to relieve the neceſſities of ſuch as were in miſery; for which we received letters of thanks from the ſaid parliament, confirmed verbally by their reſident with us. But, for a further proof of the ſincerity of our affection, of which we had given them ſuch evident marks, in order to compoſe the differences and miſunderſtandings between them, we ſent over, for the advancement of ſo great a work, an embaſſy to the king and parliament; but the Almighty, whoſe judgments are incomprehenſible, not having ſuffered their diviſions to be terminated by ſuch a friendly agreement, that nation having now received a form of government quite different from that it then had, the aforeſaid government having, under ſpecious pretences, afterwards offered to enter into a treaty of a fair alliance and friendſhip with us, believing that they were ingenuous and ſincere, and looking upon that project as very convenient and neceſſary for the tranquillity and ſecurity of commerce and navigation, as well for ourſelves as for all our neighbours and other kingdoms and ſtates that ſupport themſelves by trade. And, for avoiding all the riſing difficulties and differences occaſioned by the concurrence of the ſame intereſt between the aforeſaid government and ours, we gave them to underſtand, that the offer they made us was very acceptable; and they having ſent over their ambaſſadors extraordinary, the Sieurs Oliver, John, and Walter Strickland, we endeavoured by all poſſible methods, as much as the conſtitution of our government could allow, to find out means to bring that treaty to a concluſion; ſo that the ſaid ambaſſadors entering into a conference with our deputies, and the former having delivered general projects, though they were earneſtly required by our deputies to explain their general propoſitions, and deſcend to particularities, a counter-project being propoſed to them, when they had but lightly touched the matter, ſoon after the firſt audience, they pretended to be going; but having, after many perſuaſions, conſented to ſtay a little longer, and having preſented a more ſpecial project, we ſo induſtriouſly handled the matter on our part, that they eaſily ſaw there was but little difference between us; and finding us come home to the purpoſe, deſiring of them a more expreſs and poſitive declaration, they declined that, under pretence of their ſudden departure: notwithſtanding which, conſidering that a ſhort delay could not operate any conſiderable alteration in the thing, we preferring the excellence and benefit of ſo good a work to the outward ceremonies and formalities, upon the proteſtation the ſaid ambaſſador made us, at their departure, of the ſincerity of the intentions of that government towards us, we reſolved to ſend a conſiderable ambaſſy into England, which we accordingly did, in the month of December laſt; though that government, ſince the departure of their ambaſſadors had publiſhed a certain decree that neither favoured of the good neighbour nor the good friend, ſince thereby the accuſtomed liberty of commerce, and the correſpondence between the two nations, was very much diminiſhed. Nevertheleſs, in hopes that all diſſenſions ſhould have been ſuddenly ended by the treaty, we did our utmoſt endeavours to bring it to a happy concluſion; but, on the contrary, the ſaid government, far from having any regard to the requeſts we made them, that the execution of that decree ſhould be ſuſpended 'till the concluſion of the treaty, and the ſhips and goods of our good ſubjects, that had been ſeized and taken by them, reſtored to the proprietors, they did under ſeveral pretences, attack on every ſide our veſſels; and pirates, under their cloak, did the ſame every where, and no reparation could be obtained by our ambaſſadors in any manner.

And, though ſuch a multitude of reaſons gave us juſt cauſe to right ourſelves and ſubjects, by way of reprizals, we abſolutely refuſed to do it, and would not ſuffer any injury to be done them, in hopes that all things ſhould have been compoſed according to equity and juſtice. And having endeavoured, on one ſide, by our ambaſſadors, and, on the other ſide, having equipped a conſiderable fleet, to put a ſtop to the inſolence of the pirates, we at the ſame time declared, That it was not with any intention to incommode any of our friends, or allies, and particularly them with whom we deſigned to entertain a good friendſhip and correſpondence.

And though this declaration ought to have been taken as a mark of our ſincerity and candour, the aforeſaid government only endeavour, under various pretences, to weaken our ſtates, by ruining of our commerce, as does plainly appear by that inſtance of their admiral, who meeting with vice-admiral Trump, whom we had made commander of our fleet, the ſaid Trump, not having ſoon enough (according to his fancy) lowered his flag, though it be evident, by the teſtimony of ſeveral indifferent perſons, that he was actually a ſtriking his ſails, and occupied in hoiſting his boat to ſend and compliment the ſaid admiral; he nevertheleſs gave him a full broadſide, and forced him and the ſhips that were with him to defend themſelves; who, notwithſtanding, were ſo moderate, although they were ſuperior in number, and could have deſtroyed the aggreſſors, if they had pleaſed, they only kept upon the defenſive: to which diſcretion their adverſaries had ſo little regard, that, another of their ſquadrons coming up, they fell upon the hindermoſt veſſels of our fleet, deſtroying one, and taking another with them. Which action, that the regency may cover with ſome ſpecious pretences, they have cauſed a report to be ſpread abroad, as if we had been the firſt aggreſſors at that rencountre, and accordingly put themſelves in a poſture to demand reparation of the injury they pretend to have received from us.

But, on the contrary, that accident no ſooner came to our knowledge, but we proteſted ſolemnly, by our ambaſſador, that it had not been committed by our order, and that we were entirely ignorant of what had paſſed, as more fully appeared by a letter from our admiral, in which he recited, word for word, the commiſſion and inſtructions we had given him.

And, for a further proof of the ſincerity of our intentions to live well with that ſtate, we earneſtly prayed that an exact enquiry might be made into the matter, and that the treaty, which we thought to be in a very great forwardneſs, might not be retarded by reaſon of that unlucky rencountre, by which we had been mightily ſurprized.

But the aforeſaid government, having no regard to ſuch a reaſonable deſire, did forthwith give order to ſeize both men of war and merchant ſhips, as many as they poſſibly could find belonging to us and our ſubjects; which accordingly has been done, and all ſorts of injuries and violences whatſoever committed againſt us; by which a great deal of innocent blood has been ſhed, and many of our good citizens ruined.

Notwithſtanding all this ill uſage, we have ſent a ſecond ambaſſy extraordinary, to endeavour to bring all matters, and eſpecially that difference concerning the rencountre of the two fleets, to a friendly accommodation; they injuriouſly alledged, for covering their own pernicious and odious deſigns, that we had equipped that fleet on purpoſe to attack them as enemies, though the Heer Hadrian Pauw, our ambaſſador, whoſe employment of penſionary of Holland giving him a right to be preſent at all the aſſemblies and deliberations of the States, did moſt ſolemnly proteſt, that never any ſuch thing had been projected here, and that, far from any commiſſion to do the Engliſh, or any other body any injury, the admiral had orders to give that government all poſſible marks of our peaceable and friendly diſpoſitions.

And, becauſe the aforeſaid regency pretended to make quite another thing of that action than it really was, and demanded reparation for what was paſſed, and aſſurance that no ſuch thing ſhould happen in time to come, our ambaſſador aforeſaid told them openly, That, in order to remove that ſtumbling-block, or principal difficulty occaſioned by the accidental combat between the two fleets, and the eaſier to bring the treaty (which was then ſo far advanced) to a happy concluſion, a convenient regulation ſhould be eſtabliſhed, and punctually obſerved in time to come, by the veſſels of both nations, proteſting

teſting that this ſtate had never any thought of diſputing with the Engliſh nation the honour and dignity we had hitherto yielded them, requiring afterwards, that, during the negociations, all hoſtile attempts and actions ſhould ceaſe; and farther deſiring, that a due enquiry might be made into the whole matter, with promiſe that, if our admiral ſhould be found to be the aggreſſor, the States ſhould not only diſown the act, but puniſh the actor according to the importance of the thing; upon condition that the Engliſh ſhould treat their admiral in the ſame manner, in caſe he ſhould be found to be in the wrong.

But they ſtill rejecting all means of reconciliation, and refuſing themſelves to propoſe any project, by which things might be brought to an accommodation, did continue to ſeize and plunder our ſhips, and, at laſt, were not aſhamed to demand of us an immenſe ſum of money for the loſs and damage they ſaid they had ſuſtained, and the charges they had been put to, upon account of the fleet we put to ſea; after payment of which ſum, or ſecurity given for the ſame, all acts of hoſtility ſhould ceaſe: ſo that they, having heaped up injuries upon injuries, and committed all ſorts of violences againſt us and our good ſubjects, with a deſign, by all theſe inſupportable proceedings, by ruining our trade, to weaken our ſtrength at ſea, and ſo take poſſeſſion of the imaginary empire to which that government pretends over the ocean, and, beginning with us, to extend it over all other nations, and render them tributary, if they could. For theſe cauſes, being reſolved to make uſe of the power that God has put into our hands for our own defence, and that of our good ſubjects, &c.

Remarks.

The following lines of this manifeſto contain, in ſum, a declaration of war; which being made public at the Hague, the 2d of Auguſt, 1652, the 5th of December following there was an ordinance publiſhed by the States-General, forbidding their ſubjects all commerce with England, and withall exhorting other nations to abſtain from ſuccouring the Engliſh with ſuch things as might be neceſſary in the war, and ſo might fall under the notion of what is taken to be in that caſe contraband goods, according to the cuſtom of nations; threatening, otherwiſe, to ſeize and confiſcate the ſame, as in the aforeſaid ordinance is more largely expreſſed; with which we ſhall not trouble the reader, ſince it is not material to our preſent purpoſe.

The Dutch, being thus entered into a war with England, in the end of the year 1652, were glad to take advantage of the miſunderſtandings which then aroſe between this country and Denmark, and ſo concluded a treaty of alliance with Frederic III. then reigning in that kingdom, containing in ſubſtance.—'That the Engliſh having not only paſſed the Sound with armed merchant ſhips, but likewiſe with a fleet of eighteen men of war, without giving any previous advertiſement; and having likewiſe ſeized and taken ſeveral of his Daniſh majeſty's ſhips at ſea, and detained others in England, and in divers ways interrupted the free courſe of trade; an edict ſhould be publiſhed forthwith after the ſigning of the treaty, whereby all Engliſh ſhips, whether men of war or others, ſhould be forbid, under pain of confiſcation of ſhips and goods, to paſs and repaſs the Sound or the Baltic ſea, during the continuation of the war with Holland

That the king of Denmark, for the ſecurity of commerce, ſhould keep, in and about the Sound, the number of twenty ſhips of war well equipped, according to a liſt already given, from the firſt of April 'till the firſt of November yearly; and, if any of them be loſt, he ſhall ſupply their place with others of the like burthen.

That the States ſhall pay the king 192,000 rixdollars yearly, for his charges during the war, &c.

That they ſhould mutually aid and aſſiſt one another againſt all enemies whatſoever, by ſea and land.

That the ſaid twenty Daniſh men of war ſhould, at the requeſt of the miniſters of the States, ſail to attack the Engliſh in Cartegat and Schagrack, but no farther into the northern ſea, except in ſome extraordinary caſes.

That the Daniſh and Dutch ſhips meeting in the north, or elſewhere, ſhould jointly attack the Engliſh, and do them what harm they could.

That they ſhould mutually protect one another's ſubjects, ſhips and effects, in both countries.

That, in caſe of a conjunction of both fleets, the Daniſh admiral ſhould have the firſt voice, and then the Dutch admiral, and ſo a Daniſh and Dutch officer of equal poſt, alternatively ſhould give their voices, the Dane always firſt.

That, if their united fleets ſhould take any prizes, the ſame ſhould be diſpoſed of in the country, which had moſt ſhips at the taking of the prize; but that not without the privity of the reſident of the other country, and to his ſatisfaction.

That the ſhips of war of either ſide ſhould aſſiſt the other with ſuch neceſſaries as they might have occaſion for, at a reaſonable rate; and that they might refit and provide themſelves in each others ports and harbours, with the permiſſion of the governors or magiſtrates thereof; and that privateers, &c. might carry their prizes into one another's ports, and ſhould there receive protection.

That ſuch other princes, ſtates, and potentates, as thought fit, might enter into the league.

That all former treaties ſhould ſubſiſt.

That this treaty ſhould ſubſiſt 'till the liberty of commerce and navigation was reſtored, and the diſturbers thereof brought to reaſonable terms.

That neither of the allies ſhould make peace nor truce without the other.

That, if the twenty Daniſh men of war were not all in good order and condition, a proportionable deduction ſhould be made out of the ſubſidy promiſed, &c.

Remarks.

The effect of this good underſtanding between the Danes and the Dutch appeared by another treaty concluded between thoſe two powers at Copenhagen, the 26th of September of the following year, 1653; by which that of 1644, touching the impoſts in the Sound, is annulled, all former treaties in favour of the United Provinces renewed, and their men of war allowed to lie in the roads of Lubec, and before Elſineur; and are likewiſe (obtaining his majeſty's permiſſion) allowed to be cleaned and refitted, even at Copenhagen, with ſeveral other benefits and privileges of that nature.

But, notwithſtanding this ſtrict union with the crown of Denmark, the Dutch, beginning very ſoon to be weary of the war with this country, were glad to relinquiſh all other advantages to conclude a treaty of peace, of which here follows an abſtract.

An abſtract of a treaty of peace and union between Oliver Cromwell, as protector of England, and the United Provinces of the Low-Countries.

I. In the firſt place, it is agreed, that, from this day forth, there ſhall be a firm and inviolable peace, and ſincere friendſhip, &c. between the republic of England, and the States-General of the United Provinces of the Low Countries, and the lands, regions, and cities, ſituate under their juriſdiction without diſtinction, and between their people and inhabitants of any degree whatſoever.

II. That henceforth all enmity and hoſtilities ſhall ceaſe.

III. That all offences, injuries, damages, and charges, ſuffered after the 18th of May, O. S. 1652, ſhall be entirely buried in oblivion; and no ſuits ſhall be moved, nor actions be intended for the ſame, excepting ſuch depredations as ſhall henceforth be committed in the Britiſh ſeas, after the ſpace of twelve days, and between the Britiſh ſeas and Cape St. Vincent ſix weeks; and thence in the Mediterranean ſea, and to the equator, after the ſpace of ten weeks, and beyond the equator after eight months from the publication of this treaty, or immediately after due notice of the peace; and reſtitution ſhall be made of all things taken, and injuries done, after that time.

IV. That all priſoners of war, of whatſoever degree or condition, and in whatſoever place they be, ſhall be ſet at liberty without ranſom.

V. That ſuch as attempt to diſturb the peace of either ſtate, ſhall be reputed enemies.

Note, The ſix next articles are not much to our purpoſe.

XII. It is agreed, that the ſubjects of either ſtate ſhall freely travel through and trade to all the dominions of the other in Europe, without prejudice of the laws and cuſtoms of particular places, &c.

XIII. It is likewiſe agreed, that as well the ſhips of war, as the other ſhips of the United Provinces, meeting with the ſhips of war of this ſtate in the Britiſh ſeas, ſhall ſtrike their flag, and lower their topſail, in the ſame manner as has been done in any former time, under any government whatſoever.

XIV. That, for the greater ſecurity and encouragement of trade, all pirates be duly puniſhed in the dominions of either ſtate, and the effects, ſeized in their cuſtody, reſtored to the right owners, if any can be found.

Note, The four next articles are foreign to our preſent purpoſe.

XIX. That the merchants, mariners, ſailors, and pilots, &c. of each ſtate, nor their ſhips, goods, nor effects, ſhall either be detained or arreſted, nor forced into the ſervice of the other, without an abſolute neceſſity; in which caſe too, ſatisfaction ſhall be given for the ſame.

XX. That the ſhips of war of either ſtate ſhall take into their protection, and under their convoy, all ſhips belonging to the other ſtate, as long as they ſteer the ſame courſe with them.

XXI. That if the ſhips belonging to the ſubjects of one of the ſtates be taken in the ports of the other, by thoſe of a third nation, the ſtate under whoſe juriſdiction ſuch ſhips are taken, ſhall do their endeavours to recover the ſame.

XXII. That if any injury ſhall be done on either ſide, no letters of reprizal ſhall be granted 'till three months after juſtice has been demanded in a friendly manner, and refuſed.

XXIII. That ſuch as obtain letters of reprizal of either ſtate, ſhall give in ſecurity before the judge, which delivers them the ſame, for their behaviour.

XXIV. It is further agreed, that the veſſels of both nations, whether ſhips of war or others, ſhall be free to enter into each other's ports, and there buy proviſions and other neceſſaries, or refit, if need be; provided always, that not above eight ſhips of war enter into any port of either ally, except they be forced in by tempeſt or enemies; in which caſe they ſhall forthwith acquaint the governor, or chief magiſtrate of the place, and ſhall not remain any longer there than neceſſity requires.

XXV. It is likewiſe agreed, that the Dutch ſhall do juſtice upon all thoſe concerned in the ſlaughter of the Engliſh at Amboyna, if there be any of them remaining.

The following articles of this treaty only contain ſome ſtipulations for receiving the king of Denmark into it, and for procuring the reſtitution of ſome Engliſh effects ſeized in that country, and reparation of damage, &c. together with ſome other things no ways material to our purpoſe, and therefore I ſhall paſs by them.

Remarks.

The next important marine treaty that occurs, is one between his majeſty king Charles II. after his reſtoration to his dominions, and the States-General of Holland; in which they compoſe all ancient differences, and amongſt other things expreſsly confirm that former article, concerning the homage to be paid by all Dutch ſhips to Engliſh men of war, which article only we ſhall here inſert.

Art. X. It is likewiſe agreed, that the ſhips and veſſels of the ſaid United Provinces, as well men of war as others, meeting any of the ſhips of war of Great-Britain, within the extent of the Britiſh ſeas, ſhall ſtrike their flag, and lower their main topſail, in the ſame manner that it has been obſerved in any former time whatſoever.

The next treaty that followed after the war between Great-Britain and Holland, was a treaty of peace and alliance concluded between king Charles II. and the States-General. the 21ſt of July, O. S. 1667.

And, as the firſt eighteen articles of that treaty do not particularly relate to marine affairs, the nineteenth being preciſely the ſame with the tenth article of the precedent treaty, but juſt now inſerted, we ſhall begin at the twentieth article, and inſert the reſt of the treaty in the ſame order we find it.

XX. And, for the greater freedom of commerce and navigation, it is agreed and concluded, that the ſaid king of Great Britain, and the ſaid States-General, ſhall not receive into their havens, cities, and towns, nor ſuffer that any of the ſubjects of either party do receive pirates or ſea-rovers, or afford them any entertainment, aſſiſtance, or proviſion, but ſhall endeavour that the ſaid pirates and ſea-rovers, or their ſharers and abettors, be found out, apprehended, and ſuffer condign puniſhment, for the terror of others: and all the ſhips, goods, and commodities, piratically taken by them, and brought into the ports of either party, which can be found: nay, although they be ſold; ſhall be reſtored to the right owners, or ſatisfaction ſhall be given, either to their owners, or to thoſe who by letters of attorney ſhall challenge the ſame; provided the right of their property be made to appear in the court of admiralty, by due proofs according to law.

XXI. It ſhall not be permitted to the ſubjects of the ſaid king of Great-Britain, and the inhabitants of the kingdoms and countries under his obedience, or to the inhabitants and ſubjects of the ſaid United Provinces, to do or offer any hoſtility or violence to each other, either by land or by ſea, upon any pretence or colour whatſoever: and, conſequently, it ſhall not be lawful for the ſaid ſubjects or inhabitants to get commiſſions or letters of reprizal from any prince or ſtate, with whom either of the confederates is at difference, or in open war: and much leſs, by virtue of thoſe letters, to moleſt or damniſy the ſubjects of either party. Neither ſhall it be lawful for any foreign private men of war, who are not ſubjects to one or the other party, having commiſſions from any other prince or ſtate, to equip their ſhips in the harbours of either of the aforeſaid parties, or to fell or ranſom their prizes, or any other way to truck, as well the ſhips and goods, as any other lading whatſoever. And it ſhall not be lawful for them to purchaſe any proviſions, but what ſhall be neceſſary to bring them to the next port of that prince, from whom they obtained their ſaid commiſſions. And, if, perchance, any of the ſubjects of the ſaid king of Great-Britain, or of the ſaid States-General, ſhall buy or get to themſelves by truck, or any other way, ſuch ſhip or goods which have been taken by the ſubjects of the one or the other party; in ſuch caſe the ſaid ſubjects ſhall be bound to reſtore the ſaid ſhip or goods to the proprietors without any delay, and without any compenſation or reimburſement of money paid or promiſed for the ſame; provided that they make it appear before the council of the ſaid king of Great-Britain, or before the States-General, that they are the right owners or proprietors of them.

XXII. That in caſe the king of Great-Britain, or the ſaid States-General, do make any treaty of amity or alliance with any other kings, republics, princes or ſtates, they ſhall therein comprehend each other and their dominions, if they deſire to be therein comprehended, and ſhall give to the other notice of all ſuch treaties of friendſhip or alliance.

XXIII. That in caſe it happens, during this friendſhip, confederacy, and alliance, that any thing ſhall be done or attempted by any of the ſubjects or inhabitants of either party againſt this treaty, or any part thereof, by land, ſea, or freſh waters, nevertheleſs this amity and alliance between the ſaid nations ſhall not thereby be broken or interrupted, but ſhall remain and continue in it's full force; and that only thoſe particular perſons ſhall be puniſhed, who have committed any thing againſt this treaty, and none elſe; and that juſtice ſhall be rendered, and ſatisfaction given to all perſons concerned, by all ſuch who have committed any thing contrary to this treaty, by land or ſea, or other waters, in any part of Europe, or any places within the Straights, or in America, or in any lands, iſlands, ſeas, creeks, bays, rivers, or in any places on this ſide the Cape of Good Hope, within twelve months ſpace after juſtice ſhall be demanded; and in all places whatſoever on the other ſide of the Cape (as hath been aboveſaid) within eighteen months next enſuing, after demand of juſtice ſhall be made in manner aforeſaid. But in caſe the offenders againſt this treaty do not appear, and ſubmit themſelves to judgment, and give ſatisfaction within the reſpective times above expreſſed, proportionably to the diſtance of the places, they ſhall be declared enemies of both parties, and their eſtates, goods, and revenues whatſoever, ſhall be confiſcated for the due and full ſatisfaction of the injuries and wrongs by them offered; and their perſons alſo, when they come within the dominion of either party, ſhall be liable unto ſuch puniſhments as every one ſhall deſerve for his reſpective offences.

XXIV. That the ſubjects of the ſaid king of Great-Britain, and thoſe which trade under his juriſdiction, may freely and ſecurely travel in all the provinces of the Low-Countries, and all their dominions in Europe, and through them by ſea or land paſs to other places there or beyond them, and through all quarters of the United Provinces, cities, forts, or garriſons whatſoever, which are in any parts of the United Provinces, or elſewhere in their dominions in Europe, as well they themſelves exerciſing trade in all thoſe places, as their agents, factors, and ſervants, may go armed or unarmed (but, if armed, not above forty in company), as well without their goods and merchandizes as with them, whereſoever they pleaſe. The people alſo and inhabitants of the United Provinces ſhall enjoy the ſame liberty and freedom in all the dominions of the ſaid king in Europe, provided that they, and every of them, do, in their trade and merchandizing, yield obedience to the laws and ſtates of either nation reſpectively.

XXV. That, in caſe the merchant-ſhips of the ſubjects of either nation ſhall by ſtorm, pirates, or any other neceſſity whatſoever, be driven into any haven of either dominion, they may depart ſecurely at their pleaſure, with their ſhips and goods, without paying any cuſtoms or other duties, provided they break no bulk, nor fell any thing; nor ſhall they be ſubject to any moleſtation or ſearch, provided they do not receive on board any perſons or goods, nor do any thing elſe contrary to the laws, ordinances, or cuſtoms of the places, where they (as aforeſaid) ſhall happen to arrive.

XXVI. That the merchants, maſters, and ſeamen of either party, their ſhips, goods, wares, or merchandizes, ſhall not be arreſted or ſeized in the lands, havens, roads, or rivers of the other, to ſerve at war, or any other uſe, by virtue of any general or ſpecial command, unleſs upon an extraordinary neceſſity, and that juſt ſatisfaction be given for the ſame; but ſo as the ſame ſhall not derogate from the ſeizures and arreſts duly made in the ordinary courts of juſtice of either nation.

XXVII. That the merchants on both ſides, their factors and ſervants, and alſo the maſters and other ſeamen, as well going as returning by ſea and other waters, as alſo in the haven of either party, or going on ſhore, may carry and uſe, for the defence of themſelves and merchandizes, all ſorts of weapons, as well offenſive as defenſive; but, being come into their lodgings or inns, they ſhall there lay by and leave their arms, until they be going on board again.

XXVIII. That the men of war, or convoys of either nation, meeting at ſea any merchant-ſhip or ſhips belonging to the ſubjects of the other, holding the ſame courſe, or going the ſame way, ſhall be bound, as long as they keep one courſe together, to protect and defend them againſt all and every one who would ſet upon them.

XXIX. That if any ſhip or ſhips of the ſubjects of either nation, or of a neuter, be taken by a third party in the harbours of either, not being of the ſubjects or inhabitants of either nation, they, in or out of whoſe haven or juriſdiction the ſaid ſhips ſhall be taken, ſhall be bound to endeavour, with the other party, that the ſaid ſhip or ſhips be purſued, brought back, and reſtored to the owners; but all this ſhall be done at the charge of the owners, or whom it concerns.

XXX. That ſearchers, and other like officers on both ſides, ſhall regulate themſelves according to the laws of either nation,

tion, and ſhall not impoſe or demand more than they are allowed by their commiſſions or inſtructions.

XXXI. That if any injury be done or practiſed by either nation, or the ſubjects of the ſame, againſt the ſubjects of the other, or againſt any of the articles of this preſent treaty, or againſt common right; yet nevertheleſs no letters of reprizal, marque, or counter-marque, ſhall be granted by either ſide, 'till juſtice hath been firſt demanded according to the ordinary courſe of law; but, in caſe juſtice be there denied or delayed, then that the ſaid king of Great-Britain and the ſaid States-General, or commiſſioners of that nation, whoſe ſubjects or inhabitants have ſuffered the wrong, ſhall publickly require juſtice from that other party, where (as aboveſaid) it was denied or delayed, or from that power appointed to hear and decide ſuch difference, that there may be a friendly compoſure, or due proceſs of law. But if ſtill there happen more delays, and neither juſtice be adminiſtered, nor ſatisfaction given within three months after ſuch demand, that then letters of reprizal, marque, or counter-marque, may be granted.

XXXII. It is alſo agreed, if at any time it happen (which God of his mercy forbid) that the differences, now compoſed between his ſaid majeſty and the ſaid States-General, ſhould feſter and break out again into open war, that then thoſe ſhips, merchandizes, or any kind of moveables of either party, which ſhall be found to be and remain in the ports, and under the command of the adverſe party on either ſide, ſhall not, for all that, be confiſcated, or made obnoxious to any inconvenience; but the ſpace of ſix months ſhall entirely be allowed to the ſubjects and inhabitants of either party, that they have leiſure to tranſport from thence the forementioned things, and any thing elſe that is theirs, whither they ſhall think fit, without any kind of moleſtation.

XXXIII. That they who have obtained private commiſſions from either party, before they receive ſuch commiſſions, ſhall give good and ſufficient ſecurity before the judge of the court where they receive ſuch commiſſions by reſponſible men, who have no part or ſhare in ſuch ſhips, that they ſhall do no damage or injury to the ſubjects or inhabitants of either ſide.

XXXIV. It is alſo agreed and concluded, that the ſubjects and inhabitants of either party ſhall always have free acceſs to each other's ſea-ports, there to remain, and from thence to depart with the ſame freedom; and not only with their merchant-ſhips and lading, but alſo with their men of war, whether they belong to the ſaid king or States-General, or unto ſuch as have obtained private commiſſions, whether they arrive through violence or tempeſt, or other caſualty of the ſeas, or to repair their ſhips, or to purchaſe proviſions, ſo they exceed not the number of eight men of war, when they come there voluntarily; nor ſhall remain longer in the havens or places adjacent, than they ſhall have a juſt cauſe to repair their ſaid ſhips, or to purchaſe proviſions, or other neceſſaries: and, if a greater number of men of war ſhould upon occaſion deſire to come into ſuch ports, they ſhall in no caſe enter thereinto, until they have firſt obtained leave from thoſe to whom the ſaid havens do appertain, unleſs they be compelled ſo to do by ſtorm, or ſome force or neceſſity, whereby they may avoid the danger of the ſea: in which caſe alſo they ſhall preſently make known the cauſe of their coming, unto the governor or chief magiſtrate of the place, and ſhall ſtay no longer than the governor or chief magiſtrate ſhall permit them, and ſhall not commit any acts of hoſtility or other prejudice in the aforeſaid havens, during their abode there.

XXXV. Furthermore, it is agreed and concluded, that both parties ſhall truly and firmly obſerve and executa this preſent treaty, and all and every the matters contained therein, and effectually cauſe the ſame to be obſerved and performed by the ſubjects of either nation.

XXXVI. Alſo, for further caution and aſſurance, that this treaty and confederacy ſhall be duly and bonâ fide obſerved on the part of the ſaid States-General of the United Provinces and their people, it is concluded and agreed, and the ſaid States-General by theſe preſents do agree, and firmly bind themſelves, that all, and every one of whom they, or the ſtates of the provinces, ſhall at any time chuſe, appoint, or make captain general, governor, or chief preſident, or ſtadtholder, general of armies or military forces by land, or admiral or general of the fleets, ſhips, or forces at ſea, ſhall be bound and obliged by oath to confirm this treaty, and all the articles thereof, and promiſe ſacredly upon affidavit, that they ſhall as far as it is poſſible, religiouſly obſerve and execute the ſame, and, as much as concerns them, cauſe the ſame to be obſerved and executed by others.

XXXVII. Under this preſent treaty of peace, thoſe ſhall be comprehended, who may be named by either party with common conſent before the exchange of ratifications, or within ſix months after. But, in the mean time, as the covenanting parties do thankfully acknowledge the friendly offices, and unwearied endeavours, whereby the moſt ſerene king of Sweden, interpoſing his mediation, hath, through the aſſiſtance of God, promoted and carried on this beneficial work of pacification, unto the deſired concluſion; ſo, to teſtify their like affection, it is decreed and covenanted by the common conſent of all the parties, that his above-mentioned majeſty of Sweden, with all his kingdoms, dominions, provinces, &c. be comprehended in the preſent pacification, in the moſt effectual manner that may be.

XXXVIII. It is alſo covenanted, concluded, and agreed, that the preſent treaty, and every thing therein contained, ſhall be confirmed and ratified by the ſaid king of Great-Britain, and the ſaid States-General of the United Provinces, by letters patents on both ſides, ſealed with the great ſeal in due and authentic form, within four weeks next enſuing, or ſooner, if it can be done; and that, within the ſaid time, the ratifications on both ſides ſhall be exchanged at Breda; and that, preſently after the delivery and exchange of the ſame, this treaty and alliance ſhall be publiſhed in ſuch form and place as is uſual.

Done at Breda the $\frac{21}{31}$ day of July, 1667.

The ſame day was likewiſe concluded another treaty concerning marine affairs; but, as that was only the forerunner of another of the $\frac{7}{17}$ of February, 1667-8, we ſhall only inſert the latter, which is more methodical and poſitive, and conſequently fitter for our purpoſe.

ARTICLE VI.

Articles touching navigation and commerce, between the moſt ſerene and mighty prince, Charles II. by the grace of God, king of England, Scotland, France, and Ireland, &c. and the high and mighty lords the States-General of the United Netherlands, concluded at the Hague the $\frac{7}{17}$ of February, 1667-8.

Whereas by the bleſſing of almighty God, for the mutual ſafety of the two parties, as well as the common good of Chriſtendom, a perpetual defenſive treaty was concluded, and ſigned on the 23d day of January laſt paſt, between the moſt ſerene and moſt potent prince Charles II. and the high and mighty lords the States General of the United Netherlands, with ſtipulation of conſiderable ſuccours, to be mutually given by the parties, as well by ſea as land: and whereas the ſaid king and ſtates did on the ſame day, and by another inſtrument, readily enter into a ſolemn treaty and agreement for compoſing the affairs of their neighhours, and reſtoring peace to Chriſtendom, ſo as nothing ſeems now remaining that can at any time hereafter interrupt a friendſhip and alliance renewed with ſo equal deſires, unleſs ſuch controverſies as may otherwiſe hereafter happen to ariſe about determining the different ſorts and natures of merchandize; which, being left dubious and uncertain, would give occaſion to the further growth to ſuch differences: and therefore, that it may appear with what ſincerity and good faith, the ſaid king, and the ſaid ſtates, deſire to preſerve and entertain, not only for the preſent, but to all poſterity, the amity they lately contracted between them, they have at laſt, for the taking away all ground, not only of differences and miſunderſtandings, but even of queſtions or diſputes, and ſo utterly to cut off the hope and expectation of thoſe, whoever they are, that may think it their intereſt, by new controverſies, to endeavour the diſturbance or interruption of the ſaid peace, mutually agreed on theſe following articles, which are to be on both ſides, and for ever obſerved as the meaſure and rule of ſuch maritime affairs, and mutual ſettlement of trade, or at leaſt ſo long, 'till by the joint conſent of both parties, commiſſioners be appointed, and do meet in order to the framing a more ample treaty concerning this matter, and the laws and rules of commerce and navigation, as by farther experience ſhall be found moſt advantageous to the common good of both parties.

I. All the ſubjects and inhabitants of Great Britain may, with all ſafety and freedom, ſail and traffic in all the kingdoms, countries, and eſtates, which are or ſhall be in peace, amity or neutrality with Great Britain, without being troubled or diſquieted in that liberty by the ſhips of war, gallics, frigates, barks, or other veſſels belonging to the States-General, or any of their ſubjects, upon occaſion of the hoſtilities which may hereafter happen between the ſaid States-General and the aboveſaid kingdoms, countries, and eſtates, or any of them, which are or ſhall be in peace, amity, or neutrality with Great-Britain.

II. This freedom of navigation and traffic ſhall extend to all ſorts of merchandize, except thoſe of contraband.

III. This term of contraband goods is underſtood to comprehend only all ſorts of fire-arms and their appurtenances; as cannon, muſquets, mortar-pieces, petards, bombs, granadoes, fire crancels, pitched-hoops, carriages, reſts, bandeliers, powder, match, ſaltpetre, bullets, pikes, ſwords, morions, head-pieces, coats of mail, halberts, javelins, horſes, great ſaddles, holſters, belts, and other utenſils of war, called, in French, Affortiſſements ſervant a l'uſage de la guerre.

IV. In this quality of contraband goods, theſe following ſhall not be comprehended; corn, wheat, or other grain, and pulſe; oils, wines, ſalt, or generally any thing that belongs to the nouriſhment and ſuſtenance of life; but ſhall remain free as other merchandize and commodities not comprehended in the precedent article; and the tranſportation of them ſhall be permitted, even unto places in enmity with

the ſaid States-General, except ſuch cities and places as are beſieged, blocked up, or inveſted.

V. It hath been agreed, for the due execution of what is aboveſaid, that the ſhips and barks of the Engliſh, laden with merchandize, being entered into any port of the ſaid States-General, and purpoſing to paſs from thence unto the ports of their enemies ſhall be only obliged to ſhew unto the officers of the port of the ſaid States, out of which they would go, their paſſports; containing the ſpecification of the lading of their ſhips atteſted and marked with the ordinary ſeal of the officers of the admiralty of thoſe places from whence they firſt came, with the place whither they are bound, all in a uſual and accuſtomed form: after which, ſhewing of their paſſports in the form aforeſaid, they may not be diſquieted nor ſearched, detained nor retarded in their voyages, upon any pretence whatſoever.

VI. The ſame courſe ſhall be uſed in regard of the Engliſh ſhips and veſſels which ſhall come into any roads of the countries under the obedience of the ſaid States, not intending to enter into the ports, or being entered thereinto, not to unlade and break bulk; which ſhips may not be obliged to give account of their lading, but in caſe of ſuſpicion that they carry unto the enemies of the ſaid States any contraband goods, as was aboveſaid.

VII. And, in caſe of ſuch apparent ſuſpicion, the ſaid ſubjects of his majeſty ſhall be obliged to ſhew in the ports their paſſports, in the form ſpecified.

VIII. But, if they were come within the roads, or were met in the open ſea by any of the ſaid States ſhips or private men of war their ſubjects, for avoiding of all diſorder, the ſaid ſhips of the United Provinces or of their ſubjects, ſhall not come near within cannon-ſhot of the Engliſh, but ſhall ſend out their long-boat, and cauſe only two or three men to go on board the Engliſh ſhips or veſſels, unto whom the paſſport and certificates of the propriety of the ſhips be ſhewn by the maſter or captain of the Engliſh ſhips, in the manner above ſpecified, according to the form of the ſaid certificates, which ſhall be inſerted at the end of this treaty; by which paſſport and certificate, proof may be made, not only of the lading, but alſo of the place of the abode and reſidence of the maſter or captain, and name of the ſhip itſelf, to the end that by theſe two ways it may be known, whether they carry contraband goods; and that the quality as well of the ſaid ſhip, as of it's maſter or captain, may ſufficiently appear. Unto which paſſports and certificates entire faith and credit ſhall be given. And, to the end that their validity may be the better known, and that they may not be in any wiſe falſified and counterfeited, certain marks and counter-ſigns of his majeſty and the ſaid States-General ſhall be given unto them.

IX. And, in caſe any merchandize and commodities of thoſe kinds which are before declared to be contraband and forbidden, ſhall, by the means aforeſaid, be found in the Engliſh ſhips and veſſels, bound for the ports of the ſaid State's enemies, they ſhall be unladen, judicially proceeded againſt, and declared confiſcate before the judges of the admiralty of the United Provinces, or other competent officers: but ſo that the ſhip and veſſel, or other free and allowed goods, merchandize, and commodities, found in the ſame ſhip, may not, for that cauſe, be in any manner ſeized or confiſcated.

X. It is furthermore agreed and covenanted, that whatſoever ſhall be found laden by his majeſty's ſubjects upon any ſhip of the enemies of the ſaid States, although the ſame were not contraband goods, ſhall yet be confiſcated with all that ſhall be found in the ſaid ſhip, without exception or reſervation: but, on the other ſide alſo, all that ſhall be found in the ſhips belonging to the king of Great-Britain's ſubjects, ſhall be free and diſcharged, although the lading or part thereof belong to the ſaid State's enemies, except contraband goods, in regard whereof ſuch rule ſhall be obſerved, as hath been ordered in the precedent articles.

XI. All the ſubjects and inhabitants of the ſaid United Provinces ſhall reciprocally enjoy the ſame rights, liberties, and exemptions in their trade and commerce upon the coaſts, and in the ports, roads, ſeas, and eſtates of his ſaid majeſty (as was now ſaid) which his ſaid majeſty's ſubjects ſhall enjoy in thoſe of the ſaid States, and in open ſea; it being to be underſtood that the equality ſhall be mutual every way on both ſides, even in caſe the ſaid States ſhould hereafter be in peace, amity, and neutrality, with any kings, princes, and ſtates, who ſhould become enemies to his ſaid majeſty; ſo that either of the parties are mutually to uſe the ſame conditions and reſtrictions expreſſed in the articles of this preſent treaty, with regard to trade and commerce.

XII. And the more to aſſure the ſubjects of the ſaid States, that no violence ſhall be offered them by the ſhips of war belonging to his majeſty of Great-Britain or his ſubjects, all the captains of the king's ſhips, and all his majeſty's ſubjects, that ſend out private men of war, ſhall be charged and enjoined not to moleſt or endamage them in any thing whatſoever, upon pain of being puniſhed and made anſwerable in their perſons and goods for all coſt and damages, until due reſtitution and reparation be made.

XIII. And, for this cauſe, the captains and capers ſhall from henceforth every one of them be obliged, before they go out, to give good and ſufficient ſecurity before competent judges, in the ſum of 1500 l. ſterling, or 15,000 livres Tournois, that they will give full ſatisfaction for any injuries or wrongs they may commit in their courſes at ſea, and for their captains and officers that ſhall violate this preſent treaty, and the orders and proclamations of his majeſty, which ſhall be publiſhed by virtue and in conformity to, the regulation therein made, upon pain of forfeiting their ſaid commiſſions and licences; which ſhall in like manner be practiſed by the ſubjects of the ſaid States General.

XIV. If it ſhould happen that any of the ſaid Dutch captains ſhould make prize of a veſſel laden with contraband goods, as hath been ſaid, the ſaid captains may not open nor break up the cheſts, nails, packs, bags, caſks, or ſell or exchange, or otherwiſe alienate them, until they have landed them in the preſence of the judges or officers of the admiralty, and after an inventory by them made of the ſaid goods found in the ſaid veſſels, unleſs, the contraband goods making but a part of the lading, the maſter of the ſhip ſhould be content to deliver the ſaid contrahand goods unto the ſaid captain, and to purſue his voyage: in which caſe the ſaid maſter ſhall by no means be hindered from continuing his courſe, and the deſign of his voyage.

XV. His majeſty, being deſirous that the ſubjects of the ſaid States may be uſed in all countries under his obedience as favourably as his own ſubjects, will give all neceſſary orders, that judgments and decrees upon prizes which ſhall happen to be taken at ſea, may be given with all juſtice and equity, by judges not ſuſpected nor concerned in the matter under debate; and his majeſty will give preciſe and effectual orders, that all decrees, judgments, and orders of juſtice, already given and to be given, may be readily and duly executed according to the tenor of them.

XVI. And, when the ambaſſadors of the ſaid States-General, or any other of their public miniſters reſiding in his majeſty's court, ſhall make complaint of the judgments, which ſhall be given, his majeſty will cauſe a review to be made of the ſaid judgments in his council, to examine whether the orders and precautions contained in the preſent treaty have been followed and obſerved, and to provide for the ſame according to right and equity; which ſhall be done, within the ſpace of three months at the fartheſt: nevertheleſs, neither before the firſt judgment nor after it, during the time of the review, the goods and effects which are reclaimed, may be ſold or unladen, unleſs it be with the conſent of the parties intereſted, to avoid the ſpoiling of the ſaid commodities, if they be periſhable.

XVII. When proceſs ſhall be moved in the firſt or ſecond inſtance, between thoſe that have taken the prizes at ſea, and the perſons intereſted therein, and thoſe perſons ſhall come to obtain a favourable decree, the ſaid decree ſhall have it's execution, upon ſecurity given, notwithſtanding the appeal of him that took the prize: but the ſame ſhall not hold on the contrary, where the ſentence goes againſt the claimers. And that which is ſaid in this preſent, and in the precedent articles, for the cauſing of good and ſpeedy juſtice to be done unto the ſubjects of the United Provinces in the matter of prizes, ſhall be underſtood and practiſed by the States-General, in regard of prizes taken by their ſubjects from thoſe of his majeſty.

XVIII. But, ſince the conveniencies and inconveniencies of things and agreements cannot be diſcovered but in procedure of time, and by obſervations drawn from mutual experience, it is therefore agreed between the king of Great-Britain, and the lords the States of the United Netherlands, that at any time hereafter, when both parties ſhall ſo think fitting, certain commiſſioners, by each party reſpectively choſen, ſhall meet by the common conſent of both, who ſhall make it their care and buſineſs to ſupply whatever ſhall be found wanting in the aforementioned articles, to change or limit whatever ſhall not be convenient and commodious for both, and fully compleat a further treaty, both concerning theſe things, and all others relating to the laws of navigation.

XIX. All theſe agreements, &c. ſhall be confirmed and ratified by the ſaid king of Great Britain and the States-General of the United Provinces, by letters patents of both parties, ſealed with their great ſeal in due and authentic form, within four weeks next enſuing, or ſooner, if it may be; and mutual inſtruments ſhall be exchanged by each party, within the time aforeſaid.

REMARKS.

Here follow certain forms, whereof mention is made in the eighth article.

A form of the certificate that ought to be given by thoſe that have the ordinary power of the admiralty of England, to the ſhips and veſſels that go out thence, according to the eighth article of the preſent treaty.

high admiral of England,

To all who ſhall ſee theſe preſents, greeting,

Theſe are to certify, That we have granted leave and permiſſion to maſter and captain of the

the ſhip called of the city of of the burden of tons, or thereabouts, being at preſent in the port and haven of to go to laden with after ſearch ſhall have been made of the ſhip, and he before his departure ſhall have made oath before the officers that exerciſe the juriſdiction of maritime cauſes, that the ſaid veſſel doth belong to one or more of his majeſty's ſubjects, an act whereof ſhall be put at the bottom of theſe preſents, as alſo to keep and cauſe to be kept, by thoſe aboard him, the orders and rules of the marine, and ſhall put into the regiſtery a liſt ſigned and certified, containing the names and ſurnames, the nativity and habitation of the men that are aboard him, and of all that ſhall embark themſelves, whom he may not take on board without the knowledge and permiſſion of the marine officers; and, in every port or haven where he ſhall enter with his ſhip, ſhall ſhew the officers and marine judges this his preſent licence; and, having finiſhed his voyage, ſhall make faithful relation of what hath been done, and hath paſſed during all the time of his ſaid voyage, and ſhall carry the flags, arms, and colours of his majeſty throughout his whole voyage. In witneſs whereof, we have ſigned theſe preſents, and cauſed the ſeal of our arms to be put thereunto, and the ſame to be counter-ſigned by our ſecretary of marine, the day of one thouſand ſix hundred

Signed

And underneath by

And ſealed with the ſeal of the arms of the ſaid high admiral.

A form of the act containing the oath to be taken by the maſter or captain of the ſhip.

We of the admiralty of do certify, That maſter of the ſhip named in the paſſport above, hath taken the oath therein mentioned. Given at the day of one thouſand ſix hundred, &c.

In teſtimony whereof we have hereunto ſet our hands.

The form of the certificates that ought to be given by the burghermaſters of the cities and ſea-ports of the United Provinces, to the ſhips and veſſels that go from thence, according to the eighth article aboveſaid.

To the moſt ſerene, moſt illuſtrious, moſt mighty, moſt noble, honourable, and prudent lords, emperors, kings, common wealths, princes, dukes, comtes, barons, lords, burghermaſters, ſheriffs, counſellors, judges, officers, juſtices and regents of all cities and places, as well eccleſiaſtical as ſecular, who ſhall ſee or read theſe preſents. We burghermaſters and governors of the city of do certify, That ſhip-maſter, appearing before us, hath declared by ſolemn oath, That the ſhip called containing about laſts, of which he is at preſent the maſter, belongeth to inhabitants of the United Provinces. So help him God. And, as we would willingly ſee the ſaid ſhip-maſter aſſiſted in his juſt affairs, we do requeſt you and every of you, where the aboveſaid maſter ſhall arrive with his ſhip and goods, that you will pleaſe to receive him courteouſly and uſe him kindly, admitting him, upon paying the uſual dues, tolls, and other cuſtoms, to enter into, remain in, and paſs from your ports, rivers, and territories, and there to trade, deal, and negociate, in any part or place, in ſuch ſort and manner as he ſhall deſire. Which we ſhall moſt readily acknowledge on the like occaſion.

In witneſs whereof, we have cauſed the ſeal of our city to be thereunto put.

In witneſs and confirmation of all and every part whereof, we the commiſſioners of his ſaid majeſty the king of Great-Britain, and of the ſaid lords the States-General, having ſufficient power given us thereunto, have ſigned theſe tables, and ſealed them with our ſeals. At the Hague in Holland, the 17th of February, in the year 1668.

De Gellicum,	G. Hoolck,
B. D'Aſperon,	V. Unckell,
John de Witt,	Jan Van Iſſelmuden,
Van Crommon,	L. T. Van Sturkenborck.

This marine treaty being ſo concluded between his majeſty and the States, for their dominions in Europe, another was ſome time after ſet a foot, and agreed to, for regulating their naval affairs all over the world, which very well deſerves a place in this collection, and which the reader may take in the following terms.

Article VII.

A treaty marine between the moſt ſerene and mighty prince Charles II. by the grace of God, king of England, Scotland, France, and Ireland, defender of the faith, &c. and the high and mighty lords the States-General of the United Netherlands, to be obſerved throughout all and every the countries and parts of the world, by ſea and land, concluded at London the 1ſt day of December, 1674, S. V.

I. That it ſhall and may be lawful for all and every the ſubjects of the moſt ſerene and mighty prince, the king of Great-Britain aforeſaid, with all freedom and ſafety to ſail, trade, and exerciſe any manner of traffic in all thoſe kingdoms, countries, and eſtates which are, or at any time hereafter ſhall be in peace, amity, or neutrality with his ſaid majeſty; ſo that they ſhall not be any ways moleſted in their navigation or trade, by the military forces, nor by the ſhips of war, or any other kind of veſſels whatſoever, belonging either to the high and mighty States-General of the United Netherlands, or to their ſubjects, upon occaſion or pretence of any hoſtility, or difference which now is, or ſhall hereafter happen between the ſaid lords the States-General, and any other princes or people whatſoever in peace, amity, or neutrality with his ſaid majeſty: and likewiſe, that it ſhall and may be lawful for all and every the ſubjects of the ſaid high and mighty lords the States-General of the United Netherlands, with all freedom and ſafety to ſail, trade, and exerciſe any manner of traffic in all thoſe kingdoms, countries, and eſtates which are, or at any time hereafter ſhall be in peace, amity, or neutrality with the aforeſaid lords the States; ſo that they ſhall not be any ways moleſted in their navigation or trade, by the military forces, or by the ſhips of war, or any other kind of veſſels whatſoever, belonging either to the moſt ſerene and mighty king abovementioned, or to his ſubjects, upon occaſion or pretence of any hoſtility or difference which now is, or ſhall hereafter happen between his ſaid majeſty and any princes or people whatſoever in peace, amity, or neutrality with the ſaid lords the States.

II. Nor ſhall this freedom of navigation and commerce be infringed by occaſion or cauſe of any war, in any kind of merchandizes, but ſhall extend to all commodities which ſhall be carried in time of peace, thoſe only excepted which follow in the next article, and are comprehended under the name of contraband.

III. Under this name of contraband, or prohibited merchandizes, ſhall be comprehended only arms, pieces of ordnance, with all implements belonging to them, fire-balls, powder, match, bullets, pikes, ſwords, lances, ſpears, halberts, guns, mortar-pieces, petards, granadoes, muſquet-reſts, bandeliers, ſalt-petre, muſquets, muſquet-ſhot, helmets, corſlets, breaſt-plates, coats of mail, and the like kind of armature; ſoldiers, horſes, and all things neceſſary for the furniture of horſes; holſters, belts, and all other warlike inſtruments whatſoever.

IV. Theſe merchandizes following ſhall not be reckoned among prohibited goods, viz. all kind of cloth, and all other manufactures woven of any kind of wool, flax, ſilk, cotton, or ony other materials; all ſorts of cloathing and veſtments, together with materials whereof they uſe to be made; gold and ſilver, as well coined as not coined; tin, iron, lead, copper, and coals; as alſo wheat, barley, and all other kind of corn or pulſe; tobacco, and all kind of ſpices; ſalted and ſmoaked fleſh; ſalted and dried fiſh, butter and cheeſe, beer, oils, wines, ſugars, and all ſorts of ſalt; and, in general, all proviſion which ſerves for the nouriſhment and ſuſtenance of life; likewiſe all kind of cotton, hemp, flax, and pitch, and ropes, ſails, and anchors; alſo maſts and planks, boards and beams, of what ſort of wood ſoever, and all other materials requiſite for the building or repairing ſhips; but they ſhall be wholly reputed amongſt free goods, even as all other wares and commodities which are not comprehended in the next precedent article, ſo that the ſame may be freely tranſported and carried by the ſubjects of his ſaid majeſty, even unto places in enmity with the ſaid States; as alſo, on the other ſide, by the ſubjects of the ſaid States, to places under the obedience of the enemies of his ſaid majeſty; except only towns or places be ſeized, invironed, or inveſted; in French, blocquées ou inveſtiés.

V. And, that all manner of differences and contentions on both ſides, by ſea and land, may from henceforth ceaſe and be utterly extinguiſhed, it is agreed, that all kinds of ſhips and veſſels whatſoever, belonging to the ſubjects of his ſaid majeſty, entering or being entered into any road or port under the obedience of the lords the States, and purpoſing to paſs from thence, ſhall be only obliged to ſhew unto the officers acting in the ports of the ſaid States, or to the captains of the States ſhips, or of private men of war (if any happen there to be) their paſſport, commonly called a ſea-brief (the form whereof is added at the end of theſe articles) nor ſhall any money, or any thing elſe, be exacted from them under that pretence: but, if any ſhip belonging to the ſubjects of his majeſty of Great-Britain ſhall, in the open ſea, or elſewhere out of the dominions of the ſaid States, meet the ſhips of war of the ſaid lords the States, or private men of war of their ſubjects, the ſaid ſhips of the lords the States, or of their ſubjects, ſhall keep at a convenient diſtance, and only ſend out their boat; and it ſhall be lawful for them, only with two or three men, to go on board the ſhips and veſſels of the ſubjects of his majeſty, that the paſſport (or ſea-brief) and the propriety thereof, according to the form hereafter ſpecified, may be

ſhewn to them by the captain or maſter of ſuch ſhip or veſſels belonging to the ſubjects of his majeſty; and the ſhip which ſhall ſhew the ſame ſhall freely paſs; and it ſhall not be lawful to moleſt, ſearch, detain, or divert the ſame from her intended voyage: and all the ſubjects of the lords the States ſhall enjoy, in all things, the ſame liberty and immunity, they, in like manner, ſhewing their paſſports (or ſea-briefs) made according to the form preſcribed at the latter end of this treaty.

VI. But if any ſhip or veſſel belonging to the Engliſh, or other ſubjects of his majeſty, ſhall be met making into any port in enmity with the lords the States; or, on the other ſide, if any ſhip belonging to the United Provinces of the Netherlands, or other ſubjects of the lords the States, ſhall be met in her way making into any port under the obedience of the enemies of his ſaid majeſty; ſuch ſhips ſhall ſhew not only a paſſport (or ſea-brief) according to the form here under preſcribed, wherewith ſhe is to be furniſhed, but alſo her cockets, expreſſing the contents of the goods on board, given in the uſual form, by the officers of the cuſtoms in the port from whence ſhe came; whereby it may be known whether ſhe is laden with any merchandize prohibited by the third article of this treaty.

VII. But if, by the ſhewing the aboveſaid cockets, expreſſing the contents of the goods on board, given in the uſual form by the officers of the cuſtoms in the port from whence ſhe came (concerning the ſhewing whereof it is above agreed) either party ſhall diſcover any kind of merchandizes which, in the third article of this treaty, are declared to be contraband or prohibited goods, conſigned to any port under the obedience of their enemies, it ſhall not be lawful to open the hatches of ſuch ſhip in which the ſame ſhall happen to be found, whether ſhe belongs to the ſubjects of his majeſty, or of the lords the States: nor to unlock, or break open cheſts, mails, packs, or caſks in the ſame, nor to convey away any the leaſt part of the merchandizes, before the whole be firſt landed in the preſence of the officers of the admiralty, and inventoried; neither ſhall it be any ways lawful to ſell, exchange, or otherwiſe to alienate the ſame, until ſuch prohibited goods are rightly and lawfully proceeded againſt, and that the judges of the admiralty have, by their reſpective ſentences, confiſcated the ſame: provided always, that, as well the ſhip itſelf, as the reſt of the commodities found in the ſame, which by this treaty are to be reputed free, ſhall not, upon pretence of their being infected by ſuch prohibited goods, be detained, much leſs confiſcated for lawful prize: but if not the whole, but a part only of the lading conſiſts of contraband or prohibited commodities, and that the maſter of the ſhip ſhall be willing and ready to deliver them to the captain who ſeized the ſame, in that caſe the captor ſhall not compel the ſhip to go out of her courſe to any port he thinks fit, but ſhall forthwith diſmiſs her, and upon no account hinder her from freely proſecuting her deſigned voyage.

VIII. It is further agreed, that whatſoever ſhall be found laden by his majeſty's ſubjects, upon any ſhip whatſoever belonging to the enemies of the lords the States, although the ſame be not of the quality of contraband goods, may be confiſcated: but, on the contrary, all that which ſhall be found in the ſhips belonging to the ſubjects of his majeſty, ſhall be accounted clear and free, although the whole lading, or any part thereof, by juſt title or propriety, ſhall belong to the enemies of the lords the States; except always contraband goods, which being intercepted, all things ſhall be done according to the meaning and direction of the precedent articles: and, for the ſame reaſon, whatſoever ſhall be laden by the ſubjects of the lords the States, in any ſhip whatſoever belonging to the enemies of his majeſty, although the ſame be not of the quality of contraband goods, may be confiſcated; but, on the other ſide, all that which ſhall be found in the ſhips belonging to the ſubjects of the lords the States ſhall be accounted clear and free, although the whole lading, or any part thereof, by juſt title of propriety, ſhall belong to the enemies of his majeſty; except always contraband goods, which being intercepted, all things ſhall be done according to the meaning and directions of the precedent articles. And, leſt any damage ſhould by ſurprize be done to the one party who is in peace, when the other party ſhall happen to be engaged in war, it is provided, that a ſhip belonging to the enemies of the one party, and laden with goods of the ſubjects of the other, ſhall not render the ſaid goods liable to confiſcation, in caſe they were laden before the expiration of the times hereafter mentioned, after the declaration or publication of any ſuch war, viz. if the goods were laden in any port or place between the limits called the Soundings, and the Naz in Norway, within the ſpace of ſix weeks after ſuch declaration; of two months, between the ſaid place the Soundings and the city of Tangier; and of ten weeks in the Mediterranean Sea; or within the ſpace of eight months in any other country or place of the world: ſo that it ſhall not be lawful to confiſcate the goods of the ſubjects of his majeſty taken or ſeized in any ſhip or veſſel whatſoever of any enemy of the lords the States, upon that pretence, but the ſame ſhall be without delay reſtored to the proprietors, unleſs they were laden after the expiration of the ſaid terms of time reſpectively; but ſo that it may not be lawful for them afterwards to carry to the enemy's ports the ſaid merchandizes which are called contraband, and, for the reaſon aforeſaid, ſhall not be liable to confiſcation: neither, on the other ſide, ſhall it be lawful to confiſcate goods of the ſubjects of the lords the States, taken or ſeized in any ſhip or veſſel whatſoever of an enemy of his majeſty, upon that pretence; but the ſame ſhall be forthwith reſtored to the proprietors thereof, unleſs they were laden after the expiration of the ſaid terms of time reſpectively: but ſo that it may not be lawful for them afterwards to carry to enemy's ports the ſaid merchandizes which are called contraband, and, for the reaſon aforeſaid, ſhall not be liable to confiſcation.

IX. And, the more to aſſure the ſubjects of his majeſty and of the ſaid States, that no injury ſhall be offered to them by the ſhips of war, or private men of war of either ſide, all the captains of the ſhips, as well of his majeſty as of the ſaid States, and all their ſubjects who ſhall fit out private men of war, and likewiſe their privileged companies, ſhall be injoined not to do any injury or damage whatſoever to the other; which if they do, they ſhall be puniſhed, and moreover be liable to ſatisfy all coſts and damages, by reſtitution and reparation, upon pain and obligation of perſon and goods.

X. For this cauſe all the commanders of private men of war ſhall from henceforth be obliged, before they receive their commiſſions, to enter, before a competent judge, good and ſufficient ſecurity, who have no part or intereſt in ſuch ſhip, in the ſum of 1500 l. ſterling, or 16,500 guilders; and, when they have above 150 men, then in the ſum of 3000 l. ſterling, or 33,000 guilders, that they will give full ſatisfaction for any damages or injuries whatſoever, which they or their officers, &c. ſhall commit in their courſes at ſea, contrary to this preſent treaty, or any other whatſoever, between his majeſty and the ſaid States, upon pain of revocation of their ſaid commiſſions; in which it ſhall be always inſerted, that they have given ſuch ſecurity as aboveſaid: and likewiſe it is agreed, that the ſhip itſelf ſhall be alſo liable to make ſatisfaction for injuries and damages done by her.

XI. His majeſty and the ſaid States, being deſirous that the ſubjects of each other may be mutually treated, in all countries under their obedience reſpectively, with the like kindneſs as their own ſubjects, will give all neceſſary and effectual orders that the judgment upon prizes taken be given according to the rules of juſtice and equity, by judges beyond all ſuſpicion, and not any way concerned in the cauſe under debate; and his majeſty and the ſaid States will likewiſe give ſtrict orders that all ſentences already given, and which ſhall be hereafter given, be (according to the tenor thereof) duly put in execution, &c.

XII. And whenſoever the ambaſſadors of the ſaid lords the States, or any other their public miniſters, reſident at the court of his moſt ſerene majeſty of Great-Britain, ſhall complain of the unjuſtneſs of ſentences which have been given, his majeſty will cauſe the ſame to be reviewed and examined in his council, that it may appear whether the orders and precautions preſcribed in this treaty have been obſerved, and have had their due effect, and will alſo take care that the ſame be fully provided for, and that right be done to the party complaining, within the ſpace of three months: and likewiſe when the ambaſſadors, or other public miniſters of his majeſty, reſident with the States-General, ſhall complain of the unjuſtneſs of ſentences, the ſaid States will cauſe a review and examination thereof to be made in the aſſembly of the States-General, that it may appear whether the orders and precautions preſcribed in this treaty have been obſerved, and had their due effect; and they will likewiſe take care that the ſame be fully provided for, and that juſtice be done to the party complaining within the ſpace of three months: nevertheleſs it ſhall not be lawful to ſell or unlade the goods in controverſy, either before the ſentence given, or after it, during the review thereof on either ſide, unleſs it be with the conſent of the parties intereſted.

XIII. A ſuit being commenced between the takers of prizes on the one part, and the claimers on the other, and decree being given for the party reclaiming, the ſaid decree (upon ſecurity given) ſhall be put in execution, notwithſtanding the appeal made by him that took the prize, which ſhall not be obſerved, in caſe the ſentence ſhall be given againſt the claimers.

XIV. And whereas the maſters of merchant-ſhips, and likewiſe the mariners and paſſengers, do ſometimes ſuffer many cruelties and barbarous uſages, when they are brought under the power of ſhips which take prizes in time of war, thereby to extort from them ſuch confeſſions as they would have to be made: it is agreed that both his majeſty and the lords the States-General ſhall, by the ſevereſt proclamations or placarts, forbid all ſuch heinous and inhuman offences; and as many as they ſhall, by lawful proofs, find guilty of ſuch acts, they ſhall take care that they be puniſhed with due and juſt puniſhments, which may be a terror to others; and ſhall command that all the captains and officers of ſhips, who ſhall be proved to have committed ſuch heinous practices, either themſelves, or by inſtigating others to act the ſame, or by conniving while they were done, ſhall (beſides other puniſhments, to be inflicted proportionably to their offences) be forthwith

forthwith deprived of their offices reſpectively; and every ſhip brought up as prize, whoſe mariners or paſſengers ſhall have ſuffered any torture, ſhall forthwith be diſmiſſed and freed, with all her lading, from all further examination and proceeding againſt her, as well judicial as otherwiſe.

XV. It is alſo agreed, that the like ſeverity of puniſhments ſhall be inflicted upon thoſe who, contrary to the meaning of the 21ſt aritcle of the treaty of peace concluded at Breda, ſhall take commiſſions from enemies to ſeize the ſhips of either ally, contrary to what is provided in the ſaid article.

XVI. Laſtly, It is agreed and concluded, that this preſent treaty, &c. ſhall be, with all convenient ſpeed, on both ſides ratified and confirmed; and that the ratifications thereof ſhall be, within two months from the date thereof, reciprocally exchanged between both parties: and alſo, that the ſaid treaty ſhall, within one month after ſuch exchanging of the ratifications, be delivered, in due and authentic form, to the governors of the Engliſh Eaſt-India and African companies, and to the directors of the Dutch Eaſt and Weſt-India companies; and ſhall, with the firſt conveniency, be alſo ſent by his ſaid majeſty, and by the ſaid lords the States, to their reſpective governors and commanders in chief of their colonies and plantations in every part of the world out of Europe, to the end that it may be by them, and all others within their dominions and under their power, punctually obſerved and fulfilled.

The form of the paſſport (or ſea-brief) to be required and given by the lord high admiral, or by thoſe to whom the exerciſe of admiralty-juriſdiction is ordinarily committed, or by the mayor, or other chief magiſtrate, or by the commiſſioners, or other principal officers of the cuſtoms in their reſpective ports and places within his majeſty's dominions, to the ſhips and veſſels ſailing out thence, according to the purport of the 5th article.

To all unto whom theſe preſents ſhall come, greeting. We lord high admiral of we lords commiſſioners executing the office of the lord high admiral of or we judges of the high court of the admiralty of or we the mayor, or other magiſtrate of or we commiſſioners, or principal officers of the cuſtoms in the city or port of do teſtify and make known, That maſter or commander of the ſhip called the hath appeared before us, and hath declared, by ſolemn oath, That the ſaid ſhip or veſſel, containing about tons, of which he is at preſent maſter or commander, doth belong to the inhabitants of within the dominions of the moſt ſerene and mighty prince, the king of England, Scotland, France, and Ireland, &c. So help him God. And in regard it would be moſt acceptable to us, that the ſaid maſter or commander be aſſiſted in his juſt and lawful affairs, we do requeſt you, and every of you, whereſoever the ſaid maſter or commander ſhall arrive with his ſhip, and the goods laden on board, and carried in her, that you would pleaſe to receive him courteouſly, and uſe him kindly, and admit him, upon paying the lawful and uſual cuſtoms and other duties, to enter into, remain in, and paſs from your ports, rivers, and dominions, and there to enjoy all kind of right of navigation, traffic, and commerce, in all places where he ſhall think fit; which we ſhall moſt willingly and readily acknowledge upon all occaſions. In teſtimony and confirmation whereof, we have with our hand ſigned theſe preſents, and cauſed them to be ſealed with our ſeal. Dated at in the day of in the year of our Lord

The form of the paſſport (or ſea-brief) to be required of, and given by, the burghermaſter of the cities and ports of the United Netherlands, to the ſhips or veſſels ſailing from thence, according to the purport of the 5th article.

To the moſt ſerene, moſt illuſtrious, moſt mighty, moſt noble, moſt honourable, and moſt prudent emperors, kings, governors of commonwealths, princes, dukes, earls, barons, lords, burghermaſters, ſchepens, counſellors, judges, officers, juſtices, and rulers of all cities and places, as well eccleſiaſtical as ſecular, to whom theſe preſents ſhall be known: We the burghermaſter and rulers of the city of do certify, that maſter or ſkipper of the ſhip appeared before us, and declared by ſolemn oath, That the ſaid ſhip, called the containing about laſts, of which he is at preſent maſter or ſkipper, belongeth to the inhabitants of the United Netherlands. So help him God. And, in regard it would be moſt acceptable to us that the ſaid maſter or ſkipper be aſſiſted in his juſt and lawful affairs, we do requeſt you and every of you, whereſoever the ſaid maſter or ſkipper ſhall arrive with his ſhip, and the goods laden on board and carried in her, that you would pleaſe to receive him courteouſly, and uſe him kindly, and admit him, upon paying the lawful and uſual cuſtoms and other duties, to enter into, remain in, and paſs from your ports, rivers, and dominions, and there to enjoy all kind of right of navigation, traffic, and commerce, in all places where he ſhall think fit; which we ſhall moſt willingly and readily acknowledge upon all occaſions. In teſtimony and confirmation whereof we have cauſed the ſeal of our city to be hereunto put. Dated at in the day of in the year of our Lord

In teſtimony and confirmation of all and ſingular the premiſes, we the commiſſioners of his majeſty and the lords the States-General aforeſaid, being ſufficiently impowered thereunto, have to theſe preſents ſubſcribed our names, and ſealed them with our ſeals, at London, the 1ſt day of December, 1674.

An explanatory declaration upon certain articles of the marine treaties concluded between his majeſty and the States-General of the United Provinces, February 17, 166$\frac{7}{8}$, and December 1, 1764.

Whereas ſome difficulty hath ariſen concerning the interpretation of certain articles, as well in the treaty marine which was concluded the 1ſt day of December, 1674, as in that which was concluded the 17th of February, 166$\frac{7}{8}$, between his majeſty of Great-Britain on the one part, and the States-General of the United Provinces of the Low-Countries on the other, relating to the liberty of their reſpective ſubjects to trade unto the ports of each other enemies: We Sir William Temple, Bart. ambaſſador extraordinary from his ſaid majeſty of Great-Britain, in the name, and on the part of his ſaid majeſty; and We William Van Heuckelom, Daniel Van Wyngaerden, lord of Werckenham, Gaſpar Fagel, counſellor and penſioner of Holland and Weſt-Friezland, John de Mauregnault, John baron of Rude and Renſwoude, William de Haren, retman of the Bilt, Henry Terborgh, and Luke Alting, deputies in the aſſembly of the ſaid States-General for the States of Guelderland, Holland, Zealand, Utrecht, Friezland, Overyſſel, Groningen, and the Ommelands, in the name, and on the part of the ſaid States-General, have declared, as we do by theſe preſents declare, That the true meaning and intention of the ſaid articles is and ought to be, that ſhips and veſſels, belonging to the ſubjects of either of the parties, can and might, from the time that the ſaid articles were concluded, not only paſs, traffic, and trade from a neutral port or place to a place in enmity with the other party, or from a place in enmity to a neutral place: but alſo from a port or place in enmity to a port or place in enmity with the other party, whether the ſaid places belong to one and the ſame prince or ſtate, or to ſeveral princes and ſtates, with whom the other party is in war. And we declare that this is the true and genuine ſenſe and meaning of the ſaid articles: purſuant whereunto we underſtood that the ſaid articles are to be obſerved and executed on all occaſions, on the part of his ſaid majeſty and the ſaid States-General, and their reſpective ſubjects; yet ſo, that this declaration ſhall not be alledged by either party for matters which happened before the concluſion of the late peace in the month of February, 167$\frac{3}{4}$; and we do promiſe, that the ſaid declaration ſhall be ratified by his ſaid majeſty, and by the ſaid States-General, and that within two months, or ſooner if poſſible, reckoning from the day of the date of this declaration, the ratifications of the ſame ſhall be brought hither to the Hague, to be here exchanged. In witneſs whereof we have ſigned theſe preſents at the Hague, the 30th day of December, 1675.

	(L. S.) W. Haren,
	(L. S.) H. Terborgh,
	(L. S.) L. Alting.

After the concluſion of this marine treaty with Holland, the next material one that occurs is another of the ſame nature with France, which may deſerve a place here, amongſt the reſt.

ARTICLE VIII.

A treaty marine between the moſt ſerene and mighty prince Charles II, by the grace of God, king of England, Scotland, France, and Ireland, defender of the faith, &c. and the moſt ſerene and mighty prince Lewis XIV. the moſt Chriſtian king, concluded at St. Germains en Laye, the 24th day of February, 167$\frac{6}{7}$.

I. That it ſhall and may be lawful for all and every the ſubjects of the moſt ſerene and mighty prince the king of Great-Britain

Britain aforeſaid, with all freedom and ſafety, to ſail, trade, and exerciſe any manner of traffic in all thoſe kingdoms, countries, and eſtates, which are, or at any time hereafter ſhall be in peace, amity, or neutrality with his ſaid majeſty: ſo that they ſhall not be any ways hindered or moleſted in their navigation or trade by the military forces, nor by the ſhips of war, or any other kind of veſſels whatſoever, belonging either to the moſt Chriſtian king, or to his ſubjects, upon occaſion or pretence of any hoſtility or difference, which now is, or hereafter ſhall happen between the ſaid moſt Chriſtian king, and any princes or people whatſoever in peace, amity, or neutrality with the ſaid king of Great-Britain. And likewiſe, that it ſhall and may be lawful for all and every the ſubjects of the ſaid moſt Chriſtian king, with all freedom and ſafety, to ſail, trade, and exerciſe any manner of traffic in all thoſe kingdoms, countries, and eſtates, which are, or at any time hereafter ſhall be in peace, amity, or neutrality with the aforeſaid moſt Chriſtian king: ſo that they ſhall not be any ways hindered or moleſted in their navigation or trade by the military forces, nor by the ſhips of war, or any other kind of veſſels whatſoever belonging either to the king of Great-Britain above-mentioned, or to his ſubjects, upon occaſion, or pretence of any hoſtility or difference which now is, or ſhall hereafter happen between his majeſty and any princes or people whatſoever, in peace, amity, or neutrality with the ſaid moſt Chriſtian king.

II. Nor ſhall this freedom of navigation and commerce be infringed by occaſion of any war, in any kind of merchandizes, but ſhall extend to all commodities which ſhall be carried in time of peace, thoſe only excepted which follow in the next article, and are comprehended under the name of contraband.

III. Under this name of contraband, or prohibited merchandizes, ſhall be comprehended only arms, pieces of ordnance, with all implements belonging to them; fire-balls, powder, match, bullets, pikes, ſwords, lances, ſpears, halberts, guns, mortar-pieces, petards, granadoes, muſquet-reſts, bandeliers, ſalt-petre, muſquets, muſquet-ſhot, helmets, corſlets, breaſt-plates, coats of mail, and the like kind of armature; ſoldiers, horſes, and all things neceſſary for the furniture of horſes; holſters, belts, and all other warlike inſtruments whatſoever.

IV. Theſe merchandizes following ſhall not be reckoned among prohibited goods, viz. all kind of cloth, and all other manufactures woven of any kind of wool, flax, ſilk, cotton, or any other materials; all ſorts of cloathing and veſtments, together with the materials whereof they uſe to be made; gold and ſilver, as well coined as not coined; tin, iron, lead, copper, and coals; as alſo wheat and barley, and all other kind of corn or pulſe; tobacco, and all kinds of ſpices; ſalted and ſmoaked fleſh; ſalted and dried fiſh, cheeſe, butter, beer, oils, wines, ſugars, and all ſorts of ſalt; and, in general, all proviſion which ſerves for the nouriſhment and ſuſtenance of life; likewiſe all kind of cotton, hemp, flax, and pitch, ropes, ſails, and anchors; alſo maſts and planks, boards and beams, of what ſort of wood ſoever, and all other materials requiſite for the building or repairing ſhips; but they ſhall be wholly reputed amongſt free goods, even as well as all other wares and commodities which are not comprehended in the next precedent article; ſo that the ſame may be freely tranſported and carried by the ſubjects of the moſt ſerene king of Great-Britain, not only from one neutral place to another neutral place, or from a neutral port or place to a place in hoſtility with the moſt Chriſtian king, or from a place in hoſtility with him to a neutral place, but alſo from one place in enmity with the moſt Chriſtian king to another port or place in enmity with him; be it that ſuch ports or places do belong to the ſame prince or ſtate, or to ſeveral princes or ſtates, with whom the moſt Chriſtian king ſhall happen to be in war; and in like manner that the ſame may be freely tranſported by the ſubjects of the moſt Chriſtian king, not only from one neutral place to another neutral place, or from a neutral port or place to a place in hoſtility with the king of Great-Britain, or from a place in hoſtility with him to a neutral place; but alſo from one place in enmity with the king of Great-Britain to another port or place in enmity with him; be it that ſuch ports or places do belong to the ſame prince or ſtate, or to ſeveral princes or ſtates with whom the king of Great-Britain ſhall happen to be in war, except only towns or places beſieged, invironed, or inveſted; in French, blocquées ou inveſtiés.

V. And, that all manner of differences and contentions on both ſides, by ſea and land, may from henceforth ceaſe and be utterly extinguiſhed, it is agreed that all kind of ſhips and veſſels whatſoever, belonging to the ſubjects of his ſaid majeſty of Great-Britain, entering or being entered into any road or port under the obedience of the moſt Chriſtian king, and purpoſing to paſs from thence, ſhall be only obliged to ſhew unto the officers acting in the ports of the ſaid moſt Chriſtian king, or to the captains of the moſt Chriſtian king's ſhips, or private men of war (if any happen there to be) their paſſports, commonly called a ſea brief (the form whereof is added to the end of theſe articles) nor ſhall any money, or any thing elſe, be exacted from them under that pretence: but, if any ſhip belonging to the ſubjects of his majeſty of Great-Britain ſhall, in the open ſea or elſewhere, out of the dominions of the ſaid moſt Chriſtian king, meet his ſhips of war, or privateers of his ſubjects, the ſaid ſhips of the moſt Chriſtian king ſhall keep at a convenient diſtance, and only ſend out their boat, and it ſhall be lawful for them, only with two or three men, to go on board the ſhips and veſſels of the ſubjects of his majeſty of Great-Britain, that the paſſport (or ſea brief) and the propriety thereof, may be ſhewn to them by the captain or maſter of ſuch ſhip or veſſel belonging to the ſubjects of his majeſty of Great-Britain: and the ſhip which ſhall ſhew the ſame ſhall freely paſs; and it ſhall not be lawful to moleſt, ſearch, detain, or divert the ſame from her intended voyage: and all the ſubjects of the moſt Chriſtian king ſhall enjoy in all things the ſame liberty and immunity, they in like manner ſhewing their paſſport, made according to the form preſcribed at the latter end of this treaty.

VI. But if any ſhip or veſſel belonging to the Engliſh, or other ſubjects of his majeſty of Great-Britain, ſhall be met by any man of war making into any port in enmity with the moſt Chriſtian king; or, on the other ſide, if any ſhip belonging to the moſt Chriſtian king, or others ſubjects of the ſaid moſt Chriſtian king, ſhall be met in her way making into any port under the obedience of the enemies of his ſaid majeſty of Great-Britain; ſuch ſhip ſhall ſhew not only a paſſport, wherewith ſhe is to be furniſhed, but alſo her cockets, expreſſing the contents of the goods on board, given in the uſual form, by the officers of the cuſtoms in the port from whence ſhe came; whereby it may be known whether ſhe is laden with any merchandizes prohibited by the 3d article of this treaty.

VII. But if, by the ſhewing the aboveſaid cockets, expreſſing the contents of the goods on board, given in the uſual form, by the officers of the cuſtoms in the port from whence ſhe came, either party ſhall diſcover any kind of merchandizes which in the 3d article of this treaty are declared to be contraband or prohibited, conſigned to any port under the obedience of their enemies, it ſhall not be lawful to open the hatches of ſuch ſhip in which the ſame ſhall happen to be found, whether ſhe belongs to the ſubjects of his majeſty of Great-Britain, or of the moſt Chriſtian king; nor to unlock or break open the cheſts, mails, packs, or caſks in the ſame, nor to convey away any the leaſt part of the merchandizes, before the whole be firſt landed in the preſence of the officers of the admiralty, and inventoried: neither ſhall it be any ways lawful to ſell, exchange, or otherwiſe to alienate the ſame, until ſuch prohibited goods are rightly and lawfully proceeded againſt, and that the judges of the admiralty have, by their reſpective ſentences, confiſcated the ſame: provided always, that, as well the ſhip itſelf, as the reſt of the commodities found in the ſame, which by this treaty are to be reputed free, ſhall not, upon pretence of their being infected by ſuch prohibited goods, be detained, much leſs confiſcated, for lawful prize; but if not the whole, but a part only of the lading conſiſts of contraband commodities, and that the maſter of the ſhip ſhall be willing and ready to deliver them to the captor who ſeized the ſame, in that caſe the captor ſhall not compel the ſhip to go out of her courſe to any port he thinks fit, but ſhall forthwith diſmiſs her, and upon no account hinder her from freely proſecuting her deſigned voyage.

VIII. It is further agreed, that whatſoever ſhall be found laden by the ſubjects of his majeſty of Great-Britain, upon any ſhip whatſoever belonging to the enemies of the moſt Chriſtian king, although the ſame be not of the quality of contraband goods, may be confiſcated: but, on the contrary, all that which ſhall be found in the ſhips belonging to the ſubjects of his majeſty of Great Britain, ſhall be accounted clear and free, although the whole lading, or any part thereof, by juſt title of propriety, ſhall belong to the enemies of the moſt Chriſtian king: except always contraband goods, which being intercepted, all things ſhall be done according to the meaning and direction of the precedent article: and, by the ſame reaſon, whatſoever ſhall be found laden by the ſubjects of the moſt Chriſtian king, in any ſhip whatſoever belonging to the enemies of his majeſty of Great-Britain, although the ſame be not of the quality of contraband goods, may be confiſcated; but, on the other ſide, all that which ſhall be found in the ſhips belonging to the ſubjects of the moſt Chriſtian king, ſhall be accounted clear and free, although the whole lading, or any part thereof, by juſt title of propriety, ſhall belong to the enemies of his majeſty of Great-Britain, except always contraband goods, which being intercepted, all things ſhall be done according to the meaning and direction of the precedent article; and, leſt any damage ſhould by ſurprize be done to the one party who is in peace, when the other party ſhall happen to be engaged in war, it is agreed that a ſhip belonging to the enemies of the one party, and laden with goods of the ſubjects of the other, ſhall not render the ſaid goods liable to confiſcation, in caſe they were laden before the expiration of the times hereafter mentioned, after the declaration of any ſuch war, viz. if the goods were laden in any port or place between the limits called the Soundings and the Naz in Norway, within the ſpace of ſix weeks after ſuch declaration; of two months between the ſaid place,

the

the Soundings, and the city of Tangier; and of ten weeks in the Mediterranean Sea; or within the ſpace of eight months in any other country or place of the world; ſo that it ſhall not be lawful to confiſcate the goods of the ſubjects of his majeſty of Great Britain, taken or ſeized in any ſhip or veſſel whatſoever of any enemy of the moſt Chriſtian king, upon that pretence; but the ſame ſhall be without delay reſtored to the proprietors, unleſs they were laden after the expiration of the ſaid terms of time reſpectively; but ſo that it may not be lawful for them afterwards to carry to enemies ports the ſaid merchandizes which are called contraband; and, for the reaſon aforeſaid, ſhall not be liable to confiſcation: neither, on the other ſide, ſhall it be lawful to confiſcate the goods of the ſubjects of the moſt Chriſtian king, taken or ſeized in any ſhip or veſſel whatſoever of any enemy of his majeſty of Great-Britain, upon that pretence; but the ſame ſhall be forthwith reſtored to the proprietors thereof, unleſs they were laden after the expiration of the ſaid terms of time reſpectively; but ſo that it may not be lawful for them afterwards to carry to enemies ports the ſaid merchandizes which are called contraband, and, for the reaſons aforeſaid, ſhall not be liable to confiſcation.

IX. And, the more to aſſure the ſubjects of his majeſty of Great-Britain, and of the moſt Chriſtian king, that no injury ſhall be offered to them by the ſhips of war, or privateers of either ſide, all the captains of the ſhips, as well of his majeſty of Great-Britain as of the moſt Chriſtian king, and all their ſubjects who ſhall fit out privateers, and likewiſe their privileged companies, ſhall be injoined not to do any injury whatſoever to the other; which if they do, they ſhall be puniſhed, and moreover be liable to ſatisfy all coſts and damages, by reſtitution and reparation, upon pain and obligation of perſon and goods.

X. For this cauſe, all the commanders of privateers ſhall from henceforth be obliged, before they receive their commiſſions, to enter, before a competent judge, good and ſufficient ſecurity, by able and reſponſible men, who have no part or intereſt in ſuch ſhip, in the ſum of 1500 l. ſterling, or 16,500 livres; and, when they have above 150 men, then in the ſum of 3000 l. ſterling, or 33,000 livres, that they will give full ſatisfaction for any damages or injuries whatſoever, which they or their officers, or others in their ſervices, ſhall commit in their courſes at ſea, contrary to this preſent treaty, or any other whatſoever, between his majeſty of Great-Britain and the moſt Chriſtian king, upon the pain of revocation and annulling their ſaid commiſſions; in which it ſhall be always inſerted, That they have given ſuch ſecurity as aboveſaid; and likewiſe it is agreed, that the ſhip itſelf ſhall be alſo liable to make ſatisfaction for injuries done by her.

XI. His majeſty of Great-Britain and the ſaid moſt Chriſtian king, being deſirous that the ſubjects of each may be mutually treated, in all countries under their obedience reſpectively, with the like kindneſs as their own ſubjects, will give all neceſſary and effectual orders that judgments upon ſhips and merchandizes taken at ſea be given according to the rule of juſtice and equity, by judges beyond all ſuſpicion, and not any ways concerned in the cauſe under debate. And his majeſty of Great-Britain and the moſt Chriſtian king will likewiſe give ſtrict orders that all ſentences already given, and which ſhall be hereafter given, be according to the tenor thereof duly put in execution, and obtain their effect.

XII. And whenſoever the ambaſſadors, or other public miniſters of the king of Great-Britain, reſiding at the court of the moſt Chriſtian king, ſhall complain of the unjuſtneſs of ſentences which have been given concerning ſhips or merchandizes taken at ſea, and belonging to the ſubjects of the king of Great-Britain, then the ſaid moſt Chriſtian king, on demand of the ſaid ambaſſadors or miniſters of the king of Great-Britain, ſhall cauſe the ſaid ſentences to be reviewed and examined in his privy-council, and ſhall confirm or revoke the ſentences whereſoever given; and likewiſe the ſaid moſt Chriſtian king ſhall take care, that right be done to the party complaining within the ſpace of four months, to be accounted from the day of making ſuch demand.

In like manner, if the ambaſſadors, or other public miniſters of the moſt Chriſtian king reſiding at the court of the king of Great-Britain, ſhall complain of the unjuſtneſs of ſentences, which have been given concerning ſhips or merchandizes taken at ſea, belonging to ſubjects of the ſaid moſt Chriſtian king, the ſaid king of Great-Britain ſhall forthwith commiſſion, under his great ſeal, nine of his privy council to adjudge ſuch matters, or to confirm or revoke the ſentences whereſoever given; and the ſaid commiſſioners ſhall meet within the ſpace of one month from the day of delivering the complaint: and likewiſe the king of Great-Britain ſhall take care that right be done the party complaining within the ſpace of three months, to be computed from the firſt day of the meeting of the ſaid commiſſioners.

XIII. A ſuit being commenced between the takers of prizes on the one party, and the claimers thereof on the other, and a ſentence being given for the party reclaiming, the ſaid ſentence, upon ſecurity given, ſhall be put in execution, notwithſtanding the appeal made by him that took the prize; which ſhall not be obſerved, in caſe the ſentence ſhall be given againſt the claimers.

XIV. And whereas the maſters of merchants ſhips, and likewiſe the mariners and paſſengers do ſometimes ſuffer many cruelties and barbarous uſages, when they are brought under the power of ſhips which take prizes in time of war, the takers in an inhuman manner tormenting them, thereby to extort from them ſuch confeſſions as they would have to be made; it is agreed, that both his majeſty of Great-Britain and the moſt Chriſtian king ſhall, by the ſevereſt proclamations or edicts, forbid all ſuch heinous offences, and as many as they ſhall by lawful proofs find guilty of ſuch acts, they ſhall take care that they be ſo puniſhed, as may be a terror to others; and ſhall command that all the captains and officers of ſhips, who ſhall be proved to have committed ſuch heinous practices, either themſelves, or by inſtigating others to do the ſame, or by conniving while they were done, ſhall, beſides other puniſhments to be inflicted proportionably to their offences, be forthwith deprived of their offices reſpectively; and every ſhip brought up as prize, whoſe mariners or paſſengers ſhall have ſuffered any torture, ſhall forthwith be diſmiſſed and freed, with all her lading, from all further examination and proceeding againſt her, as well judicial as otherwiſe.

XV. It is alſo agreed, that the like ſeverity of puniſhments ſhall be inflicted upon thoſe, who ſhall take commiſſion from enemies to ſeize the ſhips of either ally or party.

XVI. Laſtly, it is agreed and concluded, that this preſent treaty, and all and ſingular the things therein contained, ſhall be, with all convenient ſpeed, on both ſides, ratified and confirmed, and that the ratifications thereof ſhall be within two months from the date hereof reciprocally exchanged.

Dated at St. Germains en Laye, the 24th day of February, in the year of our Lord 1677.

The form of the paſſport, or ſea-brief, to be required, and given by the lord high admiral, or by thoſe to whom the exerciſe of admiralty juriſdiction is ordinarily committed: or by the mayor or other chief magiſtrate, or by the commiſſioners, or other principal officers of the cuſtoms, in their reſpective ports and places within the dominions of the king of Great Britain, to ſhips and veſſels, according to the purport of the fifth article.

To all unto whom theſe preſents ſhall come greeting. We lord high admiral of We lords commiſſioners executing the office of the lord high admiral of or we the mayor, or other magiſtrate of or we commiſſioners, or principal officers of the cuſtoms in the city or port of do teſtify and make known, that maſter or commander of the ſhip called the hath appeared before us, and hath declared by ſolemn oath, that the ſaid ſhip or veſſel containing about tons, of which he is at preſent maſter or commander, doth belong to the inhabitants of within the dominions of the moſt ſerene and mighty prince, the king of England, Scotland, France, and Ireland, defender of the faith, &c. So help him God. And, in regard it would be moſt acceptable to us, that the ſaid maſter or commander be aſſiſted in his lawful affairs, we do requeſt you and every of you, whereſoever the ſaid maſter or commander ſhall arrive with his ſhip, and the goods laden on board and carried in her, that you would pleaſe to receive him courteouſly, and uſe him kindly, and admit him, upon paying the lawful and uſual cuſtoms and other duties, to enter into, remain in, and paſs from, your ports, rivers, and dominions, and there to enjoy all kind of right of navigation, traffic, and commerce, in all places where he ſhall think fit; which we ſhall moſt willingly and readily acknowledge upon all occaſions: in teſtimony and confirmation whereof, we have with our hands ſigned theſe preſents, and cauſed them to be ſealed with our ſeal. Dated the day of in the year of our Lord

And the like form of paſſport, mutatis mutandis, ſhall be uſed by the ſubjects of the moſt Chriſtian king.

REMARKS.

After the concluſion of this marine treaty between Great-Britain and France, we do not find any other of the ſame nature in which this crown is much concerned, 'till the time of king James II. who, in the month of Auguſt, 1685, renewed all former alliance with the Dutch, and particularly the ſix following treaties, viz.

I. A treaty of peace and alliance, concluded the $\frac{21}{31}$ of July, in the year 1667.

II. A treaty of commerce and navigation of the ſame date.

III. A treaty of peace and friendſhip, concluded at Weſtminſter the $\frac{4}{14}$ of February 1673-4.

IV. A marine treaty, concluded at London the 1ſt of December 1674, together with a declaration by which ſome articles of the aforeſaid treaty, as well as of another marine

treaty of the [illegible] of February 1667-8, are more fully explained and expounded.

V. Articles concluded at London, the $\frac{3}{13}$ of March 1674-5, for terminating all differences between the Engliſh and Dutch Eaſt-India companies.

VI. A league defenſive, concluded at London the 3d of March 1678.

The next remarkable marine treaty that occurs is that between their late majeſties king William and queen Mary, and the States-General, concluded at Whitehall, the 29th of April 1689, in purſuance of the treaty concluded between king Charles II. and the States, of the 3d of March 1678, which is confirmed by this with ſome additions. The articles are to this effect:

I. That their majeſties ſhall put to ſea 50 large men of war, viz. 1 of the 2d, 17 of the 3d, and 32 of the 4th rate, with 15 frigates, and 8 fire-ſhips, having on board in all 17,155 effective men.

II. That the States ſhould put to ſea 30 large ſhips, viz. 8 from 70 to 80, 7 from 60 to 70, and 15 from 50 to 60 guns, with 9 frigates and 4 fire-ſhips, which ſhall have on board 10,572 effective men.

III. That the fleets ſhall join, where the king of Great-Britain ſhall think fit.

IV. That the fleets of the two nations ſhall be divided into three ſquadrons; the firſt to be of 50 large ſhips, ſix frigates, and eight fire-ſhips, to ſerve in the Mediterranean; the ſecond of 30 large ſhips, 8 frigates, and 4 fire-ſhips, to ſerve in the Iriſh ſea and in the channel, except it be otherwiſe ſtipulated, by conſent; and the third of ten frigates, to ſerve between the mouth of the channel and Yarmouth, on the coaſt of England and the aforeſaid place, and the iſle of Waſchere on the coaſt of Zeland: the two laſt ſquadrons to aſſiſt occaſionally each other.

V. Each of the ſquadrons ſhall be compoſed of the ſhips of both nations proportionably.

VI. All the ſhips of both ſquadrons ſhall be provided for one year. What cannot be conveniently kept aboard the ſhips of the Mediterranean ſquadron, the king of Spain, the duke of Tuſcany, and the republic of Genoa, ſhall be deſired to give them a favourable reception.

VII. Each ſquadron ſhall be commanded by the Engliſh admiral or commander in chief.

VIII. The councils of war ſhall be compoſed of all the flag officers of both nations in equal number; when the votes are ſplit, the captains ſhall be called; the Engliſh admiral ſhall be preſident, and the Engliſh officers of equal rank ſhall have the precedency of the Dutch.

IX. All cauſes relating only to the officers, ſeamen or affairs, of either of the nations, ſhall be tried by a council of war of that nation; but, if both nations are concerned, the officers of both ſhall be preſent at the trial.

XI. All prizes ſhall be divided between their majeſties and the States in proportion to the ſhare they bear in the charge of the fleet. That is to ſay, their majeſties ſhall have $\frac{5}{8}$, and the States $\frac{3}{8}$.

XII. Prizes ſhall be adjudged by the admiralty of the nation by whoſe ſhips they were taken, and none but neceſſary charge ſhall be allowed, without any fees for officers.

XIII. And, if the prizes are taken by ſhips of both nations, they ſhall be adjudged by the admiralty of the nation, to whom the ſtrongeſt ſhips preſent at the caption do belong.

XIV. The ſhips of either nation ſhall have ſpecial orders to protect each other's merchant-men and plantations in the Weſt-Indies.

XV. This treaty to be ratified by both parties.

Remarks.

This treaty which I have here abridged, contains ſuch remarkable ſtipulations and regulations for marine affairs, that I thought it very well deſerved to be inſerted. And that, and all precedent treaties between theſe kingdoms and that ſtate, were renewed and confirmed with additions, by a treaty of friendſhip and alliance, concluded at London in the month of Auguſt following. And after that, in the month of October 1692, a treaty was concluded by the king of Great-Britain and the States of Holland with the king of Spain, by which that prince obliged himſelf to put to ſea at leaſt 16 men of war of 60 guns each (which perhaps, was more than he could) with 4 fire-ſhips, and 25 gallies, and proviſions for ten months; to be joined by 16 other Engliſh and Dutch men of war of the ſame force, and 4 fire-ſhips; upon condition, that all friendly offices ſhould be done them by the Spaniard.

It is obſervable, that as to the ceremonial of the ſalutation, and other ſuch punctilio's, which neither of the kings thought fit to yield to the other in the Mediterranean, (but which the king of Spain muſt have yielded to his Britiſh majeſty in the Britiſh ſeas) for avoiding all differences on that account, it is agreed, That there ſhall be no ſuch thing at all; as may be obſerved by the 10th article, which follows:

X. The men of war, gallies, and fire-ſhips, ſhall meet at the rendezvous which ſhall be aſſigned them, without any ceremony, ſalutation, or counter-ſalutation; which ſhall be obſerved, all the time they act together, as well by the whole fleet as by detachments.

And ſo nice have princes, and eſpecially the kings of England, always been upon this tender point of the marine, that for fear any ſmall condeſcenſion of any of their commanding officers ſhould afterwards militate againſt them, and be looked upon as a deference paid to the Spaniard, it is agreed by the eleventh article, That they ſhould meet the firſt time on board the Dutch admiral, or other commanding ſhips of that nation, aſunder.

XI. And, for the firſt time, the commanding officers ſhall meet in the ſhip of the firſt Dutch officer, there to regulate matters, according to the tenor of the ſeparate articles, which ſhall be agreed on for the purpoſe.

Which ſeparate articles here follow.

The commanding officers ſhall meet without any ceremony of rank at the firſt joining of the fleet, in the ſhip of the firſt Dutch officer, and ſhall concert amongſt themſelves, according to their orders, the neceſſary meaſures for acting againſt the enemy with the greateſt appearance of ſucceſs.

After this we do not meet with any other marine treaty very remarkable, 'till that concluded at the general peace of Ryſwick, between France and Holland; in which, beſides ſeveral other matters relating to commerce, it is agreed, That the French and Dutch may freely frequent, with their ſhips and merchandizes, the countries, lands, towns, ports, and places of each other, with equal and reciprocal privileges, and without paying any other or greater duties in each other's countries, than the natural ſubjects of the country.

That the ſhips of war of either nation ſhall always be free to come in, lie at anchor, and go out of roads, rivers, ports, and harbours of each other, without being ſubject to any ſearch, provided they give not any reaſonable cauſe of jealouſy.

That the ſhips of war of either nation, whether belonging to the ſovereign or the ſubjects, ſhall have liberty to conduct, whether they pleaſe, the prizes they take from their enemies, without paying any duties or fees; and, on the contrary, no retreat ſhall be allowed to ſuch as have made prize of any of the ſhips of his majeſty, or the States-General, or their ſubjects: but, if they be forced in by tempeſt or otherwiſe, they ſhall be obliged to depart as ſoon as poſſible.

That the ſhips of either nation, coming to an anchor at any port in their paſſage upon a longer voyage, ſhall not be obliged to ſell any part of their goods: and that the ſhips, nor goods, nor mariners, or other ſubjects of either nation, ſhall be arreſted or detained by the other, under any pretence whatſoever, except it be for a juſt cauſe, and according to the due forms of law.

That it ſhall be lawful for the ſubjects of either nation to trade with the enemies of the other, and to carry thither all ſorts of goods that are not contraband; under which term are only comprehended arms and ammunition, and warlike accoutrements of all ſorts for men and horſe. And the ſhips of both nations, whether at ſea or any port or road, ſhall ſhew their paſſports and other ſea-papers in due form, to which entire credit ſhall be given.

That all goods belonging to the ſubjects of either party, being ſeized on board an enemy's ſhip, ſhall be confiſcated, except ſuch as have been laded; if between the mouth of the channel and Norway, more than four weeks after the declaration of the war; if between the mouth of the channel and cape St. Vincent, more than ſix weeks; if further in the Mediterranean or elſewhere on this ſide of the Line, more than ten weeks; and if beyond the Line, all the world over, more than eight months after the declaration of war: and it is agreed, That neither the goods nor perſons of enemies ſhall be ſeized by either nation in the ſhips of the other, except the perſons be in the immediate ſervice of the other.

That any captain of either nation, making prize any ſhips laden with contraband goods, ſhall not break open coffers, cheſts, bails, or any other thing 'till the ſame be done, in due form, by the officers of the admiralty; except the captain of any ſhip, having only a part of his lading contraband goods, conſent to deliver the ſame up, and purſue his voyage with the reſt.

That judgment ſhall be given with all juſtice and expedition, concerning all ſhips take at ſea; and, upon the complaint of the miniſter or envoy of either party, the cauſe ſhall be heard over again in council; and, notwithſtanding the appeal of the captor, ſentences, pronounced in favour of the owners of ſhips taken, ſhall be put in execution, upon their giving ſecurity to be forth-coming.

That the ſubjects of either nation may freely freight, or cauſe to be built in the dominions of the other, all manner of ſhips, whether for war or commerce, and that the enemies of either ſhall not enjoy that privilege.

That in caſe of ſhipwreck upon the coaſt of either nation, the effects that can be ſaved ſhall be reſtored, if reclaimed within the year and day, without any form of proceſs.

That neither party ſhall ſuffer the ſhips of the other to be made prize in their ports or harbours.

That this treaty ſhall ſubſiſt 25 years.

By a ſeparate article of the ſame date, the duty of 50 ſols a ton impoſed upon all foreign ſhips in France was taken off the Dutch, except only, when the latter ſhould lade in one port in France, to unlade at another in the ſaid kingdom. But the breaking out of the enſuing war put a ſtop to the execution of this treaty.

REMARKS.

We have dwelt the longer upon the point of maritime affairs and treaties, in diſcharge of our promiſe made to the public; and, in the ſubſequent parts of this work, we ſhall give the ſubſtance of other the moſt material treaties of this kind, which have ſubſiſted between the chief potentates of Europe. The uſe hereof is not only to convey ſome knowledge of the hiſtory of Chriſtendom, in relation to the ſtate of commerce, but to give readers, who may not have been converſant with affairs of this nature, ſuch an idea thereof from what is paſt, as may enable them the better to judge of the rectitude of what has been tranſacted of the like kind ſince. And,

From due attention to what ſhall be laid before the public on this head in the courſe of our undertaking, it will appear, that thoſe who take upon them to make treaties of commercial or maritime concerns, cannot be too well acquainted with the ſubject of trade and navigation; they cannot have too minute and familiar a knowledge of practical trade, who would judge of it to good purpoſe in any reſpect: a general notion, which only ſkims over the ſurface of commerce, can only afford an imaginary, not ſuch a real and ſubſtantial knowledge, as will enable a man to promote the public intereſt himſelf, or capacitate him to judge of the meaſures of others. For confirmation of the truth hereof, this work affords no little variety of inſtances. See in particular the articles COLONIES, CHAMBERS OF COMMERCE, BRITISH AMERICA, CONSULS, FRANCE, GRATIAS, LEVANT TRADE, NAVAL AFFAIRS, TRADE, TREATIES of COMMERCE, CUSTOM-HOUSE BUSINESS, DUTIES, &c. See alſo ſeveral of the other articles referred to at the beginning of this article, which have affinity with this ſubject.

MARLE, for the manuring and cultivation of land, is of various kinds and different colours. The earth generally known by the name of marle, is a light friable ſubſtance, of a middle nature between clay and chalk, but neither ſo fat as clay, nor ſo denſe as chalk, and ſticks to the tongue.

REMARKS.

Under the articles EARTH, FARMING, HUSBANDRY, MANURE, we have ſhewed the neceſſity of advancing the arts of agriculture, and have opened a ſcene to the improvement thereof in general. Likewiſe under ſuch other heads as we refer to from them, the ſame ſubject is purſued with all brevity and perſpicuity with relation to its fundamental particulars that concern trade, which is as much as the reader will expect in a work of this nature.

The moſt ordinary help for fertilization of land, is ſtercoration. Sheep's dung is one of the beſt, the next is the dung of kine, and, thirdly, that of horſes, which is held ſomewhat too hot unleſs it be mixed. That of pigeons for a garden, or a ſmall piece of ground, is excellent.

The method of applying the dung to arable land, is to ſpread it immediately before ploughing, ſo as to plough it in; for, if it ſpread long before, the ſun will exhale much of it's fatneſs. For grazing ground, the way is to ſpread it ſomewhat late, towards winter, that the ſun may have leſs power to dry it up.

The ſecond kind of compoſt is, divers kinds of earth; as marle, ſea-ſand, chalk, earth upon earth, pond earth, and mixtures of them. Marle is thought the beſt, as having moſt fatneſs, and not heating the ground too much *. The next is ſea-ſand, which obtains a particular virtue from the ſalt, for ſalt is the firſt rudiment of life. See the article SALT. Chalk overheats the ground a little, and therefore does beſt upon cold clay, or moiſt ground.

* See Sir Hugh Plat's Jewel-Houſe of Art and Nature, page 114, &c.

It is a common error to think chalk is ſo great a help to arable, but not to grazing ground. The error proceeds hence, that, after chalking of the ground, they wear it out by many crops without reſt, and then, indeed, it will bear little graſs. It was a good experiment to lay chalk upon arable ground a little before ploughing, and plough it in as they do dung; but then it muſt firſt be made friable by rain or lying. Earth is a compoſt to earth. A garden, that had a field, as it were, poured upon it, bore fruit excellently the firſt year, for the ſurface of the earth is always the moſt fruitful. And earth ſo prepared has a double ſurface. But ſuch earth as affords ſaltpetre, if procurable without too much charge, is beſt. The way to haſten the growth of ſaltpetre, is to exclude the ſun; and, therefore, to make a large thatched hovel over ſome quantity of ground, or even to plank the ground over, will produce ſaltpetre. Pond-earth, or river-earth, is a very good compoſt for manure; eſpecially if the pond has been long uncleaned, and ſo the water be not too hungry; and we judge it would be yet better, if mixed with chalk.

Another help for ground is procured by means of ſome other ſubſtances, though not merely earthy, having a virtue to fertilize: wherein aſhes excel, inſomuch that the countries about Ætna and Veſuvius have a kind of amends made them in the exceeding fertility of the ſoil, for the miſchief done them by the eruptions; which fertility is cauſed by the aſhes ſcattered over the ground.

Soot alſo, though thin ſpread in a field or garden, is found a very good compoſt. Salt is generally too coſtly: it has been tried, that mixed with ſeed-corn, and ſown together, it proves ſerviceable; and we are of opinion, that powdered chalk, mixed with ſeed-corn, would do good, perhaps as much as chalking the ground all over.

The ſuffering vegetables to die into, and ſo fatten the ground is another help; as the ſtubble of corn, eſpecially of peaſe. Brakes caſt upon the ground, in the beginning of winter, will make it very fruitful. It were proper alſo to try, whether leaves ſwept together, and mixed with ſome chalk and dung, to give them more heat, would not make a good compoſt, for there is nothing waſted ſo much as the leaves of trees: and, as they lie ſcattered and without mixture, they rather make the ground four than otherwiſe.

Heat and warmth is likewiſe a good help to ground. It has been anciently practiſed to burn heath, ling, and ſedge, with the advantage of the wind, upon the ground. We find that the warmth of walls and incloſures is an amendment; ſo is lying open to the ſouth, and the folding of ſheep, as well by their warmth as their compoſt: and, perhaps, the covering of ground with brakes in the beginning of the winter, may help by means of the warmth. The uſual way of gathering flints in flinty ground, and laying them in heaps, is no good huſbandry; becauſe they are magnets to heat, and would keep the ground warm.

Another help to fertility is watering, which may be done two ways; the one by letting in and ſhutting out the water at ſeaſonable times: for water let in at ſome times, if it ſtay not too long, does good; but at others, if it ſtay too long, hurt. And this only ſerves for meadows, adjacent to a river. The other way is, to bring water from ſome high grounds, where there are ſprings into the lower, carrying it in long furrows; and from theſe furrows drawing it tranſverſe, to ſpread the water, which makes an excellent improvement both for corn and graſs: though the expedient proves the richer, if theſe hanging grounds be fruitful, becauſe the water thus waſhes down ſome of the fatneſs of the earth. Generally where there are great overflows in ſens, or the like, the drowning them in water makes the following ſummer more fruitful, as keeping the ground warm and nouriſhing it. But the fenmen hold it, that the ſewers may be kept ſo as to continue the water too long in the ſpring, 'till the weeds and ſedge be grown up; becauſe then the ground, like a wood, will keep out the ſun, and ſo continue the wet, and never graze well that year. For more matter correſponding hereunto, ſee the articles EARTH, FARMING, FLAX, HUSBANDRY, MANURE.

Marles, beſides their application with other proper compoſts for vegetation, they afford a fit matter for the making of veſſels; ſuch as crucibles, retorts, bodies, &c. in chemiſtry. They likewiſe ſerve to procure the diſcontinuation and diviſion of certain ſalts and other materials, that would otherwiſe riſe and boil over in the operation. Theſe are, therefore, employed in the diſtillation of nitre, turpentine, wax, &c. They alſo contribute more materially, more intimately, and more eſſentially, as to quantity, in the fixation of certain bodies; as of oils, for example, of common ſulphur, and even of mercury. For which ſee Becher's firſt ſupplement to his Phyſica Subterranea.

MARQUE.

Of letters of marque and reprizal, granted on depredations committed on trade and navigation, and of reſtitution, &c.

Letters of marque are extraordinary commiſſions granted by authority for reparation to merchants, taken and deſpoiled by ſtrangers at ſea: and repriſals is the retaking, or taking again of one thing for another.

The goods of others may be taken upon the ſea, by letters of marque and jus repriſaliarum; but the ſame cannot be done by any private authority, only by the power of that prince or ſtate, whoſe ſubject the injured perſon is; nor is it grantable by authority, but where the party damaged has juſtice denied him, or the ſame is delayed contrary to the laws of nations: this law or cuſtom of reprizals was eſtabliſhed by the conſent of nations, and, without it, licence would be tolerated for the committing of depredations; but princes, by the laws of nations, are anſwerable for public injuries, and ſhould by prudent meaſures, prevent thoſe that are private, not ſuffering foreigners to receive wrongs in their countries: nor ſhould the prince of the perſon injured value his misfortune at ſo low a rate, as to deny him letters of requeſt for ſatisfaction; and, if juſtice be denied after ſuch requeſt, it is reaſonable to arm him with power, to take ſatisfaction by reprize and military force.

And

And there are uſually ſent two or three letters of requeſt, according to the ſatisfaction returned in anſwer, before the reprizal is awarded; and ſuch letters generally aſſign a time certain for damages to be repaired; if not, reprizals to iſſue forth.

King Charles I. after the maſſacre of the Dutch at Amboyna, granted letters of requeſt to the States of Holland for ſatisfaction within eight months, otherwiſe letters of reprizal were to follow. King Charles II. on the petition of Meſſ. Gouler and Canham, granted one Lee letters of requeſt to the great duke of Tuſcany, for redreſs againſt the government of Leghorn.

In the year 1674, the ſame prince iſſued out the like authority to the king of Spain, requiring ſatisfaction for the depredations committed on the ſhip and goods of Mr. Stampe at the Havanna. He alſo publiſhed the year following a proclamation, promiſing a reward for apprehending the offenders dead or alive.

In the proſecution of theſe letters there muſt be, 1. The oath of the party injured, or other ſufficient proof, touching the injury thereby ſuſtained. 2. A proof of due proſecution for obtaining ſatisfaction in a legal way. 3. The deferring or denial of juſtice. 4. A complaint to his own prince or ſtate. 5. Requiſition of juſtice made to the ſupreme head or ſtate, in the ordinary courſe it was denied. 6. Perſiſting ſtill in the denial of juſtice. After all which, letters of reprizal under ſuch reſtrictions and limitations as are conſonant to law, and as the caſe requires, may iſſue not only by the civil, but by the municipal laws of this kingdom: and then the prince of that country, againſt whom the ſame are awarded, muſt repair the damage out of his or their effects, who committed the injuries, or, if that proves deficient, it ought to fall as a common debt on his country.

Such authorities grantable by the laws of England are twofold, ordinary and extraordinary: the ordinary are either within the realm, or without the ſame; the firſt are grantable where Britiſh merchants have ſuffered in their perſons, and their merchandize are ſpoiled or ſeized beyond the ſeas, by merchant ſtrangers, and the Britiſh merchants upon ſuit, or the king's demanding of juſtice by his ambaſſadors, &c. cannot obtain ſatisfaction to the perſon injured; then the parties proving they have proſecuted the offenders in a due courſe of juſtice, and have been denied or delayed illegally to have right done them, ſhall, in ſuch caſe, have a writ out of Chancery to arreſt the merchant ſtrangers of that nation, or their goods in theſe kingdoms. And the lord chancellor, in this caſe, has always the approbation of the king and council for ſo doing.

The other reprizals without the realm, are by patent under the great ſeal, and cannot be ordinarily revoked; becauſe, after the perſon injured has petitioned, and according to law proved his loſs, obtained letters of requeſt, and no reparation has been made: as ſoon as the letters patents are ſealed, the ſame does immediately create and veſt a national debt in the grantee, to be ſatisfied in ſuch manner, and by ſuch means, as the ſaid letters patents direct, out of the goods and eſtates of that prince's ſubjects, who refuſed, or illegally delayed juſtice.

But, if the ſupreme power thinks the execution of theſe letters of reprizal cannot well be effected without endangering the peace of both ſtates, it may be reſpited till a more convenient time; and princes are careful, in granting ſuch letters patents, to have them made ſo as they may not be reckoned a breach of the peace; but the granting of them for particular ſatisfaction does not, in the ordinary way, amount to a breach.

As to the extraordinary reprizals, they are by letters of marque, for reparation at ſea, or any place out of the kingdom, granted by the ſecretaries of ſtate, with the approbation of the king and council; but they are only during the king's pleaſure, and generally in time of war, ſo that they may at any time be revoked.

In king Henry the IVth's reign, on the complaint of the commons of England, who had ſuffered many wrongs and injuries in the loſs of their ſhips and goods upon the main ſea, contrary to leagues, &c. which were violated by the ſubjects of other nations; and reciting the willingneſs of the parliament to provide remedy and relief for the grieved; a law was made, by which it is enacted, that, upon application to the keeper of the privy-ſeal, he ſhall ſign letters of requeſt to demand reparation; which, if not made in convenient time, then the lord chancellor of England ſhall grant letters of reprizal in due form of law, to obtain the ſame by force, and for the indemnity of the perſons injured: this is confirmed by ſtat. 4 Hen. V. cap. 7. and other ſtatutes.

But letters of reprizal were granted long before theſe ſtatutes, by the kings of England, by virtue of their prerogatives; nor was the king's prerogative in the leaſt diminiſhed by them, but remained at the common law, to judge when it was expedient to grant them; and the before-mentioned act of king Henry IV. notwithſtanding it ordains letters of requeſt and of reprizal, doth not reſtrain the king's prerogative therein.

The caſes where reprizals will or will not lie, are thus ſtated: on wrong judgment given in a proſecution abroad, in matters not doubtful which might have been redreſſed, and the which was apparently perverted or denied, reprizal may be granted: though, if the matter be doubtful, it is otherwiſe; for in cauſes dubious, there is preſumption that juſtice was truly adminiſtered. If an Engliſhman proſecutes a perſon in any legal court beyond the ſeas, whereupon the military governor oppoſes the ſuit, and by his means the debtor and his goods are conveyed away, but a ſentence or judgment is obtained: by this the execution is fruſtrated, and letters of reprizal ſhall be had.

Yet, if a merchant of England ſhall commence a ſuit in the courts of law, beyond the ſeas, and judgment paſſes againſt him, from which he appeals to the ſupreme court, and there the firſt judgment is confirmed and allowed; though the complainant hath received a judgment contrary to the right of the cauſe, here he ſhall not have letters of reprizal; but it may, in an extraordinary caſe, occaſion ſuch letters to have a rehearing.

If any perſon ſhall be killed, wounded, or any way damaged in an hoſtile manner, in the territories or places of any king or potentate, to whom letters of requeſt are tranſmitted, and no ſatisfaction ſhall be made to the perſon injured, there is no compulſion to reſort to the ordinary proſecution, but letters of reprizal ſhall be iſſued: but, where misfortunes happen to perſons, or their goods, reſiding in a foreign country in time of war, reprizals are not to be granted; in this caſe, they muſt be contented with the loſs, for they are at their liberty to relinquiſh the place on the approach of the enemy, when they foreſee the country is ſubject to devaſtation; and, if they continue, they muſt partake of the common calamity. It is not the place of any man's nativity, but of his habitation, that ſubjects him to reprize; for the law doth not conſider ſo much where he was born, as where he lives: therefore, if letters of reprizal ſhould be awarded againſt the ſubjects of the duke of Tuſcany, and a native of Florence, but denizened or living in England, ſhould have a ſhip on a voyage for Leghorn, if in ſuch caſe a capture be made of this ſhip, it is not lawful, nor can the ſame be made prize.

There are certain perſons, as well as ſhips and goods, that are exempted or privileged from reprizals; ſuch as ambaſſadors and their retinue; travellers through a country, ſtaying but a little while there; eccleſiaſtical perſons, &c. And a merchant of another place than againſt which reprizals are granted, although the factor of his goods were of that place, is not ſubject to reprizals. Molloy Jur. Marit. 21.

Where ſhips are driven into port by ſtreſs of weather, they have an exemption from the law of reprizals, according to common right; but by the laws of England it is ſaid to be otherwiſe, unleſs expreſsly provided for in the writ or commiſſion: and, if ſuch ſhip flies from his own country to avoid confiſcation, or for ſome other fault, and is driven to by ſtreſs of weather, ſhe may then become ſubject to be prize. But it is unlawful to make ſeizure of ſhip for reprizal in any ports, but in that prince's who awarded the reprizals, or his againſt whom the ſame are iſſued; the ports of other princes or ſtates are not to be diſturbed, but be peaceably maintained.

If a ſhip, having letters of marque or reprizal, ſhall take the ſhips and goods of that nation againſt whom they are awarded, and bring the ſame into a neuter port, the owners may there claim and ſeize her; or the admiral may make reſtitution, according to law, of the ſhip's goods to the owners, and the captives to their liberty; for that the ſame ought firſt to have been brought infra præſidia of that prince or ſtate, by whoſe ſubjects they were taken: and, if it be not ſo done, it has been reſolved, that ſuch ſhips cannot become lawful prize, nor are the owners of ſuch a caption diveſted of their property. Trin. 17 Car. I. in B. R. Marſh's Rep.

When any ſhip that hath letters of reprize attacks a veſſel, and ſhe refuſes to yield, ſhe may be aſſaulted and entered; and if it falls out, that by accident ſome of thoſe which make reſiſtance are ſlain, the fault will be at their own doors, for hindering the execution of what is legal and granted by authority. But in caſe a letter of marque ſhall knowingly take a ſhip and goods belonging to another nation, againſt whom the commiſſion is not awarded, but of ſome other ſtate in amity, this amounts to piracy; whereupon the offenders will incur a forfeiture of their veſſel, &c. Roll. Abr. 530. Though if ſuch letters of marque be aſſigned over to another perſon, who takes any ſuch ſhip or goods of another nation, on a preſumption that it belonged to the right of him, againſt whom reprizals are granted: here, if the ſufferers recover their goods and ſhip, yet the captors are not to be puniſhed criminally, nor the grantees of the letters patents civilly. The captors nevertheleſs may not be excuſed from anſwering the damages, but the grantees are excuſable both as to that and puniſhment, unleſs they are privy to the caption: it is like unto the caſe of an officer arreſting a wrong perſon, he is liable to anſwer the damage to the party arreſted, but not the perſon that employed him. Stat. 4 Hen. V. cap. 14. Sea Laws 470.

A perſon

A perſon who had letters of marque in the Dutch war, took an Oſtender inſtead of a Dutch ſhip, and brought her into harbour, and was proſecuted for damage, &c. And one Broom, by letters of marque, &c. under others, having taken a French ſhip at ſea, he carried the ſame into Africa, and the admiralty there condemned her as prize; afterwards he ſold her, and applied the money to his own uſe, and then, coming into England, he was ſued in the admiralty to give an account, and ſentence was given againſt him; though he appealed for a prohibition, but it was denied. 1 Lev. 248. 1 Salk. 32.

A ſhip being lawfully taken and brought into port, the captor muſt exhibit all his ſhip-papers and captive mariners to be examined, in order to adjudication; 'till when, and the goods are legally condemned, bulk ought not to be broken; nor may the captain permit any embezzlement of the lading, or ſell, barter, or diſpoſe of any part, without commiſſion, for the king hath a proportion in all prizes [ſee PRIZES]: and the common profits of prizes are to be equally divided among all the ſhips preſent, and not be ſolely to the captor; ſo that if letters of reprizal are granted to two ſhips, and they happen both of them at ſea to meet a prize, and the one attacks and enters her, by means whereof ſhe becomes conqueror, although the other did nothing in the engagement, he hath a right to an equal diſtribution with the captor, becauſe the preſence of the other veſſel, armed and prepared for battle, becomes a terror, and will occaſion a ſhip the ſooner to yield. 3 Eliz. cap. 5. 2 Leon. Rep. 182.

If the caption of any ſhip or goods be by men of war, the property will immediately be in the captors; except it be loſt again, and the ſhip or goods are recovered by the perſons from whom they were taken, or be in battle regained. And, by the law of nations, the dominion of the things taken by thoſe to whom letters of marque are granted, become the captors, 'till the debt and coſts, that is, the original damage and ſubſequent charges are ſatisfied; which being done, the reſidue ought to be reſtored: ſo the Venetians uſed their equity, having taken the ſhips of Genoa; they did not ſpoil any of the lading, but preſerved the ſame very carefully, until the debt was paid; and then they made reſtitution of the things entirely, without diminution. Molloy, 23.

In caſe the king of England ſhould be in enmity with the States of Holland, and one of their ſhips of war takes an Engliſh merchant-man, and afterwards another ſhip of war of England meets the Dutch ſhip and his prize, and regains the ſame, there reſtitution is commonly made, the owners paying the ſalvage: ſo where the prize is recovered by a friend in amity, or comes into his ports, reſtitution is to be made. And the taking of ſhips and goods by force and arms is ſo odious, that if, by any poſſibility, the right owners may have reſtitution, the ſame hath been granted. Ibid. 6, 7.

Where, for the fault, perhaps, of a few, a debt becomes national, the goods of the guiltleſs become liable (if taken) for ſatisfaction; but ſuch party ought to have contribution by the law of England, as when one is put to the whole burden, and more are bound to do one thing. Though when depredations have happened here to foreign merchants, and complaint hath been made concerning them, our kings have often iſſued commiſſions to enquire of the ſame, and awarded ſatisfaction: and, upon the petition of ſome merchants of Genoa, who complained againſt the inhabitants of the iſle of Guernſey for a depredation, in taking away and detaining their merchandize and goods to a conſiderable value, out of a ſhip wrecked by tempeſt near the ſaid iſle; on this a commiſſion was granted, by which the commiſſioners were impowered to puniſh the offenders, and make reſtitution and ſatisfaction for the damages ſuſtained. For as the Engliſh ſubjects may have their goods by way of reprize, for the ſatisfaction of a debt from foreigners, ſo they may have the benefit of theſe commiſſions, to make themſelves whole out of the eſtates of the offenders. Pat. 26 Edw. III. See ſtat. 31 Hen. VI. cap. 4.

But he that will ſue to have reſtitution in England for goods taken at ſea, muſt prove that the ſovereign of the party was in amity with the king of England, &c. and letters of reprizal make no war, or enmity between nations. 22 Edw. III.

MASTERS of SHIPS. See our article COMMANDERS of SHIPS, containing ſomething curious relating to the diſcovery of the LONGITUDE at ſea. See alſo LONGITUDE.

Mercatorial laws and uſages relating thereto.

The maſter of a ſhip or veſſel, is to be choſen by the part owners in proportion to their concerns, not by the majority; and that man which is moſt able, is to be preferred. As the whole charge of the veſſel and lading are committed to the maſter, the owners ſhould be very careful who they admit to be commander of their ſhip; and he ought to be a perſon of honeſty, as well as ability and experience.

The law looks upon a maſter as an officer, who muſt give an account for whatever he has under his care, and on failure to render ſatisfaction; therefore, if any misfortune happens by the negligence, wilfulneſs, or ignorance of himſelf or his mariners, he muſt be anſwerable for it. As ſoon as goods and merchandize are laden aboard the ſhip, whether ſhe be riding in port, haven, or any other part of the ſeas, he that is maſter is chargeable therewith; and, if the ſame be there loſt or purloined, or ſuſtain any damage, either in the haven or port before, or upon the ſeas after ſhe is in her voyage, he muſt anſwer the damage; for the very lading of the goods on board the ſhip doth ſubject the maſter to anſwer the ſame. Hob. Rep. 11. Molloy Jur. Marit. 197.

A merchant ſends goods aboard a ſhip, and the maſter having ſigned his bills of lading for the ſame, the goods were ſtowed; but in the night divers perſons, under pretence that they were preſs-maſters, entered the ſhip and robbed her of thoſe goods and merchandize; and, in an action brought by the merchant againſt the maſter of the ſhip, it was made a queſtion, whether he ſhould anſwer for it? And it was alledged on his part, that there was no default or negligence in him; for he had a ſufficient guard, the goods were all locked up under hatches, and that the thieves came on the pretence aforeſaid and robbed the ſhip, and he could not have prevented the ſame: but it was notwithſtanding adjudged, that, as maſter, he muſt at his peril ſee that all things are forth-coming that were delivered to him, let what accident will happen (the act of God or an enemy only excepted) and from fire, thieves, and the like, he is obliged to anſwer, and is in the nature of a common carrier; though it is at the merchant's election to charge either the maſter or the owners, or both, at his pleaſure, but he can have but one ſatisfaction, Hil. 23 Car. II. B. R. 2 Lev. 69. See alſo 1 Mod. 85.

Where the maſter is ſubject to anſwer damage, is generally to be underſtood in ſuch caſes, where the lading was brought abroad either by his conſent or his deputed ſervant's; for any other, or ſuch goods, as ſhall be ſecretly brought in not being entered in his deputed ſervant's book, or in the bills of lading, the maſter ſhall not be compelled to ſee forth-coming; unleſs it be ſuch things as the parties bring into the ſhip about them, as cloaths, money, or the like, which being ſeldom entered, yet commonly are viſible, and the maſter by law is reſponſible for them. So likewiſe if a maſter forewarn a paſſenger to keep his goods, and that he will no way take care of them, and, if they be loſt, or purloined by the ſhip's crew, he will not be obliged to ſee them forth-coming; here the maſter is not held anſwerable in caſe of a loſs, eſpecially if there be any thing of an agreement concerning it. Molloy, 215, 216.

But, if goods ſhall be ſent aboard a ſhip, and the maſter ſhall appoint a cabbin for the ſame, and deliver the key thereof to the lader, and tell him he will not be anſwerable if a loſs happens, yet, if the goods are ſtole, he muſt make ſatisfaction. And if a maſter ſhall receive goods at any kay, or ſend his boat for them, and they happen to be loſt, he ſhall likewiſe anſwer both by the maritime and common law. Moor's Rep. Trin. 25 Eliz. Moll, 216, 198.

If a maſter commits any offence wilfully, or through negligence, he ſhall be anſwerable to his owners, who may compel him to make ſatisfaction for the damages, and, in ſuch caſe, they may ſue ſeparately: ſo, alſo, if the ſhip hath earned freights, and ſome of the owners have received their parts, and the reſt have not, they may bring an action for their ſhare, without joining with the others. Hil. 26 and 27 Car. II. And, when goods are tranſported for hire, and no contract is made with the proprietors of the ſhip, there the maſter is chargeable for the goods in reſpect of his wages; and the owners are ſo in reſpect of their freight, that they receive for the carriage thereof. Per Holt chief juſtice.

It is ſaid, That, where goods are once delivered to a maſter, the cargo is not ſubject to be attached in his hands; for they are in law, as it were, bailed to the ſhip, until the freight and all other charges are paid. And it has been held, That, as the maſter or owners of a ſhip may have an action for the freight, either the one or the other are anſwerable, where goods are damaged in a ſhip; but, in caſe there are ſeveral owners, and one diſſents from the voyage, he ſhall not be liable to any action afterwards for a miſcarriage, &c. Comberb. Rep. 116.

If goods are ſo embezzled or damnified, that the ſeamen or mariners muſt anſwer, here the owners and maſters are to deduct the amount of the damage out of their freight to the merchants, and the maſter ſhall deduct it out of the wages of the mariners: for, though freight is the mother of wages, it is alſo the very father of damage; and, before a mariner can claim his wages out of what the ſhip hath earned, the ſhip muſt be acquitted from the damage that the merchant hath ſuſtained by the negligence or fault of the mariners: and the reaſon is, for that, the goods being obliged to anſwer the freight, ſo the freight and ſhip are tacitly engaged to clear the damage; and, when that is done, the mariners ſhall then be let into their wages. Molloy, 212.

The law doth impute the offences committed by mariners, or if done by paſſengers aboard the ſhip, or others, to be the negligence of the maſter, to make him liable; and, were it otherwiſe, the merchant would be in a very dangerous condition: and further reaſons why he ought to be anſwerable for his men are, becauſe the mariners are of his own chuſing, and under

owners. Redemption is a redemption by the maſter, and gives ſecurity for the payment of the money agreed, by ſubjecting his perſon as a pawn or pledge; ſo that he has, as it were, paid for the goods. This power of redemption is not founded on the Rhodian laws, or the laws of Oleron, but ariſes from the cuſtom and law of nations, and the ſame cuſtom or law, gives the maſter, in this caſe, an intereſt in the ſhip and goods. See OLERON LAWS and RHODIAN LAWS. Here Holt chief juſtice interrupted him, and ſaid, We are not now upon the merits of the cauſe, for that is not before us upon this motion.

It was agreed by the whole court, that no prohibition ſhould be granted in this caſe.

Holt chief juſtice ſaid, You come too ſoon for a prohibition, before appearance, and a libel filed, for you are not yet in court. If this proceſs be an illegal proceſs, and not juſtifiable by the rules of their law, you may take your remedy by an action of treſpaſs or replevin. The caſe of Sands and Sir Joſiah Child was on an action upon the ſtatute of Rich. II. and not on a prohibition, as was ſuggeſted.

We cannot try the legality of the proceſs upon a motion. If it come before us on an action of treſpaſs, we ſhall then judge both of the legality of the proceſs and the power of the maſter. If a replevin or an action of treſpaſs be brought, and there be a juriſdiction, we muſt determine whether what was done was legally done or no, upon whatſoever law it is grounded, whether eccleſiaſtical, maritime, the law of nations, or whether [H. J.] It ſeems very juſt and reaſonable in this caſe, that the owners of the goods ought to pay the redemption. If a pirate ſhould take the ſhip and goods, and the maſter redeem them, the owners ſhall make him ſatisfaction; and then much more in this caſe when taken by an enemy.

When the maſter makes a compoſition for the benefit of the owners, it is highly reaſonable that he ſhould be indemnified. The whole ſhip and goods would have been prize, if he had not made this compoſition; therefore, where there is an inſtant danger of loſing ſhip and goods (as in this caſe, when they were under the capture and power of the enemy) and no hopes of ſaving them then appears (though afterwards it may happen that the ſhip may be reſcued on freſh purſuit) cannot the maſter make ſuch an agreement as this, as well as he may throw part of the goods overboard, in caſe of a tempeſt, to ſave the reſt? The maſter has the cuſtody and care of the ſhip and goods: ſuppoſing then that the maſter has ſuch a power of compounding, the goods then remain to him as a ſecurity to him, and he may detain them 'till payment, as he may for freight. But then it is to be conſidered, whether when he has once delivered them to the owner, or to his uſe, he has not parted with his ſecurity, and has no way to come at them again, as it is in caſe of freight? Theſe things are conſiderable, if we go into the merits of the cauſe; but, that not being before us, I give no opinion therein.

Powell juſtice. This proceſs being only to compel the parties to appear, you come too ſoon for a prohibition before libel. We cannot determine the legality of the proceſs in this manner: if that court has a power in any caſe to proceed againſt the goods, and to ſeize them on proceſs, we ought not to grant a prohibition; for how does it appear to us, but that this proceſs is awarded in ſuch a caſe, wherein it lawfully may? As to the merits, it ſeems very reaſonable, that the maſter ſhould have power to make ſuch a redemption, as he may throw part overboard in a tempeſt, to ſave the reſt. And here the goods ſeem to remain in the nature of a pawn to the maſter, to ſecure the payment; and if the maſter, by delivering out of the goods, has loſt his intereſt therein, and ſo the ſeizure illegal, yet we cannot determine that on the return of the proceſs before libel: you may plead that matter there, but we cannot take notice that the proceſs is illegal; if it be, you have your remedy.

Gould agreed; Powis abſent. Lord Raymond, vol. ii. p. 931 to 934.

Clay verſus Snelgrave.

The defendant, as executrix to the maſter of a ſhip, libelled in the admiralty court for the wages owing to the teſtator by the owner. Upon which the plaintiff, to have a prohibition, ſuggeſted the ſtatute of 15 Rich. II. cap. 3. that the admiral court ſhall not have cognizance of contracts made upon the land, and ſhews this contract to have been made upon the land, &c. And this caſe was ſeveral times moved by Sir Bartholomew Shower and Mr. Acherley, for his prohibition, as well in Michaelmas, Hilary, and Eaſter terms laſt paſt, as in this preſent term: and it was oppoſed by Mr. Northey and Mr. Hall: and the counſel for the prohibition argued, That prohibitions are grantable de jure, and are not diſcretionary in the court. Raym. 3, 4. That the caſe, in Winch. Rep. 8. was the firſt caſe where a prohibition was denied in caſe of a ſuit by mariners for their wages in the admiralty court; and the denial was grounded upon compaſſionate reaſons, becauſe they were poor men, and becauſe there they might join in action, but here they muſt ſever; but the ſaid caſe is contrary to the reaſon and grounds of the law; for where the contract is made upon the land, though the ſervice was done upon the ſea, it is out of the juriſdiction of the admiralty; and ſo vice verſa, if the ſervice was done upon the land, and the contract upon the ſea. 12 Co. 79, 80. Stanf. 51. b. Hob. 212. A conſultation is always denied in caſe of a ſuit by mariners, if there is a charter-party: and the ſealing of a writing cannot make any difference in reaſon. Raym. 3. A prohibition granted where the maſter libelled alone. Mr. Northey and Mr. Hall è contra for the defendant ſaid, That the caſe of mariners was now ſettled, and ought not to be ſtirred; but that the great reaſon why they are permitted to ſue there is, the ſhip is the debtor, and, by the law of the admiralty, they may attach her, which they cannot do by the common law; and in the admiralty court they may all join in ſuit, whereas, by the common law, they muſt bring ſeveral actions. That the caſe of the maſter is not different, for the ſhip is ſecurity to him, and he is but a mariner, and his wages are wages at ſea. But, however, where the maſter dies in the voyage, as he did in this caſe, there can be no reaſon to exclude his executors from ſuing in the admiralty, becauſe he had no opportunity of bringing his wages to account with the owners.

And in 2 Ventr. 181. Alliſon verſ. Marſh, the purſer, though an officer of the ſhip, was allowed to ſue for his wages in the admiralty. And in 2 Keb. 779. Pl. 6. Rex verſus Pike, a prohibition was denied, where the maſter and mariners joined in a ſuit in the admiralty for their wages. [But Holt ſaid, That a prohibition ought to have been granted quoad in the ſaid caſe.] And he cited a caſe, Hil. 27 and 28 Car. II. C. B. between Cooker and Older, where Atkins and Ellis juſtices were of opinion, That a prohibition ought to be granted, to the ſuit in the admiralty court by a maſter of a ſhip for his wages; but North chief juſtice ſaid, and Wyndham juſtice held the contrary opinion. But Holt chief juſtice ſaid, That it is an indulgence that the courts at Weſtminſter permit mariners to ſue for their wages in the admiralty court, becauſe they may all join in ſuit; and it is grounded upon the principle, Quod communis error faciat jus; but they will not extend it to the maſter of the ſhip, eſpecially if he was maſter at the beginning of the voyage here in England, and the contract was made with him here. Poſſibly, if the maſter of a ſhip died in the voyage, and another man took upon him the charge of the ſhip upon the ſea, ſuch caſe might be different, as in the caſe of Groſſwick verſus Louthiſly, where it was held in this court lately, That, if a ſhip was hypothecated, and money borrowed upon her at Amſterdam, upon the voyage, he who lent the money may ſue in the admiralty for it; and this court granted a conſideration in the ſaid caſe. But in another caſe, where the money was borrowed upon the ſhip before the voyage, the King's Bench granted a prohibition, and the parties acquieſced under it. There are many precedents, in the court of admiralty, of ſuits by the mariners for their wages, but none for the maſter of the ſhip. And the caſes differ; for the mariners contract upon the credit of the ſhip, and the maſter upon the credit of the owners of the ſhip, of whom generally he is one.

The opinion of lord Hobart, That, where there is matter of property to be tried, a prohibition ſhould be granted, is a little too hard. Gould juſtice agreed with Holt, and ſaid, He was of opinion that prohibitions were grantable of right, though it had been controverted in his time. To which Holt chief juſtice ſaid, that Hale chief juſtice, and Wyndham juſtice, held prohibitions to be diſcretionary in all caſes; but Kelynge chief juſtice was of the contrary opinion: and he ſaid, He did not eſteem them to be matter of right. Then Mr. Northey moved, That the court would compel the plaintiff to put in bail to the action to be brought for the wages at common law, or otherwiſe deny the prohibition; which, he ſaid, had been done often. Holt chief juſtice confeſſed, That the court had ſometimes interpoſed, and procured bail to be given; but it was by conſent, and in caſe of the proprietor himſelf: but, in regard that in this caſe the plaintiff was a purchaſer without notice, there was no reaſon: and a prohibition was granted. Lord Raymond, page 576.

MATHEMATICS. We ſhall not enter into the origin of this ſcience of ſciences, nor attempt, under this ſingle head, to convey a competent knowledge of any of the ſeveral branches whereof it conſiſts; becauſe that would be only to amuſe and deceive our readers, and make them believe they receive great benefit, when they obtain only a very ſuperficial and confuſed notion of they know not what. Wherefore we ſhall, at preſent, content ourſelves with giving the man of buſineſs ſuch an idea of theſe ſtudies, that he may be able to judge what parts may be neceſſary for him to purſue, and what to let alone; which is the view in touching on this article at all.

In all ages and countries, where learning hath prevailed, thoſe ſciences have been eſteemed as the moſt conſiderable branch of it. Amongſt the ſciences that are reckoned to be the ſeven liberal arts, four are mathematical, to wit, arithmetic, muſic, geometry, and aſtronomy.

It is ſtrange, that, notwithſtanding their uſefulneſs and excellency, a general ſupineneſs and indifferency to theſe ſtudies ſhould of a ſudden ſpread itſelf among us; when, within theſe 30 years, nothing has been more faſhionable; which

muſt be owing to an averſion in the greateſt part of mankind to ſerious attention and cloſe reaſoning, or to their not comprehending ſufficiently the neceſſity and great utility of theſe in the other parts of uſeful learning: or, perhaps, from an opinion that this knowledge requires a peculiar genius and turn of head, which few are ſo happy as to be born with. For theſe, and probably ſome other reaſons, this ſtudy begins to be as generally neglected as it was warmly cultivated, and is now regarded only by ſome few, whoſe genius and curioſity have prompted them to it, or who have been forced upon it by it's immediate ſubſerviency to ſome particular art or employment.

We think, therefore, it may be of ſome public ſervice to ſhew, that, of all parts of human knowledge, the mathematics, for the improvement of the mind, for their aſſiſtance and ſubſerviency to other arts, and their uſefulneſs to the commonwealth, and it's trade, commerce, and navigation, deſerve ſtill to be highly encouraged, and univerſally ſtudied.

The advantages which accrue to the mind from this kind of knowledge, conſiſt chiefly in theſe things: (1.) In accuſtoming it to attention. (2.) In giving it a habit of cloſe and demonſtrative reaſoning. (3.) In freeing it from prejudice, credulity, and ſuperſtition.

1. Theſe ſtudies make the mind attentive to the objects which it conſiders. This they do by entertaining it with a great variety of truths, which are delightful and evident, but not obvious. Truth is the ſame thing to the underſtanding as muſic to the ear, and beauty to the eye. The moſt part of other ſciences conſiſting only of probable reaſonings, the mind has not where to fix; and, wanting ſufficient principles to purſue it's ſearches upon, gives them over as impoſſible. And youth is generally ſo much more delighted with mathematical knowledge than with the unpleaſant taſks that are ſometimes impoſed upon them, that many have been reclaimed from idleneſs and neglect of learning, and have acquired a habit of thinking, aſſiduity, and attention; qualities which we ought early to beget in their deſultory and roving minds.

The ſecond advantage which the mind reaps from this knowledge, is a habit of clear, demonſtrative, and methodical reaſoning. We are formed by nature to learn more by imitation than by precept: and we believe, in that reſpect, reaſoning is much like other arts (as dancing, ſinging, &c.) acquired by practice. By habituating ourſelves to reaſon cloſely about quantity, we acquire a habit of doing ſo in other things *. It is ſurprizing to reflect, what ſuperficial, inconſequential reaſonings, ſatisfy the moſt part of mankind. A witticiſm, a jeſt, a ſimilè, or a quotation of an author, paſſes for a mighty argument with too many: with ſuch things as theſe, are the moſt part of authors ſtuffed; and, from thoſe weighty premiſes, they infer their concluſions.

* 'He that has to do, ſays Mr. Locke, with young ſcholars, 'eſpecially in mathematics, may perceive how their minds 'open by degrees, and how it is EXERCISE alone that opens 'them. Sometimes they will ſtick a long time at a part 'of a demonſtration, not for want of will and application, 'but really for want of perceiving the connexion of two 'ideas; that, to one whoſe underſtanding is more exer-'ciſed, is as viſible as any thing can be. The ſame would 'be with a grown man beginning to ſtudy mathematics: 'the underſtanding, for want of uſe, often ſticks in a very 'plain way; and he himſelf that is ſo puzzled, when he 'comes to ſee the connexion, wonders what it was he 'ſtuck at, in a caſe ſo plain.

'I have mentioned mathematics, as a way to ſettle in the 'mind an habit of reaſoning cloſely and in train; not that 'I think it neceſſary, that all men ſhould be deep mathe-'maticians, but that, having got the way of reaſoning, 'which that ſtudy neceſſarily brings the mind to, they 'might be able to transfer it to other parts of know-'ledge, as they ſhall have occaſion. For, in all ſorts of 'reaſoning, every ſingle argument ſhould be managed as 'a mathematical demonſtration; the connexion and depen-'dance of ideas ſhould be followed, 'till the mind is brought 'to the ſource, on which it bottoms, and obſerves the co-'herence all along, though, in proofs of probability, one 'ſuch train is not enough to ſettle the judgment, as in de-'monſtrative knowledge.

'Where a truth is made out by one demonſtration, there 'needs no farther enquiry: but in probabilities, where 'there wants demonſtration to eſtabliſh the truth beyond 'doubt, there it is not enough to trace one argument to 'it's ſource, and obſerve it's ſtrength and weakneſs, but all 'the arguments, after having been ſo examined on both 'ſides, muſt be laid in balance, one againſt another, and, 'upon the whole, the underſtanding determine it's aſſent.

'This is a way of reaſoning the underſtanding ſhould be 'accuſtomed to, which is ſo different from what the illi-'terate are uſed to, that even learned men oftentimes ſeem 'to have very little, or no notion of it. Nor is it to be 'wondered, ſince the way of diſputing in the ſchools leads 'them quite away from it, by inſiſting on one topical argu-'ment, by the ſucceſs of which the truth or falſhood of 'the queſtion is to be determined, and victory adjudged to 'the opponent or defendant; which is all one, as if one 'ſhould balance an account by one ſum, charged and diſ-'charged, when there are an hundred others to be taken 'into conſideration.

'This, therefore, it would be well, if men's minds were 'accuſtomed to, and that early; that they might not erect 'their opinions upon one SINGLE VIEW, when ſo many 'others are requiſite to make up the account, and muſt 'come into the reckoning, before a man can form a right 'judgment. This would enlarge their minds, and give a 'due freedom to their underſtandings, that they might not 'be led into error, by preſumption, lazineſs, or precipi-'tancy; for I think no body can approve ſuch a conduct 'of the underſtanding, as ſhould miſlead it from truth, 'though it be ever ſo much in faſhion to make uſe of it.

'To this, perhaps, it will be objected, that to manage the 'underſtanding, as I propoſe, would require every man to 'be a ſcholar, and to be furniſhed with all the materials of 'knowledge, and exerciſed in all the ways of reaſoning. 'To which I anſwer, that it is a ſhame for thoſe that have 'time, and the means to attain knowledge, to want any 'helps or aſſiſtance for the improvement of their under-'ſtandings, that are to be got, and to ſuch I would be 'thought here chiefly to ſpeak. Thoſe, methinks, who, 'by the induſtry and parts of their anceſtors, have been 'ſet free from a conſtant drudgery to their backs and their 'bellies, ſhould beſtow ſome of their ſpare time on their 'heads, and open their minds, by ſome trials and eſſays, 'in all the ſorts and matters of reaſoning.

'I have before mentioned mathematics, wherein algebra 'gives new helps and views to the underſtanding. If I 'propoſe theſe, it is not, as I ſaid, to make every man a 'thorough mathematician, or a deep algebraiſt, but yet I 'think the ſtudy of them is of infinite uſe, even to grown 'men; firſt, by experimentally convincing them, that, to 'make any one REASON WELL, it is not enough to have 'parts wherewith he is ſatisfied, and that ſerve him well 'enough in his ordinary courſe. A man in thoſe ſtudies 'will ſee, that, however good he may think his under-'ſtanding, yet in many things, and thoſe very viſible, it 'may fail him. This would take off that preſumption 'which moſt men have of themſelves in this part, and 'they would not be ſo apt to think their minds wanted no 'helps to enlarge them, that there could be nothing added 'to the acuteneſs and penetration of their underſtandings.

'The ſtudy of mathematics would ſhew them the neceſſity 'there is, in reaſoning, to ſeparate all the diſtinct ideas and 'ſee the habitudes that all thoſe, concerned in the preſent 'enquiry, have to one another, and to lay by thoſe, 'which relate not to the propoſition in hand, and wholly to 'leave them out of the reckoning. This is that, which, 'in other ſubjects, beſides quantity, is what is abſolutely 'requiſite to juſt reaſoning, though in themſelves it is not 'ſo eaſily obſerved, nor ſo carefully practiſed. In thoſe 'parts of knowledge, where it is thought demonſtration 'has nothing to do, men reaſon as it were in the lump; 'and if, upon a ſummary view, or upon a partial con-'ſideration, they can raiſe the appearance of a probability, 'they uſually reſt content; eſpecially if it be in a diſpute, 'where every little ſtraw is laid hold on, and every thing 'that can but be drawn in any way, to give colour to the 'argument, is advanced with oſtentation. But that mind 'is not in a poſture to find the truth, that does not diſtinctly 'take all the parts aſunder, and, omitting what is not at 'all to the point, draw a concluſion from the reſult of all 'the particulars, which any way influence it. There is 'another no leſs uſeful habit to be got, by an application 'to mathematical demonſtrations, and that is, of uſing the 'mind to a long train of conſequences.' Thus Mr. Locke.

This effeminacy of mankind, in being perſuaded where they are delighted, have made them the ſport of orators, poets, and men of wit. Thoſe lumina orationis are indeed good diverſion for the fancy, but not the proper buſineſs of the underſtanding. Even formal logical precepts are more uſeful. But, in the ſearch of truth, an imitation of the method of the geometers will carry a man further than all the dialectical rules. Their analyſis is the proper model we ought to form ourſelves upon, and imitate in the diſpoſition and gradual progreſs of our enquiries; and even he who is ignorant of the nature of mathematical analyſis, uſes a method ſomething analogous to it. The method of the geometers in demonſtrating truths already diſcovered, viz. by definitions of words agreed upon, by axioms, and propoſitions that have been already demonſtrated, is practicable in other ſubjects, though not to the ſame perfection, the natural want of evidence in the things themſelves not admitting it, but it is imitable in a very great degree. One who has been trained up in the ſeveral branches of thoſe ſciences, which they have cultivated, will hardly bear with the confuſion of other ſciences, but endeavour to reform them.

Thirdly, Mathematical knowledge adds a manly vigour to the mind, frees it from prejudice, credulity, and ſuperſtition. It does this two ways, 1ſt, By accuſtoming us to examine, and not to take things upon truſt. 2dly, By giving us a clear and extenſive knowledge of the ſyſtem of the world; which, as it creates in us a profound reverence for it's great author, ſo it frees us from the mean and narrow thoughts, which ignorance and ſuperſtition are apt to beget. How great an enemy mathematics are to ſuperſtition, appears from this, that, in thoſe countries where Romiſh prieſts exerciſe their barbarous tyranny over the minds of men, aſtronomers, who are fully perſuaded of the motion of the earth, dare not ſpeak out: but, though the inquiſition may extort

a recantation, the Pope and a general council will not find themſelves able to perſuade to the contrary opinion. Perhaps this may have given occaſion to a calumnious ſuggeſtion, as if mathematics were an enemy to religion, which is a ſcandal thrown both on the one and the other; for truth can never be an enemy to true religion, which appears always to the beſt advantage, when it is moſt examined. On the contrary, theſe ſtudies are friends to religion; inaſmuch as they charm the rational paſſion, reſtrain the impetuoſity of imagination, and purge the mind from error and prejudice. Vice is error, confuſion and falſe reaſoning, and all truth is more or leſs oppoſite to it.

What we have ſaid, may ſerve to recommend mathematics for acquiring a vigorous conſtitution of mind; for which purpoſe they have been experienced as uſeful, as exerciſe is towards the health and ſtrength of the body.

We ſhall now touch upon their extent and uſefulneſs in other parts of knowledge. And here it might ſuffice to obſerve, that mathematics is the ſcience of quantity, or the art of reaſoning about things that are capable of more or leſs, and that the moſt part of the objects of our knowledge is ſuch; as matter, ſpace, number, time, motion, gravity, &c.—We have but imperfect ideas of things without quantity, and as imperfect a one of quantity itſelf without the help of mathematics. All the viſible works of nature are made in number, weight, and meaſure; therefore, to conſider them, we ought to underſtand arithmetic, geometry, and ſtatics: and, the greater advances we make in theſe arts, the more capable we are of conſidering, for all the uſeful purpoſes of life, ſuch things as are the ordinary objects of our conception. This will further appear from particulars.

1. If we conſider, to what perfection we know the courſes, periods, order, diſtances, and proportions of the ſeveral great bodies of the univerſe, that fall within our view, we ſhall have cauſe to admire the ſagacity and induſtry of the mathematicians, and the power of numbers and geometry well applied.

Let us conſider aſtronomy in it's infancy, or rather let us ſuppoſe it ſtill to begin; for inſtance, a colony of rude country people, tranſplanted into an iſland remote from the commerce of all mankind, without ſo much as the knowledge of the calendar, and the periods of the ſeaſons, without inſtruments to make obſervations, or any the leaſt notion of obſervations or inſtruments. When is it we could expect any of their poſterity ſhould arrive at the art of predicting an eclipſe? Not only ſo, but the art of calculating all eclipſes that are paſt or to come, for any number of years, which has proved of unſpeakable uſe and conſolation to mankind. When is it, we could ſuppoſe, that one of thoſe iſlanders, tranſported to any other place of the earth, ſhould be able, by the inſpection of the heavens, to find how much he were ſouth or north, eaſt or weſt of his own iſland? Though we know this may be, and is daily done, by what is known in aſtronomy, yet when we conſider the vaſt induſtry, ſagacity, multitude of obſervations, and other extrinſic things neceſſary for ſuch a ſublime piece of knowledge, one would be apt to pronounce it impoſſible, and never to be hoped for.

Now we are let ſo much into the knowledge of the machine of the univerſe, and motion of it's parts by the rules of this ſcience, perhaps the invention may ſeem eaſy. But when we reflect, what penetration and contrivance were neceſſary to lay the foundations of ſo great and extenſive an art, we cannot but admire it's inventors: as Thales Mileſius, who, as Diogenes Laërtius and Pliny ſay, firſt predicted eclipſes; and his ſcholar Anaximander Mileſius, who found out the globous figure of the earth, the equinoctial points, the obliquity of the ecliptic, the principles of gnomonics, and made the firſt ſphere or image of the heavens; and Pythagoras, to whom we owe the diſcovery of the true ſyſtem of the world, and order of the planets. Though it may be, they were aſſiſted by the Egyptians and Chaldeans. But, whoever they were that firſt made theſe bold ſteps in this noble art, they deſerve the praiſe and admiration of all future ages.

Though the induſtry of former ages had diſcovered the periods of the great bodies of the univerſe, and their true ſyſtem and order, and their orbits pretty near, yet was there one thing reſerved for the glory of this age, and the honour of the Engliſh nation, the grand ſecret of the whole machine; which, now it is diſcovered, proves to be (like the other contrivances of infinite wiſdom) ſimple and natural, depending upon the moſt known, and moſt common property of matter, viz. gravity. From this the incomparable Sir Iſaac Newton has demonſtrated the theories of all the bodies of the ſolar ſyſtem, of all the primary planets and their ſecondaries, and among others the moon, which ſeemed moſt averſe to numbers: and not only of the planets, the ſloweſt of which compleats it's period in leſs than half the age of man, but likewiſe of the comets, ſome of which it is probable ſpend more than 2000 years in one revolution about the ſun; for whoſe theory he laid ſuch a foundation, that after-ages, aſſiſted with more obſervation, are able to calculate their return. In a word, the preceſſion of the equinoctial points, the tides, the unequal vibration of pendulous bodies in different latitudes, &c. are no more a queſtion to thoſe, that have geometry enough to underſtand what he has delivered on theſe ſubjects: a perfection in philoſophy, that the boldeſt thinker durſt hardly have hoped; and, unleſs mankind turn barbarous, will continue the reputation of this nation, as long as the fabric of nature ſhall endure. After this, what is it we may not expect from geometry, joined to obſervation and experiments?

The next conſiderable object of nature we take to be LIGHT. How unſucceſsful enquiries are about this glorious body without the help of geometry, may appear from the empty and frivolous diſcoveries of a ſort of men, whom nothing will ſerve, forſooth, but the knowledge of the very eſſence and intimate cauſes of every thing: while, on the other hand, the geometers, not troubling themſelves with thoſe fruitleſs reſearches about the nature of light, have diſcovered two remarkable properties of it, in the reflection and refraction of it's beams: and from theſe, and their ſtraitneſs in other caſes, have invented the noble arts of OPTICS, CATOPTRICS, and DIOPTRICS; teaching us to manage this ſubtile body for the improvement of our knowledge, and uſeful purpoſes of life. They have likewiſe demonſtrated the cauſes of ſeveral celeſtial appearances, that ariſe from the inflection of it's beams, both in the heavenly bodies themſelves and other phænomena, as parhelia, the iris, &c. and by other experiments they have diſcovered the celerity of it's motions. And we know yet more ſurprizing properties of light, from the works of that ſuperlative philoſopher Sir Iſaac Newton.

The fluids which involve our earth, viz. air and water, are the next great and conſpicuous bodies, that nature preſents to our view: and it may be we know little of either, but what is owing to mechanics and geometry.

The two chief properties of air, it's gravity and elaſtic force, have been diſcovered by mechanical experiments. From thence the decreaſe of the air's denſity, according to the increaſe of the diſtance of the earth, has been demonſtrated by geometers, and confirmed by experiments of the ſubſidence of the mercury in the Torricellian experiment*. From this alſo, by aſſiſtance of geometry, they have determined the height of the atmoſphere, as far as it has any ſenſible denſity, which agrees exactly with another obſervation of the duration of the twilight. Air and water make up the object of the hydroſtatics, though denominated only from the latter, of which the principles were long ſince ſettled and demonſtrated by Archimedes, who has demonſtrated the cauſes of ſeveral ſurprizing phænomena of nature, depending only on the æquilibrium of fluids, and of ſolids ſwimming or ſinking therein. Here alſo the mathematicians conſider the different preſſures, reſiſtances, and celerities, of ſolids moved in fluids: whence they explain a great many appearances of nature, unintelligible to thoſe who are ignorant of geometry.

* A term frequently uſed among phyſical writers, in the phraſes, Torricellian tube, and Torricellian experiments, on account of the inventor Torricelli, a diſciple of the great Galileo.—The Torricellian tube is a glaſs tube about 3 feet long, and $3\frac{1}{4}$ of an inch diameter, whoſe upper orifice is hermetically ſealed. The Torricellian experiment is performed by filling the tube with mercury, then ſtopping the orifice with a finger, inverting the tube, and plunging that orifice in a veſſel of mercury.—This done, the finger is removed, and the tube ſuſtained perpendicularly to the ſurface of the mercury in the veſſel.—The conſequence is, that part of the mercury falls out of the tube into the veſſel, and there only remains enough in the tube to fill from 28 to 31 inches of it's capacity, above the ſurface of the ſtagnant mercury in the veſſel.—Thoſe 28, &c. inches of mercury are ſuſtained in the tube by the preſſure of the atmoſphere on the ſurface of the ſtagnant mercury; and according as that atmoſphere is more or leſs heavy, or as the winds, blowing upwards or downwards, heave up or depreſs the air, and ſo increaſe or diminiſh it's weight and ſpring, more or leſs mercury is ſuſtained from 28 inches to 31.—The Torricellian experiment makes what we now call the barometer.

If we deſcend to the animal kingdom, there we may diſcern the brighteſt ſtrokes of divine mechanics. Whether we conſider the animal œconomy in general, either in the internal motion and circulation of the juices forced through the ſeveral canals by the motion of the heart, or their external motions, and the inſtruments wherewith theſe are performed, we muſt reduce them to mechanical rules, and confeſs the neceſſity of the knowledge of mechanics, to underſtand them, or explain them to others. Borelli, in his excellent treatiſe De Motu Animalium; Steno, in his Myologiæ Specimen, and other mathematical men on the one hand, and the nonſenſical, unintelligible traſh, that the common writers on theſe ſubjects have filled their books with on the other, are ſufficient inſtances to ſhew, how neceſſary geometry is in ſuch ſpeculations.

The only organ of an animal body, whoſe ſtructure and manner of operations are fully underſtood, has been the only one, which the geometers have taken to their ſhare to conſider. It is incredible, how fillily the greateſt and ableſt phyſicians talked of the parts of the eye and their uſe, and of the modus viſionis, before Kepler, by his geometry, found it out,

out, and put it paſt diſpute, though they applied themſelves particularly to this, and valued themſelves on it: and Galen pretended an extraordinary divine commiſſion to treat of it. Notwithſtanding the full diſcovery hereof, ſome go on in copying their predeceſſors, and talk as ungeometrically as ever. It is true, we cannot reaſon ſo clearly of the internal motions of an animal body, as of the external, wanting ſufficient data and deciſive experiments: but what relates to the latter (as articulation, ſtructure, inſertion, and vires of the muſcles) is as ſubject to ſtrict mathematical diſquiſition, as any thing whatſoever; and, even in the theory of diſeaſes and their cures, thoſe who talk mechanically, talk moſt intelligibly. Which may be the reaſon for the opinion of the ancient phyſicians, that mathematics are neceſſary for the ſtudy of medicine itſelf, for which we might bring long quotations out of their works.

If one of the reaſons of the ancients for this was heretofore unfaſhionable, to wit, becauſe they thought a phyſician ſhould be able to know the ſituation and aſpects of the ſtars, which they believed had influence upon men and their diſeaſes (and poſitively to deny it, and ſay, that they have none at all, is the effect of want of obſervation *) we have a much better and undoubted one in it's room, viz. That mathematics are found to be the beſt inſtrument of promoting natural knowledge.

* See Dr. Mead on the Sun and Moon.

If alſo we conſider, not only the animal œconomy in general, but likewiſe the wonderful ſtructure of the different ſorts of animals, according to the different purpoſes for which they were deſigned; the various elements they inhabit, the ſeveral ways of procuring their nouriſhment, and propagating their kind; the different enemies they have, and accidents to which they are ſubject; here is ſtill a greater need of geometry. It is rare, that the qualities of an expert anatomiſt and ſkilful geometer meet in the ſame perſon. Such, however, have diſcovered a whole terra incognita of delightful knowledge, to employ their time and reward their induſtry.

As for the other two kingdoms, Borelli, and others mathematically turned, ſeem to reaſon very clearly of vegetation *: and Steno, another mathematician, has applied this part of learning very handſomely to foſſils, and ſome other parts of natural hiſtory. We ſhall add only one thing more, That if we conſider motion itſelf, the great inſtrument of the actions of bodies upon one another, the theory of it is entirely owing to the geometers; who have demonſtrated it's laws, both in hard and elaſtic bodies; ſhewed how to meaſure it's quantity, how to compound and reſolve the ſeveral forces by which bodies are agitated, and to determine the lines which thoſe compound forces make them deſcribe: of ſuch forces gravity, being the moſt conſtant and unerring, affords a great variety of uſeful knowledge †, in conſidering ſeveral motions that happen upon the earth, viz. as to the free deſcent of heavy bodies, the curve of projectiles, the deſcent and weight of heavy bodies when they lie on inclined planes, the theory of the motion of pendulous bodies, &c.

* See Dr Stephen Hales's Vegetable Statics.

† See Sir Iſaac Newton's works, and thoſe of his illuſtrators.

From what has been ſaid, we ſhall draw but one corollary, That a natural philoſopher, without mathematics, is a very odd ſort of a perſon that reaſons about things that have bulk, figure, motion, number, weight, &c. without arithmetic, geometry, mechanics, ſtatics, &c.*

* So wild and extravagant have been the notions of a great part of philoſophers, both ancient and modern, that it is hard to determine, whether they have been more diſtant in their ſentiments from truth, or from one another; or have not exceeded the fancies of the moſt fabulous writers, even poets and mythologiſts. This was owing to a precipitate proceeding in their enquiries, and a neglect of geometry and experiment; without the aſſiſtance of which, it is impoſſible the powers of natural agents ſhould be diſcovered.

The manner of philoſophizing, among the ancients, was to aſcribe to bodies certain arbitrary properties, ſuch as beſt ſerved their purpoſe in accounting for the phænomena of nature; from whence proceeded ſo many various ſects of philoſophers, every one aſſigning a different cauſe to the ſame appearance, as his particular genius and imagination led him.

The chief agreement, obſervable among moſt of them, conſiſts in this, viz. that they conceived all bodies, as compoſitions of air, earth, fire, and water, or ſome one or more of them, from whence theſe acquired the name of principles or elements, which they ſtill retain.

Epicurus advanced a little farther, and aſſerted, that tho', bodies conſiſted of ſome one or more of theſe, yet that they were not ſtrictly elements, but that theſe themſelves conſiſted of atoms; by an accidental concourſe of which (as they were moving through infinite ſpace in lines nearly parallel) all things received their form and manner of exiſtence (a).

(a) For the opinions of the ancient philoſophers, conſult Diogenes Laërtius, and Stanley's Lives.

Des Cartes has contrived an hypotheſis very different from the reſt: he ſets out with a ſuppoſition, that the univerſe at firſt was entirely full of matter; that from this matter, when firſt put in motion, there would neceſſarily be rubbed off (by the grinding of the ſeveral parts one againſt another) ſome particles ſufficiently fine to paſs through the hardeſt and moſt ſolid bodies, without meeting with any reſiſtance: of theſe conſiſts his materia ſubtilis, or materia primi elementi. Thoſe which did not ſo far loſe their firſt figure, as to come under the denomination of materia primi, or ſecundi elementi, he called materia tertii elementi; and maintained, that all the variety which appears in natural bodies, was owing to different combinations of thoſe elements.

He likewiſe ſuppoſes, that God created a certain quantity of motion, and aſſigned it to this maſs of matter; and that that motion (being once created) could no more be annihilated, without an omnipotent hand, than body itſelf: in conſequence of which he was obliged to teach, that the quantity of motion is always the ſame: ſo that, if all the men and animals in the world were moving, yet ſtill there would be no more motion than when they were at reſt, the motion which they had not, when at reſt, being transferred to the æther. So unaccountable are the notions of this great philoſopher, that it is ſurprizing his doctrine ſhould have met with ſuch univerſal reception, and have got ſo ſtrong a party of philoſophers on his ſide.

Des Cartes has been ſaid, by a late writer (a) to have joined, to his great genius an exquiſite ſkill in mathematics, and, be mixing geometry and phyſic together, to have given the world hopes of great improvements in the latter. But this writer ought to have conſidered, that what he looked upon in Des Cartes's book of Principles, as demonſtrations, are only illuſtrations, there not being a demonſtration from geometry in all his philoſophical works (b).

(a) Mr. Wotten, in his Reflections on Ancient and Modern Learning.

(b) See this ſubject diſcuſſed in Keil's Introduction to his Examination of Dr. Burnet's Theory.

The preſent method of philoſophizing, eſtabliſhed by Sir Iſaac Newton, is to find out the laws of nature by experiments and obſervations. To this, with a proper application of geometry, is owing the great advantage the preſent ſyſtem of philoſophy has over all the preceding ones, and the vaſt improvements it has received within the laſt age. It is, indeed, in vain to imagine, that a ſyſtem of natural philoſophy can be framed by any other method; for, without obſervations, it is impoſſible we ſhould diſcover the phænomena of nature; without experiments, we muſt be ignorant of the mutual actions of bodies; and, without geometry, we can never be certain whether the cauſes we aſſign be proportionate to the operations we would account for, as the various ſyſtems of philoſophy built on other foundations evidently ſhew.

This way of ſearching into nature was firſt propoſed by my lord Bacon, [ſee the article PHILOSOPHY,] proſecuted by the Royal Society, the Royal Academy at Paris, the Hon. Mr. Boyle, Sir Iſaac Newton, &c.

What wonderful advancement in the knowledge of nature may be made by this method of enquiry, when conducted by a genius equal to the work, will be beſt underſtood by conſidering the diſcoveries of that excellent philoſopher laſt mentioned.

To him it is principally owing, that we have now a rational ſyſtem of natural philoſophy; it is he, who, by purſuing the ſure and unerring method of reaſoning from experiment and obſervation, joined with the moſt profound ſkill in geometry, has carried his enquiries to the moſt minute and inviſible parts of matter, as well as to the largeſt and moſt remote bodies in the univerſe, and has eſtabliſhed a ſyſtem not ſubject to the uncertainty of a mere hypotheſis, but which ſtands upon the ſecure baſis of geometry itſelf.

Every body knows, that chronology and geography are indiſpenſible preparations for hiſtory: a relation of matter of fact being a very lifeleſs thing, without the circumſtances of time and place. Nor is it ſufficient for one, that would underſtand things thoroughly, that he knows the topography, that is, the name of the country, where ſuch a place lies, with thoſe of the near adjacent places, and how theſe lie in reſpect of one another; but it will become him likewiſe to underſtand the ſcientifical principles of the art: that is, to have a true idea of a place, we ought to know the relation it has to any other place, as to the diſtance and bearing, it's climate, heat, cold, length of days, &c. which things much enliven the reader's notion of the very action itſelf. Juſt ſo, it is neceſſary to know the doctrinal part of chronology, if a man would be thoroughly ſkilled in hiſtory, it being impoſſible without it to unravel the confuſion of hiſtorians. Dr. Halley, I think, has determined the day and hour of Julius Cæſar's landing in Britain, from the circumſtances of his relation. And it is well enough known, how great uſe our incomparable hiſtorian, Mr. Dodwell, has made of the calculated time of eclipſes, for ſettling the times of great events, which before were, as to this eſſential, circumſtances almoſt fabulous.

Both chronology and geography, and alſo the ſun and moon's motions, ſo far as they relate, not only to the conſtitution

of the calendar and year, are neceſſary to a divine, but in order to the right underſtanding of the ſcriptures: we have a remarkable inſtance of this within the preſent year, by the Rev. and learned Mr. John Kennedy, author of the New Scripture Chronology*.

* See the reverend author's New Scripture Chronology—And the Doctrine of Commenſurability, between the diurnal and annual motions, illuſtrated and confirmed by above a hundred calculations, which are all adjuſted to the meridian of Greenwich, and publiſhed to aſcertain the aſtronomical principles of the Pentateuch of Moſes.—The moſt accurate obſervations which can be made for the current year, & ſeq. are appealed to as the only proper teſt of their truth.
If this reverend and learned author's diſcovery ſhould prove true, it will be of unſpeakable ſervice to the cauſe of religion, and have a happy tendency to convince learned men of the divine authority of the ſcripture.—But this is beſide my province.

No body, we ſuppoſe, will queſtion the intereſt that mathematics have in painting, muſic, and architecture, which are all founded on numbers. Perſpective and the rules of light and ſhadows are owing to geometry and optics: and we think theſe two comprehend pretty near the whole art of painting, except decorum and ornaments; which are only a due obſervance of the hiſtory and circumſtances of the ſubject repreſented.
If mathematics had not reduced muſic to a regular ſyſtem, by contriving it's ſcales, it had been no art, but enthuſiaſtic rapture, left to the roving fancy of every practitioner. This appears by the extraordinary pains which the ancients have taken to fit numbers to three ſorts of muſic, the diatonic, chromatic, and inharmonic: which, if we conſider, with their nicety in diſtinguiſhing their ſeveral modes, we ſhall be apt to judge they had ſomething very fine in their muſic, at leaſt for moving the paſſions with ſingle inſtruments and voices.
But muſic had been imperfect ſtill, had not arithmetic ſtepped in once more, and Guido Aretinus, by inventing the temperament, and making the fifth falſe by a certain determined quantity, taught us to tune our organs, and intermix all the three kinds of the ancients, to which we owe all the regular and noble harmony of our modern muſic.
As for civil architecture (of military we ſhall ſpeak afterwards) there is hardly any part of mathematics, but is ſomeway ſubſervient to it. Geometry and arithmetic for the due meaſure of the ſeveral parts of a building, the plans, models, computation of materials, time and charges: for ordering right it's arches and vaults, that they may be both firm and beautiful: mechanics for it's ſtrength and firmneſs, tranſporting and raiſing materials: and optics for the ſymmetry and beauty. And no one ſhould aſſume the character of an architect, without a competent ſkill in all theſe. Vitruvius requires theſe and many more, for making a complete architect.
It muſt be acknowledged, that ſhould any one ſet up to practiſe in any of the aforementioned arts, furniſhed only with his mathematical rules, he would produce but very clumſy pieces. He that ſhould pretend to draw by the geometrical rules of perſpective, and compoſe muſic merely by his ſkill in harmonical numbers, would ſhew but aukward performances. In thoſe compoſed ſubjects, beſides the ſtiff rules, there muſt be fancy, genius, and habit. Nevertheleſs, theſe arts owe their being to mathematics, as laying the baſis of their theory, and affording them precepts, which, being once invented, are ſecurely relied upon by practitioners. Thus many deſign, that know not a tittle of the rules they practiſe by; and many, no more qualified in their way, compoſe muſic better, perhaps, than he could have done that invented the ſcale, and the numbers upon which their harmony is founded.
As mathematics laid the foundation of theſe arts, ſo they muſt improve them; and he that would invent, muſt be ſkilled in numbers. Beſides, it is fit a man ſhould know the true grounds and reaſons of what he ſtudies: and he that does ſo, will certainly practiſe in his art with greater judgment and variety, where the ordinary rules fail him.
We ſhall now proceed to ſhew the more immediate uſefulneſs of mathematics in civil affairs. To begin with arithmetic; it were an endleſs taſk to relate it's ſeveral uſes in public and private buſineſs. The regulation and quick diſpatch of both ſeem entirely owing to it. The nations that want it are altogether barbarous, as ſome Americans, who can hardly reckon above 20. And I believe it would go near to ruin the trade of the nation, were the eaſy practice of arithmetic aboliſhed: for example, were the merchants and tradeſmen obliged to make uſe of no other than the Roman way of notation by letters, inſtead of our preſent. And, if we ſhould feel the want of our arithmetic in the eaſieſt calculations, how much more in thoſe, that are ſomething harder; as intereſt, ſimple and compound, annuities, logarithmetical tables, &c. in which it is incredible, how much the ordinary rules and tables influence the diſpatch of buſineſs.

Arithmetic is not only the great inſtrument of private commerce, but thereby, in conjunction with the incomparable art of debtor and creditor properly applied, are, or ought to be, kept the public accounts of the nation: we mean not only the accounts of the public revenue in all it's branches, but thoſe likewiſe that regard the whole ſtate of a commonwealth, as to the number, fructification of it's people, increaſe of flock, improvement of lands and manufactures, balance of trade, coinage, military power by ſea and land, &c.—Thoſe that would judge or reaſon truly about the ſtate of any nation, muſt go that way to work, ſubjecting all the forementioned particulars to calculation. This is the true political knowledge. In this reſpect the affairs of a commonwealth differ from thoſe of a private family, only in the greatneſs and multitude of particulars, that make up the accounts. Machiavel goes this way to work, in his account of different eſtates. What Sir William Petty and ſeveral others have wrote in political arithmetic, does abundantly ſhew the uſefulneſs of ſuch ſpeculations. It is true, for want of good information, their calculations ſometimes proceed from erroneous ſuppoſitions, but that is not the fault of the art. But what is it the government could not perform this way, with regard to our own dominions in particular, who have the command of all public records?
Laſtly, numbers are applicable even to ſuch things, as ſeem to be governed by no rule, ſuch we mean as depend on chance: the quantity of probability, and proportion of it to any two propoſed caſes, being ſubject to calculation as much as any thing elſe. See the articles ANNUITIES, LEASES, LIVES [ANNUITIES on LIVES], LOTTERIES, MORTALITY [BILLS of MORTALITY.]
Upon this depend the principles of game. We find ſharpers know enough of this, to cheat ſome men that would take it very ill to be thought bubbles: and one gameſter exceeds another, as he has a greater ſagacity and readineſs in calculating his probability to win or loſe in any propoſed caſe. To underſtand the theory of chance, thoroughly, requires no little knowledge of numbers, and a pretty competent one of algebra.
The ſeveral uſes of geometry are not fewer than thoſe of arithmetic. It is neceſſary for aſcertaining of the property both in planes and ſolids, or in ſurveying and gauging. By it land is ſold by the meaſure, as well as cloth: workmen are paid the due price of their labour, according to the ſuperficial or ſolid meaſure of their work: and the quantity of liquors determined for a new regulation of their price and duty. All which do wonderfully conduce to the eaſy diſpatch of buſineſs, and the preventing of frauds and controverſies. We need not mention the meaſuring diſtances, laying down of plans and maps of countries, in which we have daily experience of it's uſefulneſs. Theſe are ſome familiar inſtances of things, to which geometry is ordinarily applied: of it's uſe in civil, military, and naval architecture, we ſhall ſpeak afterwards.
From aſtronomy we have the regular diſpoſition of our time in a due ſucceſſion of years, which are kept within their limits as to the return of the ſeaſons, and the motion of the ſun. This is of no ſmall advantage for the due repetition of the ſame work, labour, and actions. For many of our public, private, military, and country affairs, appointments, &c. depending on the products of the ground, and they on the ſeaſons; it is neceſſary, that the returns of them be adjuſted pretty near to the motion of the ſun, and we ſhould quickly find the inconveniency of a vague undetermined year.
Beſide, the adjuſting of the moon's motion to the ſun's is required for the decent obſervation and celebration of the feaſts and faſts of the eſtabliſhed church, according to the antient cuſtom and primitive inſtitution; and likewiſe for the knowing of the ebbing and flowing of the tides, the ſpring and neap-tides, currents, &c. So that, whatever ſome people may think of an almanack where all theſe are repreſented, it is ſometimes the moſt uſeful paper that is publiſhed the ſame year with it: nay, the nation could, perhaps, better ſpare all the voluminous authors in the term catalogue, than that ſingle ſheet.
The mechanics have produced ſo many uſeful engines ſubſervient to conveniency, that it would be a taſk too great to relate only the ſeveral ſorts of them: ſome of them keep life itſelf from being a burthen. If we conſider ſuch as are invented for raiſing weights, and are employed in building and other great works, in which no impediment is too great for them; or hydraulic engines for raiſing of water, ſerving for great uſe and comfort to mankind, where they have no other way to be ſupplied readily with that neceſſary element; or ſuch as, by making wind and water work for us, ſave animal force and great charges, and perform thoſe actions, which require a great multitude of hands, and without which every man's time would be too little to prepare his own aliment and other neceſſaries; or thoſe machines that have been invented by mankind for delight and curioſity, imitating the motions of animals, or other works of nature; we ſhall have reaſon enough to admire and extol ſo excellent an art. What ſhall we ſay of the ſeveral inſtruments, which are contrived to meaſure time? We ſhould quickly find the value of them,

if

if we were reduced to the condition of thoſe barbarous nations that want them. The pendulum-clock, invented and compleated by that famous mathematician Monſ. Huygens, is an uſeful invention. Is there any thing more wonderful than ſeveral planetary machines, which have been invented to ſhew the motions of the heavenly bodies, and their places at any time?

Here we ſhould not forget to mention the ſciatherical inſtruments, for want of which there was a time, when the Grecians themſelves were obliged to meaſure the ſhadow, in order to know the hour; and, as Pliny (cap. ult. lib vii.) tells us, the Romans made uſe of an erroneous ſun-dial for 99 years, 'till Q. Marcius Philippus their cenſor ſet up a better; which at that time, doubtleſs, was thought a jewel. And, at laſt, that famous pyramid was ſet up in the Campus Martius, to ſerve for a gnomon to a dial marked on the ſtreet. To this ſort of engines ought to be referred ſpheres, globes, aſtrolabes, projections of the ſphere, &c. theſe are ſuch uſeful and neceſſary things, that alone may recommend the art by which they are made. For by theſe we are able in our cloſet to judge of the celeſtial motions, and to viſit the moſt diſtant places of the earth, without the fatigue and danger of voyages; to determine concerning their diſtance, ſituation, climate, nature of the ſeaſons, length of their days, and their relation to the celeſtial bodies, as much as if we were their inhabitants. To all theſe might be added thoſe inſtruments, which the mathematicians have invented to execute their own precepts, for making obſervations either at ſea or land, and for ſurveying, gauging, &c.

The catoptrics and dioptrics furniſh us with variety of uſeful inventions, both for the promoting of knowledge, and the conveniencies of life; whereby ſight, the great inſtrument of our preception is ſo much improved, that neither the diſtance, nor the minuteneſs of the object, are any more impediments to it. The teleſcope is of ſo vaſt uſe, that beſides the delightful and beneficial purpoſes it is applied to here below, as the deſcrying ſhips and men, and armies at a diſtance, we have by it's means diſcovered new parts of the creation, freſh inſtances of the ſurprizing wiſdom of the ſupreme and almighty cauſe. We have thereby diſcovered the ſatellites of Jupiter, the ſatellites and ring of Saturn, the rotation of the planets about their own axes, beſides other appearances, whereby the ſyſtem of the world is made plain to ſenſe, as it was before to reaſon.

The teleſcope has alſo improved the manner of aſtronomical obſervations, and made them much more accurate, than it was poſſible for them to be before. And theſe improvements in aſtronomy have brought along with them correſpondent improvements in geography. From the obſervation of Jupiter's ſatellites, we have a ready way to determine the longitude of places on the earth. On the other hand, the microſcope has not been leſs uſeful in helping us to the ſight of ſuch objects, as by their minuteneſs eſcape our naked eye. By means hereof men have purſued nature into her moſt retired receſſes, ſo that ſhe can hardly any more hide her greateſt myſteries from us. How much have we learned, by the help of the microſcope, of the contrivance and ſtructure of animal and vegetable bodies, and of the compoſition of fluids and ſolids?

But if theſe ſciences had never gone further than, by their ſingle ſpecula and center, to give thoſe ſurprizing appearances of objects and their images, and to produce heat unimitable by our hotteſt furnaces, and to furniſh infallible, eaſy, cheap, and ſafe remedies for the decay of our ſight, ariſing commonly from old age and from purblindneſs; they had merited the greateſt eſteem, and invited to the cloſeſt ſtudy: eſpecially if we conſider, that ſuch as naturally are almoſt blind, and either know not their nearcſt acquaintance at the diſtance of a room's breadth, or cannot read, in order to paſs their time pleaſantly, are, by glaſſes adapted to the defect of their eyes, ſet on a level again with thoſe that enjoy their eye ſight beſt, and that without danger, pain, or charge.

Mathematics are likewiſe highly ſerviceable to a nation in military affairs. I believe this will be readily acknowledged by every body. The affairs of war take in number, ſpace, force, diſtance, time, &c. (things of mathematical conſideration) in all it's parts, in tactics, caſtramentation, fortifying, attacking, and defending. The ancients had more occaſion for mechanics in the art of war than we have: gun-powder readily producing a force far exceeding all the engines they had contrived for battery: and this we reckon has loſt us a good occaſion of improving our mechanics; the cunning of mankind never exerting itſelf ſo much as in their arts of deſtroying one another. But, as gun-powder has made mechanics leſs ſerviceable to war, it has made geometry more neceſſary: there being a force or reſiſtance in the due meaſures and proportions of the lines and angles of a fortification, which contribute much towards it's ſtrength.

This art of fortification has been leſs ſtudied of late years in this kingdom than in ſome neighbouring ones, which was too apparent in the late war: nor dare we affirm that it has attained it's utmoſt perfection in any: and though, where the ground is irregular, it admits but of ſmall variety, the meaſures being pretty well determined by geometry and experience, yet, where the ground is made up of natural ſtrength and weakneſſes, it affords ſome ſcope for thinking and contrivance.

But there is another much harder piece of geometry, which gun-powder has given us occaſion to improve, and that is the doctrine of projectiles, whereon the art of gunnery is founded. Here the geometers have invented a beautiful theory, and rules and inſtruments, which have reduced the caſting of bombs to great exactneſs. As for tactics and caſtramentation, mathematics retain the ſame place in them as ever; and ſome tolerable ſkill in theſe is neceſſary for officers, as well as for engineers.

An officer that underſtands fortification will, cæteris paribus, much better defend his poſt, as knowing wherein it's ſtrength conſiſts, or make uſe of his advantage to his enemy's ruin, than he that does not. He knows, when he leads ever ſo ſmall a party, what his advantages and diſadvantages in defending and attacking are, how to make the beſt of his ground, &c. and hereby can do truly more ſervice than another of equal courage, who, for want of ſuch knowledge, it may be, throws away himſelf and a number of brave fellows under his command: and it is well, if the miſchief reaches no further. As for a competent ſkill in numbers, it is ſo neceſſary to officers, that no man can be ſafely truſted with a company that has it not. All the buſineſs is not to fire muſquets; the managing of affairs, the dealing with agents, &c. happen more frequently: and, the higher the command is, the more ſkill in all the aforeſaid things is required. And I dare appeal to all the nations in Europe, whether, cæteris paribus, officers are not advanced in proportion to their ſkill in mathematical learning, except that ſometimes great names and quality carry it; but ſtill ſo, as that the prince depends upon a man of mathematical learning, that is put as director to the quality, when that learning is wanting in them.

Laſtly, Navigation, which is made of aſtronomy and geometry, is ſo noble an art, and to which mankind owes ſo many advantages, that, upon this ſingle account, thoſe excellent ſciences deſerve moſt of all to be ſtudied, and merit the greateſt encouragement from a nation that owes to it both it's riches and ſecurity. And not only does the common art of navigation depend on mathematics, but whatever improvements ſhall be made in the architectura navalis, or building of ſhips, or ſhips of war, whether ſwift-running, or bearing a great ſail, or lying near the wind, be deſired; theſe muſt all be the improvements of geometry.

Ship-carpenters, indeed, are very induſtrious; but, in theſe things, they acknowledge their inability, confeſs that their beſt productions are the effects of chance, and implore the geometers help. Nor will common geometry do the buſineſs; it requires knowledge of the moſt abſtruſe geometry to determine the different ſections of a ſhip, according as it is deſigned for any of the aforeſaid ends.

The great objection that is made by ſome againſt the neceſſity of mathematics, in the forementioned great concerns of navigation, the art military, &c. is, that we ſee thoſe affairs are carried on and managed by ſuch as are not great mathematicians, as ſeamen, engineers, ſurveyors, gaugers, clock-makers, glaſs-grinders, &c. and that the mathematicians are commonly ſpeculative, retired, ſtudious men, that are not for an active life and buſineſs, but content themſelves to ſit in their ſtudies, and pore over a ſcheme or a calculation.

To which there is this plain and eaſy anſwer: the mathematicians have not only invented and ordered all the arts abovementioned, by which thoſe grand affairs are executed, but have laid down precepts, contrived inſtruments and abridgments ſo plainly, that common artificers are capable of practiſing by them, though they underſtand not a title of the grounds on which the precepts are built: and in this they have conſulted the good and neceſſities of mankind.

Thoſe affairs require ſo great a number of people to manage them, that it is impoſſible to breed ſo many good, or even tolerable mathematicians. The only thing then to be done was to make their precepts ſo plain and familiar, that they might be underſtood and practiſed by a multitude of men. This will beſt appear by examples.

Nothing is more ordinary than diſpatch of buſineſs by common arithmetic, by the tables of ſimple and compound intereſt, annuities, &c. extraction of the ſquare and cube roots, logarithms, &c. yet how few men of buſineſs underſtand the reaſons of common arithmetic, or the contrivance of thoſe tables, and rationale of thoſe rules, now they are made, but ſecurely rely on them that are made? They were the able mathematicians that made thoſe precepts ſo plain, and inveſtigated thoſe rules, and calculated thoſe tables, that facilitate the practice ſo much. Nothing is more univerſally neceſſary than the meaſuring of plains and ſolids: and it is impoſſible to breed ſo many good mathematicians as that there may be many that underſtand all the geometry requiſite for ſurveying, and meaſuring of priſms and pyramids, and their parts, and meaſuring fruſtums of conoids and ſpheroids, in every market-town where ſuch work is neceſſary.

The mathematicians have therefore inſcribed ſuch lines on their common rules, and ſliding rules, and adapted ſo plain

precepts to them, that every country carpenter and gauger can do the buſineſs accurately enough, though he knows no more of the rational foundation of thoſe inſtruments, tables, and precepts he makes uſe of, than a hobby-horſe.

So, in navigation, it is impoſſible to breed ſo many good mathematicians as would be neceſſary to ſail the hundreth part of the ſhips of the nation. But the mathematicians have laid down ſo plain and diſtinct precepts, calculated neceſſary tables, and contrived convenient inſtruments, ſo that a ſeaman that knows not the truths on which his precepts and tables depend, may practiſe ſafely by them. They reſolve triangles every day that know not the reaſon of any one of their operations. Seamen, in their calculations, make uſe of artificial numbers, or logarithms, they know nothing of their contrivance: and, indeed, all thoſe great inventions of the moſt famous mathematicians had been almoſt uſeleſs for thoſe common and great affairs, had not the practice of them been made practically intelligible to thoſe who cannot underſtand them. Whence it is plain, that it is to thoſe ſpeculative retired men we owe the rules, the inſtruments, the precepts for uſing them, and the tables which facilitate the diſpatch of ſo many great affairs, and ſupply mankind with ſo many conveniencies of life. They were the men that taught the world to apply arithmetic, aſtronomy, and geometry to ſailing, without which the needle would be ſtill uſeleſs. Juſt the ſame way, in the other parts of mathematics, the precepts that are practiſed by multitudes, without being underſtood, were contrived by ſome few great mathematicians.

Since then it has been ſhewn how much mathematics improve the mind, how ſubſervient they are to other arts, and how immediately uſeful to the commonwealth, and it's commercial emolument, there need no other motives to governments to encourage them. This is the natural concluſion from theſe premiſes. Plato, in his Republic, lib. 7, takes care, That whoever is to be educated for magiſtracy, or any conſiderable poſt in the commonwealth, may be inſtructed firſt in arithmetic, then in geometry, and thirdly in aſtronomy. And, however neceſſary thoſe arts were in Plato's time, they are much more ſo now: the arts of war and traffic requiring much more the aſſiſtance of thoſe ſciences now, than they did then, as being brought to a greater height and perfection. And accordingly we ſee theſe ſciences are the particular care of princes that deſign to raiſe the force and power of their countries. It is well known that this is none of the leaſt arts whereby the French king has brought his ſubjects to make that figure at ſea which they at this time do; I mean the care he takes for educating thoſe appointed for ſea-ſervice in mathematical learning: for in the ordinance marine, title 8, he orders that there be profeſſors to teach navigation publicly in all the ſea-port towns, who muſt be well ſkilled in deſigning, and teach it to their ſcholars, in order to lay down the appearances of coaſts, &c. They are to keep their ſchools open, and read four times a week to the ſeamen, where they muſt have charts, globes, ſpheres, compaſſes, quadrants, aſtrolabes, and all books and inſtruments neceſſary to teach their art.

The directors of hoſpitals, alſo, are obliged to ſend thither yearly two or three of their boys to be taught, and to furniſh them with books and inſtruments. Thoſe profeſſors are obliged to examine the journals depoſited in the office of admiralty, in the place of their eſtabliſhment, to correct the errors in preſence of the ſeamen, and to reſtore them within a month, &c.

King Charles II. who well underſtood the importance of eſtabliſhments of this nature, founded one ſuch ſchool in Chriſt's Hoſpital, London. And his majeſty king William III. during the time of the war, eſtabliſhed a mathematical lecture to breed up engineers and officers, as knowing very well the importance thereof. And this continued ſome time after the peace. And it is worthy the conſideration of the wiſdom of the nation, whether the reſtoring and continuing this, even in peace, be not expedient for the breeding of engineers, who are ſo uſeful and valuable, and ſo difficult to be had in time of war, and ſo little dangerous in times of peace.

Beſides the croud of merchants, ſeamen, ſurveyors, engineers, ſhip-carpenters, artizans, &c. that are to be inſtructed in the practice of ſuch parts of mathematics as are neceſſary to their own buſineſs reſpectively, a competent number of able mathematicians ought to be entertained, in order to apply themſelves to the practice; not only to inſtruct the former ſort, but likewiſe to remove thoſe obſtacles, which ſuch as do not think beyond their common rules cannot overcome. And doubtleſs it is no ſmall impediment to the advancement of arts, that ſpeculative men and good mathematicians are unacquainted with the particular defects of thoſe people, and the ſeveral circumſtances in them, that render things practicable or impracticable.

But, if there were effectual public encouragement, we ſhould have ſkilful mathematicians employed in thoſe arts, who would certainly find out and remedy the imperfection of them. The lords commiſſioners of the admiralty knowing that there are ſtill two great deſiderata in navigation, viz. the theory of the variation of the magnetic needle, and a method of finding out the longitude of any place that may be practicable at ſea [ſee the article LONGITUDE] and being ſenſible of what importance it would be to find out either of them, formerly employed a very capable perſon, the learned and ingenious Dr. Halley, who had joined an entire acquaintance in the practice to a full and thorough knowledge of the more abſtruſe parts of mathematics. And, although that great man was not able to make thoſe diſcoveries, yet he has been of important ſervice to navigation, by correcting the ſituation of the coaſts where he touched, and, by them, others.

The next thing that is neceſſary for the improvement of mathematical learning is, that mathematics continue to be more generally and conſtantly ſtudied at our univerſities * than they at preſent are. From thoſe ſeminaries the ſtate juſtly expects and requires thoſe who are acquainted both with the ſpeculation and practice. In thoſe are all the encouragements to them imaginable, leiſure and aſſiſtance: there are at hand all requiſite books and inſtruments, as alſo other ſcholars that have made equal progreſs, and may be aſſociates in ſtudy, and the direction of the profeſſors. There are alſo in perfection all the incitements to this ſtudy, and eſpecially an acquaintance with the works of the ancients, where this learning is ſo much recommended. Here other faculties are ſtudied, to which thoſe ſtudies are ſubſervient. There alſo are the nobility and gentry bred, who, in due time, muſt be called to their ſhare in the government of the fleets, army, treaſury, and other public employments, where mathematical learning is abſolutely neceſſary, and without which they, though of never ſo great natural abilities, muſt be at the mercy and diſcretion of their ſervants and deputies, who will firſt trick them, and then laugh at them for ſuffering it. And not only public employments, but their private concerns, require mathematical knowledge. If their fortunes lie in woods, coal, ſalt, manufactures, &c. the neceſſity of this knowledge is open and known: and, even in land eſtates, no undertaking for improvement can be ſecurely relied upon without it. It not only makes a man of quality and eſtate his whole life more illuſtrious, and more uſeful for all affairs, but, in particular, it is the beſt companion for a country life. Were this ever to continue a faſhionable ſtudy (and the mode exerciſes it's empire over learning, as well as other things) it is hard to tell how far it might influence the morals of our nobility and gentry, in rendering them ſerious, diligent, curious, taking them off from the more fruitleſs and airy exerciſes of the fancy, which they are apt to run into.

* Does it not well deſerve a public enquiry, how and from what cauſes it proceeds, that ſo many of the Britiſh nobility and gentry are ſent in their youth to foreign univerſities, for their education? It cannot be pretended that travelling is the motive, while they are confined in a college?

The only objection I can think of that is brought againſt theſe ſtudies is, that mathematics require a particular turn of head, and a happy genius that few people are maſters of, without which, all the pains beſtowed upon the ſtudy of them are in vain: they imagine that a man muſt be born a mathematician. To which it may be anſwered, that this exception is common to mathematics with other arts. That there are perſons who have a peculiar capacity and fitneſs to one more than another, will hardly be denied: and from experience, we preſume, it is not in any higher degree true concerning mathematics than the others: a man of good ſenſe and application is the perſon that is by nature fitted for them, eſpecially if he begins betimes: and, if his circumſtances have been ſuch that this did not happen, by prudent direction the defect may be ſupplied, as much as in any art whatſoever. The only advantage, I am afraid, this objection has is, that it lies on the ſide of ſoftneſs and indolence, thoſe powerful allies.

In order to obtain a fundamental knowledge of theſe ſciences, we would lay it down as a principle, that no gentleman ſhould be taught the practice of any rule without the true and ſolid reaſon and demonſtration of the ſame. Rules without demonſtration muſt and ought to be taught to ſeamen, artizans, &c. as has been already obſerved; and ſchools for ſuch people are fit in ſea-ports and trading towns; but it is far below the dignity of the noblemen or gentlemen, or any who are deſigned for ſolid and true learning, to do this. It is by ſuch meaſures that all muſt be raiſed, who are able to remedy the defects of the practical and commercial arts: and, therefore, nothing on them muſt be taken by truſt. Seamen and ſurveyors, gaugers and accountants, &c. remember their rules, becauſe they are perpetually practiſing them: but ſcholars, who are not thus employed, if they know not the demonſtration of them, preſently forget them.

Secondly, It has been thought a great miſtake by our ableſt mathematicians, that any part of their ſciences ſhould be taught by compendiums: this follows from the former. Compendiums are fit to give a general and ſuperficial knowledge, not a thorough one. It's time, and not the bulk of books, we ought to be ſparing of: and we may appeal to any perſon of experience, whether ſolid knowledge is not acquired in ſhorter time by books treating fully of their ſubjects, than by compendiums and abridgments.

From

From hence it follows, that the elements of arithmetic and geometry are to be taught. Euclid, in his thirteen books of Elements, gives us both: but our preſent way of notation ſuperſedes ſome of thoſe of arithmetic, as demonſtrating the rules from the operations themſelves. There remain then the firſt ſix books for the geometry of plains, and the laſt three for ſtereometry. The reſt ought to be read in their own place, for the perfection of arithmetic. In teaching theſe care ought to be taken to make uſe of ſuch examples as ſuit with the condition of the learner: for inſtance, merchants accounts and affairs for examples of the operations of arithmetic, to one that is afterwards to have a concern that way; whereas, to a man of the firſt quality, examples ſhould be drawn from keeping an accurate account of his eſtate, either in land or money, &c. from the increaſe and decreaſe of the people, the ſtate of the public revenue, and from land or ſea-force, and other principles of political arithmetic. For it is certain nothing makes one tired ſooner than the frivilous and trifling examples that are commonly brought for the exerciſe of the rules of arithmetic, debtor and creditor, and geometry, &c. tho' this is common to them with the other arts, as grammar, logic, &c.

The manner of writing of the mathematicians of this and the former age makes trigonometry, with the manner of conſtructing it's tables, almoſt elementary; and the practical geometry, commonly ſo called, is very fit to come next, as an elegant application of the elements of geometry to buſineſs, as ſurveying, gauging, &c.

After the elements of ſpherics, a full inſight into the principles of aſtronomy will be neceſſary.

Mechanics follow after to be read, which are the ground of a great part of natural learning; and afterwards opties, catoptrics, and dioptrics.

But none of theſe, except the elements, can be fully underſtood until one is pretty well ſkilled in conic ſections; and all theſe are made more eaſy by ſome tolerable ſkill in algebra, and it's application to geometry.

Theſe foundations being laid, any one may, with great eaſe, purſue the ſtudy of the mathematics, as his occaſions require, either in it's abſtract parts, and the more recondite geometry, and it's application to natural knowledge; or in mechanics, by proſecuting the ſtaties, hydroſtatics, &c. or in aſtronomy, by it's application to geography, navigation, gnomonics, aſtrolabes, &c. But, in moſt of theſe, a particular order is not neceſſary: any one may take that firſt which he is moſt inclined to, after he has laid the requiſite foundation in arithmetic, algebra, and geometry.

Remarks on the article Mathematics.

Our intention, by this ſummary of the univerſal utility of mathematical learning, is with a view to give the commercial claſs of people, as well as others of quality and diſtinction, ſuch an idea of thoſe ſtudies, that they may apply themſelves only or chiefly to ſuch parts as may be ſuitable to their condition and plan of life. And, from what has been ſaid, it is manifeſt beyond contradiction, that this kind of literature, taken in it's comprehenſive latitude, has been, and is ever like to be, while duly cultivated, the grand parent of numberleſs beneficial arts and trades; and, therefore, cannot be too much encouraged in commercial ſtates: yet we are ſorry to obſerve, that theſe ſtudies rather decline than advance among us, for want of their profeſſors being ſuitably cheriſhed and diſtinguiſhed.

The victories which take up the greateſt part of hiſtory, and attract admiration the moſt, have generally no other effects but the deſolation of countries, the deſtruction of cities, and the ſlaughter of men. Thoſe ſo-much boaſted heroes of antiquity, have they made a ſingle man the better? Have they made many men happy? And if, by the founding of ſtates and empires, they have procured poſterity ſome advantage, how dearly have they made their contemporaries pay for it, by the rivers of blood they have ſhed? Thoſe very advantages are confined to certain places, and have a certain duration.

Of what utility to us, at this day, are either Nimrod, Cyrus, or Alexander? All thoſe great names, all thoſe victories which have aſtoniſhed mankind from time to time, thoſe princes and conquerors, with all their magnificence and vaſt deſigns, are returned into nothing with regard to us; they are diſperſed like vapours, and are vaniſhed like phantoms.

But the inventors of all arts aiding to the commercial induſtry and proſperity of mankind have laboured for all ages of the world. We ſtill enjoy the fruits of their application and induſtry. They have provided, at a great diſtance, for all our occaſions: they have procured for us every convenience of life: they have converted all nature to our uſes: they have reduced the moſt indocile matter to our ſervice: they have taught us to extract from the bowels of the earth, and even from the deeps of the ſea, the moſt precious riches; and, what is infinitely more eſtimable, they have opened to us the treaſures of other ſciences, and have guided us to knowledge the moſt ſublime, the moſt uſeful, and the moſt worthy of our nature. They have put into our hands, and placed before our eyes, whatever is moſt proper to adorn the mind, to direct our manners, and to form good citizens, good magiſtrates, and good princes. Theſe are part of the benefits we have received from thoſe who have invented, and brought arts and ſciences to perfection.

The better to know their value, let us tranſport ourſelves in imagination back to our infancy of the world, and thoſe groſs ages when man, condemned to eat his bread by the ſweat of his brow, was without aids and inſtruments, and obliged, however, to cultivate the earth, that he might extract nouriſhment from it; to erect himſelf huts and roofs for his ſecurity; to provide cloathing for his defence againſt the froſts and rains; and, in a word, to find out the means to ſatisfy all the neceſſities of life. What labours, what difficulties, what diſquiets! All which are ſpared us.

We do not ſufficiently conſider the obligations we are under to thoſe equally induſtrious and laborious men, who made the firſt eſſays in arts, and applied themſelves in thoſe uſeful but elaborate reſearches. That we are commodiouſly houſed, that we are cloathed, that we have cities, walls, habitations, temples, ſhipping, navigation, and commerce; to their induſtry and labour we are indebted for them all. It is by their aid our hands cultivate the fields, build houſes, make ſtuffs and habits, work in braſs and iron; and, to make a tranſition from the uſeful to the agreeable, that we uſe the pencil, handle the chiſſel and graver, and touch inſtruments of muſic. Theſe are ſolid temporal felicities and emoluments, which have always been increaſing from their origin, which extend to all ages and nations, and to all mankind in particular; which will perpetuate themſelves throughout all times, and continue to the end of the world. Have all the conquerors together done any thing that can be imagined parallel with ſuch ſervices? All our admiration, however, turns generally on the ſide of theſe heroes in blood, whilſt we ſcarce take notice of what we owe to the inventors of the mathematic and philoſophic arts, which are the grand ſources of all the ſecurity, joy, and ſplendor of life. The progreſs of thoſe arts and ſciences whereon the mutual intercourſe of commerce between nations depends, and the hiſtory of thoſe perſons who have moſt eminently diſtinguiſhed themſelves therein, is the hiſtory of the human wiſdom, which does not give place to that of princes and heroes, whom common opinion places in the higheſt degree of glory.

The principal law and juſteſt title to deſerving ſolid praiſes in this uſeful empire of literature is, that every member of it be contented with his own place; that he be void of all envy for the glory of others; that he looks upon them as his collegues; deſtined, as well as himſelf, by providence, to inrich ſociety, and become it's benefactors; and that he remembers with gratitude from whom he holds his talents, and for what ends they have been given him. Can they believe they may uſe them at their own pleaſure, and ſeek, in the application they make of them, only their own reputation and glory? As providence places kings upon their thrones ſolely for the good of their people, it diſtributes alſo the different talents of the mind ſolely for the benefit of the public.

But, in the ſame manner as we ſometimes ſee in ſtates uſurpers and tyrants, who, to exalt themſelves alone, oppreſs all others; there may alſo ariſe amongſt the learned a kind of tyranny of the mind, which conſiſts in regarding the ſucceſſes of others with an evil eye; in being offended at their reputation; in leſſening their merit; in eſteeming only one's ſelf, and in affecting to reign alone: a hateful defect, and very diſhonourable to learning. The ſolid glory of the empire of learning is not to labour for one's ſelf, but for mankind; and this is what places it exceedingly above all the other empires of the world.

Uſeful Remarks, tending to the further advancement of the Mathematical Sciences, in order to the further promotion of Commerce, by the learned Dr. John Pell; which as well deſerve attention at this time, when theſe ſtudies ſeem to be upon the decline, as they did heretofore.

'I. As to what I formerly conſidered, ſays that learned gentleman, about the improvement of the mathematical ſciences; the reſult was chiefly this: while men are deſtitute of inclination, genius, aſſiſtances, and leiſure neceſſary for theſe ſtudies, no wonder if they make no greater progreſs in them: therefore it ſeems probable to me, that, by the help of the following means, a tolerable good remedy may be found for this evil. That is, if,

1. A mathematical monitor (as we may call it) be compoſed, which may give proper anſwer to theſe three queſtions, 1. What advantages, and of what kind, may be expected from the ſtudy of mathematics? 2. What helps are now in being for attaining ſo advantageous a knowledge? 3. What order is to be obſerved in making uſe of thoſe aſſiſtances? Therefore this monitor ſhould contain,

1. An eaſy and perſpicuous diſcourſe upon the limits or extent of the mathematical arts, and of the conſiderable advantages that will accrue not only to the perſons themſelves that ſtudy them, but likewiſe to a nation that abounds in ſkilful mathematicians.

2. A catalogue of mathematicians, and of works publiſhed by them; which is to exhibit, 1. A ſynopſis of all kinds of mathematical books, whether ſuch as are already publiſhed,

or ſuch as are yet unpubliſhed, and, being in manuſcript, lie concealed in public libraries; proper numbers, or references, being affixed to every kind. 2. A chronological catalogue of all the celebrated mathematicians, diſpoſed according to the ages in which they flouriſhed; always ſubjoining the year of our Lord in which their works were firſt printed.

3. A catalogue of the ſame works, according to the ſeries of years in which they were printed in any language. In digeſting of which, I would proceed in ſuch manner, that, marking the year of our Lord, I would add (as in common catalogues) the names of all the mathematical books that were publiſhed that year, in any country or any language: 1. Shewing in each how much the volume contained, by marking not only whether it was in folio, quarto, &c. but the whole number of pages, ſo that the bulk of the work might eaſily be known. 2. Before the title mentioning the year, to which any one might turn back who ſhould deſire to know when the book was wrote, and when it was laſt publiſhed in any language. 3. Marking in the margin after the title, 1. The year in which any work was laſt printed. 2. The number referring the reader to the ſynopſis, which was given in the firſt page of the catalogue. Now, by the help of theſe numbers, any one might eaſily and readily run through all the mathematical books belonging to one ſubject.

3. An admonition to the ſtudious, which are the beſt books in every kind, in what order and method they are to be read, what is to be choſen and what omitted in reading ſome of the minor mathematicians; how we are to proceed ſo as to retain every thing in memory.

4. An exhortation and encouragement to all thoſe who are ſufficiently provided with wealth, opportunity, and ingenuity for the purſuit of theſe ſtudies; that, 1. Having regard to the great advantages that redound from hence, not only to themſelves but to all mankind in general. 2. As likewiſe to that pure and ſincere pleaſure which ariſes from the ſearch of hidden truths, and from ſtriving with difficult problems, and the conqueſt of them; that they may ſeriouſly apply themſelves to the advancement of ſcience, and ſo much the rather, as, 3. More expeditious methods are now found out than were known to our anceſtors, which ſave us much labour, time, and expence.

Then an exhortation to all ſuch as are eminent for ſetting a right value on theſe ſtudies, and are likewiſe diſtinguiſhed for power and wealth (which ſurely may be made inſtrumental to perpetual fame, if prudently diſpenſed) that they may become patrons to ingenious men of this kind, by propoſing handſome rewards to the moſt deſerving of them, to encourage them to complete ſuch diſcoveries as their own genius's may prompt them to. Laſtly, to all princes and commonwealths who cannot eaſily procure a greater ornament to their dominions, than by making it their endeavour, 1. That they may abound with perſons ſkilled in theſe arts. 2. That the way leading to them may be made as little laborious and expenſive as poſſible. 3. That mathematical genius's may be more publicly known, and meet with ſuch encouragement as they ſhall deſerve.

For this end it will be very neceſſary that,

II. A public library may be founded, which may be furniſhed with all the books abovementioned, and with one inſtrument of every ſort that has been yet invented; and beſides may have an endowment ſufficient, 1. To purchaſe copies of all the mathematical books that ſhall be yearly publiſhed anywhere abroad. 2. To maintain a library-keeper, whoſe buſineſs it ſhould be,

1. To read over all the books of this kind which are publiſhed in his own country; 1. Suppreſſing thoſe which are not wrote according to the rules of art, that their miſtakes may not lead their readers into error. 2. To admoniſh authors, leſt they ſhould only republiſh things already known, and treated of by others.

2. On peril of their reputation that they ſhould approve of notable inventions, and heartily recommend the inventors to proper patrons.

3. To receive, to enter into their catalogue, and diſpoſe in their proper repoſitories, one copy of the books ſo read over, when preſented to the library well bound up, at the charge of the author or bookſeller.

4. To give a civil and ready anſwer to any ſtudious perſon who ſhall conſult him about any problem, whether it is already ſolved or no; leſt he ſhould attempt any thing that is well done already, or, on the contrary, ſuppreſs his diſcoveries, out of fear they may be already known, and perhaps diſcuſſed in ſome of the books of the library.

5. To receive, &c. all manuſcripts that may be preſented to the library, or bequeathed to it by legacy.

6. To keep a conſtant library correſpondence with all perſons of this kind that reſide in foreign countries, leſt he ſhould be ignorant of what books are publiſhed there.

7. To take notice among his countrymen who are fitteſt and moſt expert in inſtructing others in theſe arts.

8. To have an acquaintance with all kinds of artificers who excel in the conſtructing of mathematical inſtruments and contrivances, whether they work in wood, loadſtones, metal, glaſs, &c.

9. After a fair trial, to give their teſtimony, both of ſpeculative knowledge and practical dexterity, to practical men of all kinds, whether maſters of ſhips, ſurveyors, accomptants, &c. that ſuch as have occaſion for this kind of men may not be impoſed on by ignorant pretenders, to their great loſs.

The catalogue will eaſily inform which, in ſuch a multitude of books that almoſt overwhelm the world, belong only to this kind of ſtudy. The library will exhibit a copy of every ſuch book, and inform where more copies may be bought. It will alſo be a kind of ſtorehouſe both to natives and foreigners, whence they may eaſily learn what aſſiſtances that country can ſupply to theſe ſtudies.

And this, in my opinion, is the readieſt way of making uſe of the helps we are already in poſſeſſion of. If more are wanting, it will be neceſſary that, by the aſſiſtance of ſkilful artiſts.

III. The three following new treatiſes may be compoſed and publiſhed:

1. Mathematical pandects, containing, as perſpicuouſly, methodically, compendiouſly, and ingeniouſly as can be done, whatever may be collected or deduced, by way of corollary, from the mathematical books or diſcoveries made before our time; quoting the moſt eminent authors in which they are found, at the end of every period or propoſition; and ſo marking in all the following authors, where they have been caught in a theft, or where they have borrowed without making any acknowledgement, or (what is worſt of all) have boldly claimed to themſelves the inventions of others. By this means that large library would be contracted into a much narrower compaſs, to a great ſaving of labour, time, and expence, for thoſe that come after; and this much more than any would imagine at preſent. But now, ſince this work would hardly make a portable volume, there ſhould be prepared alſo,

2. A mathematical companion, containing in a manual (and therefore as conciſely as may be) all the moſt uſeful tables, with precepts to ſhew their application to ſolving of problems, whether of pure mathematics, or applied to other ſubjects.

Finally, that we may not always be confined to books in this kind of learning, there ſhould be contrived,

3. The ſelf-ſufficient mathematician, or an inſtruction to ſhew how any mathematician, who is no enemy to labour, may acquire ſo much ſkill that, without the aſſiſtance of books or inſtruments, he may attain the ſolution of any mathematical problem, and that as eaſily as another would ſolve it by turning over books.

And this is that idea of mathematics which, in my manner, I have long ago figured to myſelf; being always firmly perſuaded, that then only we can hope for aſſiſtance in great undertakings, when we have conceived an exact idea of them in our minds, and of the moſt appoſite means of putting them in execution. And, if we cannot expreſs this idea in fact, yet it is ſomething to come as near it as may be.

I imagine this is ſo far from being above human power, that I think the induſtry of one man alone to be equal to it, who is not hindered by his own domeſtic affairs, or immerſed in a multitude of buſy cares: for it is evident that the library and catalogue may eaſily be provided, if money is not wanting; and as to the pandects above deſcribed, if the taſk of compoſing them were committed to me, I ſhould impoſe upon myſelf much ſeverer conditions than I have mentioned there. For firſt I would delineate the infallible proceſs of human reaſon, in the inveſtigation of whatever it propoſes to itſelf, by ſhewing how it proceeds from the firſt principles or rudiments, by an uninterrupted chain, to the moſt ſublime as well as the loweſt application of them. Which art, perhaps, men would not be long without, if hereafter they ſhould carefully examine, by what means ſuch thoughts have aroſe in the minds of certain men whom they admire, how ſuch apt means have been found out to obtain ſuch an end. How theſe pandects may be abridged into a manual, ſuch as may be fit for common uſe, may not be difficult to underſtand.

But ſo to fix them in their minds that they ſhall have no farther need of books (which is what is aimed at by our ſelf-ſufficient mathematician) will be thought, by moſt, to exceed the power of the human mind: ſince no one that I know of has yet ventured to conceive ſuch a thing in his mind. Yet I believe that men will diſmiſs ſomething of their incredulity, when they conſider ſeriouſly with themſelves what arts have been found out for ſtrengthening the imagination, for aſſiſting the memory, and for directing the reaſoning faculty, and what wonderful effects may be produced by their conjunction and conſtant exercise.'

To this the learned Merſennus made ſome objections, concerning the collection of the various writings of the mathematicians; but, upon receiving Dr. Pell's anſwer, Merſennus replied,—'I had no ſooner read your letter, learned Sir, but I became wholly yours, and was ready to ſubſcribe to your opinion, which I intirely approve: an unuſual ardor of mind hurried me on: ſo that I would recommend this undertaking of yours, great as it is, to the great ones of the world, if I could have free acceſs to them. But where is the king that will make a beginning? for I cannot but call it a truly royal deſign.'—This likewiſe was approved by the great Des Cartes, See the article MUSÆUM of Sir Hans Sloane.

MEASURES and WEIGHTS of England.

The following being the moſt accurate and ſatisfactory account that I have met with, in regard to the ſtandard weights and meaſures of England, I ſhould be wanting to my readers if I did not give it them as it is, without any alteration whatſoever: and, although the weights are incorporated with the meaſures, I do not judge that reaſon ſufficient to make any variation, having the leſs to ſay hereafter under the article WEIGHTS.

A ſtate of the Engliſh WEIGHTS and MEASURES of capacity, as they appear from the laws, as well ancient as modern; with ſome conſiderations thereupon: being an attempt to prove that the preſent avoirdupois weight is the legal and ancient ſtandard for the weights and meaſures of this kingdom. By the learned Sam. Reynardſon, Eſq; F. R. S.

It is declared by * Magna Charta, that there ſhould be, throughout the realm, one meaſure of wine †, one of ale, and one of corn, viz. the quarter ‡ of London; and that it ſhould be of weights as of meaſures.

* 1 C. 25.

† Biſhop Fleetwood ſays, it was a good law of king Edgar, that there ſhould be the ſame weights and the ſame meaſures throughout the realm, but it was never well obſerved. Chron. Pretioſum, p. 34.—And, 2 Inſt. p. 41. ſays, this law was grounded upon the law of God, Deut. xxv. ver. 13, 14.—And that there were good laws for weights and meaſures made before the conqueſt by Canute. See Cuſtom. de Norm. c. 16.

‡ See hereafter the contents of a quarter.

This declaration has been repeated in many ſubſequent laws *; and, by ſeveral of them, the treaſurer is directed to provide ſtandards of buſhels, gallons, and weights of braſs, and to ſend them into every country; and all meaſures are to be made according to the king's ſtandard, the aſſize whereof is eſtabliſhed by ſeveral laws †, as follows: the Engliſh penny, called a ſterling round, without clipping, to weigh 32 grains of wheat dry, and taken from the midſt of the ear: 20 pence make an ounce; 12 ounces a pound; 8 pounds make a gallon of wine ‡; 8 gallons of wine make a London buſhel ‖, which is the eighth part of a quarter. And by other laws § it is declared, that the ton of wine, oil, and honey, ſhould contain of the Engliſh meaſure, according to the ancient aſſize, 252 gallons; the pipe, or butt, 126; the tertian 84; the hogſhead 63; and every barrel 31 ½, according to the old aſſize, and to be gauged by the king's gauger.

* 51 Hen. III. ſtat. 6. 14, 25, and 27 Edw. III. 13, 15, and 16 Rich. II. 9 Hen. VI. 2 Hen. VII. cap. 4. 16 Car. I. and 22 Car. II. cap. 8.

† 51 Hen. III. ſtat. 1. cap. 3. 31 Edw. I. 12 Hen. VII. cap. 5.

‡ The 12th Hen. VII. cap. 5. ſays wheat.

‖ 9 Hen. VI. c. 8. ſays,—Buyers of corn in London, bought by a veſſel called a fat, containing 9 buſhels of corn; which is forbid by the act.

§ 2 and 18 Hen. VI. 1 Ric. III. cap. 13. 5 Ann cap. 27. ſect. 19. 23 Hen. VIII. cap. 7. 2 Hen. VI. cap. 11.

In the reign of Edward III. * an act paſſed to take away the weight called ancell †, whereby, and by ſubſequent ſtatutes, it is directed that every ſale and buying ſhould be by the even balance.

* 25 Ed. III. ſtat. 5. cap. 9. 34 Ed. III. cap. 5. 8 Hen. VI. cap. 5. 9 Hen. VI. cap. 8.

† King Stephen, ſays Knighton, ſettled meaſures of length and of land, and made appointments de anſulis, bilancibus &c. Decem Scriptores, p. 2391.

In the 11th year of Hen. VII. complaint being made to the parliament that the ancient ſtatutes and ordinances of the realm relating to weights and meaſures had not been obſerved and kept, it was therefore enacted, That there ſhould be delivered, to the knights and citizens of every ſhire and city, one of every weight and meaſure, which the king had cauſed to be made of braſs, according to his ſtandard in the Exchequer, to be delivered to the reſpective places mentioned in the act; and that the inhabitants of all cities, boroughs, and market-towns, ſhould make and uſe weights and meaſures made according to the weights and meaſures ſo delivered as aforeſaid. In the next year, another act paſſed, reciting, That the king had made ſuch weights and meaſures of braſs, according to the old ſtandard thereof remaining within his Treaſury; which weights and meaſures, upon more diligent examination, had been proved defective, and not made according to the ſtatutes and old laws, and were therefore recalled, and ordered to be broken, and other new buſhels and gallons were directed to be made and ſized, according to a new buſhel and gallon to be made according to the aſſize, to remain in the king's Exchequer: where we now find a buſhel, in the cuſtody of the chamberlain, called the Wincheſter buſhel *, and a gallon agreeing thereto. Upon the buſhel there is the following inſcription: Henericus Septimus, Dei gratia, rex Angliæ et Franciæ.

* The firſt time I find it called ſo by any law, is in an act 22 Car. II. cap. 8. And afterwards it is called by this name in ſeveral acts of parliament; but, in the act juſt now mentioned, it is ſaid to be commonly called the Wincheſter meaſure: perhaps it firſt took that name from the ſtatute made at Wincheſter, 16 Rich. II. which directs the clerk of the market to have all his weights and meaſures ready, and marked and ſigned according to the ſtandard of the Exchequer.

In the laſt mentioned act, the aſſize for weights and meaſures is in ſubſtance the ſame as in the old ſtatutes, only the pound is ſaid to be the pound Troy of 12 ounces. But ſince, by this and the former aſſize laws, the pound is directed to be raiſed from 240 ſterling pennies, it follows, that the gravity of the aſſize pound was always the ſame; but the dimenſions of meaſures of capacity reſpectively, raiſed from a pound of wine and a pound of wheat, will be in proportion to each other as the ſpecific gravity of wheat is to that of wine or water.

Thus continued the laws relating to the Engliſh ſtandard of weights and meaſures, 'till after the reſtoration, when, a duty of exciſe * being laid upon beer, ale, and other liquors, 36 gallons taken by the gauge, according to the ſtandard of the ale quart (4 whereof made the gallon remaining in the Exchequer) were to be reckoned as a barrel of beer, and 32 ſuch gallons a barrel of ale; and, afterwards, † 34 ſuch gallons of vinegar (and of beer or ale, ſtronger or ſmaller) without the bills of mortality, were declared to be a barrel; and all other liquors liable to the exciſe-duty were to pay according to the wine gallon.

* 12 Car. II. cap. 24. §. 20.

† 1 Will. and Mar. cap. 24. §. 5. 10 Will. III. cap. 21. 11 and 12 Will. III. cap. 15.

We now find the officers of the revenue determining the contents of our meaſures of capacity with great exactneſs: for, on the 25th of May, 1688, two general officers of exciſe, in the preſence of the lord mayor, the commiſſioners of exciſe, Mr. Flamſtead, and others, upon an exact trial found, that the old ſtandard wine gallon, kept in Guildhall, did contain but 224 cubic inches; nevertheleſs, at that time, it was thought convenient to continue the former ſuppoſed content, being 231 cubic inches, as the ſtandard wine gallon, and which has ſince been eſtabliſhed by law *.

* 5 Ann. cap. 27. §. 17.—This act ſays, Any cylinder 7 inches diameter, and 6 inches deep, or any veſſel containing 231 cubical inches, and no more, ſhall be a lawful wine gallon.

In the year 1696, an experiment was made, in order to fix the true and exact contents of the braſs ſtandard buſhel of Henry VII. which being filled with common ſpring water, and the water meaſured out with great nicety and exactneſs, the buſhel * was found to contain 2145,6 ſolid or cubic inches; and the water being weighed by the ſtandard weights in the Exchequer (and by a beam, which would turn with ſix grains put into either ſcale, with 30 pounds in each ſcale) was found equal to 1131 ounces 14 pennyweights Troy; and at the ſame time and place the ſtandard Troy weights were compared with the ſtandard avoirdupois, and 15 pounds of the latter were found equal to 18 pounds 2 ounces 15 pennyweights Troy, which fixes the pound avoirdupois at 7000 grains.

* Everard's Stereometry, p. 193.

* Such grains as the Troy pound weighs 5760; and upon three ſeveral trials, made by the gentlemen of the council of the Royal Society, at the Exchequer, upon a medium, the avoirdupois pound was found equal to 7000,25 Troy grains.

* Ward, in his Young Mathematician's Guide, ſays, 6999 ½ grains. Phil. Tranſ. No 465. p. 181. and No 470.—Biſhop Hooper 10. Pharmacopœia Londin. ſays—The avoirdupois pound is ſaid to be about 7000 grains.

By the firſt * malt act, which paſſed ſoon after the making the experiment upon the Wincheſter buſhel, it is declared, that every buſhel 18 inches and half wide, and 8 inches deep, ſhould be eſteemed a legal Wincheſter buſhel: and the coal buſhel is directed † to be made 19 inches and a half diameter, and to contain the laſt buſhel and one quart of water. The firſt contains 2150,42 cubic inches, the laſt 2217,47. We now ſee different meaſures eſtabliſhed by law §, and, under the exciſe laws, two different gauges or meaſures, uſed for taking the dimenſions of wine and ale veſſels. The wine gallon contains 231 cubic inches, and the ale gallon 282; but upon what foundation this laſt meaſure was eſtabliſhed, is difficult to determine.

* 13 Will. III. c. 5. §. 28. and 1 Ann. ſtat. 2. c. 3. §. 10.

† 12 Ann. ſtat. 2. c. 17. §. 11.

§ Though contrary to magna charta, and ſeveral other laws not repealed.

Troy weights had for ſome time been eſtabliſhed and uſed for the money affairs in the mint, and for weighing gold,

M E A

ſilver, and ſome few commodities; and the avoirdupois were in general uſe for weighing all heavy and groſs commodities. Wine meaſure was generally looked upon as equal to Troy weight: from hence the managers of the exciſe duty were, perhaps, led to fix the ſtandard of the ale gallon, bearing the ſame proportion to the wine gallon, as the avoirdupois pound did to the Troy; and, according to this conjecture, the two gallons anſwer pretty exactly *, the ale gallon exceeding the proportion by ſomewhat more than one cubic inch and one quarter; but it exceeds the Wincheſter gallon, or 268,2 cubic inches, by very near 14 cubic inches: and not one of theſe meaſures is agreeable to the words of the aſſize, which directs †, 'That the buſhel ſhall contain 8 gallons of wheat, the gallon 8 pounds of wheat of Troy weight, the pound 12 ounces of Troy weight, &c. according to the old laws of this land.' It is very plain the law-makers, in Henry the VIIth's time, took the Troy weight for the ſtandard; and moſt authors who have wrote upon this ſubject, have followed their example.

* For, as 144 : 175 :: 231 : 280,729—And as 144 : 175 :: 224 : 272,222. This laſt comes very near the vulgar dry gallon.

† 12 Hen. VII. c. 5.

The great difficulty we are under in fixing upon a ſtandard pound, agreeable to the aſſize, ariſes from the uncertainty of the rule laid down in our laws of aſſize for raiſing the pound from 7680 grains of wheat; as theſe grains differ in weight in different countries, and in different years, I might have ſaid in the ſame field and in the ſame year.

The uncertainty of a pound ſo raiſed might, with great probability, occaſion the variety in our weights and meaſures, ſo often complained of in our ancient laws, and for the prevention whereof Edward III. in his 14th year, ordered 'Standard weights and meaſures to be made of braſs, and 'ſent into every city and town in the kingdom.'

The laws of aſſize never received any alteration, except by the 12th of Hen. VII. when the pound is declared to contain 12 ounces of * Troy weight, and the gallon 8 pounds of wheat of Troy weight; and, ſince the laws have received no change, we have great reaſon to conclude, that the ſtandard weights themſelves never ſuffered any addition or diminution; but, however this be, we † now find, in the cuſtody of the proper officer of the Exchequer, two ſetts of weights, kept there as ſtandards; one called Troy, the other avoirdupois weight.

* This is the firſt time the ſtandard weights are called Troy weights. But, in an act 2 Hen. V. ſtat. 2. c. 4. and 2 Hen. VI. c. 13. relating to goldſmiths, there is mention made of the pound of Troy.

† Phil. Tranſ. No 470.—The avoirdupois weight of 14 pounds is marked with a crowned E, and inſcribed,

XIIII Povnde Averdepoiz.
Elizabeth. Regina.
1582.

The Troy weights, marked with a crowned E, are ounces, from 256 down to the 16th part of an ounce: and there are no whole pounds Troy, pennyweights, or grain weights, at the Exchequer. There not being pounds, or greater weights, ſeems to be a proof, that theſe weights were never deſigned or uſed for determining the weight of large bodies or heavy goods.

As there is no account handed down to us by our anceſtors, ſhewing at what time, and upon what occaſion, theſe weights, differing conſiderably in gravity from each other, were there firſt depoſited, we are at a loſs to determine which is the ancient ſtandard weight deſcribed by the laws of aſſize. The act in the 12th of Hen. VII. has called the ſtandard weight by the name of Troy weight; this is the firſt time the weights are ſo called in any of our aſſize laws; and, notwithſtanding this authority, it will be found very difficult, if not impoſſible, to reconcile the Troy weight and meaſure raiſed therefrom with the words of the aſſize, and any meaſure now in being; for the natural and moſt ready way to determine this queſtion, is to compare both the Troy and avoirdupois weight with meaſures raiſed from each, according to the rule laid down in the aſſize, and with ſuch meaſures as are or have been uſed by authority.

'The moſt exact * geometrical way of expreſſing the capa-
'city of any veſſel or meaſure, is by expreſſing in known
'terms the ſolidity of a body, which will preciſely fill it:
'the fitteſt will be water. The ſolidity of all bodies is beſt
'expreſſed by the help of a cube, whoſe equal ſides we know
'by a ſtandard meaſure of length; and it appears, that this
'way of determining meaſures of capacity is not only the
'moſt geometrical, but alſo exceeding ancient †.'

* Biſhop Cumberland's Eſſay, p. 60.—who alſo ſays, The Egyptians made their ardob the cube of their known ſtandard the cubit.—And that the Romans made their quadrantal the cube of their ſtandard the foot.

† Meaſures of bodies are either determined by their ſolid contents, or weight. Meaſures of contents are formed from cubes of aſſigned lengths. Biſhop Hooper, p. 2.

By this rule ſome gentlemen at Oxford, in the year 1685, determined the weight of a cubic * foot of ſpring-water, or 1728 ſolid inches, to be 1000 ounces avoirdupois, and by the ſame rule the capacity and contents of the ſtandard buſhel in the Exchequer, were determined in the year 1696, with great care and exactneſs: by the ſame rule, the contents of other veſſels of capacity have been ſettled; and in the following table, I have inſerted the names of ſuch meaſures as are of any authority, whoſe contents are known; by which the proportion they bear to each other, and to meaſures raiſed according to the aſſize, as well from the pound Troy as the pound avoirdupois, will be readily obſerved.

* Phil. Tranſ. No 169.

In the next place, let us compare the experiment made upon the cubic foot of ſpring-water with that upon the Wincheſter buſhel, and we ſhall find an uniform and perfect agreement between them; and that, upon each trial, a cubic veſſel, the ſides whereof were equal to an Engliſh foot, did contain * 1000 ounces avoirdupois of ſpring-water. From hence we are led to the diſcovery of a natural and univerſal ſtandard for the Engliſh weights and meaſures; and ſuch an one as is, in every reſpect, agreeable to the words of the aſſize recorded in our moſt ancient laws.

oz.	pw.	cu. in.	oz.	cu. in.
1131	: 14 Troy :	2145,6	: : 1000 avoir.	: : 1,728,041.

* Some writers upon this ſubject ſay, that a cubic foot of ſpring-water is equal to 76 pounds Troy, which is 10 pennyweights 20 grains more than the 1000 avoirdupois. See Arbuthnot's Tables explained, p. 80, 283. Biſhop Hooper's State, &c. p. 11.—But the explainer of Arbuthnot's Tables ſeems to have been quite ignorant of any experiment ſince Sir Jonas Moore's time; and to have diſregarded the due proportion between the avoirdupois and Troy pound; and, for 175 to 144, his tables, he ſays, are calculated at 17 to 14.

Magna charta points out the quarter of London, as the only ſtandard for meaſures and weights of that time, but we are left to gueſs of what meaſure or weight it was the quarter part. If we ſuppoſe it the quarter of a ton, or 2000 pounds weight, then the quarter was 500 pounds, and the eighth part of that, or a buſhel, was equal to a cubic foot, or 62 $\frac{1}{2}$ pounds, from whence leſs meaſures and weights were eaſily deduced. Subſequent aſſize laws direct the greater meaſures to be raiſed from the leſs; that 8 pounds ſhould make a gallon, 8 gallons a buſhel, which was to be the eighth part of a quarter; and by this rule the quarter is raiſed to 512 pounds, and the ton to 2048 pounds. Theſe meaſures and weights are raiſed with eaſe from known parts of the foot. For a cubic veſſel, whoſe ſides are equal to $\frac{1}{10}$ of a foot, will contain a cube of ſpring-water equal to an ounce avoirdupois; and from hence, by a regular geometrical progreſſion, we ſhall obtain cubes equal to * 8—64—512 ounces, or to 4—32—256—2048 pounds avoirdupois: and, from a cubic veſſel containing one ſuch pound, we ſhall have other cubic veſſels, equal in weight 8—64—512 pounds; and in meaſure to the gallon, buſhel, and quarter, according to the aſſize.

* Eight ounces are equal to a mark, whereof two, or twice the contents of that cube, make a pound avoirdupois.

The * gallon, buſhel, and quarter, are called dry meaſures, and are uſed for aſcertaining the quantity of corn, and other dry goods; the gallon † is alſo a liquid meaſure raiſed from a pound, in liquids now called a pint §, from whence all the other liquid meaſures are raiſed; but with this difference in the proportion, that the liquid buſhel is not 64, but 63 pounds or pints, eight whereof make the hogſhead equal to 63 gallons; from whence the contents, as well of the larger as ſmaller veſſels or meaſures of capacity, are ſettled.

* The half buſhel, peck, gallon, pottle, and quart, are directed by 25 Edw. III. ſtat. 5. c. 10. to be made according to the king's ſtandard.

† See biſhop Hooper, p. 6.

§ See note hereafter.—The pint is not mentioned in the aſſize laws; but biſhop Hooper has given a long and learned diſſertation upon that meaſure, and calls it the pint of old, p. 458.

The meaſures of capacity, thus raiſed, are ſufficiently convenient for common uſe, and are generally retained at this time; but, for weights, there has been ſome variety from time to time, in the compoſition of the larger ſort, uſed for determining the weight of merchandize and heavy goods, as will appear from the following extract from ſeveral old acts of parliament.—The ſtone for weighing lead was ſettled at 12 pounds *; for wax, ſugar, ſpices, and allum, at eight pounds; of which laſt, 13 $\frac{1}{2}$, or 108 pounds, made the hundred weight: the ſack of wool † was to weigh but 26 ſtone, 14 pounds to each ſtone: a weye of § cheeſe 32 cloves,

* Cay's Abridgment, title Weights, §. 9.

† 25 Edw. III. ſtat. 5. c. 9. 13 Rich. II. c. 9.

§ 9 Hen. VI. c. 8. The weye equalled 224 pounds.

each

each clove 7 pounds. And, for many years paſt, the hundred weight has been fixed * at 112 pounds avoirdupois, and that by a general conſent, and without any particular law to eſtabliſh it.

* That is, 14 ſtone at 8 pounds, or 8 ſtone at 14 pounds each, according to the old laws, and preſent uſage of the ſtone weight. The 112 pounds is a very convenient weight for a ſtandard, becauſe it is diviſible into more even parts than any leſs number.—And it is compounded from the aſſize buſhel, it's half and quarter; that is to ſay, 64, 32, and 16 pounds.

Theſe weights have been univerſally and immemorially * uſed in England, with an exception to the weighing of gold, ſilver, and ſome very few commodities, for which the Troy weight has been uſed for a great many years. When it was firſt introduced into this kingdom, does no where appear; but Mr. Folkes, in his Tables of the Engliſh Silver Coins †, tells us, it was not eſtabliſhed or uſed at the mint before the 18th of Hen. VIII.

* The apothecaries (who, next to the goldſmiths, are ſuppoſed to make the moſt uſe of Troy weights) ſeldom keep weights adjuſted to the Troy pound heavier than two drachms; but, for all above, buy and ſell by avoirdupois: and with them, by the term libra in meaſure, is meant the wine pint; though this meaſure is not, ſay they, ſo denominated, from it's containing an exact pound weight of any liquor, and the term uncia in meaſure does not denote a twelfth part of the pint, but the ſixteenth: though in weight, agreeable to it's ſignification, it is uſed to expreſs one twelfth part of a pound; ſo that an ounce in meaſure is ſcarce more than three quarters of an ounce in weight. See Pemberton's Diſpenſatory, p. 44.

† Page 4. Mr. Folkes ſays, The pound uſed at the mint before that time, called the tower or the moneyers pound, was equal to 5400 Troy grains: and, p. 13, 14, that the weight of the groat, from 13 Hen IV. to 4 Edw. IV. was equal to 60 ſuch grains. Which is agreeable to what is ſaid in an act of parliament of 2 Hen. VI. that the pound Troy of coined money was worth 32 ſhillings; for 32 ſhillings, or 96 groats, 60 grains each, weigh 5760 grains, or a pound Troy. Though by the ſame act, by reaſon of the ſcarcity of ſilver money, and in order to bring bullion into the mint, it was enacted, That ſilver uncoined, of the ſame goodneſs as the money, ſhould be ſold only for 30 ſhillings the pound Troy.

By reducing the liquid buſhel, or one eighth of the hogſhead, from 64 to 63 pints, it ſeems plain, that our anceſtors took the cubic foot for their model; the contents of ſuch a veſſel being 62 $\frac{1}{2}$ pints or pounds: and from hence, and from what has been ſhewn before, it is not very unnatural to conclude, that at firſt our anceſtors fixed and eſtabliſhed, as well their weights as meaſures, from known parts of this model; taking always a whole number for each primary weight or veſſel, and from thence proceeding, by a regular geometrical proportion, to raiſe the greater weights or meaſures: ſo that the Engliſh foot (the undoubted and univerſal ſtandard of all meaſures of length within this realm) is alſo the ſtandard for the avoirdupois * weights, and all meaſures of capacity.

* The very name avoirdupois, by which our common weights are known, has by ſome been looked upon as a proof that they were of foreign extraction. The firſt time I find the word uſed in our laws, is in an act of Edw. III. ſtat. 1. where it is applied to wines as well as corn; as it is afterwards in 25 Edw. III. ſtat. 3. c. 2. and 16 Rich. II. c. 1. And in an act 27 Edw. III. ſtat. 2. c. 19. there is the following clauſe:—'Becauſe we have perceived ſome merchants buy avoirdupois merchandizes by one weight and ſell by another, we will and eſtabliſh, that one weight, one meaſure, and one yard, be through all the land; and that wools, and all manner of avoirdupois, be weighed by even balance. This king, in his 14th year, had directed ſtandard weights to be made of braſs, and ſent into every city and town; and I conjecture, that thoſe ſtandards, from the words of the foregoing clauſe, took the name of avoirdupois, and were the weights by which the merchant uſed to buy. What were the lighter weights by which they ſold, does not appear, perhaps the pound Troy. That the former were the lawful weights, appears by an act 24 Hen. VIII. c. 3. where they are ſo called; and butchers, who before that time ſold their meat by hand, were thereby obliged to provide themſelves with beams, ſcales, and weights ſealed, called haberdepois (for avoirdupois); and, in the next reign, the avoirdupois weights, now remaining as ſtandards in the Exchequer, were depoſited there, as appears from the name and inſcription thereon.

Upon the whole, therefore, I think it is ſufficiently proved, that a cubic veſſel, whoſe ſides are equal to an Engliſh foot, will contain 1000 ounces avoirdupois, or very near the weight of ſpring water: that weights and meaſures, deduced by a regular geometrical progreſſion from ſuch a veſſel, or from cubic veſſels, whoſe ſides are equal to known parts of an Engliſh foot, bear an exact analogy to each other, and to weights and meaſures raiſed from a pound, according to the words of our moſt ancient aſſize laws. This being conſidered, and that the avoirdupois weight is now in common uſe for determining the gravity of all heavy bodies; that this weight now is, and immemorially has been uſed, for ſettling the ancient duty of tonnage and poundage, upon all goods and merchandize taken by weight (except ſome few drugs, which are charged in the book of rates by the ounce Troy); and that there is not the leaſt proof, either in our ancient or modern laws, to induce a belief that this duty was ever generally taken by the Troy weight, or that Troy weights were ever in general and common uſe in this kingdom; it muſt ſurely be allowed, that the weight mentioned in our old laws, or acts of parliament, was the avoirdupois weight.

Postscript.

The learned biſhop Cumberland, in his * treatiſe, ſays, 'That our Engliſh avoirdupois ounce is the ſame as the Roman ounce; and was probably introduced into this kingdom by the Romans, when they gave laws and planted colonies here, and hath thence continued unchanged to this day; which is not commonly obſerved, becauſe we uſe the avoirdupois weights only about heavier commodities; not in weighing ſilver and gold, which are weighed by the Troy ounce; which I ſuppoſe was introduced by the Normans, becauſe it takes it's name † from a French town, Troyes, in Champagne.' Moſt authors ‡ have been of this opinion. This leads me compare our Engliſh foot with the Roman foot, which Mr. Greaves takes as equal to 967 ſuch parts, as ours is 1000. The Roman amphora, or quadrantal, is generally allowed § to be equal to a cubic Roman foot; and to contain 80 pounds, or 960 ounces. Then the ſide of the amphora is equal to ‖ 986 parts of the Engliſh foot, agreeing exactly with the foot deduced by Villalpandus from the congius of Veſpaſian; and a cubic veſſel, whoſe ſides are equal to 967 parts of the Engliſh foot, will not contain † quite 904 $\frac{1}{4}$ ounces; which, if true, reduces the Roman ounce to 412 $\frac{1}{12}$ grains Troy.

* See p. 11, 103, 107.

† Biſhop Hooper, p. 432. is of another opinion as to the derivation of the name.

‡ See Hooper's Enquiry, p. 10, 14, 92. and Arbuthnot's Tables explained, p. 16, 283.

§ See biſhop Hooper, p. 152, 175. Greaves's Miſc. Works, p. 198, 199, 297, 303.

‖ For the cube root of 960 is 986,1.

† The cube of 967 is but 904 oz. 231063 parts. And Mr. Greaves himſelf ſays, an amphora made by the pes Colotianus held only 7 $\frac{1}{2}$ congii, equal to 900 Roman ounces; which comes as near the cube of 967, as can be expected from the uncertain method we took to determine the contents of that amphora, which was by filling it with 7 congii, and as he gueſſed, about an half of milium. See his Miſcellaneous Works, (1737) p. 225.

† The ale meaſure -	2256	282	35,25	10,1995

* Dr. Arbuthnot gives a table of the vulgar dry meaſure, as the contents of the Wincheſter meaſure. And he had ſo little regard to the avoirdupois weight, that he does not give any table thereof.

† The ale meaſure even exceeds the coal meaſure.—And the exceſs of the ale meaſure above the Wincheſter is more than one in twenty of the laſt meaſure.

‖ See what is ſaid before.—So far Mr. Reynardſon.

All meaſures whatſoever are either receptive or applicative.

The meaſures of capacity, or receptive meaſures, are again comprehended under the denomination of liquid and dry meaſures.

The liquid, for wine, brandy, vinegar, cyder, beer, ale, and ſuch other goods.

The dry, for grains, ſalt, coals, and ſuch like.

Applicative meaſures are either,

The yard, ell, cane, aune, and other ſuch meaſures, for linen and woollen cloth, ſilks, laces, ribbons, and other ſuch goods. Or,

The inch, foot, &c. for wood, or other longer meaſures of that nature, for land, &c.

Not to ſpeak of the fractions of an Engliſh pint, which are not worth the mentioning in a book of trade, the reader may obſerve, that two pints make a quart, two quarts a pottle, and two pottles a gallon; which meaſure contains 282 ſolid inches, and holds of rain-water ten pounds three ounces, or a little more, avoirdupois weight; eight gallons make a firkin of ale, two firkins make a kilderkin, two kilderkins a barrel, and twelve barrels a laſt.

It is otherwiſe in meaſuring of beer; for, though the ſmall meaſures for ale and for beer be the ſame, yet they reckon but eight gallons of ale, and count nine of beer to the firkin; two ſuch firkins to the kilderkin, and two kilderkins to the barrel. One barrel and a half, or three kilderkins, or ſix firkins, or 54 gallons of beer, make a hogſhead of beer; two hogſheads make a pipe or butt, and two pipes a ton, conſiſting of 1728 pints, weighing ſo many pounds.

The wine meaſures are ſmaller than thoſe for ale and beer, to which they bear the ſame proportion as four to five; ſo that four gallons of ale and beer are very near five gallons of wine. And each gallon of wine is 231 cubical inches, and holds eight pounds, one ounce, and four drachms, avoirdupois weight, of rain-water; eighteen of theſe gallons make a rundlet, 42 a tierce, 63 a hogſhead, 84 a puncheon, 126 a pipe or butt, and 252 a ton.

One pint of wine weighs one pound $\frac{1}{2}$ ounce Troy, and a ton 1700 pounds avoirdupois.

Note, What we generally call a tierce, in ſpeaking of wine meaſure, is one third part of a puncheon, and one ſixth of a ton.

Formerly they made uſe of the wine meaſure for beer, ale, cyder, &c. But now that is forbid under ſevere penalties, and none but the Wincheſter meaſure is uſed. And as for veſſels, in which beer, ale, &c. are contained, there is a ſtatute, 23 Hen. VIII. giving power, to the wardens of the myſtery of coopers within the city of London, to ſearch and gauge all veſſels made for ale, beer, &c. (and alſo for ſoap) to be ſold within the city, ſuburbs, or two miles thereof; and examining their contents and weight, and finding them right, to mark them with St. Andrew's croſs.

And, by ſtat. 31 Eliz. all brewers are forbid to ſell, or put to ſale in London, the ſuburbs, or within two miles compaſs of the ſuburbs, any beer or ale in butts, pipes, puncheons, hogſheads, tierces, or ſuch other foreign veſſels, 'till they be gauged by the maſter and wardens of the coopers of the city of London.

By ſtatute 16 and 17 Car. II. It is ordained that all ſea-coals brought into the river of Thames ſhall be ſold by the chaldron, to contain 36 buſhels heaped, according to the buſhel ſealed for that purpoſe at Guildhall, London. And coals, ſold by weight, are to be ſold after the rate of 112 pounds to the hundred, under the penalty of the forfeiture of all the coals, and double the value thereof, to be recovered in any court of record, or upon complaint to the lord-mayor and juſtices; one half to the perſon complaining, and the other to the poor, or repairing of the highways within the pariſh, &c. And, by the ſame ſtatute, the lord-mayor and court of aldermen of London are impowered to ſet rates and prices upon coals to be ſold by retail, allowing a competent clear profit to the retailer. This ſtatute by 7 and 8 Will. III. c. 36. is made perpetual.

The received proportion in the weights of liquids is thus: The amphora of the Romans held, of rain-water or wine, 50 pounds of Antwerp weight; 107 $\frac{5}{52}$ of which make 112 pounds of London; ſo that it is a little more than 5 per cent. larger than ours.

And a meaſure, containing of wine or rain-water 50 pounds

Contains of river-water - - -	53
Of butter or oil - - - - -	45
Of linſeed oil - - - - -	39
Of honey - - - - - -	35
Of quick ſilver - - - - -	850

Of receptive meaſures for dry goods, ſuch as corn, and all ſorts of grains, &c. there is

Firſt, the gallon, which is larger than the wine gallon, and ſmaller than the ale gallon, contains 272 $\frac{1}{4}$ inches cubical, and holds the weight of 9 pounds, 13 ounces, 12 $\frac{1}{2}$ drachms, avoirdupois weight; 2 gallons make a peck, 4 pecks a buſhel, 4 buſhels a coomb, or cumock, 2 cumocks a quarter, ſeam or raff; and 10 quarters a laſt, which contains 5120 pints, and the ſame number of pounds Troy weight.

This is called Wincheſter meaſure, and by it, ſalt, lime, and coals are meaſured: but, in meaſuring the two latter of theſe commodities, the meaſures are heaped, or elſe 5 ſtricked pecks are allowed to the buſhel. 36 Buſhels make a chaldron of coals, and, on ſhipboard, 21 chaldrons are allowed to the ſcore.

								5120

A buſhel, water meaſure, contains five pecks. Some make ſix quarters of meal a weye, and one weye three quarters a laſt.

The ſmalleſt applicative meaſure is a barley corn, of which,
Three make one finger's breadth or inch.
Four inches one hand, or hand's breadth.
Three hands one foot.
One foot and a half, or four hands and a half, one cubit.
Two cubits one yard, of ſixteen nails.
One yard and a quarter one ell.
And again,
Five feet make one geometrical pace.
Six feet one fathom; and
Sixteen feet and a half one perch, pole, or rod.
Forty perches one furlong; and
Eight furlongs one Engliſh mile, according to the ſtatute 11. Hen. VII.
Sixty Engliſh miles and a half, make a degree (though a degree be generally computed only ſixty miles.)

A TABLE of LONG MEASURES.

63360	21160	7040	5280	3520	1760	1408	1056	880	320	8	1 Mile

MEA

Another TABLE of LONG MEASURE.

					Inches
				Feet	12
			Yard	3	36
		Pole	5½	16½	198
	Furl.	40	220	660	7920
Mile	8	320	1760	280	63360

In this table, the pole or perch is computed to be ſixteen feet and a half, which is the ſtatute meaſure; but there are ſome cuſtomary meaſures which are more, as for fens and woodlands they reckon eighteen feet to the pole, and for foreſts twenty-one.

A TABLE of SUPERFICIAL MEASURES.

					Feet
				Yard	9
			Pole	30¼	272¼
		Rood	40	1210	10890
	Acre	4	160	4810	43560
Mile	640	2560	10240c	30976	27878400

In this table, you have in a ſquare mile 640 ſquare acres, 2560 ſquare roods, &c. in a ſquare acre 4 ſquare roods, 160 ſquare poles, &c. in a ſquare pole 30 ¼ ſquare yards, and 272 ¼ ſquare feet, and in a ſquare yard 9 feet ſquare. Which being rightly underſtood, all the tables of reduction are ſufficiently explained.

The Engliſh mile, by ſtatute law, conſiſts of 5280 London feet, or 1760 yards, or 8 furlongs; of theſe miles, the experiments of Mr. Norwood and Mr. Picart, demonſtrate 69 and ſomewhat more, to be a degree of the earth's ſurface, though a degree has generally been reckoned but 60 miles.

A marine league is the 20th part of a degree, and moſt nations agree to reckon ſo for diſtances at ſea.

A French league is the 25th part of a degree, being near two Engliſh miles and three quarters.

A German mile is reckoned to be the fifteenth part of a degree, or better than four Engliſh miles.

A Dutch mile, or ſuch as are uſed in Holland, is near the nineteenth part of a degree, being about three Engliſh miles and an half.

An Italian mile is 1000 paces of five Roman feet each, and the Roman foot being ⅔ of an inch leſs than the London foot, or as 29 is to 30, it follows, that 76 Italian miles are neareſt to a degree, and the Turkiſh miles are reputed equal to the Italian.

The Danes, Swedes, and Hungarians, make long miles, about a German mile and a half, or at leaſt five or ſix Engliſh miles; the Poliſh miles are near equal to the Dutch miles, and reckoned about 20 to a degree.

The Scotch and Iriſh miles are longer than the Engliſh by about half.

The Spaniſh league is eſtimated at four Italian miles, and are reckoned 17 ½ to a degree.

The Ruſſians uſe a ſhort meaſure they call vorſt, which is a little more than three quarters of an Engliſh mile.

The Arabian mile, both ancient and modern, is about an Engliſh mile and a quarter.

Things that are not ſold by weight and meaſure, are ſold by tale.

In the primitive ages of the world, when mankind was but little acquainted with numbers, they counted by their fingers, as many Indian nations do at this time: and thence, probably it is, that the numerical letters, cyphers, and words are at moſt but ten, and in ſome places only five.

Several ſorts of goods are counted after that manner, ſuch as fiſh, hides, paper, parchment, ſables, and other things.

Cod and ling, and ſuch fiſh, have 134 to the 100.

Eels 25 to the ſtrike, and 10 ſtrike to the bind.

Herrings 120 to the 100, and 1200 to the 1000, which make a barrel, and twelve barrels make a laſt.

Of furrs, filches, grays, jennets, martins, mincks, and ſables, forty ſkins make a timber; and other ſkins have five ſcore to the hundred.

Of paper, twenty-four ſheets to the quire, twenty quires to the ream, and ten reams to a bale.

Of parchment, twelve ſkins make a dozen, and five dozen a roll.

Of hides, ten go to a dicker, and twenty to a laſt.

Hay is ſold by the truſs, containing fifty-ſix pounds, or the load of thirty-ſix truſſes *.

* Stat. 2 Will. and Mar. cap. 8. §. 16. every truſs of old hay offered to be ſold in the cities of London and Weſtminſter, and within the bills of mortality, between the laſt of Auguſt and the firſt of June, ſhall contain 56 lb. and every truſs offered to be ſold between the firſt of June and the laſt of Auguſt, being new hay of the ſummer growth, ſhall contain 60 lb. being old hay, 56 lb; and the perſon bringin the ſame ſhall forfeit for every truſs of leſs weight, 1 s. 6d.

Glaſs by the ſeam of twenty-four ſtone, and the ſtone of five pounds.

A laſt of gunpowder contains twenty-four barrels, and the barrel a hundred pounds.

By avoirdupois weight is weighed all things that have waſte, as all grocery wares, roſin, wax, pitch, tar, tallow, ſoap, hemp, flax, wool, &c. all baſe metals and minerals, as iron, ſteel, lead, copper, allum, copperas, &c.

The ton avoir dupois is 20 hundred of all things, except lead, which has but 19 hundred and a half to the ton, or fodder.

The hundred weight avoirdupois contains 112 pounds, the ſtone, or half-quarter of the hundred, is 14 pounds.

But allum, cinnamon, nutmegs, pepper, and ſugar, have but 13 pounds and an half to the ſtone, or half-quarter of the hundred; 27 lb. to the quarter, 54 lb. to the half, and 108 lb. to the whole hundred.

Eſſex cheeſe and butter are weighed by the clove, or half-ſtone, allowing 8 lb. to each clove, and 32 cloves, or 156 lb. to the weye; and in Suffolk they allow 42 cloves, or 336 lb. to the weye.

Wool is ſold by the clove, allowing but 7 lb. to the clove, 14 lb. to the ſtone, 28 lb. to the tod, 182 lb. to the weye, 364 lb. to the ſack, and 4368 lb. to the laſt.

A faggot of ſteel is 120 lb. a burthen of gad ſteel is 9 ſcore, or 180 lb. 56 lb of butter, or 60 lb. of ſoap, make a firkin, and 2 firkins of either make a barrel.

Butchers allow but 8 lb. to the ſtone.

Of MEASURES for EXTENDED BODIES.

In England they make uſe of the aune or ell, for linen only; the yard, or verge, being the ordinary meaſure for cloth, ſilks, and all other ſuch goods.

As for timber, and other ſuch goods which have likewiſe length and breadth, as well as ſtuffs, they are meaſured by the foot, which is compoſed of inches, and the inches of lines; thoſe meaſures being likewiſe longer and ſhorter, according to the uſage of each country.

The veſſels in which liquid goods, ſuch as wine, brandy, vinegar, beer, oil, honey, &c. are kept, as every other thing, have alſo different names in ſeveral countries, ſuch as barrel, pipe, hogſhead, butt, tierce, muid, futaille, &c. of which more in the ſequel.

The meaſures for grain, ſalt, and other ſuch goods, are alſo different from one another, and have their different names, as we ſhall ſee in it's place.

All ſorts of metals, ſuch as gold, ſilver, braſs, tin, lead, &c. as well as many ſorts of ſilks, wool, thread, and ſeveral other ſorts of goods, as ſpiceries, ſoap, tallow, cheeſe, butter, &c. are ſold by certain quantities called weights, which likewiſe are different from one another in their names and ſorts.

Of the diviſion of MEASURES for extended bodies, their differences, and the addition of fractions by the aliquot parts, &c.

Of FOREIGN MEASURES.

The meaſures for extended bodies, as aunes or ells, canes, verges, or yards, &c. for meaſuring of cloth, of gold and ſilver, ſilk-ſtuff, linnen and woollen cloth, &c. are commonly divided by merchants into the following parts:

½, ¼, ⅛, and 1/16, or ⅓, 1/6, 1/12, and 1/24.

REMARKS.

As for the aunes, and other meaſures in foreign places, whither merchants may go to buy goods, it is very eaſy to meaſure them, either with a compaſs or a geometrical foot of England, Holland, or any other country; for knowing how many feet, inches, and lines, there is in the aune of Paris, or any other city, it is eaſy to reduce it into our yard of London, and to diſcover the difference that is between them.

For the compariſon of the Engliſh ell with that of the principal trading countries of Europe, ſee the article ENGLAND, where you will find them repreſented by tabular inſpection, with regard to thoſe ſeveral places.

MEASURES for LIQUID GOODS.

Having given a ſuccinct account of the meaſures made uſe of for extended goods, and of their difference and conformity with one another, the next thing that falls under conſideration, is the different ſorts of veſſels uſed for containing of liquids; ſuch as wine, vinegar, brandy, cyder, beer, oil, &c. of which I ſhall treat with as much order and brevity as poſſible.

Of MEASURES for WINE and VINEGAR.

The veſſels for containing wine and brandy have different names, according to the quantities they contain, and the countries where they are made uſe of.

The veſſel called in Germany woeder, made uſe of for keeping the wines that grow upon the Rhine and the Moſelle, do ordinarily contain 14 aams of Amſterdam, but ſometimes they contain more and ſometimes leſs.

The aam of Amſterdam is a meaſure of 4 anckers, reckoning the ancker of 2 ſteckans. See the article AAM.

The ſteckan contains 16 mingles, each of which makes two pints.

The verge, or verteel, of the wines upon the Rhine and the Moſelle, &c. is reckoned but 6 mingles, that of brandy is counted $6\frac{1}{6}$ mingles, as we ſhall ſee hereafter.

The hogſhead of Bourdeaux, according to the juſt meaſure, ſhould contain $12\frac{1}{2}$ ſteckans, or 200 mingles of wine and lee; and 12 ſteckans, or 192 mingles clear wine; ſo that the tun of Bourdeaux, conſiſting of 4 hogſheads, contains 50 ſteckans, or 800 mingles, wine and lee, and 48 ſteckans, or 768 mingles clear wine.

The tun of Bayonne, and other places thereabout, is reckoned 240 ſteckans, meaſure of Amſterdam, there being likewiſe 4 hogſheads to a tun.

In England, and eſpecially at London, they reckon the hogſhead 63, and the tun 252 gallons. The ſaid gallon weighs $7\frac{1}{2}$ pounds weight of London; ſo that the 63 gallons, or the hogſhead, ſhould weigh $472\frac{1}{2}$ pounds, and the tun 1890 pounds weight of London. The ſaid gallon is ſaid to contain 4 Paris pints.

The hogſhead of Bourdeaux ſhould contain 110 pots with the lee, and 100 pots clear wine, meaſure of the ſaid place; ſo that the ſaid pot of Bourdeaux contains about 2 mingles of Amſterdam.

The Bourdeaux tun of wine ſhould weigh with the hogſhead, 2000 pounds weight; and, in marine terms in freighting of ſhips, by a ton, is meant 2000 pounds weight; ſo that, when it is ſaid any ſhip is of ſo many tons, it is to be underſtood that the ſhip can carry ſo many times 2000 pounds weight; though in Holland, Flanders, and other northern countries, they only talk of laſts, containing 2 tons each, or 4000 pounds weight.

The Rheniſh and Moſelle wines are ordinarily ſold at Amſterdam, the former at ſo many florins of about 20 each, current money, and the latter ſo many rixdollars, of 50 ſtivers each, current money, for the aam of 20 verges, or verteels, the verge being, at that rate, 6 mingles, as already ſaid.

French, Spaniſh, and Portugal wines are ſold at ſo many pound groſs the tun of 4 hogſheads, and there is ordinarily 1 per cent. rebate for payment in ready money, both buyer and ſeller paying brokerage, each 6 ſtivers per tun.

The muid of Paris contains 150 quarts, or 300 pints with the lee, and 280 pints clear wine, meaſure of Paris.

There are all over France a great many veſſels for keeping of wine, different from one another, according to the cuſtom of the ſeveral provinces where they are made uſe of; of which, though there be ſcarce any poſſibility to give an exact account, we ſhall here ſet down the regular fractions of the muid of Paris, 3 of which make the tun of France; and, as we have occaſion to ſpeak of the meaſures of the other provinces of France, we ſhall give as diſtinct an account as we can of their contents.

The pint of Paris is a meaſure pretty well known all over the world; 2 of thoſe pints make 1 quart, 4 quarts 1 ſextier, and 36 ſextiers 1 muid of Paris; 3 of which (as is already ſaid) make 1 tun of France.

The meaſure they make uſe of in Provence is called a millerole; that of Thouloufe ſhould weigh 130 pounds, and ought to contain 66 Paris pints, which is about 100 pints of Amſterdam.

At Montpelier, and ſeveral other places of Languedoc, their muid contains 18 ſextiers, and the ſextier 32 pots; ſo that the muid, which makes but 35 ſteckans, or 560 mingles of Amſterdam, makes 756 pots of Montpelier; by which it appears that the pot of Montpelier is $\frac{1}{38}$ leſs than the mingle of Amſterdam. However, you muſt here take notice that the caſks of Montpelier are not all of an equal meaſure, ſome being bigger than others; and, in ſeveral places of Provence, as well as High and Low Languedoc, they frequently tranſport wines, oils, and other ſuch goods, in veſſels made of goat-ſkins.

The butts and pipes of Seville, Malaga, Alicant, Liſbon, Port a Port, Canaries, and Iſles of Fagel, &c. are likewiſe of different ſizes; for the tun of Malaga, conſiſting of 2 butts or pipes (which they call Perſemyn at Amſterdam) is reckoned only 36 or 37 ſteckans; and thoſe of other places are reckoned at 25 or 26 ſteckans the butt or pipe.

As for the wine at Hamburgh and Lubeck, it is ſold at ſo many rixdollars of 48 ſtivers, or 3 marks lubs per tun.

Of BRANDY.

French Spaniſh, and Portugueze brandy, is ordinarily put into big caſks, which ſome call pipes, others butts, others pieces, viz. according to the cuſtom of the places, there being no poſitive meaſure regulated for that liquor.

In France it is ordinarily put into great caſks, which they call at Bourdeaux pieces, at Rochelle, Nantes, Cognac, Montguion, the Iſle of Rhé, &c. pipes, which (as we have already ſaid) contain ſome more than others, there being ſome which hold at Amſterdam from 60 to 90 verges, or verteels; and they reduce thoſe meaſures into hogſheads, by reckoning as under, for

1 Hogſhead makes
- 27 Verges of Cognac, Montguion, Rochelle, and the Iſle of Rhé.
- 29 Of Nantes, and other places in Britany and Anjou.
- 32 Of Bourdeaux, and other places in Guienne.
- 32 Of Bayonne, and places thereabouts.
- 30 Of Amſterdam, and other places of Holland.
- 30 Of Hamburgh and Lubeck.
- 27 Of Embden.

In Provence and Languedoc they ſell it at ſo much the quintal, or 100 weight with the caſk.

At Bruges they call the verges ſeſters, of 16 ſtoups to a ſeſter, which they ſell at ſo much a ſtoup.

At London, and generally through all England, they count only by gallons, as we have ſaid already.

The mingle of brandy weighs, at Amſterdam, 2 pounds 4 ounces; and the verge, or verteel, about 14 pounds; at which rate the 30 verges muſt weigh about 320 pounds.

At Bourdeaux, though pieces of brandy contain from 50 to 90 verges, they reckon but 32 to the hogſhead; the verge is ſomething leſs than $3\frac{1}{2}$ pots.

You muſt know that whatever there is at Bourdeaux in a piece of brandy more than 50 verges, is called by the farmers of the king's duty exces, or an exceſs, and pays ſo much per verge beſides the duties of ſortie, or exportation (as they call it) for the 50 verges.

Thoſe that make brandy ſeldom or never put it in ſmall barrels, or tierces, except it be deſigned for ſome particular places in America, or elſewhere, where thoſe ſmall meaſures are advantageouſly ſold to people, who, perhaps, would not be able to buy a pipe at a time; for a piece of brandy that contains perhaps $1\frac{1}{2}$ of an ordinary piece, coſts but very little more of freight and carriage than one that contains $\frac{1}{2}$ or $\frac{1}{3}$ leſs.

At Hamburgh it is likewiſe ſold at ſo many pounds groſs, of $7\frac{1}{2}$ marks lubs per pound groſs, or at ſo many rixdollars in banco; but at Lubeck it is paid in current money, there being no bank.

At Bremen, Copenhagen, and Embden, it is alſo ſold at ſo many rixdollars; and in this laſt place the hogſhead is counted but 27 verges.

At London it is ſold by the ton of 252 gallons; and, in ſhort, in every country according to the cuſtom of the country, which muſt always be ſtrictly enquired into by the dealers for their government.

Of MEASURES for OIL of OLIVES.

The oil of olives is ordinarily kept in butts or pipes, containing from 20 to 25 ſteckans, at 16 mingles a ſteckan; and there go 717 mingles, or 1434 pints of Amſterdam, to the tun of oil. They reckon at Genoa that the barrel of oil of olives weighs $187\frac{1}{2}$ pounds nett, of their weights, which make 125 pounds of Amſterdam; and 14 barrels make 717 mingles of the ſaid place, or thereabout.

At Leghorn, the barrel of oil of olives weighs 85 pounds of their weight, which is a little more than 59 pounds of Amſterdam.

In Provence they ſell it by the meaſure of that country, called millerolle, containing 66 Paris pints, which make about 100 pints of Amſterdam: and, in ſome places of that country and of Lower Languedoc, they put it in certain veſſels made of goat-ſkins, as they do the wine.

In Spain and Portugal it is put in butts and pipes, to be carried over ſeas, and ſometimes in great earthen veſſels called jars.

Of MEASURES for FISH-OIL.

Coarſe fiſh-oil is ordinarily kept in barrels, containing from 15 to 20 ſteckans each.

Of MEASURES for HONEY.

Honey is kept in many different ſorts of veſſels of wood and earth, and ſold in ſome places by meaſure, and in other places by weight.

At Amſterdam they ſell it at ſo many pounds groſs per ton, conſiſting of 6 tierces or aams, or by ſo many florins the barrel, or the 100 weight. The Bourdeaux and Bayonne honey is ſold at Amſterdam from 30l. to 40l. groſs the tun.

Of ROUND MEASURES for GRAIN, &c.

As the great diverſity of meaſures of capacity renders it very troubleſome for merchants to calculate the quantities thereof, it will be very neceſſary to give an account of thoſe that are uſed in the principal places of Europe for trade.

The laſt is of ſeveral ſorts, but all comprehended in theſe two, viz. the ſea-laſt and that uſed by land.

A laſt is reckoned at ſea both with regard to meaſure and weight according to the nature of the goods.

In

In meaſure, there are allowed to a laſt of goods 2 tuns, or 8 hogſheads of wine, 5 pieces of brandy or prunes, 12 barrels of herrings or peaſe, 13 barrels of pitch, 4 pipes or butts of oil of olives, and 7 quarters or barrels of fiſh-oil.
By weight, there is generally allowed to the laſt 4000 lb. but, as wool is bulky, they reckon only 2000 lb. to the laſt thereof, and 3000 lb. of almonds; and ſo likewiſe they make ſome abatements of ſeveral other ſorts of goods, in proportion to their bulk.
The land laſt is not the ſame in all places, there being ſome difference introduced by cuſtom in the ſeveral countries of Europe.

Of the Measures of Capacity of Amsterdam and Holland, &c.

The laſt of Amſterdam contains 27 muds, and each mud 4 ſcheppels.
Or, otherwiſe, the laſt of Amſterdam contains 36 ſacks, and the ſack 3 ſcheppels.
So that the mud is $\frac{1}{3}$ of the ſcheppel, and the cheppel is only $\frac{3}{4}$ of the mud.
A laſt of wheat commonly weighs between 4200 and 4800 lb. Rye between 4000 and 4200 lb. and barley between 3200 and 3400 lb.
But thoſe commodities are ſo much ſubject to alteration by their humidity, &c. that there is but little certainty in their weight.
The laſt of Amſterdam makes 19 ſextiers of Paris, or 38 buſhels of Bourdeaux; and three laſts make 4 muds of Rouen.
The laſt of Munickendam, Edam, Purmeran, and ſeveral other places of North Holland, is reckoned equal to that of Amſterdam.
But that of Hoorn and Enchuyſen, being likewiſe towns in North Holland, is of 22 muds, or 44 ſacks, of 2 ſcheppels each; and ſo is that of Muyden, Naerden, and Weeſoop, ſmall towns in the neighbourhood of Amſterdam.
At Haerlem they reckon 38 ſacks to the laſt, their ſacks conſiſting of 3 ſcheppels, 4 of which make 1 hoedt of Rotterdam, and 14 of thoſe ſacks make 1 hoedt of Delft.
The laſt of Alckmaer, in North Holland, contains 26 ſacks.
They reckon 44 ſacks to the laſt of Leyden, and 8 ſcheppels to the ſack.
The laſt of Rotterdam, Delft, and Schiedam, is compoſed of 29 ſacks, and the ſack of 3 ſcheppels, of which 10 $\frac{2}{3}$ make 1 hoedt; where, it is to be obſerved, that the laſt of thoſe places is 2 per cent. more than that of Amſterdam.
At Tergow they reckon 28 ſacks to the laſt, 3 ſcheppels to the ſack, and 32 ſcheppels to the hoedt.

Of the Last of Utrecht.

At Utrecht they reckon 25 muds, or ſacks, to the laſt, 10 $\frac{1}{2}$ of which ſacks make 1 hoedt of Rotterdam.
The laſt of Amesfort is compoſed of 64 ſcheppels.
That of Montfoort, Yſſelſtein, Vianen, &c. is greater than that of Rotterdam; it is compoſed of 18 muds, and the mud of 2 ſacks.

Of the Last of Friesland.

The laſt of Leeuwarden, Haerlingen, and other towns of Weſt Frieſland, is compoſed of 33 muds.
And that of Groningen in Eaſt Frieſland is of the ſame meaſure.

Of the Last of Guelderland, and the country of Cleves.

The laſt of Nimeguen, Arnhem, and Dreſburgh, is compoſed of 22 mouvers, and the mouver of 4 ſcheppels, 8 of which mouvers make 1 hoedt of Rotterdam.
At Thiel they reckon 33 ſcheppels to the laſt.
At Burenande 68 ſcheppels.
At Haerderwick they reckon 11 muds to 10 of Amſterdam.

Of the Last of Over-Yssel.

The laſt of Campen is of 25 muds for corn, 9 of which make 1 hoedt of Rotterdam.
And 9 muids of Zwoll make likewiſe 1 hoedt of Rotterdam.
The laſt of Deventer contains 36 muids of 4 ſcheppels each.

Of the Last of Zealand.

The laſt of Middleburgh is compoſed of 4 $\frac{1}{2}$ ſacks of 2 ſcheppels each, or a little more; and that of Fleſſing, Zirickzee, the Brill, and ſome other places, is ſomewhat different from it, the ſack being there reckoned 2 $\frac{1}{2}$ ſcheppels.

Of the Last of Brabant.

The laſt of Antwerp is compoſed of 38 verteels, of which 37 $\frac{1}{2}$ make 1 laſt of Amſterdam.
Their verteel is compoſed of 4 mukens, and 32 verteels make the ſack for oats.
At Bruſſels they reckon 25 ſacks equal to the laſt of Amſterdam.
At Malines they reckon 28 verteels equal to the laſt of Amſterdam.
The laſt of Louvain is compoſed of 37 muds, and each mud of 8 halſters.
At Breda and Steenbergue they reckon 33 $\frac{1}{2}$ verteels to the corn-laſt, and 29 for oats; and 13 verteels make 8 ſacks, or 1 hoedt of Rotterdam.
At Bergen-op-Zoom, they allow 34 verteels to the laſt of corn, and 28 $\frac{1}{4}$ for oats.
That of Bois-le-Duc is compoſed of 20 $\frac{1}{2}$ mouvers, 8 of which make 1 hoedt of Amſterdam.

Of the Last of several towns in Flanders.

The laſt of Ghent is compoſed of 56 halſters for corn, and of 38 for oats: their mud is compoſed of 6 ſacks, each ſack of 2 halſters.
At Bruges the laſt is compoſed of 17 $\frac{1}{2}$ hoedts for corn, and 14 $\frac{1}{2}$ for oats, equal to the laſt of Amſterdam.
At St. Omers, the laſt is reckoned 22 $\frac{1}{2}$ raziers, the razier conſiſting of 2 ſcheppels.
At Dixmude, they reckon 30 $\frac{1}{2}$ raziers to the laſt of wheat, and 24 for oats.
At L'Iſle, they reckon 41 raziers to the laſt of wheat, and 30 for oats.
At Gravelin, they reckon 22 $\frac{1}{2}$ raziers to the laſt of corn, and 18 $\frac{3}{4}$ for oats.
Eighteen raziers of Dunkirk are equal to one hoedt of Rotterdam.

Of the Last of Liege.

The laſt of Liege is compoſed of 96 ſextiers, of 8 muds each: they reckon the corn-laſt of Tongres 15 muds, and that for oats but 14.

Of the Last of Great-Britain and Ireland.

The laſt of London conſiſts of 10 $\frac{1}{2}$ quarters, or barrels, compoſed of 8 buſhels each, and the buſhel of 4 gallons.
The buſhel weighs between 56 and 60 lb. and 10 buſhels of England make about 1 laſt of Amſterdam.
In Scotland, they reckon 38 buſhels to the laſt, and 18 gallons to the buſhel; and in Ireland the ſame thing.

Of the Last of Dantzick.

At Dantzick they reckon 36 ſcheppels to the laſt, which is equal to 58 ſcheppels of Amſterdam.
They likewiſe reckon 16 ſchippondts to the laſt, and 340 lb. to the ſchippondt, which makes 5440 lb. to the laſt; but they give only 15 ſchippondts or 5100 lb. weight the laſt of oats.
They likewiſe divide their laſt at Dantzick into 16 ſextiers, meaſure of Paris, or 20 buſhels of Bourdeaux.
They buy and ſell their corn at Dantzick, as every other thing, by Poliſh florins and groſs.

Of the Last of Riga.

At Riga they reckon 46 looper to be equal to the laſt of Amſterdam; and they buy and ſell it by rixdollars of 3 florins, or 90 Poliſh groſs.

Of the Last of Koningsberg.

Six laſt of that place are equal to 7 of Amſterdam.

Of the Last of Copenhagen.

They have there ſeveral laſts, which differ from one another conſiderably, according to the different ſorts of grain, or other commodities that are meaſured by them. Ricard makes mention of three ſeveral ſorts of laſts uſual in Copenhagen, viz. of 42 barrels, of 80 ſcheppels, and of 96 ſcheppels.

Of the Last of Stockholm.

At Stockholm they reckon 23 barrels to the laſt.

Of the Last of Hamburgh, Bremen, and Embden.

The laſt of Hamburgh conſiſts of 90 ſcheppels.
At Bremen they reckon 40 ſcheppels to the laſt; and 8 laſts of Bremen have held out to 7 laſts, 18 muds, and 1 ſcheppel, at Amſterdam.
At Embden they reckon 15 $\frac{1}{2}$ barrels to the laſt.

Of the Muid, &c. of France.

The principal meaſure made uſe of for grain, &c. at Paris, and moſt other places of the kingdom is called muid.
The muid contains 12 ſextiers, and the ſextier 12 buſhels.
The ſextier of good wheat weighs between 244 and 248 lb. marc weight.
They divide the ſextier of oats into 24 buſhels, which again are ſubdivided into ſeveral ſmaller meaſures.
Nineteen ſextiers of Paris are reckoned equal to 1 laſt of Amſterdam.
The muid of Roüen contains 12 ſextiers, which are equal to 14 of Paris: it ought to weigh about 3360 lb. marc weight, and makes 28 buſhels of Bourdeaux.
Four muids of Roüen are reckoned equal to 3 laſts of Amſterdam.
The ſextier of corn weighs 210 lb. weight of Roüen, and is divided into 2 mines, and the mine into 4 buſhels.
The muid of Orleans ought to weigh 600 lb. and is compoſed of 12 mincs, equal to 2 $\frac{1}{2}$ ſextiers of Paris, or 5 buſhels of Bourdeaux.

The meaſure made uſe of at Lyons, called aſnée, is divided into 6 buſhels, equal to 1 $\frac{1}{3}$ ſextier, meaſure of Paris, or 2 $\frac{2}{3}$ buſhels of Bourdeaux.
Eight buſhels of Roüen make 1 ſextier of Paris, and 2 buſhels of Bourdeaux.
The aſnée of Macon makes 1 $\frac{2}{3}$ ſextiers of Paris, or 3 $\frac{1}{3}$ buſhels of Bourdeaux.
The 5 buſhels of Avignon make 3 ſextiers of Paris, and 6 buſhels of Bourdeaux.
The ſextier of Montpelier is compoſed of 2 emines, and the emine of 2 quarters. The ſextier, weighing between 90 and 95 lb. weight of that town, being between 75 and 80 lb. marc weight: ſo that 100 ſextiers make 1 laſt 22 muds of Amſterdam.
The ſextier of Caſtres is compoſed of 2 emines, and the emine of 16 buſhels. The ſextier weighs about 200 lb. weight of that place, which is about 170 lb. marc weight; ſo that it may be reckoned that 1001 ſextiers of Caſtres make 4 laſts of Amſterdam.
The ſextier of Abbeville is compoſed of 16 buſhels, and is equal to that of Paris.
The ſextier of Amiens weighs from 50 to 52 lb. and 5 ſextiers.
The ſextier of Bologne weighs 270 lb. ſmall weight; and 8 ſextiers of that place render 5 of Paris.
The ſextier of Calais weighs 260 lb. and 12 of them render 13 of Paris.
Which ſextier of Paris renders,

At
- St. Valery - - - 1 Sextier,
- Dieppe - - - - 18 Mines,
- Havre de Grace - - 5 $\frac{1}{4}$ Buſhels,
- Amboiſe - - - 14 Buſhels,
- Saumur - - - 1 Buſhel,
- Tours - - - - 14 Buſhels,
- Blois - - 20 Buſhels,
- Aubeterre - - 5 Buſhels,
- Barbeſieux - - 5 Buſhels,
- Perigueux - - 5 Buſhels.

The ſextier of Arles weighs only 93 lb. marc weight, and the load is 360 lb. weight of that country.
The load of Beaucaire is 2 per cent. greater that that of Arles.
The load of Marſeilles is compoſed of 4 emines, and weighs 300 lb. weight of Marſeilles, or thereabout, which make 343 lb. marc weight; 100 lb. of which make 123 $\frac{1}{2}$ lb. weight of Marſeilles; ſo that the emine weighs 75 lb. weight of Marſeilles.
The load of St. Giles's is 18 or 20 per cent. greater than that of Arles.
The load of Tarſeon is 2 per cent. leſs than that of Arles.
The load of Toulon is compoſed of 3 ſextiers of that place, and the ſextier contains 1 $\frac{1}{2}$ emines, 3 of which make 2 ſextiers of Paris; or otherwiſe, they reckon that the buſhel weighs 31 lb. and that 7 $\frac{3}{4}$ buſhels make 1 ſextier of Paris.
The ton of Auray in Britany is reckoned 2200. lb.
That of Audierne 2300 lb.
That of Breſt is 2240 lb.
That of Hennebon 2950 lb.
Port Lewis the ſame.
Quinpercorentin the ſame.
The ton of Nantes is compoſed of 10 ſextiers, and the ſextier of 16 buſhels: it weighs between 2200 and 2250 lb. the meaſure being heaped, and 18 or 20 per cent. leſs, if otherwiſe.
The ton of Rennes weighs 2400 lb.
That of St. Malo the ſame.
The ton of Brieux 2600 lb.
That of Rochelle and Maran 42 buſhels.

Of Spain.

At Seville they reckon 4 cahy's to a laſt, each cahy conſiſting of 12 anegra's.
The fanegue of Cadiz weighs 93 $\frac{3}{4}$ lb. weight of Marſeilles, 3 $\frac{1}{3}$ lb. of which make the load of 300 lb. weight of Marſeilles aforeſaid, or 243 lb. marc weight.

Of Portugal.

At Liſbon they reckon 4 alguiers to the fanegue, 15 fanegues to the muid, and 4 muids to the laſt of Amſterdam.

Of Italy.

Grain is ſold at Genoa by the mine.
Two ſacks of wheat at Leghorn make 288 lb. weight of Marſeilles.
Corn is ſold at Venice by the ſextier or ſtaro, which is the ordinary meaſure, two of which make a load of Marſeilles.

Of the chief Measures of Constantinople, and of the East-Indies in general.

There being but about 3 per cent. difference betwixt the aunes of Amſterdam and pico's of Conſtantinople, 100 aunes of Amſterdam make 103 pico's of Conſtantinople; 100 pico's of Conſtantinople make 97 aunes of Amſterdam.

Measures of Fort St. George, or Madras.

Gainr Measures.

1 Meaſure weighs about - -	2 lb.	10 oz. avoir.
8 Ditto is 1 mercal - -	21	—
3200 Ditto is 400 ditto, or 1 garſe	8400	—

1 Madras rupee weighs 7 dwts. 11 gr. Troy, and is better than Engliſh ſtandard 14 dwts. 10 gr. in 1 lb: it is country-touch 9 $\frac{7}{8}$, China-touch 98 $\frac{3}{4}$. See East-India Company.

Liquid and Dry Measures.

1 Meaſure is equal to 1 $\frac{1}{2}$ pint Engliſh of 423 cubic inches.
8 Ditto are equal to 1 mercal of 3384 cubic inches.
400 Mercals are equal to 1 garſe of 1,353,600 cubic inches.
1 Covid is equal to 18 $\frac{6}{10}$ inches.
N. B. One meaſure weighs about 2 lb. 8 oz. avoirdupois.
Eight ditto weigh about 21 lb. or 22 lb.
3200 Ditto is 400 mercals, or 1 garſe, which weighs 8400 lb. which is 3 $\frac{3}{4}$ tons, or 100 Bengal baazar maunds of 82 lb. 2 oz. 2 dr. each.

Bengal Measures.

One meaſure is five ſeer.
Eight ditto are forty ſeer.
The covid (in cloth-meaſure) is nine inches.

Of Malacca Measures.

A Malacca quoing is 3200 chupas, or 800 cantins, equal to 5000 Dutch pounds, or 5475 lb. Engliſh, or Canton peculs (according to the Dutch calculation of 125 lb. to a pecul) 40 peculs.
A laſt is 2000 chupas, 500 cantins, 3000 Dutch pounds, 24 peculs, 3285 lb. Engliſh.

Anjengo Measure.

One Anjengo covid is eighteen inches Engliſh.

Callicut and Tellicherry Measure.

One covid is eighteen inches Engliſh; and the Callicutt guz, made uſe of in meaſuring timber, is equal to 28 $\frac{2}{10}$ inches Engliſh.
They likewiſe, ſometimes at Callicut, meaſure their timber by the covid and borrebl; twelve borrebls is one covid when the timber is ſawed, and twenty-four borrebls is one covid when unſawed: the price generally is one Callicut fanam per ſolid covid.

Carwar Measure.

One covid is eighteen inches Engliſh.

Surat Measures,

Are the larger and leſſer covid, viz.
One covid of 36 inches, and one covid 27 inches.
By the latter all things are ſold except broad cloath, velvet, and ſattin, which are ſold by the large covid, or Engliſh yard.

Gombroon Long Measure.

93 Guz are equal to 100 yards Engliſh.

Mocha Measures.

Rice, and other grain, are ſold by the kalla and tomand; forty kallas is one tomand, and weighs about 165 lb. but the governor's cuſtom (of half a kalla per tomand upon all grain ſold) being deducted, and the intolerable cheat in the meaſuring, together with the pilferage from the water-ſide home, being allowed for, the Bengal maund will not come out above nineteen kallas; whereas one bag, or Bengal maund, ought to hold out more than a tomand; but, for the foregoing reaſon, two Bengal maunds ſeldom come out above thirty-eight kallas, and rarely that. See East-India-Company and East-India Trade.
Oil is ſold by the cudda, noosfia, and vakia.
Sixteen vakias is one noosfia.
Four noosfias, or meaſures, one cuddy poiſe, about 18 lb.
Of late years the price has been from three to five noosfias per Mocha dollar; and, computing the dupper of two Bengal factory maunds to hold out about 67 or 68 meaſures each, at which rate the noosfia, or meaſure, weighs about 2 $\frac{1}{4}$.
Cotton is ſold by the hearf, and nine hearfs is 11 $\frac{1}{2}$ Mocha dollars: it generally ſells from 30 to 40 hearfs per bahar.

Long Measure.

The guz is twenty-five inches Engliſh.
The covid is nineteen inches Engliſh.

China.

Canton Measure.

Ten punt is one covid in piece goods, equal to 14 $\frac{5}{8}$ inches.

Remarks.

The following conformity of meaſures in regard to grain being of uſe, we ſhall give the reader the ſame from La Bibliotheque des Jeunes Negocians, by the Sieur Larue, merchant at Lyons, dedicated to the count de Maurepas, and publiſhed in the year 1747; which is eſteemed the moſt modern and authentic account that is publiſhed in Europe.

Of

Of the CONFORMITY of the MEASURES of AMSTERDAM, PARIS, and BOURDEAUX, with regard to GRAIN.

Of Round Measures for Salt.

Salt is ſold by different meaſures in the ſeveral places where that commodity is made, and whither it is tranſported and expoſed to ſale.

The moſt conſiderable places where it is made, are Marenne, Brouage, Tremblade, Rochelle, Maran, Nantes, and other places in the provinces of Britany, Sainteonge, and the country of Aunix in France; and the iſlands of Rhé, Oleron, and others, upon the coaſt of that kingdom; and Cadiz and St. Ubes, and other places in Spain and Portugal.

And from thence it is tranſported in vaſt quantities to ſeveral parts of Europe.

In France it is ſold by the muid, which is greater or leſs, according to the cuſtom of the ſeveral provinces where it is made, and where it is ſold.

At Paris, they divide the muid into twelve ſextiers, and the ſextier into four minots.

At Marenne, the Iſle of Rhé, and other places in France, where ſalt is made, they ſell it by the hundred, which they divide into 28 muids, and the muid into 24 buſhels.

The hundred renders commonly at Amſterdam 11 ½ laſts, or 23 tons.

At Bourdeaux, that muid renders 42 pipes, or 252 ſacks or minots.

The minot commonly weighs about 240 pounds, marc weight.

But the ſalt that is made at Brouage and in the Iſle of Rhé, is heavier than that of Marenne, Tremblade, and Oleron.

The hundred of Brouage, the Iſle of Rhé, &c. renders 11 ¼ or 11 ½ laſts, which weigh about 45 or 46,000 weight.

At Copenhagen it renders 9 ½ laſts, or 18 tons.

At Konigſberg it renders about ten laſts, or 40,000 pounds weight. And it is to be obſerved, that ſtrangers are not allowed there to keep ſalt in ſtorehouſes to ſell.

At Riga it likewiſe renders about 10 laſts, nor are ſtrangers allowed any greater privilege about it than at Koningſberg.

At Dantzick it renders 11 ½, and ſometimes 12 laſts: 7 ¼, or 7 ½ of which, make the great hundred of Amſterdam.

Strangers may ſell ſalt at Dantzick to the inhabitants, but not tranſport it by the canals, nor ſell it to other ſtrangers.

At Stetin in Pomerania, it renders 10 laſts, or 40,000 pounds weight.

In Portugal ſalt is ſold by the muid, four of which make one laſt, and ſeven the hundred, of 404 ſcheppels, meaſure of Amſterdam.

The muid of France renders about 7 ½ laſts, meaſure of London.

It is ſold at Amſterdam by the hundred of 404 ſcheppels, which is reckoned 7 laſts, or 14 tons, or 28,000 pounds weight, which is alſo counted 208 ſacks.

Some EXAMPLES, to illuſtrate the converſion of the MEASURES of one country into thoſe of others.

Suppoſe that you would know how many aunes of Troyes in Champagne 100 aunes of Paris will make, and that to diſcover the ſame you have no other knowledge than what follows; which we ſhall exhibit and operate according to the rule of conjunction, that we have exemplified in variety of caſes throughout this work. See the articles ARBITRATION of EXCHANGES, HAMBURGH, HOLLAND, EXCHANGE.

	Antecedents.		Conſequents.
If	7 Aunes of Paris	make	9 Yards of London,
And	36 Yards of London	——	49 Aunes of Holland,
	7 Aunes of Holland	——	9 Braces of Milan,
	3 Braces of Milan	——	2 Vares of Arragon,
	5 Vares of Arragon	——	2 Canes of Montpelier,
	9 Canes of Montp.	——	10 Canes of Toulouſe,
	4 Canes of Toul.	——	9 Aunes of Troyes—

How many of Troyes will 100 aunes of Paris make?

Rule—Multiply the antecedents together for a diviſor, and the conſequents for a dividend, and you will find the quotient to be 150 ells of Troyes to be equal to 100 ells of Paris.—Or abbreviated according to what is taught under the article ARBITRATION of EXCHANGES, &c. will ſtand thus, which is performed in a minute's times, without thoſe tedious multiplications, and will ſtand thus by way of equation.

7 = 9
36 = 49 7
7 = 9
3 = 7
5 = 7
7 9 = 7 7
2 4 = 9 3
100

So that the product of all the antecedents, abridged, is reduced to 2 for a diviſor, and the product of the conſequents to $3 \times 100 = 300$, and divided by $2 = 150$ the anſwer.

EXAMPLE II.

Suppoſe that you owe 100 ânées of wheat at Lyons, and that you would know what quantity you muſt purchaſe at Mâcon to replace them, and that you have no other knowledge to come at the ſame than by ſaying, viz.

If	3 ânées of Lyons	make	4 Sextiers of Paris,
And	1 Sextier of Paris	——	2 Buſhels of Bourdeaux,
	38 Buſhels of Bourd.	——	27 Muds of Amſterdam,
	27 Muds of Amſter.	——	46 Fanégas of Cadiz,
	230 Fanégas of Cadiz	——	57 ânées of Mâcon:

How much does 100 of Lyons make?

The whole abridged will ſtand thus:

3 = 4 2
1 = 7
7 38 = 7 7
7 7 = 46
7 30 = 57 19
115 100

Ergo $\frac{46 \times 2 \times 100}{115}$ Anſw. = 80 ânées ſhould be bought at Mâcon to replace 100 at Lyons.

REMARKS.

If the rules that we have laid down, and the reaſons thereof which we have demonſtrated, in the ſeveral parts of this work to which we have referred, be duly attended to, theſe operations can require no farther elucidation. The ſame method of calculation is applicable to weights as well as meaſures. See WEIGHTS.

MECHANICAL ARTS. Throughout the courſe of this work, we have endeavoured to ſhew, that artificers, mechanics, and manufacturers, are the grand baſis of all our preſent commerce; and that our ſtudents and experimentaliſts in arts and philoſophy, in conjunction with theſe practical artizans, and the ſagacity and induſtry of our merchants, are the very life and ſoul of all our trafficable advancements and ſplendor. See the articles ARTIFICERS, MANUFACTURERS, MATHEMATICS, MERCANTILE COLLEGE, MUSÆUM, ROYAL SOCIETY.

What has been amply urged under the two former of theſe heads, will, in a great meaſure, hold good under this article of MECHANICS and MECHANICAL ARTS; and, therefore, we ſhall have the leſs to ſay upon the preſent occaſion.

As nothing more evidently ſhews the high value and importance of this claſs of people to commercial ſtates, than the daily artifices of our rival nations in trade, to decoy the moſt ingenious of our mechanics and manufacturers out of the kingdom; ſo nothing would ſhew the wiſdom of the nation more, than to make it for the intereſt of ſuch to remain among us, and to increaſe the number, as being the chief inſtruments to preſerve and advance the trade of the nation. To which end, nothing can ſo much contribute as the advancement of our old and eſtabliſhed branches of foreign trade, and the promotion of new: and theſe depend on the wiſdom of parliament, and that of the royal councils.

One general ſtrain that runs through this work, the reader will pleaſe to obſerve, is, to ſhew, how great a variety of trades depends upon ſound philoſophy: that is, philoſophy founded on repeated and unerring experiments, and appoſitely applied, in conjunction with the mathematical arts to practical trades. See the above articles. And, if this be the caſe, it follows, that, in order to improve the old mechanic arts, and to diſcover new, ſuch philoſophy and mathematics muſt be encouraged, or our practical artizans will be deprived of ſome of their beſt coadjutors; for it would be no difficulty to ſhew, that moſt trades and arts have been derived from this claſs of men; who, although they paſs ſilently through life in their ſerene and contemplative way, yet their memories deſerve to be eternally revered.

How that philoſophy may be effectually promoted, which has been the parent of all trades, and will ever continue to advance them, will not be judged incompatible with a work of this nature. It is therefore we have interlarded ſo much philoſophy, as is requiſite to ſhew how far particular trades depend thereupon; and we have alſo under the heads referred to endeavoured to ſhew, in what manner philoſophy ought to be encouraged by trade, ſince trade is ſo highly indebted to philoſophy.

At preſent, I ſhall only add, to what has been obſerved upon ſimilar occaſions, a recommendation to our Britiſh artiſts to endeavour to imitate all thoſe curious arts, which are practiſed to any ſuperior degree of perfection in all other nations whatſoever; for this will prove one great means to advance the intereſt of particular trades. That I may not be miſunderſtood, it may be proper to intimate a few inſtances.

REMARKS on MECHANICAL ARTS.

The country of Bengal furniſhes materials or mechanic arts and ſciences equal to moſt countries. The artizans here have wonderful ſkill and dexterity: they excel partieularly in making linen cloth, which is of ſuch fineneſs, that very long and broad pieces of it may eaſily be drawn through a ſmall ring. If you tear a piece of muſlin into two pieces, and give it to one of their fine-drawers to ſet it together again, it will be impoſſible for you to diſcover where it is joined, though you mark it on purpoſe to know it. They will place together ſo artifically the pieces of glaſs or China ware, that one cannot perceive it was ever broken.

Their embroiderers work in filigreen very curiouſly: they imitate exactly any work made in Europe, though the engine they make uſe of, and all their other utenſils, do not coſt them above the value of a crown.

The looms that their weavers uſe, do not coſt them more: with theſe they ſit in in their courts and yards, or on the ſide of the highway, and work thoſe fine ſtuffs that are ſo highly eſteemed over all the world.

They have here no need of wine to make aqua vitæ, but make it of a ſyrup, ſugar, ſome certain ſorts of barks, and raiſins; it burns better, and is ſtronger than that made in Europe.

They paint flowers, and gild very finely upon glaſs. I was ſurprized, ſays our author, to ſee their veſſels which they uſe to cool water in, and are not thicker than two leaves of paper paſted together.

Their watermen row after a different manner from ours; they move the oar with their feet, and their hands ſerve inſtead of the hypomochlion, or roller on which it turns.

The liquor which their painters uſe, does not any way loſe it's colour, nor is it tarniſhed by lye.

They make uſe of a kind of hand-mill to break their ſugar-canes, which does not coſt them above the value of ten pence.

The perſon that grinds, works and faſhions the ſtone himſelf with lac and emery.

Their maſons will pave the largeſt room with a ſort of cement made of brick duſt and lime, ſo that it ſhall ſeem to be but one ſtone, and is much harder than gravel. I ſaw them make a ſort of pent-houſe, ſays our author again, that was 40 feet long, 8 feet broad, and 5 or 6 inches thick; which they raiſed up in my preſence, and fixed it to the wall on one ſide only, without putting any prop under it to ſupport it.

Their pilots take the altitude (or latitude of places) with a cord that has ſeveral knots in it. They put one end of the cord between their teeth, and by means of a piece of wood fixed to it, that has a hole through it, they eaſily obſerve the tail of Urſa minor, which is commoly called the polar ſtar, or north pole.

Their lime is uſually made of ſea ſhells: that which is made of ſnail-ſhells, ſerves to whiten their houſes; and that which is made of ſtones they chew with the leaves of betel. I have ſeen ſome of them that would take as much of it in a day, as the quantity of an egg.

They make their butter in the firſt pot that comes to hand; they cleave a ſtick into four quarters at one end, and, ſtretching them out aſunder in proportion to the ſize of the pot that contains the milk, they turn the ſtick round different ways (backwards and forwards) by means of a cord twiſted about it, and by this means in a ſhort time make the butter.

Thoſe that ſell butter have the art of making it paſs for freſh, when it is old and rank. To do this they melt it, and pour upon it ſour curdly milk; and in eight hours after they take it out in lumps, and ſtrain it through a cloth for ſale.

Their chemiſts make uſe of the firſt pot they meet with to revive cinnabar, and other preparations of mercury, which they do after a very ſimple manner. They eaſily reduce all metals into a powder, as I myſelf can witneſs. They ſet a great value upon talc and braſs, which conſume, as they ſay, all viſcous humours, and remove the moſt ſtubborn obſtructions.

The Chineſe gild paper with leaf-gold and ſilver, laid on with a very good ſort of varniſh they have, which is the ſame wherewith they varniſh their lacquered wares; all which, after it is thoroughly dry, they put in a ſcrew-preſs, and, with an inſtrument like our plane, ſhave it as fine as they pleaſe. They alſo gild paper on one ſide with leaf-gold, then cut it in long pieces, and weave it into their ſilks, which makes them, with little or no coſt, look very rich and fine. The ſame long pieces are twiſted about ſilk thread by them ſo artificially, as to look finer than gold-thread, though it be of no great value.

Among the Japoneſe, they have the art of making lacca in a manner ſuperior to the Europeans: there is ſome ſo fine and curious, that whereas, in this country, one may buy an ordinary ſmall box for three or four crowns; one of the ſame ſize, when made in Japan of exquiſite lacca, will ſell for more than eighty crowns. The author of this account hath four cabinets of his workmanſhip, which he affirms to have coſt him about 40,000 crowns, which he will not ſell under 80,000 crowns. Philoſ. Tranſ. n. 49.

The colours wherewith they dye their ſtuffs never fade: I have ſeen one of them, which our vermilion and couleur de feu, as the French call it, come not near to. It is extracted out of a flower like to ſaffron, and one pound of it coſts an incredible price. To try whether the colour will not change by lixivium or lye, they apply an hot iron to it; and, if there it holds, they aſſure themſelves of the durableneſs of the colour.

The method of making ſalt, at Chuſan and China, may deſerve regard: it is this: all the ſhores here being mud, inſtead of ſand, in the ſummer-ſeaſon they pare off the ſuperficial earth which has been overflown with the ſalt-water, and lay it up in heaps for uſe: when they are to uſe it, they dry it in the ſun, rubbing it ſmall; then, digging a pit, they cover the bottom thereof with ſtraw, at which, through the ſide of the pit, they paſs a hollow cane that leads into a jar, which ſtands below the level of the pit's bottom; they fill the pit almoſt full with the aforeſaid earth, and pour ſalt water thereon 'till it be covered two or three inches with water, which drains through into the aforeſaid jar, and is afterwards boiled into ſalt.

Upon the whole, in whatever mechanical or manufactural arts other nations may excel Great-Britain, our artiſts ſhould be upon the watch, not only to imitate, but ſurpaſs, if poſſible. Throughout this work, thoſe particulars appear wherein other nations do excel us, under the ſeveral countries of the world, whoſe natural hiſtory and traffic we have deſcribed, and may well deſerve the attention of our artiſts. But thoſe which are imported, and which they can ſee, handle, and minutely examine, they are the moſt likely to imitate or excel.

As we have arrived at a great perfection in the China ware, why may we not in divers other eaſtern arts and manufactures?

Remarks in another light, conſiſtent with this work.

It is a maxim generally received, that one of the moſt effectual means to ſettle and improve commerce, or any other political intereſt, is the patronage of princes, diſpenſing rewards, and exciting emulation by inveſting with honours, and other marks of diſtinction, thoſe perſons, who, by the force of genius or application, have made new diſcoveries, or improved upon any thing laudable, and conducive to the intereſt of the public; more eſpecially ſuch, as upon the ſtrength of their own genius, and at their ſole charge, have ſet up and maintained manufactories, and other works of the mechanic arts beneficial to the community, and when the introduction of them has been entirely owing to their induſtry and public ſpirit. This point I ſhall only treat in a general way, as it is not poſſible to preſcribe rules for the conduct of it on particular occaſions, ſince the honours, as well as rewards and encouragements, are always to be proportioned and diſpenſed according to the ſtation and other circumſtances of the claimants, and with an eye to the charge they ſhall have been at, and the benefits that ſhall reſult to the public from them; things of ſuch a nature, that it is abſolutely neceſſary to rely upon the judgment and prudence of the miniſters, whom his majeſty ſhall intruſt with the conduct of ſuch intereſting affairs.

It is cuſtomary, and a piece of good policy, to give yearly penſions and rewards, in order not only to cheriſh among ourſelves, but to draw over and engage to ſtay in any country, able maſters in manufactures and the mechanic arts, either to introduce new ſorts of buſineſſes, or to improve ſuch as have been already eſtabliſhed, by advancing them to a degree of perfection and goodneſs, that is certain to make them eſteemed, and procure them a market every-where. To artificers or workmen ſetting up new and profitable commercial arts, it is uſual in France and Spain to allow, for a certain term, an immunity from all troubleſome offices, houſes to live in, workſhops, and a diſpenſation from ſome duties; and at the ſame time, for a farther encouragement, ſums of money have been granted to enable them to bear the firſt expence, which uſually runs high. But in reſpect to this advance of money, or the other encouragements, we are as little able to preſcribe ſtated rules, as there muſt neceſſarily be a variety of caſes, according to the ſituation of the projectors, and the benefits that will ariſe from the undertaking. It is uſual alſo to grant an excluſive privilege of this kind, that, for a certain number of years, no other perſon manufacture the commodities, they are under an obligation to introduce and eſtabliſh. But, before we ever diſpenſe indulgences of this nature, we ought to conſider the affair thoroughly; and when for ſpecial reaſons it is found abſolutely neceſſary, in order to obtain our end, they are even then to be limited and guarded with the utmoſt care, leſt they be converted into monopolies, that are of great profit to the proprietor, but of the utmoſt prejudice to the public; moreover, in diſpenſing them, though it be with all poſſible precaution, it ought at leaſt to be attended with the following circumſtances, of it's being a new undertaking, and very difficult to be ſet on foot; that there will enſue an improvement to commerce, and a conſiderable advantage to the public. See the articles Monopolies and Patents.

Lewis XIV. king of France, in the year 1665, during the miniſtry of John Baptiſt Colbert, granted an excluſive privilege and other advantages, in order to ſettle a tin manufacture in ſeveral parts of that kingdom, as it is a very uſeful commodity, and of great conſumption every-where; and, at the expiration of the term covenanted, the patent was renewed in the year 1695, in favour of Iſaac Robelin, engineer-director of the fortifications of Burgundy, and company, to which partnerſhip it was renewed for another term in the year 1700, as appears from the patent granted them. In like manner the woollen and other capital manufactories and mechanical arts have been introduced and eſtabliſhed in this and other trading kingdoms. See the articles Artificers, France.

But we are always to be very careful, that the term of the privilege (if it be excluſive) be granted for as ſhort a time as poſſible, and under due limitations, in order that the manufacture and traffic carried on, both at home and abroad, may be freely and quickly extended.

When trafficable commodities of any kind are undertaken to be eſtabliſhed in a nation by private hands, and are nearly of the ſame ſort as ſome already eſtabliſhed in the country, and though they may be of ſuperior quality, as it is from this very ſuperiority, that with a little diligence they may be imitated, there will be no reaſon to grant privileges, indulgences, and other diſtinguiſhing encouragements which ſome have moved for, as in ſuch caſes they ought to be common and general; for any thing ſingular, or excluſive, is a great prejudice to other manufactures of the kingdom, which being of equal moment, or little inferior, may, with equal propriety, claim and enjoy the ſame advantage; and, if they ſhould not obtain it, the conſequence will certainly be, that, favouring a branch, we ſhall deſtroy the root.

It would be impolitic and unjuſt to indulge a few artizans, upon no reaſonable plea, with immunities and other indulgences, that are denied to thoſe of the reſt of the kingdom. For this reaſon, all encouragements which we have recommended in favour of commerce and manufactural and mechanical arts, tend to put all, as near as poſſible, upon an equal footing under the ſame circumſtances, unleſs very particular caſes require an exemption, as ſometimes it does find a place in general proviſions, and upon the very principle of an equal diſtribution of juſtice; in order, that, at the time of carrying thoſe indulgences into execution, an equality may be better preſerved in diſtributing relief; juſt as ſtronger and more coſtly medicines are adminiſtered for a cure under dangerous diſeaſes, while, in maladies of an inferior kind, health is recoverable by gentle phyſic.

MECKLENBURG, called alſo MECKELBOURG, a duchy in Germany, has Pomerania on the eaſt; part of the marquiſate of Brandenburg, and the duchy of Lunenburg, on the ſouth; the Baltic on the north; and Holſtein and Saxe-Lawenburg on the weſt; being about 100 miles long, and 60 broad. It abounds with corn, fruit, fiſh, and fowl; it is well watered with lakes and rivers, and extremely well ſituated on the Baltic for a foreign trade, ſome of the principal Hanſe-Towns lying in this duchy, viz. Roſtock, Wiſmar, Swerin, &c.

&c. [ſee HANSE-TOWNS] which are it's principal places of trade.

At ROSTOCK, their chief commodity is beer, that which was formerly called Lubec beer, which they export in large quantities: ſome years ſince they had no leſs than 250 privileged brewers, who, it is ſaid, brewed as many thouſand tons, a year, beſides what particular perſons brew for their own uſe: ſo that the duke's revenue, ariſing from the exciſe on beer, is greater than that from all the other articles together. It's river is navigable to the very walls, but large ſhips come no farther than Wamemunde, a little town ſeven miles lower, where the Swedes built a fort formerly.

MEDAL, a piece of metal, in the form of a coin, with ſome peculiar ſtamp thereon, deſtined to preſerve to poſterity the portrait of ſome diſtinguiſhed perſonage, or the memory of ſome illuſtrious action.

REMARKS.

It not being conſiſtent with the tenor of our work to conſider this article in the mere light of an antiquarian, we ſhall take notice of it only as an object of traffic among the learned and curious, where intereſt frequently is no way concerned, the emulation among ſuch being to inrich their cabinets, and to complete their collections of thoſe eſtimable monuments of antiquity.

There are, however, as Mr. Patin remarks, in many of the principal cities of Germany, many dealers who may properly enough be called antiquarian merchants, ſince they collect medals only with a view to ſell them again for gain; a traffic, ſays the beforementioned learned author, that has it's frauds as well as moſt others, and wherein the purchaſer ſhould well examine the merchandize, if he would not receive thoſe for rare and valuable which are of a counterfeit ſtamp, for ſuch medals that are really antique and curious.

Meſſieurs Tournefort, Cornelius le Bruyn, and Paul Lucas, the latter in his accounts of Egypt, and the two others in their voyages to the Levant, ſpeak of the like commerce carried on in the iſlands of the Archipelago, and in almoſt all the ſcales of the Levant, where the inhabitants of the country, well informed of the taſte that ſtrangers have for curioſities of this nature, take pains to collect them together, and diſpoſe of them at a dear rate, and often with leſs fidelity than the German antiquarians.

Beſides this commerce in medals in Germany and the Levant, which relates only to antiquity, there is a traffic carried on in France for thoſe of a modern kind, which is more to be depended on.

This trade conſiſts chiefly in that numerous and rich ſeries of medals which were ſtruck in order to perpetuate to poſterity the moſt celebrated events in the reign of Lewis the Grand, and thoſe that are yet ſtruck every day, ſays our author, in regard to the reign of Lewis XV.

The director-general of the coinage of theſe medals, who diſpoſes of them, furniſhes thoſe only of gold, ſilver, or bronze.

The elegance and beauty of theſe medals, and the ſkill of Monſ. Launay, who has the direction thereof (1723) gives ſo great a value to them, that it is ſcarce to be doubted but they will one day be in as high eſteem as the moſt beautiful of thoſe of antiquity.

The Sieur Launay has alſo cauſed medals to be ſtruck of all the kings of France, from the commencement of the monarchy to the preſent time, which contain on one ſide the effigy of the prince, on the other a ſhort, but exact abridgment of the moſt remarkable events of every reign. Theſe alſo have entered into the commerce of the modern medals at Paris, and are not of the leaſt important ſort.

We ſhall conclude this article with a ſhort account of thoſe medals in France which concern the trade and navigation of that kingdom, and which were ſtruck in the reign of Lewis the XIVth; being perſuaded, ſays Monſ. Savary, in his French Dictionary of Commerce, in favour of that nation, that his work would want that perfection expected, if the reader did not find thoſe remaining monuments that France has ſtruck of her commerce, and of the protection that ſo great a king has given to it.

MEDALS ſtruck in France during the reign of Lewis the XIVth, upon various extraordinary eſtabliſhments made in that kingdom for the benefit of their trade and navigation.

The eſtabliſhment of a number of new manufactories in France, and the old ones being brought to their perfection, make the ſubject of the firſt medal. This was ſtruck in 1664, a year remarkable for the great number of commercial enterprizes, which commenced from that æra: and which were continued during the adminiſtration of Monſieur Colbert, whoſe memory will ever be revered and adored in that kingdom.

Upon this medal there is a Minerva, who has by her a ſpindle, a ſhuttle, bottoms of wool, and a piece of tapeſtry: the legend, MINERVA LOCUPLETRATRIX, ſignifies the kingdom inriched by arts, of which Minerva is the ſymbol; the exergum, ARTES INSTAURATÆ, which ſignifies the Arts reeſtabliſhed, M.DC.LXIV.

The ſubject of the ſecond medal is the re-eſtabliſhment of navigation, which had been a long while neglected in France: but the grand monarch, applying to their re-animation, rendered his kingdom as powerful by ſea as land, and as flouriſhing by it's commerce as by it's arms.

This medal is of the year 1665. It repreſents a ſhip in full ſail: the words of the legend are, NAVIGATIO INSTAURATA, which ſignifies NAVIGATION RE-ESTABLISHED: the exergum ſhews the date.

The French Eaſt-India company, eſtabliſhed in the year 1664, and which took poſſeſſion of the iſland of Madagaſcar in 1665, gave occaſion to the third medal.

This colony, in manner of the ancient medals, is deſigned by one of thoſe bunch-backed oxen which are in great plenty in the iſland: it ſtands nigh to an ebony-tree, which is very common in that country. The words of the legend are, COLONIA MADIGASCARICA, which ſignifies the colony of Madagaſcar: the exergum denotes the date, M.DC.LXV.

The union of the two ſeas, ſo commodious and beneficial to the domeſtic and foreign commerce of France, is repreſented in the fourth medal, ſtruck in the year 1667.

Neptune armed with his trident, with which he ſtrikes the earth, ſeems to complete this important enterprize: the guſhing out of the water, which pours forth by the ſtrength of the blow which he has given, and which ſpreads itſelf to the right and left, indicates the ocean and Mediterranean, that the canal unites. It has, for legend, JUNCTA MARIA, which ſignifies the joining of the ſeas: the exergum has FOSSA A GARUMNA AD PORTUM SETIUM; A CANAL EXTENDING FROM THE GARONNE TO THE PORT OF SETE. M.DC.LXVII.

The fifth medal was ſtruck in the year 1680, in order to preſerve the remembrance of the eſtabliſhment of the ſeveral claſſes of the marine. See the article NAVAL AFFAIRS of FRANCE.

The claſſes were three at the firſt eſtabliſhment, each conſiſting of 20,000 ſailors, one of which was to ſerve on board their men of war, the other on board their merchant-men, and the other to reſt one year in three.—Theſe claſſes have ſince been augmented to five, but they make only 60,000 ſeamen.

This medal repreſents a ſailor by the ſea-ſide, leaning upon a broken pillar; he holds in his hand a rudder, covered with a flower-de-luce: the legend has theſe words, BELLO ET COMMERCIO, ſignifying, FOR WAR AND FOR COMMERCE; the exergum has SEXAGINTA MILLIA NAUTARUM CONSCRIPTA. M.DC.LXXX. SIXTY THOUSAND SAILORS INROLLED.

The ſixth and laſt medal is on occaſion of the eſtabliſhment of the CHAMBER or COUNCIL of COMMERCE. As we have deſcribed this eſtabliſhment at large under the article CHAMBER of COMMERCE, we ſhall here only give the type, and the legend of the medal, which was ſtruck upon this account in the year 1700.

It repreſents Juſtice, and near her ſtands Mercury, the god of commerce, who, with one hand, holds his caduce, or ſnaky ſtaff, and with the other a purſe. The words are, SEX VIRI COMMERCIIS REGUNDIS; which ſignifies, SIX COMMISSIONERS PROPOSED FOR THE REGULATION OF COMMERCE.

REMARKS on the article MEDAL, ſince the laſt war, and the DEFINITIVE TREATY of 1763.

We have not learned that the FRENCH have ſtruck MEDALS to commemorate their extraordinary ſucceſſes and glorious victories, which they obtained during the laſt war; nor to celebrate the memorable advantages they gained by the laſt peace, concluded at Paris, the 10th day of February, 1763, by the DEFINITIVE TREATY of friendſhip and peace between his Britannic Majeſty, the moſt Chriſtian King, and the king of Spain; to which the king of Portugal acceded on the ſame day. See our articles AMERICA, BRITISH AMERICA, FRENCH AMERICA, CANADA, FLORIDA, and others referred to from them.

From the time of ſtriking theſe medals, to what degree the French have raiſed and extended their trade and navigation, ſee the articles FRANCE, FRENCH AMERICA, BRITISH AMERICA, LEVANT TRADE.

MEDITERRANEAN SEA, extends from the ſtraights of Gibraltar to the coaſt of Syria and Paleſtine, being above 2000 miles in length, but of very unequal breadth; the weſt part of it ſeparating Europe from Africa, and the Levant, or eaſt part of it, dividing Aſia from Africa, Spain, France, Italy, Turkey in Europe, and Natolia, or the Leſſer Aſia, bounding it on the north; and the empire of Morocco, Algiers, Tunis, Tripoli, Barca, and Egypt, bounding it on the ſouth. The ſtraight of Gibraltar, between Europe and Africa, being about 16 miles over, a ſtrong current ſets through it, out of the Atlantic Ocean, into the Mediterranean conſtantly, which requires a good gale of wind to ſtem it.

REMARKS

REMARKS, ſhewing the important utility of GIBRALTAR to the BRITISH EMPIRE.

The whole Britiſh trade carried on by means of the Mediterranean Sea being of the laſt conſequence to Great-Britain, and the permanent preſervation thereof depending upon the town and fortifications of Gibraltar; it is neceſſary to take ſome notice thereof.

Gibraltar lies in weſt longitude 6, latitude 36, and is a port-town ſituate, when it belonged to Spain, in the principality of Andaluſia, and on the ſtraight between the ocean and the Mediterranean. It ſtands at the foot of Mount Calpe, one of Hercules's pillars, about 16 miles north of Ceuta in Africa, 40 ſouth-weſt of Cadiz, and 80 ſouth of Seville. It is built on a rock, in a peninſula, and can only be approached on the land ſide by a very narrow paſſage, between the mountain and the ſea, croſs which the Spaniards have drawn a line, and fortified it, to prevent the garriſon having any communication with the country. It was taken from the Spaniards in the year 1704. Several attempts have been made to retake it, but have proved fruitleſs.

Gibraltar is but a ſmall, though ancient town. Since the Engliſh have been maſters of this town, it is become a place of conſiderable trade, which it was not before, eſpecially between the coaſt of Barbary and this place; the Engliſh merchants at Gibraltar having great warehouſes of all kinds of goods of the growth of Barbary, ſo that they furniſh the merchants in London on as good terms as they uſually had them in Barbary; and, by the convenience of ſhipping, can ſend them to England in ſmaller quantities than by loading veſſels wholly, as they were obliged to do before.

They likewiſe have a great trade here, by barco longo's, with the empire of Morocco; ſo that the trade is ſeldom ſhut up; and Gibraltar is now the market for the wax, copper, almonds, drugs, and other products of Barbary.

That a juſt and adequate idea may be formed of the real importance of this place to theſe kingdoms, we ſhall ſketch the heads of thoſe reaſons that have been occaſionally urged, both in parliament and without-doors; which, as they have been too much mixed with the temporary acrimony of party, may not, perhaps, have had ſuch weight with many as if they were ſtripped of that perſonal ſpleen and ſatire, which generally attend our political altercations. The reaſons are ſimply as follow, viz.

(1.) Becauſe Gibraltar preſerves to us the conveniency, protection, and ſecurity of our commerce to the Straights, above that of all other nations, more eſpecially in regard to the Algerines and Salleemen, who are influenced by it to keep their treaties made with us; which they never do longer with any other nation than 'till they find it their intereſt to break them.

(2.) Becauſe in reſpect to the great advantage which the poſſeſſion of that place hath already given us, when in war with France and Spain; and, conſequently, will always give us again upon the like occaſion, whilſt we continue to keep it.

(3.) With regard to our trade in general up the Mediterranean; for, as it commands the paſſage or entrance of all our navigation into that ſea, both in time of peace and war; ſo it is equally neceſſary, and as much our intereſt, to keep it ourſelves, as for any gentleman to keep poſſeſſion of the gate which leads to his own houſe; it being in the power of thoſe who poſſeſs this port, at all times, to interrupt, annoy, or hinder whom they ſhall think fit in their trade, by keeping two or three ſhips of war conſtantly on that ſtation; in the ſame manner almoſt as the Danes, by the poſſeſſion of Elſineur command the paſſage into and out of the Baltic: ſo that, if this port and fortification were in the hands of any other nation, it would be in their power likewiſe either to permit us to navigate our trade within thoſe ſtraights, or not, as they ſhould think fit, unleſs a very ſtrong ſquadron was conſtantly kept at the entrance of the ſtraight's mouth, to ſecure the paſſage, and to be relieved, from time to time, by freſh ſhips, which would put us to a much greater expence than we are now at in keeping this place.

(4.) Becauſe, before England was in poſſeſſion of Tangier, on the oppoſite ſide of the ſtraight, we were never able to deal with the Algerines, and other Turkiſh rovers; who, for near a century, had carried on a ſucceſsful piratic war againſt the commerce of this nation, and never could be reduced 'till, by the ſituation and our poſſeſſion of the abovementioned place, we diſtreſſed them ſo much, not only by taking their ſhips going in and coming out of the Straights, but alſo by retaking ſuch of their prizes as they had taken in the ocean, that at laſt they were forced to be content with ſuch a peace as we would give them; the continuance of which is owing to nothing ſo much as to our having been, for many years paſſed, and at preſent, in the ſame condition to chaſtize thoſe rovers, by the poſſeſſion of Gibraltar, as we were before by the poſſeſſion of Tangier.

(5.) Becauſe the ſecurity of our Italian, Turkey, and fiſh-trades intirely depends on our poſſeſſion of this place; and, ſhould we ever loſe it, or part with it, it is very reaſonable to believe, that both the Algerines and Salleemen would ſoon break with us again; ſo that, in ſuch a caſe, the aboveſaid branches of trade would almoſt wholly fall into the hands of our rivals, the French from Marſeilles, who, by their ſituation, are always ready at hand to furniſh thoſe markets, as ſoon as they are in want, while we, on our part, ſhall be obliged to carry on that trade by the tedious method of fleets and convoys, and at laſt, perhaps, come long after the market is ſupplied by our rivals. Beſides all this, the article of inſurance, which would certainly run much higher than uſual under theſe circumſtances, would prove a heavy charge on our goods, more than thoſe of other traders, which would thereby very much affect thoſe branches of our trade and navigation.

(6.) Becauſe the miſchief would not ſtop here: for as the Algerines, of late years, often cruize at the mouth of our channel, and as ſome of them have alſo heretofore come into our very ports two or three years ſucceſſively; ſo it is poſſible that, if we ſhould loſe Gibraltar, they may become, being ſo well acquainted with our channel, a much more dangerous enemy to us than ever they were formerly, and may attack all our trade in general, as the St. Malo privateers did in the wars of queen Anne, whenever they ſhall find that they can carry home their prizes without any interruption; which is not to be done, unleſs we ſhould be diſpoſſeſſed of Gibraltar, and thereby take the bridle, which has hitherto reſtrained them out of their mouths.

(7.) Becauſe, in reſpect to our neighbours, Gibraltar is ſituated in ſuch a manner, that it is in the power of the preſent poſſeſſors to cut off any naval communication between one port and another, of each of thoſe very powerful kingdoms; with which we have had ſuch frequent occaſions to be at war for almoſt theſe fifty years paſt, who would ſoon turn the tables upon us, if they ſhould recover this place out of our hands, eſpecially in time of any rupture between us; nothing being more ſelf-evident than that it gives, to thoſe who are maſters of it, the ſovereignty and command of the commerce and navigation of the Mediterranean Sea, and makes it impracticable for any other nation to trade there without their leave. And farther, by our poſſeſſion of this place, all nations within the Mediterranean will be obliged to court our friendſhip, or fear our power, particularly the piratical ſtates, who, beholding vengeance ſo near at hand, will be thereby deterred from attempting to interrupt our trade, while they are deſtroying that of all others.

(8.) Becauſe this advantage is not all that we reap from the poſſeſſion of Gibraltar; for it hath put into our hands occaſionally a great proportion of freight-trade into the Mediterranean, eſpecially that of the Hamburghers and Hollanders, who have made uſe of Britiſh bottoms to carry on their commerce in thoſe ſeas, 'till the Dutch obtained a peace with the Algerines, whereby we loſt one great advantage that belonged to the navigation of Great-Britain, which we before enjoyed, whilſt thoſe merchants made uſe of Engliſh ſhips, finding it dangerous to venture their eſtates in any other.

(9.) Becauſe, laying aſide all other conſiderations, there cannot be a ſtronger proof of the importance which the poſſeſſion of this place hath proved to us, than that it hath been a formidable check to the naval power of France, from the hour of our taking it, to the concluſion of the laſt French war: nor, indeed, could they ever ſend any naval ſtores round about into thoſe ſeas, without an apparent danger of their falling into our hands in going through the Straights; ſo that the greateſt part of their fleet hath thereby, as it were, become uſeleſs ever ſince. And, had not ſuch unhappy miſunderſtandings fell out as did between two admirals in the late war, we ſhould have more feelingly experienced the invaluable benefit of this poſſeſſion.

(10.) Becauſe it's proximity to Cadiz, the great mart and center of almoſt all the riches of Spaniſh America, gives us the greateſt opportunity of commanding that port, and the trade frequenting it from the Weſt-Indies; which, in time of war with Spain, may be reckoned of no ſmall conſideration or importance.

(11.) Becauſe, as the advantages of Gibraltar which reſult to this kingdom from the foregoing particulars, are fully confirmed and demonſtrated by the experience of many years paſt, ſo the preſervation of it, at all times, is of much greater concernment than it ever was before, as will appear by conſidering the preſent ſtate of public affairs: that many capital manufactures are ſpringing up in moſt parts of Europe, and particularly in France and Spain, and that ſeveral other powerful ſtates are endeavouring to vie with us in commerce and a maritime force; which ought to put us on the ſtricteſt guard, and determine us not to part with a place which is manifeſtly of ſo much advantage, by ſecuring and improving our own trade and navigation, as well as by defeating the attempts of our enemies and rivals therein.

(12.) Becauſe the Spaniards continue their unjuſtifiable captures and depredations on our logwood-trade in America, which they have more or leſs done for theſe thirty years paſt; and that, if we part with Gibraltar, we have reaſon to believe that the ſame fate may attend our whole Mediterranean trade, to it's abſolute ruin and deſtruction. See the articles LOGWOOD and SPANISH AMERICA.

(13.) Becauſe Spain and France in conjunction, if not others, will ever have their eye upon this poſſeſſion, in order to wreſt the ſame out of her hands, to ruin the whole maritime power of Great-Britain.

(14.) Be-

(14.) Becauſe Gibraltar lies at hand to intercept their Eaſt and Weſt-India fleets, with the ſpoil and riches of both worlds: it ſeparates and divides Spain from itſelf, and hinders all communication by ſea from the different parts of their dominions, and, conſequently, muſt keep them in a perpetual dependance, and put them under a neceſſity to court our friendſhip, as well as fear our enmity: it gives us an opportunity to pry into all their meaſures, obſerve all their motions, and, without the moſt ſtupid remiſſneſs on our part, renders it impracticable to them to form any projects, or carry on any expeditions againſt us or our allies, without our having due notice.

(15.) Becauſe it will ever check the riſe of the naval power of France, which can never be above our match at ſea, whilſt Gibraltar remains in our hands. It hinders the communication between their ports and ſquadrons in the ocean and the Mediterranean: it makes it impoſſible for them to ſupply their ſouthern harbours with naval ſtores either for building or repairing of fleets; of which they were ſo ſenſible in queen Anne's war, that, as ſoon as Sir George Rook had poſſeſſed himſelf of it, they ſaw themſelves under a neceſſity to lay aſide their uſual caution, and dare him in open battle; and, not meeting the ſucceſs they hoped for, the very ſame year, to the unſpeakable prejudice of their other affairs, beſieged it in form, and loſt a French and Spaniſh army before it, and never afterwards appeared with a fleet upon the ſeas again during the whole war, but ſuffered their great ſhips to moulder and rot in their harbours, for want of the means to fit them out again.

(16.) Becauſe long experience has evinced, that we can never, with ſecurity, depend on the faith of France; and, therefore, if Britons are determined never to become vaſſals to the dominion of that crown, they can never part with any thing that is ſo ſubſtantial a preſervation of their maritime power, and conſequently of their liberties and properties, as that ineſtimable fortreſs of Gibraltar.

(17.) Becauſe it appears throughout this work, from a ſeries of facts inconteſtible, that the commerce and navigation of France have been increaſing ever ſince the time of that great and able French miniſter Monſ. Colbert; and that they are now ſettled upon ſo broad a bottom, and with ſuch peculiar and extraordinary advantage for their daily riſe and encouragement, that, if Great-Britain gives up Gibraltar, ſhe may be ſo eternally imbroiled in wars with that nation, as to increaſe her national debts and incumbrances to a degree ſo enormous, that her whole trade muſt inevitably ſink under them.

(18.) Becauſe the poſſeſſion of Gibraltar will always give us reputation and figure in thoſe ſeas, which are always rewarded with power and riches. It will oblige all nations who trade in the Mediterranean, or have empire there, to court our friendſhip, and keep meaſures with us. It will awe even the courts of Rome and Conſtantinople, and make them afraid to diſturb or provoke us.

(19.) Becauſe the charge and expence of keeping Gibraltar bears no proportion to the advantages we reap by it, and the detriment and injury our trade and navigation muſt ſuſtain, if ever we part with it.

(20.) Becauſe PORT-MAHON, cannot poſſibly anſwer all the purpoſes of Gibraltar: which muſt be evident to any one, who but looks into the map; for the iſland of Minorca lies many hundred miles further up towards the gulph of Lyons, and, in truth, out of the road of all ſhips trading to Sicily, the Adriatic, the Levant, or Africa. It is ſituated at ſuch a diſtance from France and Spain, that the greateſt fleets can eſcape unobſerved, unleſs we keep perpetually before their ports to watch and purſue them; which is exceeding dangerous, if not impracticable in thoſe ſeas. We ſhall be out of the way of all intelligence. And, if we ſhould by chance have it, in all likelihood, ſhall be too late to take advantage of it; beſides, I am told, there are but few winds with which ſhips can get in or out of Port-Mahon; and, when they are once there, the paſſage is ſo narrow, that a very ſmall ſquadron can keep the greateſt from ſailing out.

(21.) Becauſe nothing is plainer, than that it will be exceeding difficult, if not impoſſible, to keep the iſland of Minorca without the poſſeſſion of Gibraltar; at leaſt it will be more expenſive to us than both are now, eſpecially if France and Spain ſhould join again; which event, I think, we ought to keep always in view, for then Gibraltar will be the only reſource we have to carry on any trade in the Mediterranean, and to prevent the union of the French and Spaniſh fleets with themſelves or each other.

(22.) Becauſe all the objections, made againſt the facility of a communication of the different ports of France and Spain with one another, will be ſtronger againſt us; for they have others near to Gibraltar, where fleets may lie ſafe, and have a chance to eſcape us, by catching at favourable opportunities, and the advantage of winds; whereas we muſt run all hazards, and truſt to our ſtrength alone, without any harbour to retreat to, in caſe of ſtorms or other accidents.

(23.) Becauſe we have no means of ſending naval ſtores and recruits to our garriſons, and often proviſions for them, without a port to protect us during a thouſand leagues ſailing. Portugal will not be ſuffered to receive or relieve us, and then we muſt run the gauntlet by ſingle ſhips, with ſcarce a chance to eſcape, or ſend convoys upon the ſmalleſt occaſions, capable of fighting the united French and Spaniſh power.

(24.) Becauſe we ought not to be ſurprized, if the nations of Europe and Africa ſhould wiſh it in hands leſs potent at ſea, and who would conſequently enjoy it more harmleſsly to it's neighbours: it muſt be undoubtedly terrible to any people who would be our rivals in trade or naval power, or indeed to any ſtate that aſpires to empire, which can never be accompliſhed without fleets as well as armies.

(25.) Becauſe we are not fallen into ſuch contempt with our enemies, our neighbours, or our allies, nor can they have ſo mean an opinion of our ſenſe and diſcernment, and the integrity of our ſtateſmen, as even to hint ſuch a thing to them.

(26.) Becauſe, if we part with Gibraltar, to what purpoſe have we made war? To what purpoſe beſtowed great ſums, and gained great victories? Did we beat the enemy, and force them to beg peace, and yet muſt bribe them to accept of it? Have we conquered, and ſhall they give terms, and get towns by loſing battles? Or, if we do not part with Gibraltar for the ſake of peace, pray what conſideration are we to receive for the ſake of Gibraltar? What can be given as an equivalent?

(27.) Becauſe there can be no ſubſtantial reaſons to take ſuch a thorn out of the foot of Spain and France, and to remove ſuch an obſtacle to their greatneſs: the enterprizing genius of the latter is as well known, as it is formidable to all it's neighbours, but in particular to us. And Spain, it is alſo well known, are taking large ſtrides to raiſe manufactures and maritime power. I would aſk, in caſe of a new rupture, what reſource have we but in our fleets, and by the help of Gibraltar, to make it impracticable for their ſquadrons in the ocean and Mediterranean to join? We know, by woeful experience, what help we are to expect from our allies, when we have no more millions to give. We are not able to keep great ſtanding armies at home, nor is it conſiſtent with our liberty to do ſo; and therefore we ought to take every meaſure to increaſe our naval ſtrength, and to put new bridles upon thoſe who are, or may ſoon be, our rivals therein.

(28.) Becauſe the nation in the world whoſe power we have moſt reaſon to guard againſt, is that of France; and yet I don't know by what fatality it has often ſo happened, that we have been the unhappy inſtruments of promoting it. Oliver Cromwell gave the firſt riſe to it's greatneſs at land, and king Charles II. at ſea: the late queen, by an ignominious peace, reſtored it, when it was reduced to the loweſt extremity, and muſt have ſubmitted to any conditions ſhe had thought fit to impoſe. But ſure it will never be ſaid that any Britiſh miniſtry, who profeſs to be the patrons of liberty, the conſtant and declared enemies of thoſe proceedings, ſhould act ſo far in defiance of all their known principles, as, voluntarily and unconſtrainedly, to throw away any part of that national ſecurity, which former betrayers purchaſed at the expence of their country's honour; and which are the only rewards and recompence of a tedious, ſucceſsful, and glorious war, carried on at an immenſe expence of blood and treaſure, of which we and our poſterity ſhall long feel the ſevere effects.

(29.) Becauſe there ſeems to be more reaſon for our being tenacious in preſerving this poſſeſſion, at this time, than there ever was ſince we had it; for it is to be feared, that we are the only maritime power that muſt alone ſtand againſt thoſe of France and Spain, and ſuch allies as they ſhall be able to influence; ſince our old and natural allies, the States-General of the United Provinces, do not appear either to be able, or ſo ſanguinely inclined as heretofore, to unite with Great-Britain, and act with vigour, when occaſion may require.

(30.) Becauſe it ſhould ſeem that another naval power is about to ariſe, by their eſtabliſhment of a great Eaſt-India company *, the weight of whoſe power both by land and ſea, is more likely to be thrown into the ſcale of France and her allies, than into that of Great-Britain and her's.

* When the Oſtend Eaſt-India company was ſome years ſince eſtabliſhed, the Dutch acted vigorouſly in concert with Great-Britain to effectuate it's abolition, and did ſo. How it comes to paſs, that times ſhould be ſo changed within theſe few years, as to ſuffer another company of the like kind to be eſtabliſhed, without any attempt to it's annihilation, we leave thoſe to ruminate on, whom it may one day nearly concern to think of. See the article OSTEND COMPANY.

(31.) Becauſe the Spaniards (if I am rightly informed) give more encouragement, by certain artifices, to the French in their trade, by the way of Old Spain to New Spain, than they do to the Engliſh; and that, in conſequence thereof, our commerce in that channel declines, while that of France increaſes: and alſo that the Spaniards ſeem to favour the French more in the S——h W—t-I—a trade, which they carry on from their colonies, than they do either the Engliſh or the Dutch in theirs.

(32.) Becauſe the treatment of the Engliſh in particular, by the Spaniards at preſent in America, is ſaid by ſome to be with a view to compel us, at length, to give up Gibraltar; which,

which, for that very reaſon, we ought to be the more ſanguine to preſerve.

(33.) Becauſe Great-Britain has already done enough in favour of the court of Spain without ſacrificing Gibraltar, to induce them to deſiſt from their obſtruction to our trade and navigation to and from our own colonies, even if they were really as unjuſtifiable as the Spaniards themſelves have miſtakenly repreſented them. [See the articles LOGWOOD, and SPAIN.]

The conduct of Great-Britain towards Spain, in order to influence them to preſerve that good underſtanding, which is ſo apparently requiſite for the reciprocal benefit of both nations, is notorious to the whole world, and may be chiefly comprehended under two articles. (1.) Our making two ſovereigns in Italy to oblige the court of Spain; and (2.) Our giving up the aſſiento contract, and liquidating the affairs of the South Sea company, upon terms ſo advantageous to Spain, and ſo detrimental to Great-Britain in general, and the South Sea company in particular. See the articles ASSIENTO, and SOUTH SEA COMPANY. And, if Great-Britain ſhould even acquieſce to the creating of a third ſovereign to gratify the inſatiable ambition of a certain p——s at l——ſo, and to give up Gibraltar alſo, what ſecurity ſhould this nation have, that her logwood trade, and other navigation in America, ſhould remain uninterrupted? Does not the ſyſtem of that court for above theſe 30 years ſhew, that we are never to expect any ſuch ſecurity, 'till we have a Gibraltar for that purpoſe in America? See the article WEST-INDIES, where we ſhall endeavour to ſhew how eaſily that might have been accompliſhed, and ſtill may.

(34.) Becauſe men in power will always know, that a fortreſs conquered by the fleets and armies, by the blood and treaſure of England, and ſolemnly yielded up by treaty made with England, becomes part of the Engliſh dominions, and ſubject to the legiſlative power of England, and could not be diſannexed but by act of parliament; and, conſequently, any agreement to deliver up ſuch a fortreſs to an enemy, is high treaſon within the ſtatute of the 25th of Edward III; and to give it to any one elſe is one of thoſe high treaſons reſerved by that act for the judgment of parliament.

For more reaſons, if more ſhould be required, to induce us never to give up GIBRALTAR, ſee the articles FRANCE and SPAIN, and all other articles, which tend to ſhew the nature and extent of their power and commerce.—For the particular ſtate of the trade carried on through the Mediterranean Sea, ſee the articles ARCHIPELAGO, GENOA, LEVANT TRADE, NAPLES, ORIENTAL TRADE, TURKEY TRADE, TUSCANY, VENICE.

Note, The diſcerning reader will eaſily believe, from the preceding ſummary heads of argument, that we could have wire-drawed them to a great length, if we were not rather ſtudious of communicating as much matter as we can in the feweſt words, than to act the contrary part.

REMARKS on our article MEDITERRANEAN SEA, before the laſt war.

One part of the grand ſyſtem of the court of Spain, in the time of Alberoni, was to preſerve the rights of Spain and of the houſe of Parma to Spaniſh princes; and to make a ſettlement for Don Carlos and Don Philip worthy of their birth, out of the ſtates which the emperor poſſeſſed in Italy: and has not this part of the ſyſtem been ſteadily and ſucceſsfully purſued? But how could theſe ſovereignties be effectually ſecured, ſays a certain princeſs, without the poſſeſſion of Gibraltar? This, therefore, was a point to be gained, in order the better to ſecure the other. The ſyſtem, at preſent in Spain, is bottomed on the ſame principles; it is not only to provide for a third prince in Italy, or elſewhere, but to fall upon the eſtabliſhment of manufactories, with a view to ſupply their extended American colonies themſelves, inſtead of taking them from the other nations of Europe. Will not this affect Great-Britain, in proportion to what ſhe now ſupplies Spain with? Some late accounts from Spain tell us, that it appears, by an authentic liſt of the ſhips which entered the Spaniſh ports laſt year, their number amounted to 1142: of which 643 were Engliſh, 277 French, 148 Dutch, and 74 of different nations.

Suppoſing this to be true, ſome people may infer from hence, perhaps, that the trade of England muſt be far ſuperior to any of the reſt: ſo it is, indeed! But what ſort of trade are we carrying on with that nation? We are ſending 6 or 700 ſhips or more, I am certain, annually to purchaſe their wines and their fruits, while France ſends between 2 or 300 to carry their own manufactures. If this be the caſe, does not France, therefore, gain far more by their ſmaller quantity of ſhipping, than we do by double the number? The fact is, that we decline in our exports to Spain, and increaſe in our imports; while France increaſes in their exports to Spain, and decreaſe in their imports from thence. Is this then a nation from whom we are ſtill to bear inſults and depredations? Have they not allured away our manufacturers and ſhipwrights out of the kingdom, with a view to turn the hands of our own artiſts againſt us?

That our readers may have a juſt idea of the meaſures which Spain are really purſuing at this time, which muſt inevitably tend to the detriment of the Britiſh commerce, as they ſhall advance that of the Spaniards; we refer them to the articles BISCAY in Old Spain, CATALONIA, DUTCH AMERICA, INDIA-HOUSE of SPAIN, LOGWOOD TRADE, SPAIN, WEST-INDIES. What is urged under theſe heads, and in divers other parts of this work, will enable us to judge, whether it can ever be adviſeable to acquieſce in the giving up Gibraltar; and eſpecially ſo, if we add to theſe conſiderations what we have ſaid alſo under the articles BRITISH AMERICA and FRANCE; becauſe we ſhall there ſee, that SPAIN is now following the example of France, in order to ruin the commerce and navigation of theſe kingdoms: for the ſyſtem of the two courts ſeems really to be what is ſaid in a tract lately printed, called the Political Teſtament of cardinal Alberoni. 'While 'the navy of the two crowns [meaning thoſe of France and 'Spain] ſays the writer, is not ſuperior to that of the Engliſh 'and Dutch together; while MINORCA and GIBRALTAR 'are not in poſſeſſion of the proper maſters; while DUNKIRK 'is not raiſed from the ſtate to which it was reduced by the 'treaty of Utrecht, a deſcent on the coaſt of ENGLAND and 'IRELAND, will be always ineffectual, &c.'

Of the CUSTOM-HOUSE affairs in relation to the Mediterranean trade.

I. If a ſhip be bound to any port in Portugal or Spain, or to any port on the Chriſtian ſhore in the Mediterranean Sea, a bill of health muſt be granted at the loading port, or elſe the perſons on board will not be permitted to come on ſhore in any of the ſaid ports, 'till they have performed quarantine: the form of which bills of health muſt be as follows;

Portus Southamptoniæ,

Omnibus Chriſti fidelibus, ad quos præſentes literæ pervenerint. Nos miniſtri ſereniſſimi principis domini noſtri Georgii ſecundi regis, in portu Southamptoniæ, in regno Magnæ Britanniæ, ſalutem. Cum pium ſit & honeſtum veritati teſtimonium perhibere, ne error aut deceptio præjudicii ipſam opprimat: cumque navis nuncupata Diligentia, de Briſtolia, cujus nauclerus (ſub Deo) eſt Henricus Hopkins, quæ jam parata eſt e dicto portu diſcedere, & abhinc (Deo volente) ad Italiam, & alia loca tranſmarina, cum viginti hominibus in eadem nave appellare. Hinc eſt, quod univerſitati veſtræ tenore præſentium innoteſcimus, fidemque indubitatam facimus, quod (Deo optimo maximo ſumma laus attribuatur) in hoc dicto portu, nulla peſtis, plaga nec morbus aliquis periculoſus, aut contagioſus, ad præſens exiſtit.

In cujus rei teſtimonium, ſigilla officii noſtra apponi fecimus, Datum hoc in regio telonio prædicti portus Southamptoniæ, decimo die Februarii, anno ſalutis Chriſtianæ, ſecundum computationem eccleſiæ Anglicanæ, milleſimo ſeptingenſimo triceſimo primo, annoque regni dicti ſereneſſimi domini noſtri Georgii ſecundi, Dei gratia, Magnæ Britanniæ, &c. regis, fidei defenſoris, &c. quarto.

A. B. Collector,
D. E. Comptroller.

* If the ſhip be Britiſh, and comes from any part of the Mediterranean Seas, beyond the port of Malaga, and hath two decks, and both carry ſixteen guns mounted, with two men for each gun, and other ammunition proportionable (which is called an act or qualified ſhip) or if one moiety of her full lading outwards, the laſt voyage, was fiſh, laden in any of his majeſty's dominions; the goods imported in ſuch ſhips are not liable to the duty of one per cent. which is payable when ſhips are not ſo qualified, or laden with fiſh: therefore in theſe caſes, after the places names, there muſt be added as follows, viz.

* 14 Car. II. cap. 11. § 35, 36.

If the ſhip be qualified.—Which ſaid ſhip has double decks from ſtem to ſtern, with ſixteen [or more, as is the caſe] guns mounted, and other ammunition proportionable.

If the ſhip went out with fiſh.—Which ſaid ſhip went out from Yarmouth to Leghorn this laſt voyage thither, full laden [or at leaſt one moiety of her full lading] with fiſh of Britiſh taking and curing, and delivered the ſame at the ſaid port of Leghorn.

But, if a ſhip that is not qualified, or was not laden outwards with fiſh, has taken in ſome part of her lading beyond the port of Malaga, and ſome on this ſide; the different places where the goods were taken in muſt be particularly diſtinguiſhed in the report, as indeed in ſtrictneſs ſhould be practiſed in all caſes where a ſhip loads at ſeveral ports: which diſtinctions may be made as follows:

Taken in at Leghorn,
A. B.——1 a 5——5 Caſes——Silk——Andrew Bird.

Taken in at Cadiz,
B. C.——8, 9——2 Bales——Kid ſkins——Benj. Croſs.

And, if the goods are ſuch, that they are liable to forfeiture, or ſubject to a different duty, upon account of the

place at which they were taken in; the truth of their being taken in, at the particular place alledged by the maſter, muſt be confirmed, by making the following addition to the oath of his report, viz.

And that the goods above-mentioned to be taken in at—— were really there laden on board, and were not landed at ——, nor any other place whatſoever, but have been kept on board the above ſhip, ever ſince the firſt ſhipping thereof at——.

MEDITERRANEAN PASSES.—Counterfeiting, altering, or eraſing them, or knowingly uttering or publiſhing ſuch counterfeited, altered, or eraſed paſſes, is felony without benefit of clergy. 4 Geo. II. cap. 18. §. 1.

MELLI, with the country of the MUNDINGOES, in Africa. The country formerly called Melli, now chiefly inhabited by the Mundingoes, who ſtill retain pretty much of the character aſcribed to the people of Melli, lies to the ſouth of the river Gambia; on the weſt it borders on the kingdom of Kabo, on the ſouth it has Melli properly ſo called, and the mountains that part it from Guinea, and on the eaſt it extends to the kingdom of Gago.

A great part of this country we are little acquainted with, as is the caſe with regard to moſt of the inland territories of Africa, but towards the ſea-coaſt this country is a little better known.

The firſt place of note we weet with is, KACHAO, a Portugueze colony, ſituated on the river of St. Domingo, which falls into the ſea about 26 leagues below this town.

About 26 leagues above Kachao, on the ſame ſide of the river, is another trading town called FARINI, where, in the months of October and November, one may trade for about half the quantity of wax and ivory, which is traded for at Kachao. Here are alſo ſome ſlaves to be bought.

BOT is a village near the mouth of the river Geſves, where moſt of the traders buy rice, which is in great plenty there, and very good.

GESVES is a village on a river of the ſame name, on which the Portugueze have a factory. At Geſves one may trade yearly for 250 ſlaves, 80 or 100 quintals of wax, and as many of ivory.

Near the mouth of the river of Geſves, is a village called KURBALI, where there is a conſiderable trade for ſalt: here are alſo ſold ſome ſlaves and ivory.

RIO GRANDE, or the GREAT RIVER, runs about 10 or 12 leagues to the ſouth of the river of Geſves. About 80 leagues from the mouth of it is a nation of negroes, who are good traders in ivory, rice, millet, and ſome ſlaves. They are called Analons.

Over-againſt the mouth of Rio Grande, is a cluſter of iſlands called Biſſago Iſles, the moſt conſiderable of which is CASAGUT, being about ſix leagues long and two broad: it's ſoil is very good, and produces millet, rice, and all kinds of pulſe, beſides orange and palm-trees, and many others. This iſland, with theſe of CARACHE, CANABAC, and LA GALLINA, are the only ones where the Europeans may trade with ſome ſecurity. They trade, however, ſometimes at the other iſlands, but they muſt be extremely cautious; and yet, after all their precautions, they will be robbed and murdered, if they venture to go aſhore.

The river NUNHO, runs 16 leagues to the ſouth of Rio Grande; it is very conſiderable, and comes from a vaſt diſtance in land. One may buy here 300 quintals of ivory, and 100 ſlaves a year. Rice grows here admirably well, and is very cheap. There are every-where ſugar-canes, which grow naturally, and plants of indigo, which might turn to good account. The trade is carried on here from March 'till Auguſt.

In the river of Sierra Leone, the late Royal African company of England had, in the year 1728, two iſlands; the one, called TASSO, a large flat iſland, near three league in circumference, in which the company's ſlaves had a good plantation: the reſt of the iſland is covered with wood, among which are ſilk cotton-trees of an unaccountable ſize.

The other iſland is BENSE, whereon ſtood a regular fort. It was formerly the reſidence of one of the Engliſh chiefs. For more matter relating to the African trade, ſee the articles AFRICA, AFRICAN ISLANDS, ENGLISH AFRICAN COMPANY, FRENCH AFRICAN TRADE and COMPANY, PORTUGUEZE AFRICAN TRADE. See alſo BRITISH and FRENCH AMERICA.

MENSURATION.

Under the article ARITHMETIC, we have given the whole art, both in rationale and practice, within the compaſs of a few pages; which, if well underſtood, what we have to add, can be no difficulty.

Of the cuſtomary way of taking dimenſions, and meaſuring the ſeveral artificers works concerned in building.

As there are ſeveral ſorts of work in building, which require the dimenſions to be taken in feet and inches, for finding the ſuperficial, or ſolid content thereof, before we proceed to treat of the meaſuring the ſeveral artificers works, it will be neceſſary, firſt, to ſhew how to multiply feet and inches by feet and inches duodecimally, vulgarly called croſs multiplication. For the better underſtanding of which, obſerve the following rules:

That, if feet are multiplied by feet, the product is feet.

If inches are multiplied into feet, every 12 of the product is one foot, and any number leſs than 12 are inches.

If inches are multiplied into inches, every 12 of the product is one inch, and any number leſs than 12 are parts of an inch.

If parts of an inch are multiplied by feet, every 12 of the product is one inch, and any number leſs than 12 are parts of an inch.

If parts of an inch are multiplied by inches, every 12 of the product is one part, and any number leſs than 12 are ſeconds.

If parts of an inch are multiplied by parts, every 12 of the product is one ſecond, and any number leſs than 12 are thirds.

CASE I.

To multiply feet, inches, and parts, by parts.

Rule. Firſt, Place a cypher under the laſt place of the multiplicand, inſtead of an integer, and alſo another cypher in the place of inches, and then the parts next following to the right-hand.

Secondly, Multiply the parts of the multiplier in the multiplicand, carrying 1 for every 12.

EXAMPLE I.

Multiply 7 feet 6 inches and a half, by a half inch, or 6 parts.

Note, That for a quarter of an inch you muſt ſet down 3, for half 6, and for three quarters 9; thoſe numbers being the quarter, half, and three quarters of 12.

OPERATION.

6 Times 6 is 36, the twelves in 36 is 3 times, and nothing remains, therefore ſet down 0 and carry 3; and 6 times 6 is 36, and 3 I carry is 39, ſet down 3 and carry 3; then 6 times 7 is 42, and 3 I carry is 45, the twelves in 45 is 3 times, and 9 remains.

F.	I.	P.
7	6	6
	0	0 6
	3	9 3 0

Now, as the whole multiplication is ended, ſet down the 9 that remains under the parts, and 3 under inches, the number of twelves is 45, and the whole product is 3 inches, 9 parts, and 3 thirds.

CASE II.

To multiply feet, inches, and parts, by inches and parts.

Rule. Firſt, Place a cypher under the laſt place of the multiplicand, inſtead of an integer, and the inches and parts in their places towards the right-hand.

Secondly, Multiply the parts into the parts, inches, and feet, and carry one for every 12.

Thirdly, Multiply the inches into the parts, inches, and feet, in the ſame manner; and, in adding the products, carry 1 for every 12, from one denomination to the other, and the ſum will be the product required.

EXAMPLE II.

Multiply 15 feet, 7 inches, and 3 parts, by 9 inches 4 parts.

OPERATION.

Firſt 4 times 3 is 12, that is 0 and carry 1; 4 times 7 is 28, and 1 I carry is 29, ſet down 5 and carry 2; 4 times 15 is 60, and 2 I carry is 62, ſet down 2 and carry 5, which ſet under the next denomination.

Secondly, 9 times 3 is 27, that is 3 and carry 2; 9 times 7 is 63, and 2 I carry is 65, ſet down 5 and carry 5; 9 times 15 is 135, and 5 I carry is 140, the twelves in 140 is 11, and there remains 8; ſet down the 8 under the inches, and 11 under the feet, and then add the two products together, and the ſum will be 12 feet, 1 inch, 7 parts, and 8 thirds, the product required.

F.	I.	P.	
15	7	3	
		0	9 4
	5	2	5 0
11	8	5	3
12	1	7	8 0

CASE III.

To multiply feet, inches, and parts, by feet, inches, and parts, when the feet of the multiplicand and multiplier do not exceed 20.

Rule. Firſt, Place the feet of the multiplier under the feet of the multiplicand, and the inches and parts in their places to the right-hand.

Secondly, Multiply the feet, inches, and parts of the multiplier, each ſeparately into the parts, inches, and feet of the multiplicand, as before in the preceding rules; and their ſeveral products, being added, will be the true product required.

EXAMPLE III.

Multiply 12 feet, 9 inches, and 5 parts, by 9 feet, 20 inches, and 2 parts.

OPE-

OPERATION.

	F.	I.	P.		
First, 2 times 5 is 10, set down 10 and carry 0; 2 times 9 is 18, set down 6 and carry 1; 2 times 12 is 24, and 1 carried is 25, set down 1 and carry 2, which set down.	12	9	5		
			9	10	2
		2	1	6	10
Secondly, 10 times 5 is 50, that is 2 and carry 4; 10 times 9 is 90, and 4 carried is 94, set down 10 and carry 7; 10 times 12 is 120, and 7 carried is 127, the twelves in 127 is 10, and 7 remains, which set down.	10	7	10	2	
	115	0	9		
	125	10	8	8	10

Thirdly, 9 times 5 is 45, that is 9 and carry 3; 9 times 9 is 81, and 3 is 84, which contains 12 7 times, and 0 remains, set down 0 and carry 7; 9 times 12 is 108, and 7 carried is 115, which being the last figure to multiply, set down the whole product; and, lastly, add the three products together, and their sum will be 125 feet, 10 inches, 8 seconds, 8 thirds, and 10 fourths.

Having by this time, I hope, sufficiently instructed the reader in the multiplication of feet and inches, by feet and inches, I shall in the next place proceed, as I proposed, to the measuring the several artificers works concerned in building. And,

I. Of CARPENTERS WORK, &c. to measure.

The works done by carpenters, are chiefly framing of houses, barns, stables, floors, partitions, roofs, &c. making of doors, windows, stair-cases, cornishes, frontispieces, modillion-cornices, cove-eaves, and boarded floors of all sorts, weather-boarding, and boarded and cleft pale fencing.

1. To measure the body of a timber building, viz. of a house, barn, or stable, &c.

This sort of work is done by the square, containing 100 superficial feet. In measuring the outside carcase of a house, &c. take the length of one side and one end, and add them together, and their sum, multiplied into the height taken from the under-side of the sill, to the upper side of the raising, gives the content of one side and one end; which, being doubled, is the content of the whole body, or outside carcase of the building, in feet.

To bring the content found into squares, divide the product by 100, or cut off from the product two figures to the right-hand, and the remaining figures are so many squares, and the figures cut off are feet.

EXAMPLE IV.

Suppose a house, &c. 40 feet long, 20 feet wide, and 20 feet high, how many square of framing is contained in the body or outside carcase of the said house, &c.

OPERATION.

Add 20 feet the breadth to 40 feet the length, and the sum is 60, which multiply by 20 feet, the height, the product is 1200, the content of one side and one end; which being doubled, or multiplied by 2, gives 2400 feet for the content of the whole body or outside carcase, in feet: from which, if you cut off 2 figures to the right-hand, there remains 24, the number of squares required.	40 Length. 20 Breadth. 60 the sum. 20 Height. 1200 2 Multiply 24,00 Cont. in feet.

Note, That in framing there are no deductions to be made for doors, windows, &c. in the measuring.

2. Of roofs. This sort of work is also done by the square of 10 feet squared, or 100 superficial feet, the particular to be observed in measuring of which is, that let the roof be true pitch or not, and the ends thereof gable or slipped, they may be either of them measured by this general rule, viz. Multiply the length of the building by the length of the rafter, and twice that product is the content in feet.

EXAMPLE V.

In the aforesaid building of 40 feet long by 20 feet wide, admit the roof to be true pitch, viz. the length of the rafter, equal to $\frac{3}{4}$ of the breadth of the building, or 15 feet.

OPERATION.

Multiply 40 feet, the length of the building, by 15 feet, the length of the rafter, and the product is 600 feet, the content of one side; which doubled, or multipled by 2, the product is 1200 feet, or 12 square, the content of the whole roof.	Feet. 40 leng. of build. 15 raft. length 200 40
3. To measure the gable end of a house, &c. observe this rule, multiply the perpendicular by half the base or breadth of the building, or the whole base by half the perpendicular, and the product is the content.	600 con. of 1 side 2 1200 content of the [whole.

In the gable end of the above-mentioned roof, the perpendicular is 11 feet 2 inches near, and the base 20 feet, what is the content?

OPERATION.

Multiply 20 feet, the whole base, by 5 feet 7 inches, half the perpendicular, and the product is 111 feet, 8 inches, which is 1 square, 11 feet, 8 inches, the content required.	Feet. 20 0 Base. 5 7 Half perp. 11 8 0
4. Note, That the same rule will hold good for measuring the hip end of a roof, by observing that the length of the rafter in this case is the perpendicular.	100 0 111 8 8 Cont.

N. B. The rafters, feet, and eaves-board, are measured at per foot, running.

5. Of floors. In naked flooring allow 9 or 10 inches for the length of the joist laid into the wall, or measure to the extremity of the joist, and from thence compute the squares contained therein.

6. In boarded flooring you must take your dimensions to the very extreme parts, and from thence compute the squares, out of which you must make deductions for stair-cases, chimnies, &c.

7. Weather-boarding is done by the yard square, and sometimes by the square, containing 100 superficial feet.

8. Framed partitions. The particular to be observed therein, is only that they are measured by the square.

9. Boarded partitions are also measured by the square, out of which, you must deduct the doors and windows contained therein, except they are agreed to be included.

10. Of windows. Windows are generally made and valued by the foot, superficial measure, and sometimes by the window. When they are measured, the dimensions must be taken in feet and inches, from the under side of the sill, to the upper side of the cap-piece, for the height; and for the breadth from outside to outside of the jaumbs; and the product of the multiplication is the superficial content.

11. Stair-cases are measured by the foot superficial, and the dimensions are taken with a string, girt over the raiser and tread, and, that length or girt, multiplied by the length of the step, the product is the superficial content.

12. Door-cases are measured by the foot superficial, and the dimensions must be taken with a string, girt round the architrave and inside of the jaumbs, for the breadth; and, for the length, add the length of the two jaumbs, to the length of the cap-piece, taking the breadth of the opening for the length thereof, and the product of their multiplication is the superficial content.

13. Frame-doors are measured by the yard square, containing nine square feet, and, if of whole deal, they are allowed work and half work, or double work, if of two inch stuff, in consideration of their being wrought on both sides.

14. Note, The same is to be said in regard to the measuring and valuing of window-shutters, as of doors.

15. Modillion cornices, coves, &c. are generally measured and valued by the foot superficial. Their dimensions, in respect to the breadth or height, are taken with a string, girt into the mouldings, and those dimensions, multiplied by the length, is the superficial content.

16. Fencing of all sorts is done by the rod, lineal measure, containing 16 feet and a half.

17. Wainscoting or joiner's work. Wainscoting is a work generally done by joiners, and is measured by the yard, square, and their dimensions are taken in feet and inches. Thus, they girt down every moulding with a string, contained between the floor and cieling, for the height, and the circumference of the room for the length, deducting the doors, windows, and chimney. The seats of windows, cheeks, sophetas, linings, &c. are all to be taken by themselves, and doors and window-shutters are to be measured and valued as at number 13 and 14 hereof.

18. Frontispieces are measured and valued by the foot superficial, and every part thereof measured separately, viz. the architrave, frieze, and cornice, each of them by themselves, also the pilasters or columns by themselves, and, lastly, add all the several measurements together, and the product is the content of the whole.

Note, That, in taking the dimensions, you must girt the moulding with a string.

II. Of BRICKLAYERS WORK to measure.

The principal work in a building done by bricklayers, is walling, tileing, rough-casting, &c.

1. Of brick walls. What is to be observed therein is, that the measure by which brick-work is measured is a square rod, or 16 feet and a half squared, whose product is equal to 272 feet and a quarter, the content of one rod of brick-work at the statute thickness of one brick and a half: and, if the wall is more or less than that thickness, it must be reduced thereto by this rule: multiply the number of feet contained in the superficial content of the wall, by the number of half bricks

that

that the wall is in thickneſs, and divide the product by 3, and the quotient is the true content required.
Note, That, although there be 272 feet and a quarter in a rod of brick-work at the ſtandard thickneſs, yet workmen meaſuring brick-work always reject the quarter, and divide by 272 only.

Example I.

How many rods of brick-work are contained in a wall 40 feet long, 8 feet high, and 2 bricks thick?

Feet.
Length 40
Height 8

320 feet in the ſuperficial content of the wall
Half bricks 4

3)1280(426 feet $\frac{2}{3}$, the ſuperficial content reduced,
8 which to bring into rods, divide the 426
6 feet by 272, and the quotient will be rods;
20 and, if the remainder be divided by 68,
2 the feet contained in a quarter of a rod,
the quotient will be quarters, and the laſt
remainder feet.
Note, That the $\frac{2}{3}$ remaining in the firſt work is equal to 8 inches.

272)426(1 rod.
272
68)154(2 quart.
136
18 feet.

The whole reduced content of a piece of brick-work 40 feet long, 8 feet high, and 2 bricks thick, is 1 rod, 2 quarters, 18 feet, 8 inches, as required.

When you meaſure brick-work, obſerve to meaſure every thickneſs by itſelf, and that you make every deduction out of it's proper thickneſs; alſo, that, when you meaſure two walls that conſtitute an angle, the length of one muſt be taken to the outſide, and the other to the inſide.
2. Chimnies muſt be meaſured and valued as a ſolid wall, out of which deduct the vacancy between the jaumbs and the mantle; the funnels are allowed ſolid, in regard to the trouble of them, and the pargetting the inſide. This of ſquare chimnies.
3. Angle chimnies, ſuch as ſtand in a ſquare corner, and are equal each way from the corner, obſerve this rule: multiply half the breadth of the breaſt, or front, by the height of the ſtory, and that product by the number of half bricks contained in the inches of the half breadth of the breaſt, or front, and divide this laſt product by 3, and the quotient will be the true reduced content in feet, out of which muſt be deducted the vacancy as in ſquare chimnies.
4. If the chimney do not ſtand equal from the corner of the room on both ſides, or the corner be not ſquare, it is uſual to lay out the angle parallel to the walls, and take one ſide of the angle, and multiply by the height of the ſtory, and half the other ſide of the angle for the thickneſs; then proceed in every reſpect as before directed, and it will give the true reduced content required.
Remember to meaſure the trimmers that ſupport the hearths, taking the length by the girt of the arching of them, accounting them half a brick thick; ſo that if they are 6 feet long, and 1 foot 6 inches girt, there is 3 feet of reduced brick-work therein.

Example II.

Suppoſe a chimney that ſtands in the corner, or angle of a ſquare room, be 7 feet in front, and the height of the ſtory 9 feet 6 inches, and the opening 3 feet ſquare, and 18 inches deep, how many feet of reduced brick-work is contained therein?

feet. inches.
9 6 height of the ſtory
3 6 half the front

4 9 0
28 6

33 3 0
9 half bricks in 3 feet 6 inches, or half the length of the front

3)299 3 0(99 1 quotient
27

29
27

2 equal to 8 inches.

feet.
3 } the opening
3 }

9
4 half-bricks deep

3)36(12, reduced feet in the opening to be deducted
6

0
99 9, the reduced content of the chimney
12 0, opening to deduct

87 9 remains, the content required.

By the above operation, it appears there are 99 feet 9 inches of reduced brick-work in the chimney; for, there being 99 feet 1 inch in the quotient, the 2 that remains is equal to 8 inches, being two-thirds of the diviſior, which, added to the 99 feet 1 inch, makes it 99 feet 9 inches in the whole; from which if you ſubtract 12 feet, the content of the opening, there remains 87 feet 9 inches nett brick-work, for the content required.
5. Beſides this rough brick-work, there is other kind of walling performed by foot-meaſure, and ſuch are facio's, arches over doors, windows, &c. architraves, friezes, cornices, ruſtics, returns, &c. piers, columns, pilaſters, &c.
6. Tileing is meaſured by the ſquare of 10 feet, as carpenters meaſure their roofs. You muſt obſerve, in taking dimenſions of tileing, that you meaſure the whole length, that is, as far as the tiles are laid, for your length, and take from the ridge to the eaves for your breadth, and thereby you will have the true content required. When many hips and vallies happen in a roof, every foot remaining muſt be added to the meaſure as ſquare feet.
Note, Obſerve to deduct the chimnies out of the tileing.
7. Thatching is a work performed by the ſquare, and is meaſured the ſame as tileing.
8. Beſides all the above work, there comes to the bricklayer's hands the paving of kitchens, cellars, &c. with brick, or pamments, which work is meaſured by the yard ſquare, containing 9 ſquare feet.

III. Of Plaisterers Work to meaſure.

Rough-caſting, plaiſtering, cielings, &c. are done by the yard ſquare, and the dimenſions taken in feet and inches.
The principal things to be obſerved in meaſuring of which are as follow:
1. To make deductions for chimnies, windows, and doors.
2. To make no deductions for rendering upon brick-work, for doors and windows, by reaſon the jaumbs and heads generally exceed the vacancies.
3. If the workmen find materials for rendering between quarters, you muſt deduct one fifth for quarters, baſes, &c. but, if workmanſhip only is found, you muſt meaſure the whole as whole work, for the workman could have performed the whole much ſooner, if there had been no quarters.
4. That ſuch ſummers and girders as lie below a cieling be deducted, if the workman finds materials, otherwiſe not.
5. In meaſuring of whiting and colouring between quartering, there muſt be a fourth part allowed extraordinary, for the returns of the quarters, or take the length with a ſtring, and ſo girt the quarters, which is the trueſt way.

IV. Of Masons Work to meaſure.

1. Maſons work, which is meaſured by foot meaſure, either lineal, ſquare, or cubical. The principal thing to be obſerved herein is, that they girt all their mouldings as joiners do, and take their dimenſions in feet, inches, and parts.
The ſolids are blocks of ſtone, marble, or any kind of ſtone, columns, cornices, &c. the ſuperficies are pavements, ſlabs, chimney-pieces, and the like. It is to be obſerved, that maſons firſt meaſure the cube of the ſtone, and their ſuperficial plain work, alſo ſuperficial moulded work (if any) as follows:
Firſt, They account all ſuch ſtones as are above two inches thick at ſo much per foot, ſolid meaſure, and, for the workmanſhip, they meaſure the ſuperficies of the ſtone, but then they meaſure no more of the ſtone than what appears without the wall.
But, as their method of meaſuring is not ſo well underſtood by many as ſome others, it may be proper to give an example how to meaſure a chimney piece, as a guide to all others.
Firſt, then, take the length of the mantle, or head-ſtone, and the ſlab (whoſe extent is generally the ſame) for one ſum of the dimenſions, and the breadth of both add together, with an inch or more for the under edge of the mantle, and half an inch (or whatever it is) for the upper edge, which, being all added, is the other ſum of the dimenſion.
Secondly, Take the length of the jaumbs, or ſides, allowing an inch longer than is ſeen (they going in below the ſlab) for one

one ſum, and the breadth of one girting, all that is ſeen, and double it for the ſecond ſum of the dimenſion.
Thirdly, If there be ſlips and noiſings to the chimney-piece, meaſure the length by all the girt that is ſeen in breadth, or make the dimenſion twice.
Fourthly, Fire-ſtone hearths, and coving-ſtones, muſt be caſt up by themſelves, and all that appears in ſight meaſured.

V. Of Glaziers Work to meaſure.

Glaziers work is meaſured by the ſuperficial foot, and the dimenſions are taken in feet, inches, and parts, or by feet, and the hundred parts of a foot, as their rules are generally divided: therefore the meaſurer of glaziers work ſhould underſtand decimals; allowing the feet as integers, and the parts as decimals; ſo that three quarters, or 9 inches, is 75; half a foot, or 6 inches, is 50; and a quarter, or 3 inches, 25 of theſe parts.
1. Therefore, admit a pane, or light of glaſs, that is leaded, be 2 feet 6 inches long, and 1 foot 6 inches wide, they ſet it down as on their rules, 250 by 150.
To ſhew the agreement between the decimal and duodecimal way of working, I will give the above example wrought both ways as follow:

By decimals.	By duodecimals. Feet.	Inches.
2,50	2	6
1,50		1 6
1,2500	1	3 0
2,50	1	6
3,7500	3	9 0

By the above operation it appears, that the aforeſaid pane of glaſs, by the decimal way of working, is 3 feet 75 parts, equal to 3 feet and three quarters: and, by the duodecimals, 3 feet 9 inches, equally the ſame: for, as 75 is three quarters of 100, ſo is 9 three quarters of 12. Should there be ſeveral lights, or panes, of the ſame bigneſs, you need meaſure but one, for multiplying that product by the number of lights, gives the contents of the whole. As for

Example.

Suppoſe a ſaſh-window contains 12 ſquares, and each ſquare of glaſs 125, or 1 foot 3 inches long, and ,75, or 9 inches broad, and the content required.

By decimals.	By duodecimals. Feet.	Inches.
1,25	1	3
,75		0 9
625	11	3
875	Number of ſquares	12
9375	11	3 0
No. of ſquares 12		
18750		
9375		
11,2500		

The content of the whole by both ways is 11 feet and $\frac{1}{4}$.

To meaſure circular, or oval windows, take the ſame length and breadth as their diameters, as if they had been ſquare windows, becauſe in cutting out the quarries of glaſs there is a great waſte, and more time expended therein, than if they had been ſquare windows.

VI. Of Painters Work to meaſure.

Painters work is meaſured the ſame as joiners work, by the yard ſquare, only with this difference, that, inſtead of accounting the doors and window-ſhutters work and half, they have double work, as being painted on both ſides; and they alſo meaſure all edges, &c. where the bruſh goes.
1. Saſh-frames, faſh-lights, window-lights, and caſements, are done at per piece.
2. Modillion, and other outſide cornices, at per foot running.

Of ſuch meaſures as are uſed in lands and buildings.

1. A ſquare foot is 144 ſquare inches.
2. A cubical foot is 1728 cubical inches.
3. A ſquare yard is 9 ſquare feet.
4. A cubical yard is 27 cubical feet.
5. A ſquare is 100 ſquare feet.
6. A load of rough timber is 40 feet.
7. A load of ſquared timber is 50 feet.
8. A load of 1 inch plank is 600 ſquare feet.
9. A load of 1 $\frac{1}{2}$ inch plank is 400 ſquare feet.
10. A load of 2 inch plank is 300 ſquare feet.
11. A load of 2 $\frac{1}{2}$ inch plank is 240 ſquare feet.
12. A load of 3 inch plank is 200 ſquare feet.
13. A load of 3 $\frac{1}{2}$ inch plank is 170 ſquare feet.
14. A load of 4 inch plank is 150 ſquare feet.
15. A load of ſtatute bricks is 500.
16. A load of plain tiles is 1000.
17. A load of lime is 32 buſhels.
18. A load of ſand is 36 buſhels.
19. A hundred of lime is 35 buſhels.
20. A hundred of deals is 120.
21. A hundred of nails is 120.
22. A thouſand of nails is 1200.
23. A ton of iron is 2240 lb. weight.
24. A fodder of lead is 19 hundred and a half, or 2184 lb.
25. A hundred of lead is 112 lb. weight.
26. A table of glaſs is 5 feet, and 45 tables is a caſe, but Newcaſtle, Normandy glaſs, 25 tables is a caſe.
27. A geometrical pace is 5 feet in length.
28. A geometrical perch is 10 feet in length.
29. A ſtatute pole or perch is 16 $\frac{1}{2}$ feet in length.
30. A ſquare ſtatute pole or perch is 272 $\frac{1}{4}$ ſquare feet.
31. A woodland pole or perch is 18 feet in length.
32. A ſquare woodland pole is 234 ſquare feet.
33. A foreſt pole or perch is 21 feet in length.
34. Four ſtatute perches is one chain's length.
35. Ten chains length is a furlong, or acre's length.
36. Four chains length is an acre's length.
37. Forty ſquare perches is a rood, or a quarter of an acre.
38. Four roods, or 160 perches is one acre.
39. A hide of land is 100 acres.

Remarks.

Since the ſliding rule hath come into general practice among men of buſineſs, theſe operations have been greatly facilitated; and, as theſe are ſo eaſily and mechanically learned, few tradeſmen concern themſelves to enter deeper into the principles of geometry, whereon the whole art of menſuration is bottomed.

Of Solid and Cubical Measure, and the Use of the Carpenter's Rule therein.

This meaſure reſpects length, breadth, and thickneſs or depth, being applicable to timber, ſtone, &c. the dimenſions whereof, ſuppoſe, are taken in feet and inches.
1. When the breadth and thickneſs are the ſame from one end to the other.

The General Rule.

Multiply the length by the breadth, and that product by the thickneſs, and the laſt product will be the content; or, if the breadth and thickneſs be multiplied together, and their product by the length, it will give the content.

Example.

Suppoſe a parallelopipedon to be a piece of timber, ſtone, &c. whoſe length is 18 feet, it's breadth 3, and thickneſs 2 feet, $18 \times 3 \times 2 = 108$ feet, the content.—Or $3 \times 2 \times 18 = 108$.

By the Sliding Rule.

The breadth and thickneſs being ſo reduced to the mean ſide of a ſquare, ſet 1 upon D, to the length upon C, and oppoſite to the mean ſide, upon D, will be found the content upon C.

Example.

The mean ſide, found as hereafter taught	2,45	} Feet.
The length - - - -	18	
The content - - - -	108	}

By the Carpenter's Rule.

Set the length in feet on the ſliding-piece to 1, on the ſquare or girt-line; and, oppoſite to the mean ſide, in inches on the ſquare or girt-line, will be found the content in feet, on the ſliding piece.
In the foregoing example, the dimenſions were given only in feet, therefore the product was feet. But,
2. When the length is given in feet, and the breadth and thickneſs in inches, the laſt produce muſt be divided by 144 (the ſquare inches in a foot) and the remainder (if any) by 12, and the quotient will be the content in ſolid feet and inches.

Example.

Suppoſe a piece of timber, &c. to be 15 feet long, 13 feet broad, and 8 inches thick,

$\frac{15 \times 13 \times 8}{144} = 10$ Feet. Inches. 10 the content.

By the Sliding Rule.

The breadth and thickneſs being reduced to the mean ſide of a ſquare, ſet 12 upon D, to the length upon C, and, oppoſite to the mean ſide upon D, will be found the content upon C.

EXAMPLE.

The mean ſide, found as hereafter taught - 10,2 Feet.
The length - - - - - - 15 Feet.
The content - - - - - - 10,8 Feet.

By the CARPENTER'S RULE.

Set the length in feet on the ſliding-piece, to 12 on the ſquare or girt-line, and, oppoſite to the mean ſide in inches on the ſquare or girt-line, will be found the content in feet on the ſliding-piece. Or,

3. If all the dimenſions are given in feet and inches, they muſt be firſt reduced into inches, and the laſt product of the multiplication of the dimenſions by each other, muſt be divided by 1728 (cubical inches in a foot) and the remainder, if any, by 144, and the quotient will be the content in ſolid feet and inches.

EXAMPLE.

Suppoſe a piece of timber, &c. to be 22 feet 3 inches long, 1 foot 5 inches broad, and 1 foot 2 inches thick,

$\therefore 22{,}3 \times 1{,}5 \times 1{,}2 = 36{,}9\frac{3}{12}$—The content.

Note, When the contents are required in loads, the contents in feet muſt be divided by 50 (the ſolid feet in a load) and the quotient will be the anſwer. And,

If the contents of any ſolid be required in cubical yards, divide the contents in ſolid feet (found as before taught) by 27 (the cubical feet in a yard) and the quotient will be the contents in cubical yards.—Or the dimenſions might have been reduced into yards, and the operation performed as for feet.

If any ſolid be exactly ſquare (which in timber ſcarce ever happens) multiply the ſide into itſelf, and that product by the length, and the laſt product will be the content.

And, if the ſides are not exactly equal, they may be reduced to a ſquare by the following methods:

To reduce the breadth and thickneſs of a ſolid to the mean ſide of a ſquare: the true way.

Multiply the breadth and thickneſs together, and the ſquare root of the product will be the mean ſide of a ſquare.

EXAMPLE.

Suppoſe a board, whoſe breadth is 13 inches, it's thickneſs 8 inches, and it's length 15 feet 6 inches,

13×8, and extract the root of the product, the anſwer is 10,198—Mean ſide of the ſquare.

By the SLIDING RULE.

Set the breadth on C to the breadth on D, and, oppoſite to the thickneſs on C, will be found the mean ſide of a ſquare on D.

By the CARPENTER'S RULE.

Set the breadth on the ſliding-piece to the breadth on the ſquare line, and, oppoſite to the thickneſs on the ſliding-piece, will be found the mean ſide of a ſquare, on the ſquare-line.

But the way commonly practiſed for unequal-ſided timber is, to add the breadth and thickneſs (taken about the middle of the piece) together, and then take half that ſum (or $\frac{1}{4}$ of the 4 ſides) for the mean ſide of the ſquare of the piece.

This method, indeed, produces a content more than the truth, by a piece equal to the whole length, and whoſe ſquare is equal to half the difference of the breadth and thickneſs; but, if the breadth and thickneſs are pretty near equal, the difference will be near enough for ordinary practice.

The breadth and thickneſs, or ſide of the ſquare, being given in inches, to find how many inches in length will make a ſolid foot.

RULE.

Divide 1728 (the cubical inches in a ſolid foot) by the product of the breadth and thickneſs, and the quotient will be the length of the cubical foot.

By the SLIDING RULE.

The breadth and thickneſs being reduced to a mean ſide of a ſquare, ſet the mean ſide on D, to 1 upon C, and oppoſite to 41,5 upon D, will be found the anſwer upon C.

MENSURATION OF PLANKS.

Though the menſuration of planks is properly by ſolid meaſure, yet the ſolid contents may be found by the directions given for ſuperficial, if the reſpective thickneſſes are afterwards accounted for.

RULE.

Multiply the length in feet and decimal parts, and the breadth in inches and decimal parts, together, and divide their product by 12; or find their ſquare by the ſliding or carpenter's rule, and the quotient, or ſquare, being divided by the following reſpective diviſors, will exhibit the ſolid contents in loads of 50 feet each.

The ſquare of the length and breadth of planks of

Inches thick	Being divided by	The quotient will be loads,	And the remainder (if any) being divided by	The quotient will be the odd feet.
4	150		3	
3	200		4	
$2\frac{1}{2}$	240		4,8	
2	300		6	
$1\frac{1}{2}$	400		8	
1	600		12	
$\frac{3}{4}$	800		16	

When the breadth and thickneſs are not the ſame throughout, but the ſolid is broader and thicker at one end than the other,

The rule for the true method.

Multiply the breadth and thickneſs at the greater end together, and alſo at the leſſer, and the two areas by each other, and to the ſquare root of that product add the two areas, the total whereof multiply by half of the length, will produce the content.

But the uſual way is to take the breadth and thickneſs in the middle of the piece, or, rather, half the ſums of the breadth and thickneſs (or find a mean ſide of a ſquare equal thereto) and then work as before taught, which will produce a content leſs than the truth: but, if the ends are pretty near equal, the difference will be but very ſmall.

MENSURATION of ROUND TIMBER.

1. When the circumference is the ſame from one end to the other,

The rule for the true method, according to the utmoſt cylindric circumference.

Firſt find the diameter of the circumference, from which the proportion is, as 22 is to 7, ſo is the girt or circumference to the diameter. Or,

By the SLIDING RULE.

Set the point *c* 3,141 on B, to 1 upon A, and, oppoſite to the circumference on B, will be found the diameter upon A. Or,

By the CARPENTER'S RULE.

Set 3,141 on the ſliding-piece, to 1 upon the upper line, and, oppoſite to the circumference on the ſliding-piece, will be found the diameter on the upper line.

The diameter being found, multiply it by $\frac{1}{4}$ of the girt, and that product by the length, which will produce the ſolid content.—Or, multiply the circumference into itſelf, and that product by ,07958 (the area of a circle whoſe circumference is unity) and the laſt product by the length, which will produce the content.—Or multiply the number 2821 (being the ſide of a ſquare equal to a circle whoſe circumference is 90) by the girt in inches, and the product will be the ſide of a ſquare equal to the girt or circumference; which multiply into itſelf, and that product by the length in feet; then divide the laſt product by 144, and the quotient will be the content in feet and decimal parts.

By the SLIDING RULE.

Set { 42,53 when the circumference is inches / 3,545 when the circumference is feet } upon D, to the length in feet C, and, oppoſite to the circumference on D, will be found the content in feet upon C.

The number 42,53 is the circumference of a circle, whoſe area is 12; and 3,545 the circumference when the area is unity.

But the cuſtomary way is, to girt the piece in the middle with a ſtring, and take $\frac{1}{4}$ of the girt for the ſide of a ſquare; which ſide multiply into itſelf, and that product by the length, and the laſt product will be the content.

If the circumference, or girt, be given in inches (having worked as before) divide the laſt product by 144, and the remainder (if any) by 12, and the quotient will be the content in ſolid feet and inches.

If the circumference and length are given in feet and inches, having reduced them into inches, and worked as before, divide the laſt product by 1728, and the remainder, if any, by 144, and the quotient will be the content in ſolid feet and inches. Or, (having taken $\frac{1}{4}$ of the girt for the ſide of a ſquare) the operation may be performed

By { Taking the aliquot parts of a foot for the odd inches, / Croſs multiplication, / Reducing the dimenſions into decimals, / Sliding rule, / Carpenter's rule, } As before taught for ſquares.

This cuſtomary way produces a content leſs than the truth by above $\frac{1}{5}$ part; for as

The area of that circle whoſe circumference is unity, is ,07958
And the ſquare of the $\frac{1}{4}$ of the unity is but - ,0625

Therefore the true content is to the cuſtomary content as ,07958 is to ,0625, or as 14 to 11; ſo that, if the cuſtomary content be obtained, the true content may be found by proportion.

Yet

Yet this method is generally practiſed, as being a medium between the content of the utmoſt cylindric circumference, and the following method of taking the ſquare within the circle, which is only mentioned for demonſtration ſake.

A third way to meaſure round timber is, by rejecting ſo much of the cylindric circumference as will reduce it to a parallelopipedon; that is, by taking the ſquare within the circular end or baſe, being ſuch a ſquare whoſe four angles will be contained within the circumference.

If the circumference of a circle be unity, the ſide of the ſquare inſcribed will be ,2251; therefore, multiply the circumference by the ſaid ,2251, and the product will be the ſide inſcribed, which ſquared, and that ſquare multiplied by the length, will produce the content.

Otherwiſe note, If the diameter of a circle be unity, the ſide of the ſquare inſcribed will be ,7071: therefore multiply the diameter by the ſaid ,7071, and the product will be the ſide inſcribed, which ſquared, and that ſquare multiplied by the length, will produce the content.

The circumference of a round piece of timber being given in inches, to find how much in length will make a ſolid foot.

The Rule.

Multiply the number 2821 by the circumference, which will produce the ſide of a ſquare equal; then multiply that ſide into itſelf for a diviſor, and let 1728 be the dividend, and the quotient will be the length of a foot.

By the Sliding Rule.

Set the circumference upon D, to 12 upon C; and, oppoſite to 42,53 upon D, will be found the length of a foot upon C.

2. When the circumference is not the ſame from one end to the other, that is, when the timber is tapering, as are maſts, &c.

The rule for the true method, according to the utmoſt conical circumference.

Having found the diameters of the circumference at each end (as before taught) multiply them together, and to the product add $\frac{1}{3}$ of the ſquare of their difference; the total whereof multiplied by ,7854 (the area of a circle whoſe diameter is unity) will produce a mean area; which, multiplied by the length, will give the content.

But the uſual way is, to take $\frac{1}{4}$ of the girt in the middle (or rather $\frac{1}{4}$ of the girts at each end, and add them together, and take $\frac{1}{2}$ of their ſum) for the ſide of a mean ſquare throughout, which multiplied into itſelf, and that product by the length, will give the content.—Many of the cuſtomary methods of meaſuring timber, &c. deviate from the true; but it is our buſineſs to give an account of practice. Thoſe who would enter into the rationale of theſe things muſt be pretty well read in geometry. See the article Mathematics.

MENTZ, an archbiſhopric and electorate in Germany. It lies on the banks of the river Mayne, between the electorate of Triers on the weſt, the Palatinate on the ſouth, Franconia on the eaſt, and the Wetteraw on the north. It is about 60 miles in length, from north-eaſt to ſouth-weſt, and about 50 in breadth.

A conſiderable part of the elector's revenue ariſes from the toll on the Rhine and the Mayne, and from the tax on the excellent wines produced in his country.

The chief towns of any trade are, 1. Mentz, on the Rhine, near it's confluence with the Mayne. This city claims a right to the invention of the art of printing, which certainly was firſt brought to great perfection here by Fauſt, or Guttenburg, about the year 1450.

Here is a very beautiful kay along the river, defended by ſeveral works, well fortified with cannon. That part of the city which extends towards the river is moſt populous. The beſt vineyards for Rheniſh wines being in this neighbourhood, Mentz has a flouriſhing trade in that commodity more particularly; and it's commerce is the briſker, by reaſon that all the merchandize which paſſes up and down the Rhine ſtops in it's harbour, to change bottoms. In this neighbourhood is Hockhem, ſo celebrated for good wines, that the beſt Rheniſh is from thence called Old Hock.

2. Bingen is a pleaſant ſmall town, which ſtands in the diſtrict called Rhingaw, which is ſo populous, that it looks like one intire town, intermixed with gardens and vineyards. The riſing grounds about it produce wines that are eſteemed preferable to thoſe of Baccharac, ſo much in vogue heretofore.

3. Elfeld, five miles weſt from Mentz, is a ſtrong fortified town, on the north ſide of the Rhine, and the chief of the Rhingaw.—Here is Roderheim, a place noted for the growth of the beſt wines in theſe parts.

4. Weisbaden lies between ſix and ſeven leagues from Frankfort, and about five or ſix miles north of Mentz: it is the metropolis of a country belonging to the branch of Naſſau-Saarbrack, and is famous for it's mineral waters.

MERCANTILE ACCOUNTANTSHIP, or what is uſually called MERCHANTS ACCOUNTS, according to the method of double entry, as practiſed by the moſt eminent merchants throughout the world.

Before the reader enters upon what follows, he is deſired to conſult the following articles, viz. Accountantship, Accounting-House, Anonymous, Banking, Book-Keeping, Debtor and Creditor, and Ledger, Mercantile Accountantship; all which, conſidered together, in the various lights there repreſented, will render what we have further to ſay very eaſy and intelligible, and make him a complete accountant in any kind of buſineſs whatſoever.

Introduction.

In keeping of mercantile accounts there are three principal books, the waſte-book, the journal, and the ledger.

I. In the waſte-book are entered, in the plaineſt manner, as bought, ſold, received, paid, &c. all tranſactions of commerce, with their dates, ſums, conditions, and every particular circumſtance relating thereto.

II. The journal is, for ſubſtance, the ſame as the waſte-book; but, as this muſt be more fairly written, ſo it muſt be expreſſed in a very different manner, more merchant-like, as it is a preparatory for the ledger. In this book the debit and credit are rationally fixed and ſettled, according to the principles of accountantſhip; and, therefore, this requires the book-keeper's hand: and, becauſe in journalizing the waſte-book lies all the difficulty of account-keeping, we have exhibited the nature and reaſon thereof upon a ſingle ſheet, for the uſe of immediate inſpection. Suppoſe, for example, that you have entered, in your waſte-book, Received of A. B. in full 50 l. To poſt this into your journal, look for the article money received for a bond, or, otherwiſe, caſh is made debtor to the perſon that owed it you: therefore in the journal, after the date, ſay, Caſh debtor to A. B. received in full 50 l.

III. The ledger is the grand and principal book of accounts, which, when duly poſted, regulates and adjuſts all your concerns with reſpect to men, money, and merchandizes, and brings all things under their proper heads, and to their reſpective accounts. And, as this book gives you a comprehenſive view of all your negociations, ſo it does a complete balance of the whole year's traffic.

As the waſte-book is poſted into the journal, ſo the journal is into the ledger; and, if the waſte-book be judiciouſly poſted into the journal, with reſpect to it's debtors and creditors in the proper journal phraſe, as follows, under the letter (J) it will be very eaſy to poſt the journal into the ledger, if you remember the following

Directions to poſt journal entries into the ledger.

1. In every account there is a debit and a credit part; and, though the journal doth not expreſs the credit part, yet it is underſtood, for the perſon or thing that follows the word (To) is the creditor, or, inſtead of the word (To) read creditor. Take the inſtance above; caſh debtor to A. B. received in full 50 l.—Or thus, debtor caſh 50 l. creditor A. B. 50 l. Turn, therefore, to ledger to caſh account, as ſuppoſe folio (1) and, in debtor ſide, write, Date Jan. (1) To A. B. received in full (fol. 9.) 50 l. then turn to A. B's account (fol. 9.) and in credit thereof write, Jan. (1) By caſh received of him in full (fol. 1.) 50 l. From hence obſerve, beſides the date in ledger-margin, that, after the word (To) in debit, follows immediately A. B. viz. he that muſt be made creditor; and after the date and word (By) in the credit-entry, follows caſh, the name of the account that is made debtor; and that debtor and creditor counter-parts refer to each other, and ſtand in journal as before margin thus:

(1) Debtor.
(9) Creditor.

2. Obſerve, once for all, whatſoever you debit in one place in your ledger, muſt have an equivalent credit in another. And notwithſtanding in ſundry accounts there is one article debtor, and ſeveral creditors, as in letter (V) or ſeveral debtors and one creditor, as in letter (L) be that as it happens; yet debit and credit are always equal, or as much value as you debit you muſt credit, before your journal-entry is duly poſted in the ledger.

3. Beſides a reference column, another inſide column muſt be kept for the quantity of goods, as hogſheads, pipes, bales, &c. On the debtor ſide muſt contain the quantity bought in, and on the credit the quantity ſold out, by which you know at any time how much of each you have unſold, &c.

Note, Although we have deſcribed the nature and uſe of theſe three eſſential books, wherein a merchant's dealings might be all kept, yet, by many claſſes of traders, the waſte-book may be omitted, and the journal and ledger be ſufficient; for the book-keeper might journalize at once every occurrence, without entering them at all in a waſte-book. But, he not being always in the way, nay ſometimes obliged to make entries in a hurry, it is proper, in general, to keep a waſte-book, from which he may at more leiſure correctly and fairly form his journal.

But to prevent thoſe books filling up, merchants, by experience, find it neceſſary to keep other books ſubſervient to them, as a caſh-book, book of charges of merchandize, book of houſhold expences, factory or invoice-book, the ſale's-book; the nature and uſe of which are as follow:

IV. The

IV. The caſh-book. This book is folioed, as the ledger, and kept to eaſe the account of caſh there, and prevent receipts and payments being entered at all in the journal. On the left-hand ſide you make caſh debtor to all you receive, and on the right-hand ſide caſh creditor by all you pay.—And, at the end of the month, you may poſt it directly to the ledger, or, as uſual, make two journal entrances, viz. caſh debtor to ſundries for all the receipts, and ſundries debtor to caſh for all the payments of the month: ſo, by the help of this book, you will have but 12 lines in the caſh-account in the ledger on the debit, and 12 on the credit, for the 12 months. But ſome chuſe to poſt their caſh weekly, that they may more eaſily recollect any omiſſion or miſtake. Note, A book is ſaid to be folioed, when, on opening, the right-hand ſide and left (though two pages) are but one folio.

V. The book of charges of merchandize is only paged, in which are entered down promiſcuouſly the charges attending each ſort of goods or voyage daily as they occur, whether belonging to yourſelf or others, or for company account. And the reſpective goods or voyages are made debtors for their proper ſhare of charges to account of charges of merchandize. And, at the end of each month, your caſh muſt have credit for the whole charges of the month.

VI. The book of houſhold expences falls under the care of the houſekeeper, who might put down the diſburſements for family proviſions, &c. houſe-rent, ſervants wages, ſchooling, &c. periſhing goods, as earthern-ware (but durable goods, as beds, cheſts of draws, &c. do more properly belong to account of houſhold furniture) this may be caſt up once a month, or otherwiſe; and, having paid your houſekeeper the month's diſburſements, credit your caſh as before; then add up your month's payments in the caſh-book, which journalized, ſundries (and among the reſt theſe accounts, charges of merchandize, and houſe expences) will be debtors to caſh their reſpective ſums.

VII. The factory or invoice-book, is paged and uſed to copy out verbatim the invoice of goods you ſent abroad, whether for your own or others, or company account.

VIII. The book of ſales is folioed as the ledger, into which is copied an exact account of ſales which you ſend your employer; the credit ſide whereof contains the ſales when, to whom, what quantity and price, whether for caſh, barter, or to M. and S. on time. On the debit the particular charges, abatements, commiſſions, and nett proceeds.

But we are far from thinking it neceſſary that a learner ſhould have copies of theſe five laſt ſubſervient books: ſuch a multiplicity of books would ſerve to amuſe, rather than to inſtruct; when a ſpecimen of all theſe might be given him in one ſingle ſheet of paper. To theſe books might be added, the book for copying letters, the book for copying bills, a remembrancer or pocket-book, and the receipt-book; but, as theſe are generally known, ſo their names carry in them a ſufficient deſcription.

Note, To ſave the labour of opening an account in the ledger for every perſon, the merchant erects a general account, the debit whereof takes in thoſe ſeveral ſmall dealers that owe, their reſpective names, to what account, and ſum. And, as they pay, he diſchargeth each, mentioning his name on the credit ſide alſo; where the merchant likewiſe (in poſting his journal) carries thoſe little debts he owes, and, as he pays, debits the perſons.

In like manner, the merchant opens an account of merchandize general, into the debit whereof he poſts all thoſe little parcels and ſorts of goods he buys in, and not like to deal much in, and for which already he has no particular account opened in the ledger; and, as they are ſold, he gives the ſaid account credit, expreſſing the name of goods and quantity, in every entry, whether in debit or credit: by which, with a little trouble, he knows how much of any ſort of theſe petty wares are left, as effectually, as though he had kept a particular account for each.

If at any time you make a wrong entry in the ledger, in debit or credit ſide, make a croſs in the margin thus X, and write in the oppoſite ſide, To or By an error committed in credit or debit of this account, wrote off the ſum, &c.

PART I.

A general Rule to be remembered. The RECEIVER is DEBTOR: The DELIVERER is CREDITOR. Alſo whatſoever Merchandizes or Money come into your Hands, are DEBTORS; what go from you, are CREDITORS.

I. To poſt your Waſte-Book into your Journal; for a Foundation, at your Commencement in Trade, you muſt begin with the INVENTORY.

Inventory of all the
- A { Ready money, merchandize by you, and debts and voyages belonging to you; make thoſe ſeveral parcels or perſons, D^r. to your ſtock, or general capital.
- B { Debts owing to you, make ſtock, or general capital D^r. to thoſe ſundry perſons *.

* The title ſtock, or general capital, is uſed inſtead of your own name.

Money received.
- C { For a bond, or book-debt, D^r. caſh to the perſon that owed the ſame, for the ſum received *.
- D { For a legacy, a wager won, or gains by lotteries, or the exchange of money: D^r. caſh to account of profit and loſs.
- E { For wares ſold: D^r. caſh to thoſe reſpective wares (if more than one ſort) each it's value.
- F { Taken up at intereſt on bond. } D^r. ſundry accounts, viz. { D^r. caſh the ſum took up / D^r. intereſt, or profit and loſs for the intereſt } to the lender, for both principal and intereſt.
- G { For intereſt of money formerly lent, and principal continued: D^r. caſh to account of intereſt, or profit and loſs, (which you pleaſe).
- H { For freight of a ſhip, rent of a houſe, or eſtate: caſh D^r. to ſuch a ſhip, houſe, or eſtate.—Except the tenant has an account opened in your books, and he made D^r. already to houſe or eſtate.—Then caſh D^r. to the ſaid tenant's accompt to diſcharge him.
- I { As an aſſurer, or inſurer, for inſuring another's ſhip, or goods at ſea, &c. D^r. caſh to account of aſſurance or inſurance, or profit and loſs.

* Mention whether in full or in part; alſo in exchanges. Obſerve to keep an inſide column for the foreign ſpecie, and, after having found it's value (by the rule of exchange) in the coin of that country you are in, carry it in the outward column, as in thoſe inſtances given before under the article LEDGER.

K Which was due from you, whether on bond, debt, or goods, formerly bought, &c. D[r]. the perſon to whom due, to caſh the ſum, &c.

L For goods juſt bought, and paid for at delivery: D[r]. the wares come in, to the money gone out.

M For houſe expences, or with a ſon to apprentice, * houſe expences, or profit and loſs D[r]. to caſh.

N Lent at intereſt on bond: D[r]. the borrower to ſundries. { to caſh the ſum lent. / to profit and loſs for the intereſt.

Money paid.

O For intereſt only, the principal continued: D[r]. profit and loſs, or account of intereſt, to caſh.

P For inſurance of goods you ſent to ſea: D[r]. voyage, &c. to caſh.

Q As by an inſurer for a loſs, &c. D[r]. inſurance account to caſh.—But if the loſs is not paid preſently—D[r]. inſurance to the perſon inſured. And, then when you pay it, D[r]. inſured perſon to caſh.

R For another, as in behalf of your landlord, for reparation or taxes of the houſe you dwell in: make your landlord D[r]. to caſh.

* Theſe accounts, viz. houſe expences, intereſt, inſurance, bottomry, profit and loſs, though often kept diſtinct, are all of the ſame nature with the account of ſtock; for, whatever you loſe by either of theſe, the reſpective account is made D[r]. and C[r]. when you gain. For, if you receive money for a legacy or portion, either make Caſh D[r]. to profit and loſs, or rather to ſtock; becauſe, on cloſing the books, you'll ſee by what means your ſtock is increaſed.

S For preſent money: D[r]. goods bought, to caſh for their coſt and charges, if any, for carriage, freight, &c.

T For time: D[r]. goods received to the ſeller, (to pay at ſuch a time, if a certain time was agreed on.)

V For part money, part time: D[r]. wares come in, to ſundry accounts, C. { to caſh, paid in part, / to ſeller, reſt unpaid.

To a ſhip, houſe, or eſtate bought, ſuch a ſhip, houſe, or eſtate (with name or place for deſcription) D[r]. to caſh or ſeller, &c.

Merchandizes, &c. bought and received.

U For part money, part another's note, and part time: D[r]. wares received, to ſundry accounts. { to caſh the ſum paid. / to the man you received the note of. / to ſelling-man the reſt due.

W By my factor A. at one place, per my orders, and ſhipped off to my factor B. at another place, voyage to, &c. conſigned to B. D[r]. to factor A. my account for coſt and charges, &c.

X Received from your factor, for your own account: write D[r]. goods received, to factor [my account] current for coſt and charges he paid thereon.

Y Wares for wares, when of equal value: D[r]. wares received to wares delivered.

Z Bought for part money, part wares, of divers ſorts: D[r]. wares received to ſundries. { to the reſpective wares delivered, their value. / to caſh, to make up the reſt.

Merchandizes in barter.

A Bought for part money, part wares, part time: D[r]. wares bought to ſundries —— { to caſh, the ſum paid. / to wares you delivered, their value. / to your dealer, the reſt owing him.

B But, when ſeveral wares are bartered for ſeveral, then D[r]. your dealer to ſundries, viz. to each ſort you deliver out, for it's value. And make ſundry accounts, viz. each ſort you receive, D[r]. to your dealer for it's reſpective value.

C Suppoſe you ſend goods to M. and left to his choice, whether to keep or return them: make account of ſuſpence D[r]. to goods ſent M.—If he returns them again, reverſe it. But if he keeps the ſaid goods, make M. D[r]. to account of ſuſpence, for ſuch goods ſent him.

Account of ſuſpence, or bargains undetermined.

D —So when you have an overplus in caſh, as of 10 l. make caſh D[r]. to account of ſuſpence 10 l.—When you recollect the perſon or account, that ſhould have had credit. —Make account of ſuſpence D[r]. to ſaid perſon on account, for ſaid omiſſion.

E Voyage to, &c. conſigned to—&c D[r]. to ſundries. { to the reſpective wares for their value *. / to caſh, on charges of merchandize for cuſtoms, inſurance, &c.

F When you buy a cargo, for ready money, then D[r]. voyage, &c. to caſh at once, (theſe never having been entered in your books.)

Goods ſent to ſea.

G When you buy goods for ſea, to pay ſome time hence: then voyage,—&c. D[r]. to perſon or perſons you bought them of.

H When for uſe, and † account of your friend, (in either of the laſt caſes) then your friend [his] account current is D[r]. &c.

* This cargo being taken out of your own wares, which have been entered in your books.

† It is [my account] when goods, &c. belong to me. And [his account] when they belong to my correſpondent.

I For ready money, D[r]. caſh received to goods delivered out.

K For time, D[r]. the buyer to the ſeveral wares, for their values reſpectively.

L For part money, part time: D[r]. ſundries, viz. { D[r]. caſh, received in part. / D[r]. the buyer for the reſt owing. } to goods ſold.

M For part money, part wares, part by another's bill, part time: D[r]. ſundries, viz. { D[r]. caſh you received. / D[r]. wares you received, their value. / D[r]. the perſon who is to pay the bill. / D[r]. your dealer, due on time the reſt. } to goods ſold, for their values.

Goods ſold.

N By advice from my factor: D[r]. the factor [my] account current to voyage, for goods ſold. (See the note above †.)

Charges.

- O — On goods bought, ſee (S) or ſent to ſea, ſee (E) or to book a month's charges, ſee deſcription of charge-book—or on intereſt, ſee (O) or on inſurance, ſee (P).
- As repairs or taxes on your own houſe, eſtate, or ſhips outſet: ſuch houſe, eſtate, or ſhip, D^r. to caſh. But, if paid by you for your landlord, ſee (R).
- P — Diſcounted by a tenant
  - out of rent due to you, D^r. houſe or eſtate to tenant.—But, if for an eſtate to which you are executor in truſt, D^r. eſtate of A. B. deceaſed, to tenant.
  - out of rent due to A. B. for whom you are ſteward: eſtate of A. B. D^r. to tenant.

Abatements.

- Q — Upon wares
  - Bought: D^r. the perſon that ſold them to the ſaid wares you bought, the ſum abated.
  - Sold: D^r. the wares you ſold to your chapman that bought them, (ſo reverſing the ſales).
- R — Upon debts
  - Due to you: D^r. account of profit and loſs to the perſon you abate, the ſum, &c.
  - Owing to you: D^r. the perſon that abates to profit and loſs account *.

* Abatements, by your factor made for defect of goods, bad debts, or for any farther charges (after you had received your account of ſale from him) make voyage D^r. to factor [my] account current. Abatements, by you as a factor, having before ſent your employer his account of ſales, make your employer his account current, D^r. to the man you abate, as alſo to charges on remitting money, poſtage, &c.

Aſſignments.

- S
  - Of money received by aſſignation: D^r. caſh to the perſon that aſſigned it (not to him that paid it).
  - Of R's bill or bond, who owes you 100 l. to M. whom you owe 200 l. make M. D^r. to R. paid the ſaid M. in part 100 l. by aſſignation.

Conſignments.

- T
  - Of goods to you as a factor: D^r. goods conſigned for account of A. B. that ſent them, to caſh or charges of merchandize for any cuſtom, or charges at landing, &c.
  - You ſend to a factor (ſee goods ſent to ſea) but he adviſing you he has ſold them (vide goods ſold).

Selling or buying goods, paying or receiving money for your employer, is booked as your own proper. The buyer D^r. to goods for account of A. B. &c. [always mentioning whoſe].

Goods in return, you ſhip off with charges: D^r. A. B. your friend his account current, to the ſeveral goods, charges, &c. you ſend, or to the perſon or perſons you bought them of.

Bills of Exchange.

- V — Remitted to you,
  - And paid at ſight: D^r. caſh to the remitter, viz. He that ſent it, mentioning whether for his or my account current.
  - To be paid you at 1 or 2 uſance (or months hence) D^r. account of bills receivable, to the remitter, and when you receive the money for it: D^r. caſh to account of bill receivable. [Mind to keep an inſide column for the foreign ſpecie.] See the article LEDGER.
- W — Drawn on you,
  - And paid at ſight: D^r. the drawer to caſh, or had you laid out for a bill to ſend D^r. the ſame.
  - Payable at time: D^r. the drawer to account of bills payable, and when you have paid the ſaid bill, then D^r. account of bills payable to caſh *.
- X — Drawn for my account, between my factors: D^r. drawing factor [my] account current, to paying factor [my] account current.

* By theſe accounts you will ſee what bills you have to receive or pay.

Goods in company (as oil, or any thing.)

- Bought Y
  - And paid for myſelf, I make oil in company between partner and me, naming our ſhares (as he $\frac{2}{5}$ and $\frac{3}{5}$ myſelf) D^r. to caſh; and immediately I make partner his account current D^r. to his account in company, his $\frac{2}{5}$ ſhare of the coſt *.
  - On time, the ſame as above: If I ſay oil in company between P. $\frac{2}{5}$ and $\frac{3}{5}$ myſelf: D^r. to the ſeller, &c.
- Sold Z
  - I bring wares of my own into company.
    - oil in company between P. $\frac{2}{5}$ and $\frac{3}{5}$ myſelf: D^r. to oil of my own proper; and P's account current, D^r. to his account in company; for his ſhare of the value.
  - For ready money, or to N. M. on truſt: caſh, or N. M. D^r. to oil in company; and P's account in company, D^r. to his account current, for his ſhare of the value †.

* By which obſerve my partner muſt have two accounts, including his account in company, and his account current; the like for each, had I more partners.

† [Suppoſing myſelf to keep the accounts between partner and me] when I received money from him for his ſhare, I laid out for him (as vide Y.) D^r. caſh to partner's account current.

Goods

Goods in company sent to sea. { Voyage in company between, &c. Dr. to sundries—— { to seller for wares in company between P. 2/5 and 1/5 myself, &c. / to cash, for charges, for shipping, insurance, &c. } { then partner's account current Dr. to his account in company, his 2/5 share. }

Note, Advice of sale is entered as in private and factory accounts.—As also returns from factor (with this difference) regarding, as before, partner's account in company; and his account current *.

* Observe, the end of my partner's having two accounts in my ledger, viz. His account in company shews his particular share of all the goods bought, on creditor side; or sold, on debtor side. And partner's account current shews what he owes me, or I him.
In regard to posting into the ledger, we refer to the heads mentioned at the beginning of this article.

II. How to Close or Balance all Accounts in the LEDGER, and to carry the Foot of each to one General Account of Balance, and so to conclude your Old Books.

To balance an account in the ledger.

- Of money——Remaining, Dr. account of general balance to cash.
- Of goods or voyages.
  - When not all sold (as you may see by comparing the debtor and creditor-side of the ledger) Dr. balance to the said goods or voyage, for the quantity unsold, which * value at the prime cost or market-price; and credit the said goods or voyage by balance. So for stocks, annuities, &c.
  - If loss thereon: Dr. profit and loss to the goods or voyage. / If gain: Dr. goods or voyage to profit and loss. } minding always the credit part, or counter entry, which follows the word (to.)
- Of interest, insurance, commissions, charges of merchandize, house expences, &c. are balanced by profit and loss.
- Of men, or personal accounts.
  - Owing to you: Dr. balance to the account of person owing.
  - Owed by you: Dr. person's account you owe, to the account of general balance.
- In company.
  - Make wares in company between, &c. Dr. to sundry accounts, the whole advantage of closing this account, { to profit and loss, my commissions, at so much per cent. And partner's account current, to his account comp. his part. / to profit and loss, for my share of the common gain. / to my partner (or partner's each) his account in comp. as for his share of gain.
  - If partners agree to divide the remaining goods, make each partner's account in company, Dr. to wares in company for his part, and wares [my own proper or] balance, make Dr. to wares in company for my share.
- Of factorage. Make goods of A. B. your employer, Dr. to sundries. { to cash or charge of merchandize for warehouse-room, cellarage, brokerage, abatements, &c. / to profit and loss, your commission for sale, &c. at so much per cent. / to employer's account current, for the nett produce.
- Of profit and loss.
  - If lost on the whole trade: stock Dr. to profit and loss †.
  - If gained on the whole trade: Dr. profit and loss to stock.
- Of stocks. Dr. stock to balance, which being credited by stock, according to the 2d head, add up debtor-side and creditor-side of balance, and both will be exactly equal, and a proof that every article hath had it's double entry throughout your books; which will yield an agreeable satisfaction, as well as shew you, that this, of all methods, is the most excellent.

But, if they do not exactly agree, it usefully informs you, that you have committed an error: then you, and another, must prick over your reference ('till you find out the omission or mistake) which then will stand thus, : 1/9.

* Debtor-side in ledger shews what goods cost, and quantity bought in. The credit side, what sold for, and the quantity sold out. All accounts are closed either by the account of profit or loss, or balance, or both.

† Profit and loss in the debit-side, are your losses; and credit-side, your gains. Observe that this account is balanced last, save stock account, and the account of general balance.

III. And lastly, How to begin a new Sett of Books, from the General Account of Balance of the Old Books. You must draw an Inventory, as at first, and in your new Journal make all the Money, Persons, and Merchandize, in Debtor-Side of Balance, Debtors to Stock. Also make Stock Debtor to all you owe; and this is contained in the Creditor-side of Balance, not reckoning the last line, which only shews your Nett Stock at the Entrance on your New Sett of Accounts; which, for Distinction Sake, you may mark B. on the Cover of each. The next Sett C. &c.

Of ACCOUNTS in COMPANY.

Introduction.

There are three ſorts of accounts opened in my ledger, when I keep the accounts of company, and have the diſpoſal of the goods, viz. An account of goods in company—a particular account current—and an account in company for each partner.

I. Of a general account of goods in company, as, ſuppoſe wine, &c. I make wine in company, between ſuch partners and myſelf (our parts) debtor for all that comes in, and creditor for all that goes out, as if it were for my own proper account.

II. Partner's account current (by ſome called his account proper, for this as any other man's proper account) ſhews what is due from him, or due to him.

III. Partner's account in company is only for order and regularity, and contrary to others; for the credit-ſide contains his ſhare of ſtock or goods (brought into company) and his part of the nett gain, or loſs at the cloſe: but the debit accounts, for what (goes out) or balance of what I have remaining in my hand, and his part of the loſs (if any) in the cloſe of the company trade.

Note, Though, for brevity ſake, I have only mentioned one partner's account current, debtor to, &c. in moſt places, it muſt be underſtood the ſame for every partner, except myſelf.—And in keeping company accounts, promiſcuouſly with our own, we do not open a particular account in company, and an account current for ourſelves, as well as for each partner, becauſe our own proper accounts keep my part in regulation; for obſerve, when I receive money for goods, ſuppoſe 100l. I debit my account caſh for the whole 100l. and, when I pay partner's half, I make his account current debtor for his 50l. and credit caſh 50l. paid out: whence it is plain, that my caſh remains debtor for my part 50l. I have ſtill in hand. In like manner, when I carry partner's ſhare of the gain, ariſing from goods or voyage in company, to his particular account in company, I carry my part to my own account of profit and loſs, (R, S.) &c.

But, in keeping company accounts in books by themſelves I open an account in company, and an account current, for myſelf, as well as for each partner: and then an account of ſtock in company, caſh in company, profit and loſs company, and balance in company, &c. As to the method of keeping theſe, it is the ſame, only obſerving, that I muſt do for myſelf, as for any other partner; ſo my part of the gains I carry to my account in company, as my partner's to his, or theirs.

The accounts being duly balanced, according to the plain ſubſequent directions, given for that purpoſe, every partner's account in company will of courſe, if accurately ſtated and poſted, balance itſelf; the debit and credit will be equal to a farthing, which will be an agreeable ſurprize to the young accountant, as well as prove the truth of the whole company tranſactions, without the trouble of balancing the whole books; and thereby make him amends for his trouble of keeping an account in company for each partner, which ſome chuſe to omit, and my ſeveral partners accounts current will exactly ſhew what I owe them, or they me.

For the third and laſt part, we have treated of two other methods, whereby company accounts may be kept by double entry, without a particular account of company for each partner: theſe are ſo plain to any one that has but a ſmall notion of debtor and creditor, by double entry, that they need very little explication, being much the ſame with private and factorage accounts.

As to the firſt of them, when I procure the goods, I make partner, as any other buyer, debtor for his part of the goods bought in, or ſent to ſea; and ſuch goods, or voyage, debtor for my part, giving the ſeller credit by both.

And in the ſecond, which I take to be plaineſt, I make goods, bought for company or voyage, debtor to the ſeller, for their whole coſt, as in private accounts.—Then I make partner debtor to ſaid goods or voyage, for his part, which, in effect, he buys of me.

And in both theſe ways, when the goods are diſpoſed of, I give ſaid account of goods or voyage credit for my part, and partner's account credit for his part, which is illuſtrated by example, in the latter part of this ſheet.

Theſe methods are uſed in ſhip accounts, and in many other tranſactions; as in glaſs-houſes, pot-works, and the like, where there are many articles to books, or many partners concerned: but the firſt method is the way more generally uſed, by ſkilful and eminent merchants. And the knowledge of this method will qualify a perſon for any counting-houſe whatſoever; whereas, if he only underſtood the latter method, and he ſhould fall into a counting-houſe, where the accounts were kept by the former, he would find himſelf greatly at a loſs. It is uſeful, however, for an accountant to know all methods of ſtating accounts, that he may not be perplexed upon the ſight of methods different to what he may have ſeen.

PART II.

A SCHEME of Company Accounts according to the Italian Method of Double Entry.

It is ſuppoſed that I myſelf keep the accounts, and have the diſpoſal of the company goods, &c.

Goods bought for company account
- A If of myſelf,
- B If of partner,
- C If paid for me,
- D If on truſt,

Dr. goods in company
- to goods for my own proper account,
- to partner's account (proper or) current,
- to caſh,
- to ſeller,

then Dr. each partner (his proper account, viz.) his account current to his account in company, for his part in the ſaid purchaſe.

Note, E When partner brings into company juſt his own part of goods, then if I only Dr. goods in company, to his account in company; this is two lines ſhorter than to account it bought of him, as above (B); but, when partner finds over or under his exact part, or his own part and mine, enter the tranſactions as above (B); and, had the other been booked ſo too, it would have been right, though not ſo conciſe.

F So, likewiſe, when I procure juſt my part of goods for company, I only Dr. goods in company, to goods for my own proper account; this is juſt the reverſe of withdrawing my ſhare (ſee L below): but, when I and partner bring in unequal parts, account is brought of ſelf and him (vide A and B).

Sales of goods for company
- G If to myſelf,
- H If to partner,
- I If for ready money,
- K If on truſt,

- Dr. ſame goods for my proper account,
- Dr. partner's account current,
- Dr. caſh,
- Dr. the buyer,

to goods in company, then, in either caſe, Dr. partner's account in company to his account current, for his part of the ſale.

*** Note well, when the buyer pays me, for company goods ſold formerly,—only Dr. caſh to buyer—for partner's account current had credit, for his part, at the ſale (vide K.)

L When partner and I agree to part remaining company goods between us, when they are diviſible into equal parts—Dr. ſundries to goods in company, viz. Dr. goods, for my own proper account, for my part. Dr. partner's account, in company, his part. This is the reverſe of (F, E); but if partner took to all the goods, at a certain price, or under, or above his juſt part, and myſelf the reſt, count it as goods ſold (G, H.) which is generally plaineſt.

Charges, as carriage, intereſt of money, &c.
- M Paid by partner, as (B).
- N Paid by myſelf, as (C).

As charges do augment the coſt, ſo it muſt be booked as the coſt.

Abatements.
- O — To us, for goods — This is the reverse of purchasing, D^r. seller, to goods in comp. — D^r. partner's account in comp. to his account current, his share of abatement.
- P — By us, in comp. — This is the reverse of selling. D^r. goods in comp. to buyer. — D^r. partner's account current, to his account in comp. his part of the same.
- Q — By advice from our factor, just the reverse of his adv. of sales (as G), only voyage to—between, &c.—D^r. to factor, our account current (no double journal entrance).

Note, R — So, in compounding for a debt, do as in (P), for the money we abate.—And, when dealer pays me his composition money, only D^r. cash to dealer (see *_* above).

Money.
- S — Received at sale of goods (see I), or for goods formerly sold, (vide *_*) above.
- T — Received of partner, D^r. cash to partner's account current.
- U — Paid to partner, D^r. partner's account current to cash *.

* Note, when partner gives me a sum to lay out, with just as much of mine own, it is somewhat shorter to D^r. cash received, to partner's account in company—but carefully observe, when goods are bought, only make goods in company D^r. to cash; so then the account will stand as in (E).

Bills.
- W — If I draw on partner a bill, D^r. cash; or Z. the man I deliver it to, to partner's account current.
- X — If partner draws on me, D^r. partner's account current to cash (if paid on sight). To account, of bills payable (if on time) *.

* (See returns per our factor.)

Barter.
- Y — Company goods delivered for others, which I take to myself, D^r. goods received for proper account, to goods in company, and D^r. partner's account in company, to his account current, for his part of sale.
- Z — Sold my own goods for others, I bring into company, D^r. goods in company received, to goods for my own account delivered, and D^r. partner's account current, to his account in company, his part of purchase.

To admit a new partner into company.

Suppose A. and myself are already in company, each $\frac{1}{3}$, for 600l. and B. would be interested $\frac{1}{3}$ of our stock, so we agree to have each $\frac{1}{3}$. B. purchases of me 100l. and of A. 100l. in the said stock, to make up his 200l. or $\frac{1}{3}$. How must this be settled? First, let goods in company account stand as it is, 'till sold (inserting B. in thirds) except you will open an account of goods in company, between A. B. and myself $\frac{1}{3}$ D^r. to goods in company between A. and me $\frac{1}{2}$ —However, A's same account current and account in company will do (whether B. pays ready money or not) D^r. partner (A's) account in company, to his account current 100l. his half of the sale to B. If B. pays me my 100l. D^r. cash to B's account in company.—If B. pays A. his 100l. D^r. A's account current, to B's account in company.—If B. pays not ready money, D^r. B's account current, to his account in company 200l.—If B. paid all to A. D^r. (A's) account current, to B's account in company, 200l.—But, if B paid all to me—cash D^r. to C B's) account in comp. 200l.

It is supposed that I myself keep the accounts, and have the disposal of the company goods, &c.

Goods in company sent to sea.
- A — If out of company goods, already booked, only D^r. voyage to —, &c. in comp. between —, &c. *
- B — If bought on credit, D^r. voyage in comp. between, &c. to seller. — then D^r. each partner's account current to his account in company in each of these cases.
- C — If bought of a partner, D^r. voyage in comp. between, &c. to partner's account current. — then D^r. each partner's account current to his account in company in each of these cases.
- D — If bought of myself, D^r. voyage in comp. between, &c. to goods for my proper account. — then D^r. each partner's account current to his account in company in each of these cases.
- E — If my factor (per order) send to our factor for comp. account, D^r. voyage in comp. between, &c. to my factor my account current. — then D^r. each partner's account current to his account in company in each of these cases.

Note, F — For customs, freight, insurance, &c. if I paid as (D), (if instead of crediting goods my own proper account,) I say, to cash or charges of merchandize.—If partner pays charges, exactly as (C).

* Partner's account current, to his account in company, was debited when these were bought in (therefore not now.)

Advice of sales of ditto.
- G — D^r. Ro. D. (our factor) at—for company account, between —, &c. to voyage between, &c. our account current. — No double journal entrance here, nothing being gone out, or come in, but only a change; factor charged, and voyage discharged.

Non-disposal.
- H — If we order our factor at Barbadoes, to send our goods he cannot sell, to our factor at Virginia, D^r. voyage to Virginia, to sundry accounts. — to voyage to Barbadoes, it's value (so make one voyage discharge the other). to factor at Barbadoes, for any new charges, shipping, &c. — D^r. partner's account current to his account in comp. his share only of new charges.

Returns by our factors.

In bills.
- I — If sent to partner, D^r. partner's account current — to factor — at for comp. between, &c. our account current. — Then D^r. each partner's account in comp. to his account current, for his part of the same.
- K — If sent to me, and paid at sight. D^r. cash
- L — If sent me at usance, D^r. bills receivable

In goods.
- M — Goods for company between——D^r. to factor at——our account current; so let them rest till I dispose of them. (For charges I pay on them, see above.)
- N — If partner takes to them, D^r. partner's account current, to said goods in comp. or (if not entered to factor. — Then Dr. partner's account in comp. to his account current for his part of sale.
- O — If I take to them, D^r. goods for my proper account.
- P — If a buyer takes to them, D^r. cash, or the buyer.

☞ Before I close the account in company, kept by myself, I make a double journal entrance for any charges not yet booked, and my commissions.

My commissions.
- Q — Goods (or voyage) in company, D^r. to sundries, — to cash, or charges of merchandize, for cellar-room, &c. or other charges. — Then D^r. partner's account current, to his account in company, his part of both.
- to profit and loss, my commissions, &c. (if not charged before.)

It is ſuppoſed that I myſelf keep the accounts, and have the diſpoſal of the company goods, &c.

To balance company accounts in my ledger.

Of goods,

R If we have gained Dr. goods in company to fundries, { to partner's account in company, his part of nett gains. / to profit and loſs, for my part of ditto.

S If we have loſt, on the whole, or in part, (as ſtaved, ſtolen, &c.) Dr. fundries, { Dr. partner's account in comp. his part, / Dr. profit and loſs, my part of loſs, } to goods in comp. &c.

Of voyages.

T If we have gained, Dr. voyage to fundries, { to partner's account in company, his part of nett gains. / to profit and loſs, my part of ditto.

V If we have loſt, Dr. fundries, { Dr. partner's account in comp. for his part of the loſs / Dr. profit and loſs, my part thereof, } to voyage to—, conſigned to—, between—, &c.

U If no returns yet made, Dr. fundries, { Dr. partner's account in comp. for his part remaining, / Dr. balance, for my part out-ſtanding, } to voyage, &c. between, &c.

Of our factor.

W If he hath under ſhipped our nett proceeds, Dr. fundries, { Dr. partner's account in comp. his part, / Dr. balance, my part in factor's hands, } to factor, at—, for comp. account, between, &c.

X If he hath overſhipped our proceeds, Dr. our factor at—, for comp. to fundries, { to partner's account in comp. his part due to factor. / to balance, for my part of the overplus due to ditto.

Suppoſe partner keeps the account, and has the diſpoſal of company goods, &c.

Note, ☞ When my partner has the diſpoſal of company goods, I only keep an account of my own ſhare in my books, (viz. goods in hand of partner, Dr. &c.) and when he has ſold them, and given me an account of the ſales, I make him debtor for my part of the nett proceeds, (as I would a factor) to account of goods in his hands, whereby theſe two accounts are balanced, as my proper accounts; for the profits ariſing from my account of goods, in partner's hands, is carried to profit and loſs. And if partner owes me, I, at the clo e of books, make balance Dr. to, or Cr. by partner's account, as I would any other man's.

Y If partner finds my part as well as his own,

Z If I buy my part,

A If I find out of my own goods my part,

} I may expreſs, or open this account in my books, either { Dr. goods, in hands of partner A. B. or, / Dr. partner, my account in comp. or, / Dr. voyage, if ſent to ſea, } { to partner, for my ½, or ⅓, &c. / to cath, or ſeller. / to goods, for my proper account.

B If I procure partner's ſhare, and my own Dr. fundries, { Dr. goods in comp. in hands of partner. for my part, / Dr. partner (as one that bought goods of me) for his part, } { to goods proper, if out of my own ſtock. / to the man I bought them of, if had them on truſt. / to cath, if I purchaſed with ready money.

See Part III. partners keeping accounts.

PART III.

COMPANY ACCOUNTS without a particular Account in Company for each Partner.

I keeping the account, &c.

Goods bought for company. { Dr. fundries. viz. { Dr. A. B. my partner, for his half, { to ſeller, if bought on truſt. / to cath, if I paid for them. / Dr. goods in comp. with A. B. for my half, { to partner, if he paid for them. / to cath, and to partner, if we paid between us.

☞ Note, In this method, I only make each partner Dr. for his part of goods bought in, to the feller. And goods in comp. to feller, for my part; and, as I ſell, give theſe accounts credit; ſo they will ſtand in my ledger as common or private accounts, and balance as ſuch.

II. Method, I might have made goods in comp. Dr. for the whole, and then made partner Dr. to goods in comp. for his part, and it would have come to the ſame.

Goods ſold in company. { Dr. buyer, or cath, to fundries, { to partner A. B. for his half of ſale. / to goods in company, for my half of ditto.

Goods in comp. ſent to ſea. My friend W. W. of London and I, are agreed to enter into copartnerſhip, in a voyage to Jamaica: and therefore writes to me, to procure 100 duroys for ſaid voyage.—Having 70 pieces of my own, which I charge at 26s.—and bought of R. S. 30 pieces more, at 26s.—and I have paid charges in packing, preſſing, porterage, &c. 'till on board, 35s.

To journalize this account, you may ſay,———

Sundries, Dr. to fundries, 135l. 00s. 10d. for 100 pieces of duroys, ſhipped on board the Sea-Horſe, W. G. maſter, for Jamaica, for account of W. W. and ſelf, each one half, conſigned to R. D. viz.

		£.	S.	D.	£.	S.	D.
II. Method, If I had made voyage, Dr. to fundries for the whole coſt and charges,-	.W. W. for his half — — — —		67	10	05		
	.Voyage to Jamaica, for my half — — —		67	10	05		
						135	00 : 10
Then made partner W. W. Dr. to voyage, for one half thereof, this would have come to the ſame,	.To duroys, for my proper account, 70 pieces, at 26s. —		91	00	00		
	.To R. S. bought of him 30 pieces, at 26s. — —		39	00	00		
	.To charges of merchandize, — — — —		1	15	30		
	.To profit and loſs, or account of commiſſion for my proviſion, at 2 and half per cent. — — — —		3	05	10		
			135	00	10		

Advice of ſales of ditto goods. Our factor, R. D. ſends an account of ſales of the above adventure; the nett proceeds amounting to 202l. 10s. exchange at 135 per cent. make——ſterling 150l.——To book this——R. D. at Jamaica, Dr. to fundries, 150l. for 202l. 10s. being the nett proceeds of goods between W. W. and ſelf, each half, viz.

	£.	S.	D.	£.	S.	D.
To W. W. his half — — — —		75	00	00		
To voyage to Jamaica, for my half — — —		75	00	00		
				150	00	00

Partner keeping the account.

When partner keeps the account, keep only an account of your own ſhare, as taught in Part II. to which we refer you. I ſhall give the following example.

Goods ſent to ſea. My partner, W. W. of London, adviſes by my order, he has ſhipped on board the Frederic, Matth. Van Holten, maſter, for Amſterdam, 100 pieces Norwich ſtuffs, conſigned to Adam Van Sculten, for account of W. W. and ſelf, each one half; which, with all charges, as per invoice, amounts to 103l. 6s. 8d. my half whereof, is 51l. 13s. 4d.—which I book thus:

÷ Voyage to Amſterdam, Dr. to W. W. 51l. 13s. 4d. for my half in 100 Norwich ſtuffs, ſhipped by him, and conſigned to—&c. — — — — — 51 : 13 : 04

Advice of ſales. Partner W. W. of London, has ſent me account of ſales, which he received from Adam Van Sculten, of Amſterdam, of the Norwich ſtuffs he ſent on our account, the proceeds whereof being 1624 guilders, 18 ſtivers, my half is 812 guilders, 9 ſtivers, exchange at 36s. 6d. make ſterling 74l. 3s. 11d.

÷ Partner W. W. Dr. to voyage to Amſterdam, 74l. 3s. 11d for 812 guilders, 9 ſtivers, my half of the nett proceeds of Norwich ſtuffs, as per account from Adam Van Sculten — 74 : 03 : 11

See Part II. partner keeping accounts.

The

The BRITISH MERCANTILE COLLEGE, humbly ſubmitted to public conſideration.

Novimus novitios quoſdam, qui cum ſe mercaturæ vix dederunt, in magnis mercimoniis ſe implicantes, rem ſuam male geſſiſſe. Et profecto imperitos mercatores multis captionibus ſuppoſitos, multorumque inſidiis expoſitos experientia videmus. Mercatores actus ſui rationem conficiant, & calamo non parcant.

Stracch. de mercatura, par. 2. p. 357.

L'ignorance des negocians vient, de ce que dans leur commencement ils manquent d'inſtruction, n'ayans pas fait leur apprentiſſage chez d'habiles marchands, qui ayent toutes les qualitez requiſes pour bien montrer le commerce. Il eſt impoſſible qu'un negociant réüſiſſe dans ſes entreprifes, s'il ne ſçait parfaitement ſa profeſſion.

Parfait Negociant de Savary.

Of the neceſſity of the eſtabliſhment of a MERCANTILE COLLEGE in Great-Britain, for the education of BRITISH MERCHANTS, with greater advantages than they uſually have.

In order to animate the French nation in general to the vigorous purſuit and cultivation of it's trading intereſt, that celebrated ſtateſman Monſ. Colbert, prevailed on the late biſhop of Avranches, a gentleman well read in antiquity, to write the hiſtory of the commerce and navigation of the ancients *; which had ſuch happy effect in the kingdom, when communicated to the moſt diſtinguiſhed perſons in it, that, from being lukewarm in regard to the national intereſts of trade, they became it's ſtrenuous advocates and zealous promoters.

* Hiſtoire du commerce, & de la Navigation des Anciens. Par M. Huet, ancien evêque d'Avranches.

And, indeed, it appears from the writings of that learned and judicious prelate, that commerce when wiſely cheriſhed and encouraged, was the firmeſt ſupport of the power of moſt of the illuſtrious ſtates and empires in ancient ſtory.

The Phœnicians, the Carthaginians, the Athenians, and Rhodians, acquired immenſe treaſure and power by the induſtry and ingenuity of their merchants, in extending their traffic. Nor did the Romans, though chiefly addicted to arms, neglect to carry on an extenſive trade to Sicily, Spain, Egypt, Barbary, and the Euxine Sea; but their perpetual victories, and the rapidity of their conqueſts, made them loſe ſight of their commercial intereſts; which, if properly cultivated, might have maintained their power, even to the end of time.

Where the people of any ſtate or empire depend altogether upon agriculture, and there are few or no traders in a nation, unleſs of the retailing and mechanic ſort; and where the farmer and the planter are the moſt uſeful members of the community; the higheſt regard will always be paid to theſe orders of men. Accordingly we find, that in the inland provinces of Aſia, they were formerly held in the moſt honourable eſtimation; and the nobles of theſe countries treated all traders with contempt; whilſt in ancient Egypt, a country naturally formed for commerce and navigation, the ſhepherd and the farmer were looked on as a deſpicable rank of men, and traders maintained the principal dignity and ſuperiority in the ſtate. Among the Tyrians, they had ſo great a ſhare of honour and power, that an inſpired writer has told us, THEIR MERCHANTS WERE PRINCES.

In free ſtates, ſuch are the natural and happy effects of commerce, that it contributes at the ſame time to aggrandize the prince, and to preſerve and extend the liberty of the ſubject: and arbitrary governments are ſo ſenſible of the benefits of traffic, that we ſee them earneſtly bent on it's advancement, whenever their wiſeſt and beſt miniſters have had the management of their affairs. Inſomuch that I believe I may venture to ſay, that it is by a rivalſhip in trade, that our neareſt and moſt potent enemy carries on a kind of warfare againſt us, more certainly deſtructive than their arms *.

* This is demonſtrated in various parts of our Dictionary of Commerce.

The peculiar importance of a well regulated and extenſive commerce to the proſperity, or rather to the very being of theſe kingdoms, is ſo well underſtood, that it is now needleſs to carry theſe reflections home to ourſelves. Trade, it is to be hoped, will ever be the chief object of our public care. But the wiſeſt laws, and the beſt concerted encouragements, are not alone ſufficient to carry our commerce to it's utmoſt extent, or to ſupport it in a ſtate of health and vigour: ſomething will ſtill be wanting, which lies beyond the reach of laws, and which private perſons muſt acquire to themſelves; I mean a proper mercantile education: for, unleſs merchants are ſkilful and judicious in improving and cultivating the practical arts of trade, the beſt laws will prove little better than a dead letter; it is the intelligent trader who muſt give them ſpirit, and render them operative and beneficial.

For erudition, in almoſt every other branch of ſcience, it muſt be acknowledged, we abound with the beſt regulated inſtitutions. I wiſh we could ſay the like in relation to the mercantile profeſſion. But, what well eſtabliſhed ſeminaries have we for the accompliſhment of that moſt conſiderable part of the Britiſh community? Certain I am that we have none, which are properly adapted to the peculiar nature of their province, and it's ſupreme utility to the ſtate in general. The cauſe to which they may be chiefly attributed, is not difficult to be diſcovered. Too many, who ſet out in the capacity of merchants, are apt to flatter themſelves that they ſtand in need of little other qualification, than a round capital, and an adventurous diſpoſition. Buying and ſelling, paying and receiving, exporting and importing, as they think, comprehend the whole circle and myſtery of mercantile tranſactions.

When a low idea is thus entertained of the accompliſhments neceſſary for this employment, it is no wonder that ſo little regard, in general, is had to the education of thoſe who are intended for it. The conſequences hereof are fatal to numbers who ruſh headlong into commerce, deſtitute almoſt of every one of thoſe accompliſhments indiſpenſibly neceſſary, and become a ſacrifice to their folly and temerity *.

* I knew a conſiderable trader in the city of London, who could neither write nor read; he made ſhift, however, to keep his head above water, for many years, though he ſwam with bladders, prepared by thoſe who intended his drowning at laſt; and it is not to be admired that bankruptcy was his fate. And numbers of bankrupts, I have known, are ſhamefully deficient in the ordinary accompliſhments requiſite for the merchant; but, if every one who preſumes to take upon him this reſpectable character, was obliged to paſs an examination by a board of ſkilful merchants, before he was admitted to practice; I am perſuaded, it would have as good an effect in regard to the intereſt of trade and traders in general, as the ſuffering no one to adminiſter medicine in any ſhape whatever would have upon the lives of his majeſty's ſubjects, 'till they had paſſed a due examination by the Royal College of phyſicians.

We daily ſee many, by their ſuperior qualifications, from very ſlender beginnings, accumulate great riches by merchandizing; while others, from commencing with plentiful fortunes, have, in the ſame courſe, been reduced to the loweſt penury. This ſeems ſtrange to the undiſcerning, but is eaſily accounted for; ſince they muſt have very little knowledge of the trading world, and leſs acquaintance with the practical arts of commerce, who can form a contemptible opinion of the qualifications neceſſary to the foreign trader.

Without acquaintance in the produce and manufactures of the commercial world, and in the laws of our own and foreign countries relative to general trade; without abilities to obtain the beſt intelligence, in order to ſtrike the critical time when and where, exportation or importation from nation to nation, drawing, remitting, and negociating foreign bills, invite to the beſt advantage: without knowledge of the duties, impoſts, ſubſidies, drawbacks, bounties, and all other charges and allowances at home and abroad, to which trade is ſubject, it is impoſſible that any previous calculation can be made, whether an adventure will turn to account or not. If the merchant be not thoroughly ſkilled in foreign monies and exchanges, as alſo in foreign weights and meaſures, and the methods of reducing thoſe of one nation reciprocally into thoſe of others, how ſhall he be able to judge of foreign INVOICES and ACCOUNTS of SALES *? And, if he be not perfectly acquainted with the arts of arbitrating the foreign exchanges with accuracy, he cannot embrace thoſe daily benefits by the negociation of them, which their perpetual fluctuation affords. Nor is a knowledge of the intrinſic value of foreign ſpecie leſs neceſſary than of the extrinſic par of exchange, in order to deal occaſionally between country and country, in the export or import of foreign coins, and bullion gold and ſilver to the beſt advantage: in fine, the merchant deſtitute of this ſeries of information, and talents to apply it to the moſt beneficial purpoſes in every ſhape, can never hope to reap any conſiderable profit from his profeſſion, or ſuſtain the character he bears with any ſort of dignity. He muſt owe his ſucceſs, if he has any, to fortunate hits, and unexpected advantages; things which no prudent man will chuſe to depend upon, for the whole proſperity of his life.

* See the articles INVOICE, and ACCOUNT of SALES.

To the ignorant in theſe matters, commerce is but a game of chance, where the odds are againſt the player. But to the accompliſhed merchant it is a ſcience, where ſkill can ſcarce fail of it's reward: and, while the one is wandering about on a pathleſs ocean without a compaſs, and depends on the winds and tides to carry him into his port, the other goes ſteadily forward, in a beaten track, which leads him directly, if no extraordinary accident intervenes, to wealth and honour.

Whoever turns his thoughts on the ſtupendious circulation of paper-property throughout the world, by inland and foreign bills; on the various cuſtoms and uſages eſtabliſhed among traders

traders in their money-negociations, for the ſupport of univerſal credit; on the numberleſs different tranſactions, which diverſify the buſineſs of the merchant; as buying and ſelling, exporting and importing, for proper, company, or commiſſion account; drawing on, remitting to, and freighting or hiring out ſhips for various parts of the world at the ſame time: whoever duly conſiders the ſkill in figures and accountantſhips*, requiſite to adjuſt and methodize this great variety of tranſactions, whereby ſuch trader may always have the true repreſentation of his affairs before him; together with the judgment to conduct ſuch a complication of occurrences, and addreſs to maintain a general correſpondence in our own, or the more univerſal languages, cannot but ſee the extent of a courſe of education proper to form ſo diſtinguiſhed a character.

* See the following PLAN of mercantile erudition.

Notwithſtanding this, nothing is more certain, than that no gentlemen in the general labour under greater diſadvantages in point of erudition —To trace this matter more minutely.
Few, very few, have more than a ſmattering of Latin and Greek, and a very ſuperficial knowledge of figures and accounts. With this very ſmall ſtock of uſeful literature, our tyro is turned into the practical counting-houſe; and, when he is there, the eager purſuits of intereſt in the maſter, who has not leiſure to attend to his inſtruction, will not admit of his making a greater proficiency in mercantile knowledge, than what ſelf-application ſhall lead him to. Here the flower of youth, we find, is oftener ripe for pleaſurable impreſſions; and the generality of young people of plentiful fortunes are ſo far from ſpontaneouſly applying to the ſeverity of buſineſs, that they rather look upon it in the light of hackney-drudgery *.

* This has been, and I am afraid daily is, the cauſe of the ruin of many gentlemens ſons of fortune.

Such indeed is the ſtrength of natural diſcernment in ſome, and ſuch ſometimes the uncommon attention to buſineſs in others, that they make little difficulty in breaking through every obſtacle to knowledge, if they obtain but a glimmering light: the caſe of the generality is far different.
But ſhould a merchant, or his principal clerks on whom he depends, have both leiſure and inclination to inſtruct a young gentleman, they may neither of them always have ability ſuitable. It is one thing to be capable of carrying on a proportion of buſineſs in a narrow branch, a very different, to qualify others for any, much leſs the moſt extenſive.
Beſides, it is not every one who is acquainted with mercantile, or any other branch of knowledge, is capable of training up others therein, and giving proper inſtructions.
It is not the practice of trade that will enable a merchant to teach his apprentice his art, though it furniſhes materials for that purpoſe. It is a good general education, a courſe of regular ſtudy, and a genius for familiar explication, that fit men for the office of inſtructors. And to theſe qualifications muſt be added ſkill other arts. During the fire and ſprightlineſs of youth, there is no fixing the attention, but by wiſely amuſing it. This age is always upon it's guard againſt bondage in every ſhape; and therefore, to give a true reliſh for knowledge, the arts of communicating it ſhould be diſguiſed under the form of pleaſure.
Should it ſo fall out, as none will think impoſſible, that our young trader is bred under thoſe, who themſelves are unſkilful; whoſe books are never duly ſtated, poſted up, or fit for a balance: ſhould it be the fortune of a young gentleman to be thus ſituated, and to receive the firſt impreſſions from ſo goodly an example, is he not likely rather to take an eternal diſreliſh to the profeſſion, than ſucceſsfully to purſue what has been rendered ſo odious and diſagreeable? Or, if he happens to be of an adventurous and ſelf-ſufficient turn, he may be raſh enough to hazard his diſgrace and ruin, by engaging in an employment he is no way qualified for.
Nor is want of leiſure and ability the only cauſe of a youth being bred to merchandizing under every diſadvantage. Intereſt may frequently prove the greateſt motive to his obſtruction. For, if a young gentleman of conſiderable fortune is let into the whole myſtery of the buſineſs of the counting-houſe wherein he may happen to be bred, it is ſometimes, I am afraid, ſurmiſed, that ſuch a one might hereafter prove highly detrimental thereto? And, where there is any intereſting inducement to keep him in ignorance, nothing is eaſier than to ſpread the veil of concealment. It is only chaining our novice to ſome appendage to the principal books, ſome labouring oar; or artfully ſhifting him from one auxiliary book to another, the more effectually to bewilder; and giving him an unwarrantable looſe to his pleaſures; and our young merchant ſhall turn out as completely qualified to be at the head of a counting houſe, as a hackney-writer at the head of the law.
The more extenſive and univerſal the buſineſs may be, with leſs difficulty is every thing, to a ſtripling, rendered dark, myſterious, and unintelligible. Provided a youth, ſo circumſtanced, proves one of ſtrong parts and an inquiſitive turn, he will probably, upon the general balance of the books, be attentive to the general profits, from a principle of curioſity only: yet he may only view them in the groſs: how, and in what manner thoſe profits aroſe, or whether they are true or falſe, is eaſily obſcured under ſome intermediate account to that of profit and loſs; a matter eaſily practiſed, to blind the eyes of one unacquainted with the niceties of accountantſhip en parties doubles *.

* Many have formed fictitious SETTS of ACCOUNTS, in order to deceive the public, and thoſe who have been taken into partnerſhip by ſuch villains; of which I have been informed we have a late inſtance in a certain BANKRUPT of the city of London: others keep DOUBLE SETTS of BOOKS, to anſwer double purpoſes.

Let the tranſactions of a counting-houſe, therefore, be as important in particular, as infinite in diverſity; let thoſe tranſactions be judiciouſly conducted, and methodically adjuſted, according to the niceſt arts of mercantile ſkill; yet, if a youth is not furniſhed with pre-requiſite knowledge to enable him to make the beſt advantage of what he ſees tranſacted, he cannot be much the wiſer for being placed in a counting-houſe of univerſal buſineſs. All that is tranſacted may be no more to him than a regular confuſion, who is diſqualified to view the connection of the whole, with an eye of underſtanding. Without being thoroughly knowing and expert in mercantile calculations and accountantſhip, and duly initiated into the arcana mercatorum *****, what advantage can a young gentleman receive?
